‡ No man knew better than Napoleon how to win the affections and excite the gratitude of his soldiers; and it was to his wonderful powers in this respect, almost as much as to his political and military capacity, that his long-continued success was owing. To increase this effect, and add to the naturally retentive powers of his memory in this respect, he inquired privately from the officers who were the veterans of Egypt or Italy in their regiments; and when he passed them in review, stopped the men designated to him, and said, "Ah! you are a veteran: how is your old father? I have seen you at Aboukir or the Pyramids: you have not a cross; here is one for you," and threw the cord round the astonished soldier's neck. It may easily be conceived what must have been the effect of such a demeanour, impressing as it did the soldiers with the belief that they were all known to the emperor if they had distinguished themselves, and that any one might look, under such auspices, to becoming a marshal of the Empire.

It was not only in his own soldiers, however, that this great man appreciated heroic or generous conduct. No one sat a higher value upon it in his enemies. When at Bou-

* Dum., xi., 40, 42. D'Abr., vii., 176, 178. Norv., ii., 336, 338.

From Boulogne the emperor traversed the coast of the Channel as far as Ostend, everywhere reviewing the troops, inspecting the harbours, stimulating the preparations, and communicating to all classes the energy of his own ardent and indefatigable mind. From thence he proceeded to Aix la Chapelle, endeavouring by all means to revive the recollection of the Empire of Charlemagne—an era of which, with Eastern servility, he was incessantly reminded in the adulatory addresses which flowed in from the mayors and constituted authorities in all the districts through which he passed. "God," said the prefect of Arras, "created Bonaparte, and rested from his labours"—an excess of flattery which shortly drew forth from the Faubourg St. Germain the witty addition, that he had better have reposed a little sooner;* and is valuable as an historical record, demonstrating how rapidly revolutionary violence leads to Eastern despotism, for in no part of France was Democratic cruelty more vehement ten years before than in that very town of Arras, the scene of the unparalleled atrocities of Le Bon, and the place where the guillotine had become so familiar an object, that it was employed by the little children to decapitate cats, birds, and mice which had fallen into their hands.†

More important changes were destined to result from the next station at which the emperor rested, Mayence, where he received at the same time the congratulatory addresses of all the eastern provinces of France, and of all the lesser German potentates on the right bank of the Rhine, whom he was already preparing to mould into the frontier bulwark of his power. It was here that he first brought to maturity the design which he had already formed of a CONFEDERATION OF THE RHINE, under the protection of France, and which would practically amount to an extension of its power into the heart of Germany.‡ Napoleon remained during the autumnal months at this great frontier fortress; and while to the public eye he seemed engaged only in matters of parade and magnificence, receiving the congratulations of the adjoining states on his accession to the imperial throne, he was in reality incessantly occupied with those vast designs which in the succeeding year led to such memorable results both at land and sea. It was there that he first conceived the plan of that great combination to elude the British fleets, and concentrate an overwhelm-

ing force in the Channel, which so nearly proved successful in the following year, and placed the English monarchy in greater jeopardy than it had stood since the battle of Hastings;* and it was there, too, that he matured the details of that astonishing march of his land-forces from the shores of the Channel to the heart of Germany, which was so soon destined to lead to the triumphs of Ulm and Austerlitz. Nor were objects of internal utility and pacific improvement neglected during these warlike designs. Numerous decrees for the encouragement of industry, as well as the encouragement of science and the protection of the frontier, are dated from the places visited during this journey. One from the camp at Boulogne established Sept. 11. nine prizes of 10,000 francs (£400), and thirteen of 5000 each, for useful inventions in agriculture and manufactures—proceeding on the noble desire expressed in the preamble, that "not only should France maintain the superiority she had acquired in science and the arts, but that the age which was commencing should advance beyond that which was drawing to a close." one from Mayence, on the 21st of September, Sept. 21. organized the institution of twelve colleges in the principal towns of the Empire for the study of law; one from Dunkirk Aug. 25. gave a new and more effective organization to the body of engineers for roads and bridges through the state; while another July 16. put upon a new and much improved footing the important establishment of the Polytechnic School.†

Immediately after his return to Paris, Napoleon commenced preparations for the important solemnity of the coronation. Although the spirit of the age was still essentially irreligious, and the forcing through the concordat with the pope had exposed his government to a ruder shock than the abrogation of all the political privileges acquired by the people during the Revolution,‡ still Napoleon was well aware that, with a large proportion at least of the rural population, the consecration of his authority by the ceremony of coronation was an essential particular, and that to all, of whatever latitude of opinion, it was of great political importance to prove that his influence was so unbounded as to compel the head of the Church himself to officiate on the occasion. The papal benediction appeared to be the link which would unite the Revolutionary to the legitimate régime, and cause the faithful to forget, in the sacred authority with which he was now invested, the violence and bloodshed which had paved his way to the throne.§ Napoleon, for

His coronation at Paris.

logue, two English sailors were brought before him who had escaped from the depot at Verdun, and attempted to cross the Channel in a frail bark a few feet long, just capable of floating them, which they had constructed of wood which they found on the sea-beach. The daring nature of the attempt attracted the admiration of the emperor, who said to them, "Is it really true that you have endeavoured to cross the sea in that bark?" "Ah! sire," they replied, "if you doubt it, give us leave and you will see us set out instantly." "I indeed wish it," replied he: "you are bold, enterprising men, but I will not let you expose your life. You are free. Farther, I will cause you to be conducted on board an English ship: you shall return to London, and tell the English what esteem I have for the brave, even among my enemies." He dismissed them with several pieces of gold each. This incident took such a hold of his imagination, that he recounted it to his companions in exile at St. Helena.—See BOURRIENNE, vi., 201, 202.

‡ "At that period (in 1804) there prevailed," says the French historian, "in the Republic a complete indifference on religious subjects; and the apathy of the nation in that respect was such that it would not leave to any legislator the power of choosing for it any species of Christian worship. This state of things is well worthy of consideration; and it existed in the great majority of the nation to such a degree, that the organization of the Catholic worship by the concordat appeared to the people a more daring innovation than the overthrow of the national representation on the 19th Brumaire. Religion had no hold at that period of the affections, I had almost said none of the necessities of the people: the spirit of the age since the days of Louis XV. had been entirely philosophical."—NORVINS, ii., 326-7.

§ "I will allow the generals of the Republic," said Napoleon, "to exclaim as long as they please against the mass: I know what I am about; I am working for poster-

these reasons, had long resolved, not only that he should be crowned according to the forms of the French monarchy, but that the ceremony should be performed by the head of Christendom; and for this purpose a negotiation had for some months been in dependence with the Holy See. There was no precedent, indeed, of such an honour being conferred on any crowned head excepting the emperors of Germany, the successors of the Cæsars, since the days when Stephen III. consecrated the usurpation of Pepin, and poured the holy oil on the head of the founder of a new dynasty and his son Charlemagne; but this only rendered him the more desirous to secure for himself an honour of which there had been no example for ten centuries, and his achievements certainly would not suffer by a comparison with those of the illustrious founders of the Carolingian dynasty. Early in June, accordingly, a negotiation had been opened with the Vatican for the coronation of the emperor by the pope in person; and although considerable difficulties were at first started by the cardinals in order to enhance the merit of compliance, and, if possible, obtain some concessions to the Church from so great an act of condescension on the part of its head, yet such was the ascendancy of French influence and the terror of Napoleon's arms, that at length the consent of the consistory was obtained; and in reply to a letter of Napoleon, dated from Mayence on the 15th Sept. 15, 1804.

September, the pope agreed to officiate at the consecration, and announced the speedy commencement of his journey to France. On the day following a concordat was concluded for the Italian Republic on terms precisely similar to those already agreed on with the French government.*

The ceremony was fixed for the 2d of December, in the Cathedral Church of Notre Dame at Paris. The pope arrived on the 25th of November at Fontainebleau, where the emperor went to congratulate him on his approach. They met at a cross in the forest on the road to Lyons, about a mile to the southward of the palace, which is still shown to travellers. Napoleon was on horseback, but they both alighted at the same time, and immediately remounted the pope's carriage, the emperor entering first, and placing his holiness on his right hand. They drove together to Fontainebleau, from whence Pius VII. proceeded alone to Paris.† He was everywhere received with extraordinary demonstrations of respect, and lodged at the Tuileries, in magnificent rooms, in the pavilion of Flora, where, by a delicate attention, he found his sleeping apartment furnished exactly like that which he had recently left on the Monte Cavallo. His arrival at Paris created an extraordinary sensation;

ity." Though indifferent as to religion himself, he saw clearly that in the end it rules the great body of mankind, and that the irreligious fanaticism of the age was probably destined to be as short-lived as its Democratic fervour.—See BOURRIENNE, vi., 223.

* Bign., iv., 103, 113. Bot., iv., 136, 142. Dum., xi., 75.

† It is a remarkable coincidence, that Fontainebleau, where Napoleon, in the pride of apparently boundless power, met the pope coming to his coronation, was also the witness, ten years after, of his abdication and fall. But the life of the emperor is full of such extraordinary and apparently mysterious combinations. Immediately after his accession to the consulship, he was intent on a negotiation to obtain for France the island of ELBA, the scene of his first exile; and not a month before his coronation, he dictated orders to Villeneuve for the conquest of ST. HELENA, the destined theatre of his sufferings and death.—See BOURRIENNE, vi., 233.

among the small remnant of the faithful, of joy at beholding the head of the Church within a city so recently defiled by the orgies of infidelity; among the more numerous body of the irreligious or indifferent, of curiosity and astonishment at the extraordinary changes which had so rapidly converted the Cathedral where, ten years before, the Goddess of Reason was enthroned amid crowds of revolutionary admirers into the scene where the august ceremony of coronation was to be performed by the head of the Church on the founder of a new race of sovereigns. How skeptical or indifferent soever the great bulk of the people may have been, they were universally impressed with feelings of respect for the venerable pontiff who displayed, in the trying circumstances in which he was placed, so large a portion of Christian charity and forbearance; and on some occasions on which the brutality of Democratic prejudice strove to expose him to insult, his demeanour was so mild and benevolent as to excite the unanimous admiration of all who witnessed it.*

On the day before the coronation, the Senate and Tribunate presented, with great Result of the pomp, the result of the appeal made to the French people on the subject people on the of the hereditary succession of his subject. family. Sixty thousand registers had been opened. Out of 3,574,898 votes, only 2569 were in the negative. Such was the result, after sixteen years' experience, of the Democratic fervour of 1789! In reply to a laboured harangue from François de Neufchâteau, the orator of the Legislature on this occasion, Napoleon said, "I ascend the throne where I have been placed by the unanimous voice of the people, the senate, and the army, with a heart penetrated with the splendid destinies of a people whom, in the midst of camps, I first saluted with the title of the Great. From my youth upward my thoughts have been entirely occupied with their glory; and I now feel no pleasure nor pain but in the happiness or misfortune of my people. *My descendants will long sit on this throne.* In the camps they will be the first soldiers of the army, sacrificing their lives for the defence of their country. As its first magistrates, they will never forget that contempt for the laws and the overthrow of the social edifice are never occasioned but by the weakness and vacillation of princes. You, senators, whose councils and aid have never been wanting in the most difficult circumstances, will transmit your spirit to your successors. Remain ever as you now are, the firmest bulwarks and the chief counsellors of the throne, so necessary to the happiness of this vast empire."‡

The ceremony of coronation took place on the day following, with the utmost possible magnificence, in the Cathedral of Notre Dame. The day was intensely cold, but clear and bright, the procession long and gorgeous, and the whole luxury and magnificence of the Empire displayed under its venerable walls. Carriages glittering with gold and purple trap-

* Bour., vi., 225, 227. Bign., iv., 141, 143. D'Abr., vii., 216.

† When visiting the imperial printing-office, one of the workmen was ill bred enough to keep on his hat in the presence of his holiness. A murmur of disapprobation arose among the crowd, which the pope observing, stepped forward and said, with the most benevolent aspect, "Uncover yourself, young man, that I may give you my benediction; no one was ever the worse of the blessing of an old man." The spectators were profoundly affected by this incident.—Bourrienne, vi., 227. ‡ Bour., vi., 233.

ping; horses proudly caparisoned; liveries, resplendent with colour, dazzled the multitude in the streets through which the cortège passed, as much as a sea of ostrich feathers; rich embroidered court dresses; and a procession of stars, ribands, and uniforms, added to the imposing aspect of the scene within the Cathedral. The bewildered Republicans who witnessed the ceremony beheld with pain the pages in attendance on the empress's carriage, and the swords used as part of full dress, as under the ancient régime. The multitude, though dazzled by the spectacle, was far from testifying the enthusiasm which was evinced in the fêtes of the Revolution. After taking the oath prescribed by the senatus consultum of the 18th of May, 1804,* and receiving the papal benediction, the emperor, with his own hands, took the crown and placed it on his head; after which he himself, with perfect grace, crowned the empress, who knelt before him. The general aspect of this interesting moment may be still seen in the admirable picture of David, whose good fortune it has been to be the means of transmitting to posterity so many of the memorable scenes of this heart-stirring epoch.†

On the day following, a military spectacle of Distribution a still more animating kind took place of eagles to in the Champs de Mars. Napoleon the army. had there laid aside his imperial robes. He appeared in the uniform of a colonel of the guard, to distribute to the colonels of all the regiments in Paris, and deputations from all those absent, the EAGLES which were thenceforward to form the standards of the army. In the midst of the plain, in front of the Ecole Militaire, a throne was placed, on which the emperor and empress were seated. The spot selected was nearly the same with that where, fifteen years before, the unfortunate Louis XVI. had sat beside the president of the National Assembly. At a signal given, the troops closed their ranks, and grouped in dense masses round the throne; then the emperor, rising from his seat, said, in a loud voice, "Soldiers! there are your standards.

* The oath was in these words: "I swear to maintain the integrity of the territory of the Republic; to respect, and cause to be respected, the laws of the concordat and the liberty of worship; to respect, and cause to be respected, equality of rights, political and civil liberty, and the irrevocability of the sale of the national domains; to impose no tax but by legal authority; to maintain the institution of the Legion of Honour; and to govern, with no other views but to the interest, the happiness, and the glory of the French people."—BIGNON, iv., 144.

† D'Abr., vii., 249, 259. Bour., vi., 235, 236. Bign., iv., 145, 146.

‡ The Duchess of Abrantes, who, as wife of the governor of Paris, was very near the emperor on this occasion, mentions, that immediately after crowning the empress he cast a look of almost intolerable intelligence on her. He thought, doubtless, of her mother, Madame Permon, and the Rue des Filles de St. Thomas, where she had refused his hand ten years before, in the humbler state of his fortunes. What must have been the duchess's feelings on the fate which might have been her mother's at that moment?—D'ABRANTES, vii., 261, 263.

When Napoleon was paying his court to Josephine, shortly before their marriage, neither of them having a carriage, they walked together to the notary Raguideau, to whom the latter communicated her design of marrying the young general. "You are a great fool," replied the cautious formalist; "and you will live to repent it. You are about to marry a man who has nothing but his cloak and his sword." Napoleon, who was waiting in the antechamber unknown to Josephine, overheard these words, but never mentioned them to her till the morning of the coronation, when he sent for Raguideau. The astonished old man was brought into the presence of the emperor, who immediately said to him, with a good-humoured smile, "What say you now, Raguideau; have I nothing but my cloak and my sword?"—BOURRIENNE, vi., 237, 238.

These eagles will serve as your rallying-point. They will ever be seen where your emperor shall deem them necessary for the defence of his throne and of his people.*

While Napoleon was thus conferring upon his newly-acquired power the sanction of papal benediction, Louis XVIII., from the shores of the Baltic, protested, in the face of God and man, against this fresh invasion of his claims, in terms worthy of the illustrious house whose fortunes he bore. "On the shores of the Baltic, in the sight and under the protection of Heaven, strengthened by the presence of my brother, of the Duke d'Angoulême, and the concurrence of the other princes of the blood; calling to witness the royal victims, and those whom honour, fidelity, patriotism, and duty have subjected to the Revolutionary Dec. 2, 1804. axe, or the thirst and jealousy of tyrants; invoking the manes of the young hero whom impious hands have torn from his country and future glory; offering to our people, as a pledge of reconciliation, the virtues of the angel whom Providence has snatched from fetters and death to offer an example of every Christian virtue, we swear, that never will we abandon the heritage of our fathers, or break the sacred bond which unites our destinies to yours; and we invoke, as witness to our oath, the God of St. Louis, the Judge of the rulers of men.†" Who could have foreseen, at the date of this coronation and this protest, that the bones of Louis XVIII. would repose in the royal vaults of St. Denis, while those of Napoleon were to rest under a solitary willow on the rock of St. Helena!

The coronation of the emperor was followed by a series of rejoicings, assemblies, Splendour of and fêtes, which lasted for upward of the imperial two months. The vast expenditure, court. both of the court and the numerous civil and military functionaries of government; the great concourse of strangers, and unwonted splendour of the dresses and decorations, caused an unusual degree of activity among the shopkeepers and manufacturers of Paris, and contributed not a little to reconcile that important and Democratic body to the imperial régime which had now succeeded the terrors of the Revolution. Without possessing the whole elegance or finished manners of the old régime, the imperial court was remarkable for the lustre and beauty of its assemblies, over which the grace and affability of Josephine threw their principal charm. But not one moment did Napoleon withdraw from state affairs for such amusements. Through the midst of the whole he laboured eight or ten hours a day with his ministers, and was already deeply engaged in those great designs which led to such decisive results in the succeeding years.‡

The pope had been led to expect, in return for his condescension in travelling to Paris to crown the emperor, some important benefits for the Holy See, and the cabinet of the Vatican looked forward to the restoration of the three legations annexed to the Italian Republic by the treaty of Tolentino. But, however much Napoleon might appreciate the importance of obtaining the papal benediction to his throne, he was not the man to relinquish any of the substantial

* Dum., xi., 77, 78. Bour., vi., 238, 239. † Bign., iv., 150. ‡ Bign., iv., 153. D'Abr., vii., 240, 260.

Protest of Louis XVIII. against his assumption of the imperial crown.

Napoleon refuses any accession of territory to the Holy See.

advantages of power and territory on that account, and he was little disposed to imitate the magnificent liberality of his predecessor Charlemagne to the Catholic Church. He accordingly replied to the petition of the pope for the three legations, "France has dearly purchased the power which she enjoys. We cannot sever anything from an empire which has been the fruit of ten years of bloody combats. Still less can we diminish the territory of a neighbouring potentate, which, in confiding to us the powers of government, has imposed upon us the duty of protection, and never conferred upon us the power of alienating any part of its territory."*

The close of the year was marked by a melancholy event, on which the British historian must dwell with pain, and which led to lighting up the flames of war between England and Spain.

The treaty of San Ildefonso in 1796 has been already mentioned, by which Spain became bound to furnish France with an auxiliary force;† and also the subsequent convention of 19th October, 1803, by which this auxiliary force was commuted into a subsidy to the amount of £2,880,000 yearly by the Spanish to the French government.‡ The hostile character of this treaty, and great amount of this subsidy, had long been a matter of jealousy to the British government, furnishing, as it evidently did, the means of war to France; and being, as it was, as directly applied to the fitting out of the armaments destined for the invasion of England, as if the gun-boats, instead of being constructed with this treasure at Boulogne, had been fitted out at Cadiz or Corunna. As it was known, however, that the Spanish cabinet, in yielding to this tribute, was, in truth, constrained by necessity, the English government, from whom its amount was studiously concealed, was not at first disposed to make it the subject of complaint; and it was intimated, soon after the convention was agreed to, that England would not consider a small and temporary advance of money as any ground for the commencement of hostilities. In

the close of the year, however, when Dec. 13, 1803. rumours as to the magnitude of the payment had got abroad, the English ambassador stated, in a formal note to the Spanish government, that if it amounted to anything like such a sum as three millions, Great Britain would consider it as a war-subsidy, and as in itself equivalent to a hostile aggression against herself.§ In reply, the Spanish cabinet insisted

that the amount of the subsidy was perfectly consistent with the neutrality which their court professed towards England, and not greater than would have been required to fit out the contingent provided for in the former treaty. Thus the matter rested for six weeks, when Feb. 18, 1804. the English ambassador presented a fresh and energetic remonstrance, upon the ground of the evident partiality and preference shown to French vessels over British, especially in the sale of prizes, and complaining of hostile preparations and armaments in the Spanish harbours.* The Spanish government, in reply, strongly professed their desire to give perfect satisfaction to the English cabinet on every subject excepting the subsidy, as to which they would not draw back from existing engagements; upon which the British ambassador stated that his government wished for an indefinite suspension of hostilities on the ground of the subsidy, provided no other causes of complaint were given, but that, if such took place, they would forthwith commence war without any farther declaration of an intention to do so.†

Matters were in this state of jealous watching and suspended hostility, when, in the end of September, intelligence was received by the British government that several small detachments of French troops, amounting in all to 1500 men, had proceeded from Bayonne to Ferrol, where a French naval force of four ships of the line was already lying, and that the Spanish government had transmitted orders for the arming, without loss of time, three ships of the line, two frigates, and several smaller vessels at that port; that similar instructions had been sent to Carthage and Cadiz; that three first-rate line-of-battle ships had been directed to proceed from Cadiz to Ferrol; and that orders had been given to the packets to arm as in time of war.‡ This was accompanied by the alarming addition, that within a month eleven ships of the line would in this way be ready for sea at the latter harbour; that numbers of soldiers were daily arriving there from France; that the ships, though said to be bound for America, were victualled for three months only; that they merely waited the arrival of the treasure on board the

Secret measures of hostility by the latter power, Sept. 29, 1804.

the best adapted to the wants and situation of the enemy, the most prejudicial to the interests of the British subjects, and the most dangerous to the British dominions; in fine, more than equivalent for every other species of aggression. Imperious necessity compels him now to declare these sentiments, and to add that the passage of French troops through the territories of Spain would be considered as a violation of her neutrality, and that his majesty would feel himself compelled to take the most decisive measures in consequence of that event." The Spanish minister replied, "Although the Spanish cabinet is penetrated with the truth that the idea of aiding France is compatible with that of neutrality towards Great Britain, yet he has thought that he could better combine these two objects by a method which, without being disagreeable to France, strips her neutrality towards Great Britain of that hostile exterior which military succours necessarily present."—*Parl. Deb.*, iii., 74, 91.

* On the 18th of February, 1804, Mr. Frere stated, in his note to the Spanish minister at Madrid, "I am ordered to declare to you that the system of forbearance on the part of England depends entirely on the cessation of every naval armament within the ports of this kingdom, and that I am expressly forbidden to prolong my residence here if, unfortunately, this condition should be rejected. It is also indispensable that the sale of prizes brought into the ports of this kingdom should cease, otherwise I am to consider all negotiations as at an end, and I am to think only of returning to my superiors."—*Parl. Deb.*, iii., 89, 91.

* Du Pradt, *Quatre Concordats*, 173. Bign., iv., 113, 114.

† This force was mutually stipulated at fifteen ships of the line and 24,000 men; and this aid is to be furnished on the simple demand of the requiring party, without any inquiry into the policy or justice of the hostilities in which they are to be engaged; and by Art. ii. of the same treaty, the contracting parties are to assist each other with their whole forces, in case the stipulated succours should not be sufficient.

‡ *Ante*, i., 441, and ii., 280.

§ Mr. Frere, the English ambassador at Madrid, stated in this note, "With respect to the subsidy, his majesty is perfectly sensible of the difficulties of the situation in which Spain is placed, as well by reason of her ancient ties with France as on account of the character and habitual conduct of that power and of its chief. These considerations have induced him to act with forbearance to a certain degree, and have inclined him to overlook such pecuniary sacrifices as should not be of sufficient magnitude to force attention from their political effects. But it is expressly enjoined to me to declare to your excellency that pecuniary advances, such as are stipulated in the recent convention with France, cannot be considered by the British government but as a war-subsidy: a succour the most efficacious,

frigates from America to throw off the mask; and that there did not appear a doubt of the hostile intentions of Spain.* In consequence of this intelligence, which was transmitted at the same time to Mr. Frere at Madrid, warm remonstrances Sept. 27, 1804. ces were presented to the Spanish Mr. Frere's government; and it was intimated note. by the British ambassador, "that the total cessation of all naval preparations in the ports of Spain having been the principal condition required by England, and agreed to by Spain, as the price of the forbearance of Great Britain, the present violation of this condition can be considered in no other light but as a hostile aggression on the part of Spain, and a defiance given to England. These preparations become still more menacing from a squadron of the enemy being in the port where they are carrying on. In no case can England be indifferent to the armament which is preparing; and I entreat you to consider the disastrous consequences which will ensue if the misery which presses so heavily on this country be completed by plunging it unnecessarily into a ruinous war." To this note

Oct. 3, 1804. the Prince of Peace replied, on the D. P. Ceval- part of the Spanish government, lo's answer. "The King of Spain has never thought of being wanting to the agreement entered into with the British government. The cessation of all naval armaments against Great Britain shall be observed as heretofore; and whatever information to the contrary may have been received is wholly unfounded, and derogatory to the honour of the Spanish nation."[†]

Everything indicated that hostilities could not be averted many weeks, when they Catastrophe which precipitated hostilities. were unhappily precipitated by the measures of the British cabinet. No sooner was Admiral Cochrane's despatch, announcing the serious naval preparations at Cadiz, Carthage, and Ferrol, received by the English government, than they transmitted orders to that officer to prevent the sailing of either the French or Spanish fleets from the harbour of Ferrol, and to intimidate this intention to the French and Spanish admirals; and at the same time they sent instructions to Lord Nelson on the Mediterranean, Admiral Cochrane on the Ferrol, and Lord Cornwallis on the Brest station, to despatch two frigates each to cruise off Cadiz, in order to intercept the homeward-bound treasure frigates of Spain; and at the same time they directed these admirals to stop any Spanish vessels laden with naval or military stores, and keep them till the pleasure of the British government was known, but without committing any farther act of hostility either on such vessels or the treasure frigates. These orders were too punctually executed. On the 5th of October a squadron of four British frigates off Cadiz, under the command of Captain Moore, in the Indefatigable, fell in with the four Spanish frigates having the treasure on board, and the British officer immediately informed the Spanish commander that he had orders to detain his vessels, and earnestly entreated that this might be done without effusion of blood. The Spaniard, of course, declined to submit in this way to an equal force, and the consequence was, that an engagement took place, and in less than ten minutes

one of the Spanish ships blew up with a terrific explosion. The three others were captured, with the valuable treasure, amounting to above £2,000,000 sterling, on board; but England had to lament a loss, on the part of Spain, of a hundred killed and wounded, besides two hundred and forty lost in the frigate which exploded, before any formal announcement of hostilities.*

It is needless to proceed farther with the details of this painful negotiation. The cap- Which at ture of the frigates produced the result once brings on a war. which might have been anticipated, in an immediate declaration of war by Spain against Great Britain, on the 12th of December. Various attempts at explanation and apology were made by the English government, but Spain was too completely in the arms of France to expect she should forego such an opportunity of joining in the war; nor, indeed, after such an act of violence, could it be expected that any independent state would abstain from hostilities.^{††}

* Captain Moore's Despatch. Ann. Reg., 1804, 557, and 144.

† Parl. Deb., iii., 99, 115.

‡ The Spanish manifesto on this occasion stated, "It was very difficult for Spain and Holland, who had Spanish manifesto. treated jointly with France at Amiens, and whose interests and political relations are reciprocally connected, to avoid finally taking part in the grievances and offences offered to their ally. In these circumstances his majesty, proceeding on the principle of a wise policy, preferred pecuniary subsidies to the contingent of troops and ships, with which he was bound to assist France by the treaty of alliance in 1796; and expressed, by his minister at the court of London, his decided and firm resolution to remain neutral during the war. But the English government, animated with a spirit of hostility against Spain, not only listened to the reclamations of individuals addressed to it, but exacted, as the precise condition on which they would consider Spain, as neutral, the cessation of every armament in her ports, and a prohibition of the sale of prizes brought into them. Though these conditions were urged in the most haughty manner, they were complied with, and religiously observed by the Spanish nation; when the English government manifested its secret and perverse aims by the abominable capture of four Spanish frigates, navigating in a state of profound peace, at the very moment when the English vessels were enjoying the full rights of hospitality in the harbours of Spain. Barbarous orders, at the same time, were given to detain and carry into its harbours as many Spanish ships as its fleets could meet with, to burn or destroy every Spanish ship below a hundred tons, and carry every one of larger dimensions into Malta."—*State Papers*, 700, 701. Ann. Reg., 1804.

To this it was replied in the British declaration of war, "The stipulations of military and naval succours to a great extent by the treaty of 1796, Reply by England. followed by an obligation to put at the disposal of France, if required, the whole resources of the Spanish monarchy, gave to Great Britain an incontestable right to declare that, unless she decidedly renounced that treaty, or gave assurances that she would not perform its conditions, she could not be considered as a neutral power; that the monthly sum which Spain was bound to pay by the present convention far exceeded the bounds of forbearance, as it might prove a greater injury than any other hostility; that, in consequence, it had been intimated to the Spanish government that England's abstaining from hostilities must depend upon its being only a temporary measure, and that, if either any French troops entered Spain, or authentic accounts were received of any naval armaments preparing in the harbours of Spain for the assistance of France, the British ambassador had instructions forthwith to leave Madrid; that the constant report of naval armaments in the ports of Spain had induced the British cabinet to give the Spanish government explicit warning on the 18th of February, 1804, that all farther forbearance on the part of England must depend on the cessation of all naval preparations in the ports of Spain; that, notwithstanding the strongest assurances of the Spanish government that this should be the case, information was received from the British admirals that considerable bodies of French troops had arrived at Ferrol from France, and that orders had been given for fitting out four ships of the line and two frigates in that very harbour, in which four French line-of-battle ships were already assembled, so as to threaten to outmatch the British blockading force; that these circumstances compelled the British government explicitly to declare, by its ambassador at Madrid, that the continuance

† Parl. Deb., iii., 95, 98.

‡ Orders, Sept. 18, 19, and 25, 1804. Parl. Deb., iii., 118, 121.

This unhappy catastrophe produced a great and painful division of opinion among the people of Great Britain. While the ministerial party lamented the necessity under which government lay of adopting the steps which had led to so deplorable an effusion of human blood, they yet vindicated the measure as justifiable in itself, and unavoidable in the circumstances in which they were placed; but a large and conscientious body of their usual supporters beheld with pain what they deemed an unwarrantable invasion of the rights of nations, and loudly condemned an act derogatory to the honour of the British name. The debates in Parliament on this subject condensed, as usual, everything that was or could be urged on the opposite sides, clothed in all the force of language of which the great orators who then led the different parties were masters. On the one hand, it was urged by Mr. Fox and Lord Grenville, "that there appeared nothing but inattention, negligence, and mystery on the part of the British government on this occasion. The Spanish government had been most eager to cultivate a good understanding with this country, and had made repeated applications for this purpose to the British cabinet; but the criminal negligence or supineness of ministers had at length forced them into the arms of France, and compelled them to permit the march of fifteen hundred French troops to Ferrol. Spain no doubt had, in 1796, entered into a treaty of alliance with France, which might well have been made the ground of hostility, but it was not done so; and when afterward she commuted the military succours there stipulated into a fixed annual payment, to this, too, there was no serious objection stated. They told the Spanish government, indeed, that the continuance of a suspension of hostilities would mainly depend on the cessation of all naval preparations in the harbours of Spain; but was this condition violated? Ships, indeed, were fitting out at Ferrol; but when remonstrated with on the subject, the Spanish government at once declared that their sole object was to transport troops to the coast of Biscay, where a rebellion had broken out; and at the same time the governor of Ferrol stated that, to remove all uneasiness, the men should be put ashore, and sent round by land, however inconvenient. Not satisfied with these explana-

of peace required a complete and unreserved disclosure of the Spanish relations and engagements with France, which had hitherto been withheld; and that, at the same time, it became necessary to issue orders to prevent the sailing of the French or Spanish squadrons from Ferrol, and to intercept and detain the treasure ships till its destination was divulged, and to send back any Spanish ship of war to the harbour from which she sailed, but on no account to detain any homeward-bound ships of war not having treasure on board, nor merchant ships of that nation, however laden, on any account whatever."—See *Parl. Deb.*, iii., 126, 130.

The statement of the Spanish manifesto as to the orders given to Lord Nelson to destroy all vessels under 100 tons and send the others to Malta, is an exaggerated and mistaken allusion to these last instructions. No such orders were given by the British government. On the contrary, the instructions were "not to detain, in the first instance, any ship belonging to his Catholic majesty sailing from a port of Spain; but you are to require the commander of such ship to return directly to the port from whence he came, and only, in the event of his refusing to comply with such requisition, to detain him and send him to Gibraltar or England. You are not to detain any homeward-bound ship of war, unless she shall have treasure on board, nor merchant ships of that nation, however laden, on any account whatever." They are also directed "to detain any Spanish ships or vessels laden with naval or military stores."—See *Orders*, 25th September, and 25th November, 1804. *Parl. Deb.*, iii., 119, 121.

tions, not waiting to see if they were well founded, we proceeded at once to the violence of assailing their ships on the high seas. It is in vain to assimilate this to an embargo on an enemy's ships. Was there no difference between delaying merchants' ships, which might be delivered back, and assailing them on the high seas? Take a merchant's property, it might be restored to him; imprison seamen, they might be discharged; but burn, sink, and blow up ship and crew, and who can restore the innocent blood which has been spilt? The French branded us with the name of a mercantile people, and said that we were ever thirsting after gold. They would therefore impute this violence to our eagerness for dollars. Better that all the dollars and ten times their quantity were paid, so as it could wash away the stain which had been brought on our arms.

"In considering this question, we must carefully distinguish between the causes of a rupture which might have been set forth, and those which were actually made the ground of hostilities. The treaty of St. Ildefonso was clearly an offensive treaty, and its existence was as clearly a ground on which war might have been declared. It was even more offensive than the family compact. But the grand objection to the conduct of ministers was, that they did not instantly take a decided line on the resumption of hostilities with France. They should then have required Spain to renounce the offensive articles of that treaty, or used every effort to cultivate a good understanding with that power, while yet her disposition was amicable. They did neither. The subsequent commutation of the warlike succours into a money payment may possibly have been considered as an additional hostile act by ministers, but unquestionably they did nothing to evince this feeling to the court of Spain. Mr. Frere remained, and was directed to remain, at Madrid long after the commutation was known. Spain, in truth, was acting under the dread of French conquest, and therefore it was cruel to inquire rigidly into her conduct. The armament at Ferrol was quite inconsiderable, and had been admitted by Mr. Frere himself to be destined for the conveyance of troops to Biscay. The orders for sailing had been countermanded, and the vessels ordered on the 16th of September to be laid up in ordinary; so that all ground of complaint had been removed before the English orders to stop the treasure frigates had been given. Even the refusal to communicate the terms of the commutation treaty was no justification of the violence which had been committed, because that refusal was subsequent to the order which produced the capture."*

On the other hand, it was answered by Mr. Pitt and Lord Hawkesbury: "The Defence of the terms of the treaty of St. Ildefonso, government by which France and Spain mutu- Mr. Pitt. ally guaranty each other's territories, and engage to furnish reciprocally a force of fifteen ships of the line and 24,000 men, to be given upon the mere demand of the requiring party, and the additional obligation upon each, in case of need, to assist the other with their whole forces, lie at the foundation of this question, because they constituted the ground of the whole proceedings which the British government found themselves compelled to adopt. In whatever light this treaty be viewed, it could not be con-

* *Parl. Deb.*, iii., 354, 362, 448, 453

sidered, on the part of Spain, but as a reluctant tribute to the overbearing dictates of its ambitious and tyrannic ally; and although conditions so plainly hostile would have justified the demand of an explicit and immediate renunciation from Spain, on pain of a declaration of war in case of refusal, yet a feeling of pity towards a gallant and high-spirited, though unfortunate nation, long dictated a delicate and temporizing policy. But, at the same time, the interests of this country imperatively required that a pledge should be given that this treaty should not be acted upon; and in reply to the representations of the English ambassador to that effect, the Prince of Peace evinced, in August last, a disposition, if possible, to elude the demands of France. The requisitions of the First Consul, however, were urgent, and nothing short of a subsidy of £250,000 a month, or £3,000,000 a year, would be accepted; although the Spaniards were so sensible of the enormity of complying with such a demand, that they strongly urged that even a subsidy of £700,000 yearly would expose them on just grounds to a declaration of war from Great Britain. The particulars of this treaty Spain, down to the very last moment, refused to communicate; and, when urged on this subject, they answered, 'You have no reason of complaint, because you do not know what we pay.' From what we have learned, however, of the commutation which was finally agreed to, it is evident that, so far from being an alleviation, it was the greatest aggravation of the original treaty. At the very highest, the rated equivalent for fifteen ships of the line would be a million yearly: so that, as the Spanish government has agreed to pay three millions annually, there remains £2,000,000 for the commutation of the land-forces, being at the rate of £85 a man; whereas the equivalent for service of this kind usually given, and that agreed to in the treaty between this country and Holland in 1788, was £9 for each man: a fact which clearly demonstrates that the commutation is nearly ten times as injurious to Great Britain as the original treaty would have been.

"The forbearance of ministers, under such aggravated circumstances of provocation, was not founded upon blindness to the danger which the hostility of Spain, under French direction, might hereafter produce, but upon motives of policy, adopting due preparations against that event. Their forbearance was expressly said to be conditional, and to depend as a *sine qua non* on a total abstinence from naval preparations in all the harbours of Spain, and the prohibition of the sale of prizes in Spanish ports. When it is recollected that the total revenue of Spain does not exceed eight millions, and that they had consented to give three millions, or not much less than a half of this sum, annually to France, these conditions cannot be deemed exorbitant. It is in vain to say that this enormous subsidy was subsequently acquiesced in. In all his notes to the Spanish government on this subject, Mr. Frere accurately distinguishes between temporary connivance and permanent acquiescence, and reserved the right of making the subsidy the ground of hostility at some future period, even by itself; and much more, if any additional ground for complaint were given.

"Such was the state of affairs, when information was received from Admiral Cochrane that the condition on which alone the neutrality of Spain, under existing circumstances, had been

connived at, had been violated by the Spanish government. That government were called upon to act upon that information, cannot be denied. The existence of formidable preparations in the ports of Ferrol, at the very time when a French squadron was lying blockaded there, and French troops were pouring in through the Spanish territory, and the packets were armed as in time of war, were such indications of approaching hostility as would have rendered the British government to the last degree culpable if they had not instantly adopted measures of precaution. What would have been said, if, through their negligence in doing so, the Ferrol, in conjunction with the Cadiz and Carthagea squadron, had struck a blow at our interests, or co-operated with the French in any part of the great naval designs which they have in contemplation? The excuse that they were wanted to convey troops to quell an insurrection in Biscay is a pretence so flimsy as to be seen through the moment it is stated. If such was really the object, why not transport the troops in small craft, or in ships of war armed *en flute*? and why, for such a domestic transaction, range her line-of-battle ships alongside of the French and Dutch in the harbour of Ferrol? Why arm the packets, if land operations in Biscay alone were in contemplation? The only question, in truth, is, not whether we have done too much, but whether we have done enough. It was clearly stated by us, long before hostilities commenced, that if the conditions of neutrality were violated by Spain, we would consider it as a declaration of war: they were so violated, and we acted upon them as such. We would, in such circumstances, have been clearly justified in preventing the junction of the French, Dutch, and Spanish squadrons, and intercepting the treasures destined for the coffers, not of Spain, but of France; but we adopted the milder expedient of stopping and detaining them only; and if they have subsequently been rendered good prize, it is entirely owing to the conduct of Spain herself, in refusing to communicate any particulars in regard to the commutation convention, and following that up by a declaration of war against this country."

Upon a division, the conduct of ministers in this affair was approved of by a Who is supported by Parliament, Feb. 12, 1805.
majority of 207 in the Lower House: there being 313 in their favour, and 106 on the other side. In the House of Lords a similar decision was given by a majority of 78: the number being 114 to 36.†

Thirty years have now elapsed since this question, so vital to the national honour and public character of England, was thus fiercely debated in Parliament and the nation: almost all the actors on the stage are dead, or have retired into the privacy of domestic life, and the rapid succession of other events has drawn public interest into a different direction, and enabled us now to look back upon it with the calm feelings of retrospective justice. Impartiality compels the admission that the conduct of England in this transaction cannot be reviewed without feelings of regret. Substantially, the proceedings of the English cabinet were justifiable, and warranted by the circumstances in which they were placed; but formally, they were reprehensible, and form enters into the essence of justice in the transactions of nations. It

* Parl. Deb., iii., 366, 386.

† Ib., iii., 354, 468.

is true, the treaty of St. Ildefonso was a just ground for declaring war: the commutation treaty was a still juster; and even the armaments at Ferrol, if not explained, might have warranted the withdrawing of the ambassador at Madrid, and commencement of hostilities. Spain was in the most delicate of all situations in relation to Great Britain, after agreeing to the enormous war subsidy stipulated by that treaty; and this the French historians cannot dispute, since they represent the accepting of a subsidy of £80,000 a year from England, by the convention of the 3d of December of that very year,* as an overt act of hostility on the part of Sweden against France. She was bound, therefore, in return for the forbearance which overlooked such excessive provocation, to have been studiously careful not to give offence in any other particular, and could not have complained if the crossing of the Bidassoa by one French company, or the arming of one frigate at Ferrol, had been followed by an immediate declaration of war on the part of Great Britain. But admitting all this, conceding

And particular in which England appears to have been wrong.

that ample ground for declaring war existed, the question remains, Could the existence of these grounds warrant the commencement of hostilities without such a declaration, while the

British ambassador was still at Madrid, and negotiations for the explaining or removal of the

grounds of complaint were still in dependence? That is the material question, and it is a question on which no defence can be maintained for the conduct of England. True, the declaration of war would, in such circumstances, have been a piece of form merely; true, it would not have averted one shot from the treasure frigates, and, on the contrary, led to their immediate capture instead of conditional detention; but it was a step which the usages of war imperatively required, and the want of which distinguishes legitimate hostility from unauthorized piracy. A line apparently as unsubstantial frequently separates the duellist from the assassin, or the legitimate acquirer of property from the highway robber; and they have much to answer for who, in the transactions of nations which acknowledge no superior, depart from one formality which usage has sanctioned, or one security against spoliation which a sense of justice has introduced. It is with painful feelings, therefore, that the British historian must recount the circumstances of this melancholy transaction; but it is a subject of congratulation that this injustice was committed to a nation which was afterward overwhelmed by such a load of obligation, that, like the Protestant martyr at the stake, England held her right hand in the flames till her offence was expiated by suffering, and that if Spain was the scene of the darkest blot on her character which the annals of the Revolutionary war can exhibit, it was the theatre, also, of the most generous devotion, and the brightest glories which her history has to record.

CHAPTER XXXIX.

FROM THE OPENING OF THE SPANISH WAR TO THE BATTLE OF TRAFALGAR.

JANUARY—OCTOBER, 1805.

ARGUMENT.

Necessity to which Napoleon was exposed of constant War.

—To disguise it, he proposes Peace to Great Britain.

—Answer of the British Government.—Great Influence of

the French Press in his Favour.—Speech of Napoleon to the Senate.—Commencement of indirect Taxation

in France, and flattering State of the Finances.—Public Announcement of the Alliance with Russia in the

King of England's opening Speech to Parliament.—Important Negotiations with the Russian Ambassador in

London.—Memorable State Paper, of the 11th of January, 1805, the Basis of the whole Anti-revolutionary Alliance.

—Continued Jealousy of Austria on the Part of Prussia.—Supplies for 1805.—Financial Details of Great Britain for

1805.—Other Parliamentary Measures.—Charges against Lord Melville.—His Impeachment and Acquittal.—Com-

mencement of the Debates on the Catholic Question.—Argument of Mr. Fox and Lord Grenville for the Repeal

of the Catholic Disabilities.—Answer of Lords Hawkesbury, Sidmouth, and Eldon, for their Continuance.—The

Bill is rejected by a large Majority.—Reflections on this Subject.—Total Failure of Catholic Emancipation to paci-

fy the Country.—Causes of this apparent Anomaly.—The immense Confiscation of Land in former Times.—

The Vesting of the forfeited Estates in Absentees.—Total Unfitness of the Irish at Present for a Free Constitu-

tion, and peculiar Character and Dangers of the Catholic Religion.—Measures of Napoleon at this Period.—

Change of Government in Holland, and Assumption of the Iron Crown of Lombardy by the French Emperor.—

His Journey into Italy.—Splendid Pageant on the Field of Marengo.—He enters Milan.—Is crowned with the

Iron Crown of Charlemagne.—Adulatory Addresses from Naples and Genoa.—Napoleon's Reply to the latter Body.

—Incorporation of Genoa with France.—His secret Designs in that Step.—Popularity of Napoleon's Govern-

ment in Italy, and great Works which it undertook.—His Progress through the Italian Cities.—Magnificent Fête at

Genoa.—Extinction of Lucca, and Incorporation of Parma and Placentia with France.—Increasing Jealousy of Aus-

tria, and Change of its Ministry.—Treaty, Offensive and Defensive, between Russia and England.—Objects of the

Alliance.—They disclaim all Intention to control the French in the Choice of their Government.—At length the

Accession of Austria is obtained to the Alliance.—Sweden also is included.—Prussia in vain endeavours to

Mediate.—Manifesto of France in the *Moniteur*.—Prussia persists in her Neutrality, from the Hope of getting Han-

over, and agrees explicitly to accept of that Electorate.—Napoleon repairs to Boulogne to superintend the Eng-

lish Expedition.—Immense Force collected on the Coasts of the Channel for that Object.—Its admirable Organiza-

tion and Equipment.—Nature of the Camps in which the Soldiers were lodged.—Ample Powers vested in the Mar-

shals of Corps and Generals of Division, and vigilant Watching to which they were subjected.—Vast Extent of

his Correspondence with his Generals.—Organization of the Flotilla.—His secret Project for effecting the Passage.

—Autograph Note which he has himself left on the Subject.—Various Actions with the British Cruisers off Bou-

logne.—Operations of the combined Fleets of France and Spain to second the Enterprise.—Measures of Defence by

the British Government.—The Toulon and Rochefort Squadrons put to Sea.—Alarm they excite in Great Brit-

ain.—The combined Fleet steer for the West Indies.—Uncertainty of Nelson.—He at length follows to that

Quarter.—Searches in vain for the Enemy there.—Simultaneous Anxiety of Napoleon as to Nelson's Destination.

—Combined Fleet had returned to Europe.—Its secret Orders.—Entire Success hitherto of Napoleon's Design.

—But Nelson penetrates it, and warns the British Government of its Danger.—Energetic Measures of the Ad-

miralty when they receive his Despatches.—The combined Fleet is outstripped by the British Brig which

brought them.—Extraordinary Penetration of Collingwood as to the Enemy's Design.—Sir R. Calder's Action

with the combined Fleet.—The two Fleets separate without decisive Success.—Vast Importance of this Action.

—Napoleon's Conduct on receiving the Intelligence.—It totally defeats his well-laid Projects.—Cruel Injustice to

which Sir R. Calder was meanwhile subjected.—Nelson returns to England.—Napoleon orders the combined Fleet

again to put to Sea.—But it makes Cadiz instead of Brest.

—Ganteaume in vain leaves Brest to meet them.—Napoleon's Designs are in consequence entirely ruined.—He

sets off for Paris, September 1.—Extraordinary Dexterity to which the Troops had arrived in embarking.—Austria

had been making hostile Preparations.—Angry Note of Talleyrand to the Cabinet of Vienna.—Their Reply.—Both

Parties warmly assail the Court of Munich.—It finally joins France.—The Austrians cross the Inn.—Forces on

both Sides.—The Army of England marches from Boulogne for the Rhine.—His Address to the Senate.—En-

tire Dislocation of the Armament at Boulogne.—The combined Fleet is ordered, nevertheless, to sail from Cadiz.—

Restoration of the Gregorian Calendar.—Increase of the British blockading Force before Cadiz.—Enthusiastic Re-

ception of Nelson by the Fleet.—His Stratagem to induce the Enemy to leave the Harbour.—They accordingly set

sail.—Disposition on both Sides.—Magnificent Aspect of the Fleets as they approached each other.—Order in which

the English Fleet bore down upon the Enemy.—Battle of Trafalgar.—Heroic Conduct of Collingwood.—Nelson next

breaks the Line.—Details of the Action in other Quarters.—Last Moments and Death of Nelson.—Vast Magnitude

of this Victory.—Violent Tempest, and Disasters to the Prizes after it terminated.—Interchange of courteous

Deeds with the Spaniards at Cadiz.—Mingled Joy and Grief in England on the Occasion.—Honours granted to

the Family of Nelson.—Character of that Naval Hero.—Victory of Sir R. Strachan.—Reflections on the decisive

Nature of these Successes.—On the Manœuvre of breaking the Line, and on the Introduction of Steam into

Naval Warfare.—What if Napoleon had succeeded in effecting a Landing.—His Designs, if he had succeeded in

that Object.—Democratic Changes which he would instantly have proclaimed.—Their probable Result.

"The world," said Napoleon, "believe me the enemy of peace; but I must fulfil my destiny. I am forced to combat and conquer in order to preserve. You must accomplish something new every three months in order to captivate the French people. With them whoever ceases to advance is lost."* Continued progress, fresh successions of victories, unbounded glory, were the conditions on which he held the throne. He knew well that the moment these failed his authority would begin to decline. With him constant wars and evident advances towards universal dominion, therefore, were not the result merely of individual ambition, or dictated by an insatiable desire to extend the boundaries of France; they were the necessary consequence of the circumstances in which he was placed, and the temper of the times in which he lived. They arose, inevitably, from a military conqueror arriving at the supreme direction of a nation when heated by the pursuit of revolutionary ambition. As this system, however, required a continual sacrifice of the rights and interests of other nations, in order to feed the vanity and gratify the passions of one, it involved in itself, like every other irregular indulgence, whether in nations or individuals, the principles of its own destruction. He fell at last, not because he opposed, but because he yielded to the evil spirit of his times; because, instead of checking, he fanned the flame of revolutionary ambition, converted by his genius into that of military conquest; and continually advanced before a devouring fire, which precipitated him at last

Necessity to which Napoleon was exposed of constant war.

* Dum., xi., 81. De Staël, Dix Ans d'Exil, 15.

upon the snows of Russia and the rout of Waterloo.

But, although well aware that it was on such perilous conditions, and such alone, ^{But to disguise it, he proposes} that he held the throne, no man ^{peace to Great Britain.} knew better than Napoleon the importance of concealing their existence from the eyes of mankind, and representing himself as compelled on every occasion to take up arms in order to defend the dignity or independence of the Empire. It was his general policy, accordingly, when he perceived that unceasing encroachments during peace had roused a general spirit of resistance to his ambition, and that a general war was inevitable, to make proposals of accommodation to the most inveterate of his enemies, in order to gain the credit of moderate intentions, and throw upon them the odium of actually commencing hostilities. In pursuance of this system, he was no sooner convinced, from the turn which his diplomatic relations with Russia and Sweden had taken, that a third coalition was approaching, than he made pacific overtures to the English government. His letter on this subject, addressed, according to custom, to the King of England in person, was of the following tenour: "Sir, my brother, Jan. 2, 1805.

Called to the throne by Providence and the suffrages of the Senate, the people, and the army, my first feeling was the desire for peace. France and England abuse their prosperity: they may continue their strife for ages, but will their governments, in so doing, fulfil the most sacred of the duties which they owe to their people? And how will they answer to their conscience for so much blood innocently shed, and without the prospect of any good whatever to their subjects? I am not ashamed to make the first advances. I have sufficiently proved, I flatter myself, to the world that I fear none of the chances of war. It presents nothing which I have occasion to fear. Peace is the wish of my heart, but war has never been adverse to my glory. I conjure your majesty, therefore, not to refuse yourself the satisfaction of giving peace to the world. Never was an occasion more favourable for calming the passions and giving ear only to the sentiments of humanity and reason. If that opportunity be lost, what limit can be assigned to a war which all my efforts have been unable to terminate? Your majesty has gained more during the last ten years than the whole extent of Europe in riches and territory: your subjects are in the very highest state of prosperity: what can you expect from a war? To form a coalition of the Continental powers? Be assured the Continent will remain at peace. A coalition will only increase the strength and preponderance of the French Empire. To renew our intestine divisions? The times are no longer the same. To destroy our finances? Finances founded on a flourishing agriculture can never be destroyed. To wrest from France her colonies? They are to her only a secondary consideration, and your majesty has already enough and to spare of those possessions. Upon reflection you must, I am persuaded, yourself arrive at the conclusion that the war is maintained without an object; and what a melancholy prospect for two great nations to combat merely for the sake of fighting! The world is surely large enough for our two nations to live in it; and reason has still sufficient power to find the means of reconciliation, if the inclination only is not wanting. I have now at least discharged a duty

dear to my heart. May your majesty trust to the sincerity of the sentiments which I have now expressed, and the reality of my desire to give the most convincing proofs of it."*

The forms of a representative government would not permit the King of England to answer this communication in person; but Lord Mulgrave, the minister for foreign affairs, on the 14th of January, addressed the following answer to M. Talleyrand: "His Britannic majesty has received the letter addressed to him by the chief of the French government. There is nothing which his majesty has more at heart than to seize the first opportunity of restoring to his subjects the blessings of peace, provided it is founded upon a basis not incompatible with the permanent interests and security of his dominions. His majesty is persuaded that that object cannot be attained but by arrangements which may at the same time provide for the future peace and security of Europe, and prevent a renewal of the dangers and misfortunes by which it is now overwhelmed. In conformity with these sentiments, his majesty feels that he cannot give a more specific answer to the overture which he has received until he has had time to communicate with the Continental powers, to whom he is united in the most confidential manner, and particularly the Emperor of Russia, who has given the strongest proofs of the wisdom and elevation of sentiments with which he is animated, and of the lively interest which he takes in the security and independence of Europe."[†]

This reply, which in a manner disclosed the existence of a coalition against France, or at least of negotiations tending to such an end, completely answered the purpose of Napoleon. ^{Great influence of French press in his favour.} It both revealed to the subjects of his Empire the necessity of extensive armaments, and gave them an opportunity of comparing what they deemed the pacific intentions and moderation of the emperor with the projects of ambition which were formed by the coalesced sovereigns. The press, which in his hands, as in the hands of every despotic power, whether military or popular, had become the most terrible and slavish instrument in benighting mankind, resounded with declamations on the forbearance and wisdom of the youthful conqueror. The real causes of the war, the occupation of Italy, the invasion of Germany, the subjugation of Switzerland, were forgotten; and public opinion, formed on the only arguments the people were permitted to hear, prepared unanimously to support the ruler of France, in the firm belief that, in so doing, they were not following out any projects of offensive ambition, but preparing only for the maintenance of domestic independence.[‡]

This general delusion was increased by the eloquent and seducing expressions in which Napoleon addressed himself to the Legislative Body at the opening of the session in the close of the year 1804: "Princes, magistrates, soldiers, citizens," said he, "we have all but one object in our several departments, the interest of our country. Weakness in the executive is the greatest of all misfortunes to the people. Soldier or First Consul, I have but one thought:

Speech of Napoleon to the Senate.

emperor, I have no other object, the prosperity of France. *I do not wish to increase its territory, but I am resolved to maintain its integrity.* I have no desire to augment the influence which we possess in Europe, but I will not permit what we enjoy to decline. *No state shall be incorporated with our Empire;* but I will not sacrifice my rights, or the ties which unite us, to other states.¹⁷ Such were the expressions by which he blinded the eyes of his subjects at the very time that he was taking measures, as the event will show, for the incorporation of the Ligurian Republic with France, and the progressive extension of its dominion over the Ecclesiastical States and the whole Italian Peninsula. No man ever knew as well as Napoleon how, by the artful use of alluring expressions, to blind his people to the reality of the projects which he had in view; and none ever calculated so successfully upon the slight recollection and exclusive attention to present objects which have ever characterized that volatile people.*

This session of the Legislative Body was distinguished by an important step in French finance, highly characteristic of the increased wisdom and milder administration by which that great department was now governed. This was the commencement of the system of *indirect* taxation, and the consequent diminution of that enormous load of direct burdens which, amid all the declamations of the Revolutionists, had been laid during the preceding convulsions upon the French people.

It has been already mentioned† that the territorial burdens of France during the progress of the Revolution had become enormous; the land-tax amounting to a full fifth of the whole profit derived from cultivation by the nation, and the inequality in the distribution of this burden being so excessive, that in many places the landowners paid thirty, forty, and fifty, and even eighty per cent. on their incomes.‡ The enormity of the evil at length attracted the attention of the emperor, and his sagacious mind at once perceived the superiority of taxes on consumption, which, confounded with the price of the articles on which they were laid, were hardly

felt as a grievance, over an enormous direct payment from the proprietors to the government, which fell with excessive and intolerable severity upon a particular class of society. Under his auspices, accordingly, a system of indirect taxes was organized under the name of *Droits Reunis*, which soon came to form an important branch of the public revenue. In the very first year, though their amount was very inconsiderable, they enabled the government to diminish the territorial imposts by 10,200,000 francs, or £408,000. The revenue, as laid before the Chambers, though not a faithful picture, exhibited a progressive increase in all its branches, and enabled the emperor, without any loans, with the assistance only of the great contributions levied on Spain, Portugal, Italy, and other allied states, to meet the vast and increasing expenses of the year.§|| On the 31st of December, a flattering exposition of the situation of the Empire was laid before the Chambers by M. Cham-

pagny, the minister of the interior, and the intention announced of effecting constitutional changes in the Italian and Bavarian Republics, similar to that recently completed in the French Empire. The splendid picture which these representations drew of the internal prosperity of France gave rise to the eulogium on Napoleon, which acquired a deserved celebrity at the time. "The first place was vacant: the most worthy was called to fill it: he has only dethroned anarchy."¹⁸

Events of still more importance were announced to the British Parliament in the speech from the throne; and the negotiations which then took place were of the greater importance, that they formed the basis on which, at the conclusion of the war, the arrangements at the Congress of Vienna were mainly formed. From the grounds then taken, Great Britain, through all the subsequent vicissitudes of fortune, never for one moment swerved. In the speech from the throne, the King of England observed, "I have received pacific overtures from the chief of the French government, and have in consequence expressed my earnest desire to embrace the first opportunity of restoring the blessings of peace, on such grounds as may be consistent with the permanent interest and safety of my dominions; but these objects are closely connected with the general peace of Europe. I have, therefore, not thought it right to enter into any more particular explanation without previous communication with those powers on the Continent with whom I am engaged in confidential intercourse and connexion with a view to that important object, and especially to the Emperor of Russia, who has given the strongest proofs of the wise and dignified sentiments with which he is animated, and of the warm interest which he takes in the safety and independence of Europe."¹⁹

It was not without foundation that Mr. Pitt thus publicly announced the formation of political connexions which evidently pointed to a third coalition. His ardent mind had long perceived, in the coldness which had taken place between France and Russia, and the almost open rupture with Sweden, the elements from which to frame a powerful confederacy against that formidable Empire; and considerable progress, through his indefatigable efforts, had been made not only in arranging the basis of such a confederacy, but obtaining the co-operation of the power whose aid was indispensable to its success, the cabinet of Vienna. Assured, at length, of the friendly disposition of the Austrian government, notwithstanding the caution and reserve which, from their exposed situation, they were compelled to adopt, Mr. Pitt, four days after the meeting of Parliament, presented a confidential com-

|| The income of France during the year 1804 was eighteen millions higher than in 1803, and was as follows:

munication to the Russian ambassador in London, in which the basis of the principles of the coalition was distinctly laid down. It was proposed, 1. To reduce France to its former limits, such as they were before the Revolution. 2. To make, in regard to the countries rescued from France, such arrangements as, while they provide in the best possible manner for the happiness and rights of their inhabitants, may at the same time form a powerful barrier against it in future, and for this purpose to incorporate the Low Countries with Prussia. 3. To unite the kingdom of Etruria to Tuscany, restore Lombardy to Austria, and annex Genoa to the kingdom of Piedmont. 4. To take measures for establishing a system of public right throughout Europe. "The first of these objects," continues the note, "is certainly the one which the views of his majesty and of the emperor (of Russia) would wish to be established, without any modification or exception; and nothing less can completely satisfy the wishes which they have formed for the security and independence of Europe." The co-operation of Austria was alluded to in the same document; for it goes on to state, "His majesty perceives with pleasure, from the secret and confidential communications which your excellency has transmitted, that the views of the court of Vienna are perfectly in accordance with this principle, and that the extension which that court desires can not only be admitted with safety, but even extended with advantage to the common cause."* But it is worthy of especial notice that, even in this secret and confidential note, there is not a hint of either reducing the ancient limits of France or imposing a government on it contrary to the wishes of its inhabitants: an instance of moderation in nations, suffering at the moment so severely under the ambition of that country, which is in the highest degree remarkable, and rendered the confederacy worthy of the glorious success which ultimately attended its exertions. The note, indeed, is the noblest monument of the prophetic wisdom, as well as impartial justice, with which Mr. Pitt conducted the war against the Revolution. It is truly wonderful to see that great statesman thus early tracing the outline of the general policy of the great coalition which, ten years afterward, effected the deliverance of Europe; and it is a memorable instance of national perseverance as well as moderation, to behold the same objects unceasingly pursued by his successors, during ten years of the most violent oscillations of fortune, and no severer terms at length imposed upon the vanquished than had been agreed to by their conquerors in the outset of the strife, and at the highest point of their enemy's elevation.†

About the same time a treaty was concluded between Russia and Sweden, for the avowed purpose of "maintaining the Jan. 14, 1805.

secure the aid and co-operation of the other powers of the Continent, in proportions corresponding to their ability to take part in the great and important enterprise on which the future safety of Europe is entirely dependant.

"With this design, the first point is to fix as precisely as possible the objects which are to be kept in view by the coalesced powers.

"It appears from the explanation which has been given of the intentions of the emperor, with which those of the king are entirely conformable, that these objects may be divided into three heads: 1. To rescue from French domination the countries which that power has conquered since the commencement of the Revolution, and to reduce it to the limits by which it was bounded before the Revolution. 2. To make, in regard to the territories so taken from France, such arrangements as may at once provide for their own tranquillity and happiness, and establish a barrier against the future projects of aggrandizement of that power. 3. To establish, on the restoration of peace, a system of mutual convention and guarantee for the security of the different powers, and establish in Europe a general system of public rights.

"The first and second of these objects are announced in the most general terms; but neither the one nor the other can be considered in detail without considering the nature and extent of the means at their disposal for carrying them into execution. The first is certainly that which the wishes of the emperor and king would wish to see established in its fullest extent, without any modification or exception; and nothing less can completely satisfy the views which they have formed for the deliverance of Europe. If it were possible to unite to Great Britain and Russia the two other great powers of the Continent, there seems no doubt that such an assemblage of forces would be at their disposal as would enable them to accomplish all that they desire. But if, as there is too much reason to fear, it shall be found impossible to make Prussia enter into the views of the confederacy, it may be doubted whether it will be possible to carry on in all parts of Europe the operations necessary to secure the first object in its full extent.

"The second object involves within itself more than one object of the highest importance. The views and sentiments of his majesty and the Emperor of Russia in striving to bring about this concert, are pure and disinterested. Their chief object in regard to the countries which may be conquered from France, is to re-establish, as much as possible, their ancient rights, and to secure the well-being of their inhabitants: but, in pursuing that object, they must not lose sight of the general security of Europe, on which, indeed, that well-being is mainly dependant.

"It follows from this principle that, if any of these countries are capable of re-establishing their independence, and placed in a situation where they are capable of defending it, such an arrangement would be entirely conformable to the spirit of the proposed system. But among the countries at present subjected to the dominion of France, there are others to whom such a system is wholly inapplicable, either from their ancient relations having been so completely destroyed that they cannot be re-established, or because they are so situated that their independence could only be nominal, and equally incompatible with their own security, or that of Europe in general. Happily, the greater number stand in the first predicament. If the arms of the allies should be crowned with such success as to despoil France of all the conquests she has made since the Revolution, it would certainly be their first object to re-establish the United Provinces and Switzerland, and the territories of the King of Sardinia and Naples, as well as the Dukes of Modena and Tuscany; but those of Genoa, of the Italian Republic, including the three Legations, as well as Parma and Placentia, the Austrian Low Countries, and the German provinces on the left bank of the Rhine, belong to the second denomination. As to the Italian provinces which have been mentioned, experience has demonstrated that they have neither disposition nor resources to resist the aggressions of France; the King of Spain has too largely participated in the system, of which so large a portion of Europe has been the victims, to render it necessary to take into consideration the ancient rights of his family; and the last measures of Genoa, and of some of the other Italian States, give them no title to appeal either to the justice or generosity of the allies. It is evident, besides, that these little sovereignties have no means of maintaining their independence, and that their separate existence can serve only to weaken and paralyze the force which, as much as possible, should be concentrated in the hands of the principal powers of Italy.

"It is needless to dwell particularly on the situation of the Low Countries. The events which have taken place forbid the possibility of their being restored to the House of

* Schoel, Rec. de Pièces Officielles, vii., 59. Bign., iv., 192, 193.

† This state paper, the most remarkable in the whole memorable state Revolutionary war, as containing the principles which were constantly maintained and finally brought to a successful issue by Great Britain, deserves to be quoted at greater length than is possible in the abridged narrative of the text:

"From the Report of Prince Czartouriski, and the confidential communications received from the cabinet of St. Petersburg, his majesty perceives with the highest satisfaction that the sentiments of the emperor, in regard to the deliverance and security of Europe, and its future independence, agree entirely with his own. The king, in consequence, is desirous of entering into the fullest and most unreserved explanations on every point which relates to that great object, and to form the closest union with the emperor, in order that, by their united efforts, they may

Memorable state paper, Jan. 11, 1805, the basis of the whole anti-revolutionary alliance.

balance of power in Europe, and providing for the independence of Germany." Immediately afterwards, a Russian corps disembarked in Pomerania, to act in conjunction with the Swedish forces. This treaty proved a source

of jealousy and disquietude to the Prussian cabinet; and the diplomatic relations between Berlin and St. Petersburg soon assumed a spirit of hostility, which augured little good to the confederacy which England was striving to bring about between the great powers of Europe. Count Wintzingerode was, in consequence, despatched to Berlin by the Emperor Alexander, to endeavour to induce the Prussian cabinet to enter into the designs of England and Russia; but, notwithstanding the leaning of Baron Hardenberg, its chief minister, and the influence of the queen, the old jealousy of Austria still prevailed, and Prussia persisted in that evident partiality to the

Austria: it follows, therefore, that some new arrangements must be made in regard to that country; and it is evident that it can never exist as an independent power. The same considerations apply to the states on the left bank of the Rhine: they have been detached from the Empire, and their owners received indemnities in the interior of Germany. It appears, therefore, no way repugnant to the most sacred principles of justice and public morality to make, in regard to these countries, such dispositions as the general interests of Europe require; and it is evident that, after all the blood which has been shed, there exist no other means of re-establishing the peace of Europe on a durable foundation. It is fortunate that such an arrangement, essential in itself to the object which is proposed, may be made to contribute in the most powerful manner to bring about the means by which it may be effected.

"It is certainly a matter of the highest importance, if not of absolute necessity, to secure the efficacious and vigorous co-operation of Austria and Prussia; but there is little reason to hope that either of these powers will embark in the common cause, unless they have the prospect of an advantage to indemnify them for their exertions. For these reasons, his majesty is clearly of opinion that nothing could so much contribute to the general security, as by giving Austria additional strength to resist the designs of France on the side of Italy, and putting Prussia in a similar situation in the Low Countries. In Italy, reasons of policy require that the strength of the King of Sardinia should be increased, and that Austria should be placed in a situation to furnish him with prompt assistance in case of attack. With this view, it is indispensable that the territories now forming the Republic of Italy should be given to other sovereigns. In making the distribution, a proper augmentation must be given to the King of Sardinia; and his possessions, as well as those of the grand-duchy of Tuscany, which it is proposed to revive, be brought in contact with those of Austria; and for those the Ligurian Republic, to all appearance, must be united to Piedmont.

"Such territorial arrangements would go far to secure the future repose of Europe, by forming a more powerful barrier against the ambition of France than has yet existed; but to render that security complete, it appears necessary that there should be concluded, at the period of a general pacification, a general treaty, by which the European powers should mutually guaranty each other's possessions: such a treaty would lay the foundation in Europe of a system of public right, and would contribute as much as possible to repress future enterprises directed against the general tranquillity; and, above all, to render abortive every project of aggrandizement, similar to those which have produced all the disasters of Europe since the calamitous era of the French Revolution."^{*}

In all these varied projects there is not a syllable either about territorial acquisition to Great Britain, or the infliction upon France of any part of that system of spoliation which she had so liberally applied to other states. The whole project breathes only a spirit of justice, philanthropy, and moderation; it contemplates restitution, and restitution only where that was practicable; and where it was not, such new arrangements as the interests of the people in the territories to be disposed of and the general safety of Europe required. The world has since had abundant reason to experience the prophetic wisdom of these arrangements, in all cases where they were subsequently carried into execution, and to lament the deviation made from them, particularly in the final destruction of Poland and Belgium.

French alliance which was destined to be rewarded by the catastrophe of Jena and partition of Tilsit.*

The supplies voted in the British Parliament for the service of the year amounted to no less than £44,559,521 for the United Kingdom of Great Britain and Ireland, exclusive of £4,534,000, as separate charges for England, besides £28,032,000 as permanent expenses, making a total of £77,125,521 yearly expenditure. The ways and means, including a loan of £20,000,000, amounted to £43,992,000 for England, and £3,500,000 for Ireland, besides a permanent revenue for both countries of £32,381,000; in all, £79,873,000.† The new taxes imposed to meet the interest of the loan amounted to £1,560,000, consisting chiefly of additions to the salt duty, to the postage of letters, to the legacy duty, and to horses employed in husbandry, or in agricultural operations.‡

The disturbed state of Ireland again rendered the suspension of the Habeas Corpus Act indispensable, which accordingly passed both houses by a very large majority. Indeed, the continued anarchy of that beautiful island now began to spread among the thoughtful and observant in Great Britain a conviction, which subsequent events have abundantly justified, that its people either had not received from nature the character, or had not reached by industry the stage of civilization requisite for the safe enjoyment of a free constitution; and that the passions consequent on the exercise of its powers would permanently distract its inhabitants and desolate its surface. In this session of Parliament, also, the report of the select committee

‡ Parl. Deb., iii., 551, 546, and v., 23.

* Parl. Deb., iii., 546, 550. V. App., 230. Ann. Reg., 1805, 592. App. to Chron.

upon the tenth and eleventh naval reports was printed, in regard to the treasuryship of the navy under the management of Lord Melville: proceedings upon which the spirit of party immediately fastened with more than usual acrimony, and which were subsequently made the means of effecting the overthrow of the statesman who had elevated the British navy from a state of unexampled dilapidation to the highest point of its triumph and glory.*

The grounds of this charge against Lord Melville, which is a matter of more importance in the domestic history of Britain than in the general transactions of Europe, were, 1st, that he had applied the public money to other uses than those of the navy departments under his control, in violation of an express act of Parliament; and, 2d, that he had connived at a system, on the part of the treasurer of the navy, of appropriating, for a time at least, the public money under his charge to his own uses; in consequence of which, if the public had sustained no actual loss, they had at least run a considerable risk, and been deprived of the profits arising from such temporary use, which should all have been carried to the public credit. They were brought forward, in a speech of distinguished ability and vehemence, by Mr. Whitbread, a mercantile gentleman of great eminence in London, a perfect master of business and a powerful debater, who for long afterward assumed a prominent place in the ranks of the opposition in the House of Commons. Mr. Pitt, without denying the facts detailed in the report, called the attention of the house to the real import of what was established in evidence, viz., that no loss had been sustained by the public, every shilling drawn out by the treasurer of the navy having been replaced in the hands of the bankers; and that it did not appear that Lord Melville had been aware of the private purposes of profit to which that gentleman had applied the money, and most certainly had not derived one farthing of patrimonial advantage from that irregularity.† After an animated debate, Mr. Whitbread's resolutions were carried by the casting vote of the speaker, the numbers being 216 on each side.‡

This was too important a blow against the administration of Mr. Pitt not to be followed up with the utmost vigour by the Whig party. It led to various subsequent proceedings, and so vehement did the opinion of the public become in consequence of the incessant efforts made to keep it in a state of agitation, that on the 6th of May 6. Mr. Pitt announced in Parliament that Lord Melville's name had been erased from the list of privy counsellors, and the thanks of the House of Commons were voted to the commissioners who had prepared the report, "for the zeal, ability, and fortitude with which they had discharged the arduous duties intrusted to them." The noble lord had resigned his situation as First Lord of Admiralty two days after the resolutions of the House of Commons were passed. These proceedings led to the impeachment of Lord Melville, in the following year, in the House of Peers, but he was acquitted by a large majority on all the charges, after a trial of great length and perfect impartiality.

* Suttie's Reports. Parl. Deb., v., 1, 210. App., iii., 589.
† "I never," said Mr. Whitbread, "charged Lord Melville with participating in the plunder of the public, because that had not appeared."—*Parl. Deb.*, iv., 611.

ty; and in the interim the nation, from whose services he had been removed, was saved from imminent danger and possible destruction by the memorable victory, to which his efforts as First Lord of the Admiralty had so mainly contributed, at Trafalgar.*

This session of Parliament was distinguished also by the commencement of those memorable debates on the removal of the existing disabilities from the Roman Catholics of Ireland, which continued, with little intermission, to agitate the Legislature for five-and-twenty years. It was argued with the utmost ability in both houses of Parliament; and to a subsequent generation, which has witnessed the passing of the Catholic Relief Bill, and is familiar with its effects, it is a matter both of interest and instruction to behold the light in which it was then considered, and the arguments adduced for and against the measure by the greatest men of the age.

On the one hand, it was argued by Mr. Fox, Lord Grenville, and Mr. Grattan, "That, in considering the claims of the Roman Catholics to exemption from the disabilities under which they laboured, it is material to recollect that they do not form a small or inconsiderable sect, but compose three fourths of the population of Ireland, and embrace, according to some, three, according to others, five millions of its inhabitants. It would, indeed, be a happy thing if we were all united in religious as well as in political and constitutional opinions, but that, unfortunately, cannot now be hoped for; and the question is, What is to be done under existing circumstances? That Parliament has long, too long, acted upon the distinction of religious faith, is indeed certain; but, in justice to the memory of King William, it must be observed, that the system of exclusion did not commence with his measures, but arose in a subsequent reign, when the opinion unfortunately became prevalent that the Roman Catholics were the irreconcilable enemies of the Protestant establishment of Ireland and the Protestant government of England; and upon that assumption, without any proof, the next step was to exclude them from all share in the Constitution. Not content with this, means were devised, by penalties, proscriptions, and disabilities, to drive the whole Catholic peasantry from the island, or reduce them to the state of a poor, ignorant, and illiterate population.

"Such was the state in which the Roman Catholics of Ireland were at the accession of his present majesty; and under his government the measures pursued have, indeed, been a contrast to the dark and bigoted system of his predecessors. Under his auspicious rule a system of gradual amelioration has been introduced, by measures which were the more effectual because they were gradual, which have by degrees reversed the whole former system. You have given them full toleration and the benefits of education; taken away those odious measures which produced the disunions of families; restored the industry of the country, by granting to the people a participation in the soil, and allowed them a full share of its benefits, except the exercise of the elective franchise. By these means the people rapidly advanced in wealth, agriculture, com-

* *Ann. Reg.*, 1806, 86, 88, 127. *Parl. Deb.*, iv., 602, 606.

mercy, and general civilization: the magnanimity of Great Britain acknowledged the right of an independent government, and at length, in 1792, they were admitted to a full participation of all the privileges of British subjects, excepting those for which the present petition prays. Here, therefore, was a system of gradual relaxation introduced, and here for a time a stand was made; not because reasons existed which rendered it doubtful whether any farther concessions should ever be made, but because there were many considerations which made it appear desirable that the last relaxations should not be made in the Irish Parliament. That Parliament had not arisen, like the British, from the wants and necessities of many centuries, but it was constituted at once, with the precise object of making the Legislature a Protestant one, to the exclusion of three fourths of the population. In these circumstances, it was more than doubtful whether the sudden admission of Catholics into that Legislature, founded, as it would have been, on a constituency embracing a great majority of persons of that persuasion, might not have endangered the Protestant interests of Ireland, and possibly its connexion with this country. But that obstacle is now removed: the Irish members no longer form a separate assembly, but are merged in the general Parliament of the empire; and the same prudential considerations which forbade the admission of Catholics into the Irish Parliament, where they would have formed a dangerous majority, recommend their entrance into the British, where they can never exceed a small minority.

"It cannot be denied that the Catholics of Ireland conceived great hopes that, by the operation of the union, they would be relieved of their disabilities. No authorized assurance was ever given, no promise was made to them that such a measure would result from that step; but still, by the arguments of those who supported it, and the course of reasoning both within doors and without doors, hopes were given that the subject of Catholic Emancipation would be more favourably considered than it had hitherto been; and those who promoted the measure undoubtedly gave the Catholics to understand that their claims would meet with the most impartial consideration from the United Parliament. It is this pledge which you are now called upon to redeem: you are required, not to concede Catholic Emancipation, but to go into a committee to consider whether their demands can with safety be granted.

"Every government unquestionably has the power to impose restrictions and disabilities upon a particular and suspected class of its subjects, but it must ever be a question of expedience whether such power should be exercised or not. What valid objections can be now urged against the removal of religious disabilities? We are not now to go back into the nineteenth century to a disquisition on the justice as well as expedience of the great principles of toleration. They are universally admitted: it lies upon the opponents of emancipation to make out their exception from the general rule. We are told that it is impossible for a Roman Catholic to be a loyal subject, and great pains have been taken to inculcate this doctrine. If true, this principle would lead to this result, that you must undo all that you have done, recall every concession you have made, and begin a crusade to drive the Catholics out of Ireland. But does

history warrant the assertion that they bear this extraordinary character? Have not Protestants and Catholics been equally mingled in the ranks of the disaffected? And have not many bright examples of the loyalty and fidelity of the popish priesthood and peasantry occurred, especially during the critical period of the American war? Lamentable as were the disorders of Ireland at the close of the last century, yet it is now evident that they arose from causes foreign to their religion: from the heart-burnings consequent on the unhappy system of middlemen, and the false relation of landlord and tenant, or the contagion of revolutionary principles from a neighbouring state; and the tranquil condition of three fourths of the Catholic population for years past may surely now plead as strongly in their favour as their former discontents can militate against them.

"The period has now arrived when one of two things must be done with respect to Ireland. Either you must go back and restore the degrading and exclusive system of Queen Anne, or you must go on and conciliate the Catholics by admitting them to a full participation in the blessings of the British Constitution. No middle course is practicable. They have already received too much to be coerced by force; too little to be won by affection. They have got everything excepting the right to seats in Parliament and eligibility to the higher offices in the army, the navy, and the law. It is in vain to say that such exclusion is not an injury. To many it is a most substantial disadvantage, because it deprives them of the just reward for their talents and exertions: to all it is a galling bar, a badge of servitude; and he knows little of human nature who is not aware that such vexatious restraints, though accompanied with little real hardship, are frequently productive of more violent heart-burnings than serious patrimonial injuries. If they came into this house, do you really believe they would attempt to overturn the hierarchy of the country? What could five or six, or even fifty or sixty Catholics do to accomplish such an object in the midst of a Protestant Legislature tenfold more numerous? Similar arguments were urged against the admission of Presbyterian members, but have they ever been found in hostility against the English establishment, and has not, on the contrary, the removal of religious disabilities been the grand cause of the pacification and loyalty of the once distracted and rebellious inhabitants of Scotland?" Mr. Pitt supported the claims of the Catholics generally, but lamented that they had been brought forward at that particular moment under circumstances which left little if any hope of the question being satisfactorily adjusted.*

On the other hand, it was strenuously argued by Lord Hawkesbury, Lord Sidmouth, and Lord-chancellor Eldon: "Independent of the obvious reasons against this measure at the particular time at which it is now pressed upon the country, there are other objections applicable to every time and to any circumstances under which this subject can be brought forward. In considering this question, it is indispensable to distinguish between toleration and the concession of political power. The first should ever be granted in its fullest extent; the second should be withheld when the granting

of it may endanger the other institutions of society. The Catholics have proved themselves, by their conduct in Canada and elsewhere, to be as loyal subjects in some places as the British Empire can boast; but their present claims do not relate to their condition as subjects, but their title to political power. No law, it is true, can be considered as perpetual, and some power must every where exist capable of abrogating the laws of the state, according as circumstances may render necessary; but there are some landmarks between the governors and the governed, *non tangenda non movenda*, except on the clearest expedience or the most overbearing necessity. The principles of the Revolution, as established by the Bill of Rights and Act of Settlement, have always been considered as of this description. That great and glorious change was not brought about by speculative opinion or the passion for visionary improvement; it was the result of necessity and experienced evils; and the great statesmen by whom it was effected had the courage to put to themselves the question, whether the inconvenience of having a king of a different religion from that established in the country, or the evil of breaking in upon the legal order of succession to the crown, were the greater; and they decided in favour of the latter. Now is it not a necessary consequence of this limitation of the crown to persons of the Protestant faith that the immediate advisers, officers, and counsellors of the crown should be of the same persuasion? What would be more preposterous than, in a government where the law is above the crown, and has altered its channel of descent, to allow the ministers, the chancellor, the judges of the land, to be of the religion the most hostile to the establishment?

"What would be the practical effect of a removal of the restrictions and limitations which our ancestors have adopted for the security of the Constitution? There are many classes of dissenters who differ from the Church of England as widely on doctrinal points, and more widely on ecclesiastical government, than the Roman Catholics; but the vital point is that they do not appeal to a foreign power for instruction or direction. It is this which constitutes the grand distinction between the Roman Catholics and all other descriptions of Christians; and it is this which it is, in a peculiar manner, of importance to consider in judging of their claims to political power. It is not their profession of a different faith which renders them dangerous; it is the submission to a foreign authority—the constitution of an *imperium in imperio*, only the more dangerous that it is founded on a spiritual basis, which all conscientious persons will ever prefer to any temporal authority. In the Catholic religion, above all others, the jurisdiction and authority of the priesthood interfere in a great part of the civil and domestic concerns of life. If religion and the state are distinct and at variance, and the Catholic is compelled to decide between them, he must decide for his religion and against the state. The question is not whether Catholics may be loyal subjects—whether they should enjoy toleration, or obtain civil rights or civil liberty—for all that they already have—but whether they are to obtain political power of every description, when they refuse, and on the principles of their religion ever must refuse, to acknowledge the complete authority of the state.

"The practical effect of the extension of the
VOL. II.—R

elective franchise to the Catholics of Ireland has been to produce in most of its counties something very nearly approaching to universal suffrage. It is the opinion of those best acquainted with the internal state of Ireland, that, if the doors of Parliament are once thrown open to the Catholics, the influence of the priests will infallibly be exerted in favour of the Catholic candidates, and as certainly against the Protestants; and thus the influence of property would be operating on one side, and that of religion on the other. Such a state of things would not only create much internal confusion and disorder, but it must operate most injuriously with respect to the lower orders of the people, who must unavoidably, and on many occasions, become the victims of these contending interests.

"The present condition of the Continent renders it, in an especial manner, inexpedient to make the proposed concessions at this time. Whoever contemplates the present extension of the power of France, must be convinced that the Roman See is substantially under the power of Napoleon. The pope has been compelled to travel to Paris, a thing unheard of for ten centuries, to place a Revolutionary crown on the head of that fortunate usurper; and he looks, doubtless, for some considerable return to so extraordinary a mark of condescension. Can there be any doubt, therefore, of the complete dependence in which he is placed to the French government? and would it not be the height of madness in us, knowing his inveterate hostility to this country, to weaken our means of resistance by the admission to political power of those who are necessarily subject to a power over which he has such a control?

"Mr. Emmett and all the leaders of the Irish insurgents have declared, in their examinations before the Secret Committee of the Irish Lords, 'that the mass of the people do not care a feather for Catholic emancipation; neither did they care for Parliamentary reform, till it was explained to them as leading to other objects which they did look to, particularly the abolition of tithes.' It is evident, therefore, from their authority, as well as from the reason of the thing itself, that the great body of the Catholics would not consider what you are now called upon to grant as any desirable boon or material concession. We are ready to give them every reasonable liberty or franchise, but not to surrender the state into their hands. The expectation that concession, as such, will lead to peace, is, unfortunately, contradicted by the whole history of Ireland, where it has been invariably found that yielding leads to disturbance and anarchy; and the public peace has been preserved only by a severe code, which, how painful soever, was, in time past at least, indispensable. The severity of that code we deprecate as much as any of the advocates of the Catholics; but we cannot shut our eyes to the fact, that under it Ireland enjoyed absolute tranquillity for nearly a century; and that, since its relaxation, it has been disgraced by two rebellions, and constantly been, more or less, the theatre of disturbance. Let us, therefore, seeing the results of the preceding parts of the experiment have been so doubtful, avoid rash innovations and shun additional changes. The future destiny of our country is not in our own hands: kingdoms may rise and fall, flourish or decay; but let us not be ourselves the instruments of that blow which may occasion our destruction, and recollect that it is only by a steady adherence

to that system which we have received from our forefathers that we can hope to exist with safety, or to fall, if fall we must, with honour.*

The motion to go into a committee on the Roman Catholic petition was negatived by a great majority in both houses: in the Peers by 178 to 49; in the Commons by 336 to 124.†

In forming an opinion on this subject, interesting from the principles which it embraces, and still more from the consequences to which they lead, it is impossible to deny that it is involved in extraordinary difficulty. Not theory, but experience, is the antagonist with which liberal principles have here to contend. How convincing soever the argument in favour of the complete removal of religious disabilities may be, and how pleasing soever the prospect of constructing a society in which opinion is as free as the air we breathe, and actual delinquency alone can impose disability, it is impossible to deny that the experiment, when put into practice, has, hitherto at least, signally failed. Catholic emancipation has at length been carried; but it has produced none of the benefits which its advocates anticipated, and realized many of the evils which its opponents predicted. When it is recollected that it was argued that concession to the Irish Catholics would only lead to additional demands; that the whole influence of the priests would be thrown on the popular side, and the peace of the country be perpetually disturbed by the conflict between numbers and property, it is impossible now to dispute the justice of the objections stated to the change; and melancholy experience has taught us that Lord Hawkesbury's words were prophetic. Ireland never has been so distracted as since Catholic emancipation was granted: the total suspension of the Constitution has, in consequence, been forced as a measure of absolute necessity upon government; and, without stilling the waves of discontent in the Emerald Isle, that long-debated change has fixed the fire-brand of discord in the British Empire. Consequences so disastrous, so different from what they anticipated, have filled with astonishment the friends of toleration: many have come to doubt whether its doctrines are in reality so well founded as abstract argument would lead us to suppose; others have settled into the belief that, however well founded in themselves, they were inapplicable to the circumstances of an old empire, essentially founded upon an opposite set of principles; and that, in the attempt to draw a tainted beam out of the edifice, the whole structure has fallen into ruins.

* *Parl. Deb.*, iv., 674, 691, 695, 700, 783, 803.

† *Parl. Deb.*, iv., 843, 1059.

‡ The following table exhibits the steady and rapid increase of crime in Ireland since the Catholic Relief Bill was passed:

	Committed.	Convicted.
1828, Catholic disabilities in force	14,693	9,269
1829, Relief Bill passed in March	15,271	9,449
1830,	15,794	9,902
1831, Reform agitation	16,192	9,605
1832, Ditto	16,036	9,759
1833, Tithe agitation begun	17,819	11,444
1834, Coercion Act in force	21,381	14,523

Thus the committals in Ireland had increased a half in six years after the disabilities were removed from the Catholics. When it is recollected that not a third part of the atrocious crimes in that country are ever made the subject either of committal or trial, it may safely be concluded, from this instructive table, that during that period crime has more than doubled over its whole extent.—See *Parl. Papers*, June 14, 1835.

In truth, however, the total failure of Catholic emancipation affords no grounds for doubting, in the general case, the great principles of religious toleration; it only shows that other and deeper sources of evil were operating in Ireland, to which that measure, though founded in the abstract on just principles, could furnish no sufficient antidote; and that Great Britain is experiencing, in the endless difficulties consequent on the possession of that island, the same law of moral retribution of which France, ever since the Revolution, has furnished so memorable an example. When rightly considered, the state of that country is pregnant with political instruction: it shows that nations who commit injustice cannot escape punishment; and in its present wretchedness may be discerned additional grounds for that love of real freedom, and detestation of revolutionary ambition, which constitute the great moral of the present times.

I. The first circumstance which has left an incurable wound in Ireland, and through it, in the whole British Empire, is the enormous and unpardonable extent to which the confiscation of landed property had been carried in former times. Without referring to historical details, it is sufficient to observe that at least three fourths of the soil of Ireland has, at different times, changed hands in this violent manner, and that the great majority of the persons on whom the forfeited estates have been bestowed were English soldiers of fortune, noble proprietors, or companies resident in Great Britain. The consequences of this spoliation have been to the last degree disastrous. As the forfeiture of property is the most cruel of all acts of injustice, because it extends to distant generations the punishment of one, so it is the one of all others which most certainly leads to its own punishment. Invariably it leaves the seeds of undying animosity between the descendants of the oppressors and oppressed; between the owners of the soil and the peasantry who till their lands. Landed confiscation has been to Ireland what a similar deed of injustice was to France, a festering sore which has never been healed. In both countries restitution has become impossible, from the multitude of new interests which have been created: therefore by both countries retribution must be endured.

II. The ghastly wound thus opened in Ireland by the barbarity of feudal injustice might, however, in the course of ages have been healed, as the evils of Norman confiscation were in Great Britain, were it not for another circumstance, of peculiar and lamentable malignity, which has continually kept it open. This is the unhappy bestowing of the estates upon persons resident in this country, and the consequent introduction of the system of middlemen and absentee proprietors into the neighbouring island. These evils necessarily flowed from the first great act of injustice; for it was not to be supposed that English noblemen would leave their baronial palaces to dwell in the comparatively barbarous realm of Ireland; and they soon found that, without middlemen interposed between them and the cultivators of the soil, they could not realize anything whatever out of their possessions. Thence necessarily followed, in close and rapid succession, the interposition of a number of tenants, many holding their estates for a

long tract of years, between the landlords and the peasantry; the continual impoverishment of the rural cultivators, by the necessity of maintaining, out of the produce of their labour, such a multitude of superiors; and the ruinous right of the landlord to distraint the effects of the sub-tenant for the arrears of rent due by his principal: a privilege which, in its application to a country so situated, rendered the growth of agricultural capital impossible, and chained the people to habits of indigent existence and unlimited increase of population. The Irish landlords have long clung with blind tenacity to this blasting privilege, inconsistent with any degree of prosperity in their country, as the only means of realizing any rents out of their tenantry; a parallel case to the strong attachment of the holders of national domains in France to the Revolutionary law of succession, the certain destroyer of anything like general freedom in their country; and another example of that law of nature which induces men, who have profited by the fruits of injustice, to adhere with infatuated obstinacy to the very institutions which are calculated to bring about its punishment.

III. The unhappy vicinity to Great Britain, and the supposed necessity of having a similar form of government and national representation for the two countries, has contributed still farther to perpetuate the disorders of Ireland, and distract its indigent peasantry by the passions and the ambition which centuries of freedom and an extensive distribution of property alone enable its more advanced neighbour to bear with safety. Experience has now placed

And total unfitness of the Irish at present for a free constitution.

it beyond a doubt that Ireland is not capable of bearing the excitement, or disregarding the passions consequent on a popular constitution.

The state of civilization to which she has arrived is not adequate to such a trial: the passions consequent on the unhappy wounds in her bosom are too strong to endure them without convulsions.* Could the wishes of philanthropy be granted, what Ireland should receive for half a century is a wise and humane, but despotic government, which, while encouraging every branch of industry, alleviating every source of suffering, aiding every opening to employment,

* The atrocious crimes over Ireland in the last months of 1832, three years after Catholic emancipation had passed, were at the rate of six thousand a year. In the year immediately following the passing of the Coercion Act they were, over the whole country, reduced three fifths; and in the county of Kilkenny, and a few other baronies where its extraordinary powers were put in force, they had been reduced from 1561 to 330 a year.—See *Parl. Report*, May 8, 1833, and May 14, 1834. "The disturbances of Ireland," said the Marquis Wellesley, while viceroy of that country in 1834, "have in every instance been excited and inflamed by the agitation of the combined projects for the abolition of tithes and the destruction of the union with Great Britain. I cannot employ words of sufficient strength to express my solicitude that his majesty's government should fix the deepest attention on the intimate connexion, marked by the strongest characters in all these transactions, between the system of agitation and its inevitable consequence, the system of combination leading to violence and outrage: they are inseparably cause and effect; nor can I, after the most attentive consideration of the dreadful scenes passed under my view, by any effort of my understanding separate one from the other in that unbroken chain of indissoluble connexion." So strongly are the Irish themselves convinced of their inability to bear the excitement of a free constitution, at least in periods of agitation, that Mr. Littleton, the Irish secretary under Lord Grey's administration, stated in Parliament that he had never met with a single person of any shade of political opinion in Ireland, and he had mingled with all, who did not cordially approve of the Coercion Act of 1833, and earnestly wish for its renewal.—*Mirror of Parliament*, the 19th of July, 1834.

should, at the same time, close every avenue to Democratic ambition, and extinguish every hope of Revolutionary elevation. It is thus, and thus only, that the apparently incurable disorders of her social condition could be removed; that habits of industry could become general; artificial wants and a higher standard of comfort reduce to due subjection the principle of population; and a foundation be laid, in the growth of an opulent middling class in society, for the safe and pacific exercise of those powers which, when prematurely conceded, destroy in a short time the only durable foundation of real freedom.

IV. It was long ago observed by the great champion of religious freedom, Mr. Locke, that the principles of toleration are not to be applied to those who hold that faith is not to be kept with heretics, or who attribute to themselves any peculiar privilege or power in civil concerns, or acknowledge any foreign or alien ecclesiastical authority.* The distinction which he draws between toleration to those who merely differ from government in religious belief, and those who acknowledge a foreign spiritual authority, and are animated by an undying desire to regain the lost possessions or ascendancy of the Catholic Church, is in the highest degree important, and throws a precious ray of light upon the darkness with which the calamities consequent on Catholic emancipation have shrouded not only the prospects of the British Empire, but the great principles of religious toleration itself. These calamities are not chargeable upon the doctrines of religious freedom abstractly considered; they are the fatal results of the combination of religious difference in the case of the

* Locke's words, which are very remarkable, are as follows: "Another more secret evil, but more dangerous to the commonwealth, is when men arrogate to themselves, and those of their own sect, some peculiar prerogative, covered over with a specious show of deceitful words, but in effect opposite to the civil rights of the community. We cannot find any sect that teaches expressly and openly that men are not obliged to keep their promise, that princes may be dethroned by those who differ from them in religion, or that the dominion of all things belongs only to themselves; for these things, proposed thus nakedly and plainly, would soon draw on them the eye and the hand of the magistrate, and awaken all the care of the commonwealth. But, nevertheless, we find those who teach the same things in other words. For what else do they mean who teach that no faith is to be kept with heretics? Their meaning is, forsooth, that the privilege of breaking faith belongs to themselves, for they declare all that are not of their communion heretics. These, therefore, and the like, who attribute unto the faithful, religious, and orthodox—that is, in plain terms, to themselves—any peculiar power or privilege above other mortals in the concerns of religion, or who, under pretence of religion, do challenge any manner of authority over such as are not associated with them in their ecclesiastical communion; I say these have no right to be tolerated by the magistrate, as neither those that will not own and teach the duty of tolerating all men in matters of mere religion. For what do all these and the like doctrines signify, but that they may and are ready upon any occasion to seize the government, and possess themselves of the estates and fortunes of their fellow-subjects, and that they only ask leave to be tolerated by the magistrates so long until they find themselves strong enough to effect it?"

"Again, that church can have no right to be tolerated by the magistrates which is constituted upon such a bottom, that all those who enter into it do thereby, *ipso facto*, deliver themselves up to the protection and service of another prince; for by this means the magistrate would give way to the settling of a foreign jurisdiction in his own country, and suffer his own people to be enlisted, as it were, for soldiers against his own government. Nor does the frivolous and fallacious distinction between the Court and the Church afford any remedy to this inconvenience, when both are subject to the absolute authority of the same person, who has not only influence to persuade the members of his own church to whatever he lists, but can enjoin it on them on the pain of eternal fire."—*First Letter on Toleration*, Works, vi., 46, 47.

Catholics, with the poisonous intermixture of ecclesiastic ambition, civil rancour, and political passion. The Catholics are dangerous, not merely because they profess different religious tenets, but because they belong to an ecclesiastical power which formerly numbered the British Islands among the brightest jewels of its mitre, and will never cease to labour to extirpate the faith which despoiled it of that ancient part of its heritage. Temporal passion, political ambition, revenge for injury, are here mixed up, in overwhelming proportions, with the abstract question of religious freedom. Unlimited toleration the Irish papists are clearly entitled to, and have long possessed; but to concede to them political power was the same error as it would have been in the Carthaginians to have permitted on their shores an armed and fortified settlement of Romans; or for England to have allowed an intrenched camp of the soldiers of Napoleon to be constructed on the coast of Kent. Nor is the comparatively inconsiderable number at first of such an organized band of aliens any reason for despising its ultimate dangers, for such a body, by taking advantage of the divisions of the ruling power, and attaching itself to the malecontents in its bosom, can almost always, in the end, attain a supremacy over both the contending factions. A few hundred English merchants appeared as suppliant settlers on the banks of the Ganges; but no sooner did they gain the privilege, professedly for defence, of constructing forts and batteries, than they went on from one acquisition to another, till they had subjected a hundred millions of Hindoos to their dominion.

While the British Parliament was occupied with these momentous discussions, Napoleon at the British people, little conscious of the imminent danger which threatened them from the power of Napoleon, were eager in the pursuit of the abuses opened up in the tenth report of the naval commissioners, that great conqueror was busied with the twofold object of consolidating in all the affiliated republics his newly-acquired authority, and directing the vast naval and military preparations destined for the invasion of this country. With the double view of attaining the first of these objects, and disguising the real designs by which he hoped to effect the last, he introduced a change into the government of all the states dependant upon France, placed on his head the Iron Crown of Lombardy, and surrendered himself, in appearance, to the magnificent fêtes by which the impassioned people of Italy celebrated the supposed era of their regeneration; but during the whole time his eyes were fixed on the shores of the Channel, and the minutest movements of the navies of France, Spain, and Holland, which were all to co-operate in the expedition, as well as of the vast army destined for his immediate command, were regulated by his indefatigable activity, while to appearance engaged only in the pomp and magnificence of an imperial progress.*

Holland was the first of the dependant republics which underwent the change consequent upon the assumption of the crown by Napoleon. The continuance of the Republican régime in that country was altogether at variance with the institutions which he proposed to establish in all the states

subjected to his control; but as it appeared too violent a transition to make so old a commonwealth pass at once from Democracy to monarchy, an intermediate preparatory state was imposed upon it by the emperor. The whole powers of the Constitution were by this change vested in a single magistrate, who, to conciliate the patrician party, was styled the Grand Pensionary. This new Constitution, forged at Paris, the grand manufactory of institutions of that description, was prepared by the French government, with the aid of M. Schemmelpennick, the Dutch ambassador at that capital, a respectable man, who rapidly entered into the views of the emperor, and was rewarded by the office of Grand Pensionary himself. The Dutch, incapable of resistance, yielded to this, as they had done to all the preceding changes. The Democrats were indignant at beholding a single governor concentrate in his hands all the powers of government; but the Orange party were secretly gratified at seeing so effectual a curb imposed on their revolutionary antagonists, and augured better things of this Constitution than any which had before been forced upon their country. The new Constitution, accepted on the 22d of March by the Legislative Body, soon received the sanction of the great majority of the inhabitants.*

More important changes soon after ensued in the Italian States. The original design of Napoleon was to have erected the Italian Republic into a separate kingdom, and placed his brother Joseph on the throne; and this choice was highly agreeable to the Cisalpines; but that upright prince declared he would not accept it, unless the emperor would give the new kingdom that without which it could not exist, a tract of seacoast, and a harbour in the Mediterranean, and relieve it from the burdensome tribute of 25,000,000 francs (£1,000,000) yearly paid to the French government. These conditions by no means answered the views of Napoleon, and therefore he changed his design, and resolved to place the crown of Lombardy on his own head, and send his son-in-law, Eugene Beauharnois, to Milan, to govern the kingdom in quality of viceroy.†

This design was first opened to Count Melzi and a deputation of the Italian Republic, who attended at Paris on occasion of the coronation of Napoleon as Emperor of France. Their consent was without difficulty obtained; and it having been arranged that the proposal should appear to come from the Italians themselves, Count Melzi, in a studied harangue, delivered in presence of the French Senate, called upon Napoleon to establish a monarchical form of government and hereditary succession, as the only means of averting the evils with which their infant institutions were threatened. He then read aloud the fundamental articles of the Act of Settlement, by which Napoleon, emperor of France, was declared King of Italy, with the right of succession to his sons, natural or adopted, and male heirs. On the following day the emperor appeared in great pomp in the Senate, and conferred on his sister Eliza the principality of Piombino. The act of settlement of the Italian crown was then read; the members of the deputation took the oath of fidelity to their new sovereign, and he declared, "That

March 18, 1805.

* *Norv.*, ii., 365, 367. *Dum.*, xi., 140, 141.

* *Bign.*, iv., 199, 200.

† *Dum.*, xi., 133, 134. *Bign.*, 199, 202.

he accepted, and would defend, the iron crown; and that, even during his lifetime, he would consent to separate the two crowns, and place one of his natural or adopted sons upon the throne as soon as the British, French, and Russian troops have evacuated respectively Malta, Naples, and the Ionian Islands." This great change was proclaimed with due solemnity at Milan on the

31st of March, when Eugene Beauharnois, who had already assumed the command of the army, acted as viceroy, and received the homage of the principal authorities.

On the same day the new Constitution of the kingdom was promulgated by an imperial and royal decree. The former and singular establishment of three colleges of electors, consisting of proprietors, men of letters, and men of business, was kept up in the new kingdom; but in every other respect its institutions were an exact copy of those established in the French Empire.*†

The better to conceal the great designs which he was at this time bringing to maturity for the concentration of his land and sea forces in the invasion of Great Britain, Napoleon resolved to proceed to Italy, and dazzle the world by the splendour of the ceremonies attendant on his assumption of the iron crown of Charlemagne. For this purpose

he set out for Turin, by the route of Fontainebleau and Lyons, corresponding daily with the minister of marine, and retiring from the magnificence of entertainments and the reception of adulatory addresses to direct the minutest details of the great armament which he was collecting in every harbour, from Texel to Cadiz, and from Brest to Venice, for this grand expedition. Nothing gives so strong an impression of the vast ability and indefatigable activity of his mind as the study of the numerous minute and lucid orders which he addressed during every day of this journey to the minister of marine, and the admirable sagacity with which almost all the conceivable chances of those numerous squadrons were calculated and provided for by his all-seeing intellect.‡ But while these were the objects of his secret meditation, very different were the occupations in which, to external appearance, he was engaged. At Lyons he inspected the rising manufactures of that city, upon which the five pacific years of his government had already diffused an

extraordinary degree of prosperity. In crossing Mount Cenis, he surveyed the great works in progress for the formation of the magnificent road which now traverses that mountain. At Turin he relinquished the royal palace to the pope, who had reached that place on his return to Rome, and lodged in the Castle of Stupinigi, a country residence of the kings of Sardinia, which had been splendidly fitted up for his reception. He there received accounts of the successful passage of the Straits of Gibraltar by the Toulon squadron, and its junction with the Spanish fleet of Admiral Gravina at Cadiz, of which the details will immediately be given. Overjoyed at this intelligence, he moved on with alacrity to Asti and Alexandria, and at the latter place seemed wholly engrossed with the immense fortifications in progress round its walls, destined to render it one of the greatest fortresses in the world. A splendid pageant had for some time been in preparation at the field of Marengo. Thirty-four bat-

talions and seven squadrons were assembled on that memorable plain, to imitate the manœuvres of the battle which had given it immortality; while the emperor and empress, seated on a lofty throne which overlooked the whole field, were to behold, in mimic war, the terrible scenes of which it had once been the theatre. The day was bright and clear; the soldiers, who from daybreak had been on the ground, impatiently awaited the arrival of the hero; and shouts of acclamation rent the sky when he appeared with the empress, in a magnificent chariot drawn by eight horses, surrounded with all the pomp of the empire, and ascended the throne, before which the manœuvres were to be performed. Many of the veterans who had been engaged in the action were present, among whom the soldiers, in an especial manner, distinguished Marshal Lannes, who had borne so large a portion of the brunt of the Imperialists in that terrible strife. After the feigned battle was over, the soldiers defiled before the emperor, upon the most distinguished of whom he conferred, amid the loud acclamations of their comrades, the crosses and decorations of the Legion of Honour. The splendid equipments of the men, the proud bearing of the horses, the glitter of gold and steel which shone forth resplendent in the rays of the declining sun, and the interesting associations connected with the spot, produced an indelible impression on the minds of the spectators, and contributed not a little to fan the military spirit among the indolent youth of Italy, whom Napoleon was so desirous to rouse to more manly feelings prior to the great contest with Austria, which he foresaw was approaching.*

On the day following the emperor continued his journey, passed the Po at Mezzona Costa amid the shouts of a prodigious concourse of people, and proceeded to Pavia, where he received the adulatory addresses with which the learned men of Italy lauded the dispenser of its wealth and influence. His triumphal entry into Milan took place on the 8th; and, amid the fêtes and rejoicings which preceded his coronation, the designs were formed for the greater part of those splendid public edifices which now adorn that beautiful city, and consoled its inhabitants for all the sacrifices they were obliged to make during the remainder

* Bot., iv., 154, 156. Dum., xi., 137, 138.

† Napoleon, on this occasion, made the following speech in the Senate: "Powerful and great is the French Empire, but greater still is our moderation. We have in a manner conquered Holland, Switzerland, Italy, Germany; but in the midst of such unparalleled success we have listened only to the counsels of moderation. Of so many conquered provinces we have retained only that one which was necessary to maintain France in the rank among nations which she has always enjoyed. The partition of Poland, the provinces torn from Turkey, the conquest of India, and of almost all the European colonies, have, in a manner, turned the balance against us. To form a counterpoise to such acquisitions we must retain something, but we must keep only what is useful and necessary. Great would have been the addition to the wealth and resources of our territory if we had united to them the Italian Republic; but we gave it independence at Lyons; and now we proceed a step farther, and solemnly recognise its ultimate separation from the crown of France, deferring only the execution of that project till it can be done without danger to Italian independence."—Botta, iv., 157.

‡ This correspondence is to be found entire in General Matthieu Dumas's work, having been put into his hands by the Duchess Decres, widow of the minister of marine, to whom it was addressed.—See DUMAS, xi., 195, 286. *Pieces Just.* It leaves no doubt whatever as to the reality of Napoleon's designs for the invasion of this country, and the extraordinary combination of chances which alone prevented it from being carried into effect.

* Bot., iv., 157, 161. Dum., xi. 141, 147. Bigu., iv., 217, 218.

Splendid pageant in the field of Marengo. May 5.

His journey into Italy.

May 8, 1805. He enters Milan.

of the war to the ambition of their sovereign. Then were projected the gorgeous additions to the Cathedral, which now shoots up its hundreds of marble pinnacles and thousands of white statues pure as the driven snow, in glittering splendour, into the clear blue of heaven; the chaste design of the arch of the Simplicon; the noble sweep of the amphitheatre; and the other works which, unhappily for the arts, were in part left incomplete at the fall of Napoleon. A fortnight was devoted to the reception of congratulatory addresses from the foreign and Italian potentates; among whom were, in an especial manner, noticed those from the King of Naples and the King of Prussia, two powers, particularly the latter, whose neutrality was of essential importance in the great contest which was approaching. The better to testify his good understanding with Prussia, the emperor, at the reviews of the troops, wore the decorations of the black and red eagle, sent to him on the occasion by Frederic William.*

After reposing a thousand years in the treasury of Monza, the iron crown of Charlemagne was brought forth to encircle the brows of Napoleon. On the 26th of May the ceremony of the coronation was conducted, with the utmost magnificence, in the Cathedral of Milan. The dresses, the decorations, the ornaments, were even more sumptuous on this occasion than on the preceding one, how splendid soever, at Paris. First came forth, from a side entrance, the Empress Josephine, dressed in gorgeous habiliments, and dazzling with the lustre of diamonds. She was received with loud acclamations; but the lofty aisles shook with thunders of applause when, a few minutes after, the emperor appeared, arrayed in his imperial robes, bearing on his head the imperial diadem, and in his hands the crown of Charlemagne and the sceptre of justice. The Cardinal Caprara officiated instead of the pope on the occasion; Napoleon placed the iron crown on his own head, pronouncing at the same time the historical words, *Dio me la diede: guai a chi la tocca*.† He afterward, as at Paris, himself crowned Josephine, who knelt at the high altar at his feet. The magnificence of the dresses, the matchless beauty of the women, the inimitable strains of the music, and the admirable decorations of the Cathedral, in all of which the refined taste of the Italians shone forth in the most conspicuous manner, combined to form a scene surpassing even the far-famed coronation in the preceding year at Notre Dame. Te Deum was afterward sung, according to the ancient custom of the kings of Lombardy, in the Ambrosian Church. Fireworks, fêtes, and illuminations closed the day; and nothing was omitted which could captivate the ardent imaginations of the Italians, or flatter the pleasing illusion that the days of national independence had at length arrived, and the reign of Tramontane authority ceased forever.‡

Among the numerous congratulatory addresses presented on this occasion to the emperor, not the least remarkable was that from the King of Naples, couched in the warmest terms of flattery and adulation. At that very time, however, he had intercepted a secret correspondence

of Queen Caroline with the imperial cabinets of Vienna and St. Petersburg, which left no doubt of the understanding of that court with the enemies of France, and he in consequence, in his answer to the address, gave way to one of those sallies of passion to which he was occasionally subject, and which, to so contemptible an enemy, and for the deeds of a high-spirited queen, was in a peculiar manner unworthy of his character. A more important deputation was soon after received from the Senate of Genoa; and the terms in which the doge addressed the emperor left no doubt as to the important alterations in the political situation of that republic which were soon to take place. "In regenerating the people of this country," said that chief magistrate, "your majesty has contracted the obligation to render it happy; but this cannot be done unless it is governed by your majesty's wisdom and valour. The changes which have taken place around us have rendered our insulated situation a source of perpetual disquietude, and imperiously call for a union with that France which you have covered with imperishable renown. Such is the wish which we are charged to lay at your majesty's feet. The reasons on which it is founded prove sufficiently that it is not the result of any external suggestion, but the inevitable consequence of our actual situation."*

Napoleon replied in words memorable, as containing the death-warrant of one of Napoleon's re- the oldest and most distinguished re- ply to the lat- publies of modern Europe. "Cir- ter body. cumstances have frequently compelled me within the last ten years to interfere in your internal situation. I have constantly endeavoured to introduce peace, and contribute to the spread of those liberal principles which alone could restore to your government that splendour with which it formerly was surrounded; but I am now convinced of your inability to accomplish by yourselves anything worthy of your ancient renown. Everything has changed. The new maritime code which the English have adopted, and compelled the greatest part of Europe to recognise; the right which they have assumed of blockading places not in a state of siege, which, in effect, is nothing else than a right to annihilate at their pleasure the commerce of every other people; the continual ravages of your coasts by the corsairs of Barbary—all conspire to render your insulated existence to the last degree precarious. Return, therefore, to your own country. I shall shortly follow you there, and put the seal to the union which my people and you have contracted. The barriers which separate you from the remainder of the Continent shall, for the common good, be removed, and things restored to their natural situation."† The secret motive of Napoleon is here conspicuous. The annexation of Genoa to France was a part of his general maritime system, and suggested by his inveterate hostility to this country.

A few days afterward a decree appeared, formally incorporating the Ligurian Republic with the French Empire, and dividing its territory into three departments: those of Genoa, Montenotte, and the Apennines. Two days afterward the ancient standard of the Republic was taken down in all the forts and vessels, and the tricolour hoisted in its stead. Thus was the

Incorporation
of Genoa with
France.

French territory, for the first time, fairly extended beyond the Alps, a large surface of seacoast added to its dominion, its frontiers advanced far into the Apennines, and brought to adjoin the Tuscan States; while one of the oldest republics in Europe, which for fourteen hundred years had maintained a separate existence, often illustrated by great and heroic actions, sunk unheeded into the arms of death.*†

Before quitting the capital of Milan, Napoleon presided at the opening of its Legislative Assembly, and laid the foundation of those great improvements in its social institutions which have survived the transitory empire of its author. The annual expenses of the kingdom were fixed at 100,000,000 francs, or £4,000,000; the military establishment cost 30,000,000, the civil only six; and a very considerable portion of the public revenue was allotted to the departments, to be laid out in canals, bridges, and other works of public ornament or utility. The Code Napoleon was introduced, which still continues, from its experienced utility, notwithstanding the change of government, to regulate the decisions of its courts of law: the order of the Iron Crown instituted, and the authority and powers of the viceroy, Eugene Beauharnois, defined by an express statute. Napoleon, after having received as king the oath of allegiance of his son-in-law as viceroy, pronounced a discourse, which terminated with these words, sufficiently expressive of the military direction which he was so desirous of giving to the ambition of Italy: "I have given fresh proofs of my desire to accomplish, by every means in my power, the happiness of

the Italian people. I trust that, in their turn, they will endeavour to occupy the place which they have already obtained in my mind; and they will never do so till they are persuaded that force in arms is the chief bulwark of nations. It is at length time that the brilliant youth, who now waste the best years of their lives in the indolence of great cities, should cease to fear the fatigues and the dangers of war.*"

Notwithstanding the heavy burdens with which they were oppressed under the government of Napoleon, and the unexampled calamities with which it closed, the Italians were highly satisfied with his administration, and still look back with fond regret to the *Regno d'Italia* as the brightest period of their modern existence. Part of this, no doubt, is to be ascribed to the expenditure and animation consequent on the vice-regal court at Milan, and the natural gratification which the people experienced at the elevated position which, as subjects of Napoleon, they occupied in the theatre of Europe. But still more was owing to the wisdom and moderation of Eugene's internal administration, and the admirable principles of government which he received from the sagacity and experience of Napoleon. In the management of the kingdom of Italy, he followed the maxims which deservedly gave, and so long preserved to the Romans, the empire of the world. Unlike the conquered states of the other European monarchies, the inhabitants of Lombardy felt the foreign yoke only in the quickened circulation of wealth, the increased vent for industry, the widened field for exertion. Honours, dignities, emoluments, all was reserved for Italians: hardly a magistrate or civil functionary was of foreign birth. Everywhere great and useful undertakings were set on foot; splendid edifices ornamented the towns; useful canals irrigated the fields: if the burdens of the people were heavy, they had at least the gratification of perceiving that a large portion of them were reserved for domestic objects, and that they received back, in the rewards of industry, a part of what they had rendered to the service of the state. In the satisfaction arising from this judicious system of government, they forgot that the heavy tribute of a million yearly was remitted to Paris, and that the higher situations in the army were exclusively occupied by Frenchmen: a system under which the soldiers of Italy came to perform glorious actions before the close of the war, and which seems to be the only method by which a temporary revival, even of the military spirit, can be communicated to nations enervated by the long enjoyment of peace, and the establishment for centuries of the refinements of civilization.†

Still keeping his eyes fixed on the shores of the Channel, and corresponding daily with his minister of marine for the regulation of all the squadrons destined to co-operate in the English expedition, Napoleon visited the other towns of the north of Italy; Verona, Mantua, Parma, successively felt the animating influence of his presence, and in each he left some lasting mark of the grandeur of his conceptions, and the minute attention which he paid to the wants and interests of his subjects. At Bologna he received a deputation

Popularity of Napoleon's government in Italy, and great works which he undertook.

* Dum., xi., 155, 156.

† Napoleon's secret motive for this act of rapacity, like most of the actions of his life, was the insatiable desire which he was animated of subverting the power of Great Britain. This distinctly appeared from his letter to the arch-chancellor of that republic, on the advantages to be derived from this acquisition. "I had no other reason for uniting Genoa to the Empire but to obtain command of its naval resources; and yet the three frigates which its port contains are not yet armed. Genoa will never be truly French till it furnishes six thousand sailors to my fleets. It is neither money nor soldiers which I wish to extract from it. Sailors, old sailors, are the contribution which I require. You must establish a naval conscription there. It is in vain to talk of governing a people without occasioning frequent discontent. Do you not know that in matters of state justice means force as well as virtue? Do you think I am so sunk in decrepitude as to entertain any fears of the murmurs of the people of Genoa? The only answer I expect or desire to this despatch is, *sailors, ever sailors*. You are sufficiently acquainted with my resolution to know that this desire is not likely to be ever diminished. Think of nothing in your administration, dream of nothing, but sailors. Say whatever you please in my name; I will consent to it all, provided only that the urgent necessity of furnishing sailors is expressed with sufficient force."

—BIGN., v., 78.

So tenacious was Napoleon on this subject, and so provident was that great conqueror of the future at this period of his government, that he wrote shortly after to the same minister when on the eve of setting out for the Rhine: "To secure victories, we must think only of defeats. Never lose sight of the chance of my army in Italy being compelled to fall back on Alexandria, nay, on Genoa. Let the artillery, the arsenal, the magazines, be there in a condition to stand a siege." Again, from Strasbourg, on the 1st of October: "Never lose sight of the provisioning of Genoa. I must have there at least 300,000 quintals of wheat. My war projects are vast; but in the midst of them all never lose sight of Genoa. Even if besieged, still remain at your post there. Take such measures that in no event can you run short of corn. Say boldly, on all occasions, that Genoa is indissolubly united to France. Repeat that the man who, on their mountains, dissipated the hosts of Austria and Sardinia with thirty thousand men, is not now likely to yield to the menaces of coalition when he has three hundred thousand in the centre of Germany." —BIGN., v., 79, 80.

Sept. 16, 1805, from St. Cloud.

Oct. 1, from Strasbourg.

from the Republic of Lucca, complaining of the vexatious dominion of the oligarchy, under whose influence they had fallen; and to whom he promised a government in the person of his sister Eliza, which should be completely in harmony with the institutions of the other states in Northern Italy: veiling thus, as he always did, his projects for the advancement and elevation of his family under an air of regard for the public welfare; and affecting the greatest deference for the public choice, when he was in effect depriving the people of all influence either in the election of their government or the administration of affairs. At length, on the 30th of June, he made a triumphal entry into Genoa, and celebrated the union of that city with France by fêtes and rejoicings of the most unparalleled magnificence. At the gates of the city he was received by the magistrates with the keys. "Genoa, named the superb from its situation," said they, "is now still more so from its destination: it has thrown itself into the arms of a hero; jealous in many ages of its liberties, it is now still more so of its glory; and therefore it places its keys in the hands of one above all others capable of maintaining and increasing it." In the principal church of the city he received the oaths of allegiance of the leading inhabitants, amid the thunder of artillery from the overhanging forts, batteries, and vessels in the harbour, and then commenced the fêtes, which in splendour and variety exceeded anything seen in Italy in modern times. All that Eastern imagination had fancied, all that poetic genius has ascribed to fairy power, was realized on that memorable occasion. The singular and romantic situation of the city, its blue sea and cloudless skies; its streets of marble and gorgeous domes; its embattled shores and overhanging forts; its proud palaces, surmounting one another in gay theatric pride, and lovely bay, glittering with the sails of innumerable barks, were peculiarly fitted to give animation and lustre to the spectacles. Splendid, above all, were the fireworks and illuminations at night: spreading from the Lantern on the west to the extremity of the Mole on the east, seeming to ascend to heaven in the mountains above, and to descend to the deep in the reflection of the water beneath. Never, in the proudest days of its greatness, amid the triumphs of Doria or the glories of La Meloria, did Genoa present so magnificent a spectacle as in these the last of its long existence. It was amid the roar of artillery and the blaze of illumination that this venerable Republic descended into an unhonoured tomb. Such is modern Italian patriotism!*

The same period witnessed the extinction of the Republic of Lucca; the promises of Napoleon were accomplished: it was bestowed, as a separate appanage, along with Piombino, on his sister, the Princess Eliza. Thus was fulfilled the saying of Napoleon nine years before, that the days were passed in which republics could be swallowed up by monarchies! Finally, he put the last hand to the organization, at this time, of Italy, by a decree, after his return to Paris, incorporating the states of Parma and Placentia with the French Empire, under the title of the twenty-eighth military division. His ascendancy in Italy was

now complete: Piedmont, Genoa, Parma, and Placentia were incorporated with the Empire: he reigned at Milan by the title of king, and in Lucca and Tuscany by the ephemeral governments of the Princess Eliza and the King of Etruria.*

These prodigious strides towards universal dominion did not escape the notice of the other powers of Europe. The resolution of Russia and England was already fixed; but the temporizing policy of the cabinet of Vienna, desirous to gain time, and prepare for those redoubtable blows which they well knew, in the event of hostilities, would be in the first instance directed against themselves, rendered it necessary during the first part of the year to delay the rupture. The rapid advances of Napoleon in Italy, however, at length roused the indignation of the Austrian nobility. M. Winzingerode, the Russian ambassador, daily found the cabinet more inclined to adopt his views as to the necessity of a general and combined effort to arrest the common danger; and at length the force of general opinion became so great, that it produced a change in the cabinet, and total alteration in the external policy of government. The illustrious president of the council, M. Cobenzell, who had long been at the head of the pacific party, resigned, and was succeeded by Count Bail-[†] June, 1805. let Latour; and Prince Schwarzenbourg received the situation of vice-president of the Aulic Council. This change was decisive: the war party were now predominant; and it was only a question of time and expedience when hostilities should be commenced.

Russia and England, more removed from the danger, and therefore more independent in their resolutions, had proceeded considerably farther in the formation of a coalition. On the 11th of April a treaty was signed at St. Petersburg, which regulated the terms and the objects of the contracting parties, and the forces they were respectively to employ in carrying these into execution. The preamble set forth, "As the state of suffering in which Europe is placed demands speedy remedy, their majesties have mutually agreed to consult upon the means of putting a stop thereto, without waiting for fresh encroachments on the part of the French government. They have agreed, in consequence, to employ the most speedy and efficacious means to form a general league of the states of Europe, and to engage them to accede to the present concert." The forces to be employed, independent of those furnished by England, were fixed at 500,000 men; and the objects of the league are declared to be, "1. The evacuation of the country of Hanover and of the north of Germany. 2. The establishment of the independence of the Republics of Holland and Switzerland. 3. The re-establishment of the King of Sardinia in Piedmont, with as large an augmentation of territory as circumstances will admit. 4. The future security of the kingdom of Naples, and the complete evacuation of Italy, including the island of Elba, by the French forces. 5. The establishment of an order of things in Europe which may effectually guaranty the security and independence of the different states, and present a solid barrier against future usurpations.

Extinction of Lucca, and incorporation of Parma and Placentia with France.

Increasing jealousy of Austria, and change in its ministry.

Treaty, offensive and defensive, between Russia and England, April 11, 1805.

strife which was approaching, and apprehensive of being cast down from the position which she occupied in the shock of such enormous powers, Prussia made the most energetic efforts to avert the collision, and for this purpose the cabinet of Berlin despatched M. Zastrow, aid-de-camp to the king, to St. Petersburg. Under the mediation of Prussia, a negotiation between the courts of Russia and France took place, which for three months averted the commencement of hostilities, but led to no other result. Neither party was sincere in the desire for an accommodation; and if either had, the pretensions of the opposite powers were too much at variance to render a pacification possible. France was resolutely determined to abandon none of its acquisitions on the Continent, alleging as a reason that they were necessary to form a counterpoise to the vast increase of territory gained by Russia in the East, by Austria in Italy, and by England in India; and the Emperor Alexander replied, with reason, that recent events had too clearly demonstrated that the acquisitions of France were out of all proportion to those of the other powers: a fact of which the necessity of a general coalition to form a barrier against its ambition afforded the clearest evidence.*†

Notwithstanding all the efforts of England and Russia, however, it was found impossible to overcome the leaning of Prussia towards the French interest. The real secret of this partiality was not any insensibility to the dangers to be apprehended to the independence of Germany from the power of France in the cabinet of Berlin, or its able director, Baron Hardenberg, but the effect of the glittering prize which her ministers had long coveted in the Electorate of Hanover. The Prussian government could never divest itself of the idea that, by preserving a dubious neutrality, and reserving her interposition for the decisive moment, she might without danger add that important acquisition to her dominions. In effect, Napoleon, well aware

of this secret bias, withdrew, in the close of July, 12,000 men from the Hanoverian states; and the Prussian ministers then dropped hints as to "the revival of the king's wishes as to Hanover," and at length openly broached the project of taking provisional possession of that electorate, "as the union of the Continental dominions of his Britannic majesty to Prussia is of such consequence to that monarchy, that it can never relinquish the prospect of gaining such an acquisition, provided it can be done without compromising the character of his majesty." There was the real obstacle. The King of Prussia, notwithstanding all the immediate advantages of the acquisition, was stung with the secret reproaches of conscience at the idea of thus appropriating the possessions of a friendly power at the very moment when it was making such efforts, without the idea of selfish recompense, for the deliverance of Europe. The struggles of conscience, however, became daily weaker. The king at length put the question to his ministers, "Can I, without violating the rules of morality, without being held up in history as a prince destitute of faith, depart, for the acquisition of Hanover, from the character which I have hitherto maintained?" The woman that deliberates is lost. It was easy to see in what such contests between duty and interest would terminate. Before the middle of August, the Prussian cabinet intimated to the French minister at Berlin their willingness to conclude a treaty of alliance, offensive and defensive, with the French government, on the footing of the annexation of Hanover to their dominions; and Duroc was forthwith sent from Paris by Napoleon to conclude its terms, and arrived there on the 1st of September. Subsequent unforeseen events prevented the treaty being signed, and saved Prussia from this last act of cupidity and infatuation; but, in the mean while, the precious moments were lost. The French forces were enabled to pour in irresistible multitudes, through the Prussian dominions, upon the devoted host at Ulm; and the battle of Austerlitz overthrew the independence of Germany, and exposed Prussia, unaided, to the mortal strokes of the French emperor. By such combinations of selfishness and folly was Napoleon aided in his project of elevating France to supreme authority in Europe, and for such wretched objects was that sincere alliance of all its powers long abandoned, which would at any time have opposed an effectual barrier to his progress!††

* Bign., iv., 258, 269. Dum., xii., 92, 95.

† The real points in dispute between France and Russia will be better understood from the following extract from the *Moniteur* at this period, than the reserved and formal style of diplomatic notes. "What have France and Russia to embroil each other? Perfectly independent of each other, they are impotent to inflict evil, but all-powerful to communicate benefits. If the Emperor of France exercises a great influence in Italy, the Czar exercises a still greater over Turkey and Persia. If the cabinet of Russia pretends to have a right to affix limits to the power of France, without doubt it is equally disposed to allow the Emperor of the French to prescribe the bounds which it is not to pass. Russia has partitioned Poland; it is but fair that France should have Belgium and the left bank of the Rhine. It has seized upon Crimea, the Caucasus, and the northern provinces of Persia; can it deny that the right of self-preservation gives France a title to demand an equivalent in Europe? Do you wish a general congress in Europe? Let every power begin by restoring the conquests which it has made during the last fifty years. Let them re-establish Poland, restore Venice to its Senate, Trinidad to Spain, Ceylon to Holland, the Crimea to the Porte, the Caucasus and Georgia to Persia, the kingdom of Mysore to the sons of Tippoo Saib, and the Mahratta States to their lawful owners, and then the other powers may have some title to insist that France shall retire within her ancient limits. It is the fashion to speak of the ambition of France. Had she chosen to preserve her conquests, the half of Austria, the Venetian States, the states of Holland and Switzerland, and the kingdom of Naples, would have been in her possession. The limits of France are in reality the Adige and the Rhine. Has it passed either of these limits? Had it fixed on the Solza and the Drave, it would not have exceeded the bounds of its conquests." It is not difficult to trace the hand of Napoleon in these able remarks.—*Moniteur*, 18th July, 1805, and DUMAS, xii., 96, 97.

* Bign., iv., 268, 273.

† The Prussian ministers having demanded a frank statement of the intentions of Napoleon in the East, and agreed explicit of such an alliance, the following note was presented by the French minister to that electorate. Baron Hardenberg: "The peace of the Continent will be the fruit of the alliance between France and Prussia. It will be enough for this purpose for Prussia to say that she makes common cause with France in any war which may have for its object to change the present state of Italy. What danger can Prussia fear, when the emperor engages to support it with 80,000 men against the Russians; when it will have for auxiliaries Saxony, Hesse, Bavaria, Baden, the emperor engaging to obtain for the king the possession of Hanover, while his allies will only be called on to guarantee the present state of Italy? The emperor offers Hanover absolutely and without any condition; and the king may judge from that whether or not he is disposed to be generous towards his German allies." The Prussian minister replied: "It is with the most lively gratitude that the king has received the proposition made by the intervention of the French minister. He experiences the greatest satisfaction at the proposal made to exchange the electorate of Hanover for a guarantee of the present state of Italy, in or-

Threatening as was the present state of the Continent, Napoleon was not one whit diverted by it from his projected descent upon Great Britain. On the contrary, it only furnished an additional reason for pushing the preparations for that great undertaking with additional vigour; being well aware that, if England was destroyed, the Continental coalition would soon fall to pieces, and that a blow struck on the banks of the Thames would more effectually attain this object than one either in the basin of the Danube or the shores of the Visula. For this purpose, shortly after Aug. 3, 1804, his return from Italy, he repaired to the camp at Boulogne, there to inspect in person the vast military force arrayed on the shores of the Channel, and to direct the distant movements of the fleets by which he hoped to obtain, for a time at least, the mastery of the seas, and the means of safely disembarking it within a few days' march of London.*

The army which Napoleon had now assembled for this great enterprise was one of the most formidable, in point of numerical strength, and beyond all question the most perfect in point of military organization, which had ever been brought together since the days of the Roman legions. It amounted to 114,000 combatants, 432 pieces of cannon, and 14,654 horses, assembled in the camps at St. Omer, Bruges, Montreuil, and Boulogne, besides 12,000 at the Texel and Helvoetsluys, and 10,000 on board the combined fleet, and the like force at Brest, ready to embark on the squadron of Admiral Gantheaume; in all, 155,000 men, in the highest state of discipline and equipment. The stores of ammunition, warlike implements, and provisions collected, were on an unparalleled scale of magnitude, and amply evinced the reality of the design which the emperor had in view. Each cannon had two hundred rounds of ammunition; the cartridges were 14,000,000; the flints, 1,200,000; the biscuits, 2,000,000; the saddles, 10,000; and 5000 sheep were ready to accompany the army in its embarkation. Provisions for the immense multitude for three months had been collected; the hospital arrangements were perfect; and 2293 vessels, capable of transporting 160,000 men and 9000 horses, of which 1339 were armed with above three thousand pieces of cannon, independent of the artillery which accompanied the army, awaited, in the harbours of Boulogne, Etaples, Ambleuse, Ostend, and Calais, the signal to put to sea.†

der to avert a war on the Continent and lead towards peace with England. His majesty is desirous to see the independence of Switzerland established, as well as that of Holland and the part of Italy not allowed by Prussia to France. If on these subjects his imperial majesty will explain himself in a positive manner, the king will enter with pleasure into the details necessary for a definitive arrangement."—See BIGNON, iv., 271, 272.

* BIGNON, iv., 277.

‡ The composition of this vast armament around Boulogne was as follows: it is one of the most curious monuments of the age of Napoleon:

Infantry.....	76,798
Cavalry.....	11,640
Cannoniers.....	3,780
Wagoners.....	3,780
Non-combatants.....	17,476
Total.....	113,474
Gunboats.....	1,339
Transport vessels.....	954

During its long encampment on the shores of the Channel, this great army had been organized in a different manner from any that had yet existed in modern Europe. It is a curious circumstance, that the genius of Napoleon, aided by all the experience of the Revolutionary wars, reverted at last to a system extremely similar to that of the Roman legions; and to the vigour and efficiency of this organization, which has never since been departed from, the subsequent extraordinary successes of the French armies may in some degree be ascribed. At the commencement of the Revolution the divisions of the army, generally fifteen or eighteen thousand strong, were hurried, under the first officer that could be found, into the field; but it was soon found that there were few generals capable of skilfully directing the movements of such considerable masses of troops; while, on the other hand, if the divisions were too small, there was a want of that unity and decision of movement which was requisite to ensure success. Selecting a medium between these two extremes, Napoleon adopted a double division. His army was divided, in the first instance, into corps composed of from twenty to thirty thousand men each, the direction of which was intrusted to a marshal of the Empire. Each of these corps had, in proportion to its force, a suitable allotment of field and heavy artillery, its reserve, and two or three regiments of light cavalry; but the heavy cavalry and medium horse, or dragoons, were united into one corps, and placed under the command of one general. The organization of the Imperial Guard was precisely the same, with this difference only, that it was considered as the reserve of the whole army, and as such more immediately under the command of the emperor himself. Each corps was formed into four or five divisions, varying from five to seven thousand men, each commanded by generals of division, who received their orders from the general of the corps. The troops in these divisions always remained under the same officers; the divisions themselves belonged to the same corps; no incorporation or transposition, excepting in cases of absolute necessity arising from extraordinary casualties in war, disturbed the order established in the camps. In this way the generals came to know their officers, the officers their soldiers; the capacity, disposition, and qualities of each were understood. An *esprit de corps* was formed, not only among the members of the same regiment, but those of the same division and corps; and the general of division took as much pride in the precision with which the regiments under his orders performed their combined operations, or the marshal in the perfection of the arrangements of the corps under his direction, as the captain of dragoons did in the steadiness with which his men kept their line

Which would carry.....	161,215 men

in a charge, or the sergeant in the cleanliness of the appointments of the little subdivision intrusted to his care.*†

Satisfied with their lot in this great encampment, the soldiers were singularly tractable and obedient. Constantly occupied and amused by the spectacle of sea-fights, or frequent reviews and mock-battles, they neither murmured at the exactions of a rigid discipline, nor experienced the usual monotony and languor of a pacific life in camps. The good effects of distributing the corps into divisions were here soon rendered conspicuous. The general commanding each division became not only personally acquainted with all his officers, but had an opportunity of correcting anything defective in the discipline of the men; and the soldiers, from constant exercises and the habit of acting together in large masses, acquired a degree of precision in the performance of manœuvres on a great scale which never before had been equalled in the French armies, and embraced everything that was really useful or suitable to the French character in the discipline of the Great Frederick.

No man knew better than Napoleon, from his own experience, as well as the calamities which an obstinate adherence to the opposite system had inflicted upon his opponents, that the general-in-chief especially, if far removed from the theatre of operations, cannot with advantage prescribe the details of subordinate movements. In his campaigns, consequently, each marshal received general instructions as to the line of operations which he was to adopt, and the end to which his efforts were to be directed, but he was left entirely master of the means by which these objects were to be attained; and although Napoleon was frequently extremely minute in his directions to his lieutenants, yet he always left them a general discretion to adopt them or not, according to circumstances; and a commander, in his estimation, would have committed a serious fault if he had followed the letter of his instructions when a change of circumstances called for a deviation from them. The same system of confidence was established between the marshal and his generals of division, to all of whom a certain

discretionary power in the execution of orders was intrusted: a confidence for the most part well deserved by the ability and experience of those officers. In one respect only the changes of Napoleon at this period were of doubtful utility, and that was in virtually suppressing the *état-major*, or general staff, by enacting that the rank of colonels in it should be abolished: an ordinance which, by closing the avenue of promotion, at once banished all young men of ability from that department, and converted what had formerly been the chief school of military talent into a higher species of public couriers.*

But though Napoleon left to each officer, in his own sphere, those discretionary powers which he knew to be indispensable, it is not to be supposed that he was negligent of the manner in which their several duties were discharged, or that a vigilant superintendence was not kept up, under his direction, of all the departments in the army. On the contrary, he exercised an incessant and most active survey of every officer intrusted with any service of importance in the vast army subject to his orders: nothing escaped his vigilance; continual reports addressed to headquarters informed him how every branch of his service was conducted; and if anything was defective, an immediate reprimand from Berthier instantly informed the person in fault that the attention of the emperor had been attracted to his delinquencies. Continual and minute instructions, addressed to the generals, commissaries, and functionaries of every description connected with the army, gave to all the benefit of his luminous views and vast experience. With the extension of his forces, and the multiplication of their wants, his powers appeared to expand in an almost miraculous proportion; and the active superintendence of all, which seemed the utmost limit of human exertion, when only fifty thousand men required to be surveyed, was not sensibly diminished when five hundred thousand were assembled. Above all, the attention of the emperor was habitually turned to the means of providing for the subsistence of his troops: a branch of service which, from the prodigious extension of his forces, and the rapidity with which he moved them into countries where no magazines had been formed, required, in an extraordinary degree, all the efforts of his talent and reflection. To such a length was this superintendence of the emperor carried, that it was a common saying in the army, that every officer who had anything of importance to perform imagined that the imperial attention was exclusively directed to himself; while, in fact, it was divided among several hundreds, perhaps thousands, who stood in a similar predicament. By this unexampled vigilance, seconded by the great abilities of the officers and generals under his command, the army destined for the invasion of England acquired a degree of perfection, in point of discipline, organization, and military habits, unprecedented since the days of the Roman legions.†

* Dum., xii., 401, 411. Jom., ii., 58.

† The camps in which the soldiers were lodged, during their long sojourn on the shores of the Channel, were distinguished by the same admirable system of organization. They were laid out according to the usual form, in squares intersected by streets, and composed of barracks constructed on a uniform plan, according to the materials furnished by the country in which they were situated. At Ostend they were formed of light wood and straw; at Boulogne and Wimereux of sharp stakes, cut in the forest of Guénis, supported by mason-work. These field barracks were extremely healthy: the beds of the soldiers, raised two feet above the ground, were composed of straw, on which their camp blankets were laid; the utmost care was taken to preserve cleanliness in every part of the establishment. Constant employment was the true secret both of their good health and docile habits; neither officers nor soldiers were ever allowed to remain any time idle; when not employed in military evolutions, they were continually engaged either in raising or strengthening the field-works on the different points of the coast, or levelling down eminences, draining marshes, or filling up hollows to form agreeable esplanades in front of their habitations and where their exercises were performed. The different corps and divisions mixed with each other in these works of utility or recreation: they even went so far as to engage in undertakings of pure ornament; gardens were created, flowers were cultivated, and, in the midst of an immense military population, the aspect of nature was sensibly improved.—See DUMAS, xii., 25, 26.

† Dum., xii., 411, 413.

‡ Ample evidence of the truth of these observations exists in the correspondence of the emperor, still preserved in the archives of Paris, or in the custody of his generals, and which, if published entire, would amount to many hundred volumes. From the valuable fragments of it published in the annexes to General Matthieu Dumas, and the works of General Gourgaud and Baron Fain on the campaigns of 1812

The organization of the flotilla was as extraordinary and perfect as that of the land-forces. It was divided into as many subdivisions as there were sections in the army; and all the stores, baggage, and artillery were already on board, so that nothing was wanting but the embarkation of the men. The French genius, able beyond that of any other people in Europe in the organization of large bodies, shone forth here in full lustre. Such was the perfection to which the arrangements had been carried, that not only every division of the army, but every regiment and company had a section of the flotilla allotted to it; and the point and vessel of embarkation was assigned to every man, horse, gun, and carriage in that prodigious array. Every man in the army, down to the lowest drummer, knew where he was to embark, on board what vessel, and where he was to station himself while on board; and, from constant practice, they had arrived at such a precision in that most difficult branch of their duty, that it was found by experiment that a corps of twenty-five thousand men, drawn up opposite the vessels allotted to them, could be completely embarked in the short space of ten minutes.*

The object of Napoleon, in this immense accumulation of gunboats and armed vessels, was not to force his way across the Channel by means of this novel species of naval force, but merely to provide transports for the conveyance of the troops, and withdraw the attention of the enemy, by their seeming adaptation for warlike operations, from the quarter from whence the force really intended to cover the descent was to be obtained. The problem to be solved was to transport one hundred and fifty thousand men in safety to the shores of Kent, and no man knew better than Napoleon that to engage in such an enterprise while the English were masters of the sea was a vain attempt. From the beginning, therefore, he resolved not to hazard the embarkation till, by a concentration of all his naval forces in the Channel, while the English fleets were decoyed to distant parts of the world, he had acquired, for the time at least, a decided command of the passage. The great object, however, was to disguise these ultimate designs, and prevent the English government from adopting the means by which they might have been frustrated; and for this end it was that the Boulogne flotilla was armed, and the prodigious expense incurred of constructing fifteen hundred warlike vessels, bearing several thousand pieces of cannon. Not one of these guns was meant to be fired; they were intended only as a veil; the real covering of the force was assembled at Martinique, and was to return suddenly to Europe, while the British squadrons were despatched to distant points to succour their menaced colonial possessions. The stratagem, thus ably

conceived, was completely successful; not one person in the British dominions, except the sagacious Admiral Collingwood, penetrated the real design; the French fleets returned in safety from the West Indies to the European latitudes, leaving Nelson three weeks' sail in the rear; and when the emperor was at Boulogne, in August, 1805, at the head of one hundred and thirty thousand men, sixty ships of the line were assembled in the Bay of Biscay, where the united British squadrons did not amount to much more than half that force.**

In the prosecution of this profound design, it was of importance to accumulate as much as possible of the flotilla at Boulogne; and in the prosecution of this object many actions took place between the English cruisers and the vessels advancing round the coast, which answered the double purpose of habituating the sailors to naval warfare, and perpetuating the illusion that it was by means of the armed force of the flotilla that the descent was to be effected. Numerous actions, in consequence, took place with the English cruisers, whose vigour and boldness knew no bounds in their warfare against this ignoble species of opponents when coasting along under cover of the numerous batteries with which the coast was guarded; but, notwithstanding all their efforts, the success achieved, from the impossibility of getting sufficiently near the enemy, was more than counterbalanced by the severe loss of life sustained in those perilous services. The most important of these was a series of actions from the 17th to the 19th of July, when the Dutch flotilla, under the command of Admiral Verhuel, accomplished the passage from Dunkirk to Ambleteuse, near

* Jom., ii., 70. Nap. in Month., ii., 20, 21. Las Casas, ii., 277, 280.

† The following precious note, written by Napoleon at the time of his leaving the camp at Boulogne, in September, 1805, explains fully the particulars of this great project :

“What was my design in the creation of the flotilla at Boulogne ?

“I wished to assemble forty or fifty ships of the line in the harbour of Martinique, by operations combined in the harbours of Toulon, Cadiz, Ferrol, and Brest; to bring them suddenly back to Boulogne; to find myself in this way, during fifteen days, the master of the sea; to have 150,000 men encamped on the coast, three or four thousand vessels in the flotilla, and to set sail the moment the signal was given of the arrival of the combined fleet. That project has failed. If Admiral Villeneuve, instead of entering into the harbour of Ferrol, had contented himself with joining the Spanish squadron, and instantly made sail for Brest and joined Admiral Gantheaume, my army would have embarked, and it was all over with England.

“To succeed in this object it was necessary to assemble 150,000 men at Boulogne, to have there four thousand transports and immense materiel, to embark all that, and, nevertheless, to prevent the enemy from divining my object. It appeared scarcely practicable to do so. If I have succeeded, it was by doing the converse of what might have been expected. If fifty ships of the line were to assemble to cover the descent upon England, nothing but transport vessels were required in the harbours of the Channel, and all that assemblage of gunboats, floating batteries, and armed vessels was totally useless. Had I assembled together three or four thousand armed transports, no doubt the enemy would have perceived that I awaited the arrival of my fleets to attempt the passage; but, by constructing prams and gunboats, I appeared to be opposing cannons to cannons; and the enemy was in this manner deceived. They conceived that I intended to attempt the *trajet* by main force, by means of my flotilla. They never penetrated my real design; and when, from the failure of the movements of my squadrons, my project was revealed, the utmost consternation pervaded the councils of London, and all men of sense in England confessed that England had never been so near its ruin.”—See the *original* in DUMAS, xii., 315, 316. and in *Napoleon in MONTHOLON*, iii., App., 384.

1813, and 1814, as well as the letters of Napoleon contained in Napier's Account of the Peninsular War, some idea may be formed of the prodigious mental activity of a man who, amid all the cares of empire, and all the distractions of almost incessant warfare, contrived, during the twenty years that he held the reins of power, to write or dictate probably more than the united works of Lope de Vega, Voltaire, and Sir Walter Scott. His secret and confidential correspondence with the Directory, published at Paris in 1819, from 1796 to 1798 only, a work of great interest and rarity, amounts to seven large closely-printed volumes; and his letters to his generals, during that time, must have been twice as voluminous.

* Ney's Mem., ii., 256, 260. Dum., xii., 35, 37.

Boulogne. They were annoyed almost the whole way by the English vessels under the command of Sir Sydney Smith and Captain Owen in the *Immortalité* frigate; but the weight of the attack was reserved for the rounding of Cape Gris Nez. The British ships approached within musket-shot, and poured in their broadsides with great effect upon the French vessels as they were weathering that dangerous point; but such was the vigour of the fire kept up by the batteries arranged on the cliffs by Marshal Davoust, that they were unable to prevent the flotilla from reaching the place of their destination with very little loss. The rapid and incessant cannonade both by the batteries on shore and the English cruisers, and the vivid interest excited among an immense crowd of spectators from the neighbouring camps by the passage of the flotilla through such a perilous defile, formed together a brilliant spectacle, which awakened the most animating feelings among the military and naval forces of France.*

While the emperor, on the heights of Boulogne, was actively engaged in re-
Aug. 1805. viewing the different corps of his army, and inspecting the immense preparations for the expedition, the different squadrons of his empire were rapidly bringing on the great crisis between the naval forces of the two countries.

Jan. 4, 1805. Early in the year, Napoleon took advantage of the open hostilities which had now ensued between England and Spain, to conclude at Paris a secret convention for the combined operation of the squadrons of both countries; and the important part there allotted to the fleets of Spain leaves no room for doubt that their co-operation had been foreseen and arranged with Napoleon long before the capture of the treasure frigates, and that that unhappy event only precipitated a junction of the Spanish forces already calculated on by Napoleon for the execution of his great design. By this convention, it was stipulated that the emperor should provide at the Texel an army of 30,000 men, and the transports and vessels of war necessary for their conveyance; at Ostend, Dunkirk, Calais, Boulogne, and Havre, 120,000 men, with the necessary vessels of war and transports; at Brest, 21 ships of the line, with the frigates and smaller vessels, capable of embarking 30,000 men; at Rochefort, 6 ships of the line and 4 frigates, with 4000 men; at Toulon, 11 ships of the line and 8 frigates, having 9000 land-troops on board; and Spain, in return, bound herself to have 30 ships of the line and 5000 men ready, and provisioned for six months, in the harbours of Ferrol, Cadiz, and Carthage-
na: in all 38 French ships of the line and 30 Spanish, and 170,000 men, all to be employed in the invasion of England. But their destination was as yet kept secret, it being provided "that these armaments shall be maintained and destined to operations on which his majesty reserves the explanation for a month, or to the general charged with full powers to that effect." When it is recollected that the fleets of Spain composed nearly a half of the naval forces thus assembled by Napoleon for the great object of his life, and that without this addition his own would have been totally inadequate to the undertaking, no doubt whatever can remain that their co-operation had for years before been calculated on by his far-seeing policy; and this must increase the regret of every Englishman, that, by the unhappy neglect to declare war before hostilities were commenced, Great Britain was put formally in the wrong, when in substance she was so obviously in the right.*

Measures of defence by the British government.

The English government, after the breaking out of the Spanish war, lost no time in taking measures for the new enemy which had arisen. Sir John Orde, with five ships of the line, commenced the blockade of Cadiz; Carthage-
na also was watched, and a sufficient fleet was stationed off Ferrol. But still these squadrons, barely equal to the enemy's force in the harbours before which they were respectively stationed, were totally unequal to prevent its junction with any superior hostile squadron which might approach; and thus, if one squadron got to sea, it might with ease raise the blockade of all the harbours, and assemble the combined fleets for the projected operations in the Channel. This was what, in effect, soon happened.†

Napoleon, anxious for the execution of his designs, sent orders for the Rochefort and Toulon squadrons to put to sea. On the 11th of January the former of these fleets, under the command of Admiral Missiessy, set sail, and made straight for the West Indies, without meeting with any English vessels. The Toulon squadron put to sea about the same time, but, having met with rough weather, it returned to Toulon, considerably shattered, in four days after its departure.‡ The Rochefort fleet was more fortunate; it arrived at Martinique on the 5th of February, and, after having landed the troops and ammunition destined for that island, made sail for the British island of Dominica, where the admiral landed 4000 men, under cover of a tremendous fire from the line-of-battle ships. General Prevost, the governor, who had only 500 regular troops in the island, immediately made the best dispositions which the limited force at his command would admit to resist the enemy. He retired deliberately, disputing every inch of ground, to the fort of Prince Rupert, in the centre of the island; and the French commander, not having leisure for a regular siege, re-embarked and made sail for Guadaloupe, after destroying the little town of Roseau. He next proceeded to St. Kitts and Nevis, in both of which islands he levied contributions and burned some valuable merchantmen; after which he embarked, without attempting to make any impression on the military defences. The arrival of Admiral Cochrane with six sail of the line having rendered any farther stay in the West Indies dangerous, Admiral Missiessy returned to Europe, after throwing a thousand men into Santa Domingo, and compelling the blacks to raise the siege of that place, and regained Rochefort in safety in the beginning of April, to await another combination of the French and Spanish squadrons.§

Jan. 11. The Toulon and Rochefort squadrons put to sea.
Jan. 15.
Feb. 22, 1805.

The successful issue of this expedition excited the greatest alarm in Great Britain, from

* Dum., xi., 97, 98.

† Ann. Reg., 1805, 219, 221.

‡ "These gentlemen," said Nelson, when he heard of this unexpected return, after having gone to Malta in search of the enemy, "are not accustomed to a Gulf of Lyons gale. We have buffeted them for twenty-one months, and not carried away a spar."—SOUTHBY'S *Life of Nelson*, ii., 214.

§ Ann. Reg., 1805, 219, 221. *Jom.*, ii., 71. Dum., xi., 110, 113, 123.

* Dum., xii., 42, 48. James, iii., 434, 440.

Alarm they excite in Great Britain. the evidence which it afforded of the facility with which, notwithstanding the utmost vigilance of the blockading squadrons, the enemy's fleets might leave and regain their harbours, and carry terror into her most distant colonial possessions. But it was far from answering the views of Napoleon, who had prescribed to Missiessy a much more extensive set of operations, viz., to throw succours into Martinique and Guadeloupe, take possession of St. Lucie and Dominica, regain Surinam and the other Dutch colonies, put the few remaining strongholds of St. Domingo in a respectable state of defence, and make himself master of St. Helena. The instructions for this expedition are dated by the emperor from Strasburg, September 29, 1804, shortly before his coronation. Strange combination in his destiny, to have contemplated the capture of the rock of St. Helena on the eve of his coronation, as he had the reduction of the Island of Elba at the period of his being created First Consul for life!*

More important results followed the next sortie of the enemy, which took place on the 30th of March from Toulon. On that day Admiral Villeneuve put to sea with eleven ships of the line and eight frigates, while Nelson, who purposely remained at a distance to entice the enemy from the protection of their batteries, was at anchor in the Gulf of Palma, and made straight for Carthage, with the intention of joining the Spanish squadron of six sail of the line in that harbour; but finding them not ready for sea, the French fleet passed the Straits of Gibraltar, raised the blockade of Cadiz, from whence Sir John Orde retired to unite with the Channel fleet off Brest, and formed a junction with the Spanish squadron in that harbour, and one French ship of the line which was lying there. Increased by this important accession to the amount of eighteen ships of the line and ten frigates, the combined fleet, having on board ten thousand veteran troops, set sail on the following day for the West Indies. About the

April 10. same time the Brest squadron, under Admiral Gantheaume, consisting of twenty-one ships of the line, put to sea, and remained three days off the Isle of Ushant before they retired to their harbour, on the approach of Admiral Cornwallis with the Channel fleet, which only amounted to eighteen.†

Meanwhile Nelson was in the most cruel state of anxiety. He was bearing up with certainty of position from the Gulf of Palma for his old Nelson. On the 4th of April, he met the Phœbe brig with the long-wished-for intelligence that Villeneuve had again put to sea, and when last seen was steering for the coast of Africa. Upon this he immediately set sail for Palermo, under the impression that they had gone to Egypt; but feeling assured by the 11th, from the information brought by his cruisers, that they had not taken that direction, he instantly turned and beat up, with the utmost difficulty, against strong westerly winds to Gibraltar; devoured all the while by the utmost anxiety lest, before he could reach them, the enemy might menace Ireland or Jamaica. In spite of every exertion, he could not reach the Straits till the 30th of April, and even then the wind was so adverse that he could not pass them, and

was compelled to anchor in Mazari Bay, on the Barbary coast, for five days.*†

At length, on the 5th of May, he received certain information that the combined He at length fleet had made for the West Indies, follows to the and amounted to eighteen sail of the West Indies. line and ten frigates. Nelson had only ten sail of the line and three frigates; his ships had been at sea for nearly two years; the crews were worn out with fatigue and watching; and anxiety had so preyed upon his naturally ardent mind that his health had seriously suffered, and his physician had declared an immediate return to England as indispensable to his recovery. In these circumstances this heroic officer did not an instant hesitate what course to adopt, but immediately made signal to hoist every rag of canvass for the West Indies. "Do you," said he to his captains, "take a Frenchman apiece, and leave all the Spaniards to me. When I haul down my colours I expect you to do the same, but not till then."‡§

The combined fleet had above thirty days the start of Nelson; but he calculated, by his superior activity and seamanship, upon gaining ten days upon them during the passage of the Atlantic. In fact, Villeneuve reached Martinique on the 14th of May, while Nelson arrived at Barbadoes on the 4th of June; but in the interim the allied squadrons had done nothing excepting the capture of the Diamond Rock, near Martinique, by a few ships detached for that purpose, which was reduced, after a most gallant resistance by the small British force by which it was occupied. Overjoyed at the discovery that the enemy were in those seas, and that all the great British settlements were still safe, Nelson, without allowing his sailors any rest, instantly made sail for Trinidad, thinking that the French fleet Searches in had gone to attempt the reduction of vain for the that colony; and so far was he mis- enemy there. led by false intelligence, that he cleared his fleet for action on the evening of the 7th of June 7. June, hoping to render the mouths of the Orinoco on the following day as famous in history as those of the Nile; but when morning broke not a vessel was to be seen, and it was evident that the British fleet had, by erroneous information, accidentally or designedly thrown in their way, been sent in an entirely wrong direction. Had it not been for this circumstance, and had Nelson acted upon his own judgment alone, he would have arrived at Port Royal just as the French were leaving it, and the battle would

* South, ii., 216, 217. Ann. Reg., 1805, 225.

† On this occasion Nelson wrote to Sir Alexander Ball, at Malta: "My good fortune, my dear Ball, seems flown away. I cannot get a fair wind, nor even a side-wind. Dead foul! But my mind is fully made up what to do when we leave the Straits, supposing there is no certain account of the enemy's destination. I believe this ill luck will go far to kill me; but, as these are times for exertion, I must not be cast down, whatever I may feel."—SOUTHEY, ii., 217.

‡ South, ii., 219, 220.

§ The uncertainty as to the destination of Nelson's squadron filled Napoleon, whose mind, not less than that of his great opponent, was anxiously intent on the result of the great events as to Nelson's destination. now in progress, with the utmost disquietude. On the 9th of June, 1805, immediately before leaving Milan, he wrote to the Minister of Marine: "We cannot discover what has become of Nelson; it is possible that the English have sent him to Jamaica: but I am of opinion that he is still in the European seas. It is more than probable that he has returned to England to re-victual and place his crews in new vessels, for his fleet stands greatly in need of repairs, and his squadron must be in very bad condition." Even Napoleon's daring mind could not anticipate Nelson's heroic passage of the Atlantic, in these circumstances, in pursuit of a fleet nearly double his own.—DUMAS, xi., 169.

* Dum., xiii., 205. Pièces Just.

† South. Nelson, ii., 217, 218. Dum., xi., 124, 128.

have been fought on the same spot where Rodney defeated De Grasse five-and-twenty years before; but as it was, the opportunity was lost, and the greatest triumph of the British navy was reserved for the European seas.*

In truth, the combined fleet had sailed from Martinique on the 28th of May, and instantly made sail for the north, having been joined while there by Admiral Magon with two additional ships of the line, which raised their force to twenty line-of-battle ships. This re-enforcement also brought the last instructions of Napoleon, dated Pavia, 8th of May, 1805, which were, to raise the blockade of Ferrol, and join the five French ships of the line and ten Spanish which awaited them in that harbour; make sail from that to Rochefort, join the five ships of the line under Missessy at that place; and with the whole united squadrons, amounting to forty ships of the line, steer to Brest, where Gantheaume awaited them with twenty-one. With this great fleet, which would greatly overmatch any force the British government could muster in the Channel, was Villeneuve to proceed to Boulogne, and cover the passage of the flotilla. His instructions were to shun a battle, unless it was unavoidable, and if so, to bring it on as near as possible to Brest, in order that the fleet of Admiral Gantheaume might take a part in it. "The grand object of the whole operation," said Napoleon, "is to procure for us a superiority for a few days before Boulogne—masters of the Channel for a few days, one hundred and fifty thousand men will embark in the two thousand vessels which are there assembled, and the expedition is concluded." Every contingency was provided for: the chance of the fleets going round about was foreseen, and stores of provisions were provided both at Cherbourg and the Texel, in the event of the general rendezvous taking place in either of these harbours.†

Hitherto everything had not only fully answered, but even exceeded, Napoleon's expectations. The design he had so long had in contemplation had never been penetrated by the British government: on the contrary, Nelson was in the West Indies; he had been decoyed to the mouths of the Orinoco when the French admiral was returning to Europe with twenty sail of the line, eighteen days in advance of his indefatigable opponent, while the English squadrons which blockaded Ferrol and Rochefort were totally inadequate to prevent the junction of the combined fleet with the vessels of war in those harbours.

Villeneuve had sailed on the 28th of May 28. from Martinique, and on the 13th of June 13. Nelson, on arriving at Antigua for the first time, received such intelligence as left no doubt that the combined fleet had returned to Europe. Disdaining to believe, what the gratitude of the delivered colonists led them to allege, that the enemy had fled at the mere terror of his name before a fleet not half their amount, he

immediately suspected some ulterior combination, but without being able to penetrate what it was; and instantly despatched several fast-sailing vessels to Lisbon and Portsmouth in order to warn the British government of the probable return of the whole fleets

of the enemy to Europe. To this sagacious step, as will immediately appear, the safety of the British Empire is mainly to be ascribed. Nelson himself, without allowing his sailors a moment's rest, set sail the very same day for July 18. Europe, and on the 18th of July reached Gibraltar; having, from the time he left Tetuan Bay, twice crossed the Atlantic, and visited every one of the leeward islands, with a fleet which had been two years at sea, in seventy-eight days;* an instance of vigour and rapidity of naval movement unparalleled in the annals of the world.†

Great was the despondency in the British islands at the intelligence of a fleet of such strength having proceeded to the West Indies, where it was well known no English force at all capable of resisting it was to be found; and the Admiralty, in the midst of the general alarm, took the most energetic measures to avert the danger, by instantly ordering every man and ship that could be got in readiness to sea, and despatched Admiral Collingwood with a squadron of five ships of the line to cruise off Gibraltar, and act as circumstances might require. That sagacious officer, alone of all the British chiefs, penetrated the real design of Napoleon; and on the 21st of July, while yet the combined fleet had not been heard of on its return from the West Indies, wrote to Nelson that he was convinced they would raise the blockade of Ferrol, Rochefort, and Brest, and with the united force make for the British islands. His penetration was so remarkable, that his letter might almost pass for a transcript of the secret instructions of Napoleon, at the time in the possession of Villeneuve.§

Meanwhile, Villeneuve returned to Europe as rapidly as adverse winds would permit, and on the 23d of June he had reached the latitude of the Azores. Napoleon, who by this time had returned to St. Cloud from Italy, despatched orders to the fleet at Rochefort to put to sea and join Admiral Gantheaume off the Lizard Point; or, if he had not made his escape from Brest, to make for Ferrol and join the combined fleet there. He literally counted the days and hours till some intelligence should arrive of the great armament approaching from

Energetic measures of the Admiralty when they received his despatches.

The combined fleet is outstripped by the British brigs with the despatches.

* From April 30th to July 18th.

† Ann. Reg., 1805, 228, 229. South., ii., 224, 225. Dum., xii., 6, 7.

‡ On the day following Nelson landed at Gibraltar, being the first time he had quitted the Victory for two years.

§ South., ii., 224, 225. Collingwood, i., 145.

|| His words are: "July 21, 1805.—We approached, my dear lord, with caution, not knowing whether we were to expect you or the Frenchmen first. I have always had an idea that Ireland alone was the object which they had in view, and still believe that to be their ultimate destination. They will now liberate the Ferrol squadron from Calder, make the round of the bay, and taking the Rochefort people with them, appear off Ushant, perhaps with thirty-four sail, there to be joined with twenty more. This appears a probable plan; for unless it be to bring their power full fleet and armies to some great point of service, some rash attempt at conquest, they have only been subjecting them to chance of loss, which I do not believe Bonaparte would do without the hope of an adequate reward. The French government never aims at little things while great objects are in view. I have considered the invasion of Ireland as the real mark and butt of all their operations. Their flight to the West Indies was to take off the naval force which proved the great impediment to their undertaking."—Collingwood's *Memoirs*, i., 145, 146. The history of Europe does not contain a more striking instance of political and warlike penetration.

* South., ii., 222, 223. Dum., xii., 1, 6.

† See the orders in Dum., xi., 247, 254. Pièces Just.

the West Indies, the signal for the completion of all his vast and profound combinations. But meanwhile, one of the brigs despatched by Nelson from Antigua on the 13th of June had outstripped the combined fleet, and by the rapidity of its passage fixed the destinies of the world. The Curieux brig, sent on this important errand,

July 9. arrived at London on the 9th of July, having made the passage from Antigua in twenty-five days; and instantly the Admiralty despatched orders to Admiral Stirling, who commanded the squadrons before Rochefort, to raise the blockade of that harbour, join Sir Robert Calder off Ferrol, and cruise with the united force off Cape Finisterre, with a view to intercept the allied squadrons on their homeward passage towards Brest. These orders reached July 15. Admiral Stirling on the 13th of July; on the 15th he effected his junction with the fleet before Ferrol, and Sir Robert Calder stood out to sea, with fifteen line-of-battle ships, to take his appointed station in search of the enemy.*

The event soon showed of what vital importance it was that the Curieux had arrived so rapidly in England, and that the Admiralty had so instantaneously acted on the information Sir Robert communicated by Lord Nelson. Hard- Calder's ac- ly had Sir Robert Calder reached the tion.

place assigned for his cruise, about sixty leagues to the westward of Cape Finisterre, when the combined fleet of France and July 22. Spain hove in sight, consisting of twenty line-of-battle ships, a fifty gunship, and seven frigates.† The weather was so hazy, that the two fleets had approached very closely before they were mutually aware of each other's vicinity; but as soon as the British admiral descried the

enemy he made the signal for action, and bore down on the hostile fleet in two columns. Some confusion, however, took place in consequence of the necessity under which the English squadron lay of tacking before they reached the enemy, which, combined with the foggy state of the weather, brought the two fleets into collision in rather a disorderly manner; and when they got into close action, several vessels in both fleets were exposed to the attack of two or three opponents. The superiority of the British, however, was soon apparent, notwithstanding the preponderance of force on the part of the enemy. Before the action had continued four hours, two of the Spanish line-of-battle ships, the St. Raphael and Férme, were so much damaged that they were compelled to strike their colours, while the Windsor Castle, in the English fleet, was also so much injured as to render it necessary to put her in tow of the Dragon. Darkness separated the combatants, and the British fleet, carrying with them their prizes, lay to for the night to repair their injuries, and prepare for a renewal of the action on the following day. The loss sustained by the British was very small, amounting only to 39 killed and 159 wounded; that of the French and Spaniards to 476;* and no ship except the Windsor Castle was seriously damaged on the English side. Neither fleet showed any decided inclination to renew the action on the following day: at noon the combined fleet approached to within a league and a half of the British, who were drawn up in order of battle, but Villeneuve made signal to haul to the wind on the same tack as the British; that is, to decline the engagement for the present, as soon

The two fleets separate with out decisive success.

as he saw that the English fleet stood firm; and night again separated the hostile squadrons. On the day after, Sir Robert Calder stood away with his prizes towards the north, justly discerning, in the danger arising from the probable junction of Villeneuve with the Rochefort and Ferrol squadrons, the first of which was known to have put to sea, a sufficient reason for falling back upon the support of the Channel fleet or that of Lord Nelson; and Villeneuve, finding the passage clear, stood towards Spain, and after leaving three sail of the line in bad order at Vigo, entered Ferrol on the 2d of August.†

Of the importance of this, perhaps the most momentous action ever fought by the navy of England, no farther proof is required than is furnished by the conduct of Napoleon, narrated by the unimpeachable authority of Count Daru, his private secretary, and the very eminent author of the History of Venice. On the day in which intelligence was received from the English papers of the arrival of Villeneuve at Ferrol, Daru was called by the emperor into his cabinet. The scene which followed must be given in his own words. "Daru found him transported with rage, walking up and down the room with hurried steps, and only breaking a stern silence by broken exclamations. 'What a navy—what sacrifices for nothing—what an admiral! All hope is gone, That Villeneuve, instead of entering the Channel, has taken refuge in Ferrol! It is all over: he will be blockaded there—Daru, sit down and write.' The fact was, that on that morning

Vast importance of this action. Napoleon's conduct on receiving the intelligence. August 11, 1805.

* Dum., xii., 16, 19. Ann. Reg., 1805, 229. James, iv., 1, 2.

† Yet, strange to say, our naval historians seem insensible to the vital importance of this junction of the squadrons blockading Rochefort and Ferrol. Mr. James observes, "Thus was the blockade of two ports raised, in which, at the time, were about as many ships ready for sea as the fleet which the blockading squadrons were to go in search of. The policy of this measure does not seem very clear. If the squadron did not, like the Rochefort one, take advantage of this circumstance and sail out, it was only because it had received no orders."* Is it not evident that, unless this junction of the blockading squadrons had taken place, the combined fleet would have successively raised the blockade of both harbours, and stood on with five-and-thirty sail of the line for Brest?

Napoleon, whose penetrating eye nothing escaped, viewed in a very different light the concentration of the English blockading squadrons at this critical period. On the 27th of July, 1805, he wrote in these terms to the Minister of Marine: "The English squadron before Rochefort has disappeared on the 12th of July. It was only on the 9th of July that the brig Curieux arrived in England. The Admiralty could never have decided in twenty-four hours what movements to prescribe to its squadrons. Even if they had, it is not likely their orders could have reached the squadron before Rochefort in three days. I think the blockade must have been raised, therefore, by orders received before the arrival of the Curieux. On the 15th of July that squadron effected its junction with that before Ferrol; and on the 16th or 17th they set out in virtue of anterior orders. I should not be surprised if they had sent another squadron to strengthen that of Nelson, and to effect the destruction of the combined fleet, and that it is these fourteen vessels before Ferrol which form that squadron. They have taken with them frigates, brigs, and corvettes, assuredly either to keep a look-out or seek the combined fleet." It is interesting at the same moment to see the sagacity of Collingwood penetrating the long-hidden designs of the French emperor, Napoleon's foresight divining the happy junction of the fleets before Rochefort and Ferrol under Sir Robert Calder, and the rapid decision of the Admiralty, so much beyond what he conceived possible, which proved the salvation of England.—See DUMAS, xii., 19, 20.

* James, iv., 2.

the emperor had received intelligence of the arrival of Villeneuve in that Spanish harbour; he at once saw that the English expedition was blown up, the immense expenditure of the flotilla lost for a long time, perhaps forever! Then, in the transports of a fury which would have entirely overturned the judgment of any other man, he adopted one of the boldest resolutions, and traced the plans of one of the most admirable achievements that any conqueror ever conceived. Without a moment's hesitation, or even stopping to consider, he dictated at once the plan of the campaign of Austerlitz; the simultaneous departure of all the corps from Hanover and Holland to the south and the west of France, their order of march, duration, their lines of conveyance, and points of rendezvous; the surprises and hostile attacks which they might experience, the divers movements of the enemy, everything was foreseen: victory rendered secure on every supposition. Such was the justice and vast foresight of that plan, that over a base of departure two hundred leagues in extent, and lines of operations three hundred leagues in length, the stations assigned were reached according to this original plan, place by place, day by day, to Munich. Beyond that capital the periods only underwent a slight alteration, but the places pointed out were all reached, and the plan, as originally conceived, carried into complete execution.*

Nothing can portray the character of Napoleon and the importance of Sir Robert Calder's victory more strongly than this passage. He well knew how imminent affairs were in his rear; that Russia was advancing, Austria arming; and that, unless a stroke was speedily struck on the Thames, the weight of Europe must be felt on the Danube. It was to anticipate this danger, to dissolve the confederacy by a stroke at its heart, and conquer, not only England, but Russia and Austria on the British shores, that all his measures were calculated; and they were arranged so nicely, that there was barely time to carry the war into the enemy's vitals before he was assailed in his own. Finding this great project defeated by the result of Sir Robert Calder's action, he instantly took his line, adopted the secondary set of operations when he no longer could attempt the first, and prepared to carry the thunder of his arms to the banks of the Danube, when he was frustrated in his design of terminating the war in the British capital.

While such immense consequences were resulting from the action of the 22d of July, the gallant officer who, with a force so inferior, had achieved so decisive a success, was the victim of the most unmerited obloquy. The first intelligence of the defeat of the combined fleet by so inconsiderable an armament was received over all England with the utmost transports of joy; and the public expectation wound up to the very highest pitch by an expression in the admiral's despatches, which pointed to an intention of renewing the battle on the following day, and the statement everywhere made by the officer who brought the intelligence, that a renewal would certainly take place.† When,

therefore, it was discovered that the hostile fleets had not again met—that the British admiral had stood to the northward, rather avoiding than seeking an encounter—and that Villeneuve had reached Ferrol in safety, where he lay unblockaded with thirty ships of the line, these transports were suddenly cooled, and succeeded by a murmur of discontent, which was worked up to a perfect paroxysm of rage upon finding that, in consequence of these circumstances, Napoleon, in the official accounts published in the admiral's name on the occasion, claimed the victory for the French arms.* The consequence was, that, after having continued a short time longer in the command of the fleet, Sir Robert was compelled to retire and demand a court-martial, which, on the 26th of December, “severely reprimanded him for not having done his utmost to renew the engagement on the 23d and 24th of July,” though the sentence admitted that his conduct had not been owing either to cowardice or disaffection.‡ Thus, at the very time that a public outcry, excited by the vehemence of party ambition, was chasing from the helm of the Admiralty the statesman whose admirable arrangements had prepared for the British navy the triumph of Trafalgar, the fury of ignorant zeal affixed a stigma on the admiral whose gallant victory had defeated the greatest and best-arranged project ever conceived by Napoleon for our destruction, and finally rescued his country from the perils of Gallic invasion. Such, in its first and hasty fits, is public opinion! History would, indeed, be useless, if the justice of posterity did not often reverse its iniquitous decrees:§

published by the Admiralty. The passage published was in these words: “The enemy are now in sight to windward; and when I have secured the captured ships, and put the squadron to rights, I shall endeavour to avail myself of any farther opportunity that may offer to give you a farther account of these combined squadrons.” The suppressed paragraph was this: “At the same time, it will behoove me to be on my guard against the combined squadrons in Ferrol, as I am led to believe that they have sent off one or two of their crippled ships last night for that port; therefore, possibly I may find it necessary to make a junction with you immediately off Ushant with the whole squadron.” Had this paragraph been published after the former, it would have revealed the real situation of the British admiral, lying with fourteen ships of the line fit for action, in presence of a combined squadron of eighteen hourly expecting a junction with two others, one of fifteen, and the other of five line-of-battle ships. In these circumstances, no one can doubt that to retire towards the Channel fleet was the duty which the safety of England, with which he was charged, imperatively imposed on the British admiral. It is the most pleasing duty of the historian thus to aid in rescuing from unmerited obloquy the memory of a gallant and meritorious officer; and it is the greatest consolation, next to the inward rewards of conscience, of suffering virtue, when borne down by the torrent of popular obloquy, to know that the time will come when his character will be reinstated in the eyes of posterity, and that deserved censure be cast upon the haste and severity of present opinion, which in the end seldom fails to attend deeds of injustice.

* The accounts published by Napoleon, in the name of Villeneuve, of the action, were entirely fabricated by the emperor himself. In his despatch to the minister of marine of 11th August, after noticing the accounts in the English newspapers, which claimed the victory, Napoleon said, “The arrival of Villeneuve at Corunna will overturn all their gasconades, and in the eyes of Europe will give us the victory; that is no small matter. Instantly write out a narrative of the action, and send it to M. Maret. Here is my idea of what it should be;” and then follows the fabricated account.—DUMAS, xii., 348; *Pièces Just.*

† James, iv., 18. Ann. Reg., 1805, 230, 231.

‡ Let us hear what the French writers say of this proceeding: “Admiral Calder,” says Dupin, “with an inferior force, meets the Franco-Spanish fleet; in the chase of it he brings on a partial engagement, and captures two ships. He is tried and reprimanded, because it is believed that, had he

† The public discontent, which terminated so cruelly for Sir Robert Calder, was, in a great degree, owing to the unfortunate suppression of part of his despatches in the account

* James, iv., 17.

Meanwhile Nelson, having taken in water and other necessary supplies at Tetuan, stood for Ceuta on the 24th of July; and, having heard nothing of the combined fleet, proceeded to Cape St. Vincent, rather cruising in quest of intelligence than following any fixed course. He then traversed the Bay of Biscay, and approached the north of Ireland; and finding the enemy had not been heard of there, joined Admiral Cornwallis off Ushant on the 15th of August. No news had been obtained of the enemy; and on the same evening he received orders to proceed with the Victory and Superb to Portsmouth, where he arrived on the 17th, and at length heard of the action of the 22d of July and entry of Villeneuve into Ferrol. He was hailed with unbounded demonstrations of gratitude and joy in England, the public having followed with intense anxiety his indefatigable and almost fabulous adventures in search of the enemy, and deservedly awarded that consideration to heroic efforts in discharge of duty which is so often the reward only of splendid or dazzling achievements.*

Napoleon's hopes of accomplishing the objects of his ambition were somewhat revived upon finding that Nelson had not joined Sir Robert Calder's squadron, and that the fleet in Ferrol was still immensely superior to that of the enemy. Accordingly, he resumed his designs of invasion: on the 12th of August transmitted orders to Villeneuve, through the minister of marine, to sail without loss of time from Ferrol, and pursue his route towards Brest, where Gantheaume was prepared to join him at a moment's warning; and in two days afterward he wrote a second letter, in still more pressing terms, absolutely enjoining the immediate sailing of the combined fleet. Sir Robert Calder had at this time effected a junction with Admiral Cornwallis off Brest, so that the sea was open to his adventure. On the 17th of August, however, he was again detached, with twenty ships of the line, to cruise off Cape Finisterre. On the 11th, the combined fleet, amounting to twenty-nine sail of the line, having left several vessels behind them in a state not fit for service, stood out to sea, and at first took a northwesterly direction; but, having received accounts at sea from a Danish vessel that

renewed the action, he would have obtained a more decisive victory. What would they have done with Calder in England if he had commanded the superior fleet, and had lost two ships in avoiding an engagement which presented so favourable a chance to skill and valour?"—*DUPIN'S Voyages dans la Grande Bretagne*, ii., 17.

* South, ii., 225, 230. Ann. Reg., 1805, 230.

† "Despatch instantly," wrote Napoleon, on the 12th of August, to M. Decres, "a messenger to Ferrol. Make Villeneuve acquainted with the news received from London. Tell him I hope that he is continuing his mission, and that it would be too dishonourable for the imperial squadrons to permit a skirmish of a few hours and an engagement with fourteen vessels to render abortive such great projects; that the enemy's squadron has suffered much; and that, on his own admission, his losses have not been very serious." And on the 14th of August, "With thirty vessels, my admirals should learn not to fear four-and-twenty English; if they are not equal to such an encounter, we may at once renounce all hopes of a marine. I have more confidence in my naval forces; had I not, it would ruin their courage. If Villeneuve remains the 13th, 14th, 15th, and 16th, at Ferrol, I will not complain; but if he remains an hour longer with a favourable wind, and only twenty-four line-of-battle ships before him—I require a man of superior character. The little energy of my admirals throws away all the chances of fortune, and ruins all the prospects of the campaign."—*DUMAS*, xii., 59, 67.

a British fleet of twenty-five ships of the line (Sir Robert Calder) was approaching, Villeneuve tacked about and made sail for Cadiz, where he arrived on the 21st, the very day on which he was expected at Brest. Admiral Col-
ingwood, with four sail of the line, who
lay before that port, was obliged to retire on the approach of so overwhelming a force; but no sooner had they entered than he resumed his station, and with his little squadron gallantly maintained the blockade of a harbour where five-and-thirty hostile line-of-battle ships were now assembled.*

Not anticipating such a departure on the part of the combined fleet from the prescribed operations, Gantheaume, on the 21st of August, stood out of Brest harbour with one-and-twenty ships of the line, and drew up in order of battle in Bertheaume Roads. Admiral Cornwallis, whose squadron, after the large detachment under Calder, amounted only to fourteen, immediately moved in to attack them, and a distant cannonade ensued between the two fleets; but the French, who had no intention to engage in a general affair before the arrival of the combined fleet, did not venture out of the protection of their batteries, and the day passed off without any general action. In vain every eye was turned to the south, in the hopes of desecrating the long-wished-for re-enforcement; in vain Gantheaume counted the hours for the arrival of Villeneuve with thirty ships of the line, chasing before him Calder with twenty. In that decisive moment the star of England prevailed; the action of the 22d of July had saved his country, though it had proved fatal to its saviour; the combined fleet, weakened and discouraged, had sought refuge in Cadiz, not daring to encounter a second action; and the Brest squadron, after spending the day in anxious suspense, returned at night to their harbour.†

The intelligence of the arrival of the combined fleet at Cadiz put a final period to the designs of Napoleon against Great Britain, and all his energies were instantly turned to the prosecution of the war against Austria. His indignation appeared in an act of accusation which he drew up against Villeneuve, dictated by himself, in which the leading charges were, incapacity in the action of the 22d of July, and positive disobedience of orders, in afterward steering with the combined fleet for Cadiz, instead of pursuing the prescribed route for Brest.‡ But as it was of the utmost moment that his designs against the Imperialists on the Danube should as long as possible be disguised, preparations for embarkation were continued with redoubled activity down to the last moment, and at the very time when the emperor was directing the contemplated movements across France and Germany to the shores of the Danube. Between the 23d of August and the 1st of September the troops were daily exercised at embarking and disembarking in the Bay of Boulogne, and at length acquired the most extraordinary perfection in that difficult operation.§

Napoleon's designs are in consequence entirely ruined.

He sets off for
Paris, Sept. 1.

Extraordinary
dexterity to which
the troops had arrived
in embarking.

The cavalry and artillery were all stored in the appointed vessels; the emperor's household and baggage were embarked; and the soldiers, in the utmost impatience, awaited the signal to step on board, when suddenly, on the 1st of September, the emperor set out at two o'clock for Paris, and orders were issued to the whole of this mighty armament to defile by different routes towards the Rhine.*

The circumstances which induced this sudden change of resolution were not merely the destruction of all the projects for the naval campaign by the entry of Villeneuve into the harbour of Cadiz: matters had also come to a crisis on the Continent of Europe, and the time had now arrived when, as the coalition could not be dissolved on the shores of Britain, it required to be anticipated on the banks of the Danube.†

From the moment that Napoleon put on his head the iron crown of Charlemagne, in direct violation of the treaty of Luneville, which had provided for the independence of the Cisalpine Republic, and incorporated Genoa, Parma, and Placentia with his vast dominions, all hope of permanently preserving the peace of the Continent was at an end; and it was only a question of time and expedience when Austria should openly join her forces to those of the coalition. The assembly of all the armies of France on the shores of the Channel, the departure of the emperor for Boulogne, and the embarkation of a considerable part of his forces having impressed the Aulic Council with the belief that the military strength of the Empire would soon be involved in that perilous undertaking, the moment appeared eminently favourable for the Imperialists

Aug. 12, 1805. Chastelar, at the head of fifteen thousand men, entered the Tyrol, and began to organize the brave and hardy population of that province. Considerable bodies of workmen were employed in strengthening the fortifications on the Venitian frontier, and armaments already began to be formed on the Inn and the principal roads leading into Bavaria. These hostile preparations were immediately made the subject of angry contention between the cabinet of the Tuileries and that of Vienna; and in several articles in the *Moniteur*, evidently flowing from

required for the embarkation, Marshal Ney distributed the gunpowder, caissons, artillery, projectiles, and stores on board the transports provided for that purpose, and he divided that portion of the flotilla assigned to him into subdivisions: every battalion, every company received the boats destined for its use; every man, down to the lowest drummer, was apprized of the boat, and the place in the boat, where he was to set himself. At a signal given, infantry, cavalry, artillery were at once put under arms, and ranged opposite to the vessels on board which they were respectively to embark. A cannon was discharged, and all the field-officers dismounted and placed themselves at the head of their respective corps; a second gun was the signal to make ready to embark; a third, and the word of command, 'Colonels, forward!' was heard with indescribable anxiety along the whole line; a fourth, which was instantly followed by the word 'March!' Universal acclamations immediately broke forth; the soldiers, in perfect order, hastened on board, each to his appointed place; in *ten minutes* and a half twenty-five thousand men embarked. The enthusiasm of the troops knew no bounds: they thought the long-wished-for moment had arrived; but at the next signal the order to disembark was given, and they were made aware that the whole was only a feint to try the rapidity with which the movement could be performed. The relanding was completed nearly as rapidly as the embarkation; in *thirteen minutes* from the time the soldiers were on board they were drawn up in battle array on shore.—*NEY*, ii., 260, 261.

* *Jom.*, ii., 101. *Dum.*, xii., 127. *Ney*, ii., 249, 265.

† *Bign.*, iv., 303.

the pen of Talleyrand, the question as to the balance of power in Europe, and the danger to be apprehended from the strength of France, was discussed with more openness than was possible in the studied ambiguity of diplomatic correspondence.*†

At length the mask was let fall on both sides. The concentration of the Austrian forces on the Adige and the Inn, and the general warlike activity which pervaded the imperial dominions, left

no doubt that a contest was approaching; while, on the other hand, the whole forces of Napoleon were, unknown to Austria, converging from the Elbe to the Pyrenees towards the Danube. In these circumstances it was of the highest importance to both sides to secure the co-operation of the lesser states of Germany, and especially of Bavaria, whose dominions lay directly between the hostile powers, and would, in all probability, be the first theatre of hostilities. The court of Munich, accordingly, was warmly urged, both by France and Austria, to side with them in the contest, and the elector, long uncertain, hesitated between the two parties, and even entered into diplomatic connexions with both—the common resource of weak states when threatened with destruction by the collision of powerful neighbours,

* *Bign.*, iv., 310, 319. *Dum.*, xii., 101, 111.

† The views of the opposite parties are well abridged in the following state papers which at this period passed between the two cabinets:

"Let us come at once," said Talleyrand, "to the bottom of the question. Austria wishes to take up arms in order to reduce the power of France. If such is her design, I ask you to consider, is it conformable to her real interests? Is she always to consider France as a rival, because she was so once; and is it not from a very different question that the liberties of Europe are now menaced? The time is perhaps not far removed when France and Austria united will be required to fight, not only for their own independence, but for the liberties of Europe and the principles of civilization itself. In every war that may ensue between Russia and Austria on the one hand, and France on the other, Austria, whatever name she may assume, will speedily be found to be a principal in the strife; and she is fortunate if, abandoned by an ally of whom she has experienced the inconstancy and caprice, she does not experience the rudest strokes of fortune.

"What does France demand of Austria? Neither efforts nor sacrifices. The emperor desires only the repose of the Continent. He is ever ready to make a maritime peace as soon as England will adhere to the treaty of Amiens. But as that is impossible, in the present temper of England, but by means of a maritime war, he desires to devote himself exclusively to it, and therefore he demands of Austria not to divert him from that great design, and to enter into no engagement which may disturb the harmony which now prevails between the two empires."

It was replied on the part of Austria, on the 3d of September, "That the cabinet of Vienna was both willing and anxious to put a period to the dangers which threatened Europe, by a sincere and anxious mediation; but that to do that with any prospect of success, it was indispensable that the faith of treaties should be religiously observed, and that he who violated them was the real aggressor. The treaty of Luneville anxiously stipulated the independence of the Italian, Helvetic, and Batavian Republics. Every state should respect the independence of those which adjoin it, no matter whether they are strong or weak; and it is the violation of this duty by the French government which imposes upon other states the necessity of coalescing to oppose a barrier to its invasion. Austria is arming, but not with a hostile intention, and solely with the design of maintaining the existing peace with France, as well as the equilibrium and repose of Europe. Even should war become inevitable, she solemnly declares that the courts of Austria and Russia have bound themselves to interfere in no respect in the internal affairs of France, to make no change on the established possessions or relations in Germany, and to respect the integrity of the Ottoman Empire. Great Britain has the same intentions, and is desirous to be regulated by the same moderate principles in re-establishing her pacific relations with the French Empire."†

* Note, Aug. 5, 1805, Talleyrand to Cobentel.

† Note by Austria, Sept. 3, 1805. *Dum.*, xii., 109, 110.

and hardly to be reproached as a fault when it is the result of necessity. On the one hand, it was represented by the French party that Austria was the old and hereditary enemy of Bavaria; that she had already solicited the cession of a portion of her territory, and there could be no doubt that she coveted her possessions as far as the Lech; and that the elector had therefore everything to hope from an alliance with Napoleon, and as much to fear from falling into the jaws of the emperor. On the other hand, it was strongly urged by the old aristocratic party that all these advantages were merely elusory; that the alliance with France was a connexion with a revolutionary state which threatened the subversion of all the institutions of society; and that, when menaced by such a catastrophe, the only prudent course was to adhere to the head of the Germanic body, whose interests, it might be relied on, would always be opposed to such innovations. It was sufficiently difficult to determine which course to adopt between such opposing considerations; but, in addition to them, the elector had other and more anxious causes for solicitude on this occasion. His eldest son was at Paris, in the power of Napoleon; the fate of the Duke d'Enghien was still recent; and his paternal fears were strongly excited by the perils which he might run if the French emperor were irritated by decided hostilities. Vacillating between such

He finally joins France. to the substance of an alliance, offensive and defensive, with France on the 24th of Aug. 24. August, but delayed the signature of the treaty on various pretences, anxious to gain time in these critical circumstances, and it was not finally signed till the 23d of September, at Wurtzburg. Meanwhile, the Austrians, having some suspicion of such an understanding, summoned the elector in a peremptory manner, on the 6th of September, to unite his forces to their own. They were met by the most urgent entreaties to be allowed to remain neutral; and as this was refused, the elector, on the 8th, despatched a letter to the emperor, promising, if neutrality was impossible, to unite his forces to his own. In the night following, however, being overcome with terrors for his son, he secretly departed with his family to Wurtzburg, and the Bavarians retired into Franconia to join the French forces; and on the same day the Austrians crossed the Inn*.

The preparations of Napoleon were on a scale proportioned to the magnitude of the contest in which he was engaged, and the immense forces which the allies were preparing to deploy against him. Mr. Pitt had conducted the negotiations for the formation of a coalition with the most consummate ability: every difficulty had been removed, every jealousy softened; Austria and Russia stood forth prominent in the fight; and hopes were even entertained that, if disaster did not attend the first efforts of the coalition, Prussia might be induced to unite her forces to those of the other allies in support of the freedom of Europe. In Italy and Germany no less than 350,000 men were preparing to act against France, among whom were 116,000 Russians, advancing by forced marches through Poland towards the Bavarian plains. Their arrival, however, could not be calculated upon for at

least two months to come; and in the mean time the Austrian army, which had just crossed the Inn, eighty thousand strong, stood exposed to the first strokes of Napoleon. Thirty thousand Imperialists, under the Archduke John, were already assembled in the Tyrol, and the Archduke Charles, at the head of fifty-five thousand of the best troops of the Empire, was preparing to exert his great talents on the Italian plains. It could not be concealed that the forces of the coalition would ultimately become superior, and that France had much to dread from the prospect of having to combat with the single resources of the Empire against Europe in arms on the Rhine. Everything, therefore, depended on secrecy of combination and celerity of movement; and in both these qualities Napoleon was unrivalled.*†

To meet this immense force, and destroy part before the remainder could advance to its support, was the object of Napoleon, and in its prosecution he displayed even more than his wonted energy and ability. The army of England on the shores of the Channel, the forces in Holland, the troops in Hanover, were forthwith formed into seven corps, under the command of so many marshals of the Empire: their united numbers amounted to 190,000 men; a force amply sufficient to crush the Imperialists in Germany, if they could be brought simultaneously into action before the Russians advanced to their support. The army of Italy was 35,000, besides 15,000 in the Neapolitan territories; and the troops of Bavaria and the lesser German states, whose aid might be relied on, amounted to 24,000, so that France could open the campaign with 270,000 men.‡

But these forces, considerable as they were, formed but a part of the preparations of the emperor. On the 23d of September he repaired to the senate, and submitted two propositions to the Legislature, which were forthwith adopted. The first was a levy of 80,000 conscripts from the class who were to become liable to military service in 1806: a sufficient proof that France was already anticipating the military resources of the Empire; the second, the reorganization of the National Guard throughout its whole extent. But in thus reviving the Republican institution, the emperor was careful to organize it on a different footing from what it had been during the days of Democratic equality. "It is important," said he, "that the officers of the National Guard should be named by the emperor: every species of force ought to emanate from the supreme au-

thority; all our institutions should be in harmony, and a single uniform direction be given to whoever commands the force of the armed citizens." Subsequent decrees arranged the details of this reorganization: every man in good health was required to serve, from the age of twenty-one to sixty; ten companies formed a cohort, and several cohorts, according to the locality, a legion. Those only in the departments of the frontier, from Geneva to Calais, were called into active service, and arranged into four corps, commanded by General Rampon, Marshal Lefebvre, Marshal Kellerman, and General D'Abbeville. The emperor adjourned the

meeting of the senate by the following address, which sufficiently indicated the urgent aspect in which he viewed public affairs, and left him no alternative but to conquer or die.

His address to the senate.

"The eternal objects of the enemies of the Continent are at length accomplished; the war is renewed in the heart of Germany; Austria and Russia have united themselves to England. A few days ago I hoped that the peace of the Continent would not be disturbed: menaces and umbrages alike found me immovable, but the Austrian army has crossed the Inn; Munich is invaded; the Elector of Bavaria is chased from his capital; all my hopes have vanished. Senators, when, in conformity with your wishes, I placed the imperial crown on my head, I undertook to you and to all the citizens of France the obligation to maintain it pure and inviolate. Magistrates, soldiers, citizens, all equally desire to preserve our country from the influence of England, which, if it once prevailed, would lead only to the burning of our fleets, the filling up of our ports, the ruin of our industry. I have kept all the promises which I have made to the French people: they have made no engagement with me which they have not more than fulfilled. Frenchmen! your emperor will do his duty; the soldiers will do theirs; you will do yours."*

Previous to setting out from Boulogne, Napoleon issued several decrees for the disarmament of the flotilla, and the laying up what was kept in ordinary for future and distant operations.

The artillery was removed from the greater part of the armed vessels and all the transports; such part of it as could be accommodated in the harbour of Boulogne was kept there, the remainder dispersed through the harbours of the Channel. The English, too well satisfied at this dislocation of so formidable a force, made no attempt to hinder its dispersion, and soon of all that vast assemblage of vessels, hardly enough remained at Boulogne to transport thirty thousand men. A reserve of twenty thousand men alone remained on the heights above the harbour, under the command of General Brune, destined at once to keep up alarm on the coasts of Britain, and form a reserve in case of disasters befalling the grand army. Thus terminated this extraordinary armament, the greatest assemblage of military and naval forces ever made in modern times, contrived with the utmost skill, conducted with the most profound dissimulation, which entirely deceived the vigilance of the mighty nation against which it was directed, and failed at last rather from a casual combination of circumstances, and the intrepidity of an admiral whom England punished for his achievement, than any inade-

quacy in the means employed to attain the vast object which her enemy had in view.*

Determined, however, not to lose entirely the fruit of his naval armaments, Napoleon, before setting out for the grand army, issued directions for the fleet at Cadiz to put to sea and proceed to Toulon, in order to be ready to act as occasion might require on the shores of Italy. This instruction was accompanied by the appointment of Admiral Rosily to the command of the combined fleet, in lieu of Villeneuve, who was directed to surrender the command to him on his arrival: a measure which led to events of the greatest importance, by rendering the disgraced admiral desperate, and prompting him to make the ill-omened sortie which terminated in the disaster of Trafalgar. But, after bringing the fleet round to Toulon, the successor of Villeneuve was to break it down into several detached cruising expeditions, the chief of which was one to take possession of and cruise near St. Helena! Strange fatality, which appeared to attach him, on the eve of so many of the greatest events of his life, to the destined scene of his exile and death!†

An important change occurred at this period, highly characteristic of the decline of Revolutionary fervour, and a return to the ordinary ideas of civilized life. This was the restoration of the Gregorian Calendar, and abolition of the barbarous nomenclature of the Revolutionary era, which for twelve years had been in use in France: a change prescribed by the emperor in a decree shortly before setting out for Strasbourg.‡

Meanwhile the British government directed all their efforts to form a powerful fleet to blockade the combined squadrons in the harbour of Cadiz. Independently of the twenty ships of the line which had been detached from the Channel fleet by Admiral Cornwallis, and the four which Admiral Collingwood had under his command off the Isle of Leon, seven more were got together in Portsmouth and Plymouth, and Nelson, who had retired to his house at Merton to recruit his exhausted strength, again volunteered his services to resume the command, repaired to Portsmouth, and hoisted his flag on board the Victory, of ninety guns. Even during the few weeks of his retirement, his thoughts perpetually ran on the combined fleets, and he was constantly impressed with the idea that they were destined to receive their deathblow from his hand. In these generous sentiments he was strongly supported by Lady Hamilton, who, notwithstanding the ardour of her attachment, constantly urged him to sacrifice every private consideration at the call of public duty.§ He was

The combined fleet is ordered, nevertheless, to sail from Cadiz.

§ When Captain Blackwood, on his way to London with despatches, called at Merton one morning early, Nelson, the moment he saw him, exclaimed; "I am sure you bring me news of the French and Spanish fleets! I think I shall yet have to beat them. Depend upon it, Blackwood," he repeatedly said, "I shall yet give M. Villeneuve a drubbing." At length his anxiety became so excessive that he resolved, notwithstanding all the remonstrances of his physicians, to volunteer his services to resume the command, which were, of course, gladly accepted by the Admiralty. In this resolution he was strongly supported by Lady Hamilton, with that feeling of generous ardour which has so often animated her sex in similar circumstances when influenced by romantic attachment. "Nelson," said she, "however we may

vividly impressed, however, with the presentiment that he would fall in the battle which was approaching, and before he left London called at the upholsterer's, where the coffin which Captain Hallowell had given him, made of the wreck of the *L'Orient*, was deposited, desiring that its history might be engraven on its lid, as it was highly probable he would want it on his return. On the night on which he left Merton, he wrote a few lines in his journal, highly descriptive of the elevated feeling and manly piety which formed the leading features of his character.*

With difficulty he tore himself, on the Sept. 14. beach at Portsmouth, on the following morning, from the crowd, who knelt and blessed him as he passed; and the last sounds which reached his ears from that loved land, which he was never again to see, were the enthusiastic cheers of his countrymen, who never ceased to strain their aching eyes on his vessel till it vanished from their sight.†

Nelson's reception in the fleet off Cadiz was as gratifying as his departure from England: the yards were all crowded with hardy veterans, anxious to get a sight of their favourite hero, and peals of acclamation shook the yards when he was seen on the quarter-deck of the *Victory* shaking hands with his old captains, who, in transports of joy, hastened on board to congratulate him on his arrival. No one from that moment entertained a doubt that the fate of the combined fleet was sealed if they should venture from their harbour. So great was the terror of his name that, notwithstanding the positive orders to sail for Toulon which he had received, Villeneuve hesitated to obey when he heard of his arrival; and in a council of war, it was resolved not to venture out unless they were at least one third superior to the enemy. Informed of this circumstance, Nelson carefully concealed his real strength from his opponents, stationed his fleet out of sight, about sixty miles to the westward of Cape St. Mary's, with a chain of repeating frigates to inform him of the motions of the enemy, while, at the same time, the blockade of the port was rigorously enforced, so as to render it probable that ere long they would be compelled to sail, from the impossibility of finding supplies in the vicinity of Cadiz for so great a multitude. Forty sail of the line were now assembled in that harbour, of which thirty-three were ready for sea; and as Napoleon, never contemplating the return of the combined fleet to Cadiz, had made no magazines of provisions in that quarter, though ample stores had been collected at Rochefort, Brest, and the harbours of the Channel, the want of provisions was soon severely felt. Still, however, the council of war which Villeneuve had summoned to his assistance had declined to undertake the responsibility

of an engagement, and Nelson, to overcome their irresolution, had recourse to a stratagem, which was crowned with the most complete success. Having received, on the 15th of October, information that he would soon be joined by six sail of the line from England, he ventured on the bold step of detaching Admiral Louis with a like force to Gibraltar for stores and water; thus maintaining the blockade with only twenty-two line-of-battle ships, in presence of thirty-three newly-equipped and ready for action. In these critical circumstances, Nelson was not without some feelings of anxiety lest the Carthage or Rochefort squadrons should join the enemy and increase their already formidable superiority; yet even then he had the generosity to allow Sir Robert Calder, who was obliged to go home to demand a court-martial, to proceed thither in his own ninety-gun ship, which could ill be spared at such a crisis. Fortunately, the promised re-enforcements arrived, and in Oct. 19. single vessels, so as not to attract the notice of the enemy; and Nelson, whose anxiety for the approaching combat had now risen to the very highest pitch, again found himself at the head of seven-and-twenty ships of the line.*

Deceived by this stratagem as to the real strength of the enemy; aware that Napoleon was desirous of concentrating his principal naval resources in the Mediterranean; and apprehensive that, if he any longer delayed his departure, Admiral Rosilly might assume the command, and deprive him of the fair opportunity which now presented itself of covering his former failures by the defeat of England's greatest hero, Villeneuve at length resolved upon putting to sea and risking a battle. Early on the 19th of October, accordingly, the inshore frigates made signal that the enemy were coming out of the harbour; and at two o'clock in the afternoon, that they were fairly at sea, steering for the southeast. Overjoyed at this intelligence, Nelson instantly gave the signal to chase in the same direction; and though they were not got sight of on the following day, yet so well were their motions watched by the frigates on the outlook, that the British admiral was made acquainted with every tack which they made, while he himself studiously kept out of view, lest, upon seeing the number of his vessels, they should return to Cadiz harbour. At length, at daybreak on the 21st, their whole fleet was descried, drawn up in a semicircle, in close order of battle, about twelve miles ahead; and Nelson, who had previously arranged the order of attack with his worthy second in command, Collingwood, and fully explained it to the officers of the fleet, made signal to bear down in two lines perpendicular upon the enemy. He had twenty-seven sail of the line and four frigates: they thirty-three line-of-battle ships and seven frigates, of which four were three-deckers; and four thousand marksmen were dispersed through the fleet, who unhappily took too effectual aim in the battle which followed.†

lament your absence, offer your services; they will be accepted, and you will gain a quiet heart by it. You will gain a glorious victory, and then you may return here and be happy." He looked at her with tears in his eyes: "Brave Emma! good Emma! If there were more Emmas there would be more Nelsons."—SOUTHEY, ii., 232.

* "Friday night, Sept. 13, half past ten. I drove from dear, dear Merton, where I left all which I hold dear in this world, to go and serve my king and country. May the great God whom I adore enable me to fulfil the expectations of my country! and if it is His good pleasure that I should return, my thanks will never cease being offered up to the throne of His mercy. If it is His good providence to cut short my days upon earth, I bow with the greatest submission, relying that He will protect those so dear to me whom I leave behind. His will be done!"—SOUTHEY, ii., 235.

‡ In communicating his plan of attack to Collingwood, Nelson, who was altogether destitute of professional jealousy, wrote, "I send you my plan of attack as far as a man dare venture to guess at the very uncertain position the enemy may be found in; but it is to place you perfectly at ease respecting my intentions, and to give full scope to your

Nelson's plan of attack was, to bear down upon the enemy in double columns, and thus break the line in two places at once. In this way he thought it was most likely that each ship should be brought speedily into close action with its antagonist, and the greatest chance of decisive success be obtained. Villeneuve's instructions, as the English lay to windward, were to lie in close order and await the attack. The fleet was divided into two lines, so arranged that, at the interstices of each two vessels in the front line, the broadside of one in the second presented itself: a combination as well imagined as can be figured, to meet the anticipated British manœuvre of breaking the line. The front line, commanded by Villeneuve himself and Admirals Alava and Dumanoir, consisted of twenty-one line-of-battle ships: twelve under Admirals Gravina and Magon formed the second. Collingwood, in the Royal Sovereign, led the first column of the British, followed closely by the Belleisle and Mars: Nelson himself, in the Victory, headed the second, immediately after whom came the Temeraire and the Neptune.* When the lines were completely formed, and the ships bearing rapidly down on the enemy, so that it was evident an engagement was inevitable, Nelson retired to his cabin and wrote the following prayer: "May the great God whom I worship grant to my country, and for the benefit of Europe in general, a great and glorious victory, and may no misconduct in any one tarnish it; and may humanity after victory be the predominant feature in the British fleet! For myself individually, I commit my life to Him that made me, and may His blessing alight on my endeavours for serving my country faithfully. To Him I resign myself and the just cause which is intrusted to me to defend."† Noble sentiments to be uttered by such a leader on such an occasion, and worthy to be engraven on the hearts of all who, like him, are called to the glorious duty of defending the cause of freedom and religion against the efforts of tyrannic power!

Never did the ocean exhibit a grander spectacle than was presented by the British fleet bearing down on the combined squadrons, at noon on the 21st of October, a few leagues to the north-west of CAPE TRAFALGAR. A long swell was setting into the Bay of Cadiz; our ships, crowding all their canvass, moved majestically before it, with light winds from the southwest. Right before them lay the mighty armament of France and Spain, the sun shining full on their close-set sails, and the vast three-deckers which it contained appearing of stupendous magnitude amid the lesser line-of-battle ships by which they were surrounded. The

British sailors, however, admired only the beauty and splendour of the spectacle, and, never doubting of success, observed to each other, "What a fine sight yonder ships would make at Spithead!" Nelson, when he appeared on the quarter-deck, wore his admiral's frockcoat, bearing on his left breast four stars, the insignia of the different orders with which he was invested; the officers on board lamented such a display, which it was evident would expose him to certain death from the enemy's marksmen; but they knew it was in vain to remonstrate, as his resolution was taken, and he had before been heard to say, "In honour I gained them, and in honour I will die with them." He was in good spirits, but calm and sedate; not in that exhilaration with which he had entered into battle at the Nile and Copenhagen; it was evident that he neither expected nor wished to survive the action. He asked Captain Blackwood what he should deem a victory. That officer answered he should consider it a glorious result if fourteen were taken; but Nelson replied, he should not be satisfied with less than twenty. He then made signal for the British fleet to prepare to anchor at the close of the day, and when it was given, asked the captain whether he did not think there was another wanting; and, after musing a while, he fixed what it should be, and the signal appeared at the mast-head of the Victory, the last he ever made, which will be remembered as long as the British name shall endure: "ENGLAND EXPECTS THAT EVERY MAN WILL DO HIS DUTY." It was received by a rapturous shout throughout the fleet, which already rung the knell of those of France and Spain, although their seamen were brave and experienced, and animated with the utmost enthusiasm for the combat which was approaching. "Now," said Nelson, "I can do no more; we must trust to the Great Disposer of all events and the justice of our cause. I thank God for this great opportunity of doing my duty."*

Nelson led thirteen ships of the line in the Victory, Collingwood fourteen in the Royal Sovereign; but such was the superior sailing of the latter vessel, that she speedily distanced all her competitors, and was already near the enemy's line when the last vessels in the column were still six miles distant; and as Nelson steered two points more to the north than Collingwood, in order to cut off the enemy's retreat from Cadiz, the other column was first engaged.† Far ahead of all the rest of the fleet was the Royal Sovereign, which, with all sails set, steered right into the centre of the enemy's line, and was already enveloped in fire, when the nearest vessels, notwithstanding their utmost efforts, were still more than two miles in the rear. "See," said Nelson, "how that noble fellow Collingwood carries his ship into action!" while Collingwood, well knowing what would be passing in the breast of his commander and friend, at the same time observed, "What would Nelson give to be here!" When Villeneuve beheld the manner in which the hostile fleet was bearing down upon his line,

Order in which the English fleet bears down.

judgment for carrying them into execution. We can, my dear Coll, have no little jealousies. We have only one great object in view, that of annihilating our enemies and getting a glorious peace for our country. No man has more confidence in another than I have in you, and no man will render your services more justice than your very old friend, Nelson and Bronte." Nelson said to his captains, "That, knowing his precise object to be that of a close and decisive action, would supply any deficiency of signals; and in case they could not be seen or understood, no captain can do wrong who places his ship alongside that of an enemy." So impressed were these noble veterans with the grandeur of the plan of attack proposed to them, that many of them shed tears in his presence.—SOUTHBY, ii., 243, 244.

† Nelson, in bearing down, made signal when the ships entered into action to cut away their canvass, in order that no hands might be lost in furling the sails. The loss to the fleet in a few minutes was nearly £200,000; but to this admirable piece of foresight much of its early success was owing.

he remarked to those around him that all was lost. In passing the Santa Ana, the Royal Sovereign gave her a broadside and a half into her stern, tearing it down, and killing and wounding four hundred of her men;* then wheeling rapidly round, she lay beside her so close that the lower yards of the two vessels were locked together, and the muzzles of their guns literally touched each other. The Spanish admiral, Alava, seeing that it was the intention of Col- lingwood of the Royal Sovereign to engage him to leeward, had brought all his strength to the starboard side; and such was the weight of his metal that his first broadside made the Royal Sovereign heel two streaks out of the wa-

Battle of
Trafalgar.

ter. A furious combat now engaged between the two first-rates; but, such was the rapidity and precision of the Royal Sovereign's fire, that the discharges of the Spaniard rapidly became weaker and weaker; and it was expected by the English that she would be compelled to strike before another British ship had got into close action. This disgrace, however, was prevented by the St. Juste, Indomitable, Fougueux, and St. Leandro, which grouped round the Royal Sovereign when they saw their admiral's danger, and assailed her on all sides by such a vehement cross-fire that their balls frequently struck each other above the deck of the English vessel. Regardless of his danger, Collingwood continued for twenty minutes pouring his broadsides into his first-rate antagonist, and with such effect that she at length returned his fire only by a single gun, at long intervals from each other, though with a firmness worthy of the Spanish character; the admiral continued the contest, relying on the assistance of his friends, who now clustered round the English vessel so closely that she was entirely hid from the remainder of the fleet, and they watched with intense anxiety the opening of the smoke, which at length showed the British flag, waving unconquered in the midst of the numerous ensigns of France and Spain by which it was surrounded.†

Meanwhile Nelson, burning with anxiety, was crowding all sail to reach the scene of danger, and as he approached within a mile and a half's distance single shots were fired from different vessels in the enemy's line, some of which fell short, and others went over, until at length one went through the Victory's main-top-gallant-sail. A minute or two of awful silence ensued, during which the Victory continued to advance, when all at once the whole van of seven or eight ships opened a concentric fire upon her, of such severity as hardly ever before was directed at a single ship. At this awful moment the wind, which had long been slight, died away to a mere breath, so that the Victory advanced still more slowly, ploughing majestically through the waves, unable from her position to return a single shot. Presently a ball knocked away the wheel—every man at the poop was soon killed or wounded—the spars and rigging were falling on all sides—while the crew, with their lighted matches in their hands,

stood at their guns, long waiting, with the coolness which discipline alone can give, the signal to return the fire. At this moment Nelson's secretary, Mr. Scott, was killed by his side. "This is too warm work, Hardy," said he, "to last long," as he continued with his captain, amid the scene of destruction, his accustomed slow walk in the centre of the vessel. He at first steered for the bows of the Santissima Trinidad, which he imagined bore the French admiral, though his flag was not yet hoisted; but, as the Victory approached, the enemy closed up and presented so compact a front that it was impossible to find an entrance, and Nelson directed Captain Hardy to steer for the opening between the Temeraire and Bucentaur, and at one o'clock the Victory, as she passed slowly and deliberately through, poured her broadside, treble shot, into the Bucentaur, with such terrible effect, that above four hundred men were killed or wounded by the discharge. While listening with characteristic avidity to the deafening crash made by their shot in the French hull, the British crew were nearly suffocated by the clouds of black smoke which entered the Victory's portholes, and Nelson and Hardy had their clothes covered by the volumes of dust which issued from the crumbled woodworks of the Bucentaur's stern. In advancing, the Victory received a dreadful broadside from the French Neptune, but passed on to the Redoubtable, with which she grappled, and commenced a furious conflict, while, on the other side, she engaged the Bucentaur and Santissima Trinidad. Captain Harvey, in the Temeraire, fell on board the Redoubtable on the other side, so that these four ships formed as compact a tier as if they had been moored together, their heads all lying the same way. The lieutenants of the Victory upon this depressed their guns, and diminished the charge, lest the shot should pass through and injure the Temeraire;* and as every shot from the Victory set the Redoubtable on fire, the British sailors stood with buckets of water in their hands and extinguished the flames in the enemy's decks as they arose, lest they should involve both ships in destruction.

After the first discharge, the Redoubtable closed her lower deck ports, and fired from them no more, fearing that she would be boarded from the Victory. He is mortally wounded. Seeing this, and thinking they had struck, Nelson twice ordered the firing into her to cease, but her crew still kept up a murderous warfare from the decks and tops; and to this humanity he fell a victim. The sixty-eight pounders, indeed, on the Victory's fore-castle, each loaded with 500 musket balls, soon cleared the Redoubtable's gangways; but a destructive fire was kept up from her fore and main tops, and as Nelson was walking on the quarter-deck, he was pierced by a shot from one of the French marksmen, not more than fifteen yards distant. "They have done for me at last, Hardy," said he. "I hope not," said Hardy. "Yes," he replied, "my backbone is shot through." He was immediately carried below, but even then, such was his presence of mind, that he directed the tiller-rope, which had been shot away, to be replaced, and taking out his handkerchief, covered his face and stars, lest the crew should be discouraged by the sight. The cockpit was crowded with wounded and dying men; he insisted that the surgeon should

* Collingwood's guns on this occasion were all double-shotted, and by long previous practice he had brought his men to such perfection that they could fire three well-directed broadsides in three minutes and a half. On the morning of the battle he was in unusual spirits, conversing cheerfully with his officers. "Now, gentlemen," said he, "let us do something to-day which the world may talk of hereafter."—COLLINGWOOD, ii., 168, 169.

† James, iv., 49, 52. Collingwood, i., 172, 174. South, ii., 257. Dum., xiii., 201, 204.

* Ann. Reg., 1805, 235, 236. James, iv., 54, 59. South, ii., 259, 262. Dum., xiii., 204, 206, 208.

leave him, and attend to those to whom he might be useful, "For to me," said he, "you can do nothing." All that could be done was to fan him with paper, and give him lemonade to assuage his burning thirst. As the action continued, however, several ships of the enemy began to strike; and as the crew of the Victory cheered as each successive flag was lowered, at every hurra a gleam of joy illuminated the countenance of the dying hero.*

Meanwhile the battle continued with unabated fury in all directions. At a quarter past two the *Santa Ana* struck to the Royal Sovereign, after an uninterrupted combat of two hours' duration; but the loss on board of the English ship was also very severe, and she was reduced to nearly as unmanageable a state as her vanquished opponent. During the latter part of the action Collingwood took his men off the poop, that they might not be unnecessarily exposed; but he long after remained there, fearless of death himself. At length, descending to the quarter-deck, he visited the men, enjoining them not to fire a shot in waste; looking himself along the guns to see that they were properly pointed, commending particularly a negro gunner, who, while he stood beside him, fired ten times directly into the opposite porthole of the *Santa Ana*. Captain Harvey of the *Temeraire*, when engaged in close combat with the *Redoutable*, perceived the *Fongueux*, of 74 guns, preparing to board her on the other side. He allowed the enemy to come within a hundred yards, and then poured in a broadside with such tremendous effect that she fell a perfect wreck aboard of the English vessel, and was soon after carried, with little resistance, by boarding. The other British vessels, as they successively came into action, engaged in close combat the nearest ships of the enemy; and when the arrival of the remote parts of the columns had reduced the great odds against which the leading line-of-battle ships had at first to contend, the wonted superiority of the English soon became apparent. Before three o'clock ten ships of the line had struck. The fire on the poop of the Victory from the tops of the *Redoutable* was so tremendous, that for a time it was almost deserted, upon which the French made a vigorous attempt to board; but they were quickly repulsed by the crew of the English vessel rushing up from below and engaging them at the muzzles of the muskets; and shortly after, the *Temeraire* having wafted nearer, poured in her whole broadside upon her crowded decks with such effect that two hundred men were swept away by the discharge. By degrees, however, the marksmen in the tops of the *Redoutable* were picked off by the Victory's marines, and at length her whole masts and rigging fell across the *Temeraire*'s bows, which, forming a bridge of communication between the two combatants, she was boarded and taken possession of by the crew of the English vessel, which thus had the glory of capturing an antagonist on the right and left. Never had a ship been more gallantly defended: out of six hundred and forty-three men who composed her crew, only five-and-thirty reached the English shores.† Shortly after the *Bucentaur*,

which had never recovered the first broadside of the Victory, struck her colours, with Villeneuve on board, and the masts of the *Santissima Trinidad*, which had been exposed to a tremendous raking fire from the Victory, Neptune, Leviathan, and Conqueror, fell with a tremendous crash, and she was taken possession of when wholly disabled by a boat from the Prince.*

While victory was thus everywhere declaring for the British arms, Nelson was lying in the cockpit, in the utmost anxiety to hear the details of the battle. As Captain Hardy could not for above an hour leave the deck, he repeatedly exclaimed, "Will no one bring Hardy to me? He must be killed; he is surely dead." At length he came down: they shook hands in silence. Hardy in vain strove to suppress his feelings at that painful moment. "Well, Hardy," said Nelson, "how goes the day with us?" "Very well," replied Hardy; "ten ships have struck, but five of the van have tacked, and are coming down upon the Victory; but I have called two or three fresh ships round, and have no doubt we shall give them a drubbing." "I hope," said Nelson, "none of our ships have struck?" "There is no fear of that," replied Hardy. "I am a dead man," then said Nelson; "I am going fast; it will be all over with me soon." Hardy then went up to the deck, but returned in about fifty minutes, and taking Nelson by the hand, congratulated him, even in the arms of death, on his glorious victory; adding that fourteen or fifteen of the enemy were taken. "That's well," replied Nelson; "but I bargained for twenty;" and then, in a stronger voice, added, "Anchor, Hardy, anchor. Do you make the signal. Kiss me, Hardy," said he. Hardy knelt down and kissed his cheek. "Now I am satisfied," said Nelson; "thank God, I have done my duty." His articulation now became difficult; but he was repeatedly heard to say, "Thank God, I have done my duty," and expired at half past four without a groan, leaving a name unrivalled, even in the glorious annals of the English navy.†

The combined fleet now presented the most melancholy spectacle. In every direction were to be seen only floating wrecks of the wrecks or dismantled hulks. The proud armament, late so splendid, was riddled, shattered, and torn by shot. Guns of distress were heard on all sides, and in every quarter the British boats were to be seen hastening to the vessels which had surrendered, to extricate their crews from their perilous situation. Twenty ships of the line had struck, with Villeneuve, the commander-in-chief, and the Spanish admirals, Alava and Cisneros. One of them, the *Achille*, of 74 guns, had blown up after she surrendered; but nineteen ships of the line, including two first-rates, the *Santissima Trinidad*, of 130 guns, and *Santa Ana*, of 112, were in the hands of the British, and lay in mingled confusion alongside of their redoubtable conquerors. In this extremity Admiral Gravina, with nine ships of the line, forming the van of the combined fleet, stood away for Cadiz; and Admiral

The two midshipmen kept firing, and he supplied them with cartridges. The old quartermaster pointed to the man who had fired the fatal shot, who wore a glazed hat and white frock. He received a ball in the mouth, and instantly expired.—SOUTHBY, ii., 269, 270.

* South., ii., 263, 264. Ann. Reg., 1805, 237. James, iv., 61, 63.

† The marksmen who had wounded Nelson did not escape. Shortly after he fell, the storm of balls was so severe, that an old quartermaster, who had seen him fire, and two midshipmen, alone were left on the Victory's poop.

† Beattie's Narrat., 46, 49. South., ii., 267, 270.

Dumanoir, with four French ships, took to flight, pouring his broadsides, as he passed, not only into the British ships, but the Spanish prizes which had struck their colours: a circumstance which, although probably unavoidable, from the confused way in which friend and foe were intermingled, contributed not a little to augment the irritation between the two nations which this terrible disaster could not fail to produce. The British ships were too much occupied in taking care of their numerous prizes to be able to give chase; and Dumanoir stood out to the northward and got clear off, only, however, to fall into the hands of another squadron, and ultimately reach a British harbour.*

It had been Nelson's dying instructions to Admiral Collingwood to bring the fleet to anchor; and it would have been well for that great and good man had this advice been followed, as he would have probably brought his nineteen noble prizes in safety to Spithead.† As it was, he deemed it an unnecessary precaution till nine at night, and the consequences proved eminently disastrous.‡ Early on the morning of the 22d a strong southerly wind arose, with squally weather, and a heavy swell set in from the Atlantic into the Bay of Cadiz. Notwithstanding the utmost efforts of the British, it was found impossible to keep the prizes in tow, or make the necessary repairs on their pierced and ruined sides, to enable them to ride out the gale; and the consequence was that most of them drifted their cables, and either foundered at sea or were wrecked on the coast. The crew of the *Algesiraz* rose upon the slender British guard which had her in possession, and escaped

Oct. 22. with them into Cádiz, where the authorities had the generosity to allow the English who had her in possession to return on their parole to the English fleet. Encouraged by this circumstance, Captain Kirgulen, the senior French officer in the harbour, put to sea with five sail of the line and five frigates, the only part of the combined fleet which was in a condition for service, in the hope of recapturing some of the dismantled hulls which were drifting about the coast. The British instantly formed a line of battle, covering such of the prizes as they still had in tow, and the French did not approach within gunshot; but their frigates succeeded in getting hold of the *Santa Ana* and *Neptune*, which drifted into their hands, and brought them into Cadiz. Many melancholy catastrophes happened during the storm. Among the rest, the *Indomitable* was wrecked on the coast, having on board, besides her own, the survivors of the *Bucentaur's* crew, and above 1000 persons perished. Many of the prizes foundered in the gale; others were sunk by the British. Four only reached Gibraltar in safety. But the British took Ad-

mirals Villeneuve, Alava, and Cisneros, besides 20,000 prisoners, including the land-forces on board; and the combined fleet was almost totally annihilated, while their own loss was only 1690 men killed and wounded. "Six-and-twenty ships of the line," says General Matthieu Dumas, "at Trafalgar or Cape Ortega,* were compelled to strike their colours." It may truly be said that there were left only a few remnants of the fleet which, two months before, had filled England with alarm.†

An interchange of courteous deeds took place between the British fleet and the Courteous in-Spaniards at Cadiz. The magni-tercourse with-tude of the disaster had extinguish- the Spaniards ed all feelings of irritation, and at Cadiz. brought the people into that state of sad exaltation which is nearly allied to generous emotion. Admiral Collingwood made an offer to send all the wounded Spaniards ashore: a proposal which excited the deepest gratitude in that high-spirited people, and was at the same time a seasonable relief to the British squadron, already sufficiently occupied with its own wounded and the numerous prizes in their hands. In return, the Marquis of Solana, governor of Cadiz, sent to offer the English the use of the hospitals for their wounded, pledging the Spanish honour that they should be carefully attended to. When the storm after the action drove some of the prizes upon the coast, they declared that the English who were thus thrown into their hands should not be considered as prisoners of war, and the Spanish soldiers gave up their own beds to their shipwrecked enemies. Already was to be seen the commencement of that heartfelt alliance which was so soon destined to take place between these generous enemies; and it was amid the tempests of Trafalgar that the feelings were produced which brought them to stand side by side at Vittoria and Toulouse.‡

No words can describe the mingled feelings of joy and grief, of exultation and Melancholy, which pervaded the British Empire upon the news being received of the battle of Trafalgar. The greatest naval victory recorded in the annals of the world had been gained by their arms. The dangers of invasion, the menaces of Napoleon, were at an end. Secure in their seagirt isle, they could now behold without alarm the marshalled forces of Europe arrayed in hostility against them. In a single moment, from the result of one engagement, they had passed from a state of anxious solicitude to one of independence and security. Inestimable as these blessings were, they yet seemed inadequately purchased by the life of the hero by whom they had

* The subsequent action with Sir R. Strachan.

† Dum., xiii., 230, 239. James, iv., 123, 137. Coll., i., 183, 184.

‡ In the midst of this scene of ruin, Admiral Collingwood did not neglect the duty which he owed to the Supreme Disposer of all events. On the day after the battle the following general order was issued to the fleet: "The Almighty God, whose arm is strength, having of his great mercy been pleased to crown the exertions of his majesty's fleet with success, in giving them a complete victory over their enemies on the 21st of this month, and that all praise and thanksgiving may be offered up to the throne of grace for the great benefit to our country and to mankind, I have thought proper that a day should be appointed for a general humiliation before God, and thanksgiving for his merciful goodness, imploring forgiveness of sins, a continuation of his divine mercy, and his constant aid to us in defence of our country, liberties, and laws, without which the utmost efforts of man are naught."—COLLINGWOOD, i., 179.

§ Collingwood, i., 185, 190. South., ii., 275, 276.

* James, iv., 99, 102. South., ii., 273, 274. Dum., xiii., 228, 229. Vict. et Cong., xvi., 188, 192.

† A practical proof of the benefit which might have been derived to the fleet and the prizes from attending to Nelson's dying instructions was afforded by the Defence. This vessel, with its prize the *San Ildefonso*, anchored, and rode out the gale in safety. The *Swiftsure* and *Bahama* prizes also anchored, and were saved.—JAMES, iv., 130.

‡ In justice to Collingwood, however, it must be stated that many high naval authorities are of opinion that, if he had anchored immediately after the battle, the consequences might have been fatal to many of the British squadron, not one of which was lost by pursuing the opposite course; and that, when the signal to anchor was given at nine at night, many vessels, including the *Victory* itself, were incapable of obeying.—COLLINGWOOD, i., 191, 192, note.

Violent tempest, and disasters to the forces after it terminated.

Mingled joy and grief in Britain on the occasion.

been gained. The feelings of grief were even more powerful than those of gratitude; and England, with the fleets of her antagonist sunk in the deep, seemed less secure than when, in presence of her yet unscathed enemies, she was protected by the hero whose flaming sword turned every way.

Need it be added that all the honours which a grateful country could bestow were heaped upon the memory of Lord Nelson. Nelson? His brother was made an earl, with a grant of £6000 a year: £10,000 was voted to each of his sisters, and £100,000 for the purchase of an estate. A public funeral was decreed, and a monument by the nation in the place of his interment, St. Paul's Cathedral. The principal cities of the empire vied with each other in erecting monuments and statues to his memory. Admiral Collingwood was made a baron, and received a pension of £2000 a year: a grant which first raised that noble officer from that state of comparative dependance which is so often the lot of upright integrity. The remains of Nelson were consigned to the grave, amid all the pomp of funeral obsequies, in St. Paul's, followed by a countless multitude of weeping spectators. The leaden coffin in which he was brought home was cut in pieces, and distributed as relics through the fleet; and when at his interment his flag was about to be lowered into the grave, the sailors who assisted at the ceremony with one accord rent it in pieces, that each might preserve a fragment as long as he lived. Unbounded was the public grief at his untimely end. "Yet," in the words of his eloquent biographer, "he cannot be said to have fallen prematurely whose work was done; nor ought he to be lamented who died so full of honours, and at the height of human fame. The most triumphant death is that of the martyr; the most awful, that of the martyred patriot; the most splendid, that of the hero in the hour of victory; and if the chariot and horses of fire had been vouchsafed for Nelson's translation, he could scarcely have departed in a brighter blaze of glory.*"

Lord Nelson was the greatest naval officer of Character of this or any other nation whose that naval hero. achievements have been recorded in history. The energies of an ardent and impetuous mind were in him wholly absorbed in patriotic feeling. Duty to his God, his king, and country constituted the simple objects to which unrivalled powers and consummate genius were directed. Like all other great commanders, he took the utmost pains to make his officers thoroughly acquainted beforehand with his general plan of operations, but intrusted them with full discretionary powers in carrying them into execution. He possessed the eagle eye which at once discerns the fitting movement, and the skillful combination which brings every power at his disposal simultaneously and decisively into action. Simple in his desires, enthusiastic in his character, he was alike superior to the love of wealth, the bane of inferior, and envy of others, the frailty of ambitious minds. Devotion to his country was in him always blended with a constant sense of religious duty; and amid all the license of arms he was distinguished from the first by an early and a manly piety. In later years, when his achievements had marked him out as the great defender of Christianity, he considered himself an instrument in the hand of Provi-

dence to combat the infidel spirit of the Revolution, and commenced his despatch on the battle of the Nile by ascribing the whole to Almighty God. Too great to be fettered by rules, too original to condescend to imitation, he consulted his own inspiration only in all his mighty deeds, and in every instance left the stamp of native genius in the duties, whether elevated or humble, which he performed. His whole career, from his first entrance into the navy to the battle of Trafalgar, exhibited a pattern of every manly virtue. Bold in conception, cautious in combination, firm in execution, cool in danger, he was the most successful, because the most profound and intrepid, of leaders. If a veil could be drawn over the deeds of Naples, his public character might be deemed without a fault; but no human being was ever yet perfect; and that alloy of frailty which has descended to all from our first parents, long concealed in him by the intensity of patriotic devotion, was at length revealed by the fascination of female wickedness.*

The battle of Trafalgar was soon followed by another victory, which at any other Victory of Sir period would have excited the most R. Strachan. lively satisfaction, but was hardly noticed in the transports consequent on that stupendous event. Admiral Dumanoir, who had escaped from the disaster at Cadiz, and crossed the Bay of Biscay in hopes of getting either into Rochefort or Brest harbours, fell in, on the 2d of November, with the frigates of Sir Richard Strachan's squadron, who immediately made signal that a strange fleet was in sight. The British admiral instantly gave chase, which was continued two days and nights, during which the light of the moon rendered the enemy visible, until at length, at noon on the 4th of November, the two Nov. 4. squadrons were so near that Dumanoir was obliged to lie to and receive battle. The English fleet at first consisted of five ships of the line and four frigates; but during the chase one of the former was driven away by stress of weather, and in the action which followed four line-of-battle ships and four frigates alone were engaged. The French had four sail of the line only, and some of the guns were dismounted from the effects of the battle of Trafalgar. The battle began at noon, by each of the British line-of-battle ships engaging one of the enemy, and lasted with great vigour for four hours, when it terminated in the capture of every one of the French ships; but not till they were almost totally dismasted, and had sustained a loss of 730 killed and wounded. Crippled and dispirited as they were, it was not to be expected that the four French ships could have withstood the shock of four fresh English line-of-battle ships, supported by four frigates, who took an important part in the action; and the heavy loss which they sustained proved that they had not surrendered till the last extremity. Sir Richard Strachan brought his four prizes into harbour, which somewhat consoled the English for the absence of so many of those taken at Trafalgar; and their satisfaction was increased by the British loss being only 24 killed and 111 wounded.†

It is observed by Mr. Hume, that actions at sea are seldom if ever so decisive as those at land: a remark suggested by the repeated indecisive actions between the English and Dutch in the reign of Charles II., but which affords a

Reflections on the decisive nature of these successes.

* South., ii., 276, 280. Coll., i., 214.

† Dum., xiii., 232, 238. James, iv., 154, 163.

striking proof of the danger of generalizing from too limited a collection of facts. Had he extended his retrospect farther, he would have observed that the most decisive and important of all actions recorded in history have been fought at sea: that the battle of Salamis rolled back from Greece the tide of Persian invasion, that of Actium gave a master to the Roman world, that of Lepanto arrested forever the dangers of Mohammedan invasion in the South of Europe, and that of La Hogue checked, for nearly a century, the maritime efforts of the House of Bourbon. Equally important in its consequences as the greatest of these achievements, the battle of Trafalgar not only at once secured the independence of England, and destroyed all Napoleon's hopes of maritime greatness, but annihilated for half a century the navies of France and Spain. The losses of the Moscow campaign were repaired in six months: even the terrible overthrow of Leipsic was almost obliterated by the host which was marshalled round the imperial eagles at Waterloo; but from the shock of Trafalgar the French navy never recovered; and during the remainder of the war, notwithstanding the utmost efforts of Napoleon, no considerable fleet with the tricolour flag was ever seen at sea. Error frequently attends hasty or partial induction; but from a sufficiently broad and extensive view of human affairs, conclusions of general and lasting certainty may be formed.

It is stated by Napoleon, that a fleet of thirty ships of the line, with guns and complement of men complete, may be considered as corresponding at sea to an army of 120,000 men at land.* Judging by this standard, the battle of Trafalgar, which destroyed fully twenty-five ships of the line and made prize of twenty, must be considered as equivalent to a victory where 90,000 men out of 120,000 were destroyed. The annals of war exhibit no instance of such a success with land-forces: it is double what even the bulletins claimed for Napoleon at Austerlitz, Jena, or Friedland. Even at Waterloo, where alone a blow approaching to that inflicted at Trafalgar was struck, the loss of the French has never been estimated at above 40,000 men. The loss by which that decisive victory was purchased on the side of the British alone was 9999; on that of the allies, above 20,000; whereas the total loss of the English at Trafalgar was only 1690 men: a smaller number than perished in many inconsiderable actions attended with little or no result in Spain.† This affords a striking instance how comparatively bloodless, when viewed in relation to the importance of the successes achieved, are victories at sea than land; and although the losses of the defeated party are much more severe, yet even they bear no sort of proportion to the enormous effusion of blood in land-fights. Lord Collingwood estimates the killed and wounded at Trafalgar, where the French navy was in a manner annihilated, "at several thousand;"‡ while the Moscow campaign, where four hundred thousand men perished, was found insufficient to beat down the military power of Napoleon.

The battle of Trafalgar affords a decisive proof that it is owing to no peculiar manœu-

vre, ill-understood by others, of breaking the line, that the extraordinary successes of the English at sea are owing, but that the superior prowess and naval skill of their sailors are alone the cause of their triumphs. In truth, the operation of breaking the line, whether at sea or land, is an extremely critical and hazardous one, and never will be attempted, or if attempted, succeed, but by the party conscious of and possessing greater courage and resources in danger than its opponent. From its superior sailing, and the lightness of the wind, the Royal Sovereign was in action at Trafalgar when the rear of the column was still six miles distant, and full a quarter of an hour before another British ship fired a shot; and the whole weight of the conflict, for the same reason, fell upon the twelve or fourteen British ships which first got into action, by whom six sevenths of the loss was sustained.* So far from the French and Spanish fleets being doubled up and assailed by a superior force, the British fleet itself was doubled up; and the victory was, in fact, gained by half its force before the remainder got into action. The arrival of this remainder, indeed, gave those first engaged a decisive advantage, and enabled the ships which hitherto had borne up against such desperate odds to overwhelm in their turn their dispirited, and now outnumbered, opponents; but had they not been, from the first, superior, and greatly superior, to their antagonists, they must have been taken prisoners in the outset of the fray, and lain useless logs alongside of their captors when the rear of the columns was getting into action. Would any but a superior enemy have ventured to plunge, like Collingwood and Nelson, into the centre of their opponent's fleet, and, unsupported, single out the hostile admiral for attack, when surrounded by his own vessels? What would have been the fate of Alava and Villeneuve, of the Santa Ana and the Bucentaur, if they had thus engaged Collingwood and Nelson, the Royal Sovereign and the Victory, at the muzzle of their guns, in the middle of the English fleet, when three or four other hostile line-of-battle ships were pouring in their shot on all sides? Would they not have been compelled to strike their colours in ten minutes, before the tardy succeeding vessels could come up to their support? In breaking the line, in short, whether at sea or land, the head of the column must necessarily be engaged with a vastly superior force, before the rear and centre can get up to its support; and if from accidental causes their arrival, as at Trafalgar, is long delayed, it may happen that this contest against desperate odds may continue a very long time—quite long enough to prove fatal to an ordinary assailant. The conclusion to be drawn from this is, not that Nelson, Duncan, and Rodney did wrong, and ran unnecessary hazard by breaking the line at Trafalgar, Camperdown, and Martinique—quite the reverse: they did perfectly right; but that it is the manœuvre suited only to the braver and more skillful party, and never can prove successful but in the hands of the power possessing the superiority in courage and prowess, though not in numbers. It will succeed when the head of the column can sustain itself against double or treble its own force before the centre or rear

And on the manœuvre of breaking the line.

* Napoleon, ii., 124.

† The loss at Talavera, out of 19,900 British, was 5000; that at Albuera, 4500 out of 7500; and out of 16,000, who formed the storming columns at Badajoz, nearly 4000 lay on the breaches and in the ditches of that terrible fortress!

‡ Coll., i., 163, 164.

* "The total loss was 1690; of which 1452 belonged to fourteen out of the twenty-seven vessels of the fleet. With a few exceptions, the ships so suffering were in the van of their respective columns."—JAMES, iv., 111.

get up, but in no other circumstances. The case is precisely the same at land: the party breaking the line there runs the greatest risk of being made prisoner, if not able to bear up against superior forces, before support arrive from the rear; and an antagonist who can trust his troops in line to resist the head of the column, will soon obtain a decisive advantage by assailing the attacking column on both flanks. This was what the Duke of Wellington felt he could do, and constantly did, with British troops; and, accordingly, Jomini tells us that the system of attacking in columns and breaking the line never succeeded against the close and murderous fire of the English infantry. It was the same with the Russians. Napoleon's system of bringing an overwhelming force to one point, and there breaking the line, answered perfectly as long as he was engaged with the Austrians, who laid down their arms, or retired the moment they saw an enemy on their flank; but when he applied it to the Russians, he soon found the attacking column fiercely assailed on all sides by the troops among whom it had penetrated; and the surrender of Vandamme, with 7000 men, in the mountains of Bohemia, in 1813, taught him that it is a very different thing to get into the rear of an army drawn from the North and one from the South of Europe.

It is frequently said by the French writers, that at this period the fate of Europe depended upon chance, and that, if the naval officers, to whom Napoleon remitted to report on Mr. Fulton's proposal for the navigation of vessels by steam, had given a different opinion, and that invention had been adopted at Boulogne, there can be no doubt that the invasion might have been successfully accomplished. There appears no solid ground for this opinion. Great discoveries, destined, like those of gunpowder, printing, and steam, in the end, to change the face of the world, never come to maturity but by slow degrees. The sublimest genius, the most overwhelming power, is not able so to outstrip the march of time as to give to one generation that general use of a discovery destined by Nature for another. Even if it were otherwise, and steam navigation could in a few years have been brought to perfection, or, at least, into common application, in the French navy, unquestionably the English would not have been idle: the mighty engine would have yielded its powers equally to both sides, and their relative situation would have remained the same as before. If steamers would have enabled the flotilla, under all winds, to issue from Boulogne harbour, and attempt the passage of the Channel, they would have enabled the English blockading squadrons at all seasons to maintain their station, and put it in their power to have sent in fire-ships, which would have carried conflagration and ruin into their crowded harbour. Propelled by this powerful force, one armed steamship, at dead of night, would have burst open the chains at the entrance of the basin, while succeeding ones, in rapid succession, brought flames and explosion into its forests of shipping. Gunpowder did not diminish the superiority of the English at sea. The victory of Nelson at Trafalgar was not more decisive than that of Edward III. at Sluys: the countrymen of Collingwood, who ventured unsupported into the midst of the combined fleet, need never fear the mechanical force which augments the facility of getting into close action,

and increases the rapidity with which the different vessels of the squadron can be brought together to the decisive point.

But it is impossible to form an equally clear opinion as to the consequences which would have followed if Napoleon, with a hundred and thirty thousand men, had succeeded in effecting a landing on the coast of Kent. He has told us that he would have advanced direct to London, of which he calculated upon getting possession in four days, and there he would instantly have proclaimed parliamentary reform, a low suffrage for the new voters, the downfall of the oligarchy, the confiscation of the property of the Church, a vast reduction of taxation, an equitable adjustment of the national debt, and all the other objects which the Revolutionary party in this country have ever had at heart, and the prospect of obtaining only one of which, five-and-twenty years afterward, produced so extraordinary a change in the dominant multitude of the English people. It was Napoleon's constant affirmation, that the majority in number of the English nation was opposed to the war, which was maintained solely by the influence and for the purposes of the oligarchy; and that, if he could once have roused the multitude against their rule, Great Britain would speedily have become so divided as to be no longer capable of resisting the power of France.* "I

* "I would have hastened over my flotilla," said Napoleon, "with 200,000 men (it was only 135,000), landed as near Chatham as possible, and proceeded direct to London, where I calculated upon arriving in four days from the time of my landing. I would have proclaimed a republic, the abolition of the nobility and House of Peers, the distribution of the property of such of the latter as opposed me among my partisans: liberty, equality, and the sovereignty of the people. I would have allowed the House of Commons to remain, but would have introduced a great reform. I would have published a proclamation, declaring that we came as friends to the English, and to free the nation from a corrupt and flagitious aristocracy, and restore a popular form of government, a democracy: all which would have been confirmed by the conduct of my army, as I would not have allowed the slightest outrage to be committed by my troops. I think that, between my promises and what I would actually have effected, I should have had the support of a great many. In a large city like London, where there are so many canaille and so many disaffected, I should have been joined by a formidable body, and I would, at the same time, have excited an insurrection in Ireland. You would never have burned your capital; you are too rich and fond of money. How often have the Parisians sworn to bury themselves under the ruin of their capital rather than suffer it to fall into the hands of the enemies of France, and yet it has twice been taken! The hope of a change for the better, and a division of property, would have operated wonderfully among the canaille, especially that of London. The canaille of all nations are nearly alike. I would have made such promises as would have had a great effect. I would have abolished flogging in the army, and promised your seamen everything, which would have made a great impression on their minds. The proclamation that we came as friends to relieve the English from an onerous and despotic aristocracy, whose object was to keep the nation eternally at war, in order to enrich themselves and their families with the blood of the people, together with the proclaiming of a republic, the abolition of the monarchical form of government and the nobility, the declaration of the forfeiture of such of the latter as should resist, and its division among the partisans of the Revolution, with a general equalization of property, would have gained me the support of the canaille, and of all the idle, profligate, and the disaffected in the kingdom." Thus far the Emperor Napoleon: to which it may be added, that, amid the divisions and Democratic transports consequent on these prodigious innovations, he would quietly have laid his grasp on Woolwich, Chatham, Portsmouth, and Plymouth, and smiled at his revolutionary allies on this side of the Channel when they called on him to redeem his pledges, farther than spoiling some of the higher orders, and, if they proved refractory, have marched a file of grenadiers into the Chapel of St. Stephen.—See O'MEARA, i., 349-352.

What if Napoleon had succeeded in effecting a landing?

Democratic changes which he would have instantly proclaimed.

would not," said he, "have attempted to subject England to France; I could not have united two nations so dissimilar. If I had succeeded in my project, I would have abolished the monarchy, and established a republic instead of the oligarchy by which you are governed. I would have separated Ireland from England, and *left them to themselves, after having sown the seeds of Republicanism in their morale.* I would have allowed the House of Commons to remain, but would have introduced a great reform."*

His designs if he had succeeded in that object.

doubtful to no one who recollects that the British troops defeated the French in every encounter, without exception, from Vimiera to Waterloo, and that Napoleon himself said to Lord Whitworth there were a hundred chances to one against his success. But would she have remained true to herself under the temptation to swerve produced by such means? This is a point upon which there is no Briton who would have entertained a doubt till within these few years; but the manner in which the public mind has reeled from the application of inferior stimulants since 1830, and the strong partiality to French alliance which has recently grown up with the spread of Democratic principles, has now suggested the painful doubt whether Napoleon did not know us better than we knew ourselves, and whether we could have resisted those methods of seduction which had proved fatal to the patriotism of so many other people.

The spirit of the nation, indeed, then ran high against Gallic invasion; unanimity unprecedented animated the British people; but, strong as that feeling was, it is now doubtful whether it would not have been supplanted, in a large portion of the nation at least, by a still stronger, and the sudden offer of all the glittering objects of Democratic ambition would not have shaken the patriotism of a considerable portion of the British, as it unquestionably would of the great bulk of the Irish people. No man can say how he would keep his senses under the application of some extraordinary and hitherto unknown stimulant, as if he were at once elevated to a throne, or saw the mountains fall around him, or the earth suddenly open beneath his feet; and even the warmest friend to his country will probably hesitate before he pronounces upon the stability of the English mind under the influence of the prodigious excitement likely to have arisen from the promulgation of the political innovations which Napoleon had prepared for her seduction. If he is wise, he will rejoice that, in the providence of God, his country was saved the trial, and acknowledge with gratitude the inestimable obligations which she owes to the illustrious men whose valour averted a danger under which her courage, indeed, would never have sunk, but to which her wisdom might possibly have proved unequal. The true crisis of the war occurred at this period. It was the arm of Nelson which delivered his country from her real danger; thenceforth the citadel of her strength was beyond the reach of attack. At Waterloo she fought for victory; at Trafalgar, for existence.

Their probable result.

CHAPTER XL.

CAMPAIGN OF AUSTERLITZ.

SEPTEMBER—DECEMBER, 1805.

ARGUMENT.

Austria, deceived by Napoleon's Measures, crosses the Inn.—Her Forces advance across Bavaria to the Black Forest.—Efforts of Napoleon to gain Prussia.—Negotiations between the two Powers.—Russians refused a Passage across the Prussian Territories.—March of French Troops from the Shores of the Channel to the Banks of the Rhine.—Composition and Direction of these Forces.—Violation of the Prussian Territory by Bernadotte's Corps.—Great Indignation excited by this at Berlin.—Measures concerted between Russia, Sweden, and England in the North of Germany.—Neutrality of Naples.—Napoleon's Arrival on the Rhine, and Proclamations to his Troops.—Mutual Manifestoes by the belligerent Powers.—Movements of the French Troops to surround the Austrians.—Mack's defensive Arrangements.—Four thousand Imperial Grenadiers are cut to Pieces by Murat.—Recompenses bestowed by Napoleon on the Soldiers engaged in the Combat.—Measures of Mack to extricate himself.—Bloody Combat at Hasslach.—Surrender of four thousand Austrians at Memmingen.—Completion of the Investment of Ulm.—Napoleon's Address to his Soldiers at the Bridge of the Lech.—Mack resolves to detach the Archduke Ferdinand to Bohemia, and himself remain at Ulm.—Combat at Elchingen.—Retreat of the Archduke Ferdinand, with great Loss.—Surrender of Werneck, with eight thousand Men.—The Heights around Ulm are carried by Napoleon.—Negotiations for the Surrender of Mack.—He capitulates at first conditionally, and then unconditionally.—The Army of Mack defiles before Napoleon.—Napoleon's Message to the Senate at Paris.—His Proclamation to his Soldiers.—The Blame of these Disasters is divided between Mack and the Aulic Council.—Errors of the Cabinet of Vienna in the general Plan of the Campaign.—The Archduke Charles is kept on the Defensive in Italy.—The Bridge at Verona is forced by Massena.—The Archduke resolves to retreat, in order to cover Vienna, and falls back by the Tagliamento to Laybach in Carinthia.—Advance of Napoleon's Army through Bavaria.—Defensive Measures of the Austrian Government.—Increasing Irritation of Prussia.—Arrival of the Emperor Alexander at Berlin, and Conclusion of a secret Convention with the Prussian Government.—Nocturnal Visit to the Tomb of the Great Frederic.—Landing of the Allies in Hanover.—Operations in the Tyrol.—Surrender of Jellachich and the Prince de Rohan, and Abandonment of that Province.—Napoleon advances into Upper Austria.—Austrians' Proposals of Peace, which come to Nothing.—Kutusoff withdraws to the left Bank of the Danube.—Continued Advance of the French towards Vienna.—Destruction of Part of Mortier's Corps by Kutusoff.—Desperate Action at Dierstein.—Mortier recrosses the Danube.—Napoleon advances rapidly to Vienna.—Description of that City.—Surprise of the Bridge over the Danube.—Napoleon passes through the Capital, and establishes himself at Schönbrunn.—Subsequent Movements of the Armies.—Finesse of Kutusoff in parrying the Attempts of the French to circumvent him.—Heroic Action of Bagration, who at length makes good his Retreat.—Junction of the Russian Armies.—Measures of Napoleon.—Conduct of the French at Vienna.—Forces on both Sides.—Napoleon reconnoitres the Field of Austerlitz.—Dangers of his Situation.—Simulated Negotiations on both Sides to gain Time.—Haugwitz arrives from Berlin.—The Allies advance to Wischaw.—Preparatory Movements on both Sides.—Allied Order of Battle.—Description of the Field of Battle.—Dispositions of the French Troops.—Nocturnal Illumination of the French Lines.—Movements on both Sides in the Morning.—Battle of Austerlitz: its Results.—Dangers of Napoleon's Situation, notwithstanding his Success.—The Austrians sue for an Armistice.—Interview of the Emperor Francis with Napoleon.—Armistice concluded with Russia and with Austria.—Dissimulation of Prussia, and Accommodation with that Power.—Treaty of Alliance with the Cabinet of Berlin, which gains Hanover.—Affairs of Naples and of the North of Germany.—Peace of Presburg.—Dethronement of the King of Naples.—Reflections on this Step.—Napoleon returns to Vienna.—Munich, the Rhine, and Paris.—Reflections on the Campaign.—Importance of the Valley of the Danube as the Theatre of Contest between France and Austria.—

Vast Growth of the Military Power of France since the last Peace.—A similar Increase during Peace characterized all the Reign of Napoleon.—Great Abilities displayed by Napoleon in the Arrangements for this Campaign.—Errors of the Allies.—Ruinous Effects of the Indecision of Prussia.—Ability displayed by Mr. Pitt in the Formation of the Confederacy.—His last Illness and Death.—His Character and mighty Achievements.—Principles of his domestic Administration.—Progressive and steady Growth of his Fame.—Erroneous Views of foreign Writers on his Designs.—His Errors.—Opinion of the Democratic Party in England on him.—Funeral Honours paid to his Memory.

In proportion as the time approached when his great projects against Austria were to be carried into execution, Napoleon redoubled his ostensible efforts for the invasion of Great Britain. These preparations, which never had been more than a feint from the moment that intelligence of the stoppage of Villeneuve's fleet by Sir Robert Calder's action, and the subsequent retreat of that admiral to Cadiz, had been received, completely produced the desired effect. Austria, deceived by the accounts which were daily transmitted of the immense accumulation of forces on the coasts of the Channel, the embarkation of the emperor's staff and heavy artillery, and the continual exercising of the troops in the difficult and complicated operation of getting on shipboard, deemed the moment come when she could safely commence hostilities, even before the arrival of the Russian auxiliaries. She broke ground, accordingly, by crossing the Inn and invading the Bavarian territories, fondly imagining that the French troops were still on the shores of the Channel, and that she would be able, by a rapid advance, to rouse Bavaria and the lesser powers of Germany to join her standard, and appear before their arrival, with the whole forces of the Empire, on the banks of the Rhine. But she grievously miscalculated, in so doing, the activity and resources of the French emperor, and soon found, to her cost, that she had been the dupe of his artifices, and had unwittingly played his game as effectually as if she had intentionally prostrated before his ambition the resources of the monarchy.*

The forces with which the Aulic Council engaged in this enterprise were 80,000 men; and the Russians were still so far removed as to render it impossible to reckon upon their co-operation in the first movements of the campaign. They had, with reason, calculated upon being joined by the whole forces of Bavaria; but, as already noticed, the paternal anxiety of the elector rendered these hopes abortive, and threw the whole weight of that electorate into the opposite side of the scale. The army of the Imperialists was numerous, gallant, and well appointed, but hardly equal to the task of meeting unaided the united French and Bavarian forces, even if led by commanders of equal talent and experience.

Austria, deceived by Napoleon's measures, crosses the Inn.

Sept. 9.

They advance through Bavaria to the Black Forest.

What, then, was to be expected from them when advancing under the guidance of Mack to meet the grand army grouped round the standard of Napoleon? In vain the British government transmitted to the cabinet of Vienna a detailed statement, obtained from the imperial staff at Boulogne, of the amount and composition of the French army, showing above a hundred and thirty thousand men, of all descriptions, ready to march, and asked whether it was against England or Austria that this force was really intended to act. With infatuated self-confidence, their host continued to advance; soon it overran the Bavarian plains, entered the defiles of the Black Forest, and occupied with its outposts the openings from that rocky ridge into the valley of the Rhine.†

From the moment that it was evident that hostilities were unavoidable, Napoleon ^{Efforts of Napoleon to gain Prussia.} was indefatigable in his endeavours to engage Prussia on his side. The instructions to Duroc, his envoy at Berlin, were to represent to the Prussian government, "that there was not a moment to lose; that it was indispensable that an alliance should forthwith be concluded between the two states; that the confederacy of Russia, Austria, and England was equally menacing to both; that during the negotiations for a conclusion of the treaty, it was necessary that Prussia should make an open declaration against Austria, or, at least, a formidable demonstration on the Bohemian frontier; that the emperor was about to make an autumnal campaign; that, having dispersed the armament of Austria before the month of January, France and Prussia might have their united forces against Russia, for which purpose the emperor offered them the aid of eighty thousand, ^{Negotiations between the two powers.} amply provided with everything necessary for a campaign." The answer of the Prussian cabinet to these propositions was in the main favourable. They admitted "that the union of France and Prussia could alone provide against the rest of the Continent such a barrier as would ensure the maintenance of general tranquillity." The French plenipotentiary, taking these words in a more favourable sense than they were perhaps intended, immediately commenced the drawing out of a treaty of alliance, offensive and defensive, between the two powers; but when it was communicated to the Prussian government, their temporizing policy reappeared: they were willing to unite with France in order to prevent the resumption of hostilities, but hesitated at taking any step which might involve them in the contest; and evinced, amid all their anxiety for the

acquisition of Hanover, an extreme apprehension of the consequences of a Russian war. To overcome their scruples, Napoleon did not hesitate to engage that "he would retain none of his conquests on his account, and that the Empire of France and Kingdom of Italy shall receive no acquisition.*" But the terrors of the Prussian cabinet were not to be overcome by these obviously hypocritical professions, and they persisted in their resolution to enter into no engagement which might involve them in hostilities.

Matters were in this doubtful state when the Russian minister at Berlin presented a letter from the Emperor of Russia, in which he proposed an interview with his Prussian majesty on the frontiers of their respective dominions, and requested permission for his troops to pass through his territories on their route for Bavaria. The pride of Frederic William instantly took fire, and he replied by a positive negative against the passage of the Moscovites through any part of his dominions, but expressed his willingness to meet his august neighbour at any place which he might select. Prussia, at the same time, renewed its negotiations with France for the acquisition of Hanover as a deposit, until the conclusion of the war: a proposition to which Napoleon testified no unwillingness to accede, provided "France lost none of its rights of conquest by the deposit."‡

While these unworthy negotiations were tarnishing the reputation of the Prussian monarchy, the French troops were in full march from the shores of the Channel to the banks of the Rhine. The instructions given by Napoleon to all the chiefs of the grand army for the tracing of their route, and the regulation of their movements, were as perfect a model of the combination of a general, as the fidelity and accuracy with which they were followed were of the discipline and efficiency of his followers. The stages, the places of rest, the daily marches of every regiment were pointed out with undeviating accuracy over the immense circumference from Cherbourg to Hamburg; relays of horses provided to convey by post those who were more remote, twenty thousand carriages collected for their rapid conveyance, and the immense host caused to converge, by different routes, through France, Flanders, and the north of Germany, to Ulm, the centre where it was anticipated the decisive blows against the Austrian monarchy were to be struck.† The troops simultaneously commenced their march from the coast of the Channel in the beginning of September, and performing, with the celerity of the Roman legions, the journeys allotted to them, arrived on the Rhine from the 17th to the 23d of the same month. They were all in the highest spirits, buoyant with health, radiant with hope; the exercises and discipline to which they had been habituated during the two preceding years in their camps on the shores of the ocean having enabled them to overcome fatigues with ease which would have been deemed impos-

September 21. Russians denied a passage through the Prussian territories.

March of the French troops towards Bavaria.

* Though totally deficient in the decision, promptitude, and foresight requisite for a commander in the field, Mack was by no means without a considerable degree of talent, and still greater plausibility in arranging on paper the plan of a campaign; and so far did this species of ability impose on Mr. Pitt, that he wrote to the cabinet of Vienna, recommending that officer to the command of the German army. The just and decisive opinion expressed of him by Nelson at Naples, in 1798, has already been noticed. With all his great qualities as a civil statesman, Mr. Pitt had but little capacity for military combinations, and this is the judgment, in this particular impartial, pronounced upon him by Napoleon. — See NAPOLEON in Month., ii., 432.

† Dum., xiii., 12.

‡ Instructions to Duroc, 24th of August, 1805. BIGNON, xv., 334. These instructions, written the very day on which Napoleon received accounts of the entry of Villeneuve into Ferrol, and when he dictated to Daru the march of the grand army from Boulogne across Germany (*Ante*, ii., 329, 330), are a singular monument of his vigour and rapidity of determination.

* Bignon, iv., 338, 341.

† Bignon, iv., 343, 346.

‡ See the orders, addressed by Napoleon to the seven marshals commanding the corps of the army, in Dumas, xiii., 309, 340; *Pièces Just.* Many of them are dated at nine, ten, eleven at night, or midnight; but in all is to be seen the same extraordinary union of minuteness and accuracy of detail, with grandeur and extent of general combination.

sible at that period by any other soldiers of Europe.*†

The army which Napoleon thus directed against the Imperialists was the Composition most formidable, in respect of numbers, equipment, and discipline, of these forces, which modern Europe had ever witnessed. Divided into eight corps, under the command of the most distinguished marshals of the Empire, it consisted of 180,000 men, and had been brought, by long exercise both in camps and in the field, to an unrivalled pitch of discipline and splendour.‡ The plan of Napoleon was to direct the corps of Ney, Soult, and Lannes, with the Imperial Guards and the cavalry under Murat, to Donaworth and Dettingen; Davoust and Marmont were to march upon Neubourg; and Bernadotte joined to the Bavarians upon Ingolstadt; while Angereau, whose corps was conveyed by post from the distant harbour of Brest, received orders to cover the right flank of the invading army, and extend itself over the broken country which stretches from the Black Forest to the Alps of Tyrol and the Grisons. A single glance at the map will be sufficient to show that these movements were calculated to envelop altogether the Austrian army, if they remained in heedless security in their advanced position in front of Ulm; for while the bulk of the French, under Napoleon in person, descended upon their right flank by Donaworth, Bernadotte, with the corps from Hanover, got directly into their rear, and cut off the line of retreat to Vienna, while Angereau blocked up the entrance to the defiles of the Tyrol. It was of the utmost moment to the success of these great operations that the movements of the troops should, as long as possible, be concealed; and the despotic power of the French emperor gave him every facility for the attainment of this object. A rigorous embargo was immediately laid on in all parts of the Empire; the post was everywhere stopped; the troops were kept ignorant of the place of their destination; and such were the effects of these measures, that they were far advanced on their way to the Rhine before it was known either to the cabinets of London or Vienna that they had broken up from the heights of Boulogne.§

The other corps of the army, traversing their own or a friendly territory, experienced no obstacle on their march; but that of Bernadotte, in its route across Germany, from Hanover to Bavaria, came upon the Prussian state of Anspach. Napoleon was not a man to be restrained by such an obstacle; he had foreseen it, and given positive orders to Bernadotte to disregard the neutrality of that power. "You will traverse its territories," said he, "avoid resting there, make abundance of protestations in favour of

Prussia, testify the greatest possible regard for its interests, and meanwhile pursue your march with rapidity, alleging as an excuse the impossibility of doing otherwise, which really is the fact." These instructions were punctually obeyed, and Bernadotte, at the head of sixty thousand men, including the Bavarians and corps of Marmont placed under his orders, disregarding the remonstrances of the local authorities, traversed the Prussian territory and assembled around Eichstadt, with his advanced guard on the Danube, between Neubourg and Ingolstadt, at the end of the first week of October. The master stroke was delivered: the left wing of the French in great force was interposed between the Austrians and their own dominions, while they were reposeing in fancied security around the ramparts of Ulm.*

Great was the astonishment and indignation at Berlin when the unexpected intelligence of this outrage to their independence was received. It at once revealed the humiliating truth, long obvious to the rest of Europe, but which vanity and partiality to their own policy had hitherto concealed from the Prussian cabinet, that the alliance with France neither was based on a footing of equality, nor on any sense of mutual advantage; that it had been contracted only for purposes of ambition by Napoleon; that he neither respected nor feared their power; and that, after having made them the instruments of effecting the subjugation of other states, he would probably terminate by overturning the independence of their own. The weight of these considerations was much increased by the recollection that this outrage had been inflicted by a nation whom, for ten years, it had been the policy of Prussia to conciliate by all the means in their power; while, on the other hand, the simple refusal to grant a passage through their territories had been sufficient to avert the march of the Russian troops, although the cabinet of Berlin had, during that time, been far from evincing the same compliance to the wishes of the Czar. These indignant feelings falling in with a secret sense of shame at the unworthy part they were about to take in the great contest for European independence which was approaching, produced a total alteration in the views of the Prussian cabinet: while the more generous and warlike part of the capital, at the head of which were the queen, Prince Louis, and Baron Hardenberg, loudly gave vent to their indignation, and openly expressed their joy at the occurrence of a circumstance which had at length opened the eyes of government to the ruinous consequences of the temporizing policy which they had so long pursued. All intercourse with the French embassy was immediately prohibited; an energetic note, demanding satisfaction, was forthwith presented to the minister of that power at Berlin; and permission was given to the Russian troops to traverse in their march the Prussian territories. The projected interview between the Czar and the Prussian monarch to adjust that matter was adjourned, as the difficulty had been solved by the measure of Napoleon: the troops which had been directed towards the Russian frontiers were countermanded, and three powerful armies of observation formed: one of sixty thousand men in Franconia, under the orders of Prince Hohenlohe; one in Lower

Saxony, of fifty thousand, under the Duke of Brunswick; and one in Westphalia, of twenty thousand, under the command of the Prince of Hesse.* This impolitic step of Napoleon is linked with many important consequences: it produced that burst of angry feeling which at length brought Prussia into the lists with France in 1806: it is thus connected with the overthrow and long oppression of that power, and may be considered as one of the many causes, at this time entering into operation, which in their ultimate results produced the resurrection of European freedom, and the fall of the French Empire.

While the precipitance of Napoleon was thus producing a storm in the north of Germany, a treaty was concluded between Russia, England, and Sweden, by which the latter power engaged to furnish an auxiliary corps of 12,000 men to act in Pomerania, in concert with a Russian force of

double the amount, under the orders of Count Osterman Tolstoy. This army was to be farther re-enforced by the German legion in the service of England, an addition which would raise it to nearly fifty thousand men: an army, it was hoped, adequate not only to the task of reconquering the electorate of Hanover, for which it was immediately destined, but to determine at last the wavering conduct of Prussia, and give an impulse to the northern states of Germany, which might precipitate them in a united mass on the now almost defenceless frontiers of Holland and Flanders.† Had Prussia boldly taken such a line, what a multitude of calamities would have been spared to itself and to Europe!

More fortunate in the south than the north of Sept. 12. Europe, Napoleon at this period concluded a convention with the court of Naples. Naples for the neutrality of that kingdom during the approaching contest. A negotiation was at the same time set on foot with the Holy See for the admission of a French garrison into Ancona; but the pope had suffered too severely from the conquests and exactions of the Republicans to admit of such a concession, and both parties protracted the discussions, with a view to gain time for the issue of military operations.‡

These negotiations at either extremity of the line of military operations might have been attended with important effects upon the final issue of the war, if affairs had been delayed for any considerable time. But Napoleon was meanwhile preparing those redoubtable strokes in the heart of Germany which were calculated at once to prostrate the strength of Austria, intimidate or overawe the lesser powers, and frustrate the great combinations formed by the English and Russian cabinets for the deliverance of Europe.

The emperor arrived at Strasbourg on the 27th of September, and immediately addressed to his soldiers one of those heart-stirring proclamations which contributed almost as much as his military genius to the success of his arms. "Soldiers!" said he, "the campaign of the third coalition has commenced: Austria has passed the Inn, violated its engagements, attacked and chased our ally from his capital. We will not again make peace without sufficient guarantees: our generosity shall not again make us forget

what we owe to ourselves. You are but the advanced guard of the great people: you may have forced marches to undergo, fatigues and privations to endure; but whatever obstacles we may encounter, we shall overcome them, and never taste of repose till we have planted our eagles on the territory of our enemies." To the Bavarian troops he thus addressed himself: "Bavarian soldiers! I come to put myself at your head, to deliver your country from the most unjust aggression. The house of Austria wishes to destroy your independence, and incorporate you with its vast possessions. You will remain faithful to the memory of your ancestors, who, sometimes oppressed, were never subdued. I know your valour, and feel assured that, after the first battle, I shall be able to say with truth to your prince and my people, you are worthy to combat in the ranks of the grand army."*

The movements of the opposite armies in Germany were now rapidly bringing matters to a crisis. Mack, at the first intelligence of the approach of the French troops, had concentrated his forces at Ulm, Memmingen, and Stockach, with advanced posts in the defiles of the Black Forest, contemplating only an attack, as in former wars, in front, and expecting to be able to stem the torrent of such an invasion as effectually in a defensive position, around the ramparts of Ulm, as Kray had done the incursion of Moreau in the former war. He was in total ignorance of the great manœuvre of Napoleon in turning his flank with his left wing, and interposing between his whole army and the Austrian frontier. This decisive movement, the knowledge of which had been carefully kept from the enemy, by a whole French corps, diffused as light troops along the ridge behind which it was going forward, was now rapidly approaching its consummation. The united corps of Bernadotte, Marmont, Davoust, and Soult, with the Bavarians, a hundred thousand strong, had arrived at the same moment on the Danube in the rear of Mack, and without a moment's hesitation passed that river at Donauwörth, Neubourg, and Ingolstadt. Pursuing their course without interruption, they speedily arrived on the communications of the Austrian army with Vienna, and by the middle of Oct. 6 and 7. October Marmont and Soult were established in great strength at Augsburg, directly on the road from the imperial headquarters to the hereditary states; while Napoleon himself, at the head of the remainder of his army, led by Murat and Ney, was pressing upon them from the westward, both on the right and left banks of the Danube.†

Struck, as by a thunderbolt, by this formidable apparition in the rear, Mack had but one resource left, which was to have fallen back with all his forces to the Tyrol, the road to which was still open, and sought only to defend the approach to Vienna by accumulating a formidable mass in that vast fortress on the flank of the invading army. But the Austrian general had not resolution enough to adopt so daring a design, and probably the instructions of the Aulic Council fettered him to a more limited plan of operations. He confined himself, therefore, to concentrating his forces on the line of the Iller, between Ulm and Memmin-

gen, hastily threw up intrenchments to defend the latter town, and, grouping his masses round the ramparts of the former, fronted to the eastward, to make head against the formidable enemy who had thus unexpectedly appeared in his rear. At the same time he despatched orders to General Auffenberg, who commanded twelve battalions of grenadiers and four squadrons of cuirassiers at Innspruck, to join him by forced marches, and as soon as he arrived, despatched him to support the corps of Reinmayer, who was at the head of the vanguard near Donaworth.*

The brave Imperialist, while pursuing, in unsuspecting security, his march to the place of his destination, suddenly found himself enveloped at Vertingen, four leagues from Donaworth, by an immense body of French cavalry. It was the corps of Murat, eight thousand strong, which, rapidly sweeping round the Austrian infantry, menaced them on every side. In this extremity, Auffenberg formed his whole division into one great square, with the cuirassiers at the angles, and in that order boldly awaited the attack of the enemy. Down came the French dragoons like a tempest, rending the air with their cries, and speedily swept away the imperial horse stationed outside the infantry, while courageously resisting the immensely superior forces of the enemy. Still the square remained, and from its sides, fronting every way, there issued a redoubtable, rolling fire, which reminded the French veterans of their own unceasing discharges at Mont Thabor and the Pyramids. The combat was long and obstinate: in vain Nansouty, with the heavy dragoons, charged them repeatedly on every side; the Imperialists stood firm; their sustained running fire brought down rank after rank of the assailants, and the issue of the combat seemed extremely doubtful, when the arrival of Oudinot with a brigade of French grenadiers changed the fortune of the day. These fresh troops, supported by cannon, opened a tremendous fire upon one angle of the square: the Austrians, worn out with fatigue, were staggered by the violence of the discharge, and Nansouty, seizing the moment of disorder, rushed in at the wavering part of the line, and in an instant an aperture was made which admitted several thousand of the enemy into the centre of the Austrian square. Collecting with heroic resolution the yet unbroken part of his troops, Auffenberg succeeded in forming a smaller square, which effected its retreat into some marshes in the neighbourhood of the Danube, which arrested the pursuit of the French horse; but three thousand prisoners, many standards, and all their artillery, remained in the hands of the enemy.†

Although the courage with which the Austrians fought on this occasion appeared to be reflecting in every part of Europe a favourable augury for the final issue of the contest, yet to the inconsiderate multitude, who judge only from the result, the effect was very different, and the brilliant termination of the first action in the campaign was an event as animating to the French as it was depressing to the imperial soldiers. Napoleon, with his usual skill, availed himself of the opportunity to exhibit a spectacle which might electrify the minds of his troops. Two days after the action he repaired in person

to Zurmurhausen, where he passed in review all the corps who had been engaged in it; with his own hand he distributed crosses, orders, and other recompenses to the most deserving, and pronounced a flattering eulogium on General Excellmans, when he presented the standards taken from the enemy. Another officer, who, at the head only of two dragoons, had so imposed on the terrors of the broken Imperialists the night after the action as to make a hundred of them lay down their arms, received a place in the Imperial Guard. Never did sovereign in modern times understand so completely the art of exciting enthusiasm in the minds of his followers, by the distinction conferred on individual merit, in whatever rank of the army; and it was as much owing to this circumstance, as the greatness of his military genius, that the superior successes of the grand army, which he commanded in person, to those at a distance, under the orders of his lieutenants, was owing.*†

While the powerful advanced guards of the grand army, viz., the corps of Ney on the left bank of the Danube, and that of Murat on the right, were thus engaging the whole attention of the enemy, the remainder of that immense host, on the right and left, was rapidly sweeping round the flanks and rear of the Austrian troops. Soult soon joined Marmont at Augsburg; the Imperial Guards were shortly after established at the same place; Davoust, with his numerous and well-appointed corps, arrived at Aicha, all directly in the rear of the Imperialists, while the corps of Kienmayer, almost enveloped in such immense masses, deemed itself fortunate in being able to effect its retreat by the bridge of Neubourg into Bavaria, and the city of Munich. Thither it was immediately followed by the corps of Bernadotte, who established himself in that capital, while the corps of Marmont and Davoust were moved in the same direction, in the view of forming a powerful army of observation, which might repel any attempt on the part of the Russians or imperial reserves from the hereditary states to disengage the army of Mack, now entirely surrounded by the French forces. But information soon arrived that the Russians were at such a distance as to be unable to take any part in the decisive operations which were approaching; and therefore Bernadotte alone was left in observation in Bavaria, and the other corps were drawn in a circle round the north and east of the Austrians at Ulm. Ney, in particular, was directed to occupy all the bridges over the Danube, and push forward his advanced guards on the right bank of the river, to give instantaneous warning of any attempt which the enemy might make to break through the net which surrounded him, and regain Bohemia by passing the rear and communications of the grand army.‡

Mack, instead of falling back to the Tyrol,

* Bign., iv., 265, 366. Dum., xiii., 45, 46.

† Generosity, as well as excellence of military conduct, attracted the notice of the emperor. At the passage of the Lech, a corporal who had been cashiered by his superior officer on account of some irregularity of discipline, beheld that officer at the point of perishing in the waves of the river. Forgetting his injury, the brave man brought in and saved him. The emperor caused him to be plunged into his presence, and after publicly eulogizing his conduct, appointed him to a situation round his own person, and gave him the star of honour.—BIGNON, iv., 365, 366.

Measures of which was the only retreat which Mack to extricate himself. now really remained to him, persisted in the idea that, by directing the mass of his forces to the northeast, he might yet regain the Bohemian frontier. He therefore moved forward all his troops, as they successively arrived from the Black Forest and the neighbourhood of the Lake of Constance, in that direction, and on the 8th of October established his own headquarters at Burgau, midway between Ulm and Augsburg, while the defence of Ulm was intrusted to General Jellachich, who laboured assiduously, night and day, not only with the garrison, but the whole inhabitants of the town and five thousand peasants in the vicinity, at strengthening the works on the heights adjoining the place. Between the 5th and 8th of October, the movement of the Austrian army was completed; it now faced towards Bavaria and the Lech, having its left resting on the Danube, over which it still held the bridges of Ulm and Gunzbourg. The latter post, being of great importance to the Austrians, was occupied by eight thousand of their best troops. They

October 9. were there attacked by Marshal Ney, at the head of superior forces, and after a bloody conflict the bridge was carried at the point of the bayonet, and the Imperialists driven out of the town, with the loss of above two thousand men. Disconcerted by this check, and despairing, from the vast accumulation of forces on the banks of the Danube and Lech, of success in any attempt to break through in that direction, Mack withdrew his headquarters to Ulm, and

October 10. Ney, rapidly following his footsteps, narrowed the circle on the north and east, which enveloped the Austrians in that city.*

In their advance towards Ulm, the vanguard of Ney encountered a body of Austrians, twenty thousand strong, posted in an admirable situation at Hasslach. October 11. lach, and supported by a powerful artillery in position on the rugged heights which adjoin that hamlet. The French were so far advanced before they perceived the strength of the enemy, which was more than double their own, that retreat was impossible, while attack seemed hopeless. In these circumstances, their commander, General Dupont, took the most audacious, often, in such situations, the most prudent course: he vigorously assailed the enemy, and in the evening, the arrival of successive reinforcements in some degree restored the equality of the combat. The weight of the contest took place at the village of Jungingen, which was taken and retaken six times during the course of the day; but, although they maintained a heroic struggle with inferior forces at that point, the French were unsuccessful at others; their cavalry having been overthrown by the Imperialist horse, who assailed them in rear, and their cannon and baggage swept off by their redoubtable cuirassiers, and brought in triumph to the walls of Ulm. At night Dupont retired, leaving, indeed, a third of his troops on the field of battle, but justly proud of having, with forces so inferior, maintained so honourable a combat, and bringing with him, as a set-off against the loss of his artillery, nearly two thousand prisoners taken during the terrible strife in the village from the imperial infantry.†

The honour of the Austrian arms was in some

degree maintained by the divided trophies of this bloody conflict; but it was shortly after severely tarnished by a less creditable transaction at Memmingen. On the 11th of October, Soult was detached by Napoleon, with his whole corps, from Augsburg against this town, and after cutting to pieces a regiment of Austrian cuirassiers, whom he encountered on his road, he completed the investment of the place on the 13th. The garrison, four thousand strong, destitute of provisions, intimidated by the great display of force which appeared round their walls, and discouraged by the disastrous issue of the combat which had hitherto taken place, capitulated on the first summons; and then began that ruinous system of laying down their arms in large bodies, which, during this campaign, more even than their numerous disasters, tarnished the lustre of the imperial annals. Rapidly pursuing his success, Soult, on the day following, crossed the Iller, and with three of his divisions marched to Biberach, so as to bar the road to Upper Swabia, which hitherto had lain open to the enemy, while the fourth took post on the south-east before the ramparts of Ulm, the investment where they were shortly after joined of Ulm.

by the corps of Marmont and Lannes. On the same day, Napoleon, with the Imperial Guard, advanced from Augsburg to Burgau, and established his headquarters there for the night, while Ney, on the north, completed the circle of enemies drawn round the unhappy Imperialists. The fate of Mack was already sealed: a hundred thousand French were grouped round the ramparts of Ulm, where fifty thousand Austrians, in deep dejection, were accumulated together.*

In advancing towards Ulm on the following morning, at the head of his guards, Napoleon came, at the bridge of the Lech, upon the corps of Marmont, which had been established there on the preceding day. The weather was dreadful; the snow already fell in heavy flakes; the cold was intense; and the soldiers, burdened not only with their arms, but provisions for several days in every man's knapsack, were slowly toiling over a road rendered almost impassable by the multitude of carriages which had already furrowed its surface. Insensible to the severity of the elements, Napoleon instantly halted, dismissed his own suite to a distance, formed the private soldiers into a dense circle around him, and there harangued them for half an hour, in a loud voice, on the situation and prospects of the campaign. He thanked them for the constancy with which they had encountered difficulties and endured privations the severest to which they could be exposed in war; demonstrated to them the situation of the enemy, cut off from his own country, surrounded by superior forces, and obliged to fight, as at Marengo, in order to open the only avenue which remained for his escape. In the great battle which was approaching, he confidently promised them victory if they continued to act with the resolution and constancy which they had hitherto evinced. This speech, the circumstances of which resemble as much the harangues of the Roman generals to their legions as they are characteristic of the French army at that period, and the pecu-

* Dum., xliii., 53, 56. Norv., ii., 389, 390.

† Jom., ii., 114. Dum., xliii., 57, 62. Bign., iv., 376.

liar turn of mind in their chief, was listened to with profound attention, but no sooner was it concluded than shouts and warlike exclamations broke out on all sides, and the joyful visages of the soldiers demonstrated that they fully appreciated the immense advantages which their own exertions and the skill of their chief had already secured for them.*

While the formidable legions of Napoleon October 13. were thus closing round the imperial array, the most stormy debates took place at the headquarters at Ulm as to the course which should be pursued. Fully alive, as all were, to the extent and imminence of the danger, opinions were yet painfully divided as to the means of salvation which yet remained to the army. On the one hand, it was urged that the only

Mack resolves to detach the Archduke Ferdinand to Bohemia, and himself remain at Ulm.

chance of safety which was left was to form the troops into one solid mass, and attempt to force a passage either towards Bohemia or the Tyrol; on the other, that the most advisable course was to detach the Archduke Ferdinand with the cavalry and light troops towards the former of these provinces, while Mack himself held Ulm, from whence he might hope either to be delivered by the Russians, or effect his retreat into the latter. A more fatal resolution than that of dividing their forces, in presence of such an enemy, could not possibly have been adopted; but the urgent necessity of providing, at all hazards, for the escape of a member of the imperial house overpowered every other consideration, and it was ultimately determined that Mack, with the bulk of the army, should run the hazard of remaining at Ulm, to engage the attention of the enemy, while the archduke endeavoured, at the head of the cavalry and light troops, to gain the Bohemian mountains.†

At the same moment that this desperate resolution was formed by the Austrian generals, Napoleon was preparing for a general attack on the following day on the position which they occupied. His army formed a vast circle round Ulm, at the distance of about two leagues from the ramparts. The advanced posts of the two armies were everywhere in presence of each other.

October 4. Early on the following morning Napoleon himself ascended to the Chateau Elchingen. of Adelhausen, from the elevated terrace of which he was surveying, by the advancing line of fire, the progress of his tirailleurs in driving in the outposts of the enemy, when his attention was arrested by a violent cannonade on the right. It was occasioned by Marshal Ney, who, at the head of sixteen thousand men, was commencing an attack on the Bridge and Abbey of ELCHINGEN. The Austrians, fifteen thousand strong, with forty pieces of cannon, under Laudon, had there established themselves in one of the strongest positions which could be imagined. The village of the same name, composed of successive piles of stone houses intersected at right angles by streets, rises in the form of an amphitheatre from the banks of the Danube to a vast convent which crowns the summit of the ascent. All the exposed points on these heights were lined with artillery, all the windows filled with musketeers. The bridge over the Danube had been only imperfectly destroyed by the retiring Austrians on the preceding day; but

the tottering arches were commanded by the cannon and infantry with which all the opposite heights were covered, and they still had a strong advanced guard on the northern bank of the river. Undeterred by such formidable obstacles, Ney approached with his usual intrepidity to the attack. Dressed in full uniform, he was everywhere to be seen at the head of the columns, leading the soldiers to the conflict, or rallying such as were staggering under the close and murderous fire of the Austrians. Nothing could at first resist the impetuosity of the French: the imperial outposts on the north bank of the river were attacked with such vigour that the assailants passed the bridge pell-mell with the fugitives, and, hotly pursuing them up the streets, arrived at the foot of the vast walls of the convent at the summit. There they were arrested by a severe plunging fire from the top of the battlements, while the Imperialists, who had been forced from the streets, took a strong position on the right, from whence they enfiladed the front of the abbey, and threatened to retake the town. Thither they were speedily followed by the French. The same division which had forced the passage of the bridge advanced in the van of the attacking column; and a desperate conflict ensued in front of the wood, which the Austrians held with invincible resolution. In vain the French brought up fresh columns to the fight. The regiments of the Archduke Charles and of Erlach, with heroic bravery, made good their ground, and, though reduced to a fourth of their numbers, still maintained, at the close of the day, their glorious defence. But towards evening, Laudon, though still in possession of the wood and abbey, found that his position was no longer tenable. The French, now in full possession of the bridge, had caused large bodies both of horse and foot to defile over. Already their cavalry was sweeping round the Austrian rear, and menacing their communications; and at length he retired, having sustained a loss in that desperate strife of 1500 killed and wounded, and 2000 prisoners.*†

The resistance of these gallant troops, though fatal to too many of themselves, proved the salvation of the Archduke Ferdinand, and preserved the house of Hapsburg from the disgrace of having one of its princes fall a prisoner into the hands of the enemy. During the desperate strife at Elchingen, the archduke October 15. disposed the troops with which his sortie was to be effected into two divisions, with the one of which he made a feint of advancing towards Biberach, while Werneck, at the head of the other, moved upon Albeck and Herdenheim. The latter corps fell, with forces greatly superior, upon the division of Dupont, stationed on the road it was following, already severely weakened by the combat at Hasslach, and those brave troops were on the point of being overwhelmed by superior numbers, when Murat, with his cavalry and two divisions of infantry, came up to their support. The arrival of these reinforcements gave the French as great a superiority of numbers as their adversaries had previously en-

† Jom., ii., 112. Norv., ii., 392, 393.

joyed, and the Austrians were compelled to retire before nightfall in the direction of Herdenheim. On the day following they were again assailed in their march by Murat, who made eighteen hundred of their wearied columns prisoners; but having been joined by the archduke, who had now returned from his feint towards Biberach, the remainder resolutely continued their endeavours to force their way through the enemy. With characteristic adherence to old custom, even in circumstances where it is least advisable to follow it, the Imperialists had encumbered this light corps, whose existence depended on the celerity of its movements, with five hundred wagons, heavily laden. They were speedily charged by the French horse and captured, with all the drivers and escort by which they were accompanied. Despairing, after these disasters, of bringing his infantry in safety through the hourly increasing masses of his pursuers, the archduke in the night continued his retreat with the light horse, and by great exertions reached Donaworth. The vigour and celerity of the French pursuit were unexampled. Some of the divisions, in dreadful weather, and through roads almost impassable for carriages, marched twelve leagues a day. The cavalry were continually on horseback; and, animated by the prospect of gaining so brilliant a prize, the troops of all arms made the utmost efforts in the pursuit. But the perseverance and skill of the Austrian cavalry triumphed over every obstacle; and after surmounting a thousand dangers, the archduke succeeded in crossing the Altmühl, and by Reidenberg and Ratisbon gaining the Bohemian frontier, where he was at length enabled to give some days' repose to his wearied followers. But it was with a few hundred horse alone that he escaped from the pursuit. The remainder of the corps, exhausted with fatigue, and despairing of safety,* were surrounded at Trochtelfingen by the cavalry of Murat, and to the number of eight thousand men laid down their arms.

Surrender of
Werneck with
8000 men.
October 18.

While these astonishing successes were rewarding the activity of Murat's corps, Napoleon in person was daily contracting the circle which confined the main body of the Imperialists around the ramparts of Ulm. This city, become so celebrated from the disasters which the Austrians there experienced, is surrounded by a wall flanked with bastions and a deep ditch; but it lies in the bottom of a valley, overhung on the north by the heights of Michelsberg and La Tuileries, which on the other side of the Danube command it in every part.† These heights, during the campaign of 1800, had been covered by a vast intrenched camp, constructed by the provident wisdom of the Archduke Charles, and it was by their aid that Kray was enabled to arrest the victorious army of Moreau for six weeks before its walls. Totally destroyed by the French after the capitulation of that city, these works had been hastily attempted to be reconstructed by Mack, after he saw his retreat cut off in the present campaign; but the ramparts were incomplete; the redoubts, unarmed, were little better than a heap of rubbish; and the garrison had not a sufficient force at their disposal to man the extensive lines which were in preparation. The

consequence was that these important heights, the real defence of Ulm, fell an easy prey to the enemy. Animated by the presence of the emperor, who had established his headquarters at Elchingen, and in person directed the operations, the French troops cheerfully advanced amid torrents of rain, and almost up to the knees in mud, to the attack.* Ney speedily carried the Michelsberg, while Suchet made himself master of La Tuileries; and before nightfall the French bombs established on the heights were carrying terror and consternation into every part of the city.

Arrived on the heights of the Michelsberg, Napoleon beheld Ulm, crowded with Negotiations troops, stretched out within half for the surren- cannon-shot at his feet, while the po- der of Mack. der of Mack. sitions occupied by his legions precluded all chance of escape to the Austrian army, now reduced by its repeated losses to little more than thirty thousand combatants. Satisfied that they could not escape him, and encouraged by the surrender of Werneck, of which he had just received accounts, he summoned Mack to surrender, and returning himself to his headquarters at Elchingen, despatched an officer of his staff, Philippe de Ségur, to conduct the negotiation. Mack at first was persuaded, or attempted to make the French believe he was persuaded, that his situation was by no means desperate, and that he would in a short time be succoured by the Russians. He accordingly expressed the greatest indignation at the mention of a capitulation; insisted that the Russians were at Daulchaw, within five days' march; and ultimately only agreed to surrender if in eight days he was not relieved. "You behold," said he, "men resolved to defend themselves to the last extremity, if you do not grant them eight days. I can maintain myself longer. There are in Ulm three thousand horses, which we shall consume, before surrendering, with as much pleasure as you would do in our place." "Three thousand horses!" replied Ségur. "Ah, marshal, the want which you experience must already be severe indeed, when you think of so sad a resource." Mack, however, continued firm, and Ségur returned to Napoleon's headquarters to give an account of his unsuccessful mission.†

Certain that the Austrians could not be relieved within the time specified by their general, Napoleon sent back Ségur, on the following day, with a written ultimatum, grant- Oct. 19. ing the eight days, counting from the 17th, the first day when the blockade was held to have been established, which in effect reduced the eight days to six. "Eight days or death!" replied the Austrian general, and, at the same time, he published a proclamation, in which he denounced the punishment of death against any one who should mention the word "surrender!"‡

* Dum., xiii., 80, 84. Jom., ii., 120, 122.

† Bour., vii., 25, 27. Dum., xiii., 84, 86. Rapp, *Memoirs*, 28, 31.

‡ The proclamation was in these terms: "In the name of his majesty I render responsible, on their honour and their duty, all the generals and superior officers who should mention the word 'surrender,' or who should think of anything but the most obstinate defence: a defence which cannot be required for any considerable time, as in a very few days the advanced guards of an imperial and a Russian army will appear before Ulm to deliver us. The enemy's army is in the most deplorable situation, as well from the want of provisions as the severity of the weather: it is impossible that he can maintain the blockade beyond a few days; and as to trying an assault, it could only be done by little detachments; our ditches are deep, our bastions strong; no-

† Personal observation.

They capitulated at first conditionally. Shortly after, Prince Lichtenstein was despatched to the French headquarters. His astonishment and confusion were extreme when the bandage was removed from his eyes, and he found himself in presence of the emperor and his brilliant staff. The emperor began the conversation by painting in the gloomiest colours the situation of the Austrian army. He cited the example of Jaffa, where he had been obliged to put the garrison, four thousand strong, to the sword, and declared that similar obstinacy would lead the imperial army to the same lamentable fate. He pointed out the hopelessness of all ideas of rescue from the Russians, who had not yet reached the Bavarian frontier, and the increase which his blockading force would soon receive from the troops who had been victorious over Werneck, and captured the garrison of Memmingen.* The prince returned to Ulm with these untoward tidings; and Mack, falling suddenly from the height of confidence to the depth of despair, agreed to surrender, and on the following day the capitulation was signed, by which the fortress of Ulm was to be given up, and the whole army lay down its arms, on the 25th, if not before that time relieved by the Russian or Austrian army.†

These terms were sufficiently disgraceful to the Austrian arms, but Mack had not yet exhausted the cup of humiliation: Napoleon, to whom every hour was precious, and who already began to experience the inconvenience of so great an accumulation of men without magazines at a single point, perceiving the weakness of the adversary with whom he had to deal, sent for Mack to his headquarters at Elchingen, and there so completely bewildered him by a recital of the disasters which had attended the army, and the impossibility of their either being relieved by the Russians, or escaping to the defiles of the Tyrol, that the unhappy man, who had now entirely lost his senses, agreed to evacuate the place and surrender on the following day, on condition that the corps of Ney should not quit Ulm till the 25th. In this way, without any reason whatever, the whole other troops employed in the blockade, amounting to nearly seventy thousand men, were rendered instantly disposable for ulterior operations.‡

In consequence of this new article in the ca-

thing is more easy than to destroy the assailants. Should provisions fail, we have more than three thousand horses, which will maintain us for a considerable time."—Dum., xiii., 87.

* "You expect the Russians?" said Napoleon. "Do you really, then, not know that they have not yet reached Bohemia? Do you suppose I am not fully informed as to your situation? If I let you return on your parole, who will assure me that the soldiers, at least, will not immediately, in defiance of the capitulation, be employed against me? I have too often already been the dupe of such artifices on the part of your generals. This is not an ordinary war: after the conduct of your government, I have no measures to keep with it. It is you who have attacked me; I have no faith in your promises. Mack might engage for himself, but he could not do so for his soldiers. If the Archduke Ferdinand was here, I could trust him, but I know he is not. He has crossed the Danube, but I will get hold of him yet. Do you suppose I am to be made a fool of? Here is the capitulation of Memmingen; show it to your general: I will grant him no other: the officers alone can be allowed to return to Austria; the soldiers must be prisoners of war. The longer he delays the worse will be his ultimate fate."—Bour., vii., 31, 33.

† Rapp, 35, 36. Jom., ii., 124. Dum., xiii., 87, 88. Bour., vii., 35. See the capitulation in Dum., xiii., 396.

‡ Jom., ii., 127. Dum., xiii., 97, 98. Rapp, 36.

pitulation, a spectacle took place on Oct. 20. The following day unparalleled in the army of Mack modern warfare, and sufficient to defile before Napoleon. have turned the strongest head. On that memorable morning, the garrison of Ulm, thirty thousand strong, with sixty pieces of cannon, marched out of the gates of the fortress to lay down its arms. Napoleon, surrounded by a numerous and magnificent staff, took his station before the fire of a bivouac on a rocky eminence forming part of the heights on the north of the city; for five hours the immense array defiled before him—the men in the deepest dejection, the officers in sullen despair, at the unparalleled disgrace which had befallen their arms. Klenau, Giulay, Gotesheim, Lichtenstein, were there—names celebrated in the achievements of former wars, and destined to acquire still greater distinction in those more glorious ones which followed. Napoleon addressed himself to these brave men in delicate and touching terms: "Gentlemen," said he, "war has its chances. Often victorious, you must expect sometimes to be vanquished. Your master wages against me an unjust war. I say it candidly, I know not for what I am fighting; I know not what he desires of me. He has wished to remind me that I was once a soldier; I trust he will find that I have not forgot my original avocation. I will, however, give one piece of advice to my brother, the Emperor of Germany: let him hasten to make peace; this is the moment to remember that there are limits to all empires, however powerful. The idea that the house of Lorraine may come to an end, should inspire him with distrust of fortune. I want nothing on the Continent: it is ships, colonies, and commerce which I desire; and their acquisition would be as advantageous to you as to me." Thus spoke Napoleon on the 20th of October, 1805: on the day following the empire of the seas was forever wrested from his arms by the victory of Nelson at Trafalgar, and on that day eight years he himself was flying from a greater disaster to the arms of France on the field of Leipsic.††

Little anticipating these calamities, the emperor enjoyed the splendid spectacle which was going forward. Under the appearance of perfect calmness, he concealed a mind intoxicated with the glory which surrounded him. The imperial soldiers, amid all their misfortunes, were filled with admiration at the conqueror by whom they had been overcome: as they defiled before him, the march of the columns insensibly became slower, and every eye was turned to the hero who filled the world with his renown; but

* Bign., iv., 374, 375. Dum., xiii., 99, 100.

† As the procession of captives continued to defile before him, Napoleon said to the Austrian generals, "It is truly deplorable that such honourable men as yourselves, whose names are spoken of with honour wherever you have combated, should be made the victims of an insane cabinet, intent on the most chimerical projects. It was already a sufficient crime to have attacked me in the midst of peace, without any declaration of war; but this offence is trivial to that of bringing into the heart of Europe a horde of barbarians, and allowing an Asiatic power to mix itself up with our disputes. Instead of attacking me without a cause, the Aulic Council should rather have united their forces to mine, in order to repel the Russian force. Such an alliance is monstrous; it is the alliance of the dogs and wolves against the sheep. Had France fallen in the strife, you would not have been long of perceiving the error you had committed." At this moment a general officer recounted aloud an insulting expression which he had heard from the common soldiers in regard to the Austrian captives. "You must have little respect for yourself," said Napoleon, with an air of marked displeasure, "to insult men bowed down by such a misfortune."—SAVARY, i., 101, 102.

when they had passed, the recollection of their situation fell at once upon them, and, without waiting till they arrived at the place where their arms were to be deposited, and in defiance of the commands of their officers, they threw them violently on the ground, and from the vast and now disorderly array a confused murmur of grief and indignation arose. In the French army, on the other hand, nothing but joy and exultation were to be seen: never had the enthusiasm of the soldiers been so great, never the devotion to the emperor so unbounded; and reviewing the movements of the campaign by which these astonishing successes had been gained, the veterans said to each other, "The little corporal has discovered a new method of carrying on war—he makes more use of our legs than our bayonets."*†

Ever anxious to make his greatest successes the means of exciting additional feelings of exultation in the inhabitants of his capital, Napoleon sent to the Conservative Senate of Paris the forty standards taken from the army at Ulm, accompanied by a flattering message, in which he said, "Senators, behold in this present which the sons of the grand army make to their fathers, a proof of the satisfaction which I experience at the manner in which you have seconded my efforts. And you, Frenchmen, make your brothers march; let them hasten to combat at our sides, in order that we may be able, without farther effusion of blood or additional efforts, to repel far from our frontiers all the armies which the gold of England has assembled for our destruction. A month has not elapsed since I predicted to you that the emperor and the army would do their duty; I am impatient for the moment when I may be able to say, 'The people have done theirs.'" Careful, at the same time, to secure the attachment of his allies, he sent six pieces of cannon to the Duke of Wirtemberg, and 25,000 muskets to the Elector of Bavaria. Shortly after he addressed to his soldiers one of those proclamations which so often electrified Europe, by the stupendous successes which they commemorated, and the nervous eloquence in which they were couched. On this occasion it was hardly possible to exaggerate the triumphs of the army: with a loss not exceeding eight thousand men, they had taken or destroyed nearly eighty thousand of their enemies.‡

* Dum., xiii., 101. Rapp, 37.

† During the rapid and complicated movements which led to the capture of Ulm, the emperor was indefatigable in his exertions. For three days and nights he had hardly ever off his clothes, incessantly on horseback; in the rudest weather he shared the fare and hardships of the meanest of his soldiers. In vain was he expected by the authorities at Augsburg, and magnificent preparations made for his reception: he slept in the villages, surrounded by his staff, in the humble cottages of the peasants.—BIGN., iv., 376.

‡ *Jom.*, ii., 130. *Dum.*, xiii., 103, 104.

§ "Soldiers of the grand army! In fifteen days we have concluded a campaign. We have kept our promise; we have chased the troops of Austria from the Bavarian territories, and re-established our ally in the possession of his states. That army which, with so much ostentation and presumption, had advanced to our frontiers, is annihilated. But what signifies that to England? We are no longer at Boulogne, and his subsidies will be neither greater nor less. Of 100,000 men who composed that army, sixty thousand are prisoners; they will replace our conscripts in the labours of the fields. Two hundred pieces of cannon, their whole park of ammunition, and ninety standards, are in our power; from that whole army not fifteen thousand have escaped. Soldiers, I announced to you a great battle, but, thanks to the faulty combinations of the enemy, I have obtained these great advantages without incurring any risk; and, what is unexampled in the history of nations, this great result has not weak-

The blame of these disasters was wholly laid, by the Austrian government, on General Mack; he was subjected to a court of inquiry, and condemned to imprisonment for twenty years in consequence, upon the conclusion of the war. Napoleon interceded for him, but in vain. Historic justice, however, requires that it should be stated, that although this unfortunate general was obviously inadequate to the difficult task imposed upon him of commanding a great army which was to combat Napoleon; and although he evidently lost his judgment, and unnecessarily agreed to a disgraceful abridgment of the period of the capitulation at the close of the negotiations, yet the whole disasters of the campaign are not to be visited on his head. The improvidence of the imperial government, the faults of the Aulic Council, have also much to answer for. Mack's authority was not firmly established in the army; the great name of the Archduke Ferdinand overshadowed his influence; the necessity of providing for the safety of a prince of the imperial house overbalanced every other consideration, and compelled, against his judgment, that division of the troops to which the unexampled disasters which followed may immediately be ascribed.* It is reasonable to impute to this unfortunate general extreme improvidence in remaining so long at Ulm, when Napoleon's legions were closing around him, and great weakness of judgment, to give it no severer name, in afterward capitulating, without trying some great effort, with concentrated forces, to effect his escape. But there appears no reason to suppose, as the Austrian government did, that he wilfully betrayed their interests to Napoleon; and it is to be recollected, in extenuation of his faults, that his authority, controlled by the Aulic Council, was in some degree shared with an assembly of officers, and that he was at the head of troops habituated to the discreditable custom of laying down their arms, on the first reverse, in large bodies.

While these stupendous events were paralyzing the imperial strength in the centre of Germany, the campaign had been opened, and already fiercely contested on the Italian plains. The Aulic Council, from whose errors the European nations have suffered so often and so deeply, had, in the general plan of the campaign, committed three capital faults. The first was that of commencing a menacing offensive war in Germany with the weaker of their two great armies. The second, that of remaining on the defensive in Italy, in presence of inferior forces, with the greatest array which the monarchy had on foot. The third, that of retaining in useless inactivity a considerable body of men,

Errors of the cabinet of Vienna in the general plan of the campaign.

ened us by the loss of 1500 men. Soldiers, this astonishing success is owing to your boundless confidence in your emperor; to your patience in undergoing fatigues; to your rare intrepidity! But we will not rest here. Already I see you are burning to commence a second campaign. The gold of England has brought against us the Russian army from the extremities of the universe; we will make it undergo the same fate. To that combat is, in an especial manner, attached the honour of the French infantry. It is there that it is to be decided for the second time that question, already resolved in Switzerland and Holland, whether the French infantry is the first or second in Europe. There are no generals there whom it would add to my glory to vanquish. All my care shall be to obtain the victory with as little an effusion of blood as possible. My soldiers are my children." Amid his customary exaggeration there was much truth in this proclamation.—RAPP, 47, 48.

* Rapp, 36. *Jom.*, ii., 130.

with no enemy whatever to combat, on the Tyrol, which might at different times have cast the balance in the desperate struggles which took place to the north and south of its mountains. While Mack, with eighty thousand men, was pushed forward to bear the weight of the grand army of double its own strength, in the valley of the Danube, the Archduke Charles, with above ninety thousand, was retained in a state of inactivity on the Adige, in presence of Massena, who had only fifty thousand;* and twenty thousand men were scattered over the Tyrol, where they had no more formidable enemy in their front than the peaceful shepherds of Helvetia.

No sooner was the cabinet of Vienna made aware, from the rapid march of Napoleon's troops across Germany, and the distance at which the Russians still were from the scene of action, of the imminent danger to which their army in Swabia was exposed, than they despatched orders to the Archduke Charles to remain on the defensive, and detach all the disposable troops at his command to the succour of Mack at Ulm. That gallant prince accordingly restrained the impetuosity of his numerous and disciplined battalions on the Adige, retained his forces on the left bank of that stream, and detached thirty regiments across the Tyrol towards Germany. By this means he lost the initiative, often of incalculable importance, at least with able commanders and superior forces, in war; was compelled to forego the opportunity of striking a decisive blow against the troops of Massena in his front; to depress the spirits of his soldiers by keeping them in inactivity till the disasters in Germany had extinguished their hopes; and all this for no good purpose, as before his re-enforcements could emerge from the gorges of Tyrol the die was cast, and the troops in Ulm had defiled as captives before the French emperor.†

The forces in Italy were divided by the Adige, not only along the course of that river from the Alps to the Po, but in the city of Verona itself; the town, properly so called, and the castles on the right bank, being in the hands of the French, while the suburbs in the left bank were in those of the Austrians. Strong barricades were drawn across the bridges which united the opposite sides of the river; and the archduke, reduced by the orders of the Aulic Council and the catastrophe in Swabia to a melancholy defensive, was strengthening with fieldworks the celebrated position of Caldiero, the importance of which had been so strongly felt in former campaigns, when Massena, stimulated by the orders of the emperor, and the accounts he was daily receiving of the advance of the grand army to the north of the Alps, resolved to commence operations. He denounced, accordingly, the armistice which had been agreed on till the 18th of October, and in the night preceding arrived alone in Verona, where preparations had for some time past been secretly making for forcing the bridges and gaining the entire command of the river at that point. At midnight on the night of the 18th, after removing, with as little noise as possible, their own barricades on the bridge, they attached a petard to the strong barrier of separation, and at daybreak, while a violent

cannonade at other points distracted the attention of the enemy, the explosion took place, and the obstacle was thrown down. It displayed, however, a yawning gulf behind it, where the bridge had been cut by the Imperialists; but this proved only a momentary obstacle to the French soldiers; some threw themselves into boats, and rowed across the stream; others brought planks, and hastily threw them over the opening; the barricades at the opposite end were speedily forced; and under cover of a thick fog, which signally favoured their operations, the intrenchments on the opposite side were stormed, and the combat continued, from street to street, and from house to house, till night. A violent storm then separated the combatants, when, although the Austrians still held their forts in the town, the passage was secured to the French, a *tête du pont* established, and three battalions left intrenched on the left bank of the stream. This operation was a masterpiece of skill, secrecy, and resolution on the part of the French general; it cost the Austrians two thousand men, and, what was of still greater importance, gave their antagonists the command of the passage with the loss of little more than half that number.*

Conceiving himself threatened with a speedy attack in consequence of this audacious and fortunate enterprise, the archduke lost no time in making preparations to repel it. The position of Caldiero, already strong, was rendered almost impregnable. Its line of rocky heights, extending from the foot of the Alps to the shores of the Adige, strengthened in every accessible point by redoubts, intrenchments, and palisades, seemed to defy an attack; while the natural advantages of the ground, broken by cliffs, woods, and vineyards, from which even the arms of Napoleon had recoiled, appeared to oppose an invincible barrier to the farther advance of the French troops. Massena remained inactive from the 18th to the 29th of October, but having then received intelligence of the astonishing successes of Napoleon in the plains of Swabia, he resolved to resume the offensive; but how to assail seventy thousand men, strongly intrenched, with a force not fifty thousand, was a problem which even the genius of the conqueror of Zurich might find it difficult to solve. Nevertheless, he resolved upon making the attempt.

The triumph at Ulm was announced to the soldiers by a loud discharge of artillery in the evening, and on the following morning, before their exultation had subsided, he made his dispositions for an attack. To assail such a position, guarded by an army superior to his own, in front, was a desperate enterprise; but the French general conceived that, by bringing the bulk of his forces to his own left, he might turn the Imperialists by the mountains, and compel them to lose all the labour they had employed in strengthening it. Massena himself, with two divisions, was to engage the enemy's attention by a feigned attack and loud cannonade in front of the position; while Verdier, at the head of the right wing, was to cross the Adige below Verona, and endeavour to turn his left, and Molitor, with the left wing, was to gain the mountains, and threaten his right. Molitor made great progress on the first day, and Massena, with the centre, advanced almost to the foot of the enemy's intrenchments; but after the

* Jom., ii., 139. Dum., xiii., 108, 109.

† Jom., ii., 139. Dum., ii., 109. Bign., iv., 360, 361.

* Bign., iv., 362, 363. Dum., ii., 112, 119. Jom., ii., 140.

most gallant efforts, they were driven back before night to their own ground in front of Verona; while Verdier, on the right, confined himself to a heavy firing along the line of the Adige. On the following day, however, the French dispositions were more completely carried into effect. Their centre, issuing in great strength from Verona, carried all the villages occupied by the imperial light troops, and arrived at the foot of the formidable redoubts of Caldiero; while Molitor gallantly advanced against the almost impregnable heights on their right, and Verdier made the utmost efforts to effect his passage on the lower part of the river. But all his endeavours were unsuccessful; and though his active efforts and threatening aspect detained a considerable portion of the Imperialists on the Lower Adige, the contest fell exclusively on the centre and left wing. Confident in the strength of their extreme right, and indignant at the idea of being assailed by inferior forces in their intrenchments, the Austrians deployed in great masses from their centre and left, and gallantly engaged their antagonists in the plain. A terrible combat ensued. The heads of the imperial columns were repeatedly swept away by the close and well-directed discharge of the French artillery; while the French, when they impetuously followed up their successes, were, in their turn, as rudely handled by the heavy fire of the Austrian redoubts. The heat of the battle took place round the village of Caldiero, which was speedily encumbered with dead. Massena and the archduke themselves charged at the head of their respective reserves, and exposed their persons like the meanest soldiers; but all the efforts of the French were unable to overcome the steady valour of the Germans. Several of Molitor's divisions on the left penetrated to the foot of the redoubts, and more than one battalion actually reached their summit, but they were instantly there cut to pieces by the point-blank discharge of the imperial cannon, rapidly turned against them from the adjoining intrenchments. At length night closed on this scene of slaughter, but not before four thousand brave men were lost to both parties, without either being able to boast of a decided advantage; for if the French had broken several columns of imperial infantry, and made twelve hundred prisoners, they had suffered at least as much, and the redoubtable intrenchments were still in the hands of their antagonists.*

On the following morning, Massena renewed the combat with greater prospect of success. On the preceding evening, Verdier had at length succeeded in throwing across two battalions, which were arrested by the Austrian columns in the marshes adjoining the river; but at day-break they were re-enforced by a whole division, and advanced, combating all the way, on the dikes which ran up from the Adige to the Austrian position. Soon a bridge was completed, and the whole right wing crossed over, which, following up the retiring columns of the Imperialists, was at length stopped by the redoubt of Chiavecto del Christo, which in this quarter formed the key of their position, and, if taken, would have drawn after it the loss of the battle. Sensible of its importance, Verdier made the utmost efforts to carry this intrenchment, but the gallantry of the defence was equal to that of the attack. General Nordman, who commanded the

Austrians, saw all his cannoniers killed by his side, and was himself struck down; but his place was instantly taken by COUNT COLLOREDO, afterward one of the most distinguished of the imperial generals, who continued the stubborn defence till the archduke, by bringing up fresh troops, succeeded in disengaging this band of heroes. Verdier was now assailed, in his turn, at once in front and both flanks; his corps was at length forced back, he himself severely wounded; and such were the losses of the French in this quarter, that it was with difficulty that they maintained themselves on the left bank of the Adige.*†

But, notwithstanding this success, the archduke was already preparing a retreat. The Archduke John had arrived at his headquarters, and brought with him a complete confirmation of the disasters in Germany, which had already circulated in obscure rumours through his army. It was no longer possible to think of preserving Italy; the heart of the Empire was laid open, and it was necessary to fly to the protection of the menaced capital. The better to disguise his movement, he made preparations as if for resuming the offensive, and several strong corps were pushed forward in the mountains towards the French left, and some detachments already appeared in the rocky ridges between the Adige and the Lake of Guarda. Alarmed at this movement, Massena stood on the defensive, and concentrated his forces in front of Verona; but, while he was in hourly expectation of an attack, the archduke had caused all his heavy cannon and baggage to defile towards the rear, and when the French videttes approached the intrenchments which had been so obstinately contested, they found them stripped of artillery, guarded only by a few of the enemy's rear-guard. Massena's whole army instantly broke up and advanced in pursuit, but the Imperialists had gained a full march upon them. The whole artillery and baggage had already defiled by one road in admirable order; dense columns of infantry, interspersed between them, covered their movements, and a strong rear-guard, under General Frimont, presented a menacing front to the pursuers. The excessive fatigue of his troops, however, rendered some repose necessary; and for this purpose, as well as to gain time for his immense array of carriages to defile in his rear, he resolved to hold firm in the neighbourhood of Vicenza, which is surrounded by an old wall flanked with towers, and by its position on the Bachiogione, whose stream was rendered impassable by floods, commanded the only line either for the retreat of the Germans or the pursuit of the French. There he continued, accordingly, with a powerful rear-guard, in battle array the whole of the 3d of November, and on the following night, leaving Vogelsang with four battalions in the town, he continued his retreat in the most leisurely manner. That intrepid rear-guard, with

The archduke resolves to retreat to cover Vienna.

† We have the best possible evidence, that of Napoleon himself, that these murderous actions terminated, upon the whole, to the advantage of the Austrians. "The Archduke Charles," says he, "had gained considerable advantages over Massena at Caldiero; in effect, the Prince of Essling was beaten." The archduke spoke of the action with his accustomed modesty and truth in his official despatches.—See *Napoleon in MONTH.* ii., 108, and 116, and *HARD.* viii., 499.

* Dum., xiii., 119, 143. Jum., ii., 141, 142.

heroic firmness, continued to make good the post, despite equally the menaces and assaults of Massena, till daybreak on the 4th, and then withdrew in perfect safety to the left bank of the river, having afforded, by their admirable steadiness, time for the park of artillery to gain a march on the other troops, and for the two wings under Rosenberg and Davidowich to unite themselves to the centre of the army. It was no ordinary skill on the part of the general, and steadiness on that of the soldiers, which could, in presence of a victorious enemy, commanded by such an officer as Massena, secure the safe retreat of seventy thousand men by a single defile and bridge, immediately after a bloody battle of three days' duration, who had been a few hours before scattered over a line of fifteen leagues in breadth.*

From Vicenza the archduke retired by forced marches through the rich and watered plains of the Brenta and Piave, towards the mountains of Friuli, separating himself altogether from Venice, into which he threw a strong garrison of eighteen battalions. When he arrived on the Tagliamento he halted for a day, and sustained a severe combat with the French advanced guard, in order to gain time to receive the information which was to decide him whether to march by Tarvis and Villach to unite his forces with those of the Archduke John in the neighbourhood of Saltzbourg, or proceed by the direct route through Laybach to Vienna. The disastrous intelligence, however, which he there received of the total wreck of General Mack's army rendered it necessary to continue his retreat as rapidly as possible by the latter of these routes to Vienna. Skillfully availing himself of every obstacle which the swollen torrents of that stream, as well as the Piave and the Isonzo, could afford, he conducted his march with such ability that, though it lay through narrow defiles and over mountains charged with the snows of winter, no serious loss was sustained, nor the spirits of the soldiers weakened, before they descended, in unbroken strength, into the valley of the Drave and the streams which make their way to the great basin of the Danube.†

Meanwhile Napoleon, whose genius never appeared more strongly than in the vigour with which, by separate columns, he followed up a beaten army, was pursuing with indefatigable activity the broken columns of the Austrian troops. On the 24th of October he arrived at Munich, where he was received with every imaginable demonstration of joy, and a general illumination gave vent to the universal transports. Augsburg was made the grand dépôt of the army, while the leading corps, under Bernadotte, Davoust, Murat, and Marmont, pressed on in ceaseless march towards the hereditary states. Speedily the Isar was passed; the French eagles were borne in exultation through the forest of Hohenlinden, and nothing arrested their march till they reached the rocky banks of the Inn, and appeared before the fortress of Brannau. At the same time, Marshal Ney, who had remained at Ulm, in terms of the capitulation, till the 25th of October, received orders to move with his whole corps upon the Tyrol, in order to

clear the vast fortress which its mountains composed of the enemy's forces, while Augereau's corps, which, having broken up from Brest, had latest come into the scene of action,* and had recently crossed the Rhine at Huningen, was moved forward by forced marches to menace the western frontier of that romantic province.

While disasters were thus accumulating on all sides upon the Austrian monarchy, the cabinet of Vienna did their utmost to repair the fatal blow which had so of the Austrians. nearly prostrated the whole strength of the state. How to arrest the terrible enemy who was pouring in irresistible force and with such rapidity down the valley of the Danube, was the great difficulty. Courier after courier was despatched to the Archduke Charles to hasten the march of his army to the scene of danger; the Archduke John was directed to evacuate the Tyrol, and endeavour to unite his forces to those of his brother to cover the capital; the levies in Hungary and Lower Austria were pressed forward with all possible rapidity; and the emperor himself, after issuing an animating proclamation to the inhabitants of Vienna,† set out in person to hold a conference with the Russian general, Kutusoff, who was advancing with the utmost rapidity, concerning the best means of arresting the march of the enemy. But when he arrived at his headquarters at Wells, the extent of the danger became apparent. The remnant of the Austrian army, under Meerfeld and Kienmayer, which had joined him, hardly amounted to twenty thousand men; his own

* Dum., xiii., 241, 248. Savary, i., 103, 2d Part. *Jom.*, ii., 144.

† "The Emperor of France has compelled me to take up arms. To his ardent desire of military achievements, his passion to be recorded in history under the title of a conqueror, the limits of France, already so much enlarged and defined by sacred treaties, still appear too narrow. He wishes to unite in his own hands all the ties upon which depend the balance of Europe. Far from attacking the throne of the Emperor of France, and keeping steadily in view the preservation of peace which we so publicly and sincerely stated to be our only wish, we declared, in the presence of all Europe, 'That we would in no event interfere in the internal concerns of France, nor make any alteration in the new Constitution which Germany received after the peace of Luneville.' Peace and independence were the only objects which we wished to attain; no ambitious views, no intention such as that since ascribed to me, of subjugating Bavaria, had any share in our councils. But the sovereign of France, totally regardless of the general tranquillity, listened not to these overtures. Wholly absorbed in himself, and occupied only with the display of his own greatness and omnipotence, he collected all his force, compelled Holland and the Elector of Baden to join him, while his secret ally, the Elector of Palatine, false to his sacred promise, voluntarily delivered himself up to him; violated in the most insulting manner the neutrality of the King of Prussia at the very moment that he had given the most solemn promises to respect it; and by these violent proceedings he succeeded in surrounding and cutting off a part of the troops which I had ordered to take a position on the Danube and the Iller. I am tranquil and at ease in the midst of twenty-five millions of my subjects, equally dear to my heart and house. With fortitude the Austrian monarchy arose from every storm which menaced it during the preceding centuries. Its intrinsic vigour is still undecayed. There still exists in the breasts of those good and loyal men, for whose prosperity and tranquillity I combat, that ancient patriotic spirit which is ready to make every sacrifice, and to dare everything to save what must be saved—their throne and their independence, the national honour and the national prosperity. From this spirit of patriotism on the part of my subjects I expect, with a proud and tranquil confidence, everything that is great and good; but, above all things, unanimity, and a quick, firm, and courageous co-operation in every measure that shall be ordered to keep the rapid strides of the enemy off from our frontier until those numerous and powerful auxiliaries can act, which my exalted ally, the Emperor of Russia, and other powers, have destined to combat for the liberties of Europe and the security of thrones and of nations."—*Ann. Reg.*, 1805, 713.

* Dum., xiii., 150, 161. *Jom.*, ii., 143.

† *Jom.*, ii., 143, 144. Dum., xiii., 165, 171.

troops hitherto come up were not thirty thousand; and how was it possible, with such considerable forces, to withstand Napoleon at the head of a hundred and fifty thousand combatants? It was therefore resolved to abandon the line of the Inn and retire towards Vienna, after breaking down all the bridges over the numerous streams which fell into the Danube, and lay across their line of march,* so as to impede the enemy's advance, and effect a junction with the Russian reserves which were approaching under Bennigsen and the Archduke Constantine, or the gallant army which was hastening to the scene of danger under the Archduke Charles.

But, while everything seemed thus to smile upon Napoleon in the south of Germany, north which menaced him with destruction. The cabinet of Berlin had taken umbrage to an extent which could hardly have been anticipated, and which was greatly beyond the amount of the injury inflicted, at the violation of the territory of Anspach. It was not the mere march of the French corps through a detached portion of their dominions which occasioned this feeling of irritation: it was the secret consciousness that the insult was deserved which had envenomed the wound. For ten years Prussia had flattered herself that, by keeping aloof, she would avoid the storm; that she would succeed in turning the desperate strife between France and Austria to her own benefit, by enlarging her territory and augmenting her consideration in the north of Germany; and hitherto success had in a surprising manner attended her steps. At once all her prospects vanished, and it became apparent, even to her own ministers, that this vacillating policy was ultimately to be as dangerous as it had already been discreditable. So far from having increased the respect with which she was regarded, it was now plain that she had entirely lost it; and a power which, under the guidance of the Great Frederic, had stepped forth as the arbiter of the north of Germany, was now treated with the indifference and neglect which is the bitterest ingredient in the cup of the vanquished. The veil suddenly dropped from the eyes of her ministers: they now distinctly perceived that, instead of security, they had reaped only danger from former submission; and that, as a reward for so long a period of forbearance, they could look only, like Ulysses, for the melancholy satisfaction of being last devoured. Under the influence of these feelings, the resolution of the cabinet was violently shaken; the king openly inclined to hostile measures, but the indignation of the nation knew no bounds; Prince Louis, whose rash and inconsiderate, though vehement and generous character, could ill brook the long inactivity of the Prussian arms, publicly and on all occasions gave vent to his desire for war; the popularity of the queen rose almost to idolatry; the consideration of Haugwitz, the author of the temporizing system, rapidly sunk, and all eyes were turned to Baron Hardenberg, whose resolute counsels to adopt a more manly policy had been long known, as the only minister fit, at such a crisis, to be intrusted with the direction of affairs.†

Matters were in this inflammable state when the Emperor Alexander arrived at Berlin, and employed the whole weight of

his great authority, and all the charms of his captivating manners, to induce the king to embrace a more manly and courageous policy. Under the influence of so many concurring causes, the French influence rapidly declined; Duroc left the capital on the 2d of November, without having been able to obtain an audience for some days previously, either from the king or emperor; and on the day following, a secret convention was signed between the two monarchs for the regulation of the affairs of Europe, and the erection of a barrier against the ambition of the French emperor. By this convention it was stipulated that the treaty of Luneville was to be taken as the basis of the arrangement, and all the acquisitions which France had since made were to be wrested from it: Switzerland and Holland were to be restored to their independence, and, without overturning the kingdom of Italy, it was to be merely stipulated that they were never to centre in the same individual. Haugwitz was to be intrusted with the notification of this convention to Napoleon, with authority, in case of its acceptance, to offer a renewal of the former friendship and alliance of the Prussian nation, but in case of refusal to declare war, with an intimation that hostilities would commence on the 15th of December.*

The conclusion of this convention was followed by a scene as remarkable as it was romantic, and which was ultimately attended by consequences of the highest importance upon the destinies of Europe. When they signed it, both were fully aware of the perilous nature of the enterprise on which they were venturing, as the Archduke Anthony had arrived two days before with detailed accounts of the disastrous result of the combats around Nov. 4. Ulm. Inspired with a full sense of the dangers of the war, the ardent and chivalrous mind of the queen conceived the idea of uniting the two sovereigns by a bond more likely to be durable than the mere alliances of cabinets with each other. This was to bring them together at the tomb of the Great Frederic, where it was hoped the solemnity and recollections of the scene would powerfully contribute to cement their union. The emperor, who was desirous of visiting the mausoleum of that illustrious hero, accordingly repaired to the church of the garrison of Potsdam, where his remains are deposited, and at midnight the two monarchs proceeded together by torchlight to the hallowed grave. Uncovering when he approached the spot, the emperor kissed the pall, and taking the hand of the King of Prussia as it lay on the tomb, they swore an eternal friendship to each other, and bound themselves, by the most solemn oaths, to maintain their engagements inviolate in the great contest for European independence in which they were engaged. A few hours after Alexander departed for Galicia, to assume in person the command of the army of reserve, which was advancing through that province to the support of Kutusoff. Such was the origin of that great alliance, which, though often interrupted by misfortune, and deeply checkered with disaster, was yet destined to be brought to so triumphant an issue, and ultimately wrought such wonders for the deliverance of Europe.†

Arrival of Alexander at Berlin, and conclusion of a treaty with Russia.

Nocturnal visit to the tomb of the Great Frederic.

It would have been well for the common cause, if, when Prussia had thus taken her part, her cabinet had possessed resolution enough to have interfered at once and decidedly in the war: the disaster of Austerlitz, the catastrophe of Jena, would thereby, in all probability, have been prevented. But, after the departure of the emperor, the old habit of temporizing returned, and the precious moments, big with the fate of the world, were permitted to elapse without any operation being attempted. Haugwitz did not set out from

Potsdam till the 14th; the Prussian armies made no forward movement towards the Danube, and Napoleon was permitted to continue without interruption his advance to Vienna, while eighty thousand disciplined veterans remained inactive in Silesia on his left flank, amply sufficient to have thrown him back with disgrace and disaster to the Rhine. Even the arrival of Lord Harrowby at Berlin, a few days after the departure of Haugwitz, with full powers and the offer of ample subsidies from Mr. Pitt, could not prevail on the government to accelerate the commencement of active operations. Apparently, the cabinet of Berlin were desirous of seeing what turn affairs were likely to take before they openly commenced hostilities, forgetting that the irrevocable step had already been taken; that Duroc, upon leaving their capital, had proceeded straight to the emperor's headquarters on the Danube; that the convention which had been concluded could not be kept a secret; that Napoleon, in consequence, was made their determined foe, and that every hour now lost was adding to his means of selecting his own time for their future destruction.*†

But, though Prussia was thus inactive, Napoleon was not without very serious allies in Han- subject of anxiety in the north of Germany. A combined force of

English, Russians, and Swedes, thirty thousand strong, had recently disembarked in Hanover, and the Prussian troops who occupied that electorate had offered no resistance: a sure proof of a secret understanding between the cabinet of Berlin and that of London, in virtue of which it was to be restored to its rightful owners. The danger of an enemy in that quarter was very great, for the whole French army of occupation had been withdrawn, with the exception of the garrison of Hameln; and not only were its inhabitants warlike, and ardently attached to the English government, but there was every reason to apprehend that the flame, once lighted, might spread to Holland, where the partisans of the

house of Orange had received an immense accession of strength from the calamities in which their country had been involved from the French alliance. Hardly any regular troops remained to make head against these dangers; but Napoleon contrived to paralyze the disaffected, by pompous announcements in the *Moniteur* of the formation of a powerful army of the North, of which Louis, in the first instance, was to take the command, but which might soon expect to be graced by the presence of the emperor himself.*

On his right flank, Marshal Ney was more successful in achieving the conquest of the Tyrol, and relieving him from the Tyrol.

all anxiety in regard to that important bulwark of the Austrian monarchy. This romantic region, so interesting from its natural beauties, the noble character of its inhabitants, and the memorable contest of which it was afterward the theatre, will form the subject of a separate description hereafter, when the campaign of 1809 is considered.† The imperious necessity to which the Austrian government was subjected, of withdrawing their forces from Tyrol for the protection of the capital, prevented it from becoming the theatre of any considerable struggle at this time. Resolved to clear these mountain fastnesses of the imperial troops, Napoleon ordered Ney to advance from Ulm over the mountains which form the northern barrier of the valley of the Inn, right upon Innsbruck, while a powerful Bavarian division, which had already occupied Salzburg, advanced by the great road from that town by Reichenhall to the same capital, and menaced Kuffstein, the principal stronghold on the eastern frontier of the province. Both invasions were successful. General Deroz, commanding the Bavarian troops, wound in silence along the margin of the beautiful lakes which lie at the foot of the rocky barrier which separates the province of Salzburg from that of Tyrol, and suddenly pushing up the steep ascent, amid a shower of balls from the overhanging cliffs and woods, which were filled with Tyrolese marksmen, carried the intrenchments and forts at their summit with matchless valour, and drove back the Imperialists, with the loss of five hundred prisoners, to the ramparts of Kuffstein. The whole eastern defences of Tyrol were laid open by this bold irruption: the imperial regulars retired over the mountains towards Leoben, while the Tyrolese levies were shut up under the cannon of Kuffstein, which was soon blockaded. Contemporaneous with this attack on the eastern frontier of the province, Augereau moved forward from the neighbourhood of the Lake of Constance, so as to threaten Feldkirch and its western extremity; while at the same time Marshal Ney advanced, at the head of ten thousand men, against the barrier of Scharnitz, the ancient *Porta Claudia*, a celebrated mountain intrenchment which commands the direct mountain road from Bavaria to Innsbruck, and was known to be almost impregnable on the only side from which it could, to all appearance, be assailed. An attack in front, though supported by all the fire and impetuosity of the bravest of the French troops, was repulsed with very heavy loss; success seemed utterly hopeless. But the genius of Marshal Ney at length overcame every obstacle. Dividing his corps into three divisions, he succeeded, with one commanded by Loison, in ma-

* Dum., xiii., 255, 256. Hard., viii., 488, 489. Savary, i., 104.

† There were not wanting, however, numbers who openly counselled a bolder policy, and prophesied all the disasters which would ensue from any longer adherence to the procrastinating system. In a council of war, held at Potsdam soon after intelligence of the disasters at Ulm was received, the Duke of Brunswick ordered Colonel Massenbach, a young pupil of the celebrated Tempelhoff, to deliver his opinion on the present state of affairs. "The armies are in presence of each other," said he; "a decisive battle must soon be fought. If Napoleon is beaten, his retreat through the Tyrol is secured by Marshal Ney's recent occupation of that province, and he will be beyond the reach of the Prussian forces. It is indispensable, therefore, that the Prussian army in Silesia should instantly march to the support of the allies, and that a strong body should threaten their communications with the Rhine, in order to compel them to divide their forces. If both these measures are not adopted, and the Russians are beat, all is lost." General Ruchel, however, an older officer, ridiculed the apprehensions of such a catastrophe; and the Duke of Brunswick, with his wonted irresolution, broke up the council without having come to any determination.—HARD., viii., 489.

* Jom., ii., 145. Dum., xiii., 249.

† See post. chap. I.

king himself master of the fort of Leitach, in the rear of the intrenchments; from whence his victorious troops pressed on in two columns to scale the precipices which overhung them on the southern side, to the summit of which the peasants, as a place of undoubted security, had removed their wives and children. The combat was long and doubtful: securely posted in the cliffs and thickets above, the Tyrolese marksmen kept up a deadly fire on the French troops, who, breathless and panting, were clambering up by the aid of the brushwood which nestled in the crevices, and their bayonets thrust into the fissures of the rock. Fruitless, however, was all the valour of the defenders: in vain rocks and trunks of trees, thundering down the steep, swept off whole companies at once; as fast as they were destroyed others equally daring succeeded them, and pressed with ceaseless vigour up the entangled precipice. The summit was at length carried, and the French eagles, displayed from the edge of the perpendicular cliff in their rear, was the signal for the renewal of the attack on the intrenchments by the division stationed in their front. They were no longer tenable; a shower of balls from the heights behind, against which they had no defence, rendered it impossible either to man the works or stand to the guns.* A panic seized the garrison; they fled in confusion, and the victorious assailants, besides a mountain barrier hitherto deemed impregnable, had to boast of the capture of 1500 prisoners.†

The immediate trophy of this victory was the Surrender of capture of Innspruck, with sixteen Jellachich and thousand stand of arms. The whole the Prince de northern barrier of the Inn was abandoned; General Jellachich, who

commanded in the western part of the Tyrol, retired to the intrenched camp of Feldkirch, while the Archduke John withdrew all his forces from the valley of the Inn and took post upon the Brenner, in the hope of rallying to his standard the corps in the eastern and western districts of the province before he commenced his final retreat into the hereditary states. It was too late,

Nov. 15. however. Surrounded and cut off from all hope of succour, Jellachich, with five thousand men, was obliged to capitulate at Feldkirch, upon condition of not serving for a year against France, and leaving all his artillery to grace the triumphs of the victors. The Archduke John, upon hearing of this catastrophe, abandoned the crest of the Brenner during the night, and retired by Klagenfurth to Cilly, where he effected a junction with his brother and the gallant army of Italy. But the Prince of Rohan was not equally fortunate. That gallant officer, who was stationed with six thousand men near Nauders and Finstermurg, on the western frontier of the province, found himself by these disasters cut off from any support, and isolated among the enemy's columns in the midst of the mountains of Tyrol. Disdaining to capitulate, he formed the bold resolution of cutting his way through all the corps by which he was surround-

ed, and joining the garrison left in Venice. Surprising success at first attended his efforts. Descending the course of the Adige, he surprised and defeated Loison's division at Bolzano, and thus opened a way for himself by Trent and the defiles of the Brenta to the Italian plains. Already the mountains were cleared; Bassano was passed, and the wearied troops were joyfully winding their way across the level fields to the shores of the Lagunæ, when they were met by St. Cyr, who commanded the force stationed in observation of that town, and completely defeated at Castel Franco.

Dispirited by Nov. 24. such a succession of disasters, and seeing no remaining means of escape, this gallant band, still five thousand strong, was obliged to lay down its arms. At the same time, the fortress of Kuffstein capitulated, on condition of the garrison being allowed to Nov. 18. march back to the hereditary states, which was readily agreed to. Thus, in little more than three weeks, not only were the Imperialists entirely driven from the Tyrol, long considered as the impregnable bulwark of the Austrian monarchy, though garrisoned by five-and-twenty thousand regular troops, and at least an equal amount of well-trained militia, but more than half of the soldiers were made prisoners, and all the strongholds had passed into the hands of the enemy. Finding the reduction complete, Ney, before the end of November, marched with his whole forces to Salzbourg to co-operate with Massena, who was approaching the same quarter against the Archduke Charles, while Augereau withdrew to Ulm,* to observe the motions of Prussia, and the occupation of the Tyrol was committed to the Bavarian troops.

It was not inability to defend the Tyrol which led to this rapid abandonment of that important province. Notwithstanding the disasters at Scharnitz and Feldkirch, the Archduke John could still have maintained his ground among its rugged defiles, aided by the numerous warlike inhabitants, whose attachment to the house of Austria has long been conspicuous: it was the pressing danger of the heart of the Empire, and the paramount necessity of providing a covering force for the capital, which rendered it absolutely imperative to withdraw the regular forces. Napoleon's progress down the valley of the Danube was every day more alarming. The formidable barrier of the Inn was abandoned almost as soon as it was taken up: forty-five thousand men could not pretend to defend so long a line against a hundred and fifty thousand. The intrenchments of Muhldorf, the ramparts of Brannau, armed as they were with art-

Oct. 31.illery, were precipitately evacuated, and the Inn crossed by innumerable battalions at all points. The advantages of the latter fortress appeared so considerable that the French emperor gave immediate orders for its conversion into the grand dépôt of the army. Meanwhile Murat, Nov. 3. at the head of the cavalry and the advanced guard, continued to press the retiring columns of the enemy: a skirmish in front of Mersbach, a more stubborn resistance Nov. 4. near Lambach, at the passage of the Traun, while they evinced the obstinate valour of the new enemy with whom they had now to contend, hardly retarded the march of the Nov. 6. invaders an hour; the determined opposition of

* Bign., iv., 390, 391. Jom., ii., 167, 168. Dum., xiii., 280, 288.

† An interesting incident occurred at Innspruck. The 76th French regiment had, in the campaign of 1799, lost two of its standards. When walking in the arsenal at Innspruck, one of its officers beheld them among the other warlike trophies of the Tyrolese! Instantly the intelligence spread that their lost ensigns were recovered, and the veterans hastening in, kissed the tattered remnants, and wept for joy at again beholding the companions of their former glory. —BIGNON, iv., 391.

* Dum., xiii., 280, 293. Jom., ii., 168, 170.

the Austrians near the foot of the mountains,* at the Bridge of Steyer over the Ens, only delayed Marshal Davoust with the right wing of the army a day; and at length the imperial headquarters were established at Lintz, the capital of Upper Austria.

The emperor profited by the two days' delay at Lintz, which the destruction of the bridge at that place, and the necessity of giving some repose to the troops, occasioned, to give a new organization to his army, with a view to the surrounding and destroying of Kutusoff's corps. Four divisions of the army, amounting in all to twenty thousand men, were passed over to the left bank of the Danube, and placed under the command of Marshal Mortier, who received instructions to advance cautiously, with numerous videttes out in every direction, and always somewhat behind the corps of Lannes, which moved next to them on the right of the river. A flotilla was prepared to follow the army with provisions and stores down the sinuous course of the Danube, and such directions given to the numerous corps on its right bank as were best calculated to ensure the separation of the Russians from the Archduke Charles and the ultimate destruction of both. Nor was it only in warlike preparations that the emperor was engaged during his sojourn at Lintz. Duroc joined him there from Berlin, with accounts of the accession of Prussia to the confederacy of Russia and England; Nov. 8. upon which he instantly directed the formation of an army of the North, under the command of his brother Louis, composed of six divisions: a force, as already mentioned, which, although existing on paper only, was likely to overawe the discontented powers in the north of Germany, while, at the same time, a Spanish auxiliary corps, twelve thousand strong, under a leader destined to renown in future times,† the Marquis LA ROMANA, which was already on its march through France, was ordered to hasten its advance, and follow in the same direction.

At Lintz the emperor received also the Elector of Bavaria, who hastened to that city to render him the homage due to the deliverer of his dominions; and on the same day Count Giulay arrived with proposals for an armistice, with a view to a general peace. The ruined condition of the army which had escaped from the disaster of Ulm, the general consternation which prevailed, and the distance at which the principal Russian forces still were, and the imminent danger that the capital, with its magnificent arsenals, would immediately fall into the hands of the invaders, had prevailed in the Austrian cabinet over their long-continued jealousy of France. Napoleon received the envoy courteously, but after observing that it was not to a conqueror at the head of two hundred thousand men that propositions should be addressed from a beaten army unable to defend a single position, sent him back with a letter to the emperor containing the conditions on which he was willing to treat. These were, that the Russians should forthwith evacuate the Austrian territory, and retire into Poland, that the levies in Hungary should be instantly disbanded, and Tyrol and Venice ceded to the French dominions. If these terms were not agreed to, he declared he would continue, with-

out an hour's intermission, his march towards Vienna.*

These rigorous terms were sufficient to convince the allies that they had no chance of salvation but in a vigorous prosecution of the contest. The most pressing entreaties, therefore, were despatched to the Russian headquarters to hasten the advance of their reserves, while a strong rear-guard took post at Amstetten, to give time for the main body and artillery to complete their march without confusion through the narrow defile of the Danube. A bloody conflict ensued there between that heroic rear-guard and the French advanced column, under Oudinot, and the cavalry of Murat; in which, although the allies were ultimately forced to retreat from the increasing multitude of the enemy,† they long stood their ground with the utmost resolution, and gained time for the army in their rear to arrive at the important rocky ridge behind St. Polten, the last defensible position in front of Vienna, and which covered the junction of the lateral road running from Italy through Leoben with the great route down the valley of the Danube to the capital. To wrest this important position from the enemy, the right wing of the army, sixty thousand strong, under Davoust, Marmont, and Bernadotte, was directed, through the mountains on the right, to turn their left flank; Murat, Lannes, and Oudinot, with the left, of above fifty thousand combatants, manœuvred on their right, while the emperor in person, at the head of the corps of Soult and the Imperial Guard, was destined to strike the decisive blows in the centre. But the allies, until the arrival either of the Russian main body, or of the Archduke Charles, were in no condition to withstand such formidable forces: either of the enemy's wings greatly outnumbered their whole army. Kutusoff, therefore, decided with reason that it had become indispensable to abandon the capital; and that, by withdrawing his forces to the left bank of the river, he would both relieve them from a pursuit which could not fail in the end to be attended with disaster, and draw nearer to the reinforcements advancing under Buxhowden, which might enable them to renew the conflict on a footing of equality. Skilfully concealing, therefore, his intention from the enemy, he rapidly moved his whole army across the Danube at Mautern, over the only bridge which traverses that river between Lintz and Vienna, and having burned its eight-and-twenty arches of wood behind him, succeeded, for some days at least, in throwing an impassable barrier between his wearied troops and their indefatigable pursuers. Arrived at St. Polten, the French found it occupied only by light Austrian troops, who retired as they advanced: no force capable of arresting them any longer remained on the road to Vienna; and their light infantry eagerly pushing forward, on the following day reached Burkersdorf, within four leagues of the capital. About the same time Davoust, while

* Sav., ii., 104. Dum., xiii., 298, 300. Jom., ii., 146.

† A remarkable instance of courage occurred here on the part of a French cannonier. The Russian cuirassiers, by a gallant charge along the high road, had seized a battery of horse artillery which was firing grape at them within half musket shot, and sabred most of the gunners. One of them, however, though wounded, contrived to crawl to his piece, and putting the match to the touchhole, discharged it right among the enemy's horsemen with such decisive effect that the whole squadron turned and fled.—Dumas, xiii., 303, 304.

November 9.
Continued advance of the French towards Vienna.

Nov. 10.

toiling with infinite difficulty among the rocky and woody Alpine ridges which formed the romantic southern barrier of the valley of the Danube, came unexpectedly on the rear-guard of Meerfeld, which, unsuspecting of evil, was pursuing its course in a southern direction, by a cross road, to avoid the pursuit of Marmont.

Nov. 8. Suddenly assailed, it was pierced through the centre, and thrown into such confusion that the fugitives escaped only by dispersing in the neighbouring woods and mountains, leaving three thousand prisoners and sixteen pieces of cannon in the hands of the enemy.*†

But while these great advantages were attending the standards of Napoleon on the right bank of the Danube, an unwonted disaster, nearly attended with fatal consequences, befell them on the left. Murat, at the head of the advanced guard of the grand army, had pressed on with his wonted ardour to the neighbourhood of Vienna, in so precipitate a manner as drew forth a severe reproof from the French emperor, who was well aware that, divided as his troops were by so great a stream, the most imminent danger would attend those on the left bank, now that the Russians had wholly passed over to that side. The catastrophe which he apprehended was not long of arriving. Mortier, following the orders which

Nov. 11. he had received to keep nearly abreast of, though a little behind the columns on the right bank, and intent only upon inflicting loss upon the Russian troops, which he knew had passed the river, and conceived to be flying across his line of march from the Danube towards Moravia, was eagerly emerging from the defiles of Diernstein, between the Danube and the rocky hills beneath the towers of the castle where Richard Cœur de Lion was once immured, when he came upon the Russian rear-guard under Miloradovitch, posted in front of Stein, on heights commanding the only road by which he could advance, and supported by a powerful artillery.

He instantly commenced the attack Desperate action at Diernstein. at break of day, though little more than the division of Gazan had emerged from the formidable defile in his rear. The combat soon became extremely warm: fresh troops arrived on both sides; the grenadiers fought man to man with undaunted resolution, and it was still doubtful which party would prevail in the murderous strife, when towards noon intelligence arrived that the division of Doctoroff, ably conducted by the Austrian general Smith, who was perfectly acquainted with the country, had by a circuitous march through the hills reached his rear, and already occupied Diernstein and the sole line of his communications. Thus, while the French marshal had the bulk of Kutusoff's force on his hands in front, his re-

rear was cut off, and with a single division of his corps he found himself enveloped by the whole Russian army.*

Mortier instantly perceived that nothing but an immediate attack on Doctoroff's division, so as to clear the road in his rear, and permit the remainder of his corps to advance to his assistance, could save him from destruction. He had an hour before gone back in person to the division of Dupont, which was the next that was coming up, in order to hasten their march; and it was with great difficulty that, pursuing a devious path through the overhanging slopes, he succeeded in regaining the division of Gazan, now hard pressed both in front and rear. Forming his troops in close column, he advanced against Doctoroff, with the determination to force his way through at the point of the bayonet, or perish in the attempt. In silence, but with undaunted resolution, they advanced, to the mouth of the terrible defile they had passed in the morning, little anticipating such a disaster; but they found the bottom of the ravine filled with dense masses of the enemy, while the river on one side, and the walls of rock on the other, precluded all hope of turning them on either side. Compelled to combat both in front and rear, they made but little progress. Incessant discharges mowed down their ranks, and destruction seemed inevitable, when the sound of a distant cannonade from the farther extremity of the pass revived the hope that succour was approaching. In truth, it was the division of Dupont, which, fully aware of the imminent danger of their general, was advancing with all imaginable haste to his succour, and was already engaged with the rear of Doctoroff's division, which gallantly faced about to repel them. This extraordinary conflict continued till nightfall with unparalleled resolution on both sides. The combatants in the dark or by the light of the moon continued the strife; the whole defile resounded with the incessant roar of firearms; while the ancient Gothic towers, which once held in chains the crusading hero, were illuminated by the frequent discharges of artillery which flashed through the gloom at their feet. Gradually, however, Gazan's division was broken; upward of two thirds of their number had fallen; three eagles were taken; and Mortier himself, whose lofty stature made him conspicuous, being repeatedly intermingled with the Russian grenadiers, owed his safety to the vigour and dexterity with which he wielded the sabre. His officers, desirous of preventing so brilliant a prize from falling into the hands of the enemy, besought him to step on board a bark on the river, and make his way to the other side, but the brave marshal refused to leave his comrades.† This heroic constancy at length received its reward. The distant fire was heard to be sensibly approaching; it was Dupont, who, forcing his way with heroic courage through the defile, was gradually compelling Doctoroff to give ground before him, but who now, in his turn, found himself between two fires. The brave Smith, at the head of the Russian column, was killed by a discharge of grapeshot at the moment when he was making a decisive charge on the remains of Gazan's di-

* Dum., xiii., 307, 309. Jom., ii., 148, 149.

† When travelling on the road to Vienna, in the uniform of a colonel of chasseurs, which he commonly wore, Napoleon met a carriage containing a priest and an Austrian lady in great distress. He stopped and inquired into the cause of her lamentations. "Sir," said she, "I am on my way to demand protection from the emperor, who is well acquainted with my family, and has received from it many obligations. My house has been pillaged and my gardener killed by his soldiers." "Your name?" replied he. "De Bunny, daughter of M. de Marbœuff, formerly governor of Corsica." "I am charmed," rejoined Napoleon, "to have the means of serving you. I am the emperor." The astonishment of the fair suppliant may easily be conceived. She was sent to headquarters, attended by a detachment of chasseurs of the guard, treated with the greatest distinction, and sent back highly gratified by the reception she had met with.—RAPPE, 54, 55.

* Sav., ii., 105. Dum., xiv., 1, 13. Jom., ii., 150, 151.

† "No," said he, "reserve that resource for the wounded. One who has the honour to happy to share their lot and perish with them. We have still two guns and some boxes of grapeshot; we are almost at Diernstein; let us close our ranks and make a last effort."—DUMAS, xiv., 14

vision. The French, who had exhausted all their ammunition, were roused by the cheers of their deliverers, which were now distinctly heard, to try a last effort with the bayonet. Assailed both in front and rear, Doctoroff's division was driven up a lateral valley, which afforded them the means of escape; and, amid the cries of "France! France! you have saved us," the exhausted grenadiers of Gazan threw themselves into the arms of their comrades.*

This untoward affair gave singular vexation to Napoleon. It was not the mere loss of three thousand men, which in so mighty a host was of little consequence—that of the allies had amounted to two thirds of that number, and it could easily be repaired—it was the blot on his arms, the derangement of the plans of the campaign, which was the source of annoyance. Mortier, on the day after the battle, esteemed himself fortunate in being able, by the aid of the French flotilla on the Danube, to make his way across the river with his whole corps, leaving the left bank entirely in the hands of the enemy. The object of his movements was frustrated. All hopes of surrounding and destroying Kutsoff before the arrival of the second Russian army were at an end. What was still more mortifying to his military feelings, both the courage and capacity of the enemy had been clearly demonstrated. His troops had not only been defeated, but outgeneralled; and the Moscovites, in their first serious engagement of the campaign, had gained greater trophies than the Austrians could boast of since the battle of Marengo. He paused, therefore, a day at St. Polten; and, abandoning all thoughts of harassing any farther the retreat of Kutsoff, turned all his attention to the capture of Vienna and the acquisition of the bridge there, which, besides its other immense advantages, would render totally impossible the junction of the Archduke Charles with the Russian forces.†

Orders, therefore, were immediately given to Lannes and Murat to advance with all possible expedition upon Vienna, and by every means in their power endeavour to gain possession of the bridges over the Danube, whether an armistice was agreed on or not.‡ Meanwhile, the Emperor Francis retired from the capital, after confiding the charge of it, at this eventful crisis, to Count Wurba, the grand chamberlain, who executed with great fidelity the difficult duty committed to his charge. The citizens were overwhelmed with consternation when they found themselves deserted by the government, and assembled in tumultuous crowds to demand arms to defend their hearths and ramparts, but it was too late. The means of resistance no longer remained; and Vienna, which never yet had yielded to an enemy, was compelled to send a deputation to Napoleon's headquarters to treat of a capitulation. An active negotiation was kept up as to

the terms on which an armistice could be granted, but the French emperor would abate nothing of his rigorous demands, that the Hungarian insurrection should instantly be disbanded, and the Tyrol, with the duchy of Venice, be immediately ceded to France.*

Built in the superb basin formed on the south by the Alps of Styria, on the east by the Carpathian Mountains, on the west by the range of the Bisamberg and the hills of Bohemia and Upper Austria, Vienna, the subject of this anxious negotiation, yields to no capital of Europe, Constantinople and Naples excepted, in the beauty and salubrity of its situation. Anciently the frontier station of the Roman Empire against the Sarmatian wilds, its situation on the frontier of civilization has in every age rendered it a military post of the highest importance. The Hungarians alone had forced its gates in the thirteenth century, but the inhabitants hardly regarded as conquest the success achieved by those who were now their own subjects. Its heroic resistance to an innumerable army of Turks in 1688, gave time for Sobieski to approach with the flower of the Polish chivalry; and the subsequent defeat of three hundred thousand Mussulmans beneath its walls delivered Eastern, as the victory of Tours had saved Western Europe from the barbarian yoke. The old city is surrounded by a wall, flanked by strong bastions; but it contains only 100,000 souls, hardly a third of the present inhabitants of the capital. The remainder dwell in the immense suburbs which surround it on every side, separated from the ancient rampart only by a broad glais, conducive alike to the health and beauty of the metropolis. They are girded around by intrenchments, but such as are not defensible against a more skilful enemy than the Turks, from whose incursions they were intended to protect the inhabitants. Vienna cannot vie with Paris, Rome, or London, in the splendour or riches of its architectural decoration, though the Church of St. Stephen, surmounted by one of the highest steeples in Europe, from the summit of which the Polish lances were first discovered gleaming in the setting sun on the ridges of the Bisamberg, possesses the greatest interest; and the imperial library presents a room three hundred feet in length, of surpassing grandeur. But in a military point of view its capture was an object of the very highest importance, commanding as it did the only bridge below Linz over the Danube, and containing the great arsenal of the Austrian monarchy, stored with two thousand cannon and above a hundred thousand stand of arms.†

The Emperor Francis had withdrawn from Vienna to Presburg, where he stimulated the armament of the Hungarians against the insurrection, and thence he repaired to the fortified town of Brunn, in Moravia, in order to concert measures with Alexander, who was hourly expected there from Berlin, for the farther prosecution of the war. Meanwhile, the French forces in great strength approached Vienna, and Napoleon renewed his orders to Lannes and Murat to endeavour, by all possible means, to gain possession of the bridge which led across the river to the northern provinces of the Empire. The interchange of couriers, which was frequent between the out-

* Bign., iv., 402, 403. Dum., xiv., 9, 15. Jom., ii., 151, 152. Sav., ii., 105.

† Jom., ii., 153. Dum., xiv., 17, 18. Sav., ii., 105.

‡ "As soon as ten o'clock on the 12th has arrived, you may enter Vienna. Endeavour to surprise the bridge of the Danube, and if it is broken down, make it your study to find the readiest means of passing the river; that is the great affair. Should M. Guilay, before ten o'clock, present himself with proposals for a negotiation, you may suspend your march on Vienna; but, notwithstanding, use all your efforts to secure the passage of the river."—Orders to Murat, 12th November, 1805, in DUMAS, xiv., 20.

* Jom., ii., 153, 154. Dum., xiv., 17, 25. Sav., ii., 105.

† Personal observation. Jom., ii., 155, 156. Dum., xiv., 23, 25.

posts of the two armies, on account of the negotiation which was going forward, gave an enemy, little scrupulous as to the means he employed, too fair an opportunity for accomplishing this object. Meerfelt, in retiring from Vienna, had intrusted the important post of the bridges over the Danube to Prince Auersberg, who, with a strong rear-guard, was stationed at that, the sole avenue to the northern part of the imperial dominions. At daybreak on the 13th of Nov. 13. November, General Sebastiani entered Vienna at the head of a brigade of dragoons, closely followed by Murat, Lannes, and General Bertrand, with a powerful body of grenadiers. Without halting an instant, they passed through the town, crossed the suburb of Leopold on its opposite side, and marched straight to the great wooden bridge of Thabor, the head of which, on the right bank, was still held by an advanced guard of the Austrians. Everything was ready for the destruction of the arches; the matches were set, the combustibles laid, the train ready; a powerful battery was stationed at the opposite extremity: Auersberg had but to give the word, and in a few minutes the bridge was wrapped in flames, and all communication with the left bank was cut off. The better to conceal their designs, Lannes and Murat advanced on foot at the head of their troops; everything bore a friendly appearance; the soldiers in column had their arms slung over their shoulders; they were surrounded by a host of stragglers, as in time of profound peace: so frequent had been the interchange of couriers between the respective headquarters, that for three days there had been a kind of armistice between the two armies. The unsuspecting simplicity of the Germans was deceived by these appearances: General Belliard advanced, with Lannes and Murat, with his hands behind his back, as if strolling out for a morning saunter: they called out to the imperial officers "not to fire, as the armistice was concluded," and the Austrians, trusting to their good faith, joined them, and began to converse about the approaching peace. As the conversation grew warmer, the French generals, followed by the grenadiers, insensibly advanced upon the bridge: for some time the Austrian officer did not take the alarm, but at length, seeing that it was more than half passed, and that the French grenadiers were quickening their pace, he lost patience, and ordered the artillery to fire. The moment was terrible: the gunners stood to their pieces, the matches were raised; in an instant the bridge would have been swept with grapeshot, when Lannes walked straight up to him, saying, with a loud voice, "What are you about? do you not see?" At this instant the grenadiers rushed forward: the Austrian officer was seized, and continued assurances held out that the armistice was signed; while the column advanced with a rapid step along the bridge, covering, by its mass, a train of sappers and miners, who followed immediately behind, and threw all the combustibles placed along its length into the river. The artillerymen on the opposite side, seeing their own officers intermingled with the French, fell into the snare, and forebore to fire: the critical moment was passed; the French grenadiers crossed the bridge, and suddenly assailing the battery on the other side, seized the guns before the cannoniers could recover from their consternation. Instantly the grenadiers of Oudinot and Suchet succeeded them; and the French found themselves masters of both banks of the Danube, by

a stratagem conducted with a skill and intrepidity which would be worthy of the highest admiration, were it not tarnished by a breach of faith, which neither ability nor success can either palliate or excuse.*

This surprise of the bridge of Vienna gave the highest satisfaction to Napoleon, and it was, in truth, one of the most important events of the campaign. It was now in his power, from the central position of the capital, with his army *à cheval* on the river, to direct an overwhelming force either against the Russians or the Archduke Charles, as he pleased; the junction of these two powerful converging armies, or even their engaging together in common operations, was thenceforth impossible. Impatient to profit by such extraordinary good fortune, the emperor, at daybreak the following morning, crossed the bridge and established his headquarters at Schoenbrunn, from which the young archduchess, Marie Louise, his future empress, had just before fled. The important effects of the capture of the bridge soon appeared. The Archduke Charles, whose columns were rapidly approaching the capital, was obliged to incline to the right, with a view, by a long circuit towards Hungary, to endeavour to regain his communications with the allied army. On the north of the river, convoys of all sorts rapidly arrived at Vienna; the hospital-train were established there; the immense stores found in the arsenal enabled the French to countermand all their warlike apparatus which had been ordered up from Metz and Strasbourg; while one half of the army passed over to the north bank, threw back Kutusoff's advanced posts towards Moravia, and the other half, spread out from Kuffstein in Tyrol towards the frontiers of Hungary, interposed between the Danube and the hitherto unconquered battalions of the Archduke Charles.†

The unexpected surprise of the bridge of Vienna contributed not a little to aggravate the danger and embarrass the situation of Kutusoff. All the advantages which he had derived from his masterly movements across the Danube were now lost; the river no longer protected his rear from disaster; and alone, in presence of a force four times greater than his own, he had to continue a painful retreat to the second Russian army. He instantly fell back, and Brunn was assigned as the point of junction with the Austrian forces who had evacuated the capital. Napoleon, without a moment's delay, continued the pursuit in different columns, with a view to prevent the union. So strongly were the Austrians impressed with the idea that an armistice had been concluded, that General Noslitz, on the 15th of November, when reached by the French dragoons, allowed them to pass without opposition through his squadrons, which gave them the means of falling unexpectedly on the heavy convoy which was struggling through the desperate roads in his rear. The rear-guard of the Imperialists was soon overtaken, encumbered as it was with great loads of artillery and stores, which had been taken from the arsenal of Vienna: one hundred and ninety pieces of cannon, and equipments to an immense amount, fell, al-

Napoleon passes through Vienna, and establishes headquarters at Schoenbrunn.

* Bour. vii., 49, 50. Rapp, 56, 60. Sav., ii., 105, 106. Dum., xiv., 27, 31. Jom., ii., 157, 159.

† Sav., ii., 107, 108. Dum., xiv., 31, 33. Bour., vii., 50, 51.

most without a combat, into the hands of the enemy. Leaving this easy prey to be secured by the corps which followed, Murat pushed forward, at the head of the whole cavalry and a corps of infantry about fifty thousand strong, to endeavour to reach Znaim before the enemy, which, if done, would have prevented the junction of the Russian and Austrian forces. Meanwhile Mortier and Bernadotte, who had both crossed the Danube, and were following fast on the traces of the Russian general, thundered without intermission in his rear. His destruction seemed inevitable.*

Burning with anxiety to anticipate the enemy in his arrival at Znaim, and encouraged by the success of his stratagem with Auersberg, Murat resolved to try a similar device with Kutusoff, and for this purpose despatched a flag of truce, announcing the conclusion of the armistice, in the hope of thereby stopping the march of the Russian columns; but he soon found that he had a very different antagonist to deal with in such an attempt from the unsuspecting Austrians. Sprung from another race, and endowed with very different mental qualities, the Russians are as skilled as the Germans are deficient in the arts of dissimulation; and they have repeatedly shown themselves superior in address to all the diplomatists of Europe. Kutusoff, whose acuteness was of the highest order, and who was inferior to none of his countrymen in the finesse of negotiation, instantly saw in this attempt the means of extricating the greater part of his army from its embarrassment. He received the French envoy in the most friendly manner, and pretended not only to enter cordially into the negotiation, but, in his anxiety to put an immediate end to hostilities, sent the emperor's aid-de-camp, Winzingerode, to propose the terms, which were, that the Russians should retire into Poland, the French withdraw from Moravia, while, in the mean time, both armies should remain in the situation which they at present occupied.† Murat fell into the snare: Bagrathion, who was in presence of the French videttes with eight thousand men, indeed remained stationary; but, meanwhile, the remainder of the army defiled rapidly in his rear, and gained the important post of Znaim, which opened up their communication with the retiring Austrians and their own reserves, which were approaching. The Emperor Napoleon was highly indignant when he heard that an armistice had been concluded, and despatched immediate orders for an attack; but, before his answer could be received, twenty hours had been gained, Znaim was passed, and the main body of the Russians were in full march to join their allies, leaving only Bagrathion and his division in presence of the enemy.‡

* Jom., ii., 159, 160. Dum., xiv., 33, 36, 45. Sav., ii., 108.

† "In agreeing to this proposal for an armistice," says Kutusoff, in his official account of the transaction, "I had in my view nothing but to gain time, and thereby obtain the means of removing to a greater distance from the enemy, and saving my army. The adjutant-general, Winzingerode, sent me a duplicate of the proposed convention for my ratification; without affixing my signature, I delayed my answer for twenty hours, waiting for that of the French emperor, and, meanwhile, paused the main body of the army to continue its retreat, which thereby gained two marches on the enemy. In so doing, I was well aware that I was exposing the corps of Prince Bagrathion to almost certain ruin; but I esteemed myself fortunate in being able to save the army by the destruction of that corps."—DUMAS, xiv., 48.

‡ Jom., ii., 160, 161. Dum., xiv., 44, 51. Bign., iv., 432, 434.

At noon on the 16th, despatches arrived from Napoleon disavowing the armistice, and directing an immediate attack on the enemy. Kutusoff had directed Bagrathion to keep his ground to the last extremity, in order to gain time for the retreat of the army; nothing more was requisite to induce that heroic general, with his brave followers, to sacrifice themselves to his brave country. He was soon assailed, at once in front and both flanks, by Lannes, Oudinot, and Murat, to whose aid Soult, with his numerous and well-appointed corps, arrived soon after the action commenced. The village of Grund was the key of the Russian position, and incredible efforts were made on both sides to gain or retain possession of that important point. For long the Moscovites made good their ground: in vain column after column bravely advanced to the attack; the resistance they experienced was as obstinate as the attack was impetuous; and after several hours' murderous fighting, this band of heroes remained unbroken in the midst of their numerous enemies. Towards nightfall, however, the immense and constantly increasing masses of the enemy prevailed; the thinned ranks could no longer be preserved by a constant feeling towards the centre; the French grenadiers broke into the village, and almost all the wounded Russians fell into their hands. Still the survivors maintained the desperate struggle: man to man, company to company, they fought in the houses, in the streets, in the gardens, with unconquerable resolution. The constant discharges of firearms and artillery spread a broad light in the midst of the gloom of a November night, and midnight found them still engaged in mortal combat. In the strife three thousand Russians fell or were made prisoners; but Bagrathion effected his retreat with the remainder, hardly five thousand, unbroken from amid forty thousand enemies: a glorious achievement, which gave an earnest of the future celebrity of a hero whose career was closed with immortal renown on the field of Borodino.*

Nothing now could prevent the junction of the allied forces, and it took place on the 19th at Wischau, in Moravia, without farther molestation. This great event produced an immediate change in the measures of Napoleon. It was no longer a dispirited band of forty thousand men, which was retiring before forces quadruple their own, but a vast army, seventy-five thousand strong, animated by the presence of the emperor in person, which was prepared to resist his efforts. The situation of Napoleon was, in consequence, daily becoming more critical. The necessity of guarding so many points, and keeping up a communication from Vienna to the Rhine, had greatly reduced his army: the Archduke Charles, with seventy thousand tried veterans, was rapidly approaching from the south; the Hungarian insurrection was organizing in the east; seventy-five thousand Russians were in his front, while Prussia, no longer concealing her intentions, was preparing to descend from Silesia with eighty thousand men on his communications. The measures of Napoleon were calculated with his wonted ability to ward off so many concurring dangers. Calculating that at least ten days must elapse before the Russian

Heroic action of Bagrathion, who at length makes good his retreat.

Junction of the Russian armies. Measures of Napoleon.

* Dum., xiv., 50, 55. Sav., ii., 108, 109. Jom., ii., 160, 161. Bign., iv., 434, 435.

armies, after the fatiguing marches which they had undergone, could be ready for active operations, he resolved to make the most of that precious interval to impose upon the different enemies with whom he was surrounded. Knowing well that the great secret of war is to expand forces, when a variety of enemies are to be restrained and a moral impression produced, and concentrate them when a decisive blow is to be struck, he resolved to take advantage of this breathing-time to disseminate his troops in every direction. Heavy contributions were imposed upon the conquered territories of Austria: Marmont was pushed forward on the road to Styria to observe the Archduke Charles; Davoust received orders to advance upon Presburg to overawe the Hungarians; Bernadotte, with his corps and the Bavarians, was removed towards Iglau and the frontiers of Bohemia to observe the motions of the Archduke Ferdinand, who, with the ten thousand men who had escaped from the disaster of Ulm, and the levies of that province, was assuming a menacing attitude on the upper Danube; while Mortier, with his corps, which had suffered so much in the preceding combats, formed the garrison of Vienna. The corps of Soult and Lannes, with the imperial guard and the cavalry under Murat, advanced on the road to Brunn to make head against the now united Russian armies.*

Meanwhile the French armies maintained the most exemplary discipline at Vienna, the French and the inhabitants, somewhat recovered from their consternation, were enabled to gaze without alarm on the warriors whose deeds had proved so fatal to the fortunes of their country. Commerce revived, the gates were open, provisions flowed in from all quarters, and, excepting from the French sentinels at the gates and uniforms in the streets, it could hardly have been discovered that an enemy was in the occupation of the capital. General Clarke was appointed governor of the city, and a provisional government was organized throughout all the conquered provinces, whose first care was to preserve discipline among the soldiers, and then next to enforce the collection of the enormous contributions which the conqueror had imposed on the inhabitants. The greatest courtesy was evinced towards the academies and scientific institutions, and even considerable payments made from the military chest for the support of these useful establishments: admirable measures, demonstrating the ascendant of discipline and European courtesy over the savage passions of war, and which would have been deserving of unqualified admiration if they had not been accompanied by withering exactions, levied under authority of Napoleon himself, and the coercion of private plunder had not been all turned to the account of the great imperial robber.† At the same time, in the bulletins which he published, the whole calamities of the war were, as usual, ascribed to the English and the corrupting influence of their gold, while, with a rudeness un-

worthy of so great a man, and especially unbecoming in the moment of triumph, he insulted his fallen enemies in his official publications, and did not even spare the Emperor of Austria in the point where chivalrous feelings would have been most anxious to have forborne, the character and influence of the empress herself.*

Meanwhile the allied armies had effected their junction in the neighbourhood of Wischau; 104 battalions, including ^{forces on the two sides.} 20 Austrian, and 159 squadrons, of which 50 were of the same nation, presented a total of 75,000 effective men. A division of the imperial guard, under the Grand-duke Constantine, brother of the Emperor of Russia, and a corps under Benningen, which were hourly expected, would raise it to nearly ninety thousand. The forces which the French emperor had at his immediate disposal to resist this great array were much less considerable, and hardly amounted, at that moment, to 70,000 combatants; but such was the exhaustion of the Russian troops, after incessant marching and fighting for two months, that it was resolved to put them into cantonments for ten days round Olmutz before resuming active operations. The troops were animated by the best spirit, and enthusiastically devoted to their sovereign, whose presence among them never fails to rouse to the highest pitch the loyal feelings of the Russian soldiers; but in equipment and skill in the art of war it had already become evident that they were decidedly inferior to their redoubtable adversaries, and that nothing but the indomitable firmness of Northern valour had hitherto enabled them to maintain their ground against them.†

The hostile chiefs gradually drew near to each other. Napoleon advanced his headquarters to Brunn, a fortified place containing considerable magazines recently abandoned by the allies, and which afforded him the immense advantage of a secure dépôt for his stores, sick, and wounded, in the immediate vicinity of the theatre of action. A few days after, ^{Nov. 20. Napoleon reconnoitred the field of Austerlitz.} when out on horseback reconnoitring the ground in the neighbourhood with his staff, he was much struck with the importance, both as a field of battle and a strategical point, of the position of AUSTERLITZ. The two chief roads of that part of Moravia, that from Nikolsbourg to Olmutz, and from Brunn towards Hungary by Holitsch, cross at that town, which renders it a military position of the highest value. "Gentlemen," said he to the generals and officers, "observe well the ground here: within a few days it will be your field of battle." The importance attached by both parties to the possession of this intersection of the roads led to a severe combat of cavalry between the advanced guard of the French, in presence of Napoleon himself, and the rear-guard of the enemy, in which neither party could boast of decisive success, although the increasing force of the enemy compelled the allies at nightfall to retire. Advices at the same time arrived that the advanced guard of Massena had entered into communication with Marmont's corps, which formed the southern extremity of the grand army, so that Napoleon could now calculate for the decisive shock upon the united strength of the armies of Italy and Germany.‡

* Dum., xiv., 55, 58. Jom., ii., 162, 163. Bign., iv., 435.

† The contribution levied on Vienna and the conquered part of Upper and Lower Austria was 100,000,000 francs, or £4,000,000 sterling: a sum fully equivalent to £8,000,000 in this country. The public stores, the legitimate objects of conquest at Vienna, were immense: 2000 pieces of artillery, of which 500 were heavy for siege; 100,000 muskets; 600,000 quintals of powder; 600,000 balls, and 160,000 bombs. Fifteen thousand muskets were sent as a present to the Bavarians, besides the colours taken from them in 1740, when their government made common cause with France.—See BIGNON, iv., 412

* Bign., iv., 412, 417. Jom., ii., 157. Dum., xiv., 37, 40.

† Dum., xiv., 61, 63. Jom., ii., 165, 166. Bign., iv., 435.

‡ Bign., iv., 436. Dum., xiv., 104, 105, 118.

But all this, notwithstanding, the French emperor was fully aware of the dangers of his situation. If Massena and the Italian army had entered into communication with his extreme right, the united forces of the Archdukes Charles and John, nearly ninety thousand strong, were rapidly approaching to the assistance of the allies; and it had already become evident that Mortier would be unable to retain Vienna for any length of time from their arms. The danger of losing his line of communication in rear was the more alarming that the forces in his front were rapidly increasing; and the arrival of the Archduke Constantine at headquarters had already raised their efficient force to eighty thousand men, assembled in a strong position under the cannon of Olmutz. Prussia, he was well aware, was arming for the fight; and he might shortly expect to have his communications on the Upper Danube menaced by twenty thousand of the soldiers of the Great Frederic.* Everything depended upon striking a decisive blow before these formidable enemies accumulated around him; and he was not without hopes that the inexperience or undue confidence of his opponents would give him the means of accomplishing this object, and terminating the war by a stroke which would at once extricate him from all his difficulties.

The more to inspire the allies with the false confidence which might lead to such a result, Napoleon despatched Savary with a letter to the Emperor Alexander to offer his congratulations to that monarch on his arrival with his army, and propose terms of accommodation.† About the same time Counts Giulay and

Stadion arrived at the headquarters of the French emperor. After two days spent in fruitless negotiations, Napoleon demanded a personal interview with the Emperor Alexander. Instead of coming in person, the Czar sent his aid-de-camp, Prince Dolgoroucki, whom Napoleon met at the advanced posts. "Why are we fighting?" said Napoleon when the aid-de-camp was admitted into his presence. "Let the Emperor Alexander, if he complains of my irruptions, make corresponding invasions on his own side, and all discussion will cease between us." The Russian represented that such a conduct would be repugnant to the principles of his cabinet, and that the emperor had only taken up arms to succor Austria, and obtain for the Continent a solid peace, without either personal interest in the matter or animosity against France, which he desired to see powerful and happy, as well as all the other European states; that his empire was already so vast that its extension was no object of ambition; and that his sole desire was the prosperity of his subjects. Napoleon replied that the allies wished to deprive him of his crown, and reinstate the Bourbons. This Dolgoroucki denied; and he denied, also, that they desired to restore his Italian possessions to the King of Sardinia; but admitted that they insisted on the independence of Holland, and an indemnity for the loss of Piedmont to the King of Sardinia.

other powers of Europe to recognise the new order of things in your country. If now I entertain different sentiments, it is because France has adopted different principles, which have given the European powers just cause of disquietude for their independence." I have been called on by them to concur with them in establishing an order of things which may tranquillize all parties, and it is to accomplish that purpose that I have come hither. You have been admirably served by fortune, it must be admitted, but I will never desert an ally in distress, or separate my cause from that of the Emperor of Germany. He is in a critical situation, but not beyond the reach of remedy. I command brave soldiers, and if your master drives me to it, I will command them to do their duty. You are already a great and powerful nation, and by your uniformity of language, feelings, and laws, as well as physical situation, must always be formidable to your neighbours. What need have you of continual aggrandizement? Since the peace of Luneville, you have acquired first Genoa, and then Italy, which you have subjected to a government which places it entirely at your disposition."

* Dum., xiv., 120, 121. Bign., iv., 438, 339. Jom., ii., 171, 172.

Nov. 25. "Sire," said Napoleon, "I send my aid-de-camp, General Savary, to your majesty, to offer you my compliments on his arrival at the headquarters of your army. I have charged him to express the esteem which I entertain for your majesty, and the anxious desire which I feel to cultivate your friendship. I indulge the hope that your majesty will receive him with that condescension for which you are so eminently distinguished, and that you will regard me as one of the men who are most desirous to be agreeable to you. I pray God to keep your imperial majesty in his holy keeping." The Emperor Alexander replied from Olmutz on the 27th in these terms: "I have received, sir, with the gratitude of which it was deserving, the letter which General Savary brought, and hasten to return my best acknowledgments: I have no other desire but to see the peace of Europe established on safe and honourable conditions. I desire, at the same time, to seize every occasion of being personally agreeable to you: receive the assurance of it, as well as of my high consideration."

"When I arrived at the Russian headquarters," says Savary, "I found the officers and staff declaiming against the ambition of the French government, and full of confidence in the success of their arms. The emperor received me in the most gracious manner, and made a sign for his attendants to retire. I could not avoid a feeling of timidity and awe when I found myself alone with that monarch. Nature had done much for him; it would be difficult to find a model so perfect and gracious; he was then twenty-six years of age. He spoke French in its native purity, without the slightest tinge of foreign accent, and made use on all occasions of our most classical expressions. As there was not the least affectation in his manner, it was easy to see that this was the result of a finished education. The emperor said, when I put the letter into his hand, 'I am grateful for this step on your master's side; it is with regret that I have taken up arms against him, and I seize with pleasure the first opportunity of testifying that feeling towards him. It is long since he has been the object of my admiration; I have no wish to be his enemy, any more than that of France. He should recollect that in the time of the late Emperor Paul, though then only grand-duke, when France was overwhelmed by disasters and met with nothing but obloquy from the other cabinets, I contributed much, by directing the Russian cabinet to take the lead, to induce the

"Genoa has been acquired by us," answered Savary, "in spite of ourselves. Its political power was annihilated, its harbour blockaded by the English, its commerce destroyed, its means of defence against the Barbary powers at an end. Necessity, therefore, not less than inclination, compelled them to throw themselves into the arms of a foreign power. France was subjected to the whole charges of its defence before the formal act of annexation took place. As to Italy, it is altogether our conquest. We have watered its fields with our blood; twice it has gained its political existence by our efforts. If it began with Republican institutions, it was in order to be in harmony with its protecting power. The changes which have since taken place in its government were intended to make it still follow the phases of our Constitution. It has the same laws, usages, and internal regulations as France. It must lean on some foreign power, and has only France and Austria to choose between. We have fought for ten years to wrest it bit by bit from that power: could we permit its inhabitants to choose an alliance which would at once deprive us of the whole fruit of our labours? If Austria has not abandoned all thoughts of Italy, we are still ready to combat her for it; if she has, it is of very little moment what its form of government is. The emperor, in sending me to your majesty, was far from doubting that the war took its origin in these questions; if so, I not only see no possibility of peace, but anticipate a universal hostility." It was easy to see that an accommodation was impossible between powers actuated by such opposite sentiments. Savary returned, after three days spent in parleying, without having accomplished the professed object of his mission, but effectually gained its real design in making the French emperor acquainted with the self-confidence and vehemence which prevailed at the allied headquarters.—SAVARY, ii., 112, 128.

"Let the Emperor of Russia imitate my conduct," said Napoleon, "and we shall soon come to terms of accommodation." "He will never desert his allies," replied Dolgoroucki. "Then we must fight," rejoined Napoleon: "I wash my hands of the consequences;" and with that abruptly broke off the conference. But, though

Nov. 28. it had only lasted half an hour, much had been done in that time to blind the allies as to the real state of affairs. The emperor met him at the advanced posts, as if solicitous to conceal what was passing in the interior of the army. Preparations for a retreat were ostentatiously put forward, field-works were hastily thrown up in front of the ground occupied by the army, and Dolgoroucki withdrew with the firm conviction, which he did not fail to communicate to his sovereign, that the French emperor had lost all his former confidence, and that his great object now was to extricate himself from the perilous situation in which he was placed.*†

On the same day Count Haugwitz arrived at the French headquarters with the ultimatum of Prussia, as agreed on in Berlin. the treaty of November 3. Since that time the measures of the cabinet of Berlin had been decidedly hostile. A combined force of Russians and Swedes had occupied the electorate of Hanover, a strong body of English troops had landed at Stade, and a proclamation from the King of England announced that the electorate was now placed under the protection of Prussia, and all the former authorities reinstated in their functions as before the French invasion. The Swedes were in full march towards the Elbe, and the Prussians towards Franconia, while a powerful force of the same nation was collecting in Silesia to bring immediate succour to the allied army. Even the garrison of Berlin had received orders to march to support the military movements which were in preparation. The eloquent declamations of the celebrated historian, Müller, had wrought up the public mind to a perfect phrensy; warlike enthusiasm filled every breast; and the most exaggerated reports of the disasters of the French were received with insatiable avidity. Napoleon was well aware of all this, and of the object of Haugwitz's mission. He therefore resolved to temporize, and, if possible, dissipate the clouds which were collecting by a decisive stroke, before they burst upon his head. He therefore refused to enter into discussion with the Prussian minister, and recommended him, after a short interview, to open conferences at Vienna with Talleyrand, instead of remaining amid the tumult of his bivouacs; and the wily diplomatist, not sorry of an opportunity of waiting the issue of events before finally committing his country in a contest which he had so long laboured to prevent, readily obeyed his directions.‡

† When forces so vast were preparing to aid them, both in the North and South, it was the obvious policy of the allies to advance to Wischau. remain on the defensive, and rest secure in their strong position under the cannon of Olmutz, until the Archduke Charles had brought up his veteran battalions, and Prussia had de-

scended in force into Silesia and Franconia. But although the expedience of doing so was fully appreciated at headquarters, it was resolved, in a council of war held on the 27th, to advance forthwith against the enemy. The Russian troops, miserably provided, at that period, with commissaries, and totally destitute of magazines in that part of the country, which it had never been expected would form the theatre of war, were suffering extremely from want of provisions, while the French, having the rich provinces of Lower Austria and Hungary in their rear, were amply supplied with provisions of all sorts. The allied generals, too, were aware of the inferiority in number of the French troops assembled round Brunn, and were ignorant of the admirable disposition of the other corps in echelon in their rear, by which the two armies could in a few days be restored to an equality. Influenced by these sentiments, a forward movement was resolved on, with a view to pass the left flank of the French army, cut them off from their communication with Vienna and the reserve under Massena, and at the same time establish their own connexion with the powerful succour approaching under the Archduke Charles. The movement commenced on the 27th, at daybreak, when the whole army advanced in five columns, moving parallel to each other, against the enemy. The French were not in sufficient force at the advanced posts to resist so formidable an assailant; a detachment was made prisoners, and after a sharp combat the little village of Raunsitz was abandoned by Murat to Bagrathion. Encouraged by this success of its advanced guard, the Russian main body followed joyfully and rapidly in its footsteps. Headquarters were moved on to Wischau, and the outposts were pushed forward to within two leagues of Austerlitz.*

This sudden irruption produced an immediate concentration of the French army. Preparatory orders instantly to raise their cantonments and fall back behind Brunn, keeping only detachments in front of that place. Bernadotte was directed to leave the Bavarians alone at Iglau, and advance by forced marches to the field of action; Davoust to come up with all imaginable haste to Nikolsbourg, on the right of the French position; Mortier to abandon Vienna to a division of Marmont's army, and hasten with his whole corps to the environs of Brunn; and Marmont to draw near to the capital with all his forces. In this way Napoleon's army, which, before the concentration commenced, was little more than fifty thousand strong, would be raised in a few days to ninety thousand men; but before these distant succours could arrive great successes might be obtained, and the emperor was in no small disquietude how to arrest the enemy before his forces were reassembled. Fortunately for him, their movements were slow and vacillating. On the 29th they marched forward only two leagues, directing their chief force towards the French left; but on the day following they retraced their footsteps, and, advancing with the left in front, bivouacked at Hoqueditz, and their light troops were seen from the French outposts marching across their position towards the right of the army. Napoleon spent the whole of both days on horseback at the advanced posts, watch-

* Sav., ii., 115, 128. Bign., iv., 437, 442.

† When Dolgoroucki had retired, Napoleon said to the officers around him, "The allies should wait till they are on the heights of Montmartre before they make such propositions;" a remarkable expression, which subsequent events rendered prophetic.—Bour., vii., 67.

‡ Hard., viii., 497, 498. Bign., iv., 437, 438. Jom., ii., 171.

* Dum., xiv., 150, 152. Hard., viii., 505, 506. Jom., ii., 172.

ing their movements. After surveying the heights of Pratzen, the highest ground in the neighbourhood, and obviously of the first importance if the battle was fought in its environs, he said to his generals, "If I wished to prevent the enemy from passing, it is here that I should station myself; but that would only lead to an ordinary battle, and I desire decisive success. If, on the other hand, I draw back my right towards Brunn, and the Russians pass these heights, they are irretrievably ruined." In pursuance of this design, the heights were abandoned; the right was drawn back, as if it was fearful of encountering the enemy.* Austerlitz was evacuated, and the French army concentrated round Brunn, ready to take advantage of the first imprudent step which might be made by their adversaries.

At length, on the morning of the 1st of December, the intentions of the enemy were clearly manifested. Napoleon beheld, as he himself says, "with inexpressible delight," their whole columns, dark and massy, moving across his position, at so short a distance as rendered it apparent that a general action was at hand. Carefully avoiding the slightest interruption to their movement, he merely watched, with intense anxiety, their march; and when it had become evident, from the direction they were following, and the number of troops which had already passed, that the resolution to turn the right flank of the French army had been decidedly taken, he said, with the prophetic anticipation of military genius, "To-morrow, before nightfall, that army is my own." In truth, the allies, under the direction of Weyrother, whose repeated defeats at Rivoli and Höhenlinden had not yet taught him the quality of the antagonists with whom he had to deal, were venturing upon one of the most hazardous operations in war—a flank march in column in front of a concentrated enemy, and that, too, when that enemy was Napoleon, at the head of seventy-five thousand men.†

Meanwhile the allies, in great strength, animated by the presence of their respective sovereigns, and in the highest spirits, were marching in five massy columns within two cannon shots of the French outposts. Their design was to turn the right flank of the enemy, so as, in case of disaster, to cut them off from Vienna, and throw them back on the mountains of Bohemia; and with that view they proposed to commence the action by a vigorous attack on that wing, which, it was hoped, would be speedily defeated and thrown back in confusion on the centre. Their first column, under Doctoroff, had advanced beyond the right flank of the French as far as Aujezd; the second, commanded by Langeron, occupied the important heights of Pratzen, directly before their right wing; the third, under Prybyszewski, crowned the eminences immediately behind that elevated point; the fourth and fifth, under Miloradowitch and Lichtenstein, followed in order, showing their flank to the enemy, and stretching along the whole front of his position; while the reserve, under the Grand-duke Constantine, occupied the heights in front of Austerlitz. In all, 114 battalions and 172 squadrons, amounting to full eighty thousand men, of whom fifteen thousand were cavalry in the finest condition.‡

The French army, in concentrated masses, occupied a position in advance of the Description fortress of Brunn, midway between of the field that town and Austerlitz. The em- of battle. peror's tent was placed on an elevated slope on the right of the great road leading across his line from Brunn to Austerlitz, at the distance of two leagues and a half from the former place, a little in front of Bellowitz, between the two streams which, descending towards the south, unite their waters at Punlowitz.* From this elevated point the whole extent of the line was visible, though many parts of it were obscured by rising grounds, copsewoods, and villages, which, intersected by numerous small fishponds, formed a sort of intrenched camp, within which the French army was placed. Their right rested on the Lake Moenitz, formed by the confluence, in that undulated country, of the two rivulets above mentioned; their left on the Bosenitzberg, an elevated hill, the first of the wooded chain which separates the basin of the Schwarza from that of the March, and which was intrenched and crowned with artillery. The front of the whole position was covered by broad marshes, which on either side bordered the streams, intersected at right angles by the great road from Brunn to Olmutz, and by various country roads from village to village, which, from the morasses and little lakes by which they were bordered, appeared easily susceptible of defence. Right in front of the position, on the opposite side of the rivulet, lay the line of waving heights, gradually rising to the elevated point of the Pratzen, which were already covered with the enemy's troops, who, congregated in formidable masses on that imposing ridge, sought to conceal the general movement of the troops in their rear, to turn the right flank of Napoleon.†

By great exertions, the French emperor had succeeded in assembling an im- Disposition of mense force for the decisive battle the French which was approaching. The left troops. wing, under Lannes, was stationed at the foot of the hills, having a powerful advance guard of cavalry in front of the fortified position of the Bosenitzberg. Next to these were placed the corps of Bernadotte, who, by forced marches, had arrived in line from Iglau on the Bohemian frontier. To their right, on the right of the high road, were stationed the grenadiers of Oudinot, with the cavalry under Murat; and the imperial guard, under Bessieres, in second line behind them. The centre was composed of the corps of Marshal Soult, which was uncommonly strong, and occupied the villages opposite the heights of Pratzen, which had been abandoned to the enemy. The right wing, under Davoust, who, by incredible efforts, had come up from Hungary, was thrown back in a semicircle, with its reserves at the Abbey of Raygern in the rear, and its front line stretching to the Lake Moenitz. Before the night of the 1st of December, above-ninety thousand men were here assembled within the space of two leagues, all veterans inured to war, and burning with impatience to signalize themselves in the decisive battle which was to take place on the morrow.‡

* These names will convey no idea to readers in this country, but they will be of value to the traveller who explores in that distant region the theatre of this memorable conflict.

‡ Dum., xiv., 134, 135. Nap., ii., 176.

Napoleon spent the whole of that day on horseback, riding along the ranks, visiting the outposts, speaking to the soldiers, and studying the ground. When a standard of the Italian army appeared, he spoke to the men in those words of brief but nervous eloquence by which he knew so well how to win their hearts; many of the veterans he even distinguished by name, and reminded them of the dangers and glories they had shared together. "Soldiers!" said he, "we must finish this war by a decisive blow;" and loud cries of "Vive l'Empereur!" proved that he had not miscalculated the ardour of his followers. He continued riding through the bivouacs, animating the men, till long after nightfall, and then retired to his tent, where he dictated one of those magical proclamations which so often, on the eve of great events, contributed to the astonishing victories which he won.* Suddenly, as he rode along, surrounded by his generals, fires were seen kindling on all sides; a brilliant illumination arose in all the bivouacs; the heavens were filled by the ruddy glow; and loud shouts in every direction announced some extraordinary transport among the soldiers. It was the enthusiasm of the common men, which, wrought to the highest pitch by the interest of the moment and the presence of their beloved emperor, celebrated thus, by the spontaneous combustion of the wood of their huts and the straw of their bivouacs, the first anniversary of his coronation.†

The night was cold, but clear, though a thick fog, as is not unusual in that country, covered all the lower grounds, and hardly enabled the sentinels to discern each other at ten yards' distance. At four in the morning the emperor mounted on horseback. All was still among the immense multitude who were concentrated in the French lines; buried in sleep, the soldiers forgot alike their triumphs and the dangers they were about to undergo. Gradually, however, a confused murmur arose from the Russian host; the lights multiplied towards Aujezd and the southeastern parts of the horizon, and all the reports from the outposts announced that the advance from right to left had already commenced along their whole line. In effect, their orders had been despatched at midnight; all their columns were in full march, within two hours after, to turn the French right. At three o'clock, a detachment of Austrian horse presented themselves before Tilnitz, the outermost village in their possession on that

side, and shortly after an attack with infantry and artillery was made on that important post. No sooner did Napoleon hear the sound of distant cannonade in that direction, than he ordered Soult to bring his columns up to the very entrance of the defiles formed by the villages and woods in the low grounds on either side of the rivulet, in order that the instant the enemy appeared sufficiently engaged in their perilous cross-march, his numerous battalions might be at once thrown on their flank. The soldiers accordingly advanced, every heart throbbing with anxiety, every eye turned to the east, where still, in that wintry season, no glimmering of light appeared. Gradually the stars, which throughout the night had shone clear and bright in the summit of the firmament, began to disappear; the ruddy glow of the east announced the approach of day, and the tops of the hills, illuminated by the level rays, appeared clear and sharp above the ocean of fog that rolled in the valleys. At last the sun rose in unclouded brilliancy—that "Sun of Austerlitz," which he so often afterward apostrophized as illuminating the most splendid periods of his life. As the mist sunk and the upper eminences in the lower grounds became visible, the magnitude of the fault which the enemy had committed became apparent: the heights of Pratzen, the key to their position, which the evening before had been crowned with artillery and glittering with armed men, were now deserted; it was evident that the left wing, advancing towards Tilnitz, had descended to the low grounds, and that the allies, intent on outflanking their opponents, had entirely abandoned the thought of retaining their position. The marshals who surrounded Napoleon saw the advantage, and eagerly besought him to give the signal for action; but he restrained their ardour, and, turning to Soult, said, "How long would it take you from hence to reach the heights of Pratzen?" "Less than twenty minutes," replied the marshal; "for my troops are in the bottom of the valley, covered with mist and the smoke of their bivouacs; the enemy cannot see them." "In that case," said Napoleon, "let us wait twenty minutes; when the enemy is making a false movement we must take good care not to interrupt him." Burning with impatience, the marshals stood around awaiting the signal; but before that time was fully elapsed, a violent fire was heard on the right, towards Tilnitz, and an aid-de-camp arriving in haste, announced that the enemy had commenced the attack in great force in that quarter. "Now, then, is the moment," said Napoleon; and the marshals set off at the gallop in all directions for their respective corps. At the same time, the emperor mounted his horse, and, riding through the foremost ranks, "Soldiers," said he, "the enemy has imprudently exposed himself to your blows; we shall finish the war with a clap of thunder."*

The French army occupied an interior position, from whence their columns started like rays from a centre, while the allies were toiling in a wide semicircle round their outer extremity. Marshal Soult, in the centre, first got into action; but long before he could pass the hollow ground which separated the two armies, the Russian left wing, under Buxhowden, had gained considerable successes. So violent was their onset, so great their supe-

* "Soldiers! The Russian army has presented itself before you to revenge the disaster of the Austrians at Ulm. They are the same men whom you conquered at Hollabrunn, and on whose flying traces you have followed. The positions which we occupy are formidable, and while they are marching to turn my right, they must present their flank to your blows. Soldiers! I will myself direct all your battalions. I will keep myself at a distance from the fire if, with your accustomed valour, you carry disorder and confusion into the enemy's ranks; but should victory appear for a moment uncertain, you shall see your emperor expose himself to the first strokes, for victory must not be doubtful on this occasion, especially when the reputation of the French infantry is at stake, which is so dear an interest to the honour of the whole nation." This is perhaps the first instance recorded in history where a general openly announced to his soldiers the manoeuvre by which he expected they would prove victorious, while the promise that he was not, except in the last extremity, to put himself at their head, affords the clearest indication of the mutual confidence which long service together had established between them.—See DUMAS, xiv., 148, 149.

† Dum., xiv., 146, 149. Sav., ii., 132, 133. Jom., ii., 176, 177.

* Dum., xiv., 160, 161. Jom., ii., 179, 180. Sav., ii., 133, 134. Bign., iv., 444.

riority of force at the first encounter, that the French were driven from the village of Tiltitz, and Buxhowden was advancing through the defile which leads from thence to Sokelnitz, beyond the extreme right of their position. Alarmed at the progress of the enemy on the right, Napoleon ordered Davoust, who, with his reserve, was concealed behind the Abbey of Raygern, to advance to check them; but before he could come up Sokelnitz also was carried, amid loud shouts, and the French right wing appeared completely turned. But it was in such moments that the cool judgment and invincible tenacity of Marshal Davoust appeared most conspicuous. Arranging his forces in battle array beyond the village of Sokelnitz, he received the Russians, when issuing from it disordered by success, with such resolution, that they were not only arrested in their advance, but driven out of that village with the loss of six pieces of cannon. Buxhowden, however, returned in greater force; the French were again expelled, blood flowed in torrents, and both parties maintained the conflict with invincible resolution.*

Affairs were in this state on the right, when Soult, with his powerful corps, was suddenly thrown on the Russian centre. The fourth Russian column, under Kollowrath, was just beginning to ascend the slopes of Pratzen, which had been entirely evacuated by the third corps, which preceded it, when its outposts perceived the immense, dark mass of French infantry emerging out of the mist in the low grounds on their right. Kutusoff instantly saw his danger; the enemy's centre, in order of battle, was ready to assail the combined army while in open columns of march. But if a fault in generalship had been committed, nothing that resolution could do to repair it was wanting. The Emperor Alexander was with the centre column, and his was not a character to sink tamely before misfortune. By his directions, Kutusoff gave immediate orders for the corps which had descended from the heights of Pratzen to reoccupy that important position. The infantry of Miloradowitch rapidly wheeled into order of battle from open column, was formed in two lines, and every disposition made in the utmost haste to receive the enemy. Before they could be completed, however, the first line of Soult had ascended the heights: its attack was so impetuous that the Russian front line was broken and driven back upon the second with the loss of several pieces of cannon; the heights of Pratzen, after a desperate conflict of two hours' duration, were carried, and six battalions, which occupied a hill forming the highest part of the ridge, cut to pieces. The danger was extreme; the allied army, surprised in their line of march, were pierced through the centre, and the left wing in advance entirely separated from the remainder of the army.†

While this important success was gained in the centre, the French left, under Bernadotte and Lannes, were also warmly engaged with the enemy. They, too, surprised the combined forces in their line of march; and Napoleon sent repeated orders to these generals to attack the enemy promptly and vigorously, in order to prevent them from sending forward any succours to the centre, where the decisive blow was to be struck. They advanced to the attack in the order prescribed for the whole army, with the front line in

order of battle, the second in columns, with the artillery between them, and Murat in reserve with the cavalry behind the second line: a disposition everywhere attended with the happiest effects. The Russian right wing, when moving along without any conception that the enemy was at hand, were thunderstruck at finding themselves suddenly assailed by French columns emerging in battle array out of the mist in the low grounds; and so complete was the surprise, that the reserve under the Grand-duke Constantine was one of the first to find itself engaged. Their dispositions, however, were speedily made: the artillery was rapidly brought forward to the front, and under cover of its fire the marching columns, with all imaginable haste, were wheeled into line. Gradually, however, the French infantry gained ground; and, taking advantage of their success, the cavalry under Kellerman were assailing even the imperial Russian guard, when Prince Lichtenstein, at the head of the splendid Austrian cuirassiers, charged them with such vigour that they were instantly broken, and the allied horse, following up their success, broke through the first French line, swept through the openings between the second, and interposed in the interval between the corps of Bernadotte and Lannes. Here, however, they were in their turn charged by Murat at the head of a large body of Napoleon's cavalry, and driven back through both French lines, who threw in a flanking fire on their disordered squadrons with such effect that nearly half their numbers were stretched on the plain.*

This murderous strife on the left was attended with no decisive success to either party, but it had long the desired effect of preventing any succours being sent from that quarter to the centre, now severely pressed by Soult. At length Kutusoff, seriously alarmed at the progress of that sturdy assailant, recalled a large part of Lichtenstein's cavalry to make head against the enemy on the heights of Pratzen: they joined the horse of Ouvaroff, and formed a mass of thirty squadrons, which it was hoped would suffice to keep up the communication between the centre and right wing of the allies. Meanwhile, the Grand-duke Constantine, perceiving the danger of Kollowrath's troops, and alarmed at the progress which Lannes and Bernadotte were making on his own side, brought forward the Russian imperial guard, and, descending from the heights, advanced midway into the low grounds to meet the enemy. They were received by the division of Vandamme; and while a furious combat was going on between these rival bodies of infantry, the French were suddenly assailed in flank by

* Dum., xiv., 176, 181. Jom., ii., 186. Bign., iv., 445, 446.

† The combat of Lannes and Bernadotte, on the left, was remarkable for the perfect success with which the troops arranged in the order prescribed by Napoleon, baffled all the efforts of the allies, whose numerous and magnificent cavalry had there a full opportunity of acting. The first line was uniformly drawn up in battle array, the second in squares of battalions, the artillery and light horse in front, with the heavy cavalry arrayed in several lines in the rear of the whole. Thus, if a charge of horse, which was frequently the case, broke the first array, it passed, while disordered by success, through the intervals between the squares in the rear, from whose front and flanks it sustained a heavy fire. If they escaped that, the horsemen were suddenly assailed, when blown and dispersed, by a solid mass of heavy cavalry in the rear, which never failed to bring them back in confusion through the squares, who by this time had reloaded their pieces, and whose flanking fire completed the destruction of their gallant assailants. The heavy brigade of horse at Waterloo suffered extremely from a similar disposition to baffle the most intrepid charges of the finest cavalry in the world.—See DUMAS, xiv., 183.

* Jom., ii., 183. Dum., xiv., 160, 165. Norv., ii., 410.

† Dum., xiv., 170, 172. Jom., ii., 185, 186. Bign., iv., 445.

the Russian cuirassiers of the guard, two thousand strong, in the finest order, led by Constantine in person. The shock was irresistible: in an instant the French column was broken, three battalions were trampled under foot, and the 4th regiment lost its eagle. Napoleon saw there was not a moment to be lost in repairing the disorder, and immediately ordered up Marshal Bessieres with the cavalry of the guard to arrest that terrible body of horse. Rapp put himself at the head of their advanced guard, and, preceded by four pieces of horse-artillery, set off at the gallop to restore the combat. "Soldiers!" said he, "you see what has happened below there: they are sabring our comrades; let us fly to their succour." Instantly spurring their chargers, they precipitated themselves upon the enemy. The Russians had scarcely time to re-form their squadrons after their glorious success when this fierce enemy was upon them: they were broken, driven back over the dead bodies of the square they had destroyed, and lost their artillery. Rallying, however, in a few minutes with admirable discipline, they returned to the charge: both imperial guards met in full career; the shock was terrible; and the most desperate cavalry action that had taken place during the war ensued, and lasted for above five minutes. The infantry on both sides advanced to support their comrades; the resolution and vigour of the combatants were equal; squadron to squadron, company to company, man to man, they fought with invincible firmness, and soon the ground was strewn with the dead and the dying. At length, however, the stern obstinacy of the Russians yielded to the enthusiastic valour of the French: the cavalry and infantry of their guard gave way, and, after losing their artillery and standards, were driven back in confusion almost to the walls of Austerlitz,* while from a neighbouring eminence the Emperors of Russia and Germany beheld the irretrievable rout of the flower of their army.†

This desperate encounter was decisive of the fate of the day. Pierced through the middle, with the bravest of their troops destroyed, the Russians no longer fought for victory, but for existence. In effect, the defeat of the centre, which was now borne back above a mile from the field of battle, exposed the left wing between Aujezd and Sokelnitz to the most imminent danger. Rapidly following up his success, Napoleon caused his reserves and Imperial Guard to wheel to the right to aid Soult in attacking the rear of that wing, while Davoust, near Sokelnitz, pressed its front. They first came up with a division of six thousand men, who were retracing their steps, too late to support the centre. Assailed at once in front and both flanks by immense masses of infantry and cavalry flushed with victory, this body was speedily defeated and half its number made prisoners. Rapidly advancing from left to right, the victorious French next came upon Langeron, who shared the same fate; and the survivors from his divisions, flying for refuge to Buxhowden, first communicated to that general the melancholy intelligence of the disasters which had befallen the central column of the army. He immediately formed his troops into close column, and began to debouche from

Aujezd with a view to regain, by a road between the margin of the lakes in his rear and the high grounds which adjoin them to the south, the remains of the army at Austerlitz. But, before they had proceeded half a mile, the marching column was furiously attacked in flank at different points by the victorious French, who succeeded in piercing it through the middle, and separating Buxhowden, with a few battalions in advance, from the remainder of the array. The unhappy body which was cut off, consisting of eight-and-twenty battalions, under Doctoroff and Langeron, was soon assailed in front, flank, and rear by the Imperial Guard, Soult, and Davoust. After a brave resistance, they were at length overwhelmed: seven thousand were taken or destroyed on the spot, and great numbers sought to save themselves by crossing, with their artillery and cavalry, a frozen lake or morass which adjoined their line of march. The ice was already beginning to yield under the enormous weight, when the shells from the French batteries bursting below the surface, caused it to crack with a loud explosion: a frightful yell arose from the perishing multitude, and above two thousand brave men were swallowed up in the waves.*

While these decisive successes were gained in the centre and right, the French left had also entirely prevailed over its opponents. Encouraged by the cries of victory which they heard to their right, and the sight of their battalions on the heights, which in the morning had been crowded with the enemy, the French troops in that quarter redoubled their efforts, and Lannes, Bernadotte, and Murat exerted all their energies to complete the discomfiture of their gallant opponents. For five hours the combat continued without any decisive advantage, the sharp rattle of the musketry interrupted at intervals by thundering charges of horse; but at noon the allies sensibly gave way. The heights of Blasowitz, the plateau of Kruh, the village of Hollubitz, were successively carried; and at length the Russians, entirely dislodged from the ridge of eminences they had occupied in the morning, were assembled in one close column by Bagrathion, and commenced their retreat in the direction of Austerlitz. Suchet and Murat, at the head of their respective divisions of infantry and cavalry, succeeded in breaking part of that mass and dislodging it from the road of Olmutz, where almost the whole of the baggage of the allies fell into the hands of the victors. By great exertions and heroic resolution, Bagrathion succeeded, before nightfall, in effecting his retreat with the remainder to Austerlitz, already filled with the wounded, the fugitives, and the stragglers from every part of the army.†

Thus terminated the battle of Austerlitz, the most glorious of all the victories of Napoleon, that in which his military genius shone forth with the brightest lustre; and the stroke which at once re-established his affairs and prostrated Europe was most clearly owing to the manifest superiority of his manœuvres. The loss of the allies was immense. Thirty thousand men were killed, wounded, or made prisoners;‡ a hundred and eighty pieces of cannon, four hundred caissons, and forty-five standards, remained the trophies of the victor's

Results of the battle.

* Rapp, 61, 62. Dum., xiv., 191, 195. Jom., ii., 187, 188. Sav., ii., 135, 136.

† It is the moment when Rapp returned, with his charger all bloody, to announce this decisive success, that Gerard has selected for the admirable and well-known picture of the battle of Austerlitz.—Rapp, 62.

* Dum., xiv., 195, 203. Jom., ii., 189, 190. Sav., ii., 137. † Jom., ii., 190, 191. Dum., xiv., 182, 189. Sav., ii., 136. Bign., iv., 449.

‡ The prisoners were 19,000 Russians and 600 Austrians; but a large proportion of them were wounded.

triumph, and the disorganization of the combined forces was complete. It is true these advantages had been dearly purchased: twelve thousand French had been killed or wounded in the struggle; but the allies were cut off from the road to Olmutz, and their line of retreat towards Hungary exposed them to be harassed by Davoust in flank, while Napoleon's victorious legions thundered in their rear. Such was the consternation produced by this disaster that, at a council held at midnight at the emperors' lodgings, it was resolved by a great majority that the farther prolongation of hostilities was hopeless; and at four in the morning Prince Lichtenstein was despatched to the headquarters of Napoleon to propose an armistice.*

There was no difficulty in coming to an understanding. Napoleon was too well aware of the magnitude of the danger from which he had escaped, and the serious nature of the perils with which he was still environed, to hesitate about accepting any offers which might detach the Emperor of Germany from the alliance. He had gained, it is true, one of the most brilliant victories on record in the annals of war; and the Russian army was threatened with a disastrous retreat, which would in all probability double its losses; but it was the very immensity of the success which he had achieved which was the source of his embarrassment. Was he prepared, in the depth of winter, to follow the Moscovite standards into the recesses of Poland or the Ukraine, and incur the hazard of rousing a national war by approaching the frontiers of old Russia? Supposing he were, what were the enemies which he would leave on his flanks and rear? The Archduke Charles, at the head of eighty thousand men, in the finest condition, was approaching Vienna, and had already summoned the French garrison in that capital to surrender, while his opponent, Massena, was still far on the other side of the Julian Alps. Hungary, with its ancient spirit, was rising *en masse* at his approach. The Archduke Ferdinand, at the head of the Bohemian levies, had just chased the Bavarians from Iglau. The Russian reserves were approaching Olmutz, while Prussia, with a hundred thousand men, was preparing from Saxony to pour into Franconia, and entirely cut off all communication with the Rhine. How was it possible, with such forces accumulating in his rear, to advance farther into the wilds of Sarmatia in pursuit of his Scythian foe? Yet how could he remain where he was, to permit them to encircle him with their arms? Or how retreat without commencing a series of disasters which would certainly dissipate the magical influence of his success, and might lead to the total overthrow of his power?†

Impressed with these ideas, it was with the most lively satisfaction that Napoleon heard of the arrival of the Austrian envoy at his headquarters, and foresaw the means of extricating himself from his present embarrassments, not only without farther danger, but the utmost possible éclat. As on the Carinthian Mountains in 1797, and at Marengo in 1801, he found an audacious and perilous advance followed by the highest triumph and success. Profoundly skilled in dissimula-

tion, however, he carefully concealed these sentiments in the recesses of his bosom, and to the Prince Lichtenstein spoke only of the magnitude of the sacrifices which he made in consenting to any accommodation, and the immense advantages which, by the continuance of hostilities, were within his grasp. The better to increase the terror of his arms, he refused to suspend the march of his victorious legions, and appointing the following day for the interview with the Emperor of Germany, gave orders, in the mean time, for following up the enemy with the utmost possible vigour.*

Meanwhile the allied army, extremely weakened and in deep dejection, continued its retreat, not without sustaining a considerable loss from the attacks made on its rear-guard. They crossed the Marche, and the Emperor of Russia established his headquarters at the Chateau of Hollitch; but the Emperor Francis remained nearer the French outposts at Czeitech, in order to be ready for the conference which Napoleon had fixed for the day following. The latter moved on to the advanced posts, and received the Emperor of Germany at a windmill on the roadside near Sarutichitz, still shown to travellers, where the fire of the bivouac protected them from the inclemency of the weather. "I receive you," said Napoleon, "in the only palace which I have inhabited for the last two months." "You have made such good use," replied Francis, "of that habitation, that it should be agreeable to you." The officers of their respective suites then retired, and the two emperors conversed for above two hours, in the course of which the terms of accommodation were verbally agreed on. Napoleon took advantage of that opportunity to display all his talent in the colouring which he gave to his own conduct, and the dark shades in which he represented that of the allies. Everything, as usual, was laid on England. It was the incessant ambition, corrupting gold, and Machiavelian policy of those islanders which had so long divided the Continent; the blood and misery of the European powers were the means by which they elevated themselves to greatness, and, amid universal suffering, engrossed the commerce of the world; the reproaches which they lavished on his ambition were in reality applicable to themselves; the cause of France was the cause of Austria, was the cause of Russia, was the cause of the civilized world; and the real enemy of them all was that perfidious power, which, having nothing in common with European nations but its situation, continually sowed the seeds of dissension on the Continent, and, secure from attack itself, found the principal source of its grandeur in the misfortunes of the states by which it was surrounded. The Emperor Francis was in no condition to enter the lists of controversy with the conqueror of Austerlitz; but he did not forget his own dignity in misfortune, and sullied his character by none of those sallies against his former allies, which Napoleon, with his usual disregard of truth, put into his mouth in the bulletins.†

The conference lasted two hours, after which the two emperors embraced and separated with all the marks of mutual esteem. The conditions had been

Armistice
with Russia.

† Jom., ii., 191. Dum., xiv., 208, 210. Hard., ix., 2, 4. Sav., ii., 138.

* Bign., iv., 462. Jom., ii., 191, 192. Dum., xiv., 209, 210.

† See this admitted in Dum., xiv., 214, 216. Bign., iv., 453.

verbally agreed on, and it was arranged that Presburg should be the seat of the negotiations, and that an armistice should immediately take place at all points. The Emperor of Russia was no party to the conference, but the Emperor of Austria engaged his word of honour for his ally that he would accept the conditions which were offered, namely, that hostilities should cease between the two armies, and that his troops should retire by slow marches, without farther molestation, to their own country.* Savary was sent next day to the Emperor Alexander to invite him to accede to these terms, which was immediately agreed to; and, without requiring any other guarantee than his word, Napoleon immediately stopped the advance of his columns.† In truth, after the secession of Austria, the war, at least in that quarter, had no longer an object, and the Emperor of Russia justly deemed himself fortunate in being able to extricate his army, without farther danger, from its perilous situation. Anxious to conciliate the good-will of so powerful an adversary, Napoleon returned several of the Russian officers who had been made prisoners, without exchange; and Alexander set out two days after, by post, for St. Petersburg.‡

On the 6th of December an armistice was formally concluded at Austerlitz, by which it was stipulated that, until the conclusion of a general peace, the French should continue to occupy all those portions of Upper and Lower Austria, Tyrol, Styria, Carinthia, Carniola, and Moravia, at present in their possession; that the Russians should evacuate Moravia and Hungary in fifteen days, and Galicia in a month; that all insurrectionary

* Though not a party to this conference, the Emperor Alexander derived great benefit from it in securing the retreat of the troops under his command. Their only means of retreat over the Moravo was by the bridge of Goding, which was defended by an Austrian division under General Meerfeld. Davoust had already commenced his march against that point, and had arrived within little more than a mile of it, at the entrance of a defile where the Austrians had placed their artillery, when Alexander suspended the operations by a note written with his own hand, in which he announced the conference which was going forward between the Emperors of France and Germany. Whether Davoust could have gained possession of the bridge at Goding is very doubtful, as, independent of the Austrians, six-and-twenty thousand Russians were at hand, who would have come up before evening, and fought with the courage of despair.—See SAVARY, ii., 144, 145.

† Savary reached the Emperor of Russia's headquarters at four in the morning of the 5th. He found that monarch already dressed, and he immediately received an audience. "I am very happy to see you again," said Alexander, "on an occasion so glorious for you; that day will take nothing from the reputation which your master has earned in so many battles. It was my first engagement, and I confess that the rapidity of his manoeuvres has never given me time to succour the menaced points: everywhere you were at least double the number of our forces." "Sire," replied Savary, "your majesty has been misinformed. Our force, upon the whole, was twenty-five thousand less than yours, and even of that the whole was not very warmly engaged, but we manoeuvred much, and the same division combated at many different points in different directions; it was that which apparently multiplied our numbers. Therein lies the art of war; the emperor, who has seen forty pitched battles, is never wanting in that particular. He is still ready to march against the Archduke Charles, if your majesty, by accepting the armistice, does not dispose of it otherwise." "What guarantee does your master require," replied Alexander, "and what security can I have that your troops will not prosecute their movements against me?" "He asks only your word of honour, and has instructed me, the moment it is given, to suspend the march of Marshal Davoust." "I give it with pleasure," rejoined the emperor; "and should it ever be your fortune to come to St. Petersburg, I hope I may be able to render my capital agreeable to you."—SAVARY, ii., 142, 143.

‡ Sav., ii., 140, 141. Dum., xiv., 210, 218. Bign., iv., 454.

movements in Hungary and Bohemia should be stopped, and no armed force of any other power be permitted to enter the Austrian territories. This latter clause was levelled at the Prussian armaments, and it afforded the cabinet of Berlin a decent pretext for withdrawing from a coalition into which they had entered on so untoward an occasion. Napoleon issued a proclamation to his troops, in which he spoke with just pride of their great achievements, and awarded a liberal recompense to the wounded and widows of those who had fallen in the battle.* At the same time he paraded the Russian prisoners, above sixteen thousand in number, in the most ostentatious manner through the streets of Vienna on their road to France,† and returned himself to Schoenbrunn to superintend the negotiations about to commence at the town of Presburg.‡

Faithful to the principles which he had sworn to adhere to at the tomb of the Great Frederic, Alexander no sooner found himself delivered from the toils of his redoubtable adversary, than he sent to Berlin the Grand-duke Constantine and Prince Dolgoroucki, offering to place all his forces at the disposition of the Prussian cabinet if they would vigorously prosecute the war; but the veteran diplomatist to whom the fortunes of Prussia were now committed had very different objects in view, and he was prepared, by an act of matchless perfidy, to put the finishing stroke to that system of tergiversation and deceit by which, for ten years, the conduct of the cabinet of Berlin had been disgraced. Haugwitz, as already mentioned, had come to Vienna to declare war against Napoleon, and the 15th of December was the day fixed for the commencement of hostilities; but the battle of Austerlitz totally deranged their plans, and the very day before he was admitted to a second audience of the French emperor, the armistice had completely detached Austria from the coalition. Nothing could be more natural than that so calamitous an event should make a total change in his views of the policy of the war, and the severest morality could not condemn a statesman who sought to withdraw his country from a contest which now appeared hopeless, and in which, from being an accessory, it was now likely to be called, without any adequate preparation, to sustain the principal part. But, not content with this, Haugwitz resolved to go a step farther. On the breaking up of the confederacy into which he had just entered, he determined to

Disimulation of Prussia, and accommodation with that power.

* In the bulletin he said, with his usual condensed energy, "Soldiers! I am content with you; you have decorated your eagles with immortal glory: peace cannot now be far removed. When everything necessary to secure the happiness and prosperity of our country is obtained, I will lead you back to France. My people will again behold you with joy; and it will be enough for one of you to say, 'I was at the battle of Austerlitz,' for all your fellow-citizens to exclaim, 'there is a brave man.'" Liberal gratifications at the same time were made to all the wounded; the generals received 3000 francs each, and the common soldiers a Napoleon each: the pensions to the widows of the generals were 6000 francs, or £240; of the colonels, 2400, or £96; of the common men, 200, or £8 sterling, yearly.—See SAVARY, ii., 148, and BIGNON, iv., 460.

† Bign., iv., 460. Dum., xiv., 214, 222. Sav., ii., 148.

‡ On his road there, Napoleon met a large convoy of wounded Austrians on their route for the hospitals of the capital; he immediately descended from his carriage, and uncovering as the wagons passed, while his suite did the same, he said, in a loud voice, "Honour to the brave in misfortune." So well did this great man know how to win the affections and command the admiration of the very soldiers who had lavished their best blood in combating his power.

secure a part of the spoils of his former allies; and if he could not chase the French standards beyond the Rhine, at least wrest from England Dec. 7. those Continental possessions which she now appeared in no condition to defend. With matchless effrontery, he changed the whole object of his mission; and when admitted into the presence of Napoleon after the victory, congratulated him upon his success, and proposed a treaty, the basis of which should be the old project of annexing Hanover to the Prussian dominions until the conclusion of a peace between France and England.*

Although Napoleon had not received full accounts of the treaty of the 3d of November, yet he was aware of its substance, and well acquainted with all the military movements which Prussia had been making in conjunction with the Russian reserve, thirty thousand strong, which had advanced from Warsaw to Breslaw. Upon receiving Haugwitz, therefore, he broke out into a vehement declamation against the perfidy of the Prussian cabinet, informed him that he was acquainted with all their machinations, and that it now lay with him alone, after concluding peace with Austria, to turn his whole forces against them; wrest from them Silesia, whose fortresses, unarmed and unprovoked, were in no condition to make any defence; excite an insurrection in Prussian Poland, and punish them in the most signal manner for their matchless perfidy. Reasons of state, however, he added, sometimes compelled sovereigns to bury in oblivion the best-founded causes of animosity: on this occasion he was willing to overlook their past misconduct, and ascribe it entirely to the efforts of England; but this could be only on one condition: that Prussia should at length abandon its doubtful policy, and enter heart and hand into the French alliance. On these terms he was still willing to incorporate Hanover with their dominions, in exchange for some of its detached southern possessions, which were to be ceded to France and Bavaria. Overjoyed at the prospect thus afforded of extricating his country, not only without loss, but with a great accession of territory, from its perilous situation, Haugwitz at once accepted the stipulations; and it was agreed that Prussia should enter into an alliance with France, and receive, besides the margravate of Bareuth, the whole electorate of Hanover in full sovereignty, as well as all the other Continental dominions of his Britannic majesty; and, on the other hand, cede to Bavaria the margravate of Anspach, and the principalities of Neuchâtel and Cleves to France, and accede to all the conditions of the general peace of Presburg. A formal treaty to this effect was signed Dec. 15. by Haugwitz on December 15, the very day when hostilities were to have commenced. Thus the Prussian minister extricated himself, not only without loss, but with apparent advantage, from his perilous situation. But the ultimate effects of this treacherous conduct were in the highest degree disastrous: it excited a just indignation in the government of Great Britain,†

Treaty of alliance with Prussia, who gains Hanover.

without really propitiating that of France;* and by inducing a false security in the cabinet of Berlin, rendered the fall of that power, when it was driven into hostilities in the following year, as irretrievable as, in the estimation of a large part of Europe, it was deserved.†

To complete the picture of the operations of this memorable year, and render intelligible some important clauses in the treaty of Presburg by which it was concluded, it is only necessary to give a summary of the operations in the south of Italy and the north of Germany, which were contemporaneous with these decisive strokes on the Danube and in the heart of Austria.

The court of Naples had entered somewhat late indeed, but cordially, into the alliance against France. Notwithstanding Affairs of Naples. the treaty of the 21st of September, al-

dice of England which affairs had taken at Vienna, that, four days after the treaty was signed, a long and official Dec. 19. note was despatched by Hardenberg to Lord Harrowby, English ambassador at Berlin, in which it was declared that Prussia would regard the entry of French troops into Berlin as a declaration of war, and various arrangements were proposed for the farther continuance of the Russian, Swedish, and English troops in the north of Germany. So overwhelmed was Hardenberg with confusion at discovering, six days afterward, by despatches from Haugwitz, what that minister had agreed to in regard to Hanover at Vienna, that he was led into an angry debate with the French ministers, which, in April following, on the requisition of Napoleon, led to his dismissal from office. Napoleon, with his habitual disregard of truth, some months afterward published in the *Moniteur* an article, in which he declared that Hardenberg, whom he cordially hated, had written this letter to Lord Harrowby without the authority of the cabinet, and that he had for "base bribes prostituted himself to the eternal enemies of the Continent."‡ This insinuation M. Bignon, albeit the chosen panegyrist of Napoleon, much to his credit, indignantly repelled: "A party man," says he, "and of an impassioned temperament, M. de Hardenberg was at the same time upright and honourable. That ever since the treaty of 3d November, Napoleon should regard him as the chief of the party hostile to France, and attack him as such, was all fair, but he had no right to accuse of venality a man far above such a reproach."—See BIGNON, v., 240, and HARDENBERG, ix., 30, 42.

Great was the general indignation at Berlin when the particulars of this extraordinary treaty were made known. The war party, in particular, with the queen and Prince Louis at its head, whose patriotic feelings had been roused to the highest pitch by the anticipated accession of Prussia to the European league, were unmeasured in their vituperation at this disgraceful spoliation of Great Britain, at that very moment a friendly and allied power. The question as to the ratification of the treaty was long and anxiously debated in the cabinet; national ambition and cupidity contending with the principles of public faith and a more enlarged view of ultimate expedience. At length Hardenberg and the opposition so far prevailed that the treaty was ratified only under the following reservations: That Napoleon was to obtain at a general peace a formal cession of Hanover to Prussia, and that till that was done the occupation was to be provisional only; a thin device, totally inadequate to blind the world to the real nature of the transaction.—See HARDENBERG, ix., 50, 59; BIGNON, v., 241, 242.

* "The conduct of Prussia," said Mr. Fox, then minister for foreign affairs, in his place in Parliament, "was a union of everything that was contemptible in servility with everything that was odious in rapacity. Other nations have been reduced by the fortune of war to cede many of their provinces, but none except Prussia has been reduced to the lowest stage of degradation, that of being compelled to become the ministers of the rapacity and injustice of a master."—23d April, 1806; *Parl. Deb.*, vi., 891.

† Hard, ix., 47, 49. Bign., v., 17, 19. Sav., ii., 149, 150. ‡ "You have come," said Napoleon to Haugwitz, on his first interview with him after the battle of Austerlitz, "to present your master's compliments on a victory, but fortune has changed the address of the letter." From that moment, in Napoleon's mind, the ruin of Prussia was resolved on; but he prudently determined, in the mean time, to dissemble his resentment, and in the first instance suggest to that power an acquisition of territory, which, by embroiling it irretrievably with England, would sow the seeds of ruin in what still remained of the coalition, and expose it, single and unaided, to the deadly strokes which he already meditated against its existence.—See BIGNON, v., 14.

* Bign., v., 14, 17. Hard., ix., 14, 28. Sav., ii., 148, 149.

† As this treaty is one of the most disgraceful passages in the history of Prussia, it is due to the many high-minded and honourable men which the cabinet of Berlin contained, and especially that able statesman and intrepid counsellor, Baron Hardenberg, to say that it was signed by Haugwitz, of his own authority, at Vienna, without the knowledge or concurrence of the government at home; and that, so far were they from contemplating the extraordinary turn to the preju-

ready mentioned, by which the neutrality of that power had been stipulated, a combined fleet, having on board ten thousand Russian and three thousand English troops, cast anchor in the Bay of Naples, and soon after landed without experiencing any opposition. It was anticipated by the allies, what in effect happened, that this armament would have the effect of embroiling the court with the French emperor. Ferdinand, indeed, upon the arrival of this force, published a manifesto, in which he declared his resolution to abide by the treaty of neutrality and inability to resist the allied forces, and he publicly engaged in no measure of hostility against France; but his army was put on the war establishment, and placed under the direction of a Russian general. The queen did everything in her power to engage the cabinet in the war, and the French ambassador, disbelieving, or affecting to disbelieve, the court's professions of neutrality, immediately left Naples in great indignation; and the government, seeing a war inevitable, was taking measures for organizing a force in the south of Italy, when the battle of Austerlitz came, like a flash of lightning, to deliver them up unprotected to the wrath of the victor.*

It is probable that the common cause did not suffer materially from the absence of the pusillanimous troops of Naples from the theatre of war; but the case was very different with the forces which had been assembled in the north of Germany. Anxious to strike an important blow in that quarter, but not deeming their strength sufficient to venture on the Continent till the intentions of Prussia were declared, the British government had fitted out a considerable expedition, composed of the king's German legion and a strong body of English troops, amounting altogether to 18,000 men, which arrived in October in Swedish Pomerania, under the command of General Don and Lord Cathcart. To these were soon after joined a Swedish corps of 12,000 men, and a Russian force, under Count Ostermann Tolstoy, of 10,000; and it was the intention of the allies that the united force, of which the King of Sweden was to receive the command, having liberated Hanover and raised the military force of that electorate, should advance towards Holland, and, after freeing the United States from their chains, threaten the north of France. Many causes conspired to produce the miscarriage of this well-conceived expedition. The vehemence of the King of Sweden could not brook the vacillating conduct of the cabinet of Berlin, and he threatened that power in so unbecoming a manner, that the allies, who at that moment were negotiating to effect the accession of Prussia to the confederacy, were obliged to interfere in order accommodate matters, upon which he resigned the command and retired to Stralsund. Three weeks were consumed in negotiations to repair the breach; and when at length he was prevailed on to resume the direction, the period of successful action had passed. It was already the middle of November, and all that this powerful force could effect was to commence the siege of Hameln, when the battle of Austerlitz changed the face of Europe. The immediate effect of that blow, followed as it soon after was by the accession of Prussia to the French league, was

to dissolve this ill-combined armament; the Russians retired to Mecklenberg, the English re-embarked their forces, and the Swedes took shelter under the cannon of Stralsund.*

The negotiations with Austria, dictated by the irresistible power of Napoleon, Peace of Presburg, 27th Dec., 1805. a close. By the peace of Presburg, 1805. she was in a manner isolated from France, and to appearance rendered incapable of interfering again in the contests of Western Europe. To Bavaria she was compelled to cede the Tyrol and the Inviertel; to the kingdom of Italy, the whole Continental dominions of Venice. The whole changes to the south of the Alps, which had been the original cause of the war, were recognised. The electors of Bavaria and Wirtemberg were elevated to the throne of their respective dominions, with large accessions of territory to each: to the former, besides the Tyrol and Vorarlberg, the principality of Echstadt, and various lesser lordships in Germany; to the latter, the five towns of the Danube, part of the Brisgau, and several other fiefs. Baden acquired the remainder of the Brisgau, with the Ortenau and town of Constance. In exchange for so many sacrifices, Austria merely received the small electorate of Salzburg and the possessions of the Teutonic order, which, from their dispersion in different states, were almost a nominal acquisition. But what was of still greater importance, the Emperor Francis was forced to engage "to throw no obstacles in the way, either as chief of the Empire, or as co-sovereign, of any acts which, in their character of sovereigns, the kings of Wirtemberg or Baden might think proper to adopt;" a clause which, by providing for the independent authority of their infant kingdoms, virtually dissolved the Germanic Empire. The counter stipulations were entirely illusory: Napoleon guaranteed, jointly with Austria, the independence of the Helvetic Confederacy, which he held in chains, and that of the Batavian Republic, which he already destined as a separate appanage for his brother Louis.†

Disastrous as these conditions were to the Austrian monarchy, the secret articles contained stipulations still more humiliating. By them it was provided that Austria was to pay a contribution of 40,000,000 francs, or £1,600,000, in addition to nearly an equal sum already levied by the French authorities in the conquered provinces, and the loss of all the military stores and magazines which had fallen into their hands, which were either sent off to France or sold for their behoof.‡ But her government judged wise-

* *Jom.*, ii., 196, 197. *Ann. Reg.*, 1805, 187, 188.

† *Martens*, iv. *Sup.*, vi., 212, 220. *Jom.*, ii., 195. *Dum.*, xiv., 236, and 339, 331.

‡ The losses of Austria by this treaty were:

	Population.	Square German Miles.	Revenue in Florins.
She received.....	2,975,620	1,417	17,075,000
	271,000	86	2,900,000
Clear loss.....	2,704,620	1,331	14,175,000
Bavaria gained.....	681,000	526	3,490,000
Wirtemberg gained....	132,400	53	691,000
Baden gained.....	143,620	54	508,000
Kingdom of Italy gained	1,856,000	711	10,000,000

Besides this, the sums drawn from Austrian contributions, and from the sale of the vast warlike magazines which fell into the hands of the French, amounted to 85,000,000 francs, or £3,500,000.—*HARDENBERG*, ix., 472, and *BIGNON*, v., 32.

After this accession of territory, the newly-elected states stood as follows:

* *Bot.*, iv., 198, 199. *Ann. Reg.*, 1805, 193. *Jom.*, ii., 198, 199. *Bign.*, v., 35, 37.

ly that all these losses, how serious soever, might one day be repaired, if the nucleus of the army were preserved entire; and therefore they redeemed, at a heavy ransom, in virtue of permission contained in the secret articles of the treaty, a large portion of stores and artillery which had become the booty of the victor, and in secret resolved to exert all their efforts to repair in silence the military strength of the monarchy. It is this system, firmly resolved on and steadily executed, which has enabled them to rise superior to all their reverses, which has brought them triumphant through a war of twenty years' duration, and obliterated the effect of a series of defeats which would have prostrated the strength of any other people: a memorable example of the vast effect of perseverance in human affairs, and the manner in which it can not only compensate, in nations equally as individuals, the want of more brilliant acquirements, but obtain the final mastery over the greatest efforts of transitory passion.*†

This treaty was immediately followed by a measure hitherto unprecedented in the history of the King of Europe.—the pronouncing of dethronement against an independent sovereign, for no other cause than his having contemplated hostilities against the French emperor. On the 26th of December a menacing proclamation proceeded from Presburg, in the 37th bulletin, which evidently bore marks of Napoleon's composition, against the

house of Naples. The conqueror announced that Marshal St. Cyr would advance by rapid strides to Naples, "to punish the treason of a criminal queen, and precipitate her from the throne. We have pardoned that infatuated king, who thrice has done everything to ruin himself. Shall we pardon him a fourth time? shall we a fourth time trust a court without faith, without honour, without reason? No! *The dynasty of Naples has ceased to reign; its existence is incompatible with the repose of Europe and the honour of my crown.*" St. Cyr immediately received orders to march, in order to carry this decree into execution. Such was the first of those sentences of dethronement which

Napoleon afterward pronounced against the European monarchs, which substituted his own family for the ancient possessors in so many of the adjoining thrones, and ultimately, by a just retribution, overturned his own.*

This extraordinary severity towards a monarch who was only mediating hostilities against the French emperor, and had certainly done less injury to his dominions than any European dynasty, was one of the most unjustifiable acts of that relentless conqueror, and, at the same time, descriptive of that mixture of caution and prudence by which his ambitious enterprises were always regulated. Let the case be put as the French themselves stated it. The ambassador and cabinet of Naples, with the dagger at their throat, and under the threat of immediate invasion, had agreed, on the 21st of September, to a treaty of neutrality, which was ratified by the court, under the like menaces, on the 8th of October. The arrival of the Russian and English squadron in the Bay of Naples six weeks afterward liberated them from their apprehensions, and the cabinet was preparing to violate the former treaty, and join in the coalition against France. Such a departure from national faith was dishonourable: it was a fair ground for hostility, and might have justified exactions of considerable magnitude: but was it a sufficient reason for dethronement? That is the point; and if it is, what European dynasty has not, fifty times over, justly provoked this severity? How often, on this principle, has Napoleon himself deserved that penalty for having violated solemn treaties, when it suited his own convenience, almost before the ink with which they were signed was dry? And what excuse is to be made for the Revolutionary government of France, which so often sent its armies into the adjoining states to proclaim war to the palace and peace to the cottage, and everywhere rouse, by its emissaries and proclamations, the Democratic authorities to break through all former national engagements, upon the principle that treaties made by despots can never bind the emancipated sons of freedom! But this has in every age been the system of the Revolutionary party. None so loud as they are in the condemnation of the principles, when acted on by others, on which their own entire previous conduct had been founded.

In fact, however, this unprecedented act of dethroning an independent sovereign, merely because he was making preparations for hostilities contrary to a subsisting treaty, was instigated by a different motive. Already Napoleon had formed the secret design of encircling France with a girdle, not of affiliated republics, but of subsidiary crowns, and of placing on all the neighbouring thrones the members of his own family. He began with Naples, because its inhabitants were the most unwelcome, and therefore the least likely to offer any resistance to the change; and because an unerring instinct led him to regard as enemies every member of the Bourbon family, wherever situated. Subsequent instances of the same rapacious policy will occur in the cases of Holland, Spain, and Prussia; and without a constant reference to this grand object, it is impossible to explain the extraordinary rigour which he uniformly manifested towards the inconsiderable states in his vicinity, and the comparative lenity evinced to the great military monarchies whose

	Population.	Army.	Square German Miles.	Revenue in Florins.
Bavaria.....	3,250,000	60,000	1,760	21,000,000
Wirttemberg..	1,154,000	20,000	346	8,000,000
Baden.....	569,000	10,000	260	6,000,000
But Austria retained	24,900,000	230,000	10,936	110,000,000

Bavaria by this means was rendered as powerful as Prussia was at the accession of the Great Frederic.—HARDENBERG, ix., 472, 474. App., and 23, 24, and *Stat. des Etats Autrichiens, par le Baron LICHTENSTEIN.*

* Hard., ix., 17, 19, 25. Dum., xiv., 426, 428.

† It is evident, from the statistical details given in the preceding note, that Napoleon had no intention, by the peace of Presburg, of totally overthrowing the Austrian monarchy. He wished only to throw its strength to the eastward, and prevent it from coming in contact with, or feeling jealousy at, his acquisitions in Italy or Germany. He proposed to interpose a barrier of subordinate kingdoms, dependant on France, between his empire and the hereditary states—the kingdom of Italy to the south of the Alps, those of Bavaria and Wirttemberg to the north of those mountains. Talleyrand, improving upon this idea, went so far as to propose the cession to Austria of the provinces of Wallachia and Moldavia, as the means of giving them the command of the Danube, inducing them to extend themselves to the eastward, and throwing a perpetual bone of contention between the cabinets of Vienna and St. Petersburg; but Napoleon deemed this too hazardous for immediate execution, as precluding all hope of accommodation with Russia, with whom he was extremely desirous of concluding a treaty, with a view to turning his undivided force against England.—See BIGNON, v., 87.

* Bign., v., 34. Hard., ix., 20

hostilities had always been as implacable as they were formidable.

The remaining career of Napoleon during this memorable year was a continued triumphal procession. On the 29th of December he announced the conclusion of peace to his soldiers,* and at the same time complimented the burgher guard of Vienna on their exemplary conduct during the occupation of their capital by his troops, and, as a mark of his esteem, restored to them the city arsenal, containing, besides its arms, a number of standards taken in the wars with the Turks. He could well afford to be generous: the public arsenal had yielded to him two thousand pieces of cannon, which were already far advanced on their road to France. At Munich he arrived on the 31st of

December, and on the day following appeared the proclamation in which he announced to the enraptured inhabitants the elevation of the elector to the royal dignity. There also he was met by the Empress Josephine: a succession of fêtes of unprecedented splendour succeeded, in the course of which Eugene Beauharnois, as the deserved reward of valour, probity, and glory, received the hand of the Princess Augusta, daughter of the King of Bavaria. At the same time, the grandson of the Elector of Baden was married to Stephanie Beauharnois, adopted daughter of the French emperor. On this occasion Napoleon, in default of his own lawful issue, called Eugene Beauharnois to the succession of the throne of Italy. The formation of a common system of conglomeration was at the same time announced to the Senate in these terms: "We reserve to ourselves the power to make known by ulterior dispositions the bonds which we propose to establish, *after our own demise*, between all the states in alliance with the French Empire, which, as depending on a common interest, absolutely require a common tie." Finally, a hundred days after the army had crossed the Rhine at Strasbourg, the emperor recrossed the same river at the same place, and proceeded by rapid journeys, under triumphal arches, amid applauding multitudes, to Paris, where he arrived on the 25th of January. A hundred days! unparalleled in the past history of Europe for the magnitude and splendour of the events which they embraced; during which had occurred the capitulation of Ulm, the triumphs of Austerlitz, the shock of Trafalgar;† but destined to be eclipsed by another hundred days, in future time, fraught with still more momentous occurrences, the recollection of which shall endure till time itself shall be no more.‡

* "Peace has just been signed with the Emperor of Austria. You have, in the last autumn, made two campaigns; you have seen your emperor share your dangers and your fatigues; I wish, also, that you should see him surrounded with the grandeur and splendour which belong to the sovereign of the first people in the universe. You shall all be there; we shall celebrate the memory of those who have died in these two campaigns in the field of honour; the world shall ever see us ready to follow their example, or to do even more than we have hitherto accomplished, if necessary, to vindicate our national honour, or resist the efforts of those who give way to the seductions of the eternal enemies on the Continent." Almost before the cannon of Austerlitz had ceased to sound, Napoleon was contemplating a Prussian war.—BIGNON, v., 41.

† Bignon, v., 39, 53. Dum., xiv., 237, 239.

‡ The public authorities had prepared a magnificent reception for Napoleon; but he disappointed them by entering Paris in the night, unattended by any escort. He had previously sent the forty-five standards taken at Austerlitz to the Senate, who deposited them with extraordinary pomp in the halls of the Luxembourg.—JOMINI, ii., 209.

The campaign of Austerlitz is the most remarkable, in a military point of view, which the history of the war afforded. In no other year were events of such magnitude crowded together, nor had achievements so vast rewarded the combinations of genius. When we recollect that in the beginning of August the French army was still cantoned on the heights of Boulogne, and that by the first week of December Vienna was taken, and the strength of Austria and Russia finally prostrated in the heart of Moravia, we are lost in astonishment at the magnitude of the successes gained, and the celerity with which ruin was brought on the coalesced powers. The march across France and Germany, the enveloping of Mack, the advance to Vienna, the thunderbolt of Austerlitz, were all concluded in four months! In the first division of the war, Austria struggled for six years in doubtful hostility against the Republic; in the second, she brought it to the brink of ruin, and yielded only, after a desperate strife of four years, to the ardent genius of Napoleon and the scientific combinations of Moreau; but in the third, she was utterly prostrated, though supported by all the might of Russia, under Alexander in person, in two months after her troops first came into collision with France! The extent of these triumphs, great as it is, is less surprising than its celerity; and we are naturally led to ask where, in these disastrous days, were the heroes who so long arrested the arms of Napoleon under the walls of Mantua, and drove the troops of the Directory, at the point of the bayonet, from the banks of the Adige to the shores of the Var? Blunders undoubtedly were committed, misfortunes occurred, but they were not peculiar to this season or this campaign; and in the long catalogue of imperial fatuity parallels are not wanting to the advance to Ulm or the flank march of Austerlitz. What was it, then, which made these false steps for the first time in European history irretrievable, and rendered errors in tactics the cause, not of the loss of towns or the retreat of armies, but the overthrow of empires and the dissolution of confederacies?

This astonishing result was doubtless, in some degree, owing to the French emperor having now for the first time chosen as the theatre of war the valley of the Danube, the natural avenue to the hereditary states, the line where neither fortresses nor mountains impeded his march, but a great navigable river constantly furnished the means of transport and supplies to the army. In former wars, the contest lay in corners of the Empire; in the plains of Flanders, among the fortresses of Italy, or the ridges of the Alps; and a disaster, however great, led only to the loss of the immediate theatre of combat: but in the present all these minor objects were relinquished, and the main strength of the invader was concentrated in the direct road from Paris to Vienna. By a singular infatuation, with which the Archduke Charles is no ways chargeable, as he had clearly pointed out the danger, the Aulic Council had left this wide avenue totally defenceless; and while they sent the bulk of their forces, under their best commanders, to the Italian plains, on which side the Empire was already protected by the fortified line of the Adige and the ridges of the Alps, they intrusted the defence of the shores of the Danube, though threatened by Napoleon in person, to an

inferior army, under the guidance of an inexperienced commander. The ruinous effects of this error were perceived, not only in the magnitude of the disasters which were incurred, but the irretrievable consequences with which they were attended. Like a skilful player at chess, Napoleon struck at the heart of his adversaries' power while they were accumulating forces round his extremities; and when he held Vienna in his grasp, and struck them to the earth at Austerlitz, the army of the Archduke Charles, equal in numbers to his own, was uselessly employed in traversing the defiles of the Rætian Alps.

This extraordinary success, however, was not gained without proportionate risk; and it was evident, even to the most superficial observer, that the imprudence of the allies in giving battle at Austerlitz had extricated him from the most perilous situation in which he had stood since the commencement of his career. At Marengo Italy only was at stake, and his retreat, in case of disaster, was open by the St. Gothard and the St. Bernard: at Campo Formio the principal army of France was still unengaged, and Moreau, with a vast force, was preparing to advance to his support through Southern Germany; but before the battle of Austerlitz his last reserves had arrived: the Archduke Charles, with eighty thousand men, was menacing one flank, while Prussia, with an equal force, was preparing to descend upon another, and the Emperor of Russia was in his front with a host hourly increasing and nearly equal to his own. Delay in such circumstances was ruin; advance with such force in his rear was impossible; retreat was the first step to perdition. Vast as the forces of France were at the commencement of the campaign, they were fairly overmatched by the banded strength of Europe: great as the talents of Napoleon were, his daring stroke at the vitals of his enemies had brought him into a situation from whence extrication, save by their imprudence, was impossible. They had nothing to do but retreat towards Poland or Hungary, and the invader must, to all human appearance, have been enveloped and destroyed. To hazard a battle when such chances were accumulating against him, after the experience they had had of the prowess of his troops, appears such an act of imprudence, that one is almost tempted to believe that Providence, as part of its great design for the government of human affairs, had struck the allied chiefs with judicial blindness, in order that the mighty drama might end in a deeper tragedy—a still more righteous moral retribution.

But, though this rapid advance to the heart of the Empire was one of the immediate causes of the extraordinary conquests of the French emperor, yet it was by no means the principal; and though, perhaps, his triumphs might not have been so rapid, the result would probably have been the same under a more cautious system, although he had chosen any other theatre for the contest. It was the astonishing increase in the military power of France during the five years which had elapsed since the termination of hostilities which was the principal cause of the rapid overthrow of the Austrian power. Napoleon poured down the valley of the Danube with a hundred and eighty thousand men, while Massena held the Archduke Charles in check in Italy

with twice the numbers which fought the battle of Marengo. Forces so vast never had before been brought into action at any period of the war: nor was this display merely an ephemeral effort; it was from an armed body of six hundred thousand men* that France maintained the contest, and she was capable of keeping them on foot for an indefinite period. It was at once evident, upon the commencement of hostilities, that her military power had increased more during five years of peace than nine years of previous warfare; and that Austria, nearly a match single-handed for her ancient rival when she laid down her arms, was totally unequal to the contest when she resumed them.

This great change is one of the most remarkable transitions of the war, and more descriptive than any other which occurred of that profound and unceasing system of military aggrandizement which formed the leading feature in the foreign policy of Napoleon. When he sheathed his victorious sword at the peace of Luneville, moderation and equity breathed in all his proclamations, and he professed the most anxious desire to cultivate only the arts of peace. But in the midst of these professions, and while the Continent was in a state of profound tranquillity, he was silently but incessantly augmenting his warlike resources, increasing his levies, disciplining his forces, new-modelling his army, incorporating all lesser states with his dominions; and the fruit of these perpetual pacific advances appeared in the most decisive manner on the resumption of hostilities, when he was enabled at once to beat down powers which had previously waged a long and doubtful war with the Republic. It was on this principle that his conduct was invariably founded: every interval of warfare was employed only in the preparation of additional military forces or the annexation of some minor state to his dominions; and he never appeared so terrible as when he first came to a rupture with the powers with whom he had contracted the closest alliances and been longest on terms of the most apparent cordiality. Five years of Continental peace followed the treaty of Luneville; but a hundred and eighty thousand men sprung up, as if by enchantment, to follow the standards of Napoleon on its termination: ten years of neutrality or alliance with the cabinet of Berlin ensued after the treaty of Bâle; but at one stroke he felled the Prussian monarchy to the earth, when she at last took up arms: for twelve years Spain laid her treasures and resources at his feet; but he rewarded that fidelity by the dethronement of her sovereign and the seizure of her dominions: he professed eternal friendship to Alexander at Tilsit; but during the five years of alliance which followed he was preparing the five hundred thousand warriors whom he afterward led to the Kremlin. It is the perception of this undeviating policy, and of the enormous additions which every interval of peace made to his warlike strength, which forms

Similar growth during peace characterized all the reign of Napoleon.

the true and unanswerable vindication of the conduct of the British cabinet throughout the struggle. That he had from the very first signalized England for destruction, he has told us himself, and proved by every part of his conduct. To what advantage he could turn the shortest breathing-time in warfare, even on that element where his power was weakest, is demonstrated by the vast increase in the French marine on the breaking out of hostilities: an increase which, compared with its situation at the peace of Amiens, is a more signal instance of warlike resurrection than even the victories of Ulm and Austerlitz. Had any one predicted, in 1800, that, before five years had elapsed, Napoleon was to have the means of assembling seventy sail of the line in the Channel, and actually to combat Nelson with a force superior to the greatest fleet England could fit out, he would have been deemed much less worthy of credit than if he had foretold that at the same period Austria was to be prostrated in a single campaign. Peace was impossible with an enemy actuated by such a principle, and capable of turning to such account every interval of war; and the result has abundantly proved the justice of these views, for while the military strength of France arose more terrible after every pacification on the Continent of Europe, her naval power, thus wonderfully recruited during the peace of Amiens, never recovered the unbroken warfare which followed the disaster of Trafalgar.

Doubtless the abilities displayed by Napoleon during this campaign were of the very highest order. The secrecy and rapidity of the march of so vast a body of troops across France; the semicircular sweep by which they interposed between Mack and the hereditary states, and compelled the surrender of that unhappy chief with half his army; the precision with which nearly two hundred thousand men, converging from the shores of the Channel, the coasts of Brest, the marshes of Holland, and the banks of the Elbe, were made to arrive each at the hour appointed around the ramparts of Ulm; the swift advance on Vienna; the subsequent fanlike dispersion of the army to overawe the hereditary states; their sudden concentration for the decisive fight at Austerlitz; the skill displayed in that contest itself, and the admirable account to which he turned the fatal cross-march of the allied sovereigns, are so many proofs of military ability never exceeded even in the annals of his previous triumphs. At the same time, it is not to be imagined that the difference in the magnitude of the results which were obtained is to be considered as the measure of the talent displayed in this as compared with other campaigns. It was the immensity of the force now at the disposal of the French emperor, and the incomparable discipline and organization which it had obtained while encamped on the shores of the Channel, which were the principal cause of the difference. It is no longer a general supplying by consummate talents, as at Arcola and Rivoli, for deficiency of numbers, that we see maintaining a long, doubtful, and desperate strife; we behold a mighty conqueror, whose power was irresistible, sweeping over the earth with the fierce tempest of Scythian war. In the results of this campaign were evinced more than the military talents of the general: the previous preparations of the emperor, the deeply-matured combinations of the statesman, produced their

natural results: he did not now take the field with a force which left anything to chance; he appeared with such a host as almost made him the master of fate; and the fruit of five years' pacific preparation appeared in the reduction of the contest to a desperate strife of a few months' duration.

Great, however, as were the abilities, unbounded the resources of the French emperor in this memorable campaign, ^{Errors of the allies.} it was not to them alone that he was indebted for its unparalleled triumphs. The errors of the Austrians, the infatuation of the allied cabinets, had their full share in the general result. Untaught by the disasters of Marengo and Hohenlinden, the Aulic Council rushed inconsiderately into the field, and, leaving the Archduke Charles with eighty thousand in Italy, they exposed Mack, with an inferior force, to the shock of Napoleon in the valley of the Danube. When that ill-fated commander found himself cut off from his line of communication with Vienna by the interposition of Bernadotte in his rear, instead of instantly taking a decisive part, and falling with his whole forces upon the enemy behind him, or retiring by the only road which was yet open to the mountains of the Tyrol, he remained for ten days paralyzed at Ulm, sending out detachments, first in one direction, then in another, all of which met with superior forces and were defeated, thereby both breaking down the spirit of his own troops and giving the invader time to envelop with his immense masses their fortified position. In vain had the foresight of the Archduke Charles, at the close of the preceding war, surrounded the heights of Ulm with a vast intrenched camp, capable of bidding defiance to and stopping the advance of the greatest invading force: the improvidence of the Aulic Council, by providing no magazines within its walls, had rendered these preparations of no avail; and Mack found himself, after a week's blockade, reduced to the necessity of feeding on horseflesh, and ultimately capitulating, with thirty thousand of the best troops of the monarchy. When the rapid advance of Napoleon towards Vienna threatened to separate the Russian forces from the retreating columns of the Archduke Charles, and everything depended on the destruction of the bridge of the capital, the credulous simplicity of the officer in command at that important station delivered it unscathed into his hands, and gave him the means of interposing safely between their converging armies, and striking tremendous blows from his central position, first on the one bank and then on the other. When the allies were reduced to their last throw on the plains of Moravia; when everything counselled a cautious policy, and forces capable of annihilating the invaders were accumulating on all sides; when the Archduke Charles, with eighty thousand undiscouraged veterans, was within sight of the steeples of Vienna, and Prussia, with a hundred thousand men, was preparing to descend upon the Danube; when, by simply retreating and drawing the enemy on, with such formidable armies in his rear, the allies must inevitably have led him to destruction or driven him to a disastrous retreat, their ill-judged confidence compelled them prematurely into action, and their rash flank march, in presence of such a general and such an army, enabled him to gain a decisive victory when on the verge of destruction.*

* In a memoir presented to the British government by the

But most of all is Prussia answerable for the ruinous effects of this campaign. She was clearly warned of her danger: the indecision of Prussia. Mr. Pitt had prefigured it to her in colours brighter than the light. The violation of the territory of Anspach had demonstrated in what manner she was regarded by the conqueror—that he contemned her menaces, despised her power, and reserved for her only the melancholy privilege of being last devoured. Then was the time to have taken a decisive part; then was the moment to have made amends for the vacillations of ten years, and, by a cordial union with Austria and Russia, put a final stop to the progress of the enemy. No one can doubt that, if she had done so, such would have been the result. A simple declaration of war would have arrested the decisive march of Bernadotte into the rear of Mack; allowed time for his army to have retired to the Inn; permitted the Russians to join the unbroken strength of the Austrian monarchy; and compelled Napoleon, instead of a menacing offensive with superior, to have commenced a cautious defensive with inferior forces. When the boundless calamities which such a determination would, to all human appearance, have prevented to Europe are con-

cabinet of Vienna, after the peace of Presburg, the disasters of the campaign were ascribed, 1. To the failure, on the part of the allied powers, to realize in the north of Germany those promised diversions which might have prevented him from accumulating his whole force in that country, and especially that in the electorate of Hanover on the Austrian forces on the Danube. 2. To the unexpected violation of the territory of Anspach, which compelled the Austrian army either to fall back on the Inn, or see itself cut off from its base of operations. 3. To the fault of General Mack, who, instead of adopting the former alternative, and retiring to form a junction with Kutsoff in the hereditary states, remained immovable on the Iller till he was surrounded by superior forces. 4. To the delay experienced in the march of the second Russian army, in consequence of the armaments of Prussia, which, until its intentions were fixed by the Emperor Alexander in person, detained it above a month in observation on the Polish frontier. 5. To the negligence of Prince Auersberg in not destroying the bridge over the Danube at Vienna, which at once gave them the command of both banks, and exposed Kutsoff to imminent danger of being cut off and destroyed before he could effect a junction with the reserves under Buxhowden.—See HARD., viii., 512.

There can be no doubt that these causes all conspired to bring about the enormous calamities of the campaign. But without disputing their influence, and fully admitting the ruinous effects of the indecision of Mack, and the want of foresight of the Aulic Council in not having provided adequate magazines either at Ulm or in Moravia, it must yet, in common fairness, be admitted that Prussia and England had an equal share in bringing about the common calamities. The vacillations of the former power from the first paralyzed both Russia and England: the former by detaining those forces long in Poland, which, earlier advanced, might have changed the fate of the campaign; the latter by preventing, from the dread of irritating so weighty a power, those important operations in the north of Germany, which would so materially have relieved the overwhelming pressure of Napoleon on the Danube. Hanover was the ill gotten spoil which at that critical moment tied up the hands of Prussia, and brought on her the catastrophe of Jena and Tilsit. England must take her share also of the common responsibility, not only in having, in conjunction with Russia, suggested the unhappy appointment of Mack to the command,* but also, by abstaining from all Continental hostilities till the campaign was decided, permitted that accumulation of force by which he was overwhelmed. Great Britain, secure in her seagirt citadel, had then 500,000 men in arms. Had she despatched eighty thousand of this vast force early in the campaign to a decisive point, had her troops marched up from the heights of Boulogne for the Rhine, and boldly attacked the enemy in Flanders, the march of troops which cut off the retreat of Mack would have been prevented; and Prussia would probably have been determined, by such a demonstration, to have thrown her weight into the scale in time to prevent the subjugation of Europe.

* Hard., viii., 512.

sidered, it is impossible not to be filled with the most poignant regret at the temporizing policy which occasioned their continuance, or to avoid the feeling, that as to Prussia, more than any other power, these misfortunes had been owing, so it was a most righteous dispensation which made them fall more heavily on her than on any of the states which had bravely struggled to avert them.

In fact, the forces which Mr. Pitt had now arrayed for this last and decisive struggle against France were of the most formidable description; and the success with which he had triumphed over all the jealousies of the European powers is the brightest page in his diplomatic career. After repeated failures, the great work was at length accomplished: the Continental sovereigns were united in a cordial league to stop the progress of the conqueror, and armies fully adequate to the task were assembled at their command. Disaster had at last taught them wisdom; the presence of a common danger had, at that moment at least, extinguished their jealousies. For the first time since the commencement of the war, Austria and Prussia stood forth, backed by Russia, for the fight, and five hundred thousand veterans, led by their sovereigns in person, were prepared to roll back to the Rhine the tide of Gallic invasion. The principles of the coalition were as just as its forces were immense; and the powers who had suffered so much from French ambition were bound by a secret compact neither to attempt any conquest on its original territory, nor interfere in the internal frame of its government.* Restitution of what it had reft from others, security against its aggression in future, alone were to be insisted on. To say that this great and equitable confederacy was unsuccessful—that its fortunes were shaken at Ulm, thrown down at Austerlitz—is no impeachment whatever, either of the justness of its principles or the wisdom of its general combinations. Mr. Pitt necessarily intrusted the execution of its details to the allied sovereigns or their generals, and it was by them that the fatal errors were committed. No foresight on his part could have prevented the inconsiderate advance to Ulm, or the ruinous cross-march at Austerlitz—no efforts that he could make, and he spared none, were able to bring Prussia at the critical moment into the field. The vulgar, in all ages, are governed merely by the result, and award praise or censure according as victory is won or lost; but it is the noblest province and first duty of history to separate the accidental from the intrinsic in estimating the merits of human conduct. Judging by this standard, it will give the highest praise in diplomatic ability to Mr. Pitt for the formation of this confederacy, and the extinction of the jealousies on all sides which had so long hindered its construction; and disregard, in the estimate of that merit, its calamitous result, as much as, in weighing the military greatness of Napoleon, it will overlook the disastrous issue of his later campaigns, and award to him a higher place for his last conflict with superior forces in the plains of Champagne, than when triumphing on the heights of Austerlitz, or striking down the Prussian monarchy on the field of Jena.

The dissolution of this great confederacy,

* See note, 11th of January, 1805, Mr. Pitt to Russian ambassador.—*Ante*, ii., 309.

Ability displayed by Mr. Pitt in the formation of this confederacy.

His last illness and death. which he had so long laboured to construct, and from which he confidently expected such important results, was fatal, however, to the master-spirit which had formed it. The constitution of Mr. Pitt, long weakened by the fatigues and the excitement incident to his situation, sunk at length under the dissolution of the confederacy. In vain he tried the waters of Bath—in vain he retired for a while from the fatigues of office: his constitution was worn out by the labours, the anxiety, and the excitement which have proved fatal to so many Parliamentary leaders, and, while yet hardly advanced beyond middle life, he already felt the weakness of age. Upon a frame thus enfeebled, the disappointment and anguish arising from the prostration of the last hopes of European freedom by the defeat of Austerlitz, fell with accumulating force. From the time the disastrous news were received he hourly declined, and political distress accelerated an event already approaching from natural causes. A devouring fever seized his blood—delirium quenched the fire of his genius. In the intervals of rest his thoughts, however, still were riveted to the fortunes of his country. After a melancholy survey of the map of Europe, he turned away, saying, "Henceforth we may close that map for half a century;" so little could the greatest intellect anticipate that general resurrection of the principles of freedom which even then was beginning, and which his own efforts had so largely contributed to produce. At the close of a lingering illness, which he bore with the wonted fortitude of his character, he expired at his house in London, on the 23d of January, 1806, exclaiming, with his last breath, "Alas! my country!" not less the victim of devotion to patriotic duty than if he had been pierced through the heart on the field of battle.*

Thus perished, at the age of forty-seven, while still at the zenith of his intellectual powers, William Pitt. Considered with reference to the general principles by which his conduct was regulated, and the constancy with which he maintained them through adverse fortune, the history of Europe has not so great a statesman to exhibit. Called into action at the most critical and eventful period in the annals, not merely of his country, but of modern times, he firmly and nobly fulfilled his destiny: placed in the vanguard of the conflict between ancient freedom and modern Democracy, he maintained his ground from first to last, under circumstances the most adverse, with unconquerable resolution. If the coalitions which he formed were repeatedly dissolved; if the projects which he cherished were frequently unfortunate, the genius which had planned, the firmness which had executed them, were never subdued; and from every disaster he rose only greater and more powerful, till exhausted nature sunk under the struggle. If the calamities which befell Europe during his administration were great, the advantages which accrued to his own country were unbounded; and before he was called from the helm he had seen not merely its independence secured by the battle of Trafalgar, but its power and influence raised to the very highest pitch by an unprecedented series of maritime successes. Victories unexampled in the annals of naval glory attended every period of his career: in the midst of a desperate strife in Europe he extended

the colonial empire of England into every quarter of the globe; and when the Continental nations thought all the energies of his country were concentrated on the struggle with Napoleon, he found means to stretch his mighty arms into another hemisphere, strike down the throne of Tip-poo Saib in the heart of Hindostan, and extend the British dominion over the wide extent of the Indian Peninsula. Under his administration the revenue, trade, and manufactures of England were doubled, its colonies and political strength quadrupled; and he raised an island in the Atlantic, once only a remote province of the Roman Empire, to such a pitch of grandeur as to be enabled to bid defiance to the world in arms.

But these external successes, great as they were, were but a part of the lasting Principles of benefits of Mr. Pitt's government. his domestic administration. It was the interior which was the scene of his real greatness; there the durable monuments of his intellect are to be seen. Inheriting from his father, the great Lord Chatham, a sincere love of freedom; early imbued with liberal principles, the strenuous supporter of the relaxation of the fetters of trade, financial improvement, Catholic emancipation, and such a practical and equitable system of parliamentary reform as promised to correct the inequalities complained of, without injustice to individuals or danger to the state, he was, at the same time, as fully alive to the extreme risk of legislating precipitately on such vital subjects, or permitting Democratic ambition, under the name of a desire of improvement, to agitate the public mind at a hazardous time by attempts to remodel the institutions of society. No sooner, therefore, did the French Revolution break out, and it had become evident that a social convulsion was designed, than he threw his weight into the opposite scale; and though the advocate for a strict neutrality, till the murder of the king had thrown down the gauntlet to every established government, when once fairly drawn into the contest he espoused it with the whole ardour and perseverance of his character, and became the soul of all the confederacies which, during the remainder of his life, were framed to oppose a barrier to the diffusion of its principles and the ravages of its armies. The steady friend of freedom, he was on that very account the resolute opponent of Democracy: the deadly, because the unsuspected, enemy by whose triumphs in every age its principles have been subverted and its blessings destroyed. When the greatest intellects in Europe were reeling under the shock; when the ardent and philanthropic were everywhere rejoicing in the prospects of boundless felicity which the regeneration of society was supposed to be opening; when Mr. Fox was pronouncing the Revolutionary Constitution of France "the most stupendous monument of political wisdom and integrity ever yet raised on the basis of public-virtue in any age or country," his superior sagacity, like that of Burke, beheld amid the deceitful blaze the small black cloud which was to cover the universe with darkness. Watching with incessant vigilance the changeful forms of the Jacobin spirit, ever unravelling its sophistry, detecting its perfidy, unveiling its oppression, he thenceforth directed the gigantic energies of his mind towards the construction of a barrier which might restrain its excesses; and if he could not prevent it from bathing France in blood and ravaging Europe with war, he at least effectually opposed its entrance into the British dominions.

* Gifford's Pitt, iii., 347, 360. Ann. Reg., 1806, 13, 14.

With admirable foresight, he there established a system of finances adequate to the emergency, and which proved the mainspring of the continued, and at length successful, resistance which was opposed to revolutionary ambition;* with indomitable perseverance, he rose superior to every disaster, and incessantly laboured to frame, out of the discordant and selfish cabinets of Europe, a cordial league for their common defence. Alone of all the statesmen of his age, he from the outset appreciated the full extent of the danger, both to the independence of nations and the liberty of mankind, which was threatened by the spread of Democratic principles, and continually inculcated the necessity of relinquishing every minor object to unite in guarding against the advances of this new and tremendous enemy. And the event has abundantly proved the justice of these principles, for while liberty perished in a few months in France, amid the fervour of Revolutionary ambition, it steadily grew and flourished in the British Empire; and the forty years which immediately followed the commencement of his resistance to Democratic ambition were not only the most glorious, but the freest of its existence.

Châteaubriand has said, "that while all other contemporary reputations, even that of Napoleon, are on the decline, the fame of Mr. Pitt alone is continually increasing, and seems to derive fresh lustre from every vicissitude of fortune." It is not merely the greatness and the constancy of the British statesman which has drawn forth this magnificent eulogium; it is the demonstration which subsequent events have afforded of the justice of his principles which is the real cause of the steady growth and enduring stability of his fame. Without the despotism of Napoleon, the freedom of the Restoration, the revolt of the barricades, and the military government of Louis Philippe, his reputation would have been incomplete in foreign transactions; without the passing of the Reform Bill, and the subsequent ascendant of Democratic ambition in Great Britain, his worth would never have been appreciated in domestic government. Every hour, abroad and at home, is now illustrating the truth of his principles. He was formerly admired by a party in England as the champion of aristocratic rights; he is now looked back to by the nation as the last steady asserter of general freedom: his doctrines were formerly prevalent chiefly among the great and the affluent; they are now embraced by the generous, the thoughtful, the unprejudiced of every rank; by all who regard passing events with the eye of historic inquiry, or are attached to liberty as the birthright of the human race, not the means of elevating a party to absolute power. To his speeches we now turn as to a voice issuing from the tomb, fraught with prophetic warnings of future disaster. It is contrast which gives brightness to the colours of history; it is experience which brings conviction to the cold lessons of political wisdom. Many and eloquent have been the eulogiums pronounced on Mr. Pitt's memory, but all panegyrics are lifeless compared to that furnished by Earl Grey's administration.

Foreign writers of every description have fallen into a signal mistake in estimating the policy of this great statesman. They all represent

him as governed by an ardent desire to elevate his own country—the mortal enemy, on that account, of the French nation—and as influenced through life by a Machiavelian desire to promote the confusion and misery of the Continent, in order that England might thereby engross the commerce of the world. There never was a more erroneous opinion. For the first ten years of his political life, Mr. Pitt was not only noways hostile to France, but its steadfast friend. So far from being actuated by a commercial jealousy of that country, he had embraced the generous maxim of Mr. Smith's philosophy, that the prosperity of every state is mainly dependant on the prosperity of those which surround it.* Had he been influenced by the malevolent designs which they suppose, he would not have adhered to a strict neutrality when France was pierced to the heart in 1792, but before the revolutionary levies were completed, have raised the standard to avenge the interference of its government in the American war. It was not against France, but *Republican* France, that his hostility was directed; it was not French warfare, but French propagandism, which he dreaded; and his efforts would have been equally persevering to resist Russia or Austria by the aid of the Gallic legions, if these insidious principles had emanated from their states.

If, from the contemplation of the general principles of Mr. Pitt's government, we turn to the consideration of the particular measures which he often embraced, we shall find much more room for difference of opinion. Unequalled in the ability with which he overcame the jealousies and awakened the activity of cabinets, he was by no means equally felici-

Erroneous views of foreign writers on his designs

* In the debate on the Treaty of Commerce with France, on February 12, 1787, Mr. Fox said, "France is the natural enemy of Great Britain; and she now wishes, by entering into a commercial treaty with us, to tie up our hands and prevent us from engaging in alliances with other powers. All the most glorious periods of our history have been when in hostility; all the most disgraceful when in alliance with that power. It is the disgrace of the Tories that they have interfered to stop these glorious successes. This country should never, on any account, enter into too close an alliance with France; the true situation is the bulwark of the oppressed whom that ambitious power has attacked."

"The honourable gentleman has said," observed Mr. Pitt, "that France is the natural enemy of England: I repudiate the sentiment. I see no reason whatever why two great and powerful nations should always be in a state of hostility merely because they are neighbours; on the contrary, I think their prosperity is mutually dependant on each other, and as a British subject, not less than a citizen of the world, I entertain the sincerest wish for the prosperity and happiness of that great country. To suppose that one nation is unalterably the enemy of another nation, is weak and childish; having no foundation in the experience of nations, it is a libel on the constitution of human societies, and supposing the existence of diabolical malice in the original frame of man."* Nor were these sentiments merely uttered in the heat of debate; they were carried into effect in every great and important legislative measure; and this statesman, whom the Continental writers represent as the eternal, inveterate enemy of France, concluded a commercial treaty between that country and Great Britain, which in liberality far surpasses anything ever proposed by the warmest modern advocates of free trade. It stipulated "a reciprocal and entirely perfect liberty of navigation and commerce between the subjects of each party in all the kingdoms of Europe." The wines of France were to obtain admission on the same terms as those of Portugal: their brandy on paying a duty of 7s. a gallon; their oil on the same terms as that of the most favoured nation; their hardware, cutlery, and iron-work on a duty *ad valorem* of 10 per cent. ! So wide is the common opinion of the principles of this great statesman from the truth!—See the *Treaty in Parl. Hist.*, xxvi., 234-240.

* See Chap. XLI., "on the British Finances."

* Parl. Hist., xxvi., 392, 402.

tous in the warlike measures which he recommended for their adoption. Napoleon has observed that he had no turn for military combinations,* and a retrospect of the campaigns which he had a share in directing must, with every impartial mind, confirm the justice of the opinion. By not engaging England as a principal in the contest, and trusting for land operations almost entirely to the Continental armies, put in motion by British subsidies, he prolonged the war for an indefinite period, and ultimately brought upon the country losses and expenses much greater than would have resulted from a more vigorous policy in the commencement. By directing the national strength chiefly to colonial acquisitions, he succeeded, indeed, ultimately in wresting from the enemy all their maritime possessions, and raising the commercial prosperity of the country to the very highest pitch; but this was done at the cost of a war of twelve years' duration, and an addition of above three hundred millions to the national debt; whereas, by the vigorous application of a comparatively inconsiderable English force to the heart of the enemy's power at the outset, or when their resources were failing, before the arrival of Napoleon at the helm, he would, in all human probability, have gained the same object at a comparatively trifling sacrifice, and, at the same time, liberated the Continent from Gallic oppression. In warlike combinations he was too much inclined to follow out the Austrian system of simultaneous operations over an extensive circle; and to waste those forces on the reduction of sugar islands, or useless descents with small bodies on the coasts of France, which, if concentrated upon the decisive point, would have accelerated by twenty years the triumphs of Toulouse and Waterloo. In justice to the British statesman, however, it must be observed, that at that period eighty years of repose, and the disastrous results of the American war, had weakened the military spirit of the nation, and dimmed the recollections of its ancient renown; and that no one deemed it capable of those vast and persevering efforts on land which at length brought the contest to a glorious termination.

"It is needless," say the Republicans, "to raise statues to Mr. Pitt's memory, he has raised up an indestructible monument to himself in the national debt. His name will never be forgotten as long as taxes are paid by the British people." If, however, it is apparent that the war, both with the Republic and Napoleon, was unavoidable, and, from the principles on which it was conducted, incapable of adjustment, those burdens, generally speaking, are to be regarded as the salvage paid for the safety of the Empire, and are no more chargeable on his memory than the losses sustained during a gale are on the skilful pilot who has weathered the storm. The real point for consideration is, whether these vast expenses were not unnecessarily swelled by the adoption of an over-cautious, and therefore protracted, system of warfare, and whether much of the debt might not have been avoided by contracting it in a different and less, ultimately, burdensome form. And probably the warmest of

his partisans will find it difficult to defend the frequent practice which he adopted, of borrowing in the three per cents.; in other words, giving a bond for a hundred pounds to the public creditor for every sixty advanced: a system which, although favourable to public credit at the moment, from the low rate at which it enabled him to contract the largest loans, led to an enormous addition to the national burdens in after times; prevented the return of peace from making the due diminution in the interest of the debt; and saddled the nation with the ultimate payment of above a third more than it ever received.

Mr. Pitt's eloquence and talents for debate were of the very highest order, his Funeral honours paid to our memory. command of financial details unbounded, and his power of bringing a vast variety of detached facts or transactions to bear on one general argument—the noblest effort of oratory—unequalled in modern times. Many of his speeches, delivered extempore during the heat of debate, will bear a comparison with the most finished specimens of written Greek or Roman eloquence. In private life his conduct was irreproachable: concentrated on national objects, he had none of the usual passions or weaknesses of the great; his manners were reserved and austere; his companions, in general, men inferior in years and capacity to himself; he had many admirers—few friends. Superior to the vulgar desire for wealth, he was careless, though addicted to no expenses, of his private fortune; and the man who had so long held the treasury of Europe and the Indies was indebted to the gratitude of the nation for a vote of forty thousand pounds to pay the debts which he owed at the time of his death. In this vote Mr. Fox cheerfully and honourably concurred, but he resisted the motion for a monument at the public expense to his memory, upon the ground that, however splendid his abilities or praiseworthy his integrity had been, the principles of his conduct were not such as to entitle him to the character of "an excellent statesman."† The monument which the House of Commons, by a great majority, voted, was placed above his grave in Westminster Abbey, already illustrated by the ashes of so many of the great and good in English history; but the historian who surveys the situation of the British Empire at the close of the contest, which he so nobly maintained, and recollects that the liberty of mankind was dependant on its success, will award him a wider mausoleum, and inscribe on his grave the well-known words, "Si monumentum quæris circumspece."

* *Parl. Deb.*, vi., 42, 62, 71, 138.

† "When I see a minister," said Mr. Fox, "who has been in office above twenty years, with the full command of places and public money, without any peculiar extravagance or waste, except what might be expected from the multiplicity of duties to which his attention was directed, exerting his influence neither to enrich himself nor those with whom he is connected, it is impossible not to conclude that he has acted with a high degree of integrity and moderation. In the course of his long administration, the only office which he took to himself was the wardenship of the Cinque Ports. But I cannot concur in a motion for funeral honours upon Mr. Pitt as an 'excellent statesman.' Public honours are matters of the highest importance, and we must not, in such cases, yield our consent if it is opposed by a sense of public duty."—*Parl. Deb.*, vi., 61, 62.

CHAPTER XLII.

THE BRITISH FINANCES, AND MR. PITT'S SYSTEM OF FINANCIAL POLICY.

ARGUMENT.

Importance of the Subject.—Astonishing financial Efforts of England during the War.—Historical Sketch.—Public Income of the State before the Commonwealth.—Great Increase of the public Burdens during the Usurpation.—Permanent Addition to them on the Accession of William III.—Reasons which led to the Introduction of the National Debt.—Corresponding Increase of the Expenditure of France on the Accession of Louis Philippe.—Progressive Growth of the Public Debt during the succeeding Century.—Table illustrating its Increase.—Alarming financial Aspect of the Country at Mr. Pitt's Accession to Power in 1764.—Principle on which he proposed to remedy the existing Evils.—His strong Expressions on the Importance of the Subject in Parliament, and his simultaneous Adoption of Measures for National Defence.—Establishment of the Sinking Fund, and Mr. Pitt's Speech introducing it.—Mr. Fox gives the Plan his cordial Support.—It is passed by the Legislature, and made applicable to all future Loans.—Modification introduced on the System in 1802.—Immense Results with which it was attended.—Table showing the progressive Growth of the Sinking Fund.—Obloquy to which it began to be exposed.—General Diffusion of this Delusion, which is the more Dangerous, as it involves much abstract Truth mixed with Error.—Ultimate Extinction of the Sinking Fund in 1832.—Table showing its progressive Growth, Decline, and final Extinction.—Comparison of the Arguments for and against its Continuance.—He saw clearly the Objections since urged against the System.—Proof of the Justice of Mr. Pitt's Principles which has been afforded by the Result during the last twenty Years.—It is clearly the only Way of effecting a Reduction of the Debt.—Durable and far-seeing System which he had established.—Had it been adhered to, the whole Debt would have been discharged in 1843.—Tables showing the progressive Growth of a Sinking Fund kept up at fifteen or ten Millions, from 1816 to 1836.—Causes which have led to the Decay of this System.—Table showing the amount of indirect Taxes repealed since 1816.—Great Error in not repealing at once all the direct Taxes on the Peace.—Imprudent Remission of indirect Taxes since that Time.—Little Good has been derived from their Repeal.—Immense Burdens under which the Nation prospered during the War.—Argument on this Subject.—Temporary Advantages which would have attended the Keeping up the Sinking Fund.—Ample Funds which existed for its Maintenance, even when providing largely for the public Relief.—Public Errors which led to its Abandonment, and their distressing Effects.—Lord Castlereagh's Error in 1816 regarding the income Tax.—Advantages of the Funding System.—Its Dangers.—Mr. Pitt's Views on the Subject.—Modification which they received from the first Continental Peace in 1797.—He proposed to augment largely the Supplies raised within the Year.—Trebling of the assessed Taxes, which were intended to be a War-burden only.—First Introduction of the income Tax.—Details of Mr. Pitt's Plan on the Subject.—Objections urged against it.—It is adopted by Parliament.—Advantages of the new System.—Mr. Pitt's permanent Taxes were all in the indirect Form.—Their Advantage.—Arguments in Favour of indirect Taxation.—Reply to the Objections against them.—Cases in which indirect Taxes, being excessive, become direct Burdens on Production.—General Character of Mr. Pitt's financial Measures: their Grandeur and Foresight.—Their Errors.—Undue Extent to which he carried the Funding System.—Niggardly Use of the military Forces of England.—Injudicious System of borrowing in the Three per Cents.—Its Effect in preventing the Reduction of Interest by Government on the Return of Peace.—Temporary Diminution of Interest with which it was attended was no adequate Compensation for these Evils.—In Mr. Pitt's View, however, the Sinking Fund was speedily to obviate all these ruinous Consequences.—Table of the whole Expenses of every Year in every Department during the War.—Vast Effects of the Suspension of Cash Payments in 1797.—Its powerful Operation in increasing the present Resources of the State.—Table showing the Paper and Coin issued, with the Exports, Imports, Shipping, and Revenue of every Year during the War.—

Great temporary Advantages also of the Funding System.—Undue Ascendency of popular Power was the real Cause which undid Mr. Pitt's durable System for the Reduction of the Debt; and it must ultimately ruin the British Empire.—But will still more impel the British Race to the New World.

It would be to little purpose that the mighty drama of the French Revolutionary wars was recorded in history, if the mainspring of all the European efforts, the BRITISH FINANCES, were not fully explained. It was in their boundless extent that freedom found a never-failing stay, in their elastic power that independence obtained a permanent support. When surrounded by the wreck of other nations; when surviving alone the fall of so many confederacies, it was in their inexhaustible resources that England found the means of resolutely maintaining the contest, and waiting calmly, on her citadel amid the waves, the return of a right spirit in the surrounding nations. Vain would have been the prowess of her seamen, vain the valour of her soldiers, if her national finances had given way under the strain; and the conquerors of Trafalgar and Alexandria must have succumbed in the contest they so heroically maintained, if they had not found in the resources of government the means of permanently continuing it. Vain even would have been the reaction produced by suffering against the French Revolution: vain the charnel-house of Spain and the snows of Russia, if England had not been in a situation to take advantage of the crisis; if she had been unable to alimient the war in the Peninsula when its native powers were prostrated in the dust; and the energies of awakened Europe must have been lost in fruitless efforts, if the wealth of England had not at last arrayed them, in dense and disciplined battalions, on the banks of the Rhine.

How, then, did it happen that this inconsiderable island, so small a part of the Roman Empire, was enabled to expend wealth greater than ever had been amassed by the ancient mistress of the world; to maintain a contest of unexampled magnitude for twenty years; to keep on foot a fleet which conquered the united navies of Europe, and an army which carried victory into every corner of the globe; to acquire a colonial empire that encircled the earth, and subdue the vast continent of Hindostan, at the very time that it struggled in Spain with the land-forces of Napoleon, and equipped all the armies of the North for the liberation of Germany? The solution of the phenomenon, unexampled in the history of the world, is without doubt to be in part found in the persevering industry of the British people, and the extent of the commerce which they maintained in every quarter of the globe; but the resources thus afforded would have been inadequate to so vast an expenditure, and must have been exhausted early in the struggle, if they had not been organized and sustained by an admirable system of finance, which seem-

Importance of the subject.

Astonishing financial efforts of England during the war.

ed to rise superior to every difficulty with which it had to contend. It is there that the true secret of the prodigy is to be found; it is there that the noblest monument to Mr. Pitt's wisdom has been erected.

The national income of England at an early period was very inconsiderable, and totally incommensurate to the important station which she occupied in the scale of nations. In the time of Elizabeth it amounted only to £400,000 a year, and that of James I. to £450,000; and even including all the subsidies received from Parliament during his reign, £480,000 a year: sums certainly not equivalent to more than £800,000, or £1,000,000 of our money.* That enjoyed by Charles I. amounted, on an average, to £895,000 annually: a sum perhaps equal to £1,500,000 in these times.†

It was the Long Parliament which first gave the example of a prodigious levy of money from the people in England; affording thus a striking instance of the eternal truth, that no government is so despotic as that of the popular leaders, when relieved from all control on the part of the other powers in the state. The sums levied in England during the Commonwealth, that is, from the 3d of November, 1640, to the 5th of November, 1659, amounted to the enormous, and, if not proved by authentic documents, incredible sum of £83,000,000, being at the rate of nearly £5,000,000 a year; or more than five times that which had been so much the subject of complaint in the times of the unhappy monarch who had preceded it: The permanent revenue of Cromwell was raised from the three kingdoms to £1,868,000; or considerably more than double that enjoyed by Charles I.‡ The total public income at the death of Charles II. was £1,800,000, of James II. £2,000,000; sums incredibly small, when it is recollected that the price of wheat was

not then materially different from what it is at the present moment.*†

These inconsiderable taxes, however, were destined to be exchanged for others of a very different character, upon the accession of the house of Brunswick to the throne. The intimate connexion of the princes of that family with Continental politics, and the long wars in which, in consequence, the nation was involved, soon led to a more burdensome system of taxation, and the raising of sums annually from the people which in former times would have been deemed incredible. So great was the increase of the public burdens during the reign of William, that the national income, in the thirteen years that he sat on the throne, was nearly doubled; being raised from £2,000,000 a year to £3,895,000. But the addition made to the public revenue was the least important part of the changes effected during this important period. It was then that the NATIONAL DEBT began; and government was taught the dangerous secret of providing for the necessities, and maintaining the influence of present times, by borrowing money and laying its payment on posterity.‡

Various motives combined to induce the government, immediately after the Revolution, to adopt the system of borrowing on the credit of the state. Notwithstanding the temporary unanimity with which the Revolution had been brought about, various heart-burnings and divisions had succeeded that event, and the exiled dynasty still numbered a large and resolute body, especially in the rural districts, among their adherents. Extensive patronage and no small share of corruption were necessary to secure the influence of government over a nation thus divided: foreign wars were deemed requisite to maintain the ascendancy of the Protestant principles, to which the king owed his accession to the throne, and the Continental connexions of the house of Orange imperiously required the intervention of Great Britain in those desperate struggles by which the very existence of the Commonwealth of Holland was endangered. The same causes which led to the duplication of the public burdens of France by Louis Philippe after the Revolution of 1830, produced a similar increase in the taxes of Great Britain after the change of dynasty in 1688, and engendered the dangerous system of borrowing on the security of the assessments of future years.§ It was justly thought

* Hume, v., 412; vi., 112. † Ib., vii., 341. Pebrer, 45. ‡ "It is seldom," says Hume, "that the people gain anything by revolutions in government, because the new settlement, jealous and insecure, must commonly be supported with more expense and severity than the old; but on no occasion was the truth of this maxim more sensibly felt than in England after the overthrow of the royal authority. Complaints against the oppression of ship-money, and the tyranny of the star chamber, had roused the people to arms, and, having gained a complete victory over the crown, they found themselves loaded with a multiplicity of taxes formerly unknown, while scarce an appearance of law and liberty remained in any part of the administration."§

The following are some of the items in this enormous aggregate of £83,000,000 raised from the nation during the Commonwealth—a striking proof of the despotic character of the executive during that period:

Land-tax	£32,000,000
Excise	8,000,000
Tonnage and poundage	7,600,000
Sale of church lands	10,035,000
Sequestrations of bishops, deans, and inferior clergy, for four years	3,528,000
Sequestrations of private estates in England	4,564,000
Fee-farm rents for five years	2,963,000
Compositions with delinquents in Ireland	1,000,000
Sales of estates in Ireland	3,567,000
Other lesser	10,074,000
Total	£83,331,000

—PEBRER, 139, 140.

Of this sum, there was drawn	
from England	£1,517,274
from Scotland	143,652
from Ireland	207,790
	£1,868,716

—*Ibid.*, 140.

* Hume, vii., 115.

* The quarter of wheat from 1636 to 1701 was, on an average.....5s. 11½d.
from 1700 to 1765.....40s. 6d.
from 1764 to 1794.....44s. 7d.

In 1835, the average of the quarter in Great Britain was 38s. 8d., and the average of the last five years was only 48s. —SMITH'S *Wealth of Nations*, i., 358, and *Corn Average*, 1835. † Pebrer, 59, 60.

‡ The following is a statement of the budgets of France before and after the Revolution of July. It is a curious and instructive object of contemplation to observe a similar convulsion leading, in countries so widely different in their character, customs, and institutions as France and England were at the accessions of the dynasties of Orange and Orleans to their respective thrones, to a result so precisely similar:

	FRANCE.	
1824	951,000,000, or about	£38,100,000
1825	946,000,000, or	37,800,000
1826	942,000,000, or	37,600,000
1827	986,000,000, or	38,730,000
1828	939,000,000, or	37,300,000
1829	975,000,000, or	38,840,000
1830 Revol. in July.	981,000,000, or	38,930,000

Permanent addition to them on the accession of William III.

Reasons which led to the introduction of the national debt.

Corresponding increase of the expenditure of France on the accession of Louis Philippe.

that the present influence of government could in this way be increased to an extent altogether impracticable if the expenditure of each year were to be limited to the supplies raised within itself; and that, by the distribution of the debt among a great number of public creditors, an extensive and influential body might be formed, attached by the strong tie of individual interest to the fortunes of the ruling dynasty; because they were aware that their claims would be disregarded by the legitimate monarchs if restored to the throne. The expedient, therefore, was fallen upon of contracting a debt transferable by a simple power of attorney, in the smallest shares, from hand to hand; and capable of being used almost like the highest and most valuable species of bank notes, in the transactions of the nation. To the steady prosecution of this system, and the formation of a secure deposit by its means for the savings of the nation, much of the subsequent prosperity and grandeur of England is to be ascribed: but, like all other human things, it has its evils as well as its advantages; and in the perilous facility of borrowing, which the magnitude of the national resources and the fidelity with which the public engagements were fulfilled produced, is to be found the remote but certain cause of financial embarrassments, now to all appearance irremediable.

It is unnecessary to follow the successive steps by which both the public revenue and the national debt of Great Britain were increased after this period. Suffice it to say, that both were largely augmented during the glorious War of the Succession; that the long and pacific administration which followed effected no sensible reduction in their amount; that the checkered contest of 1739, and the more triumphant campaigns of the Seven Years' War, contributed equally to their increase; and that the disasters of the American struggle were attended by so great an augmentation of the national burdens, that at its termination in 1783, in the opinion both of Mr. Hume and Adam Smith, they must inevitably prove fatal in the end to the independence of the nation. At the close of the last contest the public revenue was £12,000,000, and the debt £240,000,000,* the interest of which absorbed no less than £9,319,000 of the annual income of the state; the loans contracted during that last unfortunate contest having been no less than one hundred millions.†

† The following table exhibits, in a clear and condensed form, the increase of the public revenue, and the progressive growth of the debt, from the Revolution in 1688 to the present time:

	Debt.	Interest.	Public Revenue.
National debt at the Revolution.....	£664,263	39,865	2,001,885
Increase during the reign of William...	15,730,439	1,271,087	
Debt at the accession of Queen Anne....	16,394,702	1,310,952	3,895,205
Increase during the reign of Queen Anne	37,750,661	2,040,416	
Debt at the accession of George I.	54,145,363	3,351,368	5,691,803
Decrease during the reign of George I..	2,053,128	132,807	
Debt at the accession of George II.	52,092,235	3,217,561	6,762,463
Decrease during the peace.....	5,137,612	253,526	

It was at this period that Mr. Pitt came into office, on the resignation of Mr. Fox and the coalition ministry. His alarming financial aspect of the country on Mr. Pitt's accession to power in 1784. His ardent and sagacious mind was immediately turned to the consideration of the finances, and the means of extricating the nation from the embarrassments, to ordinary observers inextricable, in which it had been involved by the improvident expenditure of preceding years. It was evident, from a retrospect of history, that no sensible impression had been made on the debt by any efforts of preceding times; that though a sinking fund had long existed in name, yet its operations had been very inconsiderable; and that all the economy of the long periods of peace which had intervened since the Revolution, had done little more than discharge a tenth of the burdens contracted in the previous years of hostility. The interest of the debt absorbed now more than two thirds of the public revenue. It was impossible to conceal that such a state of things was in the highest degree alarming; not only as affording no reasonable prospect that the existing engagements could ever be liquidated, but as threatening, at no distant period, to render it impossible for the nation to make those efforts which its honour or independence might require. It was easy to foresee that, in the course of events, wars and changes would arise, which would render it indispensable for the government to assume a menacing attitude, and possibly engage in a long course of hostilities; but how could any administration venture to assume the one, or the people bear the other, if an immense load of debt hung about their necks, absorbing alike by its interest their present revenues, and paralyzing by its magnitude the credit by which their resources might be increased on any unforeseen emergency?

	Debt.	Interest.	Public Revenue.
Debt at the opening of the war, 1739.....	46,954,623	2,964,035	6,874,000
Increase during the war.	31,338,689	1,096,979	
Debt at the end of the war, 1748.	78,293,312	4,061,014	6,923,000

Decrease since the peace.....	82,155,207	3,883,841	
Debt on the 5th of January, 1832.....	£782,667,234	£28,341,463	£50,990,000

—MOREAU and PEBBER'S *Tables*, 70, 89, 152, 245, and PORTER'S *Parl. Tables*, i., 1.

These dangers took strong possession of the mind of Mr. Pitt; but, instead of sinking in despair under the difficulties of the subject, he applied the energies of his understanding with the greater vigour to overcome them. Nor was it long before he perceived by what means this great object could with ease and certainty be effected. The public attention at this period had been strongly directed to the prodigious powers of accumulation of money at compound interest; and Dr. Price had demonstrated, with mathematical certainty, that any sum, however small, increasing at that ratio, would in a given time extinguish any debt, however great.* Mr. Pitt, with the instinctive sagacity of genius, laid hold of this simple law to establish a machine by which the vast debt of England might without difficulty be discharged. All former sinking funds had failed of producing great effects, because they were directed to the annual discharge of a certain portion of debt; not the formation, by compound interest, of a fund destined to its future and progressive liquidation; they advanced, therefore, by addition, not multiplication, in an arithmetical, not a geometrical progression. Mr. Pitt saw the evil, and not merely applied a remedy, but more than a remedy; he not only seized the battery, but turned it against the enemy. The wonderful powers of compound interest, the vast lever of geometrical progression, so long and sorely felt by debtors, were now to be applied to creditors; and, inverting the process hitherto experienced among mankind, the swift growth of the gangrene was to be turned from the corruption of the sound to the eradication of the diseased part of the system. Another addition, like the discovery of gravitation, the press, and the steam-engine, to the many illustrations which history affords of the lasting truth, that the greatest changes both in the social and material world are governed by the same laws as the smallest; and that it is by the felicitous application of familiar principles to new and important objects, that the greatest and most salutary discoveries in human affairs are effected.

Mr. Pitt's mind was strongly impressed with the incalculable importance of this subject, one before which all wars or subjects of present interest, excepting only the preservation of the Constitution, sunk into insignificance. From the time of his accession to office in 1784, his attention had been constantly riveted to the subject, and he repeatedly expressed, in the most energetic language, his sense of its overwhelming magnitude. "Upon the deliberation of this day," said he, in bringing forward his resolutions on the subject on the 29th of March, 1786, "the people of England place all their hopes of a full return of prosperity, and a revival of that public security which will give vigour and confidence to those commercial exertions on which the flourishing state of the country depends. Yet not only the public and this house, but other nations are intent upon it; for upon its deliberations, by the success or failure of what is now proposed, our rank will be decided among the powers of Europe. To behold this country, when just emerging from a most unfortunate war, which had added such an accumulation to

sums before immense, that it was the belief of surrounding nations, and of many among ourselves, that we must sink under it—to behold this nation, instead of despairing at its alarming condition, looking boldly its situation in the face, and establishing upon a spirited and permanent plan the means of relieving itself from all its encumbrances, must give such an idea of our resources as will astonish the nations around us, and enable us to regain that pre-eminence to which, on many accounts, we are so justly entitled. The propriety and even necessity of adopting a plan for this purpose is now universally allowed, and it is also admitted that immediate steps ought to be taken on the subject. It is well known how strongly my feelings have been engaged, not only by the duties of my situation, but the consideration of my own personal reputation, which is deeply committed in the question, to exert every nerve, to arm every vigilance, to concentrate my efforts towards that great object, by which alone we can have a prospect of transmitting to posterity, that which we ourselves have felt the want of, an efficient sinking fund for the national debt. To accomplish this is the first wish of my heart, and it would be my proudest hope to have my name inscribed on a pillar to be erected in honour of the man who did his country the essential service of reducing the national debt."†

In pursuance of these designs, Mr. Pitt proposed that a million yearly—composed partly of savings effected in various branches of the public service, to the amount of £900,000, and partly of new taxes, to the amount of £100,000—should be granted to his majesty, to be vested in commissioners chosen from the highest functionaries in the realm; that the payments to them should be made quarterly; and that the whole sums thus drawn should be by them invested in the purchase of stock, to stand in the name of the commissioners, the dividends on which were to be periodically applied to the farther purchase of stock, to stand and have its dividends invested in the same manner. In this way, by setting apart a million annually, and religiously applying its interest to the purchase of stock, the success of the plan was secured; because the future accumulations would spring, not from any additional burdens imposed on the

Establishment of the sinking fund, and Mr. Pitt's speech introducing it.

* Parl. Hist., xxvi., 1205, 1313, 1109.

† It is worthy of especial notice, however, that though thus deeply impressed with the paramount importance of raising up an effective sinking fund for the reduction of the public debt, Mr. Pitt was equally resolute not to attempt it by any measure by which the public security might be impaired, and, on the contrary, at the very same time strongly advocated and carried a bill for the fortification of Portsmouth and Plymouth, which required several hundred thousand pounds. "He would not be seduced," said he, "by the plausible and popular name of economy; he would not call it only plausible and popular, he would rather say the sacred name of economy, to forego the reality; and for the sake of adding a few hundred thousand pounds at the outset to the sinking fund, perhaps render forever abortive the sinking fund itself. Every saving, consistently with national safety, he would pledge himself to make; but he would never consent to starve the public service, and to withhold those supplies, without which the nation must be endangered."‡ Every measure of this great man was directed to great and lasting national objects; he was content to impose present burdens, to forego present advantages, and incur present unpopularity, for the sake of ultimate public advantage; the only principle which ever yet led to greatness and honour, either in nations or individuals, as the opposite system, gilded by present popularity or enjoyment, is the certain forerunner of ultimate ruin.

* Parl. Hist., xxvi., 1109.

* A penny laid out at compound interest at the birth of our Saviour, would in the year 1775 have amounted to a solid mass of gold eighteen hundred times the whole weight of the globe.

people, but the dividends on the stock thus bought up from individuals, and vested in the public trustees. The powers of compound interest were thus brought round from the side of the creditor to that of the debtor—from the fundholders to the nation; and the national debt was eaten in upon by an accumulating fund, which, increasing in a geometrical progression, would to a certainty, at no distant period, effect its total extinction.* “If this million,” said Mr. Pitt, “to be so applied, is to be laid out with its growing interest, it will amount to a very great sum in a period that is not very long in the life of an individual, and but an hour in the existence of a great nation; and this will diminish the debt of this country so much as to prevent the exigencies of war from raising it to the enormous height it has hitherto done. In the period of twenty-eight years, the sum of a million, annually improved, would amount to four millions per annum. But care must be taken that this sum be not broken in upon. This has hitherto been the bane of this country; for if the original sinking fund had been properly preserved, it can easily be proved that our debts at this moment would not have been very burdensome; but this, hitherto, has been found impracticable, because the minister has uniformly, when it suited his convenience, gotten hold of this sum, which ought to have been regarded as most sacred. To prevent this, I propose that this sum be vested in certain dignified commissioners, to be by them applied quarterly to buy up stock; by which means no considerable sum will ever be open to spoliation, and the fund will go on without interruption. Long, and very long, has the country struggled under its heavy load, without any prospect of being relieved; but it may now look forward to the object upon which the existence of the country depends. A minister could never have the confidence to come down to the House and propose the repeal of so beneficial a law—of one so directly tending to relieve the people from their burdens. The essence of the plan consists in the fund being invariably applied in diminution of the debt; it must forever be kept sacred, and especially so in time of war. To suffer the fund at any time, or on any pretence, to be diverted from its proper object, would be to ruin, defeat, and overturn the whole plan.”†

* The following table will exemplify the growth of capital when its interest, at the rate of 5 per cent., is steadily applied to the increase of the principal. Suppose that £20,000,000 is borrowed; and that, instead of providing by taxes for the interest merely of this large sum, provision is made for £1,200,000 yearly, leaving the surplus of £200,000 to be annually applied in the purchase of a certain portion of the stock, by commissioners, for the reduction of the principal, the dividends on the stock so purchased being annually and progressively employed in the same manner. The progressive growth in ten years will stand as follows:

First year's surplus	£200,000
Second	210,000
Third	220,500
Fourth	231,250
Fifth	242,532
Sixth	254,378
Seventh	266,684
Eighth	279,386
Ninth	292,114
Tenth	306,661
	£2,500,105

The wonderful rate at which this fund increases must be obvious to every observer, and it is worthy of especial notice, that this rapid advance is gained without imposing one farthing additional upon the country, by the mere force of an annual fund, steadily applied year after year, with all its fruits, to the reduction of the principal debt.

† Parl. Hist., xxvi., 1309, 1329.

‡ The speech delivered by Mr. Pitt on this occasion, which went over the whole details of our financial system, is one

Nor was Mr. Fox behind his great rival in the same statesmanlike and heroic sentiments; but he pointed out too prophetic a spirit the dangers to which the reserved fund might be exposed, amid the necessities or weakness of future administrations. “No man,” said he, “in existence was, or ever had been, a greater friend to the principle of a sinking fund than I have been from the very first moment of my political life. I agree perfectly with the right honourable gentleman in his ideas of the necessity of establishing an effective sinking fund for the purpose of applying it to the diminution of the national debt, however widely I may differ from him as to the subordinate parts of the plan. Formerly, the payment of the national debt was effected by a subscription of individuals, to whom the faith of Parliament had been pledged to pay off certain specified portions, at stated periods. Under that system, when the nation, or when Parliament, stood bound to individuals, the pledge was held as sacred as to pay the interest of the national debt at present; whereas, under the new system, when no individual interests were concerned, nothing would prevent a future minister, in any future war, from coming down to the House and proposing the repeal of the sinking fund, or enabling government to apply the whole money or stock in the hands of the commissioners to the public service. What would prevent the House from agreeing to the proposition? or was it at all likely that, under the exigency of the moment, they would not immediately agree to it, when so much money could so easily be got at, and when they could so readily save themselves from the odious and unpleasant task of imposing new taxes on themselves and their constituents?”* Memorable words from both these great men! when it is recollected how exactly the one predicted the wonderful effects which experience has now proved his system was calculated to have produced, in reducing, in a period of time smaller than the most ardent imagination could have supposed, a debt double the amount of that which he estimated as so great an evil; and with how much accuracy the other pointed out the vulnerable point in its composition, and predicted the cause, springing from the necessities or weakness of future administrations, which would ultimately prove its ruin!

The bill passed both Houses without a dissentient voice; and on the 26th of May May 26, 1786. the king gave it the royal assent in person, to mark his strong sense of the public importance of the measure.

of the most luminous of his whole Parliamentary career. An intimate friend of his has recorded, “That having passed the morning of this most important day in providing and examining the calculations and resolutions for the evening, he said he would take a walk to arrange in his mind what was to be said in the House in the evening. His walk did not last above a quarter of an hour, and when he came back he said he believed he was prepared. He then dressed, and desired his dinner to be sent up; but hearing that his sister, and another lady residing with her in the family, were going to dine with him at the same early hour, he desired that they might dine together. Having passed nearly an hour with those ladies, and several friends who called on their way to the House, talking with his usual liveliness and gaiety, as if he had nothing on his mind, he then went immediately to the House of Commons, and made that elaborate and far-extended speech, as Mr. Fox called it, without one omission or error.”—See No. V. WILLIAM PITT. *Blackwood's Magazine*, xxvii., 852; a series of papers on the character of this illustrious man, by one of the ablest writers of the age, containing by far the best account of his policy and character extant in any language.

* Parl. Hist., xxvi., 1318.

The sinking fund thus provided was amply sufficient to have discharged all the existing debt within a moderate period; and so well aware was its author of its vast productive powers, that he observed, that when it rose to four millions, it should be submitted to Parliament whether it should thenceforth be suffered to increase at compound interest. But the events which followed, soon not only rendered illusory all danger of the debt being too rapidly reduced, but made an addition to the system unavoidable to meet the new and overwhelming obligations contracted during the war. Some expedient, therefore, was necessary to provide for the liquidation of these vast additional debts; and it was in the means taken to do so that the extensive foresight and unshaken constancy of Mr. Pitt are to be discerned. He laid it down as a principle, which was never, on any pretence whatever, to be departed from, that, when any additional loan was contracted for, provision should be made for its gradual liquidation. "We ought," said Mr. Pitt, "not to confine our views to the sinking fund, compared with the debt now existing. If our system stops there, the country will remain exposed to the possibility of being again involved in those embarrassments which we have in our own time severely experienced, and which apparently brought us to the verge of bankruptcy and ruin. To guard against such dangers hereafter, we should enact that, whenever any loan shall take place in future, unless it be raised on annuities, which will terminate in a moderate number of years, there should, of course, be issued out of the consolidated fund,* to the commissioners for the reduction of the national debt, an additional sum, sufficient to discharge the capital of such loan in the same period as the sinking fund, after reaching its largest amount, will discharge what will then remain of the present debt. To do this, one hundredth part of the capital borrowed would be sufficient to be raised from the country on such emergencies; for instance, supposing it were necessary to raise by loan ten millions, £100,000 should be raised in addition to the existing funds appropriated to the redemption of the debt, in order to relieve the country within a given time of this additional burden. In addition to this, I propose that £200,000 a year additional should, from this time forward, be regularly granted out of the ordinary revenue of the country to the sinking fund." Mr. Fox stated, "that he had ever maintained the necessity of establishing a fund for reducing the national debt,† and that as strongly when on the ministerial as the opposition benches. He had not the power to promote it as effectually as Mr. Pitt, but he wished it as warmly." In pursuance of the united opinion of these great men, it was enacted by the statute passed on the occasion, "that whenever, in future, any sums should be raised by loans on perpetual redeemable annuities, a sum equal to one per cent. on the stock created by such loan should be issued out of the produce of the consolidated fund quarterly, to be

March 30,
1792.

placed to the account of the commissioners.* Every additional loan was thus compelled to draw after itself, as a necessary consequence, a fresh burden, by the annual payment of which the extinction of the principal might to a certainty, in little more than forty years, be expected.

Under this system the whole loans were contracted, and the sinking fund was managed till 1802; and as immense sums were borrowed during that period, the growth of the sinking fund was far more rapid than had been originally contemplated. In that year an alteration of some importance was made, not, indeed, by Mr. Pitt, but by Mr. Addington, then chancellor of the Exchequer, with his consent and approbation. "The capital of the debt," said he, "is now £488,000,000; its interest, including the charges of the sinking fund, £23,000,000: it is impossible to contemplate either the one or the other without the utmost anxiety. What I now propose is, that the limitation which was formerly provided against the accumulation of the original sinking fund should be removed; and that both that original fund and the subsequent one, created by the act of 1792, should be allowed to accumulate till they have discharged the whole debt." This proposition was unanimously agreed to; it being enacted "that this fund should accumulate till the whole existing redeemable annuities should be paid off." By this act, the original sinking fund of £1,000,000, with the £200,000 subsequently granted, and the one per cent. on all the subsequent loans, were combined into one consolidated fund, to be applied continually, at compound interest, till the whole debt then existing was paid off, which it was calculated would be in forty-five years.†

Under these three acts of 1786, 1792, and 1802, the sinking fund continued to be administered with exemplary fidelity, not only during Mr. Pitt's life, but after his death, till 1813, when a total change in the system took place, which eventually led to its ruin, and has, to all appearance, rendered the financial state of the country almost desperate. To obtain a clear view of the practical effects of Mr. Pitt's system, it is necessary to anticipate somewhat the march of events, and give a summary of the operation of the sinking fund which he established down to the period when it was abandoned by his more embarrassed and less provident successors.

From the accounts laid before Parliament, it appears that the sinking fund of a million which Mr. Pitt established in 1786, had increased by accumulation at compound interest, and the vast additions drawn from the one per cent. on all subsequent loans, to the enormous sum of fifteen millions and a half yearly in 1813, while the debts which it had discharged during that period amounted to no less than £238,231,000 sterling. This great increase had taken place in twenty-seven years, whereas Mr. Pitt had calculated correctly that his original million would be only four millions in twenty-eight years: the well-known period of the quadruplication of the sum at compound interest of 5 per cent. The subsequent £200,000 a year granted certainly accelerated in a certain degree the rate of its advance; but the true cause of the extraordinary and unexpected rapidity of its increase is to be found in the vast accumula-

Modification introduced upon the system in 1802. April 14, 1802.

* The consolidated fund was a certain portion of the ordinary taxes, which were amassed together and devoted to certain fixed objects of national expenditure. The surplus of this fund, as it was called, or the excess of those branches of revenue above the charges fixed on them, was annually appropriated, during war, among the ways and means to the current war expenditure.

† Parl. Hist., xxix., 1050, 1058.

* 32 Geo. III., c. 69.

† Parl. Hist., xxxvi. 890, 892.

tion which the one per cent. on subsequent loans produced. This distinctly appears from the table compiled below, showing the sums paid off by the sinking fund in every year from 1786 to 1813, the loans contracted during that period, the stock redeemed by the commissioners, and the proportion of each loan paid to them for behoof of the public debt. It thence appears how rapidly and suddenly the sinking fund rose, with the immense sums borrowed at different periods during the war; and when it is recollected that the loans contracted from 1792 to 1815 were £585,000,000, it will not appear surprising that even the small sum of one per cent. on each, regularly issued to the national debt commissioners, should have led to this extraordinary and unlooked-for accumulation.*

It is this subsequent addition of one per cent.

Obliquely to on all loans contracted since the institution of the sinking fund which it became exposed. has been at once the cause of its extraordinary increase and subsequent ruin. While the nation in general were entirely satisfied with Mr. Pitt's financial statements, and, delighted with the rapid growth of the sinking fund, never examined whether the funds for its prodigious extension were provided by the fictitious supply of loans or the solid growth of the revenue above the expenditure, a few more sagacious observers began to inquire into the solidity of the whole system, and mistaking its past operation, which had been almost entirely during war, for its permanent character, loudly proclaimed that it was founded entirely on a delusion; that a great proportion of the sums which it paid off had been raised by loans; that, at all events, a much larger sum than the amount of the debt annually redeemed had been annually borrowed since the commencement of the war; that it was impossible that a nation, any more than an individual, could discharge its debts by mere financial operations; and that the only way of really getting quit of encumbrances was by bringing the expenditure permanently under the income.†

These doctrines soon spread among a consid-

erable part of the thinking portion of the nation; but they made little general impression till the return of peace had diverted into different channels the attention of the people, formerly concentrated on the career of Napoleon; and Democratic ambition, taking advantage of national distress, had begun to denounce all that had formerly been done by the patriots who had triumphed over its principles. Then they speedily became universal: attacks on the sinking fund were rapidly diffused and generally credited—the delusion of Mr. Pitt's system—the juggle so long practised on the nation, were in every mouth; the meanest political quacks, the most despicable popular demagogues, ventured to discharge their javelins at the giants of former days; and a system on which the greatest and best of men in the last age had been united, in commendation of which Mr. Fox had vied with Pitt, and Sheridan with Burke, was universally denounced as the most complete and ruinous deception that ever had been palmed off by official fraud on the credulity of mankind.

Had these doctrines been confined to the declamation of the hustings or the abuse of newspapers, they would have furnished the subject only of curious speculation on the way in which principles, just to a certain extent, and truths, undeniable as they were originally stated, became perverted, when they were employed as an engine for the purposes of faction or ambition. But, unhappily, the evil soon assumed a much more serious complexion: the prevailing ideas spread to the Legislature, and the statesmen who succeeded to the government, imbued partly with the declamation of the period, influenced partly by the desire of gaining a temporary popularity by the reduction of the public burdens, without any regard to the interests of future times, went on borrowing or abstracting from the sinking fund till it was totally extinguished during the great convulsion of 1832; and the commissioners for the

General diffusion of this delusion.

Which is the more dangerous, as it involves much abstract truth mixed with error.

* Table showing the sums paid to the commissioners for the reduction of the national debt in every year, from 1786 to 1816; the stock redeemed by them in each year; the loans contracted, and proportion of those loans paid to those commissioners in every year for that period; with the public revenue of the state for the same time.—MOREAU'S TABLES; FEBREYER'S TABLES, 153, 154, 240; *Parl. Pap.*, 1822, &c., 145; PORTER'S *Parl. Tables*, i, 1; COLQUHOUN, 292, 294.

Table showing the progressive growth of the sinking fund.

† Hamilton on the Sinking Fund, and others.

reduction of the national debt issued an official intimation that their purchases for the public service had altogether ceased. The principle acted upon since that time has been to apply to the reduction of debt no more than the annual surplus of the national income above its expenditure; and as that surplus, under the present Democratic system, can never be tinction of the expected to be considerable, Mr. Pitt's sinking fund may now, to all practical purposes, be considered as destroyed.*

In the preceding observations, the march of events has been anticipated by nearly thirty years, and changes alluded to which will form the important subject of analysis in the subsequent volumes of this, or some other history. But it is only by attending to the dissolution of Mr. Pitt's system, and the effects by which that change has been, and must be attended, that the incalculable importance of his financial measures can be appreciated, or the wisdom discerned which, so far as human wisdom could, had

* The following table exhibits the progression and decline of the sinking fund from the time of its being first instituted in 1786, till it was broken upon by Mr. Vansittart in 1813, and till its virtual extinction in 1832.

Table showing its progressive growth, decline, and final extinction.

Years.	Stock redeemed.	Money applied to redemption of debt.	Total Amount of funded debt.
1786		£500,000	£239,693,900

—PORTER'S *Parl. Tables*, i., and ii., 6, 8; PEBREY'S *Tables*, 247; MOREAU'S *Tables*.

N.B.—This table exhibits the progress of the sinking fund and stock redeemed in Great Britain and Ireland, which explains its difference from the preceding table, applicable to Great Britain alone.

guarded against the evils which must, in their ultimate consequences, dissolve the British Empire.

It is perfectly true, as Mr. Hamilton and the opponents of the sinking fund have argued, that neither national nor individual fortunes can be mended by mere financial operations, by borrowing with one hand while you pay off with another; and unquestionably Mr. Pitt never imagined that, if the nation was paying off ten millions a year and borrowing twenty, it was making any progress in the discharge of its debt. In this view, it is of no moment to inquire what proportion of the debt annually contracted was applied to the sinking fund; because, as long as larger sums than that fund was able to discharge were yearly borrowed by the nation, it is evident that the operation of the system was attended with no present benefit to the state: nay, that the cost of its machinery was, for the time at least, an addition to its burdens. But all that notwithstanding, Mr. Pitt's plan for the redemption of the debt was not only founded on consummate wisdom, but a thorough knowledge of human nature. He never looked to the sinking fund as the means of paying off the debt while loans to a larger amount than it redeemed were contracted every year; * he regarded it as a fund which would speedily and certainly effect the reduction of the debt in time of peace. And the admirable nature of the institution consisted in this, that it provided a system, with all the machinery requisite for its complete and effective operation, which, although overshadowed and subdued by the vast contraction of debt during war, came instantly into powerful operation the moment its expenditure was terminated. This was a point of vital importance: indeed, without it, as experience has since proved, all attempts to reduce the debt would have proved utterly nugatory. Mr. Pitt was perfectly aware of the natural impatience of taxation of mankind in general, and the especial desire always felt that, when the excitement of war ceased, its expenditure should draw to a termination. He foresaw, therefore, that it would be impossible to

* Mr. Pitt's speech on the budget, in 1798, affords decisive evidence that he laboured under no delusion on the subject of the operation of the sinking fund during war, but always looked forward to its effects when loans had ceased by the return of peace, as exemplifying its true character, and alone effecting a real reduction of the debt. "By means of the sinking fund," said he, "we had advanced far in the reduction of the debt previous to the loans necessarily made in the present war, and every year was attended with such accelerated salutary effects as outran the most sanguine calculation. But, having done so, we have yet far to go, as things are circumstanced. If the reduction of the debt be confined to the operations of that fund, and the expenses of the war continue to impede our plans of economy, we shall have to go far before the operation of that fund, even during peace, can be expected to counteract the effects of the war. Yet there are means by which I am confident it would be possible, in not many years, to restore our resources, and put the country in a state equal to all exigencies. Not only do I conceive that the principle is wise and the attempt practicable to procure large supplies out of the direct taxes from the year, but I conceive that it is equally wise and not less practicable to make provision for the amount of the debt incurred and funded in the same year; and if the necessity of carrying on the war shall entail upon us the necessity of contracting another debt, this principle, if duly carried into practice, with the assistance of the sinking fund to co-operate, will enable us not to owe more than we did at its commencement. I cannot, indeed, take it upon me to say that the war will not stop the progress of liquidation, but if the means I have pointed out are adopted and resolutely adhered to, I will leave us at least stationary."—*Parl. Hist.*, xxxiii., 1053, 1054

get the popular representatives at the conclusion of the war to lay on new taxes, and provide for a sinking fund to pay off the debt which had been contracted during its continuance. The only way, therefore, to secure that inestimable object, was to have the whole machinery constructed and in full activity during war, so that it might be at once brought forward into full and efficient operation upon the conclusion of hostilities; without any legislative act or fresh imposition whatever, by the mere termination of the contraction of loans.

The result has completely proved the wisdom of these views. Crippled and mangled as the sinking fund has been by the enormous encroachments made upon it by the administrations of later times, it has yet done much during the peace to pay off the debt: amply sufficient to demonstrate the solidity of the principles on which it was founded. In sixteen years, even after these copious reductions, it has discharged more than eighty-two millions of the debt, besides the addition of seven millions made by the bonus of 5 per cent. granted to the holders of the five per cents., who were reduced to four: that it has paid off in that time nearly ninety millions.* It is not a juggle which, in a time so short in the lifetime of a nation, and during the greater part of which Great Britain was labouring under severe distress in almost all the branches of its industry, was able, even on a reduced scale, to effect a reduction so considerable.

Nor has the experience of the last twenty years been less decisive as to the absolute necessity of making the provision for the liquidation of the debt part of a permanent system, to which the national faith is absolutely and unequivocally bound, and which depends for no part of its efficiency upon the votes or financial measures of the year. Since this ruinous modification of Mr. Pitt's unbending, self-poised system was introduced; since the fatal precedent was established of allowing the minister to determine, by annual votes, how much of the sinking fund was to be applied to the current services of the year, and how much reserved for its original and proper destination, the encroachment on the fund has gone on continually increasing, till at length it has, to all practical purposes, swallowed it entirely up. The sinking fund, when thus broken upon, has proved, like the chastity of a woman, when once lost, the subject of continual subsequent violation, till the shadow even of respect for it is gone. If such has been the fate of this noble and truly patriotic establishment, even when no increased burden was required to keep it in activity, and the temptation which proved fatal to its existence was merely the desire to effect a reduction of taxes long borne by the nation, it is easy to see how utterly hopeless would have been any attempt to make considerable additions to the annual burdens upon the

conclusion of hostilities with a view to effect a diminution of its public debt; and how completely dependant, therefore, the sinking fund was for its very existence upon Mr. Pitt's system of having all its machinery put in motion at the time the loans were contracted during war, and its vast powers brought into full view without any application to the Legislature, by the mere cessation of borrowing on the return of peace.*

Not a shadow of a doubt can now remain that Mr. Pitt's and Mr. Addington's anticipations were well founded, and that, if their system had been adhered to since the peace, the whole national debt would have been discharged by the year 1843. The payment of eighty millions, under the mutilated system, since 1815, affords a sample of what might have been expected had its efficiency not been impaired. Even supposing that, for the extraordinary efforts of 1813, 1814, and 1815, it had been necessary to borrow from the commissioners the whole sinking fund during each of these years, still, if the nation and its government had possessed sufficient resolution to have resumed the system with the termination of hostilities, and steadily adhered to it since that time, the debt discharged by the year 1836 would, at 5 per cent., have been nearly six hundred millions, and the sinking fund would now have been paying off above forty millions a year. Or, if the national engagements would only have permitted the sinking fund to have been kept up at ten millions yearly from the produce of taxes, and if the accumulation were to be calculated at four per cent., which, on an average, is probably not far from the truth, the fund applicable to the reduction of debt would now have been above twenty millions annually, and the debt already discharged would have exceeded three hundred and thirty millions! A more rapid reduction of

Had it been adhered to, the whole debt would have been discharged in 1843.

It is clearly the only way of effecting a reduction of the debt.

been less decisive as to the absolute necessity of making the provision for the liquidation of the debt part of a permanent system, to which the national faith is absolutely and unequivocally bound, and which depends for no part of its efficiency upon the votes or financial measures of the year. Since this ruinous modification of Mr. Pitt's unbending, self-poised system was introduced; since the fatal precedent was established of allowing the minister to determine, by annual votes, how much of the sinking fund was to be applied to the current services of the year, and how much reserved for its original and proper destination, the encroachment on the fund has gone on continually increasing, till at length it has, to all practical purposes, swallowed it entirely up. The sinking fund, when thus broken upon, has proved, like the chastity of a woman, when once lost, the subject of continual subsequent violation, till the shadow even of respect for it is gone. If such has been the fate of this noble and truly patriotic establishment, even when no increased burden was required to keep it in activity, and the temptation which proved fatal to its existence was merely the desire to effect a reduction of taxes long borne by the nation, it is easy to see how utterly hopeless would have been any attempt to make considerable additions to the annual burdens upon the

* In Mr. Pitt's Financial Resolutions in the year 1799, which embrace a vast variety of important financial details, there is the clearest indication of the lasting and permanent system to which he looked forward with perfect justice for the entire liquidation of the public debt. One of these resolutions was, "That, supposing the price of 3 per cent. stock to be on an average, after the year 1800, £90 in time of peace, and £75 in time of war, and the proportion of peace and war to be the same as for the last hundred years, the average price of peace and war will be about £85; that the whole debt created in each year of the present war will be redeemed in about 40 years from such year respectively, and the whole of the capital debt existing previous to 1793 will be redeemed in about 47 years from the present time; that from 1808 to 1833 (at which time the capital debt created in the first year of the present war would be redeemed, and the taxes applicable to the charges thereof would become disposable) taxes would be set free in each year of peace to the amount of £133,000, and of war to that of £168,000; that the amount of the sum annually applicable to the reduction of the debt would in the course of the same period gradually rise from £5,000,000 to £10,400,000; and that, on the suppositions before stated, taxes equal to the amount of the charges created during each year of the present war will be successively set free, from 1833 to 1840, to the amount in the whole of £10,500,000, and about 1846, farther taxes to the amount of £4,200,000, being the sum applicable from 1808 to the reduction of the debt existing previous to 1793; making in all, when the whole debt is extinguished in 1846, a reduction of £19,000,000 yearly." Such was the far-seeing and durable system of this great statesman; and experience has now proved that, if his principles had been adhered to, and the taxes applicable to the charges of the debt had not been imprudently repented, these anticipations would have been more than realized, notwithstanding the vast increase of the debt since that time.

Durable and far-seeing system which he had established.

funded property would not probably have been consistent, either with a proper regard to the employment of capital, or the due creation of safe channels of investment, to receive so vast an annual discharge from the public treasury.*

Everything, therefore, conspires to demonstrate that Mr. Pitt's system for the reduction of the national debt was not only founded on just principles and profound foresight, but an accurate knowledge of human nature and a correct appreciation of the principles by which such a salutary scheme was likely to be defeated, and the means by which alone its permanent efficiency could be secured. And no doubt can now remain in any impartial mind that, if that system had been resolutely adhered to, the whole debt contracted during the war with the French Revolution might have been discharged in nearly the same time that it was contracted.

What is it, then, which has occasioned the subsequent ruin of a system constructed with so much wisdom, and so long adhered to, under the severest trials, with unshaken fidelity?

The answer is to be found in the temporary views and yielding policy of succeeding statesmen; in the substitution of ideas of present expedience for those of permanent advantage; in the advent of times, when government looked from year to year, not from century to century; in the mistaking the present applause of the unreflecting many for that sober approbation of the thoughtful few, which it should ever be the chief object of an enlightened statesman to obtain. When a Greek orator was applauded by the multitude for his speech, the philosopher chid him; "For," said he, "if you had spoken wisely, these men would have given no signs of approbation." The observation is not founded

on any peculiar fickleness or levity in the Athenian people, but on the permanent principles of human nature, and that general prevalence of the desire for temporary ease over considerations of permanent advantage, which it is the great object of the moralist to combat, and to the influence of which the greatest disasters of private life are owing. And, without relieving subsequent statesmen of their full share of responsibility for an evil which will now in the end probably consign the British Empire to destruction, it may safely be affirmed that the British people, and every individual among them, must bear their full share of the burden. A general delusion seized the public mind. The populace loudly clamoured for a reduction of taxation, without any regard to the consequences, not merely on future times, but their own present advantage; the learned fiercely assailed the sinking fund, and, with hardly a single exception, branded the work of Pitt and Fox as a vile imposture, unfit to stand the test of reason or experience; the opposition vehemently demanded the remission of taxes; the government weakly granted the request. Year after year passed away under this miserable delusion; tax after tax was repealed amid the general applause of the nation;* the general concurrence in the work of destruction for a time almost obliterated the deep lines of party distinction, and, amid mutual compliments from the opposition to the ministerial benches, the deep foundations of British greatness were loosened, the provident system of former times was abandoned; revenue to the amount of forty-two millions a year surrendered without any equivalent, and the nation, when it awakened from its trance, found itself saddled forever with eight-and-twenty millions as the interest of debt, without any means of redemption, and a Democratic constitution which rendered the construction of any such in time to come utterly hopeless.

The people were entitled to demand an instant relaxation from taxation upon the termination of hostilities; the pressure of the war taxes would have been insupportable when its excitement and expenditure were over. The income-tax

Supposing the stock, in the first case, purchased on an average at 90 by the commissioners, the £534,027,464 sterling money would have redeemed a tenth more of the stock, or £587,000,000 of the stock. Supposing it bought, in the second case, at an average at 85, which would probably have been about the mark, the £342,000,000 sterling money would have purchased nearly a seventh more of stock, or £385,357,000, being just about a half of the debt existing at this moment.

Great error in not repealing at once all the direct taxes on the peace.

could no longer be endured; the assessed taxes and all the direct imposts should at once have been repealed; no man, excepting the dealers in articles liable to indirect taxation, should have paid anything to government. This was a part, and a most important part, of Mr. Pitt's system. He was aware of the extreme and well-founded discontent which the payment of direct taxes to government occasions; he knew that nothing but the excitements and understood necessities of war can render it bearable. His system was therefore to provide for the extra expenses of war entirely by loans or direct taxes, and to devote the indirect taxes to the interest of the public debt and the permanent charges of government, those lasting burdens which could not be reduced without injury to the national credit or security on the termination of hostilities. In this way a triple object was gained: the nation during the continuance of war was made to feel its pressure by the payment of heavy annual duties, while upon its conclusion the people experienced an instant relief in the cessation of those direct payments to government, which are always felt as most burdensome; and at the same time the permanent charges of the state were provided for in those indirect duties, which, although by far the most productive, are seldom complained of, from their being mixed up with the price of commodities, and so not perceived by those who ultimately bear their weight. Mr. Pitt's system of taxation, in short, combined the important objects of heavy taxation during war, instant relief on peace, and a permanent provision for the lasting expenses of the state, in the way least burdensome to the people. The influence of these admirable principles is to be seen in the custom so long adhered to, and only departed from amid the improvidence of later times, of separating, in the annual accounts of the nation, the war charges from the permanent expenses, and providing for the former by loans and temporary taxes, for the most part in the direct form, while the latter were met by lasting imposts, which were not to be diminished till the burdens to which they were applicable were discharged.

Following out these principles, the income-tax, the assessed taxes, the war malt-tax, and, in general, all the war taxes, should have been repealed on the conclusion of hostilities, or as soon as the floating debt contracted during their continuance was liquidated; but, on the other hand, the indirect taxes should have been regarded as a sacred fund set apart for the permanent expenses of the nation, the interest of the debt, and the sinking fund; and none of them repealed till, from the growth of a surplus after meeting those necessary charges, it had become apparent that such relief could be afforded without trenching on the financial resources of the state. That the growth of population and the constant efforts of general industry would progressively have enabled government, without injuring these objects, to afford such relief, at least by the repeal of the most burdensome of the indirect taxes, as the salt-tax, the soap and candle tax, and part of the malt-tax, is evident, from the consideration that the taxes given up since the peace amount to £42,000,000, and, consequently, after the repeal of the income-tax, assessed taxes, and these oppressive indirect taxes, an ample fund for the maintenance of the sinking fund,

even at the elevated rate of fifteen millions a year, would have remained.* Thus Mr. Pitt's system involved within itself the important and invaluable qualities of providing amply for the necessities of the moment, affording instant relief on the termination of hostilities, and yet reserving an adequate fund for the liquidation of all the national engagements in as short a time as they were contracted.

If, indeed, the nation had been positively unable to bear the burden of the sinking fund of fifteen millions drawn from the indirect taxes, it might have been justly argued that the evil consequences of its abandonment, however much to be deplored, were unavoidable, and, therefore, that the present hopeless situation of the debt may be the subject of regret, but cannot be reproached as a fault to any administration whatever. But, unfortunately, this is by no means the case. To all appearance, the nation has derived no material benefit from a great part of the taxes thus improvidently abandoned, but has, on the contrary, suffered in all its present interests, as well as future prospects, from the change.

In proof of this, it is only necessary to recollect that during the war the nation not only existed, but thrived under burdens infinitely greater than have been imposed since its termination, and that, too, although the exports and imports at that period were little more than half of what they have since become. During the last four years of the war, the sum annually raised by taxes was from sixty-five to seventy-five millions, while twenty years after it was from forty-five to fifty: although, during the first period, the exports ranged from forty-five to sixty millions, and the imports from twenty-five to thirty; while, during the latter, the exports had risen to seventy-five millions, and the imports to forty-five.† Without doubt, the prosperity of the latter years of the war was, in a great degree, fictitious; most certainly it depended to a certain extent on the feverish excitement of an extravagant issue of paper, and was also much to be ascribed to a large portion of the capital of the nation being at that period annually borrowed and spent in an unproductive form, to its great present benefit and certain ultimate embarrassment. It is equally clear that, if this had gone on for

Little good has been derived from this repeal of indirect taxes.

Immense burdens under which the nation prospered during the war.

some years longer, irreparable ruin must have been the result. But there is a medium in all things. As much as the public expenditure before 1816 exceeded what a healthful state of the body politic could bear, so much has the expenditure since that time fallen short of it. Violent transitions are as injurious in political as private life. To pass at once from a state of vast and unprecedented expenditure to one of rigid and jealous economy, is in the highest degree injurious to a nation; it is like making a man who has for years drank two bottles of port a day suddenly take to toast and water. It may sometimes be unavoidable, but, unquestionably, the change would be much less perilous if gradually effected.

It was unquestionably right, at the conclusion of the war, to have made as large a reduction as was consistent with the public security in the army and navy, and to stop at once the perilous system of borrowing money. Such a reduction at once permitted the repeal of the whole direct war-taxes. But having done this, the question is, Was it expedient to go a step farther, and make such reductions in the indirect taxes, of which no serious complaint was made, as amounted to a practical repeal of the sinking fund? That was the ruinous measure! The maintenance of that fund at twelve or fifteen millions a year, raised from taxes, with its growing increase, would, to all appearance, have been a happy medium, which, without adding to, but, on the contrary, in the long run diminishing the national burdens, would, at the same time, have prevented that violent transition from a state of expenditure to one of retrenchment, under the effects of which, for eighteen years after the peace, all branches of industry, with only a few intervals, continued to labour.

No one branch of the government expenditure would have gone farther to uphold, during this trying time, the industry and credit of the country, and diffuse an active demand for labour through all classes, than that which was devoted to the sinking fund. Such a fund, beginning at twelve or fifteen millions a year derived from taxes, and progressively rising to twenty or thirty millions, annually applied to the redemption of stock, must have had a prodigious effect, both in upholding credit and spreading commercial enterprise through the country. It would have produced an effect precisely opposite to that which the annual absorption of the same sum, during the war, in loans occasioned. The public funds, under the influence of the prodigious and growing purchases of the commissioners, must have been maintained at a very high level; it is probably not going too far to say, that since 1820 they would have been constantly kept from 90 to 100. The effect of such a state of things in vivifying and sustaining commercial enterprise, and counteracting the depression consequent upon the great diminution of the government expenditure in other departments, must have been very great. The money given for the stock purchased by the commissioners would have been let loose upon the country; their operations must have continually poured out upon the nation a stream of wealth, constantly increasing in size, which, in the search for profitable investment, could not have avoided giving a most important stimulus to every branch of national industry. The sinking fund must have operated like a great

forcing-pump, which drew a large portion of the capital of the country annually out of its unproductive investment in the public funds, and directed it to the various beneficial channels of private employment. Doubtless the funds necessary for the accomplishment of this great work must have been drawn from the nation, or the proceeds of the stock purchased by the commissioners, just as the produce of the taxes is all extracted from the national industry; but experience has abundantly proved that such a forcible direction of a considerable part of the national income to such a productive investment is often more conducive to immediate prosperity, as well as ultimate advantage, than if, from an undue regard to popular clamour, it is allowed to remain at the disposal of individuals. It is like compelling a spendthrift and embarrassed landowner not only to provide annually for the interest of his debts, but to pay off a stated portion of the principal, which, when assigned to his creditors, is immediately devoted to the fertilizing of his fields and the draining of his morasses. Nor is this all. The high price of the funds consequent upon the vast and growing purchases of the commissioners would have gone far not only to keep up that prosperous state of credit which is essential to the well-being of a commercial country, but would have induced numbers of private individuals to sell out in order to realize the great addition to their capitals which the rise of the public securities had occasioned. To assert that this forced application yearly of a considerable portion of the national capital to the redemption of the debt would have altogether counteracted the decline in the demand for labour consequent on the transition from a state of war to one of peace, would be going farther than either reason or experience will justify; but this much may confidently be asserted, that the general prosperity consequent on this state of things could not have failed to have rendered the taxation requisite to produce it comparatively a tolerable burden; that the nation would, to all appearance, have been much more prosperous than it has been under the opposite system, and, at the same time, would have obtained the incalculable advantage of having paid off, during these prosperous years, above two thirds of the national debt. This prosperity doubtless would have been partly owing to a forced direction of capital; but whatever danger there may be in such a state of things while debt is annually contracted, there is comparatively little when it is continued only for its discharge; and when an artificial system has contributed to the formation of a burden, it is well that it should not be entirely removed till that burden is reduced to a reasonable amount.

Every one, when this vast reduction of indirect taxes was going on, to the entire destruction of the sinking fund and Mr. Pitt's provident system of financial policy, looked only, even with reference to present advantage, to one side of the account. They forgot that, if the demands of government on the industry of the nation were rapidly reduced, their demands on government must instantly undergo a similar diminution; that, if the Exchequer ceased to collect seventy millions a year, it must cease also to expend it. Every reduction of taxation, even in those branches where it is not complained of, was held forth as an alleviation of the burdens of the nation, and a reasonable ground for popularity to its rulers; whereas, in

Argument on this subject.

Temporary advantages which would have attended keeping up the sinking fund.

Public errors which led to its abandonment, and their distressing effects.

truth, the relief even at the moment was more nominal than real, as though a diminution of those burdens was effected: it took place frequently in quarters where they were imperceptible, and drew after it an instantaneous and most sensible reduction in the demand for labour and the employment of the industrious classes, at a time when it could ill be spared, from the same effect having simultaneously ensued from other causes. Great part of the distress which has been felt by all classes since the peace was the result of the general diminution of expenditure, which the too rapid reduction of so many indirect taxes, and consequent abandonment of the sinking fund, necessarily occasioned, and which the maintenance of its machinery till it had fulfilled its destined purpose would, to a very great degree, have alleviated. It augments our regret, therefore, at the abandonment of Mr. Pitt's financial system, that the change had not even the excuse of present necessity or obvious expedience for its recommendation, but was the result of undue subservience to particular interests, or desire for popularity on the part of our rulers, unattended even by the temporary advantages for the sake of which its incalculable ultimate benefits were relinquished.

Lord Castlereagh made a most manly endeavour, in 1816, to induce the people to submit for a few years to that elevated rate of taxation by which alone permanent relief from the national embarrassments could be expected; but he committed a signal error in the tax which he selected for the struggle, and deviated as much from Mr. Pitt's principles in the effort to maintain the heavy impost as subsequent administrations did in their abandonment of others of a lighter character. The income-tax, being a direct war impost of the most oppressive and invidious description, was always intended by that great statesman to come to a close with the termination of hostilities; and its weight was so excessive, that it was impossible and unreasonable to expect the people to submit any longer to its continuance. Nothing could be more impolitic, therefore, than to commit government to a contest with the people on so untenable a ground. It was the subsequent repeal of indirect taxes to the amount of above five-and-twenty millions a year, when they were not complained of, and the fall in the price of the taxed articles, from the change in the value of money, had rendered their weight imperceptible, which was the fatal deviation from Mr. Pitt's principles. The administrations by whom this prodigious repeal was effected are not exclusively responsible for the result: it is not unlikely, that from the growing preponderance of the popular branch of the Constitution, it had become impossible to carry on the government without the annual exhibition of some such fallacious benefit, to gain the applause of the multitude; and it is more than probable that, from the excessive influence which in later years it acquired, the maintenance of any fixed provident system of finance had become impossible. But they are to blame, and posterity will not acquit them of the fault, for not having constantly and strenuously combated this natural, though ruinous popular weakness; and if they could not prevail on the House of Commons to adhere to Mr. Pitt's financial system, at least laid on them the responsibility of all the consequences of its abandonment.

It was impossible to explain Mr. Pitt's system

for the reduction of the debt, without anticipating the course of events, and unfolding the ruinous results which have followed the departure from its principles. The paramount importance of the subject must plead the author's apology for the anachronism: and it remains now to advert, with a different measure of encomium, to the funding system on which that statesman so largely acted, and the general principles on which his taxation was founded.

It is evident that in some cases the funding system, or the plan of providing for extraordinary public expenses by loans, of the funding system. the interest of which is alone laid as a burden on future years, is not only just, but attended with very great public advantage. When a war is destined apparently to be of short endurance, and a great lasting advantage may be expected from its results, it is often impossible, and, if possible, would be unjust, to lay its expenses exclusively upon the years of its continuance. In ordinary contests, indeed, it is frequently practicable, and when so, it is always advisable, to make the expenses of the year fall entirely upon its income, so that at the conclusion of hostilities no lasting burden may descend upon posterity. But in other cases this cannot be done. When, in consequence of the fierce attack of a desperate and reckless enemy, it has become necessary to make extraordinary efforts, it is often altogether out of the question to raise supplies in the year adequate to its expenditure: nor is it reasonable, in such cases, to lay upon those who, for the sake of their children as well as themselves, have engaged in the struggle, the whole charges of a contest of which the more lasting benefits are probably to accrue to those who are to succeed them. In such cases, necessity in nations, not less than individuals, calls for the equalization of the burden over all those who are to obtain the benefit; and the obvious mode of effecting this is by the funding system, which, providing at once by loan the supplies necessary for carrying on the contest, lays its interest as a lasting charge on those for whose behoof the debt had been contracted. Nor is it possible to deny, amid all the evils which the abuse of this system has occasioned, its astonishing effect in suddenly augmenting the resources of a nation; or to resist the conclusion deducible from the fact, that it was to its vigorous and happy application at the close of the war that the extraordinary successes by which it was distinguished are in a great degree to be ascribed.*

But this system, like everything good in human affairs, has its limits; and if extraordinary benefits may sometimes arise from its adoption, extraordinary evils may still more frequently originate in its abuse. Many individuals have been elevated, by means of loans contributed at a fortunate moment, to wealth and greatness; but many more have been involved, by the fatal command of money which it confers for a short period, in irretrievable embarrassments. Unless suggested by necessity

* Loans contracted by the British government in the latter years of the war.

1812, £24,000,000	1814, £58,763,000
1813, 27,871,000	1815, 18,500,000

Of these great loans upward of £12,000,000, was, in 1813, 1814, and 1815, applied annually to foreign powers; in consequence of which, the whole armies of Europe came to be arrayed in British pay on the banks of the Rhine; while, at the same time, the Duke of Wellington, at the head of 60,000 men, was maintained on the southern frontier of France.—MOREAU'S *Tables*; PEBBER, 246.

and conducted with prudence; unless administered with frugality and followed by parsimony, borrowing is, to nations not less than individuals, the general road to ruin. It is the ease of contracting compared with the difficulty of discharging; the natural disposition to get a present command of money, and leave the task of paying it off to posterity, which is the temptation that, to communities not less than single men, so often proves irresistible. Opulent nations, whose credit is high, become involved in debt from the same cause which has drowned almost all the great estates in Europe with mortgages: the existence of the means of relieving present difficulties, by merely contracting debt, is more than the firmness either of the heads of families or the rulers of empires can resist. And there is this extraordinary and peculiar danger in the lavish contraction of debt by government, that by the great present expenditure with which it is attended, a very great impulse is communicated at the time to every branch of industry, and thus immediate prosperity is generated out of the source of ultimate ruin.

Mr. Pitt was fully aware both of the immediate advantages and ultimate dangers of the funding system. His measures, accordingly, varied with the aspect which the war assumed, and the chances of bringing it to an immediate issue, which present appearances appeared to afford. During its earlier years, when the Continental campaigns were going on, and a rapid termination of the strife was constantly expected, as was the case with the Spanish Revolution in 1823, or the Polish in 1831, large loans were annually contracted, and the greater part of the war-supplies of the year were raised by that means; provision being made for the permanent raising of the interest, and the sinking fund for its extinction, in the indirect taxes which were simultaneously laid on, and to the maintenance of which the national faith was pledged, till the whole debt thus contracted, principal and interest, was discharged.* It is no impeachment of the wisdom of this system, so far as finance goes, that the expectations of a speedy termination of the contest were constantly disappointed, and that debt to the amount of £116,000,000 was contracted before the Continental peace of Campo Formio in 1797, without any other result than a constant addition to the power of France. The question is not whether the resources obtained from these loans were beneficially expended, but whether the debts were contracted yearly under a belief, founded on rational grounds, that by a vigorous prosecution of the contest, it might speedily be brought to a successful issue. That this view, so far as mere finance considerations are concerned, was well founded, is obvious from the narrow escapes which the French Republic repeatedly made during that period, and the many occasions on which the jealousies of the allies, or the niggardly exertion of its military resources by Great Britain, threw away the means of triumph when within their grasp. The financial measures of the British ministry, therefore, during this period, were justifiable and prudent:

* 1793,	Loan contracted,	£4,500,000
1794	12,907,451	
1795	42,090,646	
1796	42,736,196	
1797	14,629,000	

£116,863,293

—MOREAU'S Tables.

the real error consisted in the misapplication, or undue husbanding of its land-forces, for which it is not so easy to find an apology.

But after the peace of Campo Formio this system of lavish annual borrowing, in expectation of an immediate and decisive result, necessarily required a modification. Great Britain was then left alone in the struggle.

Modification which they received from the first Continental peace in 1797.

Her Continental allies had all disappeared from the field of battle; and the utmost that she could now expect was to continue a defensive warfare, till time or a different series of events had again brought their vast armies to her side. To have continued the system of borrowing for the war expenses of the year, in such a state of the contest, would have been to go on with measures which were likely to lead to perdition. The war having now assumed a defensive and lasting complexion, the moment had arrived when it became necessary to bring the taxes within the year nearer to a level with the expenditure. This change, and the reasons for it, are thus detailed in Mr. Pitt's speech on the budget for the year 1798: "Nineteen millions is the sum which is required for extraordinary expenses in the present year. According to the received system of financial operations, the natural and ordinary mode of providing for this would be by a loan. I admit that the funding system, which has so long been the established mode of supplying the public wants, is not yet exhausted, though I cannot but regret the extent to which it has been carried. If we look, however, at the general diffusion of wealth and the great accumulation of capital; above all, if we consider the hopes which the enemy has of wearing us out by the embarrassments of the funding system, we must admit that the true mode of preparing ourselves to maintain the contest with effect and ultimate success is to reduce the advantages which the funding system is calculated to afford within due limits, and to prevent the depreciation of our national securities. We ought to consider how far the efforts we shall exert to preserve the blessings we enjoy will enable us to transmit the inheritance to posterity unencumbered with those burdens which would cripple their vigour, and prevent them from asserting that rank in the scale of nations which their ancestors so long and gloriously maintained. It is in this point of view that the object ought to be considered. Whatever objections might have been fairly urged against the funding system in its origin, no man can suppose that, after the form and shape which it has given to our financial affairs, after the heavy burdens which it has left behind it, we can now recur to the notion of making the supplies raised within the year, on such a scale of war expense as we are now placed in, equal the expenditure. If such a plan, how desirable soever, is evidently impracticable, some medium, however, may be found to draw as much advantage from the funding system as it is fit, consistently with a due regard to posterity, to afford, and at the same time to obviate the evils with which its excess would be attended. We may still devise some expedient by which we may contribute to the defence of our own cause and to the supply of our own exigences, by which we may reduce within equitable limits the accommodation of the funding system, and lay the foundation of that quick redemption which will prevent the dangerous consequences of an overgrown accumulation of our public debt.

"To guard against the undue accumulation of the public debt, and to contribute that share to the struggle in which we are engaged which our abilities will enable us, without inconvenience to those who are called upon to contribute, to afford, appears essentially necessary. I propose, with this view, to reduce the loan for this year (1798) to twelve millions, and to raise seven millions by additional taxation within the year. I am aware that this sum does far exceed anything which has been raised at any former period at one time; but I trust that, whatever temporary sacrifices it may be necessary to make, the House will see that they will best provide for the ultimate success of the struggle by showing that they are determined to be guided by no personal considerations, and that while they defend the present blessings they enjoy, they are not regardless of posterity. If the sacrifices required be considered in this view; if they be taken in reference to the objects for which we contend, and the evils we are labouring to avert, great as they may be compared with former exertions, they will appear light in the balance.

"The objects to be attained in the selection of the tax to meet this great increase are threefold. One great point is, that the plan should be diffused as extensively as possible, without the necessity of such an investigation of property as the customs, the manners, and the pursuits of the people would render odious. The next is, that it should exclude those who are least able to contribute or furnish means of relief. The third, that it should admit of those abatements which, in particular instances, it might be prudent to make in the portion of those who might be liable under its general principles. No scheme, indeed, can be practically carried into execution in any financial arrangement, much more in one embraced in such difficult circumstances as the present, with such perfect dispositions as to guard against hardships in every individual instance; but these appear to me to be the principles which should be kept in view in the discussion of the proper method to be adopted for meeting the large deficiency, which, from the contraction of the loan, it will become necessary to make good by taxation within the present year.*

In pursuance of these admirable principles, Trebling of the assessed taxes, which fell chiefly on the rich, such as servants, horses, carriages, and that the house and window tax, which in a great measure are borne by the middling ranks, should only be doubled; both under various restrictions, to restrain their severity in affecting the humbler class of citizens. This was agreed to by the committee of the House of Commons; and thus the first step was made in the new system of contracting the loan within narrower limits, and making the supplies raised within the year more nearly approach to its expenditure. But the produce of the tax fell greatly short of the expectations of government, as they had calculated on its reaching seven millions, whereas it never cleared four millions and a half; a deficiency which rendered a recurrence to borrowing necessary in that very year.†

The trebled assessed taxes thus imposed, however, were, according to Mr. Pitt's plan, to be con-

tinued only for a limited time, and were to be a kept up only as a war-burden. "I propose," said he, "that the increased assessment now voted shall be continued till the principal and interest of the loan contracted this year shall be discharged: so that after the seven millions shall have been raised within this year, the same sums continued next year, with the additional aid of the sinking fund, will pay off all that principal and intermediate interest. If you feel yourselves equal to this exertion, its effects will not be confined to the benefits I have stated in the way of general policy; it will go to the exonerating of the nation from increased burdens. Unless you feel that you have a right to expect that, by less exertion, you will be equally secure, and indulge in the hope that, by stopping short of this effort, you will produce a successful termination of the war, you must put aside all apprehensions of the present pressure, and by vigorous exertion, endeavour to secure your future stability, the happy effects of which will soon be seen and acknowledged. I am aware it will be said it would be fortunate if the system of funding had never been introduced, and that it is much to be lamented that it is not terminated; but if we are arrived at a moment which requires a change of system, it is some encouragement for us to look forward to benefits which, on all former occasions, have been unknown, because the means of obtaining them were neglected. Raise the present sums by taxation in two years, and you and your posterity are completely exonerated from it; but if, on the other hand, you fund its amount, it will entail an annual tribute for its interest, which in forty years will amount to no less than forty millions. These are the principles, this is the conduct, this is the language fit for men legislating for a country, that from its situation, character, and institutions, bears the fairest chance of any in Europe for perpetuity. You should look to distant benefits, and not work in the narrow, circumscribed sphere of shortsighted, selfish politicians. You should put to yourselves this question, the only one now to be considered, 'Shall we sacrifice, or shall we save to our posterity a sum of between forty and fifty millions sterling?' And above all, you should consider the effect which such a firm and dignified conduct would have on the progress and termination of the present contest, which may, without exaggeration, involve everything dear to yourselves, and decide the fate of your posterity."* Here was a great change of system, and a remarkable approximation to a more statesmanlike and manly mode of raising the supplies required for the existing contest. Instead of providing taxes adequate to the interest merely of the sums borrowed, direct burdens were now to be imposed, which in two or three years would discharge the whole principal sums themselves: an admirable plan, and the nearest approximation which was probably then practicable to the only safe system of finance, that of making the supplies raised within the year equal or nearly equal to the expenditure, but which was soon departed from amid the necessities or profusion of future years; and which, from the heavy burdens which it imposes at the moment, and from its withdrawing as much capital from the private employment of labour as it added to the public, was necessarily attended both with greatly more suffering, and far less

* Parl. Hist., xxxiii., 1042, 1045.

counteracting prosperity, than the more encouraging and delusive system of providing for all emergencies by lavish borrowing, which had previously, and for so long a period, been adopted.

The new system, thus commenced, was continued with more or less resolution during all the remainder of Mr. Pitt's administration. But in spite of the clear perception which all statesmen had now attained of the ultimate dangers of the funding system, it was found to be impossible to continue the new plan to the full extent originally contemplated by its author. In the next year, the war again broke out under circumstances the most favourable to the European powers, and sound policy forbade a niggardly system of finance, when, by a great combined effort, it appeared possible to attain, during the absence of Napoleon on the sands of Egypt, all the objects of the war in a single campaign. Impressed with these considerations, Mr. Pitt proposed the income-tax in 1799; a great step in financial improvement, and, if considered as a war impost, and regulated according to a just scale, the most productive and expedient that could be adopted. The grounds on which this great addition to the national burdens was proposed, were thus stated by Mr. Pitt: "The principles of finance which the House adopted last year were, first, to reduce the total amount to be at present raised by loan; and next, to provide for the deficiency by a temporary tax, which should extinguish the loan within a limited time. The modifications, however, which it became necessary to introduce into the increase of the assessed taxes last year, considerably reduced its amount, and it is now necessary to look for some more general and productive impost, which may enable us to continue the same system of restraining the annual loan within reasonable limits. With this view, it is my intention that the presumption on which the assessed taxes is founded shall be laid aside, and that a general tax shall be imposed on all the leading branches of income. No scale, indeed, can be adopted which shall not be attended with occasional hardship, or withdraw from the fraudulent the means of evasion; but I trust that all who value the national safety will co-operate in the desirable purpose of obtaining, by an efficient and comprehensive tax upon real ability, every advantage which flourishing and invigorated resources can confer upon national efforts."*

In pursuance of these principles, he proposed that no income under £60 a year should pay anything; that from that up to £200 a year, it should be on a graduated scale; and that for £200 a year and upward, it should be ten per cent. No one was to be called on to disclose to the commissioners; but if he declined, he was to be liable to be assessed at the sum which they should fix: if he gave in a statement of his receipts, he was, if required, to confirm it on oath. Funded property was to be assessed as well as any other sources of income, and the profits of tenants were to be estimated at three fourths of the rack-rent of their lands. The total taxable income of Great Britain he estimated at £102,000,000 a year, and calculated the produce of the tax at ten millions sterling. In consideration of this great supply, he proposed to reduce the trebled assessed

taxes to their former level, and to restrict the loan to £9,500,000, for which the income-tax was to be mortgaged, after the mortgage imposed for the loan of the former year had been discharged.*

In opposition to this bill, it was urged by Sir William Pulteney and a considerable body of respectable members, "That the general and wise policy of the country, from the Revolution downward, had been to lay taxes on consumption, and consumption only; and to this there was no exception but the land-tax, which was of inconsiderable amount; for even the window-tax was a burden on a luxury which might be diminished at pleasure. Now, however, the dangerous precedent is introduced of levying a heavy impost, not on expenditure or consumption, but income: that is, of imposing a burden which by no possibility can be avoided. If this principle be once introduced, it is impossible to say where the evil may stop; for what is to hinder the government to increase the tax to a fifth, a third, or even a half; that is, to introduce the confiscations which have always distinguished arbitrary governments, and have been in an especial manner the disgrace of the French Revolution? The great danger of this tax, therefore, is, that it not only sanctions a most odious and dangerous inquisition into every man's affairs, but it is so calculated as to weigh with excessive severity on the middling orders of society, while it would bear but slightly in comparison upon the highest, and totally exempt the lowest. It would destroy the middling class, and do it soon; it would totally prevent the accumulation of small capitals, the great source of general prosperity, and then we should have only two classes in the community, and a miserable community it would be, of noblemen and peasants. The principle that every man should contribute according to his means is doubtless just; but is this a contribution according to means? Quite the contrary; it is a tax which falls with undue severity upon some classes, and improper lightness on others. A person possessing permanent and independent income might spend what portion of it he chose without injury to his heirs; but income resulting from personal industry or from profession stood in a very different situation, for it was necessary that a part of the income of these descriptions should be laid by as a provision for old age or helpless families. Expenditure, therefore, is the only sure criterion of taxation, because it alone is accommodated to the circumstances or necessities of each individual taxed: and if a few misers, under such a system, may avoid contributing their proper share, they are only postponing the day of payment to their heirs, who in all probability will be the more extravagant; and far better that such insulated individuals should escape, than the far-spread injustice should be inflicted, which would result from the adoption of the proposed alteration."†

The income-tax, notwithstanding these objections, was adopted by the House of Commons in the year 1799; for the loan of that year being, for Great Britain and Ireland, £18,500,000, besides £3,000,000 of Exchequer bills. But in comparing the amount of the loans which would have been necessary if this system of increasing the supplies raised within the year had not been

* *Parl. Hist.*, xxxiv., 5, 6.

† *Ib.*, xxxiv., 134, 147.

adopted, with that actually contracted under the new system, it was satisfactorily shown by Mr. Pitt that no less than £120,000,000 would ultimately be saved to the nation by the more manly policy, when the interest which was avoided was taken into account: a striking proof of the extraordinary difference to the ultimate resources of a country, which arises from raising the supplies within the year, and providing them in great part by the funding system.*

The regulation of Mr. Pitt, however, in regard to these direct taxes, was, in one important particular, a deviation from his general financial policy, and the embarrassing consequences of this deviation speedily became conspicuous. At the first imposition of the treble assessment, it was intended as an extraordinary resource, which there was no likelihood would be required beyond one or two years, and, in consequence, it was mortgaged for a considerable proportion of the loans contracted in the years when it was in operation; and the same principle was continued when it was commuted for the income-tax. But when this system continued for several years in succession, it came to violate the principle that these direct taxes, being a painful impost, should be continued only while the war lasted; for in the years from 1793 to 1801 the amount thus fixed as a preferable burden on the direct war-taxes was no less than fifty-six millions. The magnitude of this mortgage obliged Mr. Pitt, in 1801, to return to his old mode of contracting loans, by providing, in the increase of indirect taxes, for their interest and the sinking fund required for their redemption; and in 1802, when Mr. Addington came to arrange the finances for a peace establishment, he got quit altogether of this embarrassing load on the direct taxes, which would have required them, contrary to all principle, to be continued for nine years after the war had ceased, and boldly funded at once the whole of this £56,000,000, as well as £40,000,000 of unfunded debt which existed at the end of the war; and for the whole of this immense sum of £96,000,000 he contrived to find sufficient taxes, even when adhering to Mr. Pitt's system of making provision in the funding of loans, not only for its annual interest, but the sinking fund destined for its redemption. There can be no doubt but this was a very great improvement, and that it restored this branch of our finances to their true principle, which is, that the whole sums required for the interest and redemption of the debt should be raised by indirect taxes, and direct burdens reserved only for the extraordinary efforts intended during the continuance of the war—to make the supplies raised within the year as nearly as possible equal its expenditure.†

The changes which have now been mentioned embraced all the leading principles of Mr. Pitt's financial system. In subsequent years the same policy was adopted which had been introduced with so much success in later times, of augmenting as much as possible the supplies raised within the year, and diminishing as much as might be the loan which it was still necessary annually to contract. And of the success with which this system was attended, and the rapid growth of the machinery erected for the extinction of the debt, the best evidence is preserved in the honest testimony of his Whig successor in the important office of chancellor of the Exchequer: "In the

year 1803," said Lord Henry Petty, afterward Lord Lansdowne, "the proportions of the sinking fund to the unredeemed debt was as one to eighty-two; the former being £5,835,000, and the latter £480,572,000. But in the year ending the 1st of February, 1806, the sinking fund amounted to £7,566,000, and the unredeemed debt was then £517,280,000, making the proportion one in sixty-eight. After this it is unnecessary for me to enter into any eulogium on the sinking fund, or to detain the House with any panegyric on its past effects or future prospects. Its advantages are now fully felt in the price of stock and contracting of loans; and, independent of all considerations of good faith, which would induce the House to cling to it as their sheet-anchor for the future, they were pledged to support it, having had positive experience of its utility. And of the vast importance of raising a great part of the supplies within the year, no better proof can be desired than is furnished by the fact that during the first ten years of the war the increase of the debt was £253,000,000, being at the rate, on an average, of twenty-five millions a year;* whereas during the three years of the present war, from 1803 downward, the total sum borrowed has been £36,000,000, being at the rate of twelve millions a year only."

With the exception, however, of the war taxes thus imposed for a special purpose, and which were pledged to be temporary burdens, enduring only for the year in which they were raised, or at most for a year or two after it, all the other taxes imposed by Mr. Pitt were in the indirect form. And in particular, the interest of the loans annually contracted, when laid as a permanent burden on the nation, and for the immediate redemption of the principals of which the war taxes were not mortgaged, as was done in 1799, were all provided for in this mitigated form. The wisdom of this arrangement cannot be better stated than in the words of Mr. Hume: "The best taxes are such as are levied upon consumption, especially those of luxury, because such taxes are least felt by the people. They seem in some measure voluntary, since a man may choose how far he will use the commodity which is taxed. They are paid gradually and insensibly; they naturally produce sobriety and frugality, if judiciously imposed; and, being confounded with the natural price of the commodity, they are scarcely perceived by the consumers. Their only disadvantage is, that they are expensive in the levying. Taxes, again, upon possessions, are levied without expense, but have every other disadvantage. Most statesmen are obliged to have recourse, however, to them, in order to supply the deficiencies of the other. Historians inform us that one of the chief causes of the destruction of the Roman state was the alterations which Constantine introduced into the finances, by substituting a universal direct tax in lieu of almost all the tithes, customs, and excise which formerly composed the revenue of the Empire. The people in all the provinces were so grinded by this imposition, that they were glad to take refuge under the conquering arms of the barbarians, whose dominion, as they had fewer necessities and less art, was found to be preferable to the refined tyranny of the Romans."† It is to be regarded, therefore, as a capital excellence in Mr. Pitt's

Advantages of the new system.

embraced all the leading principles of Mr. Pitt's financial system.

In subsequent years the same policy was adopted which had been introduced with so much success in later times, of augmenting as much as possible the supplies raised within the year, and diminishing as much as might be the loan which it was still necessary annually to contract. And of the success with which this system was attended, and the rapid growth of the machinery erected for the extinction of the debt, the best evidence is preserved in the honest testimony of his Whig successor in the important office of chancellor of the Exchequer: "In the

Mr. Pitt's permanent taxes were all in the indirect form. Their advantages.

financial measures, that he not only provided in permanent imposts for the interest of the whole public debt and the sinking fund necessary for its redemption, but made that provision exclusively in taxes in the indirect form, the burden of which is imperceptible, and is never the subject of any general complaint; whereas the direct taxes, which are always felt as so oppressive, were reserved, as a last resource, for the unavoidable exigencies of war, and specially set apart for those years only when the excitement and necessities of the actual contest were experienced.

In addition to these forcible reasons for ever, Arguments except in cases of obvious necessity, for indirect and when its resources are exhausted, taxation. preferring indirect to direct taxation, there is another of perhaps still greater importance, which has never yet met with the attention it deserves. It has often been observed with surprise by travellers, that though the sums which are extracted from the people in a direct form by the Turkish pachas or the Indian rajahs have frequently the effect of totally ruining industry, yet they are inconsiderable when compared to the immense revenue derived from the customs and excise in the European states, without any sensible impediment to its exertions. The reason is obvious: it consists in the difference upon the meadows beneath, between drawing off water from the fountain-head and drawing it off at a vast distance below, after it has fertilized innumerable plains in its course. If you abstract money in a direct form from the cultivator or the artisan, the revenue taken goes at once from the producer to the public treasury; but if you withdraw it from the person who ultimately sells the manufactured article to the consumer, it has, before it is withdrawn, put the industry of a dozen different classes of persons in motion. The sum received by the government may be the same in both cases: but how immense the difference between the effect upon general industry when it is seized upon by the tax-collector early in its course, and only withdrawn after it has given all the encouragement to different branches of employment it is capable of effecting! Fifty different individuals are often put to their shifts to meet the burden of an indirect tax—a direct one falls in undivided severity on one alone. So important is this distinction, that it may safely be affirmed that no nation ever yet was ruined by indirect taxation; nor can it be so, for before it becomes oppressive it must cease to be productive. Many, however, have been exterminated by much smaller sums levied in the direct form, that method of raising the supplies being attended with this most dangerous quality, that it is often most productive when it is trenching most deeply on the sources of future existence.

Nor is there any foundation for the obvious Reply to the objections against them. industry are taxed in the person of the consumer, he must diminish the quantity which he can purchase, and thus industry will be as effectually paralyzed as if the impost were laid directly upon the producer. Plausible as this argument undoubtedly is, the common sense and experience of mankind have everywhere rejected its authority. No complaint was made during the war of fifty-five millions levied annually, by means of indirect taxes, on the people of Great Britain; but so burdensome was the income-tax, producing only fourteen millions a

year, felt to be, that all the efforts of government could not keep it on for one year after its termination. When the voice of the people was directly admitted, through the portals opened by the Reform Bill, upon the Legislature, it was not the forty-two millions levied annually in the indirect form, but the four millions and a half extracted directly by the assessed taxes, which was made the subject of such loud complaint that a great reduction in those burdens became indispensable. The people, however unfit to judge of most matters in legislation, may be referred to as good authority in the estimation of the burdens which are most oppressive upon them at the moment. Nor is it difficult to perceive the reason of this universal opinion among all practical men, how adverse soever it may be to the theoretical opinions of philosophers. Indirect taxes, if judiciously laid on, and not carried to such an excess as to render them unproductive, often do not, in reality, fall on any one individual with overwhelming severity; they are defrayed by the economy, skill, or improved machinery of all the many persons who are employed in the manufacture of the taxed article. The burden is so divided as to be imperceptible. Portioned out among fifteen or twenty different hands, the share falling on each is easily compensated. A slight increase in the economy of the manufacturer, a trifling improvement in the machinery of its production, in the many hands engaged in its preparation, more than extinguish the burden. The proof of this is decisive: the manufactures of England not only existed, but prospered immensely, under the combined pressure of the heavy indirect taxation and the enormous rise of prices occasioned by the suspension of cash payments during the war; many of them, though the value of money had fallen to a half during its continuance, were sold at half the price at its termination which they were at its commencement. Of all the parts of Mr. Pitt's financial system, none was more worthy of admiration than that which provided for all the permanent expenses of the nation in the indirect taxes: of all the errors committed by his successors, none has been more prejudicial than the obstinate retention of direct, and the lavish relinquishment of indirect taxes.*

* It results from these principles, that when an indirect tax is very heavy, and laid on a raw material, or one subjected to but a slight manufacturing process, it is frequently impossible for the producer either to compensate the tax by increased skill or economy of the article, or lay it upon the consumer. In such cases the tax ceases to be an indirect impost on consumption; it becomes a direct burden on production, and if unduly heavy, may terminate in the total ruin of the class on whom it was imposed. A signal instance of this occurred in regard to the heavy impost duties on sugar. The burden formerly of 30s., then 27s., and now of 24s. the hundred weight on West India sugar, was little felt during the war, when that article sold for forty or forty-five pounds the hogshead (from £6 to £6 10s. the cwt.); but when, on the return of peace, prices fell to £12 or £15 the hogshead (from 50s. to 60s. the cwt., including duty), it became intolerably severe. It then became nearly a hundred per cent. on the rude material; the same as if a duty of fifty shillings a quarter had been laid on wheat raised in England for the home consumption. Nor had either the planter or the refiner the means of eluding this tax to any considerable degree, by either raising the price of the article to the consumer, or diminishing by economy or machinery the cost of its production: the cost of raising rude agricultural produce can hardly ever be diminished to any considerable extent by the application of machinery; and the stoppage of the slave-trade necessarily, in the first instance at least, increased the cost of production, while the only way in which it seemed possible to render the burden tolerable was by augmenting the quantity raised, which necessarily depressed to an undue extent the price

Cases in which indirect taxes, by being excessive, become direct burdens on production.

Such were the general features of Mr. Pitt's financial policy. Decried by the spirit of party during his own lifetime, and that of the generation which immediately succeeded; stigmatized by the age which found itself oppressed by the weight of the burdens he had imposed, and which had forgotten the evils he had averted; obliterated almost, amid the temporary expedients and conceding weakness of the governments by whom he was succeeded, it is yet calculated to stand the test of ages, and appears now in imperishable lustre from the bitter and experienced, though now irrevocable consequences of its abandonment. Grandeur of conception, durability of design, far-seeing sagacity, were its great characteristics. It was truly conceived in a heroic spirit. Burdening, perhaps oppressing the present generation, it was calculated for the relief of future ages: inflicting on its authors a load of present odium, it was fitted to secure the blessings of posterity when they were mouldering in their graves. Founded on that sacrifice of the present to the future which is at once the greatest violence to ordinary inclinations, the invariable mark of elevated understanding, and the necessary antecedent of great achievements, it required for its successful development patience, self-denial, and magnanimity in subsequent statesmen equal to his own. It fell because such virtues could not be found in the age by which he was succeeded. In contemplating his profound plans for the ultimate and speedy liberation of England, even from the enormous burdens entailed on its finances by the Revolutionary war, we

which it bore in the market. Being unable to diminish the cost of production from these causes, all the efforts of the planters to make head against their difficulties and defray the interest of their mortgages, by raising more extensive crops of sugar, only tended to lower prices and throw the taxes as an exclusive burden on themselves. The proof of this is decisive: the price of sugar in America is generally higher than in England, if the duty be deducted, sometimes by fully a third. In 1831, the price per cwt. was in Great Britain 23s. 8d., excluding duty, while in America it was 26s. per cwt. in the same year. Taking into view the greater expense of freight to Britain than America from these islands, there can be no doubt that almost the whole tax has been paid in many years by the producers, amounting though it now does to 100 per cent. Nothing more is requisite to explain the almost total ruin which has fallen on these splendid colonies, even before the last fatal measure of emancipating the slaves was carried into effect.—See *Comma's Report*, 1832, on *West Indies*, p. 7.

In all fiscal measures on this subject there is one principle to be constantly kept in view, to the neglect or oversight of which, more than anything else, the ruin of the West Indies is to be ascribed. This is, that while many branches of manufacturing industry possess the means, by improvements in machinery or the division of labour, of compensating very heavy fiscal burdens, the raisers of rude produce can hardly ever do the same; so that, unless they can succeed in laying the tax upon the consumer, which is very often altogether beyond their power, they are forced to pay it entirely themselves, and it becomes a ruinous direct burden on industry. No doubt can exist on this head, when it is recollected not merely how slight is the improvement which agriculture has ever received from the aid of machinery, but that, while in the most highly civilized states, such as England, the cost of raising manufactures is always, notwithstanding heavy taxes and a plentiful currency, less than in ruder states, it is always much greater of producing agricultural produce. Great Britain can undersell the world in manufactures, but her farmers would be ruined without a corn-law; a fact strikingly illustrative of this vital distinction, and pointing to a very different rate of indirect taxation when applied to rude produce and manufactured articles, which has never yet met with adequate attention.—See BERNARD'S *Theory of the Constitution*, 356, 358: a work which, amid much exaggeration and declamation, contains many just and profound observations on the changes the country has undergone during the last half century, and is deserving of much more attention than it has received.

feel that we are conversing with one who lived for distant ages, and who voluntarily underwent, not the fatigues which are forgotten in the glory of the conqueror, but the obloquy consequent on the firmness of the statesman in the prosecution of what he felt to be for the ultimate good of the nation. In comparing his durable designs with the temporary expedients of the statesmen who preceded and followed him, we experience the same painful transition as in passing from the contemplation of the stately monuments of ancient Egypt, wrought in granite, and calculated for eternal duration, to that of the gaudy but ephemeral palaces of the Arabs, who dwell amid their ruins, and whose brilliancy cannot conceal the perishable nature of the materials of which they are composed.

While doing justice, however, to the great qualities of this illustrious financier, Their errors. it is indispensable not to draw a veil over his faults; and the application of his own principles to the measures which he sometimes adopted will best explain the particulars in which he was led astray.

I. The first great defect which history must impute to the financial measures of Undue extent Mr. Pitt, is having carried too far of the funding system. and continued too long the funding system. system, and not earlier adopted that more manly policy of raising as large a portion as possible of the supplies within the year, the benefits of which he himself afterward so fully explained. During the years 1793 and 1794, indeed, when formidable armies menaced France on every side, and the iron barrier of the Netherlands was broke through to an extent never achieved by Marlborough or Eugene, a speedy termination of the war might reasonably be expected, and it was just, therefore, to lay the vast expenses of those years in a great degree on the shoulders of posterity. But after that crisis was passed; after Flanders and Holland had yielded to the victorious arms of Pichegru; after Spain had retired from the struggle, and the Republic, instead of contending for its existence on the Rhine, was pursuing, under Napoleon, the career of conquest in Italy, it had become evident that a protracted contest was to be expected, and measures of finance suitable to such a state of things should have been adopted. The resolute system of raising a considerable portion of the supplies within the year should have been embraced, at latest, in 1796, and the enormous loans of that and the two following years reduced to one half. Those loans amounted to seventy-five millions; if forty millions had been raised in the time by taxation, in addition to the imposts actually paid, the difference in the sum since paid by the nation down to this time, on account of the loans of those years, would have been above £120,000,000! So prodigious is the difference in the ultimate accumulation of burdens, between the energetic and intrepid system of raising a large portion of the supplies within the year, and the more acceptable but delusive policy of providing at the moment only for the interest, and leaving to posterity the charge of providing for the liquidation of the principal.

II. But if the insidious advantages of the funding were to be preferred to the ultimate benefits of the taxing system, it was indispensable that the warlike forces of England. resources of the state should have been put forth on a scale and in a way calculated to reap sudden advantages commensurate to the

immense burdens thus imposed on posterity; that the contest, if gigantic and expensive, was at least to be short and decisive. That the military power of England was capable, if properly directed and called forth, of making such an effort, is now established by experience. The more the history of the campaigns from 1793 to 1800 are studied, the more clearly will it appear that the armies of France and the coalition were very equally poised; that the scale sometimes preponderated to one side and sometimes to the other, but without any decisive advantage to either party. After three years of protracted strife, the Republican armies, in the close of 1795, were still combating for existence on the Rhine, and gladly accepted a temporary respite from the victorious arms of Clairfait: after three additional years of desperate warfare, they were struggling for the frontiers of the Var and the Jura with the terrible armies of Suwarrow and the Archduke Charles. No doubt can remain, therefore, that the forces on the opposite sides of that great contest were, at that period at least, extremely nearly matched. With what effect, then, might the arms of England have been thrown in upon the scene of warfare; and how would the balance, so long quivering in equilibrium, have been subverted by the addition of fifty thousand British soldiers on the theatre of Blenheim or Ramilies! Herein, therefore, lay the capital error of Mr. Pitt's financial system, considered with reference to the warlike operations it was intended to promote, that while the former was calculated for a temporary effort only, and based on the principle of great results being obtained in a short time by an extravagant system of expenditure, the latter was arranged on the plan of the most niggardly exertion of the national strength, and the husbanding of its resources for future efforts, totally inconsistent with the lavish dissipation of its present funds. No one would have regretted the great loans from 1793 to 1799, amounting though they did to a hundred and fifty millions sterling, if proportional efforts in the field had at the same time been made; and it was evident that nothing had been omitted which could have conduced to the earlier termination of the war: but our feelings are very different when we recollect that during these six years, big with the fate of England and the world, only 208,000 men were raised for the regular army, and that a nation reposing securely in a seagirt and inaccessible citadel never had above twenty thousand soldiers in the field, and that only in the first two years of the war, out of a disposable force of above a hundred thousand. Mr. Pitt's plans for military operations were all based on the action of Continental armies, while the troops of his own country were chiefly employed in distant colonial expeditions; picking up pawns in this manner at the extremity of the board, when by concentrated moves he might have given checkmate to his adversary at the commencement of the game. His military successes, in consequence, amounted to nothing, while his financial measures were daily increasing the debt in a geometrical progression: and thence, in a great measure, the long duration and heavy burdens of the war.

III. But the greatest of all Mr. Pitt's errors, and the one which was the most inexcusable, because it was most at variance with the admirable foresight and enduring fortitude of his other financial measures, was the extent to which

Injudicious
system of bor-
rowing in the
3 per cents.

he carried the ruinous system of borrowing in the three per cents.; in other words, inscribing the public creditor for £100 in the books of the Bank of England, in consideration of only sixty advanced to the nation. That this policy had the effect of lowering the interest of the loans contracted, and thereby diminishing the burdens of the nation at the moment, may be perfectly true, but what was the advantage thus gained, compared to the enormous burden of saddling the nation with the payment of forty pounds additional to every sixty which it had received? The benefit was temporary and inconsiderable; the evil permanent and most material. Of the seven hundred and eighty millions which now compose the national debt, about six hundred millions has been contracted in the three per cents.; and if this whole debt were to be paid off at par, the nation would have to pay, in all, two hundred and fifty millions more than it ever received. Supposing it to be redeemed by a sinking fund at 80, on an average, which, taking a course of years together, of peace and war, is probably not far from the mark, and which coincides with Mr. Pitt's estimate in 1799, the surplus to be paid above what was received would still be two hundred millions.

Nor have the evils of this most improvident system of borrowing been limited to the great addition thus unnecessarily made to the capital of the national debt. Its effect upon the burden of the interest has been equally unfortunate. Doubtless the loans were, in the first instance, contracted during the war on more favourable terms, as to interest, than could have been obtained if the money had been borrowed in the five per cents.; that is, if a bond for £100 had been given for each £100 only paid into the treasury. But, as a set-off against this temporary and inconsiderable advantage, what is to be said to the experienced impossibility, with funds so contracted, of lowering the interest in time of peace? It is impossible to lower the interest of the three per cents. till interest generally falls below three per cent.; because, if it were attempted when the rate was higher, all the stockholders would immediately demand their money, and government, being unable to borrow below the market rate, would become bankrupt. Nevertheless, it may safely be affirmed that interest, on an average, since 1815, has not exceeded, if it has reached, four per cent. Had the national debt all been contracted in the five per cents., it might all have been subjected to the operation which in 1824 proved so successful with the five per cents., and which, on £157,000,000 only of the debt, the amount of that stock, saved the nation at that time £1,700,000 a year, to which is to be added the half of that sum since gained by the reduction of the same stock to three and a half, which, after taking into view the dissentients, has saved the nation, *forever*, £2,400,000 yearly. Calculating the interest of the £600,000,000 in the three per cents. (£360,000,000 sterling) at £18,000,000 a year, the proportion of this annual burden, which would have been saved by the first reduction of one per cent., would have been £3,600,000, and by the second of half per cent., £1,800,000 more; in all, £5,400,000 *forever*. The sum already saved to the nation, on interest alone, paid since 1824, would have been above fifty millions sterling. Every twenty years, in future, the sum saved, with interest, would exceed a hundred and fifty millions a year!

Its effect in
preventing the
reduction of
interest in
peace.

The temporary reduction of interest obtained by contracting the debt in this ruinous manner will bear no sort of comparison with these serious losses with which the system was ultimately attended. It appears, from the curious table of loans contracted during the war, compiled by Moreau, that the difference in the interest of the loans in the three per cents. and the five per cents. was seldom above half a per cent., generally not more than a quarter.* What is the additional burden thus undertaken during the contest, to the permanent reduction which the opposite system would have enabled government to have effected on the return of peace? Even supposing the difference of interest on the loans while the war lasted had been on an average one per cent., what was this burden, during its continuance, to the reduction of the interest *forever* to four or three and a half per cent.? This thing is so clear that it will not admit of an argument; and if the public necessities had rendered it impossible to have raised the additional interest during the year, it would have been better to have contracted an additional loan every year while the disability lasted, to defray the additional interest, than, by contracting the debt on such disadvantageous terms, disabled posterity forever from taking advantage of the return of peace to effect a permanent reduction of the public debts. So strongly, indeed, has the impolicy of this mode of contracting debt now impressed itself upon the minds of our statesmen, that by a solemn resolution in 1824, Parliament pledged itself never again, under any pressure, to borrow money in any other way than in the five per cents.; a resolution worthy of the British Legislature, and which it is devoutly to be hoped no British statesman will ever forget,

* Take, for example, the following loans, contracted in the three and five per cents. at different periods during the war:

	Sums borrowed, actually paid into Treasury.	Interest.	Rate per cent.
1794. Loan in 5 per cts.	£1,907,451	£96,326	5 per ct.
Do. in 3 per cts.	10,806,000	502,791	4-3-4 per ct.
1795. Loan in 5 per cts.	1,490,646	80,494	5-1-8 per ct.
Do. in 3 per cts.	17,777,163	841,374	4-3-4 per ct.
1796. Loan in 5 per cts.	2,034,889	101,744	5 per ct.
Do. in 3 per cts.	8,500,000	493,145	5-1-2 per ct.
1797. Loan in 5 per cts.	17,815,918	1,006,242	5-1-2 per ct.
Do. in 3 per cts.	13,000,000	625,500	5-3-4 per ct.
1801. Loan in 5 per cts.	2,227,012	111,380	5-1-8 per ct.
1806. Loan in 3 per cts.	27,519,544	1,344,487	5-1-8 per ct.
1807. Loan in 5 per cts.	1,293,200	64,660	5-1-8 per ct.
Do. in 3 per cts.	10,800,000	512,400	4-1-2 per ct.; but £140 of stock created for each £60 paid.
1809. Loan in 5 per cts.	7,932,100	408,878	5-1-8 per ct.
Do. in 3 and 4 per cts.	11,600,000	538,433	4-2-3 per ct.
1811. Loan in 5 per cts.	4,909,350	258,315	5-1-8 per ct.
Do. in 3 and 4 per cts.	11,925,243	569,500	4-3-4 per ct.
1814. Loan in 5 per cts.	5,549,400	277,470	5-1-7 per ct.
Do. in 3 per cts.	12,345,076	574,362	4-3-4 per ct.
1815. Loan in 5 per cts.	10,313,000	603,310	5-4-5 per ct.
Do. in 3 and 4 per cts.	27,000,000	1,517,400	5-1-2 per ct.

--See PEBBER'S *Tables*, 246, from MOREAU.

It clearly appears, from this most instructive table, that the difference between the interest paid on loans in the three and five per cents., from the beginning to the end of the war, varied only from a half to an eighth per cent. And the real difference was even less than here appears, for the public creditors were, frequently in the three per cents., subscribed for much more than £100 in consideration of £60 advanced. In particular, in 1807, they received no less than £140 of stock for each £60 paid.

but which is too likely to be overlooked, like so many other praiseworthy determinations, amid the warlike profusion or Democratic pressure of subsequent times.*

It is true, as Mr. Pitt contemplated the extinction of the whole public debt before the year 1846 by the operation of the sinking fund, and had provided means, which, if steadily adhered to, would unquestionably have produced that result even at an earlier period, the disastrous effects which have actually occurred from this mode of contracting so large a portion of the debt are not to be charged so strongly as an error in his financial system. In the contracting of loans, present relief was, in his estimation, the great object to be considered, because the means of certainly redeeming them within a moderate period, on the return of peace, were simultaneously provided. It was of comparatively little importance that the interest of the three per cents. could not be reduced during peace, when the speedy liquidation of the principal itself might be anticipated; and the addition of nearly double the stock to the sum borrowed appeared of trifling moment, when the only mode of redeeming the debt which any one contemplated was the purchase of stock by the sinking fund commissioners at the current market rates. Still, though these considerations go far to excuse, they do by no means exculpate Mr. Pitt in these measures. Admitting that the reduced rate of interest during the war might be considered as a fair set-off against the enhanced rate for the pacific period of nearly the same amount which elapsed before the debt was discharged, still what is to be said in favour of a system which redeems at 85 or 90 a debt contracted at 58 or 60? In looking forward to this method of liquidating the debt, as calculated to obviate all the evils of inscribing the public creditor for a larger amount of stock than he had advanced of money, Mr. Pitt forgot the certain enhancement of the price of stock by the admirable sinking fund which he himself had established, and that the more strongly and justly he elucidated the salutary tendency of its machinery to uphold the public credit, the more clearly did he demonstrate the ruinous effect of a method of borrowing which turned all that advance to the disadvantage of the nation in discharging its engagements.†

* The author was early in life impressed with the disastrous effects of this borrowing in the three per cents., but it was long before he found any converts to an opinion now generally received. In the year 1813, when a student at college, he maintained the doctrines stated in the text on this subject, in a company consisting of the most eminent and intelligent bankers in Scotland; and, in particular, contended that, if Mr. Pitt could not have afforded to pay annually from the taxes a larger interest for his loans than he actually undertook, he should have "borrowed a little loan to pay the interest of the great loan, rather than have contracted debt in the three per cents." They all, however, disputed the justice of the opinion, maintaining that money could not have been obtained on other terms, and the "little loan" became a standing joke against the author for many years after. Should these lines meet the eye of Mr. Anderson of Moreau, one of the oldest and most valued of the author's friends, and now one of the leading partners of the highly respectable firm of Sir William Forbes & Co., of Edinburgh, he will recur, perhaps, not without interest, to this incident.

† It is a common opinion, that the great expenses of Mr. Pitt's administration were owing to the subsidies so imprudently and needlessly advanced to foreign powers, to induce or enable them to carry on the contest. This, however, is a mistake. The loans and subsidies to foreign powers during the whole war only amount-

In Mr. Pitt's view the sinking fund was to remedy all these evils.

Table of the whole expenses of every year, in every department, during the war.

To Mr. Pitt's financial system there belongs a subject more vital in its ultimate effects than any which has been considered, and the whole results of which are far from being exhausted. The SUSPENSION OF CASH PAYMENTS in 1797, already noticed in the transactions of that year, was a measure of incomparably more importance than any financial step of the past or the present century, and, when taken in conjunction with the almost total destruction of the Spanish mines in America, in consequence of the revolution which broke out in that country in 1808, and the subsequent and unavoidable resumption of cash payments, by the bill of 1819, in Great Britain, opened the way to a series of changes in prices, and, of consequence, in the relative situation, power, and influence of the different classes of society, more material than any which had occurred since the discovery of the mines of Potosi and Mexico, and to which the future historian will perhaps point as the principal cause of the great revolution of England in 1832, and the ultimate fall of the British Empire. This important and vital subject, however, so momentous in its consequences, so interesting in its details, requires a separate chapter for its development, and will more appropriately come to be considered in a future volume, when the effects of the monetary changes during the whole war are brought into view, and the commencement of another set of causes, having an opposite tendency from the rapid decay of the South American mines at its close, is, at the same time, made the subject of discussion.

At present, it only requires to be observed, that the effects of the suspension of cash payments, whether good or evil, are not fairly to be ascribed to Mr. Pitt. They were not, like the consequences of the issue of assignats in France, the result of a barbarous and inhuman confiscation, nor like subsequent changes in this coun-

try, of theoretical or abstract opinions. They were forced on the British statesman by stern necessity. Bankruptcy—irretrievable national bankruptcy stared him in the face if the momentous step were any longer delayed. Once taken, the fatal measure could not be recalled; a resumption of cash payments during the continual pressure and vast expenditure of the war was out of the question. The nation has had ample experience of the shock it occasioned, and the protracted misery it produced, at a subsequent period, even in the midst of profound peace. To have attempted it during the whirl and agitation of the contest, would at once have prostrated all its resources.

No doubt, however, can remain, that the suspension of cash payments contributed essentially to increase the available resources of Great Britain for carrying on the war. An extension of the circulating medium, especially if accompanied by a great and increasing present expenditure, never fails to have this effect. It is when the subsequent stoppage or contraction takes place that the perilous nature of the experiment becomes manifest. Great immediate prosperity to all around him is often produced by the prodigality of the spendthrift; but if he trenches deep, amid this beneficent profusion, on the resources of future years, the day of accounting will inevitably come alike to himself and his dependants. In seeking for the causes of the vast and continued warlike exertions of England during the war, and of the apparently boundless financial resources which appeared to multiply, as if by magic, with every additional demand, just as in investigating the causes of the difficulties under which all classes have laboured since the peace, a prominent place must be assigned to the alterations on the currency, as productive of present strength as they were conducive to future weakness. No finan-

Its powerful operation in increasing the present resources of the state.

ed to £52,528,470; of which no less than £33,000,000 were advanced during the last three years. At Mr. Pitt's death the sum was only £6,370,000. The subsidies granted, with the years when they were received, and the other items of the expenditure of the war, were as follow.—(MOREAU.)

	Subsidies to Foreign Powers.	Army.		Civil List.	Ordnance.	Navy Total.	Total charge of Debt, Funded and Unfunded.	Total Expenditure.

This most instructive table proves at a glance how little share either the foreign subsidies or civil expenditure had in the vast outlay of seventeen hundred millions during the war. The first was only a thirty-third, the latter hardly a fifth-teenth of the total expenditure. The vast sums absorbed by the debt is a striking feature, amounting to more than a third of the whole; but it was in a certain degree unavoidable. The cost of the navy, amounting to about a fifth, is not to be regretted, for it gave England the naval dominion of the globe. It was the prodigious expenditure for the army, amounting to almost a fourth of the whole, which is the real subject of regret, attended as it was with no exploits worthy of being recorded till the last eight years of the war; concurring thus with what every other consideration indicates, that it was the nugatory use of that arm, and the ignorance which prevailed as to its efficacy, which was the real reproach to Mr. Pitt's administration.

cial embarrassments of any moment were experienced subsequent to 1797; in vain Napoleon waited for the blowing up of the funding system, and the stoppage of England's financial resources; year after year the enormous expenditure continued; loan after loan, with incredible facility, was obtained, and at the close of the war, when the revenues of France and all the Continental states were fairly exhausted, the treasures of Great Britain were poured forth with a profusion unexampled during any former period of the struggle. No existing wealth, how great soever, could account for so prodigious an expenditure. Its magnitude points to an annual creation of funds even greater than those which were dissipated. It is in the vast impulse given to the circulation by the suspension of cash payments, and subsequent extension of paper credit of every description, that one great cause is to be found of the never-failing resources of Great Britain during so long a period. Her fleets commanded the seas; her commerce extended into every quarter of the globe; her colonies embraced the finest and richest of the tropical regions; and in the centre of this magnificent dominion was the parent state, whose quickened and extended circulation spread life and energy through every part of the immense fabric. Great as was the increase of paper in circulation after the obligation to pay in specie was removed, it was scarcely equal to the simultaneous increase in exports, imports, and domestic industry; and almost boundless as was the activity of British enterprise during those animating years, it must have languished from want of commensurate credit, if not sustained by the vivifying influence of the extended currency.*

It is evident, also, that the funding system, with all its dangers and ultimate evils, of which the nation since the peace has had such ample experience, was eminently calculated to increase this feverish action of the body politic, and

produce a temporary flow of prosperity, commensurate, indeed, to the ultimate embarrassments with which it was to be attended, but still exciting a degree of transient vigour, which could never have arisen under a more cautious and economical system of management. The contracting and immediately spending loans, to the amount of thirty or forty millions a year, in addition to a revenue raised by taxation of equal amount, had an extraordinary effect in encouraging every branch of industry, and enabling the nation to prosper under burdens which at first sight would have appeared altogether overwhelming. Government is proverbially a good paymaster, and never so much so as during the whirl and excitement of war. The capital thus sunk in loans was, indeed, withdrawn from the private encouragement of industry, but it was so only in consequence of being directed into a channel where its influence, in that respect was still more powerful and immediate than it ever would have been in the hands of individuals: it was in great part dissipated, indeed, in a form which did not reproduce itself, and afforded no means of providing for its charges hereafter; but still that circumstance, how fatal soever to the resources of the state in future times, did not diminish the temporary excitement produced by its expenditure. Under the combined influence of this vast contraction of loans and extended paper circulation, the resources of the nation were increased in a rapid and unparalleled progression: exports and imports doubled, the produce of taxes was continually rising, prices of every sort quickly rose, interest was high, profits still higher, and all who made their livelihood by productive industry, or by buying and selling, found themselves in a state of extraordinary and increasing prosperity. That these favourable appearances were, to a certain extent, delusive; that the flood of prosperity thus let in upon the state was occasioned by exhausting, in a great degree, the reservoirs of wealth for future emer-

—*Parl. Deb.*, vii., xiv., xv.; *App. Parl. Hist.*, xxxv., 1563. COLQUHOUN, 99. MOREAU'S *Tables*, and PERRER, 279. MARSHALL'S *Digest*, p. 97, 147, 236.

Thus, in the twenty-four years from 1792 to 1816, the circulation of England, including the large and small notes and commercial paper discounted at the Bank, was more than tripled; the revenue tripled, and the exports more than doubled; the imports increased a half. The increase of commercial paper from 1792 to 1810 was sevenfold: indicating, perhaps, the greatest and most rapid rise in mercantile transactions in the whole history of the world.

gencies; and that a long period of languor and depression was to follow this feverish and unnatural tract of excitement, is indeed certain; but still the effect at the moment was the same, and in the activity, enterprise, and opulence thus created were to be found the most powerful resources for carrying on the contest. How beneficial soever to the finances of the state, in future times, it might have been to have raised the whole supplies by taxation within the year, it was impossible that from such a prudent and parsimonious system there could have arisen the extraordinary vigour and progressive creation of wealth which resulted from the lavish expenditure of the national capital in maintaining the conflict; and but for the profuse outlay, which has been felt as so burdensome in subsequent times, the nation might have sunk beneath its enemies, and England, with all its glories, been swept forever from the book of existence.

Had Mr. Pitt's system, attended as it was, however, with this vast expenditure of capital instead of income on the current expenses, made no provision for the ultimate redemption of the debt thus contracted, it would, notwithstanding the prodigious and triumphant results with which it was attended, have been liable to very severe reprehension. But every view of his financial policy must be imperfect and erroneous, if the sinking fund, which constituted so essential a part of the system, is not taken into consideration. Its great results have now been completely demonstrated by experience; and there can be no question that, if it had been adhered to, the whole debt might have been extinguished with ease before the year 1840: that is, in nearly as short a time as it was created. Great as were the burdens of the war, therefore, he had established the means of rendering them only temporary; durable as the results of its successes have proved, the price at which they were purchased admitted, according to his plan, of a rapid liquidation. It is the subsequent abandonment of the sinking fund, in consequence of the unnecessary and imprudent remission of so large a proportion of the indirect taxes, which is the real evil that has undone the mighty structure of former wisdom; and for a slight and questionable present advantage, rendered the debt, when undergoing a rapid and successful process of liquidation, a lasting and hopeless burden on the state. The magnitude of this change is too great to be accounted for by the weakness or errors of individuals: the misfortune thus inflicted upon the country too irreparable to be ascribed to the improvidence or shortsighted policy of subsequent governments. Without exculpating the members of the administrations who did not manfully resist, and, if they could not prevent, at least denounce the growing delusion, it may be safely affirmed, that the great weight of the responsibility must be borne by the nation itself. If the people of Great Britain have now a debt of seven hundred and seventy millions, with hardly any fund for its redemption, they have to blame, not Mr. Pitt, who was compelled to contract it in the course of a desperate struggle for the national independence, and left them the means of its rapid and certain liquidation, but the blind Democratic spirit,

which first, from its excesses in a neighbouring state, made its expenditure unavoidable, and then, from its impatience of present sacrifice at home, destroyed the means of its discharge. "All nations," says M. Tocqueville, in his profound work on American Democracy, "which have made a great and lasting impression on human affairs, from the Romans to the English, have been governed by aristocratic bodies: the instability and impatience of the Democratic spirit render the states in which it is the ruling power incapable of durable achievements."* The abandonment of a system fraught with such incalculable future advantages as the sinking fund, but requiring a present sacrifice for its maintenance, affords decisive evidence that the balance of the Constitution had become overloaded in reality, before it was so in form, on the popular side, and that the period had arrived when an ignorant impatience of taxation was to bring about that disregard of everything but present objects which is the invariable characteristic of the majority of mankind. With the prevalence of aristocratic rule in England, that noble monument of national foresight and resolution progressively prospered: with its decline the efficiency of the great engine of redemption was continually impaired amid the general influence of the unthinking multitude; and at length, upon its subversion by the great change of 1832, it finally, to all practical purposes, was destroyed. Irretrievable ultimate ruin has thus been brought upon the state: for not only is the burden now fixed upon its resources inconsistent with the permanent maintenance of the national independence, but the steady rule has been terminated, under which alone its liquidation could have been expected. But if the sun of British greatness is setting in the Old, it is, from the same cause, rising in renovated lustre in the New World. The impatience of the Democratic spirit, both in the British isles and on the shores of the Atlantic; the energy it develops, the insatiable desires it creates, the national burdens which it perpetuates, the convulsions which it induces, all conspire to impel the ceaseless wave of emigration to the West; and the very distresses consequent on an advanced stage of existence force the power and vigour of civilization into the primeval recesses of the forest. In two centuries the name of England may be extinct, or survive only under the shadow of ancient renown; but a hundred and fifty millions of men in North America will be speaking its language, reading its authors, glorying in its descent. Nations, like individuals, were not destined for immortality; in their virtues equally as their vices, their grandeur as their weakness, they bear in their bosoms the seeds of mortality; but in the passions which elevate them to greatness, equally as those which hasten their decay, is to be discerned the unceasing operation of those principles at once of corruption and resurrection which are combined in humanity, and which, universal in communities as in single men, compensate the necessary decline of nations by the vital fire which has given an undecaying youth to the human race.

And it must ultimately ruin the British Empire.

But will still more impel the British race to the New World.

* Tocqueville, ii., 237.

CHAPTER XLII.

FROM THE PEACE OF PRESEBURG TO THE RENEWAL OF THE CONTINENTAL WAR.

JANUARY—OCTOBER, 1806.

ARGUMENT.

Immense Results of the Campaign of Austerlitz.—The Office of Premier is offered to Lord Hawkesbury, and declined.—General Opinion on the Necessity of a Coalition of Parties.—Mr. Fox is sent for.—State of Parties in the Country.—Composition of the new Cabinet.—Their first Measures.—The Budget.—Return of Napoleon to Paris.—Financial Crisis there.—Its ostensible Causes.—Immediate Origin of the Explosion was the Absorption of Gold for the German War.—Measures of Napoleon to remedy the Evil.—Real Causes of the Catastrophe.—Financial Changes in Consequence introduced into France, and Imposition of its Armies as a Burden on Foreign States.—French Budget for 1805, and Exposition of the Minister of the Interior.—Erection of the Column in the Place Vendôme.—Advance of the French against Naples.—Successful Invasion of Calabria.—Joseph Bonaparte created King of the Two Sicilies.—Naples threatened by Sir Sydney Smith.—General Stuart lands in the Bay of St. Euphemia.—Regnier resolves to attack him.—Battle of Maida.—Great Moral Effect of this Victory; but its immediate Results are less considerable.—Surrender of Gaeta.—Retreat of the English, and Suppression of the Insurrection.—Domestic Reforms of Joseph in Naples.—Louis Bonaparte is created King of Holland.—Creation of Military Fiefs in the Kingdom of Italy.—Napoleon's secret Views in these Measures.—Audience given to the Turkish Ambassadors.—Naval Operations.—Sailing of a Division of the Brest Fleet.—Defeat of the first Squadron at St. Domingo.—Disasters of the second Division under Villaurmez.—Capture of Linois, and lesser Naval Operations.—Reflections on these last Naval Disasters of France.—Greatness of the French Navy under Louis XVI.—Napoleon's Change of System in regard to Naval War.—Reflections on the Growth of the English Maritime Power.—Its probable Influence on the future Destinies of the World.—Reduction of the Cape of Good Hope.—Sir Home Popham resolves to attack Buenos Ayres, which falls.—Embarrassment of Government at this Success.—It is retaken by the South Americans.—Differences with America in regard to Neutral Rights.—Violent Measures of Congress.—The Commissioners appointed on both Sides adjust the Differences.—Continental Affairs.—Growing Coldness between France and Prussia.—Jealousy of the two Cabinets.—The Prussian Cabinet seizes on Hanover.—Measures of Retaliation adopted by Great Britain.—Mr. Fox's Speech on the Subject.—Napoleon's Opinion of Prussia in this Transaction.—His farther Measures of Aggression on Germany.—Universal Indignation which they excite in the North of Germany.—Gentz's Pamphlet on the Subject.—Formation of the Confederacy of the Rhine.—Powers admitted to the Confederation.—The Emperor Francis renounces the Crown of Germany.—Addresses of Napoleon and the Emperor Francis to the German States.—Great Sensation which these Events produce at Berlin.—Warlike Preparations of Prussia.—Renewed Causes of Irritation between France and Russia.—Difference about the Mouths of the Cattaro, which is occupied by the Russians.—The French, in return, seize Ragusa.—Actions in its Neighbourhood.—D'Oubril concludes a Treaty between France and Russia, which is disavowed by the Cabinet of St. Petersburg.—Opening of the Negotiations between France and England.—Later Power insists on Russia being a Party to the Negotiation.—Basis of Utipossidets, which France departs from.—Continuance of the Negotiation, and gradual Estrangement of the Parties.—Its farther Progress.—The Demands of France become more extravagant, and the Negotiation is broken off.—Real Views of the Parties in this Proceeding.—State of Affairs at Berlin.—Prussian Ultimatum, and Preparations for War on both Sides.—Murder of Palm.—Great Sensation which it occasioned.—Proceedings of the Military Commission by which he was condemned.—Influence which it had in producing the Rupture of the Negotiation.—Last Instructions of Mr. Fox to Lord Lauderdale.—His Eyes were at length opened to the real Nature of the War.—His Illness and Death, and Character.—Extraordinary Talents in Debate; but his Fame is on the Decline as a just Thinker.—Reasons of this Change.

THE peace of Presburg appeared to have finally subjected the Continent to the Empire of

France. The greatest and most formidable coalition which had ever been arrayed against its fortunes was dissolved; the military strength of Austria had received, to all appearance, an irreparable wound; Prussia, though irritated, was overawed, and had let the favourable moment for striking a decisive blow elapse without venturing to draw the sword; and even the might of Russia, hitherto held in undefined dread by the states of Southern Europe, had succumbed in the conflict, and the northern autocrat was indebted to the generosity of the victor for the means of escaping from the theatre of his triumph. When such results had been gained with the great military monarchies, it was of little moment what was the disposition of the lesser powers; but they too had been terrified into submission, or retired from a contest in which success could no longer be hoped for. Sweden, in indignant silence, had withdrawn to the shores of Gothland; Naples was overrun; Switzerland was silent; and Spain consented to yield its fleets and its treasures to the conqueror of Northern Europe. England, it is true, with unconquerable resolution and unconquered arms, still continued the contest; but after the prostration of the Continental armies and the destruction of the French marine, it appeared no longer to have an intelligible object; while the death of the great statesman, who had ever been the uncompromising foe of the Revolution, and the soul of all the confederacies against it, led to a well-founded expectation that a more pacific system of government might be anticipated in his successors.

The hopes entertained by Napoleon of such a temporary accommodation with England as might leave him at liberty, by fostering his naval power, to prepare the means of its final subjugation, were soon, to all appearance, likely to be realized. The death of Mr. Pitt dissolved the administration of which he was the head. His towering genius could ill bear a partner in power or rival in renown. Equals he had none—friends few; and with the exception of Lord Melville, whom the pending accusation had compelled to retire from government, perhaps no statesman had ever possessed his unreserved confidence. There were many men of ability and resolution in his cabinet, but none of weight sufficient to take the helm when it dropped from his hands; and when he sunk into the grave, the ministry, which was supported by his single arm, fell to the earth. The king, indeed, who was aware of the danger of introducing a change of policy in the middle of a desperate conflict, and still retained a keen recollection of the humiliation to which he had been subjected in consequence of the India Bill introduced by the Whigs in 1784, made an attempt to continue the government in the same hands, and immediately after Mr. Pitt's death, commissioned Lord Hawkesbury to form a new administration on the same basis; but that experienced and cau-

tious statesman soon perceived that the attempt, at that period at least, was impossible, and the only use he made of his short-lived power was to accept the wardenship of the Cinque Ports, which had been held by Mr. Pitt, and was the most lucrative sinecure in the gift of the crown; an appointment which gave rise to keen and acrimonious discussion in both houses of Parliament under the succeeding administration.*

Independently of the acknowledged weakness of the ministry after Mr. Pitt ceased to sustain its fortunes, the state of public opinion rendered it extremely doubtful whether any new administration could command general support which was not founded on a coalition of parties, and a union of all the principal statesmen of the time to uphold the fortunes of the state. The defeat of Austerlitz, and the consequent exposure of Great Britain to the necessity of maintaining the war single-handed against the forces of combined Europe, had made a deep impression on the public mind. Many believed some change of system to be necessary; and the opinion was sensibly gaining ground, that, having unsuccessfully made so many attempts to overthrow the power of Revolutionary France by hostility, the time had now arrived when it was not only expedient, but necessary, to try whether its terrors might not be disarmed by pacific relations. Complaints against the abuses of government—some real, some imaginary—during the conduct of so long and costly a war, had multiplied to a very great degree; the opposition journals had increased in number and vehemence of declamation; and the vote against Lord Melville in the House of Commons had shaken the opinion of numbers in the integrity of government in that point where Mr. Pitt's administration had hitherto been regarded as most pure. The Tories, it was said, are exhausted by perpetual service for twenty years; the hopes of the state are to be found in the ranks of the Whigs; or, at all events, the time has now arrived when these absurd party distinctions should cease, and all true friends to their country, on whichever side of politics, must unite for the formation of a liberal and extended administration, on so broad a basis as to bring its whole capacity to bear on the fortunes of the state during the perilous times which are evidently approaching. A general wish, accordingly, was felt for the formation of a government which should unite "all the talents" of the nation, without regard to party distinction; a natural wish at all times, and frequently indulged by the British people, but which has never led to any good result in the history of England, and never can do so, except in such a crisis of national danger as would have led the Romans to appoint a dictator, and calls for the suspension of all difference in foreign or domestic policy in the warding off immediate danger, by which all are equally threatened.†

Yielding at length, though unwillingly, and with sinister presentiments, to the inclinations of the people and the necessity of his situation, the king, on the 26th of January, sent a messenger to Lord Grenville, so long the firm supporter of Mr. Pitt's foreign administration, requesting his attendance at Buckingham House, to confer with his majesty on the formation of a government. Lord Grenville suggested Mr. Fox as the person he should

consult on the subject. "I thought so, and I meant it so," replied the king; and immediately the formation of an administration was intrusted to these two illustrious men.*

The anxious wish expressed both by the sovereign and the nation that the government should be formed on the ^{State of parties in the country.} broadest possible basis, so as to include all the leading men of the country, led to a coalition of parties, which, although it gave great apparent stability at the outset, was little calculated, in the end, to ensure the permanence of the administration. Three distinct and well-defined parties, independent of the partisans of Mr. Pitt's cabinet, then divided the Legislature and the nation. The ardent Whigs, who had adhered through all the horrors of the French Revolution to Democratic principles, were represented by Mr. Fox and Mr. Erskine, and embraced all the zealous adherents of Republican institutions throughout the country. Parliamentary Reform, Catholic Emancipation, the Repeal of the Test Acts, the Abolition of Slavery, Peace with France, were inscribed on their banners. Another section of the Whig party existed, who had recently been arrayed in fierce hostility against their former allies. They were composed of the old Whig families which had receded with Mr. Burke, at the commencement of the French Revolution, from the popular side, and acted with Mr. Pitt till his resignation in 1800, but never coalesced with his government after his resumption of power. This party, led in Parliament by Lord Grenville, Earl Spencer, and Mr. Windham, embraced many powerful aristocratic families and a large portion of private worth and ability, but their hold of the affections of the populace was not so considerable as that of their stancher brethren. In hostility to France and fierce opposition to Revolutionary principles, they yielded not to the warmest partisans of Mr. Pitt; but in domestic questions they inclined to the popular side, and might be expected to form a salutary check on the innovating ardour of the more Democratic portion of the government. Less considerable from general support or parliamentary eloquence than either of these great parties, the adherents of Mr. Addington's administration, who had remained in opposition ever since they were displaced from power, were still of importance from their business talents and the intimate acquaintance they had with the machinery of government. Lord Sidmouth (formerly Mr. Addington) was the leader of this portion of the old Tory administration, whom exclusion from office had led to coalesce, not in the most creditable manner, with their ancient antagonists, and, from the known pacific inclinations of their chief, no serious difference of opinion in the cabinet was anticipated, at least so far as foreign affairs were concerned.

The leaders of these three parties were combined in the new cabinet; but the preponderance of Mr. Fox's adherents was so great as to render the ^{Composition of the cabinet.} ministry, to all intents and purposes, a Whig administration, which speedily appeared in the universal removal of all Tory functionaries from every office, even the most inconsiderable, under government. Mr. Fox, though entitled, from his talents and influence, to the highest appointment under the crown, contented himself with the important office of secretary for foreign affairs,

* Ann. Reg., 1806, 18, 21. Parl. Deb., iv., 67, 75.

* Ann. Reg., 1806, 21.

deeming that the situation in which most embarrassment was likely to be experienced, and where his own principles were likely soonest to lead to important results. Lord Grenville was made first lord of the treasury; Mr. Erskine, lord-chancellor; Lord Howick (formerly Mr. Grey), first lord of the admiralty; Mr. Windham, secretary at war; Earl Spencer, secretary of state for the home department.* The cabinet exhibited a splendid array of ability, and was anxiously looked forward to by the country, with the undefined hope which naturally arises upon admitting a party whose leaders had been so long celebrated by their eloquence and genius for the first time, after so long an exclusion, to the administration of public affairs. But, amid the general satisfaction, there were many who observed with regret that all the members of the recent government were excluded from office, and anticipated no long tenure of power to a coalition which departed thus widely from the path of its predecessors, and voluntarily excluded the aid of all who had grown versant in public affairs, while the admission of the lord-chief-justice into the cabinet was justly regarded by all as a most dangerous innovation, fraught with obvious peril to that calm and dispassionate administration of judicial duties,† which had so long been the glory of English jurisprudence.

Notwithstanding the essential and total change

First measures of the new ministry and the accession of a party to power. The budget. The measures of their rivals as fraught with irreparable injury to the best interests of the state, no immediate change in the measures of government took place; and Europe beheld with surprise the men who had invariably characterized the war as unjust and impolitic, preparing to carry it on with a patience and foresight in no degree inferior to that of their predecessors: a striking circumstance, characteristic alike of the justice of the reasons which Mr. Pitt had assigned for its continuance, and the candour of the party who had now succeeded to power. The budget of Lord Henry Petty was but a continuation of the financial system of Mr. Pitt, modified by the altered situation of affairs, and the necessity which had obviously arisen of making provision for a protracted maritime struggle. The system of raising as large as possible a proportion of the taxes within the year, so happily acted upon since 1798 by the late government, was continued and extended; and, in pursuance thereof, it was proposed to carry the war taxes from fourteen to nineteen millions and a half—an increase which was effected by raising the income-tax from six and a half to ten per cent., and an addition of 3s. a hundred weight on sugar.‡ The loan, notwithstanding this great addition, was still £18,000,000, to provide for the interest of which, and a sink-

ing fund to redeem the principal, the war wine-duty was declared permanent, producing £500,000 a year, and an additional duty laid on pig iron, calculated to produce as much more, besides lesser duties, to the amount, in all, of £1,136,000.*

The great addition to the income-tax was loudly complained of as a grievous burden and total departure from all the professions of economy so often made by ministers; but there is reason to believe that indirect taxes could not have been relied on to produce so great an increase as was required in the public revenue; and there can be no doubt that, in adopting the manly course of making so great a demand on present income rather than increase the debt, they acted a truly patriotic and statesmanlike part.

The return of Napoleon to Paris, where he arrived on the night of the 26th of January, to the great disappointment of the municipality and people, who had made the most magnificent preparations for his triumphal reception, was very necessary, from the financial crisis which had there occurred, and which threatened to involve the government in the most serious embarrassments. This catastrophe, partly arising from political, partly from commercial causes, had long been approaching, and the public consternation was at its height when the emperor re-entered the Tuileries. Without undressing or going to bed, he sent for the minister of finances at midnight, and spent the whole remainder of the night in a minute and rigid examination of that functionary, and all the persons connected with his establishment. At eleven next day, the council of finance was assembled; it sat nine hours, and when it broke up, M. Mollien was appointed minister of finances, and M. de Marbois, the former minister, dismissed.†

This panic, which at the time excited such consternation at Paris, and might, if the issue of the campaign had been doubtful, have been attended with the most disastrous effects, arose from very simple causes. During the whole of 1805, the Bank of France, yielding to the flood of prosperity which on all sides flowed into the Empire, and urged on by the constant demand for discounts on the part of all the contractors and others engaged in the public service, from the expenditure of government constantly keeping in advance of the receipts of the treasury, had been progress-

Its ostensible causes.

* The budget of this year stood as follows:

	Charges.	Supplies.
	Great Britain.	Great Britain.
Navy	£15,281,000	
Army	18,500,000	
Ordinance	4,718,000	
Miscellaneous	2,170,000	
Arrears of subsidies	1,000,000	
Vote of credit	2,000,000	
	£43,569,000	
		Supplies.
		Great Britain.
Malt and personal estate duties		£2,750,000
Grants from captured ships		1,000,000
Lotteries		380,000
Surplus of consolidated fund		3,500,000
War taxes	19,500,000	
Deduct as outstanding at end of year	1,500,000	
Loan	18,000,000	
		£43,630,000

Exclusive of the permanent income on the one hand, and permanent charges on the other, which added largely to both sides of the account: the charges of the debt being £23,000,000, and the total sum raised by taxes and other sources of revenue £55,796,000, while the total expenditure was £72,750,000.—*Parl. Deb.*, vi., 566, 569. *PARTER'S Parl. Tables*, i., 1. † *Bign.*, v., 86. *Bour.*, vii., 111.

* The cabinet was composed of the following members:

Lord Erskine—Lord-chancellor.
 Earl Fitzwilliam—President of the Council.
 Viscount Sidmouth—Lord Privy Seal.
 Lord Grenville—First Lord of the Treasury.
 Lord Howick—First Lord of the Admiralty.
 Earl Moira—Master-general of the Ordnance.
 Earl Spencer—Secretary of State for Home Affairs.
 Mr. Fox—Foreign Affairs.
 Mr. Windham—Secretary at War.
 Lord Henry Petty—Chancellor of the Exchequer.
 Lord Ellenborough—Chief-justice, with a seat in the cabinet.—*Ann. Reg.*, 1806, 26.

† *Ann. Reg.*, 1806, 26, 28.

‡ *Parl. Deb.*, vi., 566, 574. *Ann. Reg.*, 1806, 71.

ively enlarging its discounts: before the emperor set out for the army, they had risen from thirty to sixty millions, double the usual amount. In the midst of the apparent prosperity produced by that excessive increase, the sagacious mind of Napoleon perceived the seeds of future evil; and amid all the turmoil of his military preparations at Boulogne, he repeatedly wrote to the minister of finances on the subject, and warned him of the danger of the Bank of France trusting too far the delusive credit of individuals engaged in extensive transactions, or pushing to an undue length, in the form of a paper circulation, the royal privilege of coining money.* The immense discounts which occasioned the peril were almost entirely granted to the functionaries engaged in the public service, and who, being obliged to make good their payments to government by a certain day, and embarrassed by this remote period to which all payments from the public treasury were postponed, were frequently driven to this resource to supply the deficiencies arising from the backward payments of individuals, and whose credit was in some sort interwoven with that of the general administration. A few rich companies also had shared in the liberality of the bank, who were engaged in most extensive speculations in all parts of the world, and so deeply implicated in the furnishing of the precious metals to the bank, that their support on its part was almost a matter of self-preservation. The greatest of these was that of which M. Ouvrard was the leading partner, and its engagements with the Bank of France were to an enormous amount. This great capitalist had for several years been engaged in vast contracts for the service of the Spanish fleet, and so extensive were his transactions, that almost all the treasures of Mexico found their way into his coffers. Gradually he had introduced himself into the principal departments of the French service: and before the middle of 1805 nearly seventy millions (£2,800,000) was owing chiefly to the company of which he was a member by the public treasury of that country. The long delays thrown in the way of the liquidation of this debt by the government occasioned an excessive multiplication of paper securities, which soon fell considerably in value in the money market; but so implicated was government in these trans-

actions, that it was compelled to go on in the same perilous course, and thus increase the depreciation which had already become sufficiently alarming. The consequence was, that the bills of the public contractors sunk so much in value, that they would no longer pass current in the market; at length they fell so low as 10 instead of 100: a universal disquietude prevailed,* and the demands upon the public treasury had already become very heavy, at the moment when it had little else than paper securities in its coffers.

Matters were in this critical state when the breaking out of the German war, and departure of the army for the Rhine, occasioned an immense and immediate demand for metallic currency, which alone would pass in foreign states, both on the part of government and individuals. Napoleon, for the different branches of the public service, took fifty millions of francs (£2,000,000) from the Bank of France. Unable, after this great abstraction, to meet his other engagements, the minister of finances had recourse to Ouvrard, Vanlerbergh, and Seguire, who advanced 102,000,000 (£4,080,000) to the public treasury, and received, in return, long dated bills for 150,000,000. To meet this advance, Ouvrard hastened to Madrid to obtain a supply of piasters from the Spanish government, and such was the ascendancy which he had acquired at that capital, that he shortly after concluded a treaty with the King of Spain, in virtue of which his company, during the whole remainder of the war, acquired "an exclusive right to carry on the whole trade to the Spanish colonies, and to import the *whole treasures* and merchandise brought from thence to the European shores." Never before had such a power been vested in any company: the treasures of the whole world were to pass through their hands. But though this treaty gave Ouvrard the prospect of obtaining, before a year expired, from America 272,000,000 francs (£11,400,000) in hard dollars, yet this would not furnish a supply for present necessities; and the efforts of all the capitalists of Europe, which were put in requisition for the occasion, were unable to meet the crisis or avert a catastrophe. Desprez and several of the greatest capitalists in Paris failed: this immediately occasioned a terrific run upon all the other public functionaries, as well as the bank and the treasury; paper would no longer pass; credit was at an end; and M. Vanlerbergh, one of the greatest of the national contractors, was prevented from failing solely by an advance to a great amount from the public treasury. The consequences would have been fatal to the Empire had a disaster at the same time occurred in Germany, for the government were absolutely without the means of replenishing any branch of the public service; but the battle of Austerlitz and the treaty of Presburg operated as a charm in dispelling the panic: with the cessation of Continental war the demand for the precious metals immediately ceased; and the crisis was in fact over when the return of the emperor to the Tuileries entirely restored the public confidence. But the danger had been so pressing, that nothing but the instantaneous termination of the war could have averted it; and by merely protracting the contest in Moravia for a few months, the allies would infallibly have brought

Immediate cause of the explosion was the absorption of gold for the German war.

* His words are, in a letter to the minister of finances, "The evil originates in the bank having transgressed the law. What has the law done? Sept. 24, 1805. It has given the privilege of coining money in the form of paper to a particular company; but what did it intend by so doing? Assuredly, that the circulation thus created should be based on solid credit. The bank appears to have adopted a most erroneous principle, which is, to discount to individuals, not in proportion to their real capital, but the number of shares of its capital stock which they possess." That, however, is no real test of solvency. How many persons may be possessed of fifty or a hundred such shares, and yet be so embarrassed that no one would lend them a single farthing? The paper of the bank is thus issued in many, perhaps a majority of cases, not on real credit, but a delusive supposition of wealth. In one word, in discounting after this manner the bank is *coining false money*. So clearly do I see the dangers of such a course that, if necessary, I would stop the pay of my soldiers rather than persevere in it. I am distressed beyond measure at the necessities of my situation, which, by compelling me to live in camps and engaging me in distant expeditions, withdraw my attention from what would otherwise be the chief object of my anxiety, the first wish of my heart, a good and solid organization of all which concerns the interest of banks, manufactures, and commerce." What admirable wisdom in this great man, conceived at the camp of Boulogne, in the midst of the boundless arrangements which the march of the army to Ulm, already commenced, must have required, and of which his correspondence furnishes such ample proof!—

See BIGNON, v., 85, 86.

the French government to a national bankruptcy.*

Napoleon was highly indignant at these measures of barrissements, and fully appreciated the magnitude of the peril from which he had been extricated by the fortunate victory of Austerlitz.† Public opinion, as usual, followed the impulse set by its leaders; the imprudent facility of the minister of finances became the general object of reprobation; and the greatest wits of the capital exerted their talents in decrying his administration.‡ The emperor minutely scrutinized the embarrassments of the bank and the treasury; it was found that the total deficit of the public contractors to the government amounted to 141,000,000 francs (£5,600,000), of which Ouvrard and Vanlerbergh owed nearly two thirds, and measures of severity were immediately ordered against all the defaulters, who were thrown into prison without distinction. The gigantic company of M. Ouvrard and his partners was in consequence reduced to bankruptcy, but in the end nearly the whole deficit was recovered for the nation. The system of providing for the public service by means of contractors was shortly after abandoned: but a few years after the government was under the necessity of resuming it; and Napoleon ultimately made the most ample amends to the injured M. de Marbois, by appointing him president of the Chamber of Accounts.§

In fact, though it suited the interests of the emperor to represent this alarming catastrophe as exclusively the result of the imprudent facility of the minister of finances, and the inordinate profusion of discounts by the bank, yet the evil in reality lay a great deal deeper, and the crisis was, in fact, occasioned by the vicious system to which the extravagant expenditure of the imperial government had driven the finance ministers. Although the budgets annually presented since Napoleon seized the government had exhibited the most flattering aspect, yet in reality they were in a great degree fictitious, and intended to conceal the labouring condition of the finances.

The actual receipts of the treasury for the last five years had been a hundred millions below the annual expenses.¶ In addition to this, the payments of the finance minister required to be almost all made in the course of each year, while the period of its receipts for the same time, according to the established mode of collecting the revenue, extended to eighteen months. Thence there arose an indispensable necessity for a recourse to money-lenders, who instantly advanced cash to the treasury, and received in return bills payable when the tardy receipts of the revenue might be expected to be realized. In this way, while the receipts and expenditure, as exhibited in the budget annually presented to the chambers, were nearly equal, there was in reality a most alarming deficit; and it was only by largely anticipating, by the discount of bills accepted

by the treasury, the revenue of succeeding terms or years, that funds could be provided for the liquidation of the daily demands upon it. Recourse was at first had to the receivers-general of the departments to make these advances; and this system succeeded, though with some difficulty, during the comparatively economical years of 1803 and 1804; but the vast expenditure of 1805, occasioned partly by the equipment of the expedition at Boulogne, partly by the cost of the Austrian war, rendered their resources totally unavailing; and it became necessary to apply to greater capitalists, who, in anticipation of future payments, could afford to make the great advances required by government. M. de Marbois was thus driven by necessity to M. Ouvrard and the company of the Indies, which was already the contractor for the supplies to almost all the forces, both by land and sea; and thus became invested with the double character of creditor of the state for advances made on Exchange bills, and also for payment of the supplies furnished to the different branches of the public service. Thence the deep implication of this company with the transactions of government; and the necessity of the Bank of France supporting, by extraordinary and lavish discounts, the credit of individuals or associations, from whom alone government derived the funds requisite for its immense engagement. The monetary embarrassments of 1805, therefore, like almost all others, were occasioned by an extravagant expenditure; but they arose not on the part of individuals, but of government; the crisis was not commercial, but political. Thence the singular and instructive fact that the whole inordinate discounts, of which Napoleon so loudly complained, were made, not to individuals engaged in private undertakings, but to the contractors for the public service; the root of the evil lay in the extravagant expenditure of the emperor himself, which rendered the anticipation of future revenues indispensable, to a perilous extent, in every branch of government. Considered in this view, this financial crisis was not a mere domestic embarrassment, but an important event in the progress of the contest: it indicated the arrival of the period when France, almost destitute of capital from the confiscations of the convention, and severely weakened in its national credit by the injustice committed during its rule, was unable from its own resources to obtain the funds requisite for carrying on the gigantic undertakings to which its ruler was driven in defence of its fortunes; and when foreign conquest and extraneous spoliation had become indispensable, not merely to give vent to the vehement passions, but maintain the costly government and repair the financial breaches occasioned by the Revolution.*

Napoleon, however much he was disposed to lay the fault, according to his usual system, on others, was in secret perfectly aware of the perilous pass to which his financial affairs had now been brought, and, like Alexander, he trusted to his sword to cut the Gordian knot. M. Marbois had long before represented to him the danger of "having for the bankers of the state those to whom its ministers were indebted;" and Napoleon was so sensible of this, that he had long before expressed his resolution, in military fashion, of having M. Ouvrard arrested, and

* Bign., v., 87, 88.

Financial changes in consequence introduced in France.

made to disgorge some of what he called his ill-gotten wealth, but he had never been able to emancipate himself from his influence.* The crisis of 1805, however, made decisive measures necessary. "I will have no alliance," said he, "between the bank and the treasury. If such existed, a simple movement of the funds might reveal the most important state secrets. We cannot too soon sign an arrêt for the emancipation of the treasury." The difficulty was, that the treasury had to pay every twelve months a hundred and twenty millions (£5,000,000) more than it received, in consequence of the backwardness of all payments to the Exchequer. To liquidate part of this debt, sixty millions (£2,500,000) was funded in the five per cents.; the capital of the Bank of France was doubled; and deposit-banks, under the name of "caisses de service," where the receivers-general of the revenue were invited to deposit the sums they had drawn as soon as ever they were received, and encouraged to do so by being offered interest for all sums so deposited prior to the time when they were bound to make them forthcoming. By this means, the necessity of having recourse to paper credit to raise funds upon anticipated revenues was in a great measure avoided, and the collection of the taxes conducted with much greater regularity than formerly.†

But these financial improvements, great as they were, did not strike at the root of the evil, which was a permanent expenditure by government greatly beyond its income. To cure this by means of loans, the well-known practice in Great Britain, was impossible in a country so ruined in its commercial relations and interests as France then was. The victories of Ulm and Austerlitz solved the difficulty. From the moment that the grand army crossed the Rhine, it was fed, clothed, lodged, and paid at the expense of Germany.‡ On the Nov. 18. 18th of November, an edict of the emperor directed the transmission of all the funds to the army of the North to cease; and on the 18th of December a similar order was given in regard to the army of Italy. Thus the three principal armies of the Empire ceased to be any longer a charge to its finances, and the tributary or conquered states bore the burden of the greater part of that enormous military force by which they were overawed or retained in subjection. This system continued without intermission during the whole remainder of the reign of Napoleon; and the budgets annually presented to the Chambers were, in consequence, as the Duke

de Gaeta, their principal author, himself confesses, no true statement of the imperial expenses.* They were delusive even in what concerned the domestic finances of France, by always exaggerating the income and diminishing the expenditure; but, as concealing the greater part of the enormous contributions levied by the army in the allied or conquered states, totally fallacious.†

The budget of France for 1805, presented to the Chambers in February, 1806, accordingly exhibited no true picture of the national finances; but even as it was, it showed an expenditure of 700,000,000 of francs (£28,000,000), and an income of only 588,000,000 (£23,600,000), the balance being made out by contributions levied from foreign states.‡ But although Napoleon knew as well as any one the perilous nature of the crisis which the government had recently experienced, it was no part of his policy to permit his subjects to share his disquietude, and he resolved to dazzle the world by a splendid exposition of the state of the Empire. The report drawn up by Champagny, minister of the interior, contained a picture of the state of the Empire, which, from the magnitude of the victories which it recounted, and the splendour of the undertakings which it commemorated, might well bear a comparison with Pliny's panegyric of Trajan. It represented the navigation of the Seine and the Soane as essentially improved; Alexandria surrounded with impregnable fortifications; Genoa furnishing its sailors and naval resources to France; Italy delivered from the presence of the English; the sciences, the arts encouraged; the capital about to be adorned by the most splendid monuments; the Alps and the Apennines yielding to the force of scientific enterprise, and the noble routes of the Simplon, Mont Cenis, the Comiché, and the Mont Genevre opening to loaded chariots a path amid heretofore impassable snows; numberless bridges established over the Rhine, the Meuse, the Loire, the Soane, and the Rhone; harbours and wet-docks in a rapid state of construction in five-and-thirty maritime cities; the works of Antwerp and Cherbourg promising soon to rival the greatest naval establishments of England.

* "Bourrienne," said he, in 1800, "my part is taken: I will cause M. Ouvrard to be arrested." "General," replied the secretary, "have you any proofs against him?" "Proofs? What are required? He is a contractor, a scoundrel. He must be made to disgorge. All of his tribe are villains. How do they make their fortunes? at the public expense. They have millions, and display an insolent extravagance when the soldiers are without shoes or bread. I will have no more of this." He was accordingly arrested and thrown into prison; but, as there was no evidence whatever against him, he was speedily liberated, and soon, from his great capital, regained all his former influence with the government.—BOUR., vii., 94, 95.

† Bign., v., 89, 189, and 195.

‡ From the castle of Louisberg in Wirtemberg, Napoleon wrote, so early as the 4th of October, 1805, to the minister of finances at Paris, "The army maintains the most exact discipline; the country hardly feels the presence of the troops. We live here on *Bons*: I have no need of money from you." These *Bons* were treasury bills, which were discharged by the French government out of the contributions levied on the inhabitants, or the sums extracted from the conquered countries.—BIGN., v., 100.

The exposition concluded with a rapid view of the advantages which France had derived from the successive coalitions which had been formed against its existence. "The first coalition, concluded by the treaty of Campo Formio, gave the Republic the frontier of the Rhine, and the states which now form the kingdom of Italy; the second invested it with Piedmont; the third united to its federal system Venice and Naples. Let England be now convinced of its impotence, and not attempt a fourth coalition, even if subsequent events should render such a measure practicable. The house of Naples has irrevocably lost its dominions: Russia owes the escape of its army solely to the capitulation which our generosity awarded; the Italian Peninsula, as a whole, forms a part of the great empire; the emperor has guaranteed, as chief supreme, the sovereigns and constitutions which compose its several parts." In the midst of these just subjects of exultation, Napoleon had not the moral courage to admit the terrible disaster of Trafalgar. That decisive event was only alluded to in the following passage of his opening speech to the Chambers: "The tempests have made us lose some vessels after a combat imprudently engaged in. I desire peace with England; I shall not on my side retard its conclusion by an hour. I shall always be ready to terminate our differences on the footing of the treaty of Amiens." Thus, while the Neapolitan dynasty, for merely making preparations for war, was declared to have ceased to reign, England, which had struck so decisive a blow at his maritime strength, was invited to a pacification on terms of comparative equality: a striking instance of that resolution to crush the weak, and temporize till the proper time arrived with the powerful, which formed so remarkable a feature of Napoleon's policy.*

The return of Napoleon to Paris was the signal for the commencement of magnificent public structures in that capital. The municipality voted a monument to the emperor and the grand army, which, after much hesitation as to the design, it was at length resolved to make a triumphal column, composed of the cannon taken in the Austrian campaign, surmounted by a statue in bronze of the emperor. The design was speedily carried into effect; five hundred imperial guns, melted down and cast anew, assumed the mould of the principal actions of the campaign, which wound, like the basso-relievo on Trajan's pillar at Rome, to the summit of the structure, a hundred and twenty feet from the ground, where the statue of Napoleon, since carried off by the Emperor Alexander as a trophy of victory to St. Petersburg, was placed. Since the accession of Louis Philippe it has been replaced by an admirable bronze representation of the great conqueror in his gray riding-coat, which has become canonized in the minds of the French by the feelings of admiration, almost amounting to devotion, with which his memory is regarded. Magnificent fêtes were projected by the emperor to signalize the return of the grand army to the capital; but they were adjourned, first on account of the sojourning of the troops on the Austrian frontier, next from the menacing aspect of Prussia, and finally abandoned after the gloom and bloodshed of the Polish campaign.†

The ominous announcement, made from the depths of Moravia, that the dynasty of Naples had ceased to reign, was not long allowed to remain a dead letter. Massena was busily employed, in January, in collecting his forces in the centre of Italy, and before the end of that month fifty thousand men, under the command of Joseph Bonaparte, had crossed the pontifical states and entered the Neapolitan territory in three columns, which marched on Gaeta, Capua, and Itri. Resistance was impossible; the small Russian and English forces which had disembarked to support the Italian levies, finding the whole weight of the war likely to be directed against them, withdrew to Sicily; the court, thunder-struck by the menacing proclamation of the 27th of December, speedily followed their example; the governors of the cities first exposed to invasion hastened to appease the conqueror by submission; a vain attempt at negotiation by means of Prince St. Theodore did not suspend for an instant the march of the victorious troops; in vain the intrepid Queen Caroline, who still remained at Naples, armed the lazzaroni, and sought to infuse into the troops a portion of her own indomitable courage; she was seconded by none; Capua opened its gates; Gaeta was invested; the Campagna filled with the invaders; she, vanquished but not subdued, was compelled to yield to necessity, and follow her timid consort to Sicily; and on the 15th of February Naples beheld its future sovereign, Joseph Bonaparte, enter its walls.*

But, although the capital was thus occupied by the invaders, and the reigning family had taken refuge in the seagirt shores of Sicily, the elements of resistance still existed in the Neapolitan dominions. The Prince of Hesse-Philpsthall had the command of Gaeta, and he had inspired the garrison of eight thousand men which he commanded with a share of his own gallant resolution. When summoned to capitulate, this gallant officer replied that his honour would not permit him to lower his colours till the last extremity; and the long resistance which he made, coupled with the natural strength of the place, which could be approached, like Gibraltar, only by a neck of land strongly fortified, inspired the Sicilian cabinet with the hope that something might yet be done for the deliverance of its Continental dominions. During the first tumult of invasion the peasantry of Calabria, in despair at the universal desertion of the kingdom, both by their government and its allies, submitted to the enemy; and General Regnier, with a considerable corps, at first experienced little resistance in his occupation of the principal strongholds of the country. But the protraction of the siege of Gaeta, which occupied Massena with the principal army of the French, gave them time to recover from their consternation; and the cruelty of the invaders, who put to death without mercy all the peasants who were found with arms in their hands, on the pretence that they were brigands, drove them to despair. A general insurrection took place in the beginning of March, and the peasants stood firm in more than one position; but they were unable to withstand the shock of the veterans of France, and in a decisive action in the plain of Campo-Tenese, their tumultuary levies, though fifteen thousand strong, were en-

tirely dispersed. The victorious Regnier penetrated even to Reggio, and the standards of Napoleon waved on its towers, in sight of the English videttes on the shores of Sicily.*

When hostilities had subsided, Joseph repaired in person to the theatre of war, and sought, by deeds of charity, to alleviate its distresses, while his beneficent mind contemplated great and important public works to ameliorate that savage and neglected district. He visited the towers of Reggio, admired the magnificent harbour of Tarentum, and had already formed the design of canals and roads to open up the sequestered mountains of Calabria. In the midst of these truly princely projects he received at Scigliano, the principal town of the province, the decree by which Napoleon created him King of the Two Sicilies. By so doing, however, he was declared not to lose his contingent right of succession to the throne of France; but the two crowns were never to be united. At the same time, the Venetian states were definitively annexed to the kingdom of Italy, and that capital was to give his title to the eldest son of its sovereign. The beautiful Pauline, now married to Prince Borghese, received the duchy of Guastalla, subsequently united to the same dominions; the Princess Eliza was created Princess of Lucca Piombino; Murat was made Grand-duke of Berg, with a considerable territory; and the emperor reserved to himself twelve duchies in Italy, of which six were in the Neapolitan dominions, which were bestowed on the principal officers of his army.†

Thus, while he was elevating the members of his family to the neighbouring thrones, the military hero of the Revolution already gave indications of his secret design, by reconstructing the titles of honour which it had cost so much bloodshed to destroy, to overturn its principles.

Events, however, soon occurred which showed the infant sovereign what an insecure tenure he had of his dominions. Hardly had he returned to Naples to receive the congratulations of his new subjects on his elevation, when the island of Capri, the celebrated retreat of the Emperor Tiberius, whose romantic cliffs bound the horizon to the south of the Bay of Naples, was wrested from his power by an English detachment, and nothing but the generous forbearance of the commander of the squadron, Sir Sydney Smith, saved his capital and palace from a bombardment, amid the festive light of an illumination. Shortly after, a still more serious disaster occurred in the southern provinces of his dominions, attended in the end with important effects on the fortune of

the war. Encouraged by the prolonged resistance of Gaeta, and the accounts which were brought from all quarters of the disaffections which prevailed in Calabria, the English commanders in Sicily resolved upon an effort by land and sea, with the double view of exciting an insurrection on the one side of the capital, and relieving the fortress which so gallantly held out on the other. In the beginning of July an expedition set sail from Palermo, consisting of somewhat less than five thousand men, which landed in the Gulf of St. Euphemia; and the commander, Sir John Stuart, issued a proclamation, calling on the Calabrians to repair to his standard and unite their efforts to expel the intruding sovereign. Few or none, however, of the peasantry appeared in arms; no intelligence of more distant armaments was received; and the English general was beginning to hesitate whether he should not re-embark his troops, when advices were received that Regnier, with a French force not greatly exceeding his own, was encamped at Maida, about ten miles distant. With equal judgment and resolution, Sir John Stuart immediately resolved to advance against his opponent; and if he could not expel the enemy from the Neapolitan territories, at least give the troops of the rival nations an opportunity, so much longed for, of measuring their strength on a footing of comparative equality. He moved forward his forces, accordingly, in quest of the enemy. On the 5th of July the outposts of the two armies were within sight of each other, and both sides prepared for a decisive conflict on the following morning, the French never doubting that they would speedily drive the presumptuous islanders into the sea; the English anxious, but not apprehensive that it would be found, in the hour of trial, that they had not degenerated from their ancestors of Blenheim or Poitiers.*

When the English army arrived in sight, the corps of Regnier, consisting of five thousand infantry, six hundred cavalry, and a battery of horse-artillery, was strongly posted on a range of wooded heights which skirted the little plain stretching from their feet towards the sea; while the British, bivouacking in that marshy and unhealthy expanse on the banks of the Amato, were in a situation of all others the most exposed to the pestilential gales of the malaria, at that sultry season in full activity. But Regnier, inspired with a supercilious contempt for his opponents, with whom he had combated in Egypt, and the defeats from whom, there received, he had entirely ascribed, in his subsequent publication, to the errors of General Menou, and encouraged by the arrival of reinforcements in the night, which raised his forces to seven thousand five hundred men,† resolved to leave nothing to the diseases of the climate, and march at once to the encounter. Hastily, therefore, he descended from the heights, crossed the sluggish stream, and advanced against the enemy.‡

Surprised, but nothing dismayed at the unexpected appearance of forces so much more considerable than they had anticipated, the British troops awaited, with undiminished resolution, the attack. Their right rested on the Amato, at the point where its lazy current fell into the sea; the thickets and underwood which enveloped its mouth were filled

* Bot., iv. Hard., ix., 88, 90. Dum., xv., 107, 116.

† "The interests of our crown," said Napoleon, "and the tranquillity of the Continent of Europe, require that we should secure in a stable and definitive manner the fate of the people of Naples and Sicily, fallen into our power by the right of conquest, and forming part of the great Empire: we therefore declare our well-beloved brother, Joseph, King of the Two Sicilies." By the same decree, Berthier was created Prince of Neuchâtel, which had been ceded by Prussia; Talleyrand obtained, with the title of Prince of Benevento, the principality of the same name, which belonged to the pontifical states; Bernadotte became Prince of Pontecorvo; Cambacérès and Le Brun, Dukes of Parma and Placentia. Substantial reservations in favour of the crown of France accompanied the creation of these inferior feudatories; a million yearly was reserved from the Neapolitan revenues, to be distributed among the French soldiers.—Hard., ix., 94, 95. with light troops, which kept up a destructive fire on the assailants as they approached; but notwithstanding the heavy loss which they sustained in consequence, the French bravely advanced, and, impatient of victory, after a few volleys had been exchanged, rushed forward with the bayonet. But they little knew the enemy with which they had now to deal. No sooner did the English right, consisting of the light companies of the 26th, 27th, 35th, 58th, 61st, 81st, and 85th regiments, perceive the levelled steel of their opponents, than they too advanced with loud cheers to the charge; the 1st light infantry, a famed French regiment, as gallantly pressed forward, and the rival nations approached each other till their bayonets literally crossed. At that appalling moment French enthusiasm sank before British intrepidity: their battalions broke and fled, but were instantly overtaken amid deafening shouts, with such slaughter, that in a few minutes seven hundred lay dead on the spot, and a thousand, including General Compere, were made prisoners. Taking advantage of this overthrow, the brigade under General Auckland, which was immediately to the left of the victorious right, also pressed forward, and drove the enemy in that quarter from the field of battle. Defeated thus in the centre and right, Regnier made an attempt with his cavalry, in which arm the British were totally deficient, to overwhelm the left: a rolling fire of musketry repelled them from the front of the line; but their squadrons, rapidly wheeling round the immovable infantry, succeeded in turning its left, and this movement might have yet retrieved the day, when the French cavalry, in the midst of their advance, were assailed by a close and well-directed fire in flank from the 28th regiment, which had that morning landed, and came up most opportunely at the decisive moment to take a part in the action. This unexpected discharge totally disconcerted the horse, which fled in disorder from the field of battle; and the enemy, routed at all points, withdrew their shattered battalions across the Amato, weakened by the loss of half their numbers.*†

The battle of Maida, though hardly noticed by the French nation amid the blaze of Ulm and Austerlitz, had a most important effect upon the progress of the war. It is often by the feelings which it excites, and the moral impression with which it is attended, more than by its immediate results, or the numbers engaged on either side, that the importance of a victory is to be estimated. In this point of view, never was success more important than that thus achieved. True, the forces engaged were inconsiderable, the scene remote, the probable immediate advantages trifling; but of what avail was all that? it was a duel between France and England, and France had fallen in the conflict. At last the rival states had come into collision on terms approaching to equality, and without the paralyzing effect of lukewarm or dubious allies, and the result had been decisive: the veterans of Napoleon had fled before the British steel. Indescribable was the national exultation at this glorious result. The disasters of the early years of the war were forgotten, or ascribed to their true cause, general inexperience

in the military art: confidence, the surest presage of victory when guided by prudence, was transferred from the naval to the land service; and, reposing securely on the fights of Alexandria and Maida, all classes openly expressed their ardent desire for an early opportunity of measuring the national strength on a greater scale with the conquerors of Continental Europe. Publications began to issue from the press which strongly urged the adoption of a more manly system of military policy, and the descent of the British in large bodies on the shores of Germany or Italy;* the people no longer hesitated to speak of Cressy and Azincour. The British historian need entertain no fears of exaggerating the moral influence of this success, even with so inconsiderable a force. He will have occasion to portray a similar result to the enemies of his country, from the successes of the Americans with detached ships at the close of the war.† Napoleon was well aware of its importance: he received the accounts of the defeat at Maida with a degree of anguish which all his matchless powers of dissimulation could not conceal. "Sive tanta, sive minor victoria fuit, ingens eo dic res, ac nescio, an maxima illo bello, gesta sit; non vinci enim ab Hannibale, vincen-tibus, tunc difficilior fuit, quam postea vincere."‡

But, though productive in the end of the most important consequences, from the ^{its immediate} moral feelings which it inspired, the ^{results are less} victory of Maida was not attended ^{considerable} at the moment with any durable results. In the first instance, indeed, considerable advantages were gained. Every town and fort along the coast of Calabria fell into the hands of the victors. The whole artillery, stores, and ammunition collected for the invasion of Sicily were taken or destroyed. The French forces made a precipitate retreat on all sides, and the insurrection spread like wildfire through the whole southern provinces of the Neapolitan dominions. A few days after the town of Crotona, containing a thousand men, chiefly wounded, surrendered to the insurgents. Their detachments were cut off on all sides, and massacred with savage cruelty by the peasantry, whose ferocity General Stuart in vain endeavoured to appease, by a proclamation earnestly imploring them not to disgrace their cause by a deviation from the usages of civilized warfare. So general was the disaster, that Regnier was unable to stop his retreat till he reached the intrenched camp of Cassano, where the junction of Verdier's division enabled his shattered army, weakened by the loss of eight thousand men, at length to make head against the enemy.§

These disasters might have been attended with important results upon the whole campaign in the Peninsula, could ^{Surrender of} Gaeta have held out till the combined English and Neapolitan forces approached its walls. But the progress of the siege, and the vigour of Massena, who commanded the attacking army, rendered this impossible. After a gallant resistance, and the display of great skill on both sides, which rendered this siege one of the most memorable of the whole war, a practicable

breach was effected in front of the citadel, while a second, of smaller dimensions, was formed on its flank. Already a column of three thousand grenadiers was prepared for the assault.

July 18. Prince Hesse Philipsthal had some days before been mortally wounded by the bursting of a shell, and removed on board an English vessel to Sicily. His successor was not animated with his dauntless spirit: proposals of capitulation were made; and Massena, glad on any terms to render his force disposable for still more pressing exigencies, granted them the most honourable conditions. The garrison, still seven thousand strong, marched out with the honours of war, and on the 18th of July the French flag waved on its classic and almost impregnable battlements.*†

The surrender of Gaeta, by rendering disposable the whole besieging force of Massena, eighteen thousand strong, made the insurrection in Calabria hopeless, and the ulterior stay of the English army on the Neapolitan shores impossible.

Sir John Stuart, therefore, slowly bent his steps towards the straits of Messina; and at length, on the 5th of September, after a residence of two months, the last detachments of the English embarked for Palermo, leaving, of necessity, though on this occasion for the last time, the stain too often thrown on their arms, of exciting a people to resistance whom they subsequently abandoned to their invaders. Meanwhile the advance of Massena, though stubbornly resisted and attended with great bloodshed, was a succession of triumphs. The insurgents kept their ground bravely at the romantic defile of Lauria, so well known to travellers in Calabria,

Aug. 5. but were at length turned by the Monte Galdo, and defeated with great slaughter. A guerilla warfare ensued, attended with savage cruelty on both sides. The stream of the Calore, which flowed through the theatre of the contest, descended to the sea charged with the bodies of the slain. But after several months

Nov. 10. of carnage, the French troops regained all the ground they had occupied prior to the descent of the English; and an amnesty, judiciously published by King Joseph, at length put a period to this sanguinary and hopeless contest, in which they lost, by sickness and the sword, little short of fifteen thousand men.†

No monarchy in Europe stood more in need of reformation than that of Naples when Joseph took possession of its throne. The administration of justice, the administration of the finances, the general police of the country, stood equally in need of amendment. Hence the remarkable fact, that

Domestic reforms of Joseph in Naples.

† The physical difficulties experienced by the assailants in this memorable siege were of the most formidable description; its details, which are fully given by General Mathieu Dumas, are highly interesting to the military reader. No less than 120,000 cannon-shot and 22,000 bombs were fired by the garrison upon the besiegers before they returned a single gun; but when their batteries were opened on the 10th of July, the superiority of their fire became soon apparent. Gaeta, named after the nurse of *Æneas*,* underwent a desperate siege from the Austrians in 1707, when it surrendered only after a murderous assault by Marsina Dam. Thirty years afterward it was besieged and taken, when defended only by an insufficient garrison.—See DUMAS, xv., 155, 170.
‡ Dum., xv., 171, 179. Jom., ii., 239, 246. Bot., iv., 214, 217. Ann. Reg., 1806, 143, 148.

* *Tu quoque litteribus nostris, Æneia nutrix, Eternam moriens famam, Caieta, dedisti.*—*Verg.*, lib. vii.

the most democratically inclined of the whole community were those of the higher ranks who had travelled, or received the advantages of a liberal education, while the supporters of the arbitrary government, and all the abuses consequent in its train, were to be found among the rabble of cities and the peasantry of the country. A state of things which, however at variance with what is generally prevalent in a constitutional monarchy, arises naturally from the feelings brought into action in such circumstances as here occurred, and has been since abundantly verified by the experience of the southern monarchies of Europe when exposed to revolutionary convulsions. Joseph Bonaparte, who was endowed by nature with an inquisitive and beneficent spirit, found ample room for, and soon effected the most extensive ameliorations. Without conceding in an undue degree to the Democratic spirit, he boldly introduced reforms into every department. The estates held by the nobles by a military tenure were deprived of their unjust exemption from taxation; their castles, villages, and vassals subjected to the common law of the realm; the number of convents was restrained; part of their estates appropriated to the discharge of the public debt; part devoted to the establishment of schools in every province for the youth of both sexes. Academies for instruction in the military art, in naval science, in drawing, a national institute, and various other useful institutions, were established in the capital. Roads, bridges, harbours, and canals were undertaken or projected, and a general spirit of activity diffused by the energy of the government. Great part of these improvements have survived the ephemeral dynasty with which they originated, and constitute part of the lasting benefits produced by the disastrous wars of the French Revolution.*

The conquest of Naples and ascent of the throne of the Two Sicilies by the brother of Napoleon was not the only usurpation which followed the peace of Presburg. The old commonwealth of Holland was destined to receive a master from the victorious emperor; while the Republic of Venice, incorporated, by the decree of the 30th of March, with the kingdom of Italy, furnished a noblesse to surround and support his throne. Since their conquest by the French, under the victorious arms of Pichegru, the Dutch had uniformly shared in all the revolutionary convulsions of the parent Republic; and the authority latterly conferred on the Grand Pensionary in 1805 had almost rendered it a monarchical government. Meanwhile the misfortunes of the state were unparalleled. Its most valuable colonies had been conquered by the English, and were, to all appearance, indefeasibly united to that absorbing power. The Cape of Good Hope had become a half-way house to their vast dominions in Bengal; the island of Ceylon had recently been added to their possessions in the Indian Archipelago; and Surinam itself, the entrepôt of the commercial riches of Holland, in the Eastern seas, had fallen into their hands. Their harbours were blockaded, their commerce ruined, their flag had disappeared from the ocean, and the state, as usual at the close of revolutionary convulsions, had fallen under the despotism of ignoble men, whose tyranny over others was equalled only by their base adulation of the

Louis Bonaparte created King of Holland.

* Colletta, ii., 1, 15. Bign., v., 135, 139.

foreign rulers of the commonwealth. The people, desperate of relief, and worn out by obscure tyrants, in the election of whom the respectable classes had taken no share, were desirous of any change which promised a more stable and creditable order of things. Encouraged by these dispositions, Napoleon resolved to place his brother Louis on the throne of Holland. With this view a Dutch deputation, composed of persons entirely in his interest, was instructed to repair to Paris and demand his appointment. A treaty was soon concluded, which, on the preamble "that it had been found by experience that the annual election of a chief magistrate was the source of continual discord, and that, in the existing state of Europe, a hereditary government could alone guaranty the independence and furnish securities to the civil and religious of the state," declared Louis the King of Holland. A few days after the new monarch was proclaimed, and issued a decree, in which he promised to maintain the liberties of his people, whose independence was guaranteed by the emperor; but the elusory nature of that independence was made painfully evident by the characteristic speech which Napoleon made to his brother on the occasion. "Never cease to regard yourself as a Frenchman. The dignity of constable of the empire shall be reserved to you and your descendants. It will recall to your recollection the duties you have to discharge *towards me*, and the importance which I attach to the guardianship of the strong places which I intrust to you, and which compose the northern frontier of my states."*

At the same time, the incorporation of the Venetian States with the kingdom of Italy afforded the emperor an opportunity of laying the foundation of that territorial noblesse by which he hoped to add stability and lustre to his throne. Twelve military fiefs were created out of the ceded districts, which Napoleon reserved for the most distinguished of his marshals and ministers, while a fifteenth of the revenue which they yielded to the treasury at Milan was set apart to form appanages suitable to those dignities. A revenue of 1,200,000 francs (£48,000) was at the same time destined, from the taxes of the kingdom of Italy, to form a fund, out of which he was to recompense his soldiers, and soon divided among a great variety of claimants. Thus Napoleon was rendering the conquests of his arms not only the source of power to himself, but of emolument to his followers in every degree.†

The system upon which Napoleon now openly entered of placing his relations and family on the thrones of the adjoining kingdoms, and surrounding France with a girdle, not of affiliated Republics, but of dependant dynasties, was not, as has been sometimes imagined, a mere ebullition of personal vanity or imperial pride. It had its origin in profound principles of state policy, and a correct appreciation of the circumstances, both of which had elevated him to the throne, and surrounded him when there. He clearly perceived that it was Revolutionary passion, converted by his genius into the spirit for military conquest, which had placed him on his present pinnacle of power, and that he was regarded with a jealous eye by the old European dynasties, who both

dreaded, from dear-bought experience, the fervour which had elevated him to the throne, and were averse to the principles which had overturned the ancient family. He felt that, of necessity, however disguised under the semblance of friendship, his hand was against every man, and every man's hand against him; and this being the case, the only permanent bond of alliance on which he could depend was that which united him to his own family, and cemented with his own the interests of inferior royalities, dependant on the preservation of his great parent diadem. "I felt my isolated position," says he, "and threw out on all sides anchors of safety into the ocean by which I was surrounded; where could I so reasonably look for support as in my own relations? could I expect as much from strangers?" Such were the views of Napoleon, and that, *situated as he was*, they were founded on reason, is perfectly obvious. That the measures to which they led him, of displacing the adjoining monarchs, and seating on their thrones the members of his own family, were calculated to excite, in the highest degree, the jealousy and hostility of the other Continental powers, and thus had a powerful influence in producing his ultimate overthrow, is, indeed, equally certain; but these considerations afford no ground for impeaching the soundness of the principles by which his conduct was regulated. They show only that he was placed in circumstances which required a hazardous game to be played, and afford another to the many illustrations which the history of this eventful period exhibits of the eternal truth, that those who owe their elevation to Revolutionary passion, whatever form it may have assumed, are driven on before a devouring flame, more fatal in the end to those who are impelled by than those who resist its fury.*†

On the same day on which a king was given by the French emperor to the United Provinces, an ambassador arrived from the grand signior, who came to congratulate him on his accession to the imperial dignity. He was received with the utmost condescension; and the words used by Napoleon on the occasion are well worthy of being recorded, when taken in conjunction with his subsequent conduct to that power by the treaty of Tilsit. "Everything," said he, "that can happen, either of good or bad fortune, to the Ottomans, will be considered in the same light by France. Have the goodness, M. Ambassador, to transmit these words to Sultan Selim. Let him ever recollect that my enemies, who are also his own, may one day penetrate to his capital. He never can have any cause of apprehension from me: united to my throne, he need fear nothing from his enemies." Within a year after these words were spoken, Napoleon signed, on the Niemur, a treaty with Russia, for the partition of the whole Turkish territories in Europe.‡

But while fortune seemed thus lavishing her choicest gifts on Napoleon by land, and the dynasties of Europe were melting away before his breath, disaster, with equally unvarying course, was attending all his maritime operations, and the sceptre of the ocean had irrevocably passed into the hands of his enemies.

* Bign., v., 132, 143. Las Cas., vii., 127.

† "The truth is," said Napoleon, "that I was never master of my own movements; I was never altogether my own. I was always governed by circumstances."—Las Cas., vii., 124, 125.

† Bign., v., 139, 140

The victory of Trafalgar, with the subsequent achievements of Sir Richard Strachan, had almost entirely destroyed the great combined fleet which, under Villeneuve, had issued from Cadiz; but the squadrons at Rochefort and Brest, upon the co-operation of which Napoleon had so fondly calculated, still existed; and he was not yet sufficiently humbled by disaster to renounce altogether the hope of deriving some advantage from their resources. He resolved to employ the remainder of his naval forces, not in regular battles with the English fleet, but in detached operations with smaller squadrons, against their remote colonies or merchant vessels. Half the Brest fleet, consisting of eleven line-of-battle ships, were victualled for six months; and in the middle of December, when the Channel fleet was blown off the station by violent winds, they stood out to sea, and shortly after divided into two squadrons: the first, under Admiral Leissegues, consisting of five ships of the line and two frigates, were destined to carry out succour to St. Domingo; while the second, under Villameuz, embracing six ships of the line and two frigates, received orders to make for the Cape of Good Hope, and do as much injury as possible to the English homeward-bound merchant fleets. But a cruel destiny awaited both squadrons, which annihilated the enemy's remaining naval forces, and almost closed the long series of British maritime triumphs during the war.*

Admiral Leissegues arrived without any accident at St. Domingo, and disembarked his troops and stores; but the damage he had experienced from the wintry storms during the passage of the Atlantic rendered some repairs necessary, which were undertaken in the open roadstead of that harbour. The imprudent security which had dictated that resolution was soon severely punished. On the 6th of February Admiral Duckworth, who had been detached from the blockading squadron before Cadiz in pursuit of the enemy, hove in sight with seven ships of the line and four frigates. Four of the English ships engaged each a single adversary, while the three others united against the Imperial, a splendid vessel of 130 guns, which bore the admiral's flag, and was equal to the encounter of any two of its opponents. So unequal a contest as that with three, however, could not be of long endurance. Notwithstanding all their efforts to escape, the French squadron were overtaken and brought to close action: a desperate conflict of two hours ensued, which terminated in the whole of their line-of-battle ships being taken or destroyed; three having struck their colours, and two, including the superb Imperial, driven ashore and burned. The frigates stood to sea during the confusion of this murderous engagement, and escaped. Nothing could exceed the gallantry with which the French in all the ships stood to their guns: on board the three taken alone, the killed and wounded were no less than 760, while the total loss of the British was only 64 killed and 294 wounded. The Imperial, before it ran ashore, had seen 500 of its bravest sailors mowed down by the irresistible fire of the English vessels.†

Though not overtaken by so overwhelming a

disaster, the cruise of Admiral Villameuz, with the remainder of the Brest fleet, was in the end nearly as calamitous. Having received intelligence, when he approached the Cape, of the capture of that settlement by the British, he stood over for Brazil, where he watered and revictualled at Bahia, and moved northward towards the West Indies, in hopes of falling in with the homeward-bound Jamaica fleet. Thither he was tracked by Sir Alexander Cochrane with four sail of the line, who, though not in sufficient strength to risk an engagement, followed him at a distance, and, by means of his look-out frigates, observed all his movements. On the 12th of July Sir John Borslase Warren arrived from England at Barbadoes. His squadron had been fitted out and performed the voyage with unexampled rapidity, having left Spithead only on the 4th of June: Sir Richard Strachan soon after made his appearance with a second fleet in the same latitude, while a third, under Admiral Louis, put to sea in the end of August to intercept their return. As it was now evident that the attention of the English government was fully fixed on this squadron, the last which the enemy had at sea, the most serious apprehensions began to pervade the French that they would share the fate of their comrades on the coast of St. Domingo; and under the influence of these feelings the Veteran, of 74 guns, commanded by Jerome Bonaparte, separated from the rest of the squadron, and without any orders stood away in the night of the 30th of July for France. Discouraged by this defection, and perceiving no possibility of maintaining his position, Villameuz saw no resource but to make sail for the first friendly harbour in Europe. In doing so, however, he was assailed by a furious tempest, which totally dispersed his fleet: the Foudroyant, severely disabled, with difficulty reached the Havana, pursued by the English frigate Anson under the very guns of the Moro Castle: the Impetueux was standing in for the Chesapeake, when she was descried by Sir Richard Strachan's squadron, driven ashore and burned, her crew being made prisoners; two other seventy-fours were destroyed by the English in the same bay; the Cassant alone, which was supposed to have foundered at sea, regained Brest about the middle of October in the most deplorable condition. Jerome Bonaparte, in the Veteran, made a rich prize in returning to Europe; but, chased by some English vessels when he reached the Bay of Biscay, he was obliged to let go his booty, and after a hard run only reached the coast of France by steering his vessel ashore under the batteries of the little harbour of Concarneau, where the bulk was abandoned, but the crew and guns got into safety.*

The squadron under Admiral Linois, which had so long wandered almost unmo- lested in the Indian Ocean, and done very great damage to our commerce in the East, after its inglorious repulse by the China mercantile fleet, of which an account has already been given, made an attack on the Centurion, 74 guns, and a few English merchantmen, in the Bay of Vesigabatam; but though they took one of the merchantmen, and drove another on

shore, they could make no impression on the line-of-battle ship, which, with undaunted resolution, bore up against triple odds, and at length succeeded in repulsing the enemy. Finding that the

March 13, 1806. Cape of Good Hope had been conquered by the British, Linois at length bent his steps homeward, and had reached the European latitudes, when he fell, in the night, into the middle of Sir John Borlase Warren's squadron, and, after a short action, was taken, with the Marengo of 80 and the Belle

Poule of 40 guns. Next day five large frigates, with troops on board, bound for the West Indies, were met at sea by a British squadron under Sir Samuel Hood, and, after a running fight of several hours, four out of the five were made prisoners. The only division of the enemy at sea at that period which escaped destruction was the Rochefort squadron, under Admiral Lallemand, which had the good fortune not to fall in with any of the British fleets, and at length, after a cruise of six months, regained its harbour, having made eight hundred prisoners from merchant vessels in the course of its voyage. From its singular good fortune in eluding the pursuit of all the fleets sent in search of it by the British government, Lallemand's was called by the English sailors the invisible squadron. He had the luck to meet and capture the

Dec. 15, 1805. Calcutta of 56 guns, which, unsuspecting danger, fell into the middle of his fleet of four line-of-battle ships; and his safe return was celebrated as a real triumph by the French,* who in those disastrous days accounted an escape from the enemy at sea as equivalent to a victory.

These maritime transactions conduct us to an important epoch in the war—that in which the French and Spanish naval disasters were TOTALLY DESTROYED, and the English fleet, by general consent, had attained to UNIVERSAL DOMINION. There is something solemn, and apparently providential, in this extraordinary ascendancy acquired on that element by a single power. Nothing approaching to it had occurred since the fall of the Roman Empire. Napoleon afterward acquired important additions of maritime strength. The fleets of Russia, the galleys of Turkey, the impotent rage of Denmark, were put at his disposal; but he never again adventured on naval enterprises, and, with the exception of an unhappy sortie of the Brest fleet, which was soon terminated by the flames of Basque Roads, no sea-fight of any moment occurred to the conclusion of the war. Fearless and unresisted, the English fleets thenceforward navigated the ocean in every part of the globe, transporting troops, convoying merchantmen, blockading ports, with as much security as if they had been traversing an inland sea of the British dominions. Banded Europe did not venture to leave its harbours: all apprehensions of invasion disappeared, and England, relieved from all danger of domestic warfare or colonial embarrassment, was enabled to direct her undivided attention to land operations, and launch forth her invincible legions in that career of glory which has immortalized the name of Wellington.

It was not thus at the commencement of the struggle, nor had it been thus in the preceding war. The mild and pacific Louis XVI. had nursed up the French marine to an unprecedented pitch of

power. The French and Spanish fleets had rode triumphant in the Channel. Gibraltar had been revictualled in presence of superior forces only by the admirable skill of Admiral Howe; and more than once it had seemed for a moment doubtful whether the ancient naval greatness of England was not about to yield to the rising star of the Bourbons. When the war broke out, Louis bequeathed to the convention a gallant fleet of eighty ships of the line, and a splendid colony in St. Domingo, which equalled all the other sugar islands of the world put together. But revolutionary convulsions, however formidable in the creation of a military, can hardly produce a naval power. The transports of Brissot and the society of Les Amis des Noirs cut off the right arm of their maritime strength by the destruction of St. Domingo; the confiscations of the convention utterly ruined their commercial wealth; the blockade of their harbours deprived them of the only means of acquiring naval experience. One disaster followed another, till not only their own fleets were destroyed, but the navies of all Europe were so utterly paralyzed that the English flag alone appeared on the ocean, and the monarch whose will was obeyed from Gibraltar to the North Cape, and from the Ural Mountains to the Atlantic Ocean, did not venture to combat the sloops which daily insulted him in his harbours.

This astonishing result led to a total change in the weapons by which Napoleon thereafter combated Great Britain, and impelled him into that insatiable career of conquest which ultimately occasioned his ruin. He at once perceived that it was in vain, at least for a very considerable time, to make any attempt to withstand the English at sea, and that the prospect of ultimately rivalling their power on that element could only be entertained after a costly construction of ships of war, during a long course of years, in all the harbours of Europe. Abandoning, therefore, all idea of renewing any maritime contest, till his preparations, everywhere set on foot for the formation of a navy, were completed, he turned his mind to the conversion of his power at land to such a course of policy as might strike at the root of the commercial greatness of England. Thence the CONTINENTAL SYSTEM, based on the project of totally excluding British goods and manufactures from all the European monarchies, which required for its completion the concurrence of all the Continental powers, which could everywhere be enforced only by the most rigid police, and could succeed only through the intervention of universal dominion. From the moment that this ruling principle obtained possession of his mind, the conquest of Europe, or at least the subjection of all its governments to his control, became a matter of necessity; for if any considerable state was left out the barrier would be incomplete, and through the chasm thus left in the defences, the enemy would speedily find an entrance. The termination of the maritime war, therefore, is not only an era of the highest importance, with reference to the separate interests of England, but the commencement of that important change in the system of Continental warfare which necessarily brought Napoleon to the alternative of universal dominion or total ruin.

Doubtless the highest praise is due to the long line of brave and illustrious men who, during a series of ages, reared up this astonishing pow-

Napoleon's changes of system in regard to the naval war.

Greatness of the French navy under Louis XVI.

* Ann. Reg., 1806, 229. Bign., v., 153, 154.

Reflections on
the growth of
the English
maritime
Power.

er. It was not, like the empires of Napoleon or Alexander, constructed in a single lifetime, nor did it fall with the fortunes of the heroes who gave it birth. It grew, on the contrary, like the Roman power, through a long succession of ages, and survived the death of the most renowned chiefs who had contributed to its splendour. So early as the time of Edward III., the English navy had inflicted a dreadful wound on that of France: thirty thousand of the vanquished had fallen in a single engagement; and the victory of Sluys equalled in magnitude and importance, though, from the frequency of subsequent naval triumphs, it has not attained equal celebrity with, that of Cressy or Azincour. The freeborn intrepidity of Blake, the fire of Essex, the dauntless valour of Hawke, contributed to cement the mighty fabric: it grew and hardened with every effort made for its overthrow; the power of Louis XIV., the genius of Napoleon, were alike shattered against its strength; the victories of La Hogue and Trafalgar equally bridled, at the distance of a century from each other, the two most powerful monarchs of Europe; and the genius of Nelson only put the keystone in the arch which already spanned the globe. The world had never seen such a body of seamen as those of England during the Revolutionary war: dauntless to their enemies, yet submissive to their chiefs—brave in action, yet cool in danger—impetuous in assault, yet patient in defence—capable of the utmost efforts of patriotic devotion, yet attentive to the most minute points of naval discipline—submissive to orders equally when facing the muzzles of an enemy's broadside, or braving the storms of the Northern Ocean—capable of enduring alike the vertical rays of the torrid zone, or the frozen serenity of an arctic winter—cherishing, amid the irregularities of naval life, the warmth of domestic affection; and nursing, amid the solitude of the waves, the ennobling sentiments of religious duty. By such virtues, not a transient, but an enduring fabric is formed. It is by such fortitude that a lasting impression on human affairs is produced. But amid all our admiration for the character of the British navy, destined to rival in the annals of the world the celebrity of the Roman legions, we must not omit to pay a just tribute to the memory of their gallant and unfortunate, but not on that account less estimable antagonists. In the long and arduous struggle which for three centuries the French navy maintained with the English, they were called to the exercise of qualities perhaps still more worthy of admiration. Theirs was the courage which can resolutely advance, not to victory, but defeat; the heroism which knows how to encounter not only danger, but obloquy; which can long and bravely maintain a sinking cause, uncheered by one ray of public sympathy; which, under a sense of duty, can return to a combat in which disaster only can be anticipated; and sacrifice not only life, but reputation, in the cause of a country which bestowed on success alone the smiles of general favour. Napoleon constantly lamented that his admirals, though personally brave, wanted the skilful combination, the daring energy, which distinguished the leaders of his land-forces, and gave the English admirals such astonishing triumphs; but had he possessed more candour, or been more tolerant of misfortune, he would have seen that such daring can be acquired only in the school of victory; that, as self-confidence is its soul, so

despondence is its ruin; and that, in reality, the admirals who encountered not only danger, but disgrace, in combating the arms of Nelson, were often more worthy of admiration than those who led his land-forces to certain victory at Jena or Austerlitz.

As the English navy has thus risen by slow degrees to universal dominion, so the analogy of history leads to the conclusion that great and durable results are to be produced by its agency. And without presuming to scan too minutely the designs of Providence, in which we are merely blind, though free agents, it may not be going too far to assert that the ultimate object for which this vast power was created is already conspicuous. The Roman legions bequeathed to the world the legacy of modern Europe; its empires and monarchies are but provinces of their dominion, regenerated by the fierce energy of Northern valour. The English navy will transmit to mankind the still more glorious inheritance of transatlantic greatness. A new world has been peopled by its descendants, and imbued with its spirit: freedom, tempered by power, will follow in its footsteps: more closely than the march of the Roman legions will the career of civilization follow the British flag. The era is fast approaching in this narrative, when another power, equally slow in its growth, equally permanent in its progress, will arise to greatness in the east of Europe: the cross is inscribed on its banners; wo to the crescent is the watch-cry of its people; and while the brilliant meteor of Napoleon, rising on the fleeting ascendant of passion and crime, is extinguished in blood, these two colossal empires, alike irresistible by sea and land, will each lay the foundations of the spread of Christianity through half the globe.

The destruction of the French naval squadrons was not the only maritime operation of this year. Before Mr. Pitt's death, he had prepared an expedition, under Sir David Baird, for the reduction of the Cape of Good Hope, consisting of 5000 men; the naval armament being under the direction Sir Home Popham. On the 4th of January, 1806, the expedition reached Table Bay; but the violence of the surf precluding the possibility of disembarking at that quarter, they were obliged to land in Leopard Bay, from whence they moved immediately towards the capital. On the 8th they came up with the Dutch forces, five thousand strong, chiefly cavalry in battle array, upon an elevated plateau which the road crossed on the summit of the Blue Mountains. The Hollanders withstood several discharges without flinching; but no sooner were preparations made for charging with the bayonet than they broke and fled, leaving seven hundred killed and wounded on the field of battle, while the loss of the victors was only two hundred and twelve. This action decided the fate of the colony: Cape Town surrendered; General Jansens, who had retired with three thousand men towards the Hottentot country, was induced by an honourable capitulation, which provided for his safe return to Europe with all his forces, to abandon a hopeless contest; and within eight days from the time when the troops were first landed, the British flag waved on all the forts, and this valuable colony was permanently annexed to the English dominions.*

* Ann Reg., 1806, 233, 234. Dum., xv., 69, 73.

This well-concerted enterprise added an important settlement to the British colonial girdle, which already almost encircled the earth; but the facility with which it was conducted inspired the commanders with an overweening confidence, which ultimately led to serious disasters. Sir Home Popham had at a former period been privy to certain designs of Mr. Pitt for operations in concert with General Miranda against South America, and had even been appointed in December, 1804, to the Diadem, of 64 guns, "for the purpose of co-operating with General Miranda, to the extent of taking advantage of any of his proceedings which might tend towards our attaining a position on the Continent of South America favourable to the trade of this country."* But this intention had been afterward abandoned, or at least suspended, in consequence of the urgent remonstrances of Russia against any such remote employment of the British forces; and when he arrived at the Cape, Sir Home had no authority, express or implied, to employ any part of the forces under his command on any other expedition. But his ardent imagination had been strongly impressed by the brilliant results, both to the nation and the officers engaged in the service, which might arise from such a destination of part of the force which had effected the reduction of the Cape of Good Hope; and having persuaded Sir David Baird, the governor of that settlement, to a certain extent to enter into his views, he set sail in the beginning of April from Table Bay, taking with him the whole naval force under his command, and fifteen hundred land troops. With these, and two companies which he had the address to procure from St. Helena, he steered straight for the mouth of the Rio della Plata.†

The expedition reached the neighbourhood of Buenos Ayres on the 24th of June, and was immediately disembarked.

General Beresford, who commanded the land-forces, immediately proceeded against that town, while the naval forces distracted the attention of the enemy by threatening Montevideo, where the principal regular forces were collected. Buenos Ayres, chiefly defended by militia, was unable to withstand the energetic attack of the invaders, and a capitulation was soon concluded, which guaranteed private property: a stipulation which the English commanders religiously observed, though cargoes of great value were lying afloat in the river, and might, by the established usages of war, have been declared good prize. But public stores to a great amount fell into the hands of the victors; of which 1,200,000 dollars were forthwith forwarded to government, while quicksilver to double the amount was seized for the benefit of the captors.‡

Government were extremely embarrassed how to act when intelligence of this unlooked-for success reached the British islands. Not that they felt any doubt as to the inexpediency and unhappy tendency of the enterprise; for on the first information that the expedition was in contemplation, they had despatched orders to countermand its sailing, which, unhappily, arrived too late to put a stop to its progress. But they were unable to stem or moderate the delirium of joy which pervaded the minds of the mercantile

classes on receipt of the despatches. The English, subject beyond any other people, perhaps, of whom history makes mention, to periodical, though, fortunately, not very lasting fits of insanity, were suddenly seized with the most immoderate transports: boundless fields of wealth, it was thought, were opened, endless markets for the produce of manufacturing industry discovered; and those fabled regions which formed the El Dorado of Sir Walter Raleigh appeared about to pour their inexhaustible treasures into the British islands. Under the influence of these extravagant feelings every principle of reason, every consideration of policy, every lesson of experience was swept away: speculations the most extravagant were entered into, projects the most insensate formed, expectations the most ridiculous entertained;* and government, unable to withstand the torrent, were obliged to dissemble their real feelings, and give a certain countenance to ideas which could be fraught only with ruin to all who acted upon them.

But long before the cabinet of St. James were either required to come to a resolution in what manner they were to act in regard to their new acquisition, or the boundless consignments

It is retaken by the South Americans, August 4.

which were in preparation could have crossed the Atlantic, the conquest itself had returned to the government of its former masters. Ashamed of their defeat by a handful of foreigners, and recovered from the consternation which the unexpected occurrence of an invasion had at first produced, the Spaniards began to entertain serious thoughts of expelling the intruders. An insurrection was secretly organized in the city of Buenos Ayres, almost under the eyes of the English commanders, without their being aware of what was going forward: the militia of the surrounding districts were assembled; Colonel Linieres, a French officer in the Spanish service, favoured by a thick fog, succeeded in crossing over from Montevideo at the head of a thousand regular troops; and on the 4th of August the small English garrison, assailed by several thousand men from without, found itself menaced with insurrection in the interior of the city. The state of the weather rendered embarkation impossible: a desperate conflict ensued in the town, and the English troops, after sustaining for several hours an unequal con-

Aug. 12.

flict with the enemy, in greatly superior force in the streets, and a still more deadly because unseen foe in the windows and on the roofs of houses, were obliged to capitulate. The terms of the surrender were afterward violated by the Spaniards, and the whole remaining troops, thirteen hundred in number, made prisoners of war, after having lost nearly two hundred in killed and wounded. Sir Home Popham, the author of these calamities, succeeded in making his escape with the squadron, and cast anchor off the mouth of the river, where he maintained a blockade till re-enforcements enabled the British to resume the offensive, attended in the end with still more unfortunate circumstances in the succeeding year. General Miranda, whose projects against South America had been the remote cause of all these disasters, disappointed in his expectations of assistance both from the British and American governments, set sail from New-York at the head of a most inadequate force of one sloop and two schooners; and after under-

going many hardships and landing on the Spanish Main, was obliged to re-embark, and make the best of his way back to Trinidad.*

Differences at this period arose which threatened to involve the British government in a far more serious contest with the United States of North America. They originated in grievances which unquestionably gave the Americans much ground for complaint, although no fault could be imputed to the English maritime policy; and they were the necessary result of their having engrossed a large portion of the lucrative carrying-trade between the belligerent powers. The first subject of complaint was the impressment of seamen said to be British in the American service. The next, the alleged violation of neutral rights, by the seizure and condemnation of vessels engaged in the carrying trade between France and her own or allied colonies. The first, though a practice of all others the most likely to produce feelings of irritation among those upon whom it was exercised, arose unavoidably from the similarity of habits and identity of language in the two states, which of course rendered desertion frequent from the one service to the other; and was a necessary consequence from the right of search which the American government, by a solemn treaty in 1794, had recognised, and which constituted the basis of the whole maritime laws of Europe. It was impossible to expect that, when British officers, in the course of searching neutral vessels for contraband articles, came upon English sailors who had deserted to their service, they should not reclaim them for their own country. If abuses were committed in the exercise of this delicate right, that was a good reason for making regulations to check them as far as possible, and provide for a due investigation of the matter, but none for abrogating the privilege altogether.† The

* Ann. Reg., 1806, 240, 241.

† On the part of the Americans it was contended, "That the practice of searching for and impressing seamen on board their vessels was not only derogatory to the honour of their flag as an independent nation, but led to such outrages and abuses, that, while it continued, no lasting peace or amity could be expected with Great Britain. It continually happened that native Americans were impressed, and obliged to serve in the English navy on pretence of their being British-born subjects; and such was the similarity of language and external appearance between the two nations, that even with the fairest intentions such mistakes must frequently happen. A practice which leads to such intolerable abuses cannot be tolerated by an independent state. It is in vain to appeal to abstract right, or the practice of other states: the close similarity of the Americans and English renders the exercise of it infinitely more grievous in their than it could be in any other case. The American government are willing to concur in any reasonable measures to prevent British deserters from finding refuge on board the American ships, but they can no longer permit the liberty of their citizens to depend on the interested or capricious sentence of an English officer."

To this it was replied on the part of Great Britain, "That no power but her own could release a British subject from the allegiance which he owed to the government of his nativity; and that, provided she infringed not the jurisdiction of other independent states, she had a right to enforce their services wherever she found them; that no state could, by the maritime law, prevent its merchant vessels being searched for contraband articles; and if, in the course of that search, her subjects were discovered, who had withdrawn from their lawful allegiance, on what principle could the neutral refuse to give them up? It is impossible to maintain that a belligerent may search neutral vessels for articles of a certain sort, held contraband and belonging to that neutral, and not at the same time vindicate its own subjects, if simultaneously discovered. The right of impressment is a necessary corollary for the right of search; it is, in truth, the exercise of a still clearer privilege. The difficulty of distinguishing an Englishman from an American is no reason for abandoning the right of searching for subjects of the

second arose from the decisions of the English Admiralty Courts, which now declared good prize neutral vessels carrying colonial produce from the enemy's colonies to the mother-state, though they had landed and paid duties in the neutral country,* contrary to the former usage, which admitted that step as a break in the continuity of the voyage, and protected the cargo.† The ground of the distinction, as explained by Sir William Scott, was, that, to bring the neutral within the exception, it was necessary that there should be a *bona fide* landing and payment of duties; and so it had been expressly stated in Lord Hawkesbury's declaration on the subject, issued in 1802; whereas, under the system of revenue laws established in the United States, this was not done, but, on the contrary, the payment of the duties was only secured by bonds, which were cancelled by debentures for the same sums the moment the goods were re-exported, which was usually done, without unloading, next day, so that the whole was a mere evasion, and cost only 3½ per cent. on the amount of the sums nominally paid. It was strictly conformable to legal principle to refuse to recognise such an elusory proceeding as sufficient to break the continuity of the voyage, and permit the goods to set out on their travels anew, as from a neutral state; but it was equally natural that the sufferers under this distinction should exclaim loudly against its severity, and ascribe to the British courts inconsistent conduct, in first recognising as legal a trade from the enemy's colony to the mother-state, interrupted by payment of duties at a neutral harbour, and then, after extensive capital had, on the faith of that recognition, been sunk in the traffic, declaring the vessels engaged in it good prize.‡

To these serious and lasting subjects of discord was added the irritation produced by an unfortunate shot from the British ship *Leander*, on the coast of America, which killed a native of that country, and produced so violent a commotion, that Mr. Jefferson issued an intemperate proclamation, forbidding the crew of that and some other English vessels from entering the harbours of the United States. Meetings took place in all the principal cities of the Union, at which violent resolutions on all the subjects of complaint were passed by acclamation. Congress caught the flame, and, after some preliminary angry decrees, passed a non-importation act against the manufactures of Great Britain, to take effect on the 15th of November following. The English people were equally loud in the assertion of their maritime rights,§ and everything announced the commencement of a fresh trans-

Violent measures of Congress.

former state, whatever reason it may afford for discrimination and forbearance in the exercise of it. If the right is abused, the officer guilty of the wrong will meet with exemplary punishment: if the Americans can show that a native of the United States has by mistake been seized for a Briton, he will be immediately released; but it is impossible for Great Britain to relinquish for an instant a right essential to the existence of her navy, and the knowledge of which alone prevents her ships of war being deserted for the higher wages which the lucrative commerce of neutrals enables them to offer as a bribe to the principal defenders of her independence. If such a change is ever to be made, it can only be on the neutrals providing some substitute for the present practice equally efficacious, and not more liable to abuse, which has never yet been done."—See Ann. Reg., 1806, 244, 245.

atlantic war by a state already engaged with more than half of Europe.

But, fortunately for both countries, whose real interests are not more closely united than their popular passions are at variance, the adjustment of the matters in dispute was placed in wiser and cooler heads than the vehement populace of either. Commissioners were sent from America to negotiate with Great Britain, and endeavour to obtain some clear and precise rule for regulating their trade with the enemy's colonies, not liable to be changed by orders of council or decisions of courts as to the intentions of parties. These commissioners were Mr. Monroe and Mr. Pinckney on the part of the United States, and Lords Holland and Auckland on that of Great Britain. The instructions of their respective governments were of the most conciliatory kind, and the gentlemen on both sides entered upon their duties in a correspondent spirit. Under such auspices the negotiation, how difficult and embarrassing soever, could hardly fail of being brought to a successful issue. With respect to the impressment of seamen, the subject was found to be surrounded with such difficulties, that the American commissioners, in opposition to the letter of their instructions, found themselves constrained to consent, in the mean time, to a pledge by the British government that they would issue directions for the exercise of this right with the greatest delicacy and forbearance, and to afford immediate redress upon any representation of injury sustained by them, reserving the final discussion of the matter to a future opportunity; but on the other points in controversy a satisfactory adjustment was effected. A clear and precise rule was laid down for the regulation of the circuitous trade by the enemy to their colonies, which defined the difference between a continuous and interrupted voyage, and stipulated that, besides the goods being landed and the duties paid, there should remain, after the drawback, a duty of one per cent. on European and two per cent. on colonial produce; and an extension of the maritime jurisdiction of the United States was agreed to, to five miles from the shore of their territory. Thus, by good sense and moderation on both sides, were these difficult questions satisfactorily adjusted, and the British nation honourably extricated from an embarrassment which threatened, under far more perilous circumstances, to renew the dangers of the armed neutrality or the Northern coalition.*

While England was thus extending her naval dominion into every part of the globe, and asserting with equal forbearance and spirit the maritime rights essential to the preservation of the vast fabric, Napoleon was rapidly advancing in his career of universal terrestrial empire. Prussia was the first power which felt the humiliation to which these incessant advances led in all the adjoining states. The singular treaty has already been mentioned which was concluded by Count Haugwitz on the 15th of December, whereby he substituted for the intended warlike defiance an alliance purchased by the cession of Hanover from the unconscious and neutral England. Great was the embarrassment of the cabinet of Berlin when this unexpected intelligence arrived. On the

one hand, the object of their ambition for the last ten years seemed now about to be obtained, and the state to be bounded by an adjoining territory which would bring it an addition of nearly a million of souls; on the other hand, some remains of conscience made them feel ashamed of thus partitioning a friendly power, and they were not without dread of offending Alexander by openly sharing in the spoils of his faithful ally. At length, however, the magnitude of the temptation and the terror of Napoleon prevailed over the king's better principles, and it was determined not simply to ratify the treaty, but to send it back to Paris with certain modifications; and, as a colour to the transaction, and also, perhaps, as a salvo to their own consciences, it was agreed to "accept the proposed exchange of Hanover for the Margraviates, on condition that the completion of it should be deferred till a general peace, and the consent of the King of Great Britain in the mean time be obtained;" while it was represented to the English minister at Berlin that arrangements had been concluded with France for ensuring the tranquillity Jan. 26, 1806. of Hanover, which "stipulated expressly the committing of that country to the exclusive guard of the Russian troops and to the administration of the king until the conclusion of a general peace." But not a word was said of any ulterior designs of definitively annexing Hanover to the Prussian dominions; and in the mean time the French troops were replaced by the Prussian in that electorate, a large part of the army disbanded, and a proclamation to the same effect issued by the king in taking possession of that territory.*

But it was alike foreign to the character and the designs of Napoleon to admit any modification, how trifling soever, in the treaties which he had concluded with the ministers of inferior powers. The utmost indignation, therefore, was expressed at St. Cloud at the modifications proposed to be inserted in the treaty. "From that moment," says Bignon, "on the part of Napoleon the question was decided: all sincere friendship was become impossible between Prussia and him; it was regarded only as a suspected power, whose hollow friendship had ceased to have any value in his eyes." On the 4th of February it was officially announced to Haugwitz, that, "as the treaty of Vienna had not been ratified within the prescribed time by the Prussian government, the emperor regarded it as no longer binding." This rigour had the desired effect: Prussia had not resolution enough to resist; and on the 15th of Feb. 15. February a new and still more disgraceful treaty was signed by Haugwitz at Paris, which openly stipulated not only the annexation of Hanover to the Prussian dominions, but the exclusion of the British flag from the ports of that electorate. It was ratified on the 26th, and immediately carried into execution. March 28. Count Schulenberg took possession of Hanover on the part of the Prussian monarchy, and immediately issued a proclamation closing its harbours against English vessels; and on the 1st of April a patent appeared, formally annexing the electorate to the Prussian dominions, on pretence that, when belonging to Napoleon by the right of conquest, it had been transferred to

* Hardenberg's Letter, 26th Jan., 1806, to Mr. Jackson. Ann. Reg., 1806, 158. Hard., ix., 52, 58. Bign., v., 223, 226

Prussia, in consideration of three of her provinces ceded to France.*

This system of seizing possession of the territories of neutral or friendly states, in order to meet the wishes or suit the inclinations of greater powers, when bounding their dominions, to which Napoleon, through his whole administration, was so much inclined, had succeeded perfectly when the objects of spoliation were powers, like Venice or Naples, too weak to manifest their resentment; but Prussia was egregiously mistaken when she applied it to Great Britain. So early

Feb. 3. as the 3d of February, Count Munster, the Regent of Hanover, had protested against the occupation of that electorate by the Prussian forces, from having observed in the conduct of their generals various indications of an intention to do more than take possession of it for a temporary purpose;

March 17. and the mildest remonstrance, accompanied by a request of explanation, had been made by Mr. Fox at a subsequent period, when the intentions of the cabinet of Berlin became still more suspicious. But no sooner did intelligence arrive of the exclusion of the English flag from the harbours of the Elbe, and the Prussian proclamation announcing that they took possession of the country in virtue of the French right of conquest, than that spirited minister took the most decisive measures to show that perfidious government the dispositions of the power they had thought fit to provoke. The British ambassador was immediately recalled from Berlin; the Prussian harbours declared in a state of blockade; an embargo laid on all vessels of that nation in the British harbours; while a message from the king to both houses of Parliament

April 23. announced his resolution to assert the dignity of his crown, and his "anxious expectation for the arrival of that moment when a more liberal and enlightened policy on the part of Prussia should remove every impediment to the renewal of peace and friendship with a power with whom his majesty had no other cause of difference than that now created by these hostile acts."† An

May 14. order of council was soon after issued, authorizing the seizure of all vessels navigating under Prussian colours; and such was the effect of these measures, that the Prussian flag was instantly swept from the ocean; and before many weeks had elapsed four hundred of its merchant vessels had found their way into the harbours of Great Britain.

In the speech which he made shortly after in Mr. Fox's House of Commons, Mr. Fox drew speech on in vivid colours, and depicted with all the subject. the force of his eloquence, the humiliating and disgraceful part which Prussia had taken in this transaction. "The Emperor of Russia," said he, "after he left Austerlitz, abandoned the whole direction of his troops that remained in Germany to the King of Prussia, and this country had promised him powerful assistance in pecuniary supplies. These were the means which he possessed of giving weight to his negotiations; and what use did he make of them? Why, to seize a part of the territories of those powers who had been supporting him in the rank and situation that had enabled him to negotiate on fair terms with the French emperor.

or. At first he pretended only to take interim possession of the electorate of Hanover, till the consent of its lawful sovereign could be obtained to its cession at a general peace; but latterly this thin disguise was laid aside, and he openly avowed that he accepted it in full sovereignty from France, to which it belonged by right of conquest. Such a proceeding rests upon no other conceivable foundation, but that worst emanation of the disorders and calamities of Europe in recent times—the principle of transferring the people of other states from one power to another, like so many cattle, upon the footing of mutual ambition or convenience. We may not at present be able to prevent the transfer, but let us protest solemnly against its injustice, and vigorously make use of the forces which Providence has given us to make the guilty league feel the consequences of our just indignation. The pretext that Prussia received this territory from Napoleon, to whom it belonged by right of conquest, is as hollow as it is discreditable. It was merely occupied in a temporary way by the French troops; it formed no part of the French Empire; above all, its cession had never been agreed to by this country; and where is there to be found an instance in history of such a cession of a military acquisition pending the contest? The conduct of Prussia in this transaction is a compound of everything that is contemptible in servility, with everything that is odious in rapacity. Other nations have yielded to the ascendancy of military power: Austria was forced, by the fortune of war, to cede many of her provinces; Prussia alone, without any external disaster, has descended at once to the lowest point of degradation—that of becoming the minister of the injustice and rapacity of a master.*

In consenting to this infamous transaction, the cabinet of Berlin were doubtless actuated by the desire to deprecate the wrath and conciliate the favour of the French emperor. It is worth while to examine, therefore, whether that object was gained, and in what light their conduct was viewed by that dreaded conqueror. "From the moment," says Bignon, "that the treaty of the 15th of February was signed, Napoleon did more than hate Prussia—he conceived for that power the most profound contempt. All his views from that day were based on considerations foreign to its alliance: he conceived new projects—he formed new plans, as if that alliance no longer existed. In the mean time, he pressed the execution of all the stipulations it contained favourable to France; he would not permit the delay of a single day."† Hardenberg had the good fortune to escape the disgrace of being privy to these proceedings: he had, from his known hostility to Napoleon, been obliged to withdraw from the Prussian cabinet before they were finally consummated.

The effects of this unmeasured contempt of Prussia soon appeared, in a series of measures, which overturned the whole constitution of the Germanic Empire, and ultimately brought that power into hasty and ill-fated collision with the French Empire. On March 15, Murat, without any previous concert with the cabinet of Berlin, was invested with the duchies of Berg and Cleves, ceded to France, by the treaty of the 15th

Napoleon's opinion of Prussia in this transaction.

His farther measures of aggression on Germany.

of February, by Bavaria, in exchange for the Prussian provinces of Anspach and Bayreuth, in Franconia. The establishment of a soldier of fortune, the brother-in-law of Napoleon, in the very heart of his Westphalian provinces, was not calculated to allay the now awakened jealousy of Prussia; and this feeling was strongly increased when the French troops, towards the end of April, took possession of the abbacies of Werden, Essen, and Elten, on pretence that they belonged to the Duchy of Cleves, without any regard to the claims of Prussia to these territories, founded on a prior right. This irritation was augmented by the imperious conduct of the French generals in the north of Germany, who openly demanded a contribution of 4,000,000 florins (£200,000) from the city of Frankfurt; and, in terms equally menacing, required a loan from the city of Hamburg to a still larger amount; while, in Bremen, every kind of merchandise suspected to be English was seized without distinction, and committed to the flames. Six millions of francs (£240,000) was the price at which the imperial robber condescended, in a time of profound peace, to tender to the city of Hamburg and the Hanse towns his protection. The veil which had so long hung before the eyes of the Prussian government now began to fall; they perceived, with indescribable pain, that their long course of obsequiousness to France had procured for them only the contempt of that power, and the hostility of its enemies.*

No words can paint the mingled feelings of shame, patriotism, and indignation which burst forth in all ranks in Prussia, when the rapid course of events left no longer any doubt, not only that their rights and interests were totally disregarded by France, in favour of whom they had made so many sacrifices, but that they had sunk to this depth of degradation without any attempt to assert their dignity as an independent power. The queen and Prince Louis, who had so long mourned in vain the temporizing policy and degraded position of their country, now gave open vent to their indignation; nor did they appeal in vain to the patriotic spirit of the people. The inhabitants of that monarchy, clear-sighted and intelligent beyond almost any other, as well as enthusiastic and brave, perceived distinctly the gulf into which their country was about to fall: one universal cry of indignation burst forth from all ranks; it was not mere warlike enthusiasm, but the profoundest feeling of national shame and humiliation which animated the people. The young officers loudly demanded to be led to the combat: the elder spoke of the glories of Frederic and Rosbach: an irresistible current swept away the whole nation. Publications, burning with indignant eloquence, issued from all the free cities in the north of Germany where a shadow even of independence was still preserved, and that universal fervour ensued which is the inevitable forerunner of great events for good or for evil. Guided by wisdom and prudence, it might have led to the most splendid results; impelled by passion and directed by imbecility, it induced unheard-of disasters.†

* Bign., v., 247, 370. Ann. Reg., 1806, 164. Hard., ix., 126, 224, 225. Bour., vii., 137, 138.

† Ann. Reg., 1806, 165. Hard., ix., 117, 119.

‡ One of the most remarkable of these was a pamphlet published by the celebrated Gentz, which at the time produced a very great sensation. "The war hitherto conducted against France," said he, "was just and necessary in its origin, and

Strong as were the patriotic feelings which the conquests and rapacity of the French had awakened in a large portion of the German people, they were not as yet universal: the hour of the resurrection of the Fatherland had not arrived. By appealing to the blind ambition of some of their princes, and flattering the inconsiderate feelings of many of their people, Napoleon had contrived to animate one portion of its inhabitants against the other; and on this division of opinion he had formed the project of reducing the whole to servitude. The first design of the CONFEDERATION OF THE RHINE had been formed, as already noticed, the year before, during the residence of the emperor at Mayence; but it was brought to maturity, from his witnessing the enthusiasm excited among the lesser states in Germany by the victories in which they had shared, gained under the standards of France over Austria, and the regal dignity to which they had elevated their sovereigns. France on this occasion played off with fatal effect the policy so uniformly followed by its chiefs since the Revolution, that of rousing one portion of the population in the adjoining states against the other, and raising itself, by their mutual divisions, to supreme dominion over both. As his differences with Russia assumed a more envenomed character, and the hostility of Prussia became more apparent, Napoleon felt daily more strongly the necessity of uniting the states in alliance with him into a durable confederacy, which should enable him at all times to convert their military resources to his own purposes. It was no small matter to have such an outwork beyond the great frontier rampart of the Rhine; their contingents of troops would place nearly a fourth of the military force of Germany at his disposal; and, what was to him perhaps of still greater importance, under the pretence of stationing the vast contingent of France in such a situation as to protect its allies, he might lay the whole expenses of two hundred thousand men on the allied states.*

Influenced by such desires on both sides, the negotiations for the conclusion of the Powers admitted to the treaty were not long of being brought tithed to a termination. The plenipoten- confederacy.

certainly it has not become less so during its progress. If it has hitherto failed from false measures, are we to regard everything as lost? Is Germany destined to become what Holland, Switzerland, Spain, and Italy now are? But how is our salvation to be obtained? By assembling what is dispersed, raising what is fallen, resuscitating what is dead. We have had enough of the leagues of princes: they have proved as futile as they are precarious. There remains to us but one resource: that the brave and the good should unite; that they should form a holy league for our deliverance: that is the only alliance that can defy the force of arms, and restore liberty to nations and peace to the world. You, then, who, amid the universal shipwreck, have yet preserved the freedom of your souls, the honesty of your hearts, who have hearts capable of sacrificing your all for the good of your fellow-citizens, turn your eyes upon your country; behold it mutilated, bleeding, weighed down, but not destroyed; in all but the grave there is hope. It is neither to England nor Russia that we must look for our deliverance, how desirable soever the co-operation of these powers may be; it is to Germany alone that the honour of our deliverance is reserved. It is Germany which must raise itself from its ruins, and accomplish the general emancipation. We shall do more: we shall deliver France itself, and restore to that power a free and pacific existence, consistent with the independence of Europe."—GENTZ, *Europe en 1806*, and HARD., ix., 122, 123. On the eve of the battle of Jena, what could appear more misplaced than this prophecy! yet how exactly it was accomplished at a future time! a remarkable instance of the manner in which genius, piercing through the clouds of present events, can discern the ultimate changes in which they are to terminate.

* Hard., ix., 153, 155. Bign., v., 300, 303. Lucches, i., 124, 131.

tiaries of all the powers who were to be admitted into the confederacy assembled at Paris in the beginning of July, and on the 12th of July 12. that month the act of the confederation was signed. The members of it were the Emperor of the French, the Kings of Bavaria and Wirtemberg, the Archbishop of Ratisbon, the Elector of Baden, the Grand-duke of Berg, the Landgrave of Hesse d'Armstadt, the Princes of Nassau Weilberg, Nassau Usingen, Hohenzollern-Hechingen and Hohenzollern Sigmaringen, Salm-Salm, and Salm-Kerboung, Isenberg-Birchstein, Prince Lichtenstein d'Aremberg, and Count de la Leyen. The Archduke Ferdinand, Grand-duke of Wurtzberg, acceded to the confederacy a short time afterward. By the

Sept. 30. act of confederation, the states in alliance were declared to be severed forever from the *Germanic Empire*; rendered independent of any power foreign to the confederacy, placed under the protection of the Emperor of the French; and any hostility committed against any of them was to be considered as a declaration of war against the whole.* Several of the allies received accessions of territory or dignity: the free towns of Frankfort and Nuremberg were handed over, the first to the Prince Primate, the second to the King of Bavaria: all the members of the confederacy were invested with the full sovereignty of their respective states, and received a gift of the foreign territories encircled in their dominions.† Lastly, a separate article provided the military contingent which each of the confederates was to furnish for their common protection: which were, for France 200,000; and for the German States 58,000 men; but subsequent experience soon proved that Napoleon received military aid to double the amount of these numbers from them all.‡

This confederacy was by far the most important blow which Napoleon had yet levelled at the independence of the European states. It was no longer an inconsiderable power, such as Switzerland, Venice, or Holland, which received a master from the conqueror: the venerable fabric of the Germanic Empire had been pierced to the heart, her fairest provinces had been reft from the Empire of the Cæsars. The impression produced in Europe by this aggression was proportionally great: sixteen millions of men were by a single stroke transferred from the Cæsars to a foreign alliance; and profound pity was felt for the emperor, the first sovereign of Christendom, who was thus despoiled of a large portion of the dominions which, for above a thousand years, had been enjoyed by his predecessors. Nor was this feeling of commiseration lessened by what immediately followed. On the 1st of August notification was sent to the Diet of Ratisbon of the formation of the confederacy, both on the part of the Emperor of France and the coalesced princes. The former deemed it

unnecessary to assign any reasons for his conduct; but the latter pleaded, as their excuse for violating their engagements to the Empire, the inconsistency between their present situation and their ancient bonds, and the necessity, amid the weakness of their former chief, of looking out for a new protector, who might possess force adequate to secure them from insult. Under such flimsy devices did these selfish princes conceal a dereliction of loyalty and desertion of their country, calculated to produce unbounded calamities to Germany, and which they themselves were destined afterward to expiate in tears of blood. But how keenly soever the Emperor Francis might feel the open blow thus levelled at his dignity, and the formation of a separate and hostile state in the heart of his dominions, he was not in a situation to give vent to his resentment. Soult still held the battlements of Brannau: on one pretext or another, the evacuation of the German States, which by the treaty of Presburg was to be effected at latest in three months, had been delayed: the French battalions were in great strength on the Inn, the prisoners made during the campaign had not been restored, while the dispirited Austrian troops had not yet recovered the rude shocks of Ulm and Austerlitz. Wisely yielding, therefore, to a storm which they could not prevent, the imperial cabinet dissembled their feelings; and, justly considering this stroke as entirely subversive of the Empire, the Emperor Francis, by a solemn deed, re-nounced the throne of the Cæsars, and declared himself the first of a new series of the emperors of Austria.*†

Though in appearance levelled at the Emperor Francis as chief of the Empire, this violent dislocation of the Germanic body was in reality still more formidable to Prussia, from the close proximity of its frontier to the coalesced states. The sensation, accordingly, which it produced at Berlin was unbounded: all classes, from the cabinet of the king to the privates in the army, perceived the gulf which was yawning beneath their feet; they saw clearly that they were disregarded and despised, and reserved only for the melancholy privilege of being last devour-

Great sensation which these events produce at Berlin.

† Napoleon set forth, in his communication to the Diet of Ratisbon announcing the Confederation of the Rhine, "The Germanic Constitution is no longer but a shadow; the diet has ceased to have any will of its own. His majesty the emperor and king can, therefore, no longer recognise its existence. He has accepted, in consequence, the title of Protector of the Confederation of the Rhine. In his pacific views he declares that he will never carry his views beyond that river. He has hitherto been faithful to all his promises." The confederated princes declared, "The results of the last three wars having proved that the Germanic body was really dissolved, the princes of the west and south have deemed it expedient to renounce all connexion with a power which has ceased to exist, and to range themselves under the banners of the Emperor of the French, who is bound alike by the interests of his glory as well as those of his Empire to secure to them the enjoyment of external and internal tranquillity." With more truth and dignity the Emperor Francis said, in his act renouncing the throne of the Empire, "Being convinced of the impossibility of discharging any longer the duties which the imperial throne imposed upon us, we owe it to our principles to abdicate a crown which could have no value in our eyes, when we were unable to discharge its duties and deserve the confidence of the princes electors of the Empire. Therefore it is that, considering the bonds which unite us to the Empire as dissolved by the Confederation of the Rhine, we renounce the imperial crown, and by these presents absolve the electors, princes, and states, members of the supreme tribunal, and other magistrates, from the duties which unite them to us as their legal chief."—See HARD., ix., 159, 162.

§ The contingents were settled as follows:

France.....	200,000
Bavaria.....	30,000
Wirtemberg.....	12,000
Baden.....	3,000
Berg.....	5,000
Darmstadt.....	4,000
Nassau, Hohenzolki, and others.....	4,000
	258,000

ed. The increasing aggressions of Napoleon or his vassals speedily made them aware that this was their destiny. Murat advanced claims to the principality of Embden, and the three abbas which formed part of the indemnity awarded to Prussia for its cessions in Franconia, as well as to the free cities of Hamburg and Bremen. The twenty-fourth article of the Confederation of the Rhine conferred on that military chief the sovereignty of all the German principalities of the house of Orange, and rendered its head, brother-in-law to the king, tributary to the vassal of Napoleon; while the injurious treatment to which the Prince of Latour and Taxis, brother-in-law of the Queen of Prussia, was exposed, was a fresh outrage to that monarch in the most sensitive part. To avoid, however, if possible, an immediate rupture with the court of

Sept. 27. Berlin, they were given to understand by the French emperor that, if they were desirous to form a league of the states who were attached more or less to Prussia in the north of Germany, France would not oppose its formation. But they were informed, shortly after, that

Oct. 3. the Hanse towns, which Napoleon reserved for his own immediate protection, could not be permitted to join that northern confederacy: that Saxony could not be allowed to form part of it against its will; while the Elector of Hesse was invited to join the confederacy of the Rhine, and, on his refusing to comply, struck at by a resolution which cut off his access to part of his own dominions. But all these causes of complaint, serious as they were, sunk into insignificance compared to that which arose when it was discovered by M. Lucchesini, the Prussian ambassador at Paris, that France had entered into negotiations with England on the footing of the restitution of Hanover to its lawful sovereign; that, while continually urging the cabinet of Berlin to look for indemnities for such a loss on the side of Pomerania, Napoleon had engaged to Russia, in the treaty signed with D'Oubril, its ambassador at Paris, to prevent them from depriving the King of Sweden of any part of his German dominions;* and that, while still professing sentiments of amity and friendship to Frederic William, he had offered to throw no obstacles in the way of the re-establishment of the kingdom of Poland, including the whole of Polish Prussia, in favour of the Grand-duke Constantine. Irritated beyond endurance by such a succession of insults, and anxious to regain the place which he was conscious he had lost in the estimation of Europe, the King of Prussia

Aug. 9. War- part his armies on the war footing, like preparations despatched M. Krusemark to St. Petersburg, and M. Lacobi to London,

sia. to endeavour to effect a reconciliation with these powers, opened the navigation of the Elbe, concluded his differences with Sweden, assembled his generals, and caused his troops to defile in the direction of Leipsic. The torrent of public indignation at Berlin became irresistible: the war party overwhelmed all opposition; in the general tumult, the still small voice of reason, which counselled caution and preparation in the outset of so great an enterprise, was overborne; Prince Louis and his confederates openly boasted that Prussia, strong in the recollection of the Great Frederic, and the discipline he had bequeathed to his followers, was able,

single-handed, to strike down the conqueror of Europe; the young officers repaired at night to sharpen their sabres on the window-sills of the French ambassador; warlike and patriotic songs resounded, amid thunders of applause, at the theatres; and the queen roused the general enthusiasm to the highest pitch by displaying her beautiful figure on horseback in the streets of Berlin, at the head of her regiment of hussars, in the uniform of the corps.*

While Prussia, suddenly and violently awakening from the trance of ten years, was thus taking up arms and rushing headlong into a contest, single-handed, with the conqueror of Europe, negotiations of an important character, terminating in a resolution equally warlike, had taken place with Russia and England.

The retreat of the Emperor Alexander and his army from the disastrous field of Austerlitz had apparently extinguished all causes of discord between the vast empires of Russia and France. Their territories nowhere were in contact. The vast barrier of Germany, with its two thousand walled cities and forty millions of warlike inhabitants, severed them from each other. They had parted with mutual expressions of esteem, and the interchange of courteous deeds between the victor and the vanquished. The conclusion of the peace of Presburg, by releasing the Czar from all obligations towards his unfortunate ally, seemed to have still farther removed the possibility of a rupture, while the withdrawing of Austria from the Continental alliance left no rational ground for renewing the contest on account of any danger, how imminent soever, to the balance of power from the aggressions of Napoleon. But, notwithstanding all these favourable circumstances, the secret ambition of these potentates again threw them into collision, and the quarter where the difference arose indicated that it was the glittering prize of Constantinople which brought them to the fields of Eylau and Friedland.

Cattaro, a small barren province situated to the south of Ragusa, on the eastern coast of the Adriatic, derives its value from the excellence of its harbour, which is the largest and safest in that sea, and the skill of its seamen, which has always secured them an honourable place in its naval transactions. By the treaty of Presburg it had been provided that this province should be ceded by the Imperialists to the French within two months after its final ratification. When this period had expired, the French commissioners authorized to take possession had not arrived, and the Russian agent there, taking advantage of that circumstance, succeeded in persuading the inhabitants, who are almost all of Greek extraction, that their intended transference to France had fallen to the ground, and that they were at liberty to tender their allegiance to whom they chose. In pursuance of these investigations, the people, who are cupied by the styled Montenegrins, and ardently Russians, desired the establishment of a power professing the Greek faith within their bounds, rose in a tumultuous manner, shut up the Austrian commander, who had only a slender garrison at his disposal, within the fortress, and commenced a strict blockade, in which they were soon sup-

* Ann. Reg., 1806, 187. Bign., v., 369, 390. Hard., ix., 167, 176.

* Hard., ix., 176, 181. Bign., v., 409, 415. Ann. Reg., 1806, 167.

ported by a Russian man-of-war, which arrived from Corfu. After a short blockade he surrendered the place to the insurgents, who immediately transferred it to the Russians, by whom it was occupied in force; but the circumstances attending the transaction were so suspicious that the Austrian subaltern officers in the fortress protested against its surrender, and the governor was afterward brought to a court-martial at Vienna for his conduct on this occasion, and sentenced to confinement in a Transylvanian fortress for life.*

Nothing that has since transpired authorizes the belief that Austria was privy to this transaction; nor does any motive appear which could induce her, for so trifling an object, to run the risk of offending the Emperor Napoleon, whose terrible legions were still upon the Inn. But no sooner did he receive intelligence of it than Napoleon ordered Marshal Berthier to delay the evacuation of the fortress of Brannau, on the Austrian frontier; and the march of all the French troops towards the Rhine was countermanded. In this way, the important object was gained of keeping a hundred and fifty thousand men still at free quarters on the German States. He made no effort to dispossess the Russians and Montenegrins from Cattaro; but, on the pretext that, because the Austrians had failed in performing their obligations to him, he was at liberty to look for an indemnity wherever he could find it, seized upon the neighbouring city of Ragusa, a neutral power with whom they had no cause whatever of hostility. There Lauriston, who commanded the French garrison, was shortly after besieged by the Russians, both by land and sea; but before anything of moment could be transacted in that quarter, the Austrians, exhausted by the prolonged stay of such an immense body of men on their territory, made such energetic remonstrances to the cabinet of St. Petersburg on the subject, that they agreed to the evacuation of Cattaro; and M. d'Oubril, who was despatched from the Russian cabinet to Paris, ostensibly to negotiate the exchange of prisoners, but really to conclude a treaty between the two powers, brought authority for its surrender to the French. But, in consequence of that ambassador having exceeded his instructions, the treaty which he concluded was not ratified by the Emperor Alexander; and as hostilities for that reason still continued, Lauriston was reduced to the last extremity in Ragusa, and saved from destruction only by the opportune arrival of Molitor, who advanced at the head of reinforcements from Dalmatia. The territory of Ragusa was now fully occupied by the French, and continued in their hands till the end of September, when it was invaded by a powerful body of Russians and Montenegrins; but these troops having been drawn out of their intrenchments by a skilful stratagem on the part of Marmont, were attacked and defeated with great loss, and even experienced some difficulty in regaining the fortresses of Castel Nuovo and Cattaro, from whence they had issued.†

M. d'Oubril came to Paris by Vienna; but, notwithstanding his conferences with the English and Austrian ministers at that capital, he ap-

pears, when he arrived at Paris, to have misunderstood, in an unaccountable manner, his instructions. Talleyrand and the French ministers made such skilful use of the dependence of the negotiations with England, which Lord Yarmouth was at that moment conducting at Paris, and of the threat totally to destroy Austria if hostilities were resumed, that they induced in the Russian ambassador a belief that a separate peace with that power was on the eve of signature, and that nothing but an instant compliance with the demands of the emperor could save Europe from dismemberment, and Russia from all the consequences of a single-handed contest with Napoleon. Under the influence of these fears and misrepresentations, he suddenly signed a treaty as disgraceful to Russia as it was contrary to the good faith which she owed to Great Britain. Not content with surrendering the mouths of the Cattaro, the subject of so much discord, to France, without any other equivalent than an illusory promise that the French troops should evacuate Germany in three months, he stipulated also, in the secret articles, "that if, in the course of events, Ferdinand IV. should cease to possess Sicily, the Emperor of Russia should unite with the Emperor of France in all measures calculated to induce the court of Madrid to cede to the Prince-royal of Naples the Balearic Isles, to be enjoyed by him and his successors with the title of king—the harbours of those islands being shut against the British flag during the continuance of the present war; that the entry to these isles should be closed against Ferdinand himself and his queen; and that the contracting parties should concur in effecting a peace between Prussia and Sweden, without the latter power being deprived of Pomerania." Ragusa also was to be evacuated, and the integrity of the Ottoman dominions guaranteed by both the contracting parties: a provision which forms a striking contrast to the agreement for the partition of that power concurred in within a year afterward at Tilsit. Thus did Napoleon and D'Oubril concur in spoliating the King of Naples of the dominions which were still under his command, without any other indemnity than a nominal throne of trifling islands to his son; give away Sicily, garrisoned by English troops, without consulting either the court of Palermo or the cabinet of London; dispose of the Balearic Islands without the knowledge or consent of the King of Spain; and stipulate the retention of Pomerania by Sweden at the very moment that France held out the acquisition of that duchy as an equivalent which should reconcile Prussia to the loss of Hanover.*

M. d'Oubril seemed to be aware, at the time he signed this extraordinary treaty, that he had exceeded or deviated from his instructions; for no sooner was it concluded, than he set off in person to render an account of it at St. Petersburg, observing, at the same time, "I go to lay the treaty and my head at the feet of my imperial master." In effect, before he reached the Russian capital, intelligence of the formation of the Confederation of the Rhine had arrived, which unexpected event greatly strengthened the influence of the party hostile to France. A

D'Oubril concludes a treaty at Paris between France and Russia.

change of ministry had ensued: Prince Adam Czartorinski, and the chiefs inclined for a separate accommodation, were displaced, and succeeded by the Baron Budberg, and the nobles who supported the English in opposition to the French alliance. The treaty was, in consequence of these events, formally disavowed by the imperial government, as "entirely in opposition to the instructions which D'Oubril had received," though they professed their willingness to resume the negotiations on a basis which had been communicated to the cabinet of the Tuileries. By this disavowal, indeed, the Russian government was saved the dishonour which must forever have attached to it had so disgraceful a treaty been unconditionally ratified; but upon comparing the powers conferred on the ambassador by one ministry, with the refusal to ratify the treaty by its successor, it was difficult to avoid the inference, that the difference in reality arose from a change of policy in the imperial cabinet, not any deviation from instructions on the part of its ambassador; and all reflecting men began to conceive the most serious apprehensions as to the consequences which might ensue to the liberties of Europe from the alliance of two colossal powers, which thus took upon themselves, without any authority, to dispose of inferior thrones, and partition the territories of weaker states.*†

The rapid succession of more important events left no time for the advance of the fresh negotiations thus pointed at by the cabinet of St. Petersburg. All eyes in Europe were turned to the conferences between France and England, which had been long in dependance at Paris; and the turn which it was now taking left little hope that hostilities in every quarter could be brought to a termination.

This celebrated negotiation took its rise from a fortuitous circumstance equally creditable to the government of both powers. An abandoned exile, in a private audience with Mr. Fox in February, had proposed to that minister to assassinate Napoleon. Either penetrating the design of this wretch, who had once been an agent of the police in Paris, or inspired by a generous desire to prevent the perpetration of so atrocious an offence, the English minister, after Feb. 10. having at first dismissed him from his presence, had the assassin apprehended, and sent information to M. Talleyrand of the proposal. This upright proceeding led to a courteous reply

from that minister, in which, after expressing his satisfaction at the new turn which the war had taken, which he regarded as a presage of what he might expect from a cabinet of which he fondly measured the sentiments according to those of Mr. Fox, "one of the men who seem expressly made to feel the really grand and beautiful in all things," he repeated the passage in the exposition of the state of the Empire by the minister of the interior, wherein Napoleon declared that he would always be ready to renew conferences with England on the basis of the treaty of Amiens. Mr. Fox replied that he was inspired with the same sentiments; and thus commenced a negotiation under the most favourable of all auspices, mutual esteem on the part of the powers engaged in it.*

The basis proposed by Mr. Fox was, that the "two parties should assume it as a principle that the peace was to be honourable to themselves and their respective allies." "Our interests," said Talleyrand, "are easily reconciled, from this alone, that they are distinct. You are the masters of the sea. Your maritime forces equal those of all the kings of the earth put together. We are a great Continental power, but other nations have as great armies on foot as ourselves. If, in addition to being omnipotent on the ocean from your own strength, you desire to acquire a preponderance on the Continent by means of alliances, peace is not possible." Talleyrand strongly urged the English minister to lay all the allies on either side out of view, and conclude a separate accommodation; but in this design he was unsuccessful. Mr. Fox insisted, with honourable firmness, that Russia should be made a party to the treaty. "Do you wish us to treat," said he, "conjointly with Russia? We answer yes. Do you wish us to enter into a separate treaty,† independent of that power? No?" Finding the English minister immovable on this point, M. Talleyrand had recourse to equivocation; and it was agreed that the intervention of the Continental powers to the treaty should be obtained.

The next step in the negotiation was to fix the basis on which the interests and Basis of uti-honour of England and France possidetis fixed. themselves were to be adjusted. To ascertain this important point in a manner more satisfactory than could be done by the slow interchange of written communications, M. Talleyrand sent for Lord Yarmouth, one of the English travellers whom Napoleon had detained a prisoner ever since the rupture of the peace of Amiens, and proposed to him the basis on which June 13. France was willing to enter into an accommodation. These were the restitution of Hanover, which, after great difficulty, Napoleon was brought to agree to, and the retention of Sicily by England or its allies; the recognition

* Bign., v., 330, 344. Hard., ix., 221, 222.

† The powers conferred on M. d'Oubril bore, "We authorize, by these presents, M. d'Oubril to enter into negotiations with a view to the establishment of peace, with whoever shall be sufficiently authorized on the part of the French government, and to conclude and sign with them an act or convention on bases proper to consolidate peace between Russia and France, and to prepare it between the other belligerent powers; and we promise on our imperial word to hold good and execute faithfully whatever shall be agreed to and signed by our said plenipotentiary, and to admit to it our imperial ratification in the term that shall be specified." On the other hand, the act of disavowal bore, "The pretended act of pacification concluded by M. d'Oubril has been submitted to a council speedily summoned to that effect, and compared with the instructions which he had received here, and the instructions transmitted to him from Vienna before his departure from that town; and they found that M. d'Oubril in signing that treaty has not only deviated from the instructions he had received, but acted in a manner directly contrary to the sense and spirit of the orders themselves." The penalty inflicted on the ambassador, however, that of mere banishment to his estates, did not look like any very serious deviation from instructions.—See MARTEN'S *Sup.*, iv., 305, 312, and HARD., ix., 222.

‡ "I inquired," said Lord Yarmouth, "whether the possession of Sicily would be demanded, it having been so said, 'Vous l'avez,' he replied, '*nous ne vous la demandons pas*; si vous la possédiez, elle pourroit augmenter de beaucoup les difficultés.' Considering this to be very positive, both from the words and the manner of delivering them, I conceived it would be improper to make farther questions. We ask nothing of you (*nous ne vous demandons rien*), amounting to an admission of *uti-possidetis*, as applicable to his majesty's conquests. Talleyrand concluded with these words: '*Les sentiments de la France sont entièrement*

of the Emperor of France by England, and of the integrity of the Ottoman dominions by France.* These terms Lord Yarmouth justly considered as equivalent to the establishment of the principle of *uti-possidetis*, and stated them as such in his communication made the same day to Mr. Fox on the subject.

At the time when the proposals were made by which France the French government, no accommodation had been effected with June 13.

Russia; and it was an object of the highest importance to induce Great Britain, on any terms, to accede to the basis of a negotiation. But when the next communication from Talleyrand was made, circumstances had entirely changed. D'Oubril had expressed his willingness to sign a separate peace on behalf of Russia, and Napoleon was resolved to take advantage of this circumstance to exact more favourable conditions than he had at first agreed to from the British government. When pressed, there-

fore, by Lord Yarmouth to adhere to the principle of *uti-possidetis*, and in particular to agree to the King of Naples retaining Sicily, he replied that, though the sentiments of the emperor in favour of peace had undergone no alteration, "yet that *some changes had taken place*, the possibility of which he had hinted at when I last saw him," alluding to the readiness of Russia to treat separately; and farther mentioned that the emperor had received reports from his brother, and the general officers under his command, stating that *Naples could not be held without Sicily*, and the probability they saw of gaining possession of that island; that the restitution of Hanover for the honour of the British crown, the retention of Malta for the honour of the navy, and the Cape of Good Hope for the interests of commerce, should be sufficient inducements to the cabinet of St. James's to enter into the negotiation; that, if a confidential communication had been made three months before, the questions both of Holland and Naples might have been arranged in the manner most satisfactory to Great Britain; but that now, when their dominions had been settled on the emperor's brothers, any abandonment of any portion of them would be "considered by the emperor as a retrograde measure, equivalent to an abdication." Lord Yarmouth continued to insist, in terms of Mr. Fox's instructions, for the basis of *uti-possidetis* as the one originally proposed by France, and to which Great Britain was resolved to adhere; that it was on the faith of this basis, more especially as applied to Sicily, that the conferences alone were continued; that any tergiversation or cavil, therefore, on that capital article would be considered as a breach of the principle of the negotiation in its most essential part; that full powers were now communicated to him to conduct the negotiation; but that the possession of Sicily was a *sine qua non*, without which it was useless to continue the conferences.

Talleyrand upon this offered the *Hanse* June 26.

July 1. *Towns* as an equivalent for the King of Naples; and when this was refused, to give Dalmatia, Albania, and Ragusa as an indemnity to his Sicilian majesty: looking out

thus, according to the usual system of Napoleon,

in every direction for indemnities at the expense of minor neutral states, rather than surrender one foot of his own acquisitions.*

This clear departure, on the side of France, from the basis of the negotiation originally laid down by its own minister, and open avowal of the principle that neutral and weaker powers were to be spoliated in order to reconcile the pretensions of the greater belligerents, augured but ill for its ultimate success, and the notes which were interchanged gradually assumed a more angry character; but the conferences were still continued for a considerable time. Mr. Fox, with the firmness which became a British minister, invariably insisted that Sicily should be retained by the king, and enjoined Lord Yarmouth to demand his passports if this were not acceded to. July 9

The changes in Germany consequent on the Confederation of the Rhine were admitted by Talleyrand, but offered to be concealed if peace with great Britain were concluded. Mr. Fox refused to be any party to the project of despoiling Turkey and Ragusa, independent and neutral states, to provide an equivalent for the abandonment of Sicily; but threw out a hope that, by the cession of part of the Venetian States, with the city of Venice, from the kingdom of Italy to the King of Naples, an accommodation might be listened to. To this, as making the proposed equivalent come from his own allies, Napoleon would by no means consent. Advice was received at Paris that an army of thirty thousand men had been assembled at Bayonne. All the officers in Paris belonging to corps in Germany received orders instantly to join their respective regiments, and the signature of a separate treaty between France and Russia, in which the cession of Sicily in exchange for the Balearic Isles taken from Spain was a principal article, came to the knowledge of the British plenipotentiary.†

The conclusion of the separate peace between Russia and France on the day following these communications, did not, of course, lessen the expectations of the latter power, though it removed all difficulty arising from the condition to which Great Britain had uniformly adhered, of making the cabinet of St. Petersburg a party, either directly or in substance, to the pacification. But the demands of France did not rise in the manner that might have been expected after so great an advantage: she was still willing to allow Great Britain to retain Malta, the Cape, and her acquisitions in India, and to restore Hanover; full powers were given to Lord Yarmouth, which were exchanged with those of General Clarke, and specific retention of Sicily by the King of Naples was no longer insisted for, it being agreed by Great Britain that an adequate equivalent, if provided by lawful means, should be accepted. Napoleon continued to urge the acquisition of the Hanse Towns, either by Prussia as a compensation for Hanover, or by his Sicilian majesty; and held out the menace that, by not acceding to such an arrangement, the invasion of Portugal would be rendered inevitable, for which an army was already assembled at Bayonne. Nay, he even hinted at ulterior views

Continuation of the negotiations, and gradual estrangement of the parties.

in regard to the Spanish Peninsula, which the resistance of England would cause to be developed, as they had been in Holland and Naples. But, regardless of these threats, Mr. Fox firmly insisted for the original basis of *uti possidetis*, as the only one which could be admitted; and as matters appeared as far as ever from an adjustment, Lord Lauderdale was sent to Paris with full powers to treat from the British government.*

Under the auspices of Lord Lauderdale the negotiation was protracted two months longer, without leading to any satisfactory result. The English minister continued incessantly to demand for a return to the principle of *uti possidetis* as the foundation of the negotiation; and the French cabinet as uniformly eluded, or refused the demand, and insisted for the evacuation of Sicily by the English troops, and its surrender to Joseph, and the abandonment of all the maritime conquests of the war, with the exception of the Cape of Good Hope, by Great Britain. Lord Lauderdale, in consequence, repeatedly demanded his passports, and the negotiation appeared on the point of terminating, when intelligence was received in London of the refusal of the Emperor of Russia to ratify the treaty signed by M. d'Oubril.

This important event made no alteration in the proposals of Great Britain, farther than an announcement that any treaty now concluded must be with the concurrence of Russia; but it considerably lowered those of France, and Talleyrand announced that France "would make great concessions for the purpose of obtaining peace." These were afterward explained to be the restoration of Hanover to Great Britain, the confirmation of its possession of Malta, the cession of the Cape, Tobago, and Pondicherry to its empire, and the grant of the Balearic Isles, with an annuity from Spain, in lieu of Sicily, as a compensation to the King of Naples. To these terms the English cabinet would by no means accede; and as there was no longer any appearance of an accommodation, Lord Lauderdale demanded and obtained his passports, nine days after Napoleon had set out from Paris to take the command of the army destined to act against Prussia.†

Thus this negotiation, begun under such favourable auspices, both with England and Russia, broke off with both powers on the subject of the possession of Sicily and of the mouths of the Cattaro. Apparently these were very inconsiderable objects to revive so dreadful a contest, and bring the armies of the south and north of Europe to Eylau and Friedland; but, in reality, the secret ends which the hostile powers had in view were more considerable in contending for these distant possessions than might be at first imagined. It was not merely as an appanage of the crown of Naples that Napoleon so obstinately insisted on Sicily for his brother: it was as the greatest island in the Mediterranean, as opening the way to the command of that inland sea, and clearing the route to Egypt and the Indies, that it became a paramount object of desire; it was not an obscure harbour on the coast of the Adriatic which brought the colossal empires of France and

Russia into collision; it was a settlement on the skirts of Turkey, it was the establishment of a French military station within sight of the Crescent, which was the secret matter of ambition to the one party, and jealousy to the other. Thus, while Sicily and Cattaro were the ostensible causes of difference, India and Constantinople were the real objects in the view of the parties; and the negotiation broke off upon those eternal subjects of contention between England, Russia, and France, the empire of the seas and the dominion of Continental Europe.*

The intelligence of the refusal of Alexander to ratify D'Oubril's treaty with France excited an extraordinary transport at Berlin, which was much heightened when, shortly after, it became evident that the negotiations at Paris for an accommodation with Great Britain were not likely to prove successful. The war party became irresistible: a sense of national degradation had reached every heart; the queen was daily to be seen on horseback at the head of her regiment in the streets of Berlin.† The enthusiasm was universal, but in the guards and officers of that distinguished corps it rose to a pitch approaching to phrensy: in proportion to the force with which the bow had long been bent one way, was the violence with which it now rebounded to the other. Wiser heads, however, saw little ground for rational confidence in this uncontrolled ebullition of popular effervescence; and even the heroic Prince Louis let fall some expressions indicating that he hoped for more efficient support in the field than the declaimers of the capital.‡ Lucchesini, who had so long conducted the Prussian diplomacy at the French capital, sent despatches to his government full of acrimonious complaints of the cabinet of the Tuileries, which, either by accident or design, fell into the hands of the French police, and were laid before Napoleon. He instantly demanded the recall of the obnoxious minister, who left Paris early in September, and was succeeded by Knobelsdorf, whose mission was mainly to protract matters, that the cabinet of Berlin might complete its preparations, and, if possible, gain time for the distant succours of Russia to arrive on the Elbe. But as the troops on both sides were hastening to the scene of action, and it was evident of how much importance it was that the strength of Russia should be thrown into the scale before a decisive conflict took place, Napoleon easily penetrated their design, and resolved himself to commence hostilities. His troops for some weeks past had been rapidly defiling from Brannau, the Inn, and the Neckar towards the banks of the Elbe, and a hundred thousand men were approaching the Thuringian Forest. He set out, therefore, from Paris to put himself at their head on the night of the 26th of September, conveyed the guard by post to Mayence, and was already far advanced on his journey to the theatre of war, when the Prussian ultimatum was delivered at Paris by M. Knobelsdorf. Its conditions were, 1st, That the French troops

Real views of the parties in this negotiation.

should forthwith evacuate Germany, commencing their retreat from the day when the King of Prussia might receive the answer of the emperor, and continue it without interruption. 2d, That Wesel should be detached from the French Empire. 3d, That no obstacles should be thrown in the way of the formation of a counter league in the north of Germany. No stronger proof of the infatuation which had seized the cabinet of Berlin can be desired than the fact of their having, in the presence of Napoleon and the grand army, and without any present aid either from Russia, Austria, or England, proposed terms suitable rather to the day after the rout of Rosbach than the eve of the battle of Jena.*

The public mind was violently excited at this period in Germany against the French, not merely by their prolonged stay beyond the Rhine, and the enormous expenses with which it was attended, but by a cruel and illegal murder, committed by orders of Napoleon, on a citizen of one of the free cities of the Empire, who had sold a work hostile to their interests. Palm, a tradesman in Nuremberg, had been instrumental, with many other booksellers, in circulating the celebrated pamphlet by Gentz, already mentioned, in which the principle of resistance to French aggression was strongly inculcated, and another by Arndt, entitled "The Spirit of the Age," of a similar tendency, but in neither of which was any recommendation of assassination or illegal measures held forth. The others were fortunate enough to make their escape; but

Aug. 12. Palm was seized by the French soldiers, dragged before a military commission of French officers, assembled by the emperor's orders at Brannau, and there sentenced to be shot, which inhuman decree was immediately carried into execution, without his being so much as allowed to enter on his defence.†

Aug. 25. Palm was seized by the French soldiers, dragged before a military commission of French officers, assembled by the emperor's orders at Brannau, and there sentenced to be shot, which inhuman decree was immediately carried into execution, without his being so much as allowed to enter on his defence.†

* Jom., ii., 274. Bign., v., 443. Hard., ix., 266.

† The judgment of the military commission convicting Palm and sentencing him to death, bore in its preamble, "Considering that wherever there is an army, the first and most pressing duty of its chief is to watch over its preservation; that the circulation of writings tending to revolt and assassination menaces not only the safety of the army, but that of nations; that nothing is more urgent than to arrest the progress of such doctrines, subversive alike of the law of nations and the respect due to crowned heads; injurious to the people committed to their governments; in a word, subversive of all order and subordination, declares unanimously, That the authors, printers, publishers, and distributors of libels bearing such a character, should be considered as guilty of high treason, and punished with death." Such were the doctrines in which the phrensy of the French Revolution, which began by proclaiming war to the palace and peace to the cottage, the contest which opened by an invitation to the people of all countries to throw off the yoke of crowned heads, terminated! It is hard to say whether the barefaced falsehood, delusive sophistry, or cold-blooded cruelty of this infamous conviction are most conspicuous. The pamphlets which Palm had sold contained no doctrines whatever recommending assassination or any private crime. If they had, they were published not in the dominions of France, or by any person who owed allegiance to its emperor, but in the free city of Nuremberg, in the heart of the German Empire; and they were addressed, not to the subjects of Napoleon, but the Germans, aliens to his authority and enemies of his government. The French armies, contrary to the express terms of the peace of Presburg, were remaining in and devouring the resources of that country, upon the hollow pretext that Russia, a separate power at war with France, had, in the usual course of hostility, conquered a town ceded by Austria to the French Empire. The pamphlets published were nothing but appeals to the Germans to unite against this foreign oppression, and certainly never had men a more justifiable cause of hostility. Even applying Napoleon's principles to himself, what punishment would they fix on the head of him who published proclamations calling on the Venetians, the Irish, and Swiss

This atrocious proceeding, for which there is not a shadow of excuse, either in the nature of the publication charged, or in the law of nations, excited the most profound indignation in Germany: men compared the loud declamations of the Republican partisans in favour of the liberty of the press with that savage violation of it by their military chief; and concluded that the only freedom which they really had at heart was license for their own enormities, and the only system of government which was to be expected from their ascendancy that of military force. A dignified proclamation, issued about the same time by the Senate of Frankfort, after recounting the enormous contributions which they had paid to the Republican armies in 1796, 1799, Aug. 19. 1800, and 1806, concluded with declaring their inability to preserve the independence of their country, which had been transferred to the Elector of Mayence, and recommending submission to the arms of France. Aug. 27. Augereau replied to this proclamation by a stern requisition to have the authors of it delivered up to him in twenty-four hours: the fate of Palm was universally anticipated for the last magistrates of the state, but after they had been arrested, Napoleon, alarmed at the universal horror which that tragic event had excited, deemed it prudent to drop farther proceedings.*

The death of this unfortunate victim did not pass unrevenge, either upon Napoleon or the French people. It fell deep and profoundly on the generous heart of Mr. Fox, whose enthusiastic hopes of the extension of general freedom by the spread of Republican principles were thus cruelly belied by the deeds perpetrated by its leaders in the name of the French people, and contributed, perhaps more than any other circumstance, to produce that firm resolution to adhere to the basis originally laid down by Napoleon for the negotiation which ultimately led to its abandonment. The carnage of Spain, the catastrophe of Moscow, the conquest of France, the rock of St. Helena, are thus directly associated with this deed of blood. The brave and the free thenceforward saw clearly in every part of Europe that no hope for public or private liberty remained but in a determined resistance to the aggressions of France; that slavery and chains followed in the rear of the tricolour flag. Napoleon has frequently said that, if Mr. Fox had lived, peace would have been concluded, and all the subsequent misfortunes of his reign averted; but the truth of history must dispel the illusion, and the English annalist cannot permit the insidious praises of an enemy to deprive one of the brightest ornaments of his country of the honour of having at last been awakened to a sense of the nature of revolutionary ambition, and possessed the magnanimity instantly to act upon the conviction. In the last instructions, dictated a few weeks before his death, to Lord Yarmouth, there is to be found the firmest resolution to insist on the original basis of the negotiation, and never to consent to any other: Earl Spencer, who succeeded him, had merely to follow in the path thus clearly chalked out.† In several of the

to throw off the yoke of their respective governments, and avowed his intention, when he landed in England, to call on the whole subjects of the British Empire to throw off the rule of their sovereign and parliament, establish annual parliaments, and universal suffrage!—See Bign., v., 337, 338.

* Hard., ix., 246, 250. Bign., v., 337, 339.

† "In the instructions," says Mr. Fox, in his last impor-

Mr. Fox's eyes are at last opened to the real nature of the war. speeches which he had made after he had obtained the direction of foreign affairs, is to be found a candid admission that his opinion as to the necessity and justice of the war had undergone a total alteration.* Thus the discord of earlier years was at length by this great man forgotten in the discharge of patriotic duty: the two lights of the age came finally to concur in the same policy; if Mr. Pitt struggled for fifteen years, amid difficulty and disaster, to carry on the war, it was Mr. Fox who bequeathed the flood of glory in which it terminated to his successors; and after having spent the best part of his life in recommending less honourable and enlightened measures of concession to his country, in his last moments "nailed her colours to the mast."†

Last instructions tant official despatch, "given to Lord Lauderdale of Mr. Fox to dale, the repeated tergiversations of France Lord Lauderdale. during the negotiation are detailed. It is from thence alone that any delay has arisen. The offers made through Lord Yarmouth were so clearly and unequivocally expressed, that the intention of the French government could not be doubted. But they were no sooner made than departed from. In the first conferences after his lordship's return to France, Sicily was demanded; in the former, it had been distinctly disclaimed. This produced a delay attributable solely to France: our answer was immediate and distinct; the new demand was declared to be a breach of the principle of the proposed negotiation in its most essential parts. To obviate the cavil on the want of powers, full powers were sent to you, but with an express injunction not to use them till the French government should return to its former ground with respect to Sicily. M. Talleyrand, upon being informed of this determination, proposed to give the Hanse Towns in lieu of Sicily to the King of Naples. The moment this proposal was received here it was rejected; and the same despatch which conveyed that rejection carried out his majesty's commands, if the demand for Sicily should still be persisted in, to demand his passports and return to England. M. Talleyrand, upon this, made fresh proposals, supported by Russia, as affording the means of preventing the meditated changes in Germany, and stated "that these changes were determined upon, but should not be published if peace took place." That despatch was received here on the 12th, and on the 17th, in direct violation of these assurances, the German confederation treaties were both signed and published. Such are the unfounded pretences by which the French government seeks to attribute to delays on our part the results of its own injustice and repeated breach of promise." Such was Mr. Fox's dying view of the negotiation up to the beginning of August; and it surely contains no confirmation of Napoleon's assertion that, if he had lived, peace would have been concluded. Its last stages, down to his death on the 17th of September, were conducted in strict conformity to the instructions he had given to Lord Lauderdale.—See Mr. Fox's *Despatches*, August 3d and 14th, 1806; *Parl. Deb.*, viii., 138, 164.

* In the debate on Mr. Windham's military system, on April 3, 1806, Mr. Fox said, with admirable candour, "Indeed, by the circumstances of Europe, I am ready to confess that I have been weaned from the opinions which I formerly held with respect to the force which might suffice in time of peace: nor do I consider this as an inconsistency, because I see no rational prospect of any peace which would exempt us from the necessity of watchful preparation and powerful establishments. If we cannot obtain a safe and honourable peace, of which it is impossible in the actual state of affairs to be sanguine, and if we are not successful in carrying it on, we must be reduced to that state which I, for one, cannot contemplate without apprehension.—'toto divors orbe Britannæ,' and he left to our own resources and colonial possessions. In such an arduous and difficult struggle, demanding every effort and every exertion, or, indeed, under any system which we may act upon, a large army is indispensable."—*Parl. Deb.*, vi., 715, 716.

† This memorable final coincidence of opinion between Pitt and Fox on the necessity of continuing the war, is not the only instance of a similar approximation equally honourable to both parties. Ten years before, the two champions of the Constitution and of revolution, Mr. Burke and Sir James Mackintosh, the well-known author of the *Vindiciæ Gallicæ*, had in like manner, come to view the origin of the convulsion in the same light. "The enthusiasm," said Mackintosh, in a letter to Burke, "with which I once embraced the instruction conveyed in your writings is now ripened into cold conviction by the experience and conviction of more mature age. For a time, seduced by the love of what I thought liberty, I ventured to oppose, without ever

The health of this illustrious man had for some weeks past been declining, and in the middle of July he was compelled to discontinue his attendance in Parliament, though he was still assiduous in his duties at the Foreign Office. Notwithstanding all the efforts of medical skill, his complaint daily became more alarming. Symptoms of dropsy rapidly succeeded, and yielded only for a brief space to the usual remedies. On the 7th of September he sunk into a profound state of weakness, and on the 13th of the same month breathed his last, having entertained almost to the end of life confident hopes of recovery.*

Thus departed from the scene of his greatness, within a few months after his illustrious rival, Charles Fox. Few men during life have led a more brilliant career, and none were ever the object of more affectionate love and admiration from a numerous and enthusiastic body of friends. Their attachment approached to idolatry. All his failings, and he had many, were forgotten in the generous warmth of his feelings and the enthusiastic temper of his heart. "The simplicity," says Mackintosh, "of his character communicated confidence; the ardour of his eloquence roused enthusiasm; the gentleness of his manners inspired friendship." "I admired," says Gibbon, "the powers of a superior man, as they were blended in his attractive character with the simplicity of a child. No human being was ever more free from any taint of malignity, vanity, or falsehood." Nothing can more strongly mark the deep impression made by this part of Mr. Fox's character than the words of Burke, pronounced six months after all intercourse between them had ceased: "To be sure, he is a man made to be loved."†

A man of pleasure in every sense of the word, dissipated and irregular in private life, having ruined his private fortune at the gaming-table, and often emerging from such haunts of vice to make his greatest appearances in Parliament, he yet never rose without, by the elevation of his sentiments and the energy of his language, exciting the admiration not only of his partisans, but his opponents. The station which he occupied in the British Parliament was not that merely of the leader of a powerful and able party. He was at the head of the friends of freedom in the human race. To his words the ardent and enthusiastic everywhere turned as to those of the gifted spirit intrusted with their cause. To his support the oppressed and destitute universally looked as their last and best refuge in periods of disaster. "When he pleaded," says Chateaubriand, "the cause of humanity, he reigned—he tri-

ceasing to venerate, that writer who had nourished my understanding with the most wholesome principles of political wisdom. I speak to state facts, not to flatter. You are above flattery. I am too proud to flatter even you. Since that time a melancholy experience has undeceived me on many subjects, in which I was then the dupe of my own enthusiasm. I cannot say I even now assent to all your opinions on the present politics of Europe. But I can with truth affirm that I subscribe to your general principles, and am prepared to shed my blood in defence of the laws and constitutions of my country." Burke answered from the bed of death: "You have begun your opposition by obtaining a great victory over yourself; and it shows how much your own sagacity, operating on your own experience, is capable of adding to your own extraordinary talents and to your early erudition. It was the show of virtue, and the semblance of public happiness, which could alone mislead a mind like yours. A better knowledge of their substance alone has put you on the way that leads the most securely and certainly to your end." What words between such men!—See MACKINTOSH'S *Memoirs*, i., 87, 88.

* *Ann. Reg.*, 1806, 258. † Mackintosh's *Mem.*, i., 324.

Death of Mr. Fox.

Sept. 13.

umphed. Ever on the side of suffering, his eloquence acquired additional power from his gratuitous exertions in behalf of the unfortunate. He crept even to the coldest heart. A sensible alteration in the tone of the orator discovered the man. In vain the stranger tried to resist the impression made upon him; he turned aside and wept."

Mr. Fox was the greatest debater that the Extraordinary English Parliament ever produced. ry talents in Without the admirable arrangement debate.

and lucid order which enabled Mr. Pitt to trace, through all the details of a complicated question, the ruling principle which he wished to impress upon his audience, he possessed a greater power of turning to his own advantage the incidents of a debate or admissions of an antagonist, and was unrivalled in the power and eloquence of his reply. In the outset of his speech he often laboured under a hesitation of expression, and was ungainly or awkward in manner; but, as he warmed with the subject, his oratory became more rapid, his delivery impassioned, and, before it closed, the enraptured senate often hung in breathless suspense on his words. He was an accomplished classical scholar, and was master of an extraordinary power of turning to the best advantage the information which he possessed, or had gained during the debate; but his habits were too desultory, his indolence too great, his love of pleasure too powerful, to permit him to acquire extensive knowledge.* Respectable as an historian, the fragment on the annals of the Revolution which he composed is justly admired, from the purity of its style and the manliness of its sentiments; but the pen was too cold an instrument to convey the fervid bursts of his eloquence, and the reader will look in vain for the impassioned flow of the Parliamentary orator. It is in the debates of the House of Commons that his real greatness is to be seen; and a vigorous intellect will seldom receive higher gratification than from studying the vehement declamation, the powerful and fervent reasoning by which his great speeches are there distinguished.

But all this notwithstanding, the fame of Mr. Fox is on the decline. With the extinction of the generation which witnessed his parliamentary efforts—with the death of the friends who were captivated by his social qualities, his vast reputation is sensibly diminishing. Time, the mighty agent which separates truth from falsehood—experience, which dispels the most general illusions—suffering, which extinguishes the warmest anticipations when unfounded in human nature, have separated the wheat from the chaff in his principles. In so far as he sought to uphold the principles of general freedom, and defend the cause of the unfortunate and oppressed, in whatever country—in so far as he protected in legislation the freedom of the press, and stopped the infamous traffic in human flesh, his efforts will ever command the respect and sympathy of mankind; but in so far as he sought to advance this cause by advocating the principles of Democratic power—in so far as he supported the wild prospects of the French Revolutionists, and palliated when he could not defend their atrocious excesses—in so far as he did his utmost to transfer to this country the same destructive doctrines,

and, under the name of Reform, sought to give an entrance here to Jacobin fanaticism and infidel zeal—in so far as he counselled peace and recommended concession, when peace would have been the commencement of civil warfare, and concession a crouching to revolutionary ambition, he supported principles calculated to destroy all the objects which he himself had in view, and induce the very tyranny against which the thunders of his eloquence were directed.

The doctrines that all abuses are owing to power being confined to a few hands; that the extension of political influence to the lower classes is the only antidote to the evil; that virtue, wisdom, and intelligence will be brought to bear on public affairs when those classes are intrusted with their direction; and that the growth of Democratic ascendancy is the commencement of social regeneration, are sometimes amiable from the philanthropy of those who support them, and always will be popular from the agreeable flattery they convey to the multitude. They are liable to only one objection, that they are altogether visionary and chimerical, founded on a total misconception of human nature, and invariably lead, when put in practice, to results diametrically the reverse of what were held forth or expected by their supporters. Abuses, by the introduction of a Democratic regime, it is soon found, instead of being diminished, are multiplied tenfold; tyranny, instead of being eradicated, is enormously increased; personal and social security, instead of being established, are kept in perpetual jeopardy; the weight of public opinion, instead of an antidote to evil, becomes its greatest promoter, by being exerted in favour of those by whom its enormities are perpetrated.* It is by the opposing influence of these powers that the blessings of general freedom are secured under a constitutional monarchy: no hope remains of its outliving the spring-flood which drowns the institutions of a state; when these antagonist forces are brought, for any length of time, to draw in the same direction. The liberties of England long survived the firm resistance which Mr. Pitt opposed to Revolutionary principles; but those of France perished at once, and perhaps forever, under the triumph in which Mr. Fox so eloquently exulted on the other side of the Channel. Taught by

Reasons of this change.

* No man more frequently quoted or referred to Adam Smith, but he had never read the Wealth of Nations.

* "In the contests of the Greek commonwealth," says Thucydides, "those who were esteemed the most depraved, and had the least foresight, invariably prevailed; for, being conscious of this weakness, and dreading to be overchecked by those of greater penetration, they went to work hastily with the sword and poniard, and thereby got the better of their antagonists, who were occupied with more refined schemes." "In turbis atque seditiosis," says the Roman annalist, "pessimo cuique plurima vis; pax et quies bonis artibus aluntur." "Enfin je vois," said the French demagogue, when going to the scaffold, "que dans les révolutions l'autorité toujours reste aux plus scélérats." "A Democratic Republic," said the British statesman, "is not the government of the few by the many, but of the many by the few, with this difference, that the few who are thus elevated to power are the most profligate and worthless of the community." "Democracy," says the author of the *Vindicta Gallica*, "is the most monstrous of all governments, because it is impossible at once to act and control; and, consequently, the sovereign power is there left without any restraint whatever. That form of government is the best which places the efficient direction in the hands of the aristocracy, subjecting them in its exercise to the control of the people at large." What a surprising coincidence between the opinions of such men in such distant ages! He is a bold speculator who, on such a subject, differs from the concurring authority of Thucydides, Sallust, Danton, Mr. Pitt, and Sir James Mackintosh.—THUCYDIDES, l. iii., c. 39. SALLUST, *de Bello Cat.* RIOUFFE, 67. *Parl. Hist.*, xxi., 902. MACKINTOSH'S *Memoirs*, i., 92.

this great example, posterity will not search the speeches of Mr. Fox for historic truth, or pronounce him gifted with any extraordinary political penetration; on the contrary, it must record with regret, that the light which broke upon Mr. Burke at the outset of the Revolution, and on Mr. Pitt before its principal atrocities began, only shone on his fervent mind when descending to the grave; and award to him, during the greater part of his career, the praise rather of an eloquent debater, a brilliant sophist, than either a profound thinker or a philosophic observer. But recollecting the mixture of weakness in the

nature of all, and the strong tendency of political contention to dim the clearest intellect and warp the strongest judgment, it will, while it condemns a great part of his principles, do justice to his motives and venerate his heart; it will indulge the pleasing hope that a longer life would have weaned him from all, as he honourably admits it had done from many of his earlier delusions; and admire the magnanimous firmness with which, on the bed of death, he atoned for his past errors, by bequeathing, in a moment of extraordinary gloom, the flag of England unlowered to his successors.

CHAPTER XLIII.

CAMPAIGN OF JENA—FALL OF PRUSSIA.

ARGUMENT.

Efforts of Prussia to obtain the Aid of Russia and England, and of Austria.—But the Cabinet of Vienna resolves to remain Neutral.—Instructions to Mr. Adair, at the Austrian Capital, on the Subject.—Spain indicates a hostile Disposition against France.—The lesser German Powers incline to France.—Preparations of Prussia.—Forces on both Sides.—Her want of Foresight, and neglect of Defensive Measures.—Imprudent Conduct of the Prussian Generals.—Proclamation of Napoleon to his Soldiers.—Reply of Prussia.—Reflections on these Proclamations.—Preparatory Movements of the Prussians.—Counter-movement of Napoleon.—The Duke of Brunswick abandons the Offensive.—Commencement of Hostilities, and Defeat of detached Bodies of the Prussians.—Death of Prince Louis.—Discouragement of the Prussians, who are completely turned by the French.—Movements on both Sides preparatory to a general Action.—Result of these Manœuvres.—The Prussian Army is again divided.—The King marches to Auerstadt.—Napoleon's Dispositions for the approaching Action.—Positions of the Army on both Sides.—Battle of Jena.—Defensive Measures of the Prussians.—The Prussians are defeated.—Arrival of Ruchel on the Field, who is also overwhelmed.—Preparatory Movements which led to the Battle of the King's Army.—Battle of Auerstadt.—Desperate Struggle which there ensued.—Additional Forces come up on both Sides.—Dreadful Fight on the Sonnenberg, on the Right.—The Prussian Reserve advances, and is overthrown.—Disastrous Retreat of the Prussians from both Fields of Battle.—Loss on both Sides in these Actions.—Unparalleled Disasters of the Retreat.—Capture of Erfurt with thirteen thousand Men.—The King of Prussia confers the chief Command on Prince Hohenlohe, and retires to Magdebourg.—Measures of Napoleon, to follow up his Victory.—Soul defeats Kalkreuth.—The Duke of Wirtemberg is overthrown by Bernadotte at Halle.—Saxony is overrun by the French.—Investment of Magdebourg, which is abandoned by Hohenlohe, who is pursued, assailed, and made Prisoner.—March and Escape of the Duke of Saxe Weimar.—Disgraceful Surrender of Stettin and Custrin.—Blücher's Corps is pursued to Lubeck, and is there defeated, after a desperate Conflict.—He retires to Rat-Kau, and is there made Prisoner.—Fall of Magdebourg, and of Hameln and Nieubourg on the Weser.—Napoleon detaches Saxony from the Coalition, but refuses to treat with Prussia.—Napoleon visits Potsdam and the Tomb of the Great Frederic.—Berlin, Spandau, and Charlottenberg are occupied by the French.—Affair of Prince Hatzfeld, and his Pardon by Napoleon.—His Proclamation and Addresses to his Soldiers, and unpardonable Severity to the Queen, the Duke of Brunswick, and Elector of Hesse Cassel.—Cruel Expressions regarding both in the Bulletins.—Enormous Contributions levied on Prussia and the North of Germany.—Napoleon's unworthy Expressions on Gentz, and Sir James Mackintosh's Opinion of him.—Military Organization of the Country, from the Rhine to the Vistula, under Napoleon.—Negotiation with Prussia.—Armistice concluded, which the King refuses to ratify.—Advance of Jerome Bonaparte into Silesia, and of the French Troops to the Vistula.—Siege and Surrender of Glogau.—Treaty between France and Saxony.—Berlin Decree against English Commerce.—Occupation of Hamburg.—Immense Results of the Campaign.—General Despondency which it occasioned in Europe.—Talents and Rashness displayed by Napoleon during its Progress.—Reflections on the sudden Fall of Prussia.—Blücher's Opinion on its probable Resurrection.

NOTWITHSTANDING the inconsiderate haste with which Prussia had taken up ^{Efforts of Prussia to obtain the aid of Russia and England.} arms, the cabinet of Berlin made some attempts to induce the other aid of Russia powers of Europe to share with them the dangers of the conflict. With England it was no difficult matter to effect a reconciliation. At the first authentic accounts of the change in the policy of Frederic William, an order in council was issued, raising the blockade of the Prussian harbours. M. Jacobi, the Prussian ^{Sept. 25.} minister in London, returned to that capital immediately after he had left it; and the British ministry had the generosity to resume its amicable relations with the cabinet of Berlin before an explanation had been given on the subject of Hanover. With Sweden an accommodation was also without difficulty ef- ^{Aug. 17.} fected, on the footing of the troops of that power taking possession of Lauenburg, which they did in the name of the King of Great Britain. It was not so easy a matter to convince the cabinet of St. Petersburg of this unlooked-for change in the Prussian councils; and, taught by the long vacillation of its policy, they were for some time unwilling to yield to the general joy which was diffused through the Russian capital on the intelligence that war was resolved on. But no sooner was Alexander informed, by confidential letters brought by General ^{Sept. 18.} Krusemark from the King of Prussia, that he had embarked seriously in the contest, than he instantly wrote, promising an immediate succour of seventy thousand men, and announcing his intention of himself marching at the head of a chosen army to aid in the support of his faithful ally.*

Important as the announcement of the intentions of Russia were, the accession ^{And of Austria.} of Austria would have been of still more value to the common cause, from its closer proximity to the scene of action, and the strong positions which the Bohemian Mountains afforded on the flank of the probable theatre of war. The Prussian ambassador, accordingly, was indefatigable in his endeavours to rouse the cabinet of Vienna to a sense of the vital importance of joining heart, and hand in the approaching conflict for the liberties of Europe. He represented to Count Stadion, then prime minister at Vienna, "that the losses inflicted on Austria by the treaty of Presburg were so immense, that the emperor,

* Hard., ix., 272, 275. Bign., v., 413, 415. Dum., xv., 285, 287.

of necessity, must at some future period look out for the means of repairing them. The loss of the Tyrol is of such irreparable importance to Austria that no doubt can be entertained that she will take advantage of the first opportunity to resume it from Bavaria, by rousing the patriotic attachment of the inhabitants of that important province to their ancient masters. Napoleon has justly conceived the most serious apprehensions for the faithful observance of that treaty which he himself has been the first to violate. Does he not, in defiance of his engagements, still hold the fortress of Brannau and the line of the Inn six months after he was bound by a solemn treaty to have evacuated Germany with all his forces? The recent establishment of the Confederation of the Rhine, and dissolution of the Germanic Empire, too clearly demonstrate with what ulterior views the French government is actuated in regard to the countries beyond the Rhine. Honour, necessity, the existence of its people, have forced the King of Prussia to take up arms alone; but a powerful Russian army, and the well-known generosity of England, diminish its perilous chances.* Now, therefore, is the time for Austria and Prussia to lay aside their jealousies springing from the conquest of Silesia, and unite their forces against the common enemy, who is about to make the Confederation of the Rhine an outwork from whence to enslave all the other states of Germanic origin.*

Forcible as these considerations were, and strongly as the cabinet of Vienna felt their justice, there were yet many circumstances which forbade them to yield on this occasion to their inclinations. The conduct of Prussia for the last ten years had been so dubious and vacillating; her hostility to Austria, especially on the division of the indemnities, so evident; her partiality for the French alliance so conspicuous; her changes of policy during the last year so extraordinary, that no reliance could be placed on her maintaining a decided line of conduct for any length of time together, and, least of all, continuing steadfast in that sudden and perilous hostility in which she had now engaged, and the vehemence of which was the worst possible guarantee for its endurance. Who could ensure that she would not desert this alliance as she had done the first coalition against France, or change her policy as suddenly as she had done her recent hostility against England, and leave to Austria, irrevocably embarked, the whole weight and dangers of the contest? The Archduke Charles, on being consulted as to the state of the army, reported that the infantry, which had not yet been rejoined by the prisoners taken during the campaign, was hardly a half of its full complement; the cavalry but recently remounted, and for the most part unskilled in military exercises; the artillery numerous, but the majority of the gunners without any experience. The treasury was empty, great part of the most valuable provinces of the monarchy had been torn away, and those which remained were exhausted by enormous war contributions, wrung from them by the enemy. Influenced by these considerations, the cabinet of Vienna resolved to preserve a strict neutrality, and issue a proclamation to that effect; and however much the historian may lament that determination, from a knowledge of the boundless calamities which an opposite

course might have saved to both monarchies, it is impossible to deny that, situated as Austria was at that time, it was the most prudent resolution which its government could have adopted, and that, if Prussia was left single-handed to maintain the cause of European independence, it was no more than what she was bound to expect from the selfish and temporizing policy which she had so long followed.*†

Hopes were not wanting to the cabinet of Berlin of efficacious aid in another quarter where it was least expected, and of a kind to paralyze a considerable part of the French forces. Spain, bereft of her navy by the battle of Trafalgar, blockaded in her harbours, destitute of commerce, cut off from all intercourse with her colonies, had felt all the burdens of war without any of its glories. The public indignation was hourly accumulating against the Prince of Peace, whose ignoble birth, exorbitant power, and immense wealth, rendered him as much an object of jealousy to the Castilian noblesse as the uniform disasters which had attended his administration made him detested by the people. Still, however, that ruling favourite persevered, against the almost unanimous wishes of the kingdom, in the French alliance, till his pride was offended at the haughty conduct of Napoleon, who excluded the Spanish ambassador from any share in the negotiations for a general peace at Paris, and it was revealed to him that in those conferences he had seriously proposed to take the Balearic Islands from the Spanish crown, and confer them as an indemnity for Sicily, together with a revenue drawn from Spain, on the King of Naples; while the assembling of a powerful army at Bayonne, ostensibly directed against Portugal, sufficiently indicated a design to overawe both states of the Peninsula. The light now suddenly flashed upon the Spanish rulers. They perceived, as Prussia had done during the same negotiation, that the French emperor made use of the powers with whom he was in alliance as mere dependancies, excluding them from any participation in treaties in which they were deeply interested, and disposing of their provinces to others without condescending even to ask their consent to the transfer. No sooner, therefore, did they receive intelligence of the rupture of the conferences between Great Britain and France at Paris; and the resolution of Prussia to take up arms, than they resolved to detach themselves from the French alliance, and join their forces to those of European independence. Despatches from the Prussian envoy at Paris to the Prince of Peace on this subject were

Spain indicates hostile dispositions against France.

* Hard., ix., 279, 281. Bign., v., 416, 419. Lucchesini, ii., 106, 112.

† The instructions of Mr. Adair, the British ambassador at Vienna at that period, were, not to stimulate the Austrian government to hurry into a war, of which the consequences, if unsuccessful, might be fatal to that country, but to offer its government, if they deemed the opportunity favourable for engaging in hostilities, or if the necessities of their situation compelled them to such a course, the whole pecuniary aid which Great Britain was capable of affording. Of the wisdom of this course of proceeding, no one who considers the precarious situation of Austria at that crisis can entertain a doubt; and it affords another proof of the clear insight which Mr. Fox at that period had obtained into the insatiable ambition of Napoleon, and of the magnanimity with which that upright statesman instantly acted upon his conviction. "A man," says the Marquis Lucchesini, "unjustly styled by Napoleon and his adherents the last prop of the pacific dispositions of the cabinet of St. James."—Vide LUCCHESINI, ii., 96, 97, note; and BIGN., v., 417.

* Hard., ix., 277, 281.

secretly intercepted and deciphered by the French government, which from that moment resolved on the overthrow of the Spanish branch of the house of Bourbon at the first convenient opportunity, while the Prince of Peace, deeming concealment of his designs no longer necessary, issued two proclamations, in the middle of October, in which he enjoined the immediate completion of the ranks of the army, and the formation of the national militia, under their constitutional leaders, in all the provinces of the monarchy. Thus was the ambition and reckless disregard of national rights by Napoleon again reviving, on a surer basis, because that of experience and common danger, the great original European coalition against France; and on the eve of the battle of Jena were the first sparkles of that terrible conflagration visible, which afterward burned with such fury in Russia, Germany, and the Spanish Peninsula.*

But although the greater and distant powers, with the exception of Austria, were thus arming in favour of the coalition, the lesser states nearer the scene of action were overawed by the influence and the authority of France. Napoleon was daily receiving accessions of strength from the states which bordered on the Confederation of the Rhine. The Archduke Ferdinand, though brother to the Emperor of Austria, gave the first example of defection by joining his states of Wurtzburg to that alliance; the Elector of Hesse, whom interest as well as family connexions strongly inclined to the cause of Prussia, was nevertheless so overcome by his apprehensions as to persist, notwithstanding the utmost efforts of the cabinet of Berlin, in a forced neutrality; the Elector of Cassel, summoned to each of the hostile camps, and sorely perplexed between his inclinations and his apprehensions, put his troops on the war footing of twenty thousand men, and contrived to protract his ultimate decision till the battle of Jena rendered submission to France a matter of necessity. Saxony alone, continuous along its northern frontier with Prussia, and capable, from its strength, of adopting a more generous resolution, openly joined the cabinet of Berlin, but twenty thousand men were all that it brought to the standards of the Great Frederic.†

The whole weight of the contest, therefore, fell on Prussia; for although great and efficacious aid might be expected to be derived in time from Russia, and succours were hoped for from England, both in men and money, yet these auxiliaries were as yet far distant. The Moscovite battalions were still cantoned on the Niemen; those of England had not yet left the Thames; while Napoleon, at the head of a hundred and eighty thousand veteran troops, was rapidly approaching the Thuringian Forest. Nothing daunted, however, by this formidable prospect, Frederic William gallantly took the field, and directed all the disposable troops of the monarchy towards Saxony and Erfurth. The total military strength of the kingdom was 240,000 men, of whom 120,000 were assembled on the frontier, 12,000 in observation in Westphalia, for the approaching campaign; the remainder being dispersed in garrison depôts, or not yet in a state for active operations. Such was

the general enthusiasm, and so little did they anticipate the terrible reverse which awaited them, that the Prussian guards marched out of Berlin, singing triumphant airs, amid the shouts of the inhabitants, almost in a state of sedition from the tumultuous joy they experienced on at length being about to measure their strength with the enemy.††

The memorable military operations of the year 1813, and the tenacious hold which Napoleon then kept of the fortresses on the Elbe, when assailed by the greatly superior forces of the coalition, have demonstrated that no position in Europe is more susceptible of defence than the course of that river; and that, supported by the ramparts of Magdebourg, Wittenberg, Dresden, and Torgau, an inferior force can there, for a considerable time, prolong its defence against an enemy possessing an overwhelming superiority in the field. Had these fortresses been properly armed and provisioned, and the Prussians been commanded by a general capable of turning to the best advantage the means of defence which they afforded, it is probable that as protracted a contest might have been maintained as Napoleon supported in 1796 on the Adige, or Kray in 1800 around the bastions of Ulm, and time gained for the arrival of the Russians before a decisive blow was struck in the centre of Germany. But not only had no preparations for such a defensive system been made, but the nation, as well as its rulers, were in such a state of exaltation as to despise them. None of these important bulwarks were provisioned; hardly were guns mounted on their ramparts. The interior fortified towns on the Oder and in Silesia were, for the most part, in the most deplorable state. No depôts were formed, no provision for recruiting the army in case of disaster made. They had not even a rallying-point assigned in the event of defeat, though the strong fortresses of Magdebourg, Wittenberg, and Torgau lay immediately in the rear of the theatre of war, and the Elbe spread its ample stream to arrest the victor. Careless of the fu-

Her grievous want of foresight and defensive measures.

* Lucches, ii., 117, 118. Dum., xv., 289. Jom., ii., 275, 276. Hard., ix., 299, 300.

† Napoleon's army was divided into nine corps, and stationed as follows, on the 3d of October, when he arrived at Wurtzburg:

First corps—Bernadotte—at Lichtenfelds.
Second do.—Marmont—Illiria.
Third do.—Davoust—Bamberg.
Fourth do.—Soult—between Amberg and Bamberg.
Fifth do.—Lefebvre, succeeded by Lannes—in front of Schweinfurth.
Sixth do.—Ney—Nuremberg.
Seventh do.—Augereau—Wurtzburg.
Cavalry do.—Murat—between Wurtzburg and Cronach.
Imperial Guard—Bessières and Lefebvre, after Lannes got the 5th corps—Wurtzburg.

The bulk of the army was grouped round Cobourg and Bamberg. The whole bearing on the Prussians, exclusive of Marmont in Illiria, was 150,000 men.

The Prussians, when the campaign opened, were divided into three armies: the right wing, under General Ruchel, of 30,000 men, was stationed on the frontiers of the Hessian territories; the centre, 55,000 strong, commanded by the king in person, with his lieutenant-general, the Duke of Brunswick, under his orders, was behind the Elbe around Magdebourg, with its advanced guard on the Saale; the left wing, composed of 40,000 men, including the Saxons, was commanded by Prince Hohenlohe, with Prince Louis, the king's brother, under him. It assembled in Saxony; its extreme left rested on the Bohemian Mountains, and its advanced posts were pushed as far as Hof and the Kirchberg. A detached corps of 12,000 men, in Westphalia, was under the orders of a general destined for future celebrity—BLÜCHER.—See DUMAS, xv., 290, 514; and JOM., ii., 275, 276; and the *Official Report of the Russian Strength to the Duke of Brunswick*, HARD., ix., 484, App. G.

* Ann. Reg., 1806, 221. Lucches, ii., 100, 101. Hard., ix., 285, 286.

† Bign., v., 435, 442. Dum., xv., 287, 288.

ture, chanting songs of victory, and enjoying its triumphant march through the villages, the army bent its steps towards Erfurth; strong in the recollection of the Great Frederic, stronger still in the anticipation of the overthrow of Napoleon, and dreaming rather of the banks of the Rhine or the plains of Champagne, than of the shores of the Vistula or the fields of Poland.*

But if the infatuation of the army was great, greater still was the delusion of its commanders. The Duke of Brunswick, though an able man of the last century, and enjoying a great reputation, was altogether behind the age, and totally ignorant of the perilous chances of a war with the veteran legions and numerous columns of Napoleon. The disasters of the late campaigns were by him ascribed entirely to timidity or want of skill in the Austrians: the true way to combat the French, he constantly maintained, was to assume a vigorous offensive, and paralyze their military enthusiasm by compelling them to defend their own positions. That there was some truth in this opinion, no one acquainted with the character and history of the French army could deny; but, unfortunately, it required for its successful application both a general and an army very different from the Prussian at this period. The former did not possess the energy and rapidity, the latter the strength or experience requisite for so perilous a system. Bold even to rashness in the original conception of the campaign, the Duke of Brunswick was vacillating and irresolute when he came to carry it into execution; and, while his opponent was counting hours and minutes in the march of his indefatigable legions, frequently lost whole days in deliberation or councils of war, and sometimes changed the destination of the forces when their movements were half completed. The troops, indeed, were numerous and perfectly disciplined; the artillery admirable; the cavalry magnificent; the staff skilful and highly educated, but in matters of theory and detail, rather than the practical disposal of large masses in presence of a powerful and enterprising enemy. But what the whole army, from the general to the lowest drummer, were alike ignorant of, was the terrible vehemence and rapidity which Napoleon had introduced into modern war, by the union of consummate skill at headquarters with enormous masses and a vast application of physical force: combining thus the talent of Cæsar or Turenne with the fierce tempest of Scythian warfare. Applying, then, to the present the experience of the past age, the usual error of second-rate men, they calculated their measures upon the supposition of a war of manœuvres, when one of annihilation awaited them, and advanced as against the columns of Daun or Laudohn, when they were in presence of Napoleon and a hundred and fifty thousand men.†

As usual in such cases, the contending parties prefaced the war of arms by mutual manifestoes, calculated to rouse the spirit of their respective forces, or vindicate their hostility in the eyes of Europe. That of Napoleon, which bore intrinsic evidence of his composition, was, as usual, admirably calculated to dazzle and stimulate his followers. "Soldiers! the order for your return to France was already issued: you had already ap-

proached it by several marches; triumphal fêtes awaited you; preparations for your reception were already made in the capital: but, while we were surrendering ourselves to a too confiding security, new conspiracies were formed under the mask of friendship and alliance. Cries of war have been heard from Berlin: for two months provocations have daily been offered to us; the same insane spirit which, taking the advantage of our dissensions fourteen years ago, conducted the Prussians into the plains of Champagne, still prevails in their councils. If it is no longer Paris which they propose to raze to its foundation, it is now their standards which they announce their intention of planting in the capitals of our allies; it is Saxony which they wish to compel to renounce, by a shameful transaction, its independence, and range itself by their side; it is your laurels which they wish to tear from your brows: they insist upon our evacuating Germany at the mere sight of their army! The fools! Let them learn that it is a thousand times easier to destroy the great capital than to wither the honours of a great people and its allies. Their projects were then confounded: they found in the plains of Champagne defeat, shame, and death; but the lessons of experience are forgotten, and there are men in whom the feelings of hatred and jealousy are never extinguished. Soldiers! there is not one among you who would return to France by any other path but that of honour. We should never re-enter there but under arches of triumph. What, then! shall we have braved the seasons, the seas, the deserts; vanquished Europe, repeatedly coalesced against us; extended our glory from the east to the west, to return at last to our country like deserters, after having abandoned our allies, and to hear it said that the French Eagle fled at the mere sight of the Prussian standards? But they have already arrived at our advanced posts. Let us then march, since moderation has not been able to awaken them from this astonishing trance: let the Prussian army experience the same fate which it did fourteen years ago: let them learn that if it is easy, by means of the friendship of a great people, to acquire power and dominions, its enmity, though capable of being roused only by an abandonment of every principle of wisdom and reason, is more terrible than the tempests of the ocean."*

Less fitted to rouse the military passions and warlike enthusiasm of its subjects than this master-piece of Napoleon, the Prussian manifesto, drawn by Gentz, was yet a model of dignified reason, and concluded with a sentiment as to the ultimate issue of the contest, which subsequent events have rendered prophetic. "All our efforts, and those of our allies, to preserve peace have proved unsuccessful; and if we are not willing to abandon to the despotism of an implacable enemy, and to deliver over to his devouring armies, the whole north of Germany, and perhaps of Europe, a war is inevitable. His majesty has resolved upon it because the honour and security of the state are in danger: he would have deemed himself happy could he have attained the same end by pacific means; but it is with the firmest confidence that he takes the command of the army which is about to combat for its country and national honour, because the cause in which it is engaged is just. His majesty is well aware that for long

* Hard., ix., 297, 300. Lucches., ii., 117, 120.

† Hard., ix., 301, 303. Jom., ii., 279.

* Dum., xiv., 4, 6.

the army desired war; and even when circumstances prevented him from yielding to its wishes, they commanded his respect, because they took their origin in those feelings of honour and patriotism which have ever distinguished the Prussian forces. The nation, in a body, has manifested the warm interest which it takes in this war; and that strong expression of enthusiasm has confirmed his majesty in the opinion that now it is not only unavoidable, but in unison with the wishes of every people. His majesty is convinced that the desire to preserve the national honour unchanged, and the glory which the Great Frederic has shed over our arms, will suffice to excite the army to combat with its accustomed valour, and to support with constancy all its fatigues.

"But this war possesses even a more general interest. We have to deal with an enemy who all around us has beaten the most numerous armies, humbled their most powerful states, annihilated their most venerable constitutions; ravished from several nations their honour, from others their independence. A similar fate awaited the Prussian monarchy: numerous armies menaced your frontiers; they were daily augmenting; it had become your turn to fall into the gulf, to bow beneath a strange yoke; and already his pride and rapacity coveted the spoils of the north of Germany. Thus we combat for our independence, for our hearths, for all that is dear to us; and if God gives victory to the just side, to our arms, to the courage which burns in the heart of every Prussian, we shall be the liberators of oppressed millions. Every warrior who shall fall on the field of battle will have sacrificed his life in the cause of humanity; every one who survives will acquire, besides immortal glory, a just title to the gratitude, the triumph, the tears of joy of a liberated country. Who among us could endure the thoughts of becoming the prey of a stranger? While we combat for our own safety, to avert from us the deepest humiliation to which a nation can be subjected, we are the saviours of all our German brethren; the eyes of all nations are fixed on us as the last bulwark of liberty, security, or social order in Europe.*"

The opposite style of these two eloquent proclamations is very remarkable. Both are addressed to some of the strongest passions of the human breast; both are master-pieces of manly oratory; but the language which they severally employ is strikingly characteristic of the different situations in which their authors respectively stood. Napoleon speaks to his soldiers only of an insult offered to their arms; of glory and triumphs, and victories to be won; Frederic William, equally firm, but less sanguine as to the result, disguises not the dangers and chances of the struggle, but reminds them of the duty they owed to themselves, their country, the cause of the human race. The former invokes the Eagles of France, and calls on the soldiers to follow their glorious career: the latter appeals to the God of battles, and anticipates from his aid a final triumph to the arms of freedom. The battle of Jena and chains of Tilst seemed for long to have announced an abandonment of this cause by the care of Providence: but let these words be borne in mind, and compared with the final issue of the contest.†

* Dum., xvi., 8, 10.

† Napoleon had no gallantry or chivalrous feeling in his

Animated by those heart-stirring addresses, the forces on both sides rapidly approached each other, and their advanced posts were in presence on the 8th of October. Then began the terrible contest of the north with the south of Europe, never destined to be extinguished till the domes of the Kremlin were reddened with flames, and the towers of Notre Dame were shaken by the discharge of the Russian batteries. The first plan discussed at Berlin was for the whole army to debouche in two columns by the two great roads, those of Saalfeld and Adorf, and Gotha and Eisenach, and commence the offensive towards the valley of the Maine, on the east and west of the Thuringian Forest, the intermediate passes of which were to be occupied by a central corps; but this plan was soon abandoned, as exposing the army to a perilous division of force in presence of so powerful and enterprising an enemy. The design ultimately adopted was to advance with the right in front, which was pushed on to Eisenach: next in echelon followed the centre, commanded by the king in person, which, united with the corps of Hohenlohe and Ruchel, was to advance upon Saalfeld and Jena, while each wing was covered by a detached corps of observation, the right by Blücher, on the confines of Hesse, the left by Tauenzin, on the side of Bayreuth. The object of this movement was to determine the hesitations of the Electors of Hesse and Cassel, and effect the junction of their contingents to the Prussian army, and at the same time pierce the centre of the valley of the Maine, which was the base of the enemy's operations, and cut them off from their communication with France. Both objects were important, and the design well conceived, had the Duke of Brunswick possessed a force adequate to its execution; but it necessarily involved his army in great hazard in presence of a numerous and skilful enemy; and by leaving open to his advance the great roads to Dresden and Leipsic, exposed the Prussians to the very hazard of being themselves turned and cut off from their communications and magazines when endeavouring to inflict that injury upon their opponents.*

Napoleon was not a man to let slip the oppor-

breast. The Prussian minister had, with the ultimatum of the cabinet of Berlin, given a pressing request for an answer to the Prussian headquarters by the 8th of October. "Marshal," said he to Berthier, "they have given us a rendezvous for the 8th: never did a Frenchman refuse such an appeal: we are told that a beautiful queen is to be a spectator of the combat: let us, then, be courteous, and march without resting for Saxony." Francis I. might have used the same language; but what followed in the first bulletin of the campaign, dictated by Napoleon himself? "The emperor was right when he spoke thus: for the Queen of Prussia is with the army, dressed as an Amazon, bearing the uniform of her regiment of dragoons, writing twenty letters a day to spread the conflagration in all directions. We seem to behold Armida in her madness setting fire to her own palace. After her fellows Prince Louis of Prussia, a young prince full of bravery and courage, hurried on by the spirit of party, who flatters himself he shall find a great renown in the vicissitudes of war. Following the example of these illustrious persons, all the court cries 'to arms!' but when war shall have reached them with all its horrors, all will seek to exculpate themselves from having been instrumental in bringing its thunder to the peaceful plains of the North." Such was the language in which Napoleon spoke of the most beautiful princess in Europe, rousing her subjects to patriotic resistance! How singularly prophetic is the concluding part of the sentence of what he himself experienced just six years afterward in the frozen fields of Russia!—*First Bulletin of 1806. Bull. Nap., ii., 11, 12.*

* Prussian plan of operations. Dum., xvi., 19. Jom., ii., 279, 280.

Counter-movement of Napoleon. opportunity which this hazardous attempt afforded, of not merely defeating, but destroying their army. Confident in the numbers and experience of his troops, which rendered a situation comparatively safe to them which was to the last degree perilous to their opponents, he instantly resolved to retort upon the enemy the measure they were preparing to play off upon him; and by throwing forward his army with the right in front, turn the Prussian left, and cut them off from their magazines on the Elbe, and the heart of the monarchy. On Oct. 8.

On the 8th of October, the French army was concentrated around Bamberg: at three o'clock on the morning of the 9th, Napoleon put himself in motion, and his columns marched towards Saxony on three great roads: on the right, Soult and Ney, with a Bavarian division, moved from Bayreuth by Hof, on Plauen; in the centre, Murat, with the cavalry, with Bernadotte and Davoust, marched from Bamberg by Cronach, on Saalbourg; on the left, Lannes and Augereau, breaking up from Schweinfurt,* advanced by Cobourg and Graffenhal upon Saalfeld. The effect of these movements was to bring the centre and right of the French directly upon the Prussian magazines and reserves, while they were stretching forward on the left, to interpose between their antagonists and the Rhine.

The Prussians were in the midst of their perilous advance to the French left, when intelligence of this rapid accumulation of forces on their centre and left reached the Duke of Brunswick's headquarters. It was indispensable to renounce forthwith the hazardous enterprise, and orders were instantly despatched to countermand the advance, and direct the concentration of the army in the neighbourhood of Weimar: the principal column, commanded by the king, at Erfurth; Ruchel at Gotha; Hohenlohe at Hochdorf; the reserve, under the Duke of Wirtemberg, at Halle. Thus the Prussians, in presence of the greatest general and most powerful army of modern times, were thrown into a change of position, and a complicated series of cross-movements, with their flank exposed to the enemy—the situation of all others the most perilous in war, and which, not a year before, had proved fatal to the combined army, when attempting a similar movement in front of Austerlitz. To complete their danger, the concentration, from the orders which they received, took place on the centre and right; whereas it was on the left, towards Hof, that it should have been made to resist the rapid march of the invaders upon their magazines and resources.†

But before the junction of the Prussian forces, even in this false direction, could be effected, the formidable legions of Napoleon were already upon them. As might have been expected, when surprised in this manner in the middle of a lateral movement, they were attacked at the same time in different quarters, and in all by greatly superior columns of the enemy. The French masses, dense and strong, marching on the great chaussées, fell perpendicularly upon the flank of their opponents when endeavouring, by cross and often deplora-

ble roads, to reach the points of rendezvous assigned to them. The consequences might easily have been anticipated: they were defeated in every quarter, and lost, in the very outset of the campaign, the moral influence of an advance. On the 9th, Tauenzein, who was at the moment in front of Schleitz with six thousand Prussians and three thousand Saxons, was attacked by Bernadotte, at the head of greatly superior forces, and, after a gallant resistance, dislodged from his position with the loss of several hundred men. The day following, Murat marched on Gera, and on the road fell in with and captured a convoy of five hundred carriages and a pontoon train: an extraordinary proof of the advantage the French had already gained, when, on the third day after hostilities had commenced, they had fallen in with and captured a large part of the baggage of the enemy! Nor was the French left, under Lannes and Augereau, less successful. On the 10th, the former of these generals arrived on the heights of Saalfeld, and animated his troops to the highest degree by reading to them the proclamation of Napoleon on the opening of hostilities; and on the same day, in continuing his advance, fell in with Prince Louis, who commanded the rear-guard of the Prussian right, and had been stationed at Rudolstadt and Blankenberg by Prince Hohenlohe to cover the cross-march of his columns, who were then endeavouring to reach the points of rendezvous assigned them by their commander-in-chief. This gallant prince, in common with his immediate superior, Prince Hohenlohe, had long expressed the opinion, which they had in vain endeavoured to impress upon the Duke of Brunswick, that Napoleon meditated an attack on the Prussian left, and that a concentration of their troops in that direction should have been made some days before.* Unable to prevent the disastrous resolution to assemble on the right, he now set himself with heroic bravery to mitigate its effects. The forces under his command were only eleven battalions and eighteen squadrons of hussars, with eighteen pieces of cannon; and with these he had to withstand the shock of Lannes, with twenty-five thousand men. Notwithstanding this fearful preponderance of force, he resolved to hold firm during the remainder of the day, to gain time for the evacuation of the considerable magazines which were collected close in his rear at Saalfeld. In this gallant but unhappy determination he was confirmed from an opinion that it was only by resuming the old Prussian system of a vigorous offensive, that the spirits of the

* In the great council of war held, on the 5th of October, at Erfurth, when the Duke of Brunswick's project of continuing the march across the Thuringian Forest was discussed, Prince Hohenlohe, Prince Louis, and Colonel Massenbach, his chief of the staff, strongly represented that, by continuing the march in that direction, the army would be exposed to certain ruin; that they would soon arrive at a country where the ground was entirely favourable to the operations of the enemy, and adverse to their own method of fighting; and that, if the French were inclined, as seemed more than probable, to turn either of the wings of the army, nothing could favour his design so much as the plunging the Prussian host by columns in the forest. These sage observations made no sort of impression on the Duke of Brunswick; and all the modification of his plan which these generals could effect, was, that the troops should halt for a day on the 8th of October, and on the following morning throw out strong reconnoitring parties, and receive bread for eight days before engaging in the defiles of Thuringia. It may safely be affirmed that that council, by continuing this fatal advance, determined the result of the campaign.—See DUM., xvi., 25, 26, and *Saalfeld Allgemeine Geschichte* iii., 299.

* Jom., ii., 280, 281. Dum., xvi., 19, 26. Bign., v., 465, 466. Norv., ii., 456, 457.

soldiers, which had been much sunk by the general order to retreat on the preceding day, could be revived. The sensible increase of the enemy all around him on the following day—even the turning of his right flank by Suchet with a powerful body of light troops, which rendered his position no longer tenable, could not induce him to abandon his ground; and when the attack commenced, the Prussians were surrounded on all sides. Notwithstanding this, they made a gallant resistance, and enabled the artillery and chariots to leave Saalfeld in safety. Returning from the town to his gallant comrades, who still made good their ground in its front, Prince Louis found them dropping fast under the murderous fire of the French tirailleurs. Soon their retreat was converted into a rout by the ravages of the hostile artillery; and the prince himself, while combating bravely with the rear-guard, and striving to restore order among the fugitives, was surrounded by the enemy's hussars: "Surrender, colonel," said their chief, not knowing the rank of his opponent, "or you are a dead man." The prince answered only by a blow with his sabre, which wounded without disabling his adversary, who replied with a mortal stroke, which laid the heroic prince dead at his feet.

In this disastrous encounter the Prussians lost twelve hundred prisoners, besides eight hundred killed and wounded, and thirty pieces of cannon; but this was the least part of their misfortunes. The heroic Prince Louis was no more: he had fallen, it is true, while bravely combating on the field of honour, but his body had remained the trophy of the victors, and the continued advance of the enemy too surely indicated that defeat had attended the first serious exploit of the Prussian arms.* Their army was now broken in upon in several points; its concentration interrupted; its magazines in part seized; its line of march intercepted, and the dejected columns, without any fixed rallying-points, were wandering about in every direction, while the terrible French legions, in dense masses, were falling perpendicularly on their flank. These disasters rapidly communicated themselves to the minds of the soldiers. The death of Prince Louis, above all, equally dear to the officers and private men, diffused a universal gloom. So grievous a calamity in the outset of the campaign was taken as the worst augury of its future fortunes; and, as is usual with great bodies in a violent state of excitement, the transition was immediate from the preceding exaltation to an extraordinary degree of depression.†

Meanwhile the movements preparatory to a decisive battle continued, though in a very different spirit, on both sides. In deep dejection, and with infinite difficulty, the Prussians at length concentrated their forces in two great masses under the king in the neighbourhood of Weimar,

and under Hohenlohe near Jena. It was in the highest exultation, on the other hand, and in the full anticipation of victory, that the French made a sweep which brought them completely round the Prussian army. The early triumphs with which the campaign had opened had given Napoleon hopes of rapid and decisive success. He no longer feared that he would be obliged to have recourse to the mattock.* The confusion of the enemy's columns had dissipated the prestige of the Great Frederic. Encouraged by these events, he now hesitated not to follow out the brilliant career which had opened to his arms. A complete conversion, turning on the pivot of the left, took place in the direction of his columns, who wheeled round so as to face the Northern Ocean. Davoust, Bernadotte, and Murat marched upon Naumberg, where on the next day they made themselves masters of considerable magazines. Soult was Oct. 13. advancing on Jena, where Lannes was already established, while Ney and Augereau were at Roda and Kohla, in its immediate neighbourhood. Such was the confusion of the Prussian movements, and the bad understanding which already prevailed between them and the Saxons, that, when the French took up the ground which the allies had just quitted in the environs of Jena, they found the fields and roads covered with arms, cuirasses, and chariots, like the scene of a defeat. The Saxons had pillaged the Prussians, the Prussians the Saxons. Baggage and ammunition wagons had been abandoned by their drivers, and lay scattered in confusion, while some guns even had been spiked to prevent their falling into the hands of the enemy.†

The result of these different marches was in the highest degree favourable to the imperial arms. By the advance on Naumberg they had cut the enemy off from the line of their retreat to Leipsic, and thrown their left back in such a manner that the French on the banks of the Saale had their back to the Elbe, and faced the Rhine, while the Prussians had their back to the Rhine, and could only hope to regain their country by cutting their way through the enemy. Finding affairs in a situation so much more favourable than he could possibly have anticipated, Napoleon, to gain additional time to complete the encircling of his antagonists, despatched, on the 12th, an officer of his household with proposals Oct. 12. of peace to Frederic William, taking care meantime not to suspend for one instant the march of his columns; but the letter did not reach that monarch till after the battle was over. In the evening of the 12th, the army of Hohenlohe, which, with all the additions it had received from Ruchel, did not exceed forty thousand men, was grouped in dense masses on a ridge of heights to the north on the road from Jena to Weimar, between the Ilm and the Saale. Its advanced posts were on the Landgrafenberg, a steep hill between its position and the town of Jena, from the summit of which the whole lines of the Prussians could be descried, and over which the only road to the attack of their position in front lay. The

* No sooner was the rank of the slain prisoner known than Marshal Lannes, with deserved courtesy, showed it all the honours due to so illustrious a character. He was interred with military honours in the cemetery of the Princes of Cobourg, at Saalfeld; and Berthier wrote on the 12th to the chief of the Prussian staff, announcing that the emperor had ordered it to be restored, if it was desired that he should rest in the tomb of his ancestors: an offer which the disasters immediately ensuing rendered it impossible for the royal family at that time to comply with.—BIGNON, v., 469.

† Lucches, ii., 137, 140. Bign., v., 468, 470. Dum., xvi., 51, 58.

* In setting out for the Prussian campaign, Napoleon expected to experience a more formidable resistance than he had yet met with in Europe. The exploits of the Seven Years' War had filled him with the highest idea of the troops trained in the school of its illustrious hero, and he frequently said to his assembled officers at Mayence, "We shall have earth to move in this war."—See JOMINI, ii., 282.

† Dum., xvi., 58, 64. Jom., ii., 282, 283. Lucches, ii., 140, 141.

army of the King of Prussia, under the immediate command of the Duke of Brunswick, on the other hand, sixty-five thousand strong, was concentrated at the distance of somewhat more than a league in the rear of Hohenlohe, near Weimar. Thus the whole Prussian army, consisting of above a hundred thousand men, of which eighteen thousand were superb cavalry, with three hundred pieces of cannon, were at length concentrated in a field of battle, where their far-famed tactics had a fair theatre for development; and notwithstanding the early disasters of the campaign, an opportunity was afforded them of reinstating affairs at the sword's point. Each army had passed its opponent, and mutually intercepted the other's communications; but there was this extreme difference between the two, that the army of the Duke of Brunswick, cut off from all its magazines, had no resource but in victory, whereas that of Napoleon, though severed from the Rhine, had a clear line of retreat, in case of disaster, to the Maine and the Danube.*

It would have been well for the Prussians had they continued and given battle in this concentrated position; but the intelligence of the advance of Davoust and Murat upon Naumberg, which arrived at headquarters on the night of the 12th, led to a renewed separation, attended in the end with the most frightful disasters. Conceiving that the French emperor had no intention of immediate combat, and being anxious for the safety of that town, where the principal magazines of the army were placed, the Duke of Brunswick came to the ruinous resolution of again dividing his forces; and while Hohenlohe was left in position near Jena, as a rear-guard to cover the retreat of the army, the principal body, with the king at its head, moved at daylight for Sulza, and at night arrived on the heights of AUERSTADT. Thus, at the very moment when Napoleon, with above a hundred thousand men, was making his dispositions for a general battle on the day following, and surmounting the difficulties of the approach to the enemy's position on the heights in his vicinity, the Prussian general dislocated the imposing mass of his soldiers, and, diverging to the left with two thirds of his forces, engaged in a hazardous flank march of ten leagues in presence of his antagonists, leaving a comparatively inconsiderable rear-guard to be crushed by more than double its force in its position in the rear. Such was the dearth of provisions which already prevailed in the allied camp from the capture of their magazines by the enemy, that no regular supply of bread was dealt out to the men after the long and fatiguing march, but great numbers lay down, wearied and superfluous, to sleep on the ground which was to cover their grave on the morrow.†

Meanwhile Napoleon, never suspecting this division of the enemy's force, and supposing they were to follow the principles of the Great Frederic, which were to combat in concentrated masses, and on as confined a field of battle as possible, was endeavouring, with his wonted energy, to overcome the all but insurmountable difficulties of the passage of the Landgrafenberg, by which access was to be afforded to his columns for the at-

tack of the Prussian position. No sooner had the French light troops dislodged the enemy's patrols from these important heights than the emperor repaired to them in person, from whence he distinctly beheld the Prussian army still reposing at leisure on its formidable position on the opposite ridge. Not doubting that he would have to deal with their whole army on the following day, he pressed without intermission the march of his columns, and soon arranged the forces of Lannes, who first arrived with his infantry above by the steep and rugged ascent to its summit, in such formidable masses around its declivities on the other side, that the enemy, who were now sensible of their error in abandoning so important a point, and were making preparations to retake it, were obliged to desist from the attempt. This valuable height, therefore, from which the whole of the Prussian position and all the movements of their troops were distinctly visible, remained in the hands of the French; and its elevation not only gave them that advantage, but entirely concealed from their observation the rapid concentration of troops on the Jena side of the mountain, which would at once have revealed the intentions of a decisive attack on the following day. Still the difficulty of surmounting the ascent was very great, and for artillery and wagons it was as yet totally impassable. Nothing, however, could long withstand the vigour of Napoleon and his followers. He stood on the spot till the most rugged parts of the ascent were widened by blasting the solid rock, or smoothed by pioneers, and when the men were exhausted, revived their spirits by himself working with the tools, and exhibiting his old experience as a gunner, in surmounting the difficulty of dragging the cannon up the pass. Animated by such an example, and the vigorous exertions of the successive multitudes who engaged in the task, the difficulties which the Prussian generals deemed altogether insurmountable were rapidly overcome: before eight in the evening the ascent was passable for cavalry and artillery, and at midnight the whole corps of Lannes, with all its guns and equipage, reposed in crowded array on the ridges and flanks of the mountain; the Imperial Guard, under Lefebvre, bivouacked on its summit; Augereau on its left; Soult and Ney received orders to march all night to the right in order to turn the enemy after the combat was engaged by his left; Murat was in reserve at Jena, while Davoust and Bernadotte were directed, the first to fall back to Naumberg, in order to threaten the enemy's rear, the second to advance to Dornberg and cut off his retreat to the Prussian dominions. The two armies were now so near that their fires were within cannon-shot, and the sentinels touched each other: the lights of the Prussians, dispersed over a space of six leagues, threw a prodigious glow over the whole heavens to the northwest; those of the French, concentrated in a small space, illuminated the heights in the middle of their position. Surrounded by his faithful guards, the emperor, after having despatched his last orders to his marshals, wrapped himself in his cloak, and shared the frigid bivouac of the soldiers on the summit of the Landgrafenberg.*

At four in the morning of the 14th he was already on horseback, and, surrounded by his generals, rode along the front of the line of Suchet and Ga-

Situation of the armies on both sides

zan's divisions, which were first to be engaged, and were already under arms: "Soldiers!" said he, "the Prussian army is turned, as the Austrian was a year ago at Ulm; it no longer combats but to find the means of retreat. The corps which should permit itself to be broken would be dishonoured. Fear not its renowned cavalry; oppose to their charges firm squares and the bayonet." Loud acclamations rent the air at these words, but the morning was still dark: the first streaks of dawn were only beginning to appear, and a thick, cold fog obscured every object around. Burning with impatience, the soldiers awaited the signal of attack, but for two long hours they were kept shivering in their lines. At length at six, when the day, though still misty, was light, and the emperor judged that his marching columns would be so far advanced on their respective routes as to justify the commencement of the action in front, he gave the signal for the attack. Meanwhile, the Prussians, little suspecting the tempest which awaited them, were securely reposing in their position, and, anticipating a day of complete repose on the 14th, had made no provision either for marching or battle. This fatal security had been increased by the opinion generally received at Hohenlohe's headquarters, that the flag of truce who had appeared at their advanced posts on the preceding day and been forwarded with his despatches to the king, bore proposals of peace, and that nothing serious would be attempted till his answer was received. Their position was strong, and admirably chosen: secure from attack on either flank, and approachable in front only by narrow and steep defiles, in which, if the heads of the enemy's columns were vigorously resisted and hindered from deploying, horse, foot, and cannon would be jammed up together, and the disaster of Hohenlinden might have been repaid with interest to the French army. But the departure of the king with two thirds of the army, and the total absence of any preparations for an attack on the part of those who remained, deprived them of this advantage, and relieved Napoleon from a risk in the outset of the campaign, greater, perhaps, than he underwent even during the perilous changes which signalized its later stages.*

Great was the astonishment of the Prussian outposts, when, through the gray mist of the morning, they beheld the French battalions close upon them, and advancing swiftly in the finest order to the attack. They made a gallant resistance, and did their utmost to prevent the French from debouching from the defiles at the mouth of which they were stationed; but being altogether unprepared for the attack, and completely surprised, they were not long able to make good their posts, and fell back, with the loss of twenty pieces of cannon, to the main body of the army. The ground thus gained by Suchet was of the utmost importance, for it enabled the heads of the French columns, after emerging from the defiles, to extend themselves to the right and left, and gain room for the successive corps as they came up to deploy. Roused by the first discharge of firearms in front, Prince Hohenlohe rode through the mist from his headquarters in the rear at Cappellendorf towards the front; but, still confident that it would only prove a skirmish, said to General Muffling,

"that his troops should remain quiet in their camp till the fog had risen; and that, if circumstances demanded it, he would move forward the division of Grawert, as he did not wish the Saxons to combat at all that day." Soon, however, messengers arrived in breathless haste from the outposts with urgent demands for assistance, and Grawert was rapidly advanced towards Vierzehn-Heiligen to support Tauenzein, who there with difficulty kept his ground against the impetuous attacks of Suchet. Meanwhile, the whole army of the Prussians, alarmed by the sharp and incessant fire of musketry in their front, stood to their arms, and re-enforcements were sent to the points in advance which were menaced; but in spite of all their exertions the enemy gained ground, the villages of Closwitz and Kospoda, at the foot of the eminence on which the lines of Hohenlohe were posted, were successively carried, and all the low grounds in front of his position were filled with troops. Still the mist was so thick as to be almost impenetrable: the contending bodies could not see each other till they were within a few yards' distance; and under cover of this veil, and in the midst of the confusion arising from an unexpected attack, the movements of the assailants were completed, the defiles passed, and the precious moments, when the heads of his columns might have been driven back into the gorges by a vigorous attack, as those of the Imperialists were at Hohenlinden, forever lost.*

At length, at nine o'clock, the increasing rays of the sun dispersed the fog, and his light shone forth in unclouded brilliancy. Then, and not till then, the Prussians perceived the full magnitude of the danger. On every side they were beset by assailants, no longer struggling through steep and narrow gorges, but deployed, with all their cavalry and artillery, on the open expanse to which they led. Directly in their front, the whole corps of Lannes, having made itself master of the villages at the foot of the Prussian position, was preparing to ascend the slope on which they stood; immediately to its right, Ney, and beyond him Soult, had already cleared the defiles, and were drawn up in line or column on the open ground; while Augereau on the left was pressing forward to turn their flank; and the Imperial Guard, with Murat's cavalry, were stationed in reserve on the slopes of the Landgrafenberg. Above ninety thousand men had outflanked on either side, and were preparing to crush forty thousand, in a strong position, indeed, but totally inadequate to so desperate an encounter. Surprised, but not panic-struck, the Prussians drew up their lines in admirable order in the form of an obtuse triangle, with the apex in front, to avoid the danger of being turned on their flanks, and instructions were despatched to Ruchel, who, with the reserve, twenty thousand strong, was at a short distance on their right, to hasten his march to the scene of action. Before he could arrive, however, the battle had commenced: the preparatory movements were made on either side in the finest style, the French columns advancing, and the Prussians retiring to their chosen ground with all the precision of a field-day. But though they stood their ground bravely, and received the assailants with a close and well-directed fire, the odds were too great to give any

hopes of success. Ney, indeed, whose impetuous courage led him to begin the attack before his columns were properly supported, and who had, by a charge of cuirassiers, carried a battery of thirteen pieces on an eminence which severely galled his soldiers, was for a few minutes in imminent danger: the Prussian cavalry broke the French horse, and enveloped the infantry in such numbers as would inevitably have proved fatal to less experienced troops; but the brave marshal instantly formed his men in squares, threw himself into one of them, and there maintained the combat by a rolling fire on all sides, till Napoleon, who saw his danger, sent several regiments of horse, under Bertrand, who disengaged him from his perilous situation. But on all other points the French obtained early and decisive success. Ney, extricated from his difficulties, with an intrepid step ascended the hill, and, after a sharp conflict, carried the important village of Vierzehn-Heiligen, in the centre of the Prussian position: in vain Hohenlohe formed the flower of his troops to regain the post; in vain these brave men advanced in parade order, and with unshrinking firmness, through a storm of musketry and grape; the troops of Lannes came up to his support, and the French established themselves in such strength in the village as to render all subsequent attempts for its recapture abortive. Emboldened by this success, Ney next attacked the right of the Prussian line towards Isserstaedt, which Augereau with the French left had already carried: a devouring fire ran along the whole right wing, and the French were for some time arrested by the intrepid resistance of their adversaries; but the odds were too great, and, despite of all their efforts, the allies were compelled to give ground in that quarter. But on the left of Vierzehn-Heiligen the Prussians had obtained some advantage: their numerous and magnificent cavalry had made several successful charges on the French infantry when advancing on the open ground beyond its enclosures; several cannon had been taken, and Hohenlohe for a short time flattered himself with the hope of obtaining decisive success.*

Matters were in this state when the approach of Ruchel with his corps, twenty thousand strong, to the field of battle from the right, confirmed the Prussian general in these flattering anticipations; and he despatched a pressing request to him to direct the bulk of his forces to the village of Vierzehn-Heiligen, already the theatre of such desperate strife.† Thither, accordingly, the brave Prussian directed his steps; but before he could arrive at the decisive point, matters had essentially changed for the worse, and he came up only in time to share and augment the general ruin. The lapse of time had now enabled the French to bring their immense superiority of force to bear upon the enemy at all points: Soult, by a heavy and well-directed fire, had driven the cavalry from the field on their left, while Lannes and Augereau, pressing them at once in front and flank on their right, had forced back their

infantry above half a mile. Emerging from the villages which had been the theatre of such obstinate conflict, the French forces advanced with loud shouts and in irresistible strength towards the Prussians, who, weakened and dispirited, and in some places almost mown down by the terrible fire of their adversaries, were now yielding on all sides, though hitherto their retreat was conducted in the most orderly manner. Napoleon saw that the decisive moment had arrived, and from his station on the heights in the rear, sent orders to Murat with the whole cavalry to advance and complete the victory. This terrible mass was irresistible. Twelve thousand horse, fresh, unwearied, in the finest array, animated by the shouts of triumph which they heard on all sides, bore down with loud cheers on the retreating lines of the Prussians. In an instant the change was visible: in vain their cavalry, so brilliant and effective in the early part of the day, strove to make head against the assailants, and cover the retreat of the infantry and cannon; their horses, wearied by eight hours of fighting or fatigue, were unable to withstand the fresh squadrons and ponderous cuirassiers of Murat, and by their overthrow contributed to the disorder of the foot-soldiers. After a gallant resistance, the lines were broken; horse, foot, and cannon pressed tumultuously together to the rear, closely followed by the bloody sabres of Murat; in the general confusion all order was lost: the infantry and cavalry were blended together, the guns and caissons abandoned to the victors.*

In the midst of this appalling scene, the columns of Ruchel, still in battle array, arrived at Ru- emerged through the cloud of fugitives to stem the torrent.† It was a overwhelmed movement extremely similar to the arrival of Dessaix on the field of Marengo; but he had to meet Napoleon, not Melas. The fresh troops, though advancing in good order, and with an undaunted countenance, were speedily assailed on all sides: an ephemeral advantage gained by their cavalry was speedily, in the disorder of success, turned into disaster; in front they were charged with the bayonet by the French grenadiers, in flank assailed by an endless succession of Murat's dragoons; the villages of Romstedt and Cappellendorf were strewn with their dead, and Ruchel himself, while bravely animating his men, was wounded in the breast by a musket-ball, and carried off the field. After a terrible combat of an hour's duration, this powerful reserve, which in any other circumstances would have changed the fortune of the day, was broken, dispersed, and almost totally annihilated. It was no longer a battle, but a massacre. In frightful disorder, the whole army rushed like an impetuous torrent from the field; but nearly the whole right wing was cut off by the rapidity of Soult's advance, and made prisoners. Almost all the artillery of the allies was taken, and the victors entered Weimar pell-mell with the fugitives, at the distance of six leagues from the field of battle.

* Dum., xvi., 97, 115. Jom., ii., 286, 287. Bign., v., 475, 476. Saalf., iii., 306. Lucches., ii., 156.

† At this crisis, Hohenlohe wrote to Ruchel, "It is highly gratifying to me to hear at this moment that your excellency has arrived to my support. Send all the force you can to the village of Vierzehn-Heiligen, the chief point of attack. You are a brave man and sincere friend. At this moment we beat the enemy at all points; my cavalry has captured some of his cannon."—DUM., xvi., 114.

* Dum., xvi., 97, 120. Bign., v., 476. Jom., ii., 287. Saalf., iii., 307, 308. Camp. de Saxe, i., 262, 263.

† The rapid change for the worse in the prospects of the Prussians since he first approached the field, may be discerned in the altered tone of the next letter despatched to him by Prince Hohenlohe. "Lose not a moment in advancing with your as yet unbroken troops. Arrange your columns so that through their openings there may pass the broken bands of the battle: be ready to receive the charges of the enemy's cavalry, which in the most furious manner rides on, presses and sabres the fugitives, and has driven into one confused mass the infantry, cavalry, and artillery."—LUCCHESI, ii., 157.

Behind that town, on the road to Auerstadt, Hohenlohe, at six o'clock, collected twenty squadrons, whose firm countenance till nightfall gave some respite to the wearied foot-soldiers, who were now dispersed through the fields in every direction; while Napoleon, according to his usual custom, rode over the bloody theatre of death, distributing prizes to those who had most distinguished themselves, and giving directions for the care and consolation of the wounded.*

While this terrible disaster was befalling the united corps of Hohenlohe and Ruchel, the King of Prussia was combating under very different circumstances, but with little better success, on the plateau of AUERSTADT. Little expecting any engagement on the morrow, this fine army, commanded by the Duke of Brunswick in person, had bivouacked in close array around the village of that name: the queen was only prevailed on by the most pressing entreaties late in the evening to retire with a slender guard to Weimar. Informed of the occupation of Naumberg by a considerable force, the duke directed the division of Schmettau to occupy the heights of Koessen, and present themselves in battle array before the enemy, whom he supposed to be at the utmost a few thousand strong, while under their cover the remainder of the army leisurely continued its march towards the Elbe. These orders were obeyed, but Schmettau's division, contenting themselves with occupying the heights in the neighbourhood, neglected to send forward detachments to seize the defile of Koessen: an omission which was speedily taken

Oct. 14. advantage of by Davoust on the morning of the 14th, who, falling back to Naumberg according to his directions, early seized upon the important pass. At six on that morning, the French marshal had received an order from Napoleon, dated three o'clock A. M., from his bivouac on the Landgrafenberg, in which he announced his intention to attack in a few hours the Prussian army, which he imagined to be concentrated in his front, and ordered Davoust to march without loss of time upon Apolda, in order to fall upon their rear, leaving him the choice of his route, provided he took a part in the action. The despatch added: "If the Prince of Ponte Corvo (Bernadotte) is with you, you may march together; but the emperor hopes that he will be already in the position assigned to him at Dornberg." Davoust instantly repaired to the headquarters of Bernadotte, who at that moment was in communication with his corps in the neighbourhood of Naumberg, and showed him this order, proposing that they should march together to Apolda; but that officer, relying on the ambiguous expression in the despatch, which indicated that the emperor "hoped he would be in the position assigned to him at Dornberg," did not conceive himself entitled to deviate from his previous instructions, and set out with his whole corps in the direction of that town.†

Left then to his own resources, Marshal Davoust, notwithstanding, set himself to march in the direction which Napoleon had assigned. His forces were considerable, amounting to twenty-six thousand infantry and four thousand horse: a body perfectly adequate to its destined task of falling on the rear of the allied army, when defeated in front by

Napoleon, but little calculated to withstand the shock of fifty thousand infantry and ten thousand cavalry, whom the king was leading in person to the encounter. The Prussians, on their side, were as little prepared for an action, and deeming their flank march sufficiently secured by Schmettau's division on the heights of Koessen, were in open column and straggling, advancing on their march towards the Elbe, when suddenly, at eight o'clock, on the plateau, they were met by the vanguard of Davoust, which had emerged from the long and steep ascent so well known to travellers who visit that memorable field, and were already in battle array on either side of its summit. The thick mist which here, as at Jena, concealed the movements of the opposing armies, prevented the troops seeing each other till they were only a few yards distant; and both parties deeming their adversaries only an inconsiderable detachment, fell back to collect forces to clear their advance—the Prussians to drive the enemy back again down the defile, and secure the flank of the army from insult; the French to clear their front, and pursue their route by the cross-road they were on to Apolda. Speedily re-enforced, both sides returned to the charge. Davoust supported the advanced guard by the whole division of Gudin, with instructions to maintain themselves to the last extremity on the level space at the upper end of the defile, in order to gain time for the remainder of the corps to debouche; while the King of Prussia, impatient at the check given to the march of his army, ordered Blücher, with two thousand five hundred hussars, to ride over the Sonnenberg and clear the plateau of the enemy. Little anticipating the formidable resistance which awaited them, the Prussian cavalry were thrown into disorder by the close and steady fire of the French infantry, which speedily formed themselves into squares. Their cavalry were, indeed, overthrown by the overwhelming mass of the Prussian horse;* but all the efforts of that gallant body, even when guided by the impetuosity of Blücher, were shattered against the compact mass of Gudin's infantry, and the terrible discharges of grape which issued from his artillery.

Surprised at the obstinacy of the resistance, the king, adopting the opinion of Marshal Mœllendorf, who insisted that it was only a detached column which occasioned the delay, and disregarding the advice of the Duke of Brunswick, who strongly counselled a general halt, and the formation of the army in order of battle till the mist cleared away and the enemy's force could be ascertained, continued the attack by means merely of successive divisions as they came up to the ground. The divisions of Wartensleben and the Prince of Orange were ordered to pass the defile of Auerstadt, where the road runs through a winding hollow skirted with copewood or rough slopes, and advance to the support of the discomfited cavalry. The former, who first emerged from the defile, was directed to assail the flank of Gudin's division, which had advanced on the plateau beyond the village of Hassen-Haussen; at this moment the mist was dissipated, and the sun shone in full brilliancy on the splendid squadrons and regular lines of the Prussians. The Duke of Brunswick put himself at the head of the infantry, and led them gallantly to the attack,

* Dum., xvi., 120, 133. Bign., v., 475, 476. Lucches, ii., 157, 158. Hard., ix., 305, 306. Saalf., iii., 307, 308.
† Dum., xvi., 137, 141. Bign., v., 480. Jom., ii., 290.

* Jom., ii., 290, 291. Dum., xvi., 139, 147. Bign., v., 480, 481. Saalf., iii., 306.

while Schmettau and Blücher pressed them with their respective divisions of foot and horse on the other flank. But the brave troops of Gudin, forming themselves into squares, resisted all the charges with unconquerable resolution; and the nature of the ground, which permitted the successive divisions to come up to the support of either side only by degrees, the one by the long and winding defile of Auerstadt, the other up the steep ascent of Koessen, rendered it impossible for the Prussians to bring all their overwhelming force to bear at once upon the enemy. The conflict, therefore, was most severe. The French troops, stationed behind the hedges, enclosures, and garden walls of Hassen-Hausen, kept up an uninterrupted and murderous fire upon the enemy. The Duke of Brunswick was mortally wounded by a ball in the breast while leading on a charge. Schmettau experienced the same fate. Wartensleben had his horse shot under him; and the Prussians, discouraged by the loss of their leaders, wavered in the attack, which, being made in line, and not in column, was not pressed with the requisite vigour. Still the terrible discharge of artillery and firearms continued. Gudin's division had lost nearly half their numbers, and it was evident they could not long maintain their ground against their redoubtable and hourly increasing adversaries.*

From this peril, however, they were at length relieved by the arrival of the other divisions of Davoust's army. Morand was the first who got up the defile: his troops, as they successively arrived on the summit, drew up on the left of Gudin, towards the Sonnenberg; and shortly after, Friant, with his division, debouched upon the right, and extended to the foot of the Spielberg. The combat was now equal, or, rather, the advantage was on the side of the French, for their three divisions were superior in strength to those of Schmettau, the Prince of Orange, and Wartensleben, to which they were opposed. Prince William of Prussia, at the head of a powerful body of cavalry, which had surmounted the Sonnenberg and arrived on the French left, furiously assailed Morand's division immediately after it formed, but those veteran troops, with admirable coolness, threw themselves into squares, and with rapid discharges received the repeated and impetuous attacks of the Prussian horse. In vain those gallant cavaliers, with headlong fury, drove their steeds to the very muzzles of the French muskets. In vain they rode round and enveloped their squares; ceaseless was the rolling fire which issued from those flaming walls; impenetrable the hedge of bayonets which the front rank, kneeling, presented to their advances. The heroic devotion of Prince William in vain led them again and again to the charge; still the fire continued, still the bayonets stood firm. At length he himself was wounded, half his followers stretched on the field, and the remainder sought refuge, in disorder, partly on the heights of the Sonnenberg, partly in the enclosures of Neuzalza.†

While this desperate conflict was going on on the left of Hassen-Hausen, the division of Friant had debouched from the defile, extended itself on the ground to its right, and chased

the enemy who assailed it back to the village and heights of Spielberg, which were speedily carried. The left of the Prussians was thus threatened; but it was not there that the principal danger lay. The progress of Morand on their right was much more alarming. On that side, not content with repulsing the furious attacks directed against them, the French had now assumed the offensive, and were rapidly pressing forward to the heights of Sonnenberg, from whence their guns would command the whole field of battle, and render untenable the position of the Prussian reserves, which had hitherto taken no part in the action. Sensible that the battle was lost without resource if these important heights fell into the hands of the enemy, the king put himself at the head of a chosen body of troops, and bravely led them to the charge. But if the attack was gallant, the defence was not less obstinate: Morand himself was to be seen at the head of his regiments, and for some minutes the balance quivered; but insensibly the French gained ground, and at length their artillery, dragged up to the summit of the heights, was placed in battery, and opened such a tremendous fire of grape upon the enemy's columns as completed their discomfiture in that quarter, and with the bloodstained Sonnenberg and the village of Rehausen, the whole left of the field of battle fell into the hands of the invaders.*

The experienced eye of Marshal Davoust now told him that the moment for striking the decisive blow had arrived. The heights of Eckartsberg commanded the line of the enemy's retreat, as those of Sonnenberg did the field of battle: by moving forward his centre and seizing that important point, their defeat would be rendered complete, and all possibility of their rallying prevented. Thither, accordingly, Gudin's division advanced, driving before them the broken remains of Schmettau's and Wartensleben's divisions, which had lost nearly half their numbers during the sanguinary strife in which they had been engaged. But the Prussians made one effort more to regain the day. Their broken battalions, which had retired from the field, were rallied under cover of the powerful reserve commanded by Kalkeuth, who assumed the direction upon Moellendorf being wounded, consisting of two divisions, which had hitherto taken no part in the action, and placed in front; while the whole cavalry, re-formed under Blücher's orders, was posted in a second line immediately behind the infantry, to take advantage of any hesitation which might appear in the enemy's columns. Wearing by a morning's march and four hours' hard fighting, the French soldiers had now to withstand the shock of fifteen thousand fresh troops, to whom they had no corresponding reserve to oppose. Had the quality of the troops on the opposite side been equal, this powerful addition to the enemy's forces, at such a moment, must have proved decisive; but, nevertheless, they were totally defeated, and this last success put the keystone to the arch of Marshal Davoust's fame. Though strongly posted on an eminence, and protected by the fire of a powerful battery, they were charged with such intrepidity by Gudin's division, supported by a part of Friant's, that they were driven from their position with the loss of twenty pieces of cannon.

At the same time, Morand repulsed an attack against the troops which he had stationed on the heights of Sonnenberg: the artillery, from that commanding position, carried death through all the ranks of the enemy; and at length his gallant troops descended from the eminence, and carrying all before them, drove the reserves opposed to their advance through the defile of Auerstadt. Thither Blücher's cavalry followed the retreating columns: the guards still kept their ranks, and retired in good order in open square, and by their firm countenance enabled the broken infantry to rally at a distance from the field of battle, where Davoust reposed amid his heroic followers.*

The King of Prussia, who, during this disastrous day, had manifested the most signal coolness and intrepidity, and, during the repeated charges which he made at the head of his troops, had lost two horses killed under him, gave directions for the army to retreat in the direction of Weimar, intending to fall back on the corps of Prince Hohenlohe, of whose disaster he was still ignorant. But as the troops were in extreme dejection, and with little order following the great road which leads to that place, they were suddenly startled in the twilight by the sight of an extensive line of bivouac fires on the heights of Apolda. These lights were made by the corps of Bernadotte, who, adhering to his original instructions to march to Dornberg, had arrived in this position, after passing that town, late in the evening, and, ignorant of the combats which had taken place, was preparing to fall on the rear of the Prussian army on the following day. His too strict adherence to the letter of the orders he had received deprived him of the glory of sharing in either battle, endangered Davoust's corps, and had wellnigh cost him his own life, from the indignation of the emperor; but, nevertheless, this sudden apparition of a fresh corps of unknown strength upon the flank of their line of retreat at that untimely hour, compelled the Prussians to change their direction and abandon the great road.† About the same time, obscure rumours began to circulate through the ranks of a disaster experienced on the same day at Jena; and soon the appearance of fugitives from Hohenlohe and Ruchel's corps, flying in the utmost haste across the line which the troops retiring with the king were following, announced but too certainly the magnitude of the defeat sustained in that quarter. A general consternation now seized the men: despair took possession of the firmest hearts, as the cross tide of the battalions

flying from Jena mingled in greater proportions with the wreck which had survived the fight of Auerstadt: the confusion became inextricable, the panic universal—infantry, cavalry, and artillery disbanded, and leaving their guns, horses, and ammunition-wagons, fled in mingled disorder across the fields, without either direction, command, or rallying-point. The king himself narrowly escaped being made prisoner during the tumult and horrors of the night; and it was not till five in the morning that, by a long circuit, he arrived at Sommerda, where he received the official news of the melancholy disaster at Jena, accompanied by the letter, offering an accommodation, so insidiously despatched by Napoleon the day before that great victory.‡

Such were the astonishing battles of Jena and Auerstadt, which in a single day Less on both sides in these Prussian monarchy, and did that in a few actions. hours which all the might of Austria, Russia, and France, in the Seven Years' War, had been unable to effect. The subsequent disasters of the campaign were but the completion of this great calamity—the decisive strokes were given on the banks of the Saale. The loss of the Prussians was prodigious: in the two fields there fell nearly twenty thousand killed and wounded, besides nearly as many prisoners; and two hundred pieces of cannon, with twenty-five standards, were taken. Ten thousand of the killed and wounded fell at Auerstadt: an honourable proof that, if infatuation led them into the field, valour inspired them when there. Nor was that victory bloodless to the conquerors: their total loss was fourteen thousand men; of whom seven thousand five hundred belonged to Davoust's corps: a striking indication of the dauntless intrepidity with which they had fought.§ Napo-

* Dum., xvi., 171, 178. Jom., ii., 295, 298. Bign., v., 486, 487. Hard., ix., 307. Lucchesi, ii., 148.

† Napoleon's official account of the battle of Jena, in the fourth bulletin of the campaign, is characterized by that extraordinary intermixture of truth and falsehood, and unceasing jealousy of any general who appeared to interfere with his reputation, which in one who could so well afford to be generous in that particular, is a meanness in an especial manner reprehensible. Davoust was the real hero of the day, since, with thirty thousand men, he had defeated the King of Prussia in person, at the head of sixty thousand. His own achievement in overthrowing forty thousand, or, including Ruchel, sixty thousand, with ninety thousand veteran troops, including the whole cavalry of Murat, is nothing in comparison. Nevertheless, he represents the action as all fought in one field; speaks of the enemy, eighty thousand strong, as being commanded by the king and the Duke of Brunswick in person, and, after dilating fully on his own achievements, dismisses the wonderful exploits of Davoust in the following words: "On our right, the corps of Marshal Davoust performed prodigies. Not only did he keep in check, but maintained a running fight for three leagues with the bulk of the enemy's troops, who were seeking to debouche on the side of Koessen. That marshal has displayed alike the distinguished bravery and firmness of character which are the first qualities of a warrior. He was seconded by Generals Gudin, Friant, Morand, Daultanne, chief of the staff, and by the rare intrepidity of his brave corps." Who could imagine that it was the glorious battle of Auerstadt which was here narrated? The injustice to Davoust is so manifest, that it is admitted even by the eulogists of Napoleon.—See BIGN., v., 487, 488, and Fourth Bulletin, 1806, in *Camp. de la Saxe*, i., 265.

‡ Dum., xvi., 177. *Camp. de Saxe*, i., 265. Dum., xvi., 180.

§ Davoust's loss at Auerstadt was 270 officers and 7200 privates, killed and wounded. Of these, 134 officers and 3500 privates belonged to Gudin's division of 7000 men: in other words, more than a half of that band of heroes had fallen. This was the bravest action fought by the French troops during the whole contest; but the valour both of the corps and the division was inferior to that displayed by the English in more than one action of the Penin-

* Dum., xvi., 164, 171. Jom., ii., 294. Lucchesi, ii., 146, 148. Bign., v., 485, 486.

† Napoleon's anger at Bernadotte, on account of his not supporting Davoust, and taking a share in the battle of Auerstadt, knew no bounds. "If I should send him to a council of war," said he, "nothing could save him from being shot. I will not speak to him on the subject, but I will let him see what I think of his conduct. He has too much honour not to be aware himself that he has committed a disgraceful action." In truth, however, Napoleon had no sufficient grounds for this ebullition. If Bernadotte did not take a part in the action, it was because his own latest instructions expressed a hope that he should go to Dornberg rather than march towards Auerstadt with Davoust. Had he violated these instructions, and, in consequence, the Prussian army had escaped by Dornberg, its natural and most probable line of retreat, what defence could Bernadotte have offered for his conduct? "I was piqued," said that marshal, "to be addressed in the language of authority by Davoust, but I did my duty. Let the emperor accuse me if he pleases, I will answer him. I am a Gascon, but he is still more so."—BOURRIENNE, vii., 161, 162.

leon, with his usual disregard of truth, called his whole loss in both battles 4000—little more than a fourth part of its real amount.

Great as were these results, however, they unparalleled were but a part of the effects which disasters of ultimately flowed from these memorable battles. The disasters consequent on the retreat of the Prussians exceeded anything hitherto recorded in modern history—equalled only by the still greater calamities which followed the flight from Waterloo. Nothing had been provided for such a contingency: no rallying-point assigned, no line of march prescribed, no magazines collected. The extraordinary circumstance of four generals of the army—the Duke of Brunswick, Marshal Moellendorf, General Schmettau, and General Ruchel—being killed or mortally wounded, left the confused mass of fugitives without a head: the unparalleled calamity of the survivors from two different defeats, experienced on the same day, crossing each other, and becoming intermingled during the horrors of a nocturnal retreat, rendered it impossible for them to know whose orders were to be obeyed. Thus, when morning dawned on the scene of ruin, the soldiers from the three armies of Ruchel, Hohenlohe, and the Duke of Brunswick collected, as chance threw them together, in disorderly groups, and inspired only with a common panic, fled in different directions, as accident or intelligence guided their steps. Vast numbers of stragglers wandered at large through the fields, or hurried, with so little knowledge of the country, from the scene of danger, that, instead of avoiding, they fell headlong into the jaws of the enemy. It is in the extraordinary confusion arising from this disastrous retreat, and the terror which seized the minds of both officers and men at finding themselves thus huddled together with soldiers to whom they were perfect strangers, that the true cause of the unparalleled disasters which followed the battle of Jena is to be found.*

The effect of the general consternation which prevailed speedily appeared in the Capture of Erfurth with fate which befell the fragments of the 14,000 men, the mighty army. Six thousand fugitives, almost without leaders, had taken refuge the day after the battle in Erfurth, whose embattled walls and almost inaccessible citadels promised the means of at least a temporary defence. It contained, also, the grand park and reserve artillery stores of the army, with the greatest part of its camp equipage. Thither, also, the Prince of Orange, Marshal Moellendorf, and a great number of the wounded of distinction, besides seven thousand private soldiers, in the same mutilated state, had been conveyed. Such, however, was the terror of the governor at finding himself thus suddenly overwhelmed by a mass of wounded and stragglers, incapable of aiding in the defence, but who would speedily consume its slender stock of provisions, that he thought the best thing he could

do was to negotiate a capitulation, on condition that the officers should retire on their parole into Prussia, and the private men remain prisoners of war. On these terms the place surrendered,* and with it fourteen thousand men, including Marshal Moellendorf and the Prince of Orange; a hundred and twenty pieces of cannon, and immense military stores, fell into the hands of the enemy.

Hohenlohe, who had retired, covering the retreat of the fugitives beyond Weimar with a considerable body of cavalry in good order, at nightfall on the 14th found himself so completely overwhelmed by the crowd of stragglers, who attached themselves during the night to his squadrons, that by degrees his array melted away; and it was only by making frequent circuits, and repeatedly crossing the fields, that he was enabled to reach Dernstedt at seven on the following morning, at the head of sixty horsemen. On the day following, the king, who had arrived at Sondershausen, accompanied only by his aid-de-camp, conferred the command of all the troops which had combated at Jena and Auerstadt upon Prince Hohenlohe, with the exception of the two divisions under the orders of Kalkreuth, the reserve at the latter battle, which it was thought would still be in some sort of order; but in the general confusion this corps had dispersed like the rest, and there remained only eight battalions around his standard. Magdebourg was assigned as the rallying-point to the army, within the almost impregnable walls of which fortress it was hoped the wreck of its mighty array could be reorganized, and a defensive struggle maintained till the arrival of the Russians from the Vistula, and the re-enforcements which were collecting in the interior of the kingdom. Thither, accordingly, the king repaired, attended only by a few horsemen, to make preparations for the reception of the army; and there he was quitted by the British envoy, Lord Morpeth,† who, seeing no chance of diplomatic concerns being attended to amid the general confusion, returned to London to render an account to his bewildered cabinet of the extraordinary events which he had witnessed in the outset of his mission.

But if there was any one thing more than another in which the genius of Napoleon shone prominent, it was in his vigour and ability with which he followed up a beaten enemy. The present was not an opportunity to be lost of displaying this essential quality of a great general. Without an instant's delay, therefore, he prepared to pursue the extraordinary advantages he had gained. From all parts of Germany his forces had been assembled to one point, in order to strike the decisive blow. That done, the next object was to disperse them like a fan over the conquered territory, to carry everywhere the impression of their victory, and the terrors of their arms. On the night after the battle, Napoleon, instead of retiring to rest, sat up dictating orders to all the corps of his army for the directions they were to follow in pursuing the enemy. On the extreme right, Bernadotte, whose numerous corps was still untouched, received orders to advance from Apolda to Neustadt, to cut off the

Oct. 16. The King of Prussia gives the command to Hohenlohe, and retires to Magdebourg.

Measures of Napoleon to follow up the victory.

sular war, if the number of killed and wounded, a fair test with armies both of which have been victorious, is taken as the criterion. At Talavera, out of 19,500 English soldiers, 5000 were killed and wounded, nearly the same proportion as fell of the victors at Auerstadt; but at Albuera, out of 7000 English troops, only 1500 were wounded at the close of the fight; and 9999 red-coats fell at Waterloo, out of a force of native English not exceeding 36,000 men.

line of retreat from Weimar to Naumberg, and so shut out the army from the great road to Magdebourg. Davoust was to return to Naumberg to hold that important post, and keep himself in readiness to debouche on the Elbe before the enemy could arrive there; Soult was to move on Buttelsstadt, the point in rear of the fields of battle, where the greatest number of fugitives had assembled; Murat and Ney were to march direct upon Erfurth,* and reduce that important place; while Lannes and Augereau were directed to take a position in advance of Weimar; and the Imperial Guard and Napoleon's headquarters were transferred to that town.

Soult was the first who came up with the enemy. At Greussen his cavalry reached the retiring squadrons of Kalkeuth's division, which alone preserved any semblance of an army. That general proposed a suspension of arms, in order to gain time, declaring that he knew an armistice had been concluded, and for the purpose of arranging its conditions repaired to the advanced posts in order to a conference with the French general. The terms, as might be expected, could not be agreed on. The statement was made in perfect good faith, under the impression founded on the letter from Napoleon offering an accommodation, written the day before, but not received till the night after the battle; and it gave the Prussian commander leisure to cause a considerable part of his forces to defile in safety to the rear.

Oct. 15. Enraged at finding himself thus overreached, Soult, the moment the conferences were broken off, attacked the Prussian rear-guard posted in front of Greussen, which, after a short resistance, was cut to pieces, and the victors entered that town pellmell with the vanquished. Following up his success, the French marshal, early the following morning, resumed the pursuit, and again came up

Oct. 16. with the enemy at Nordhausen, where they were again defeated, with the loss of twenty pieces of cannon and three thousand men. Unable, from want of provisions, to keep his men together, and having no other means of escape to any part of his forces, the Prussian general divided his troops into two bodies, with instructions to follow different routes to Magdebourg. An almost total dispersion immediately followed this order. The stragglers came into that fortress by companies, squadrons, and groups of single men in hardly any array; and thus was the disorganization of the only divisions of the army which still preserved their ranks rendered complete within three days after the battle. Collecting prisoners at every step, Soult continued

Oct. 21. rapidly to advance, and on the 21st his vanguard reached the Elbe, and planted their victorious standards around the walls of Magdebourg.†

A more important action awaited the arms of Bernadotte. This able chief, whose too literal adherence to the letter of his instructions had deprived him of all the laurels of Auerstadt, was burning with anxiety to achieve some exploit worthy of the deeds of his comrades and his own renown, when fortune threw the wished-for opportunity in his way. The Duke of Wirtemberg, who commanded the Prussian reserve, fourteen thousand strong, stunned by the

intelligence of the disasters of the army at Jena, was making the best of his way back to Magdebourg and the Elbe, when he was beset on all sides at Halle by the corps of Bernadotte. The Prussians, who were brought into action, had not shared in the preceding defeats; notwithstanding the great superiority of force on the part of the French, they made a brave resistance, and there might be seen what elements of success existed in their army had they been opposed by less, or guided by greater ability. Assailed with the utmost impetuosity by the vanguard of the French, under Dupont, at Passendorf, they were driven in haste back to the islands in the Saale, over which the road passes; but in that defile they stood firm, and, supported by a cloud of light troops who lined the dikes on either hand along the margin of the stream, long withstood their assailants and debarred all access to the gates. After an obstinate resistance, however, a column of grenadiers, headed by Dupont himself, rushed across the bridges, carried the guns which enfiladed them, and rapidly pursuing their success, pushed on and made themselves masters of the town. The Prussians had now no alternative to gain time for the retreat of their main body to Magdebourg but to prevent, as long as possible, the French troops from debouching from the gates on its opposite side, and the gallant efforts of the Duke of Wirtemberg long delayed them at that important point; but at length the increasing numbers of the French, and the murderous fire of the artillery which they brought up and planted on the ramparts, drove the Prussians from their strongholds in the gardens and walls of the suburbs, and enabled the columns to issue from the gates. Charged while retreating in open square along the level plain, the Prussians, during a running fight of four leagues, sustained severe loss from the enemy, and lost nearly their whole artillery; but they combated with heroic resolution, and still kept their ranks, when the pursuit ceased on the approach of night. Then the combat terminated on the right bank of the river, but on the left bank a greater disaster awaited the allied arms. Three thousand Prussians had broken up from their quarters near Magdebourg, in order to join the main body of the reserve at Halle, and, ignorant of the occupation of that town by the French, fell into the midst of such superior forces that they were almost all either killed or made prisoners. Honourable as this affair was to the Prussians, it augmented in an alarming degree the dangers of the army by dissipating its last regular corps: four thousand prisoners and thirty pieces of cannon remained in the hands of the victors, whose loss did not exceed twelve hundred men; while the broken remains

Oct. 19. of the vanquished crossed the Elbe in such haste that they were unable completely to burn the bridge behind them, which was speedily restored by the French, who established themselves in force on the right bank, and drew their posts round Magdebourg.*

Meanwhile the other corps of the army continued their triumphant progress, with Saxony is hardly any opposition, through Saxony. Four days after the battle of the French. Auerstadt Marshal Davoust took possession of Leipsic: strange coincidence, that the French army should for the first time enter that

* See the orders in Dum., xvi., 192, 193.

city on the very day on which, seven years afterward, they were there to experience so terrible an overthrow!* Napoleon gave testimony of the rigorous warfare which he was about to commence on English commerce, by there issuing an edict of extraordinary severity against British merchandise.† Rapidly following up his success, Davoust, two days afterward, reached Wittenberg, at the very time that the retiring Prussians were preparing to blow up its great bridge over the Elbe; the French grenadiers rushed so rapidly over the arches that the enemy had not time to set fire to the train, and thus that important passage was secured. On the same

Oct. 19. day Lannes made himself master of the passage at Dessau. Thither Napoleon followed with his guards three days afterward; Oct. 23. and regarding the capture of Berlin as certain and a secondary object, he already began to give directions for the march of his troops from the Elbe to the Oder. Davoust's corps was pushed on towards that capital, Napoleon having permitted, as a reward for his transcendent heroism at Auerstadt, that his corps should be the first to enter the capital of the fallen monarch.‡

Such was the rapidity of the French advance that they arrived around Magdebourg before a large portion of the broken Prussians had taken refuge within its walls. Napoleon saw clearly the importance of accumulating as large a number as possible of the enemy in a situation where he foresaw they would, ere long, become his prisoners, and therefore he gave orders to leave the entrance to the place open, and dispersed his cavalry in all directions to drive the stragglers into that devoted fortress.|| Murat's horsemen inundated the plain; and the garrison of the town, ill provided with subsistence, already began to feel the pangs of hunger from the multitude of useless soldiers

who were driven to its shelter. Summoned to surrender by Marshal Soult, the governor replied that he hoped to gain the esteem of the besiegers by an honourable defence; but the confusion of the garrison, and the evident discouragement of the multitudes of insulated men who thronged around the gates, rendered it more than probable that his means of defence could not be prolonged for a very long period. Hohenlohe, despairing of preventing the investment of the place with so disorganized a wreck as was collected within its walls, and aware that the want of provisions would, in the end, compel its surrender, resolved to depart with all the forces which still maintained the appearance of order, and make for the great line of fortresses on the Oder; but such was the universal confusion which prevailed, that he could only collect fifty battalions and a hundred and sixty squadrons in a state to keep the field. With those he departed on the day following, leaving fifty skeleton battalions, hardly amounting to twelve thousand combatants, within the walls.*

Upon leaving Magdebourg, Hohenlohe, abandoning Berlin to its fate, made for Stettin, situated near the mouth of the Oder, by the route of Spandau. But when he drew near to that place, he received intelligence that on that very day it had capitulated to the first summons of the advanced posts of the cavalry under Murat, and that Davoust on the same day was to make his entrance into the capital. Driven thus to a circuit to avoid the taken towns, he moved by Grandsee to Zeydenick, in order to reach, if possible, before the enemy, the defile of Lochnitz, near Stettin, which would have secured his retreat to that important fortress. Aware of the importance of anticipating the Prussian general in these movements, Napoleon sent Murat forward with the cavalry to get before him to the defile, while Lannes advanced as rapidly as possible in pursuit of his steps with his indefatigable infantry. By forced marches, Murat got the start even of the horsemen who formed the advanced guard of Hohenlohe's corps; and, on leaving Zeydenick, they were assailed by that active officer himself, at the head

Who is pursued, assailed, and made prisoner at Prentzlow, Oct. 25.

* On Oct. 18, 1813.

† "Your city," said Napoleon, "is known throughout Europe as the principal depot of English merchandise, and on that account the enemy most dangerous to France. The emperor and king commands, 1. In the four-and-twenty hours immediately following this notification, every banker, merchant, or manufacturer having in his possession any funds the produce of English manufactures, whether they belong to a British subject or the foreign consignee, shall declare their amount in a register appointed for that special purpose. 2. As soon as these returns are authentically received, domiciliary visits shall be made to all, whether they have declared or not, to compare the registers with the stock in hand, to ascertain its correctness, and punish by military execution any attempt at fraud or concealment." Well may the honest General Mathieu Dumas exclaim, "What a deplorable abuse of victory!"—DUMAS, xvi., 225.

‡ Bign., vi., 8, 9. Jom., ii., 302. Dum., xvi., 223, 227. Luchess., ii., 162.

§ Bernadotte was unavoidably detained a day longer than he was ordered in marching to the Elbe, and, in consequence, did not cross that river till the 23d and 24th, instead of the 21st and 22d, before which time the corps of the Duke of Wittenberg had defiled through Magdebourg, and was in full march for the Oder. This escape of a considerable part of the best-organized corps of the Prussians excited to the highest degree the indignation of Napoleon, who took occasion bitterly to reproach him with this delay, as well as his conduct in not marching with Davoust to Auerstadt. Already were to be seen the germs of that mutual discontent which seven years afterward, on those very plains, brought Bernadotte in arms against the French emperor on the field of Leipsic.—BIGNON, vi., 9; DUMAS, xvi., 230.

|| "Magdebourg," said Napoleon, "is a net where all the isolated men who have wandered about since the battle may be taken. We must, therefore, invert our manoeuvres, and beat all the country for fifteen leagues around; we shall thus collect numbers of prisoners, and also gain accounts of the direction taken by the strong columns of the enemy, of whose route we have as yet no certain intelligence."—DUMAS, xvi., 232.

Oct. 26. of Lasalles' dragoons. Confounded at being thus anticipated in a quarter where they expected a leisurely retreat, the Prussian horse made but a feeble resistance: even the famous regiment of the Queen's Dragoons was driven back after a gallant effort, surrounded, and almost cut to pieces; and the Prussian cavalry were compelled to fall back on their infantry, with the loss of 300 slain, and renounce all hope of pursuing the direct road to Stettin. Driven thus from his line of retreat, and his right flank being exposed to the attack of Marshal Lannes, Hohenlohe, after waiting three hours in the vain hope of being joined by Blücher, who had retreated to the same quarter, changed his direction, and moved upon Boitzenberg, where he arrived on Oct. 27. the 27th, hoping to reach Stettin by the circuitous route of Prentzlow; but, in attempting to do so, the unhappy prince found himself again beset by his indefatigable pursuers. No sooner was Murat informed of his change of direction, than he marched across the country all night, from the one road to the other, again got before him, and assailed the Prussian horse at once in front and flank with his terrible dragoons on the

* Bign., vi., 10, 11. Dum., 223, 237. Jom., ii., 304, 308.

Oct. 28. following morning, as they were continuing their march two leagues beyond Prentzlow. To troops wearied by incessant marching for a fortnight together, and discouraged by such a succession of disasters, the shock of his victorious squadrons was irresistible: the Prussian cavalry were speedily broken, and fell back in disorder to the suburbs of Prentzlow, already encumbered with infantry and artillery. To complete their misfortunes, Marshal Lannes appeared at this critical moment on their right flank, having, with indefatigable perseverance, marched all night from Templin on the direct road. Murat now summoned Hohenlohe to surrender, which the latter refused, and brought up a powerful battery of cannon to answer the fire of the French artillery, which was severely galling his troops as they attempted to debouche from the town. This battery was immediately attacked and carried; a regiment of infantry and cavalry which advanced to support it broken and made prisoners. Prince Augustus of Prussia, at the head of his regiment, which was still two leagues in the rear of Prentzlow, was surrounded, and, after heroically resisting the repeated charges of the French cuirassiers, during a march in hollow square of four miles, was at length made prisoner, with almost all his men, while bravely resisting to the last. Overwhelmed by such a multitude of calamities, and seeing no chance of escape, while every hour increased the forces against him by permitting the formidable battalions of Lannes to arrive on his rear and flank, Prince Hohenlohe, after several unsuccessful attempts to obtain a capitulation, was Oct. 28. obliged to lay down his arms, on condition that the officers should be dismissed on their parole. With him were taken fourteen thousand men, including the flower of the Prussian army: the guards, six chosen regiments of cavalry, forty standards, and fifty pieces of field-artillery. Notwithstanding their many defeats and disastrous circumstances, this grievous surrender did not take place without the most profound grief by the Prussian troops: the officers retired from the circle where it had been agreed to in stern silence, or shedding tears; many of them fiercely and indignantly accused their commanders of treachery, and invited their comrades to cut their way through the enemy, sword in hand; the private soldiers, by loud sobs and lamentations, gave vent to their grief, and, flinging their muskets on the ground, slowly and mournfully pursued their way into the town; while a loud flourish of trumpets, the quick rattle of drums, and the triumphant shouts of the soldiers, announced the successive arrival of the French regiments at the scene of their triumph.*

Of the army, late so splendid and numerous, there remained only in the field the corps of the Duke of Weimar and Duke of Saxe General Blücher. The former of these, which formed the advanced guard of the host which advanced to the Saale, and had been pushed on through the Thuringian Forest to Vërra, in the view of threatening the rear of the French army, had become entirely detached, by subsequent events, from the principal body, and thus escaped the catastrophes of both defeats. Almost forgotten in the rapid succession of succeeding triumphs, the duke was left to his own direction, and no sooner received

accounts of the ruin of the main army, than he took steps for making the best of his way back to the Elbe. He had much difficulty in steering his way through the numerous corps of enemies which traversed the intervening country in every direction; but by great exertions he contrived to escape, and rallying to his standard a considerable detachment of Ruchel's corps, which had been separated from the remainder, reached the Elbe in safety at Stendal, with fourteen thousand men, by Seesen, Schladen, and Lutter. He was there superseded in the command by the King of Prussia, and his corps passed Oct. 26. into the hands of General Winning, who gave them a day's rest at Kigritz. As the approach of the French corps rendered those quarters dangerous, he broke up and retired towards the Oder, and by good fortune, and no small share of skill, he succeeded in reaching the banks of that river in safety in the first week of October, where he joined Blücher with the cavalry which had escaped from Auerstadt. Their united forces now amounted to twenty-four thousand men.*

Meanwhile the fortresses on the Oder fell in the most disgraceful manner. The Disgraceful day after the capitulation of Hohenlohe, a brigade which had escaped Stettin and Custrin. from the wreck of his corps presented itself at the gates of Stettin; the governor sternly refused them admittance, upon the pretence that his provisions were only adequate to the support of his own garrison. Next day, Oct. 28.

however, he capitulated, on the first summons, to the advanced guard of Marshal Lannes; and the French, without firing a shot, became masters of a fortress of the first order, armed with a hundred and fifty pieces of cannon, and garrisoned by six thousand men. The brigade of Prussians, shut out from its walls, was soon after surrounded at Anclam and made Oct. 29. prisoners. Encouraged by these repeated successes, the French soldiers deemed nothing beyond the reach of their arms; and the advanced guard of Davoust's corps, which had traversed the district between the Elbe and the Oder without meeting with any enemies, presented itself before Custrin, and threatened the garrison with a severe bombardment if they did not instantly capitulate. This menacing outpost consisted merely of a regiment of foot, and had only two pieces of artillery at its command. On the other hand, the governor of the town had ninety pieces of cannon mounted on the ramparts, and four hundred in the arsenal; four thousand brave men for a garrison, and every requisite for a prolonged defence. Nevertheless, such was the terror produced by Napoleon's arms, and such the skill with which the French officer, General Gauthier, concealed the real amount and description of his force, that the Prussians capitulated almost on the first summons; and one of Oct. 31.

the strongest places in the kingdom, amply garrisoned, situated in an island of the Oder, and invested only on one side, had the disgrace of surrendering to a regiment of foot with only two pieces of cannon. The besiegers could not approach it to take possession till the garrison furnished them with boats! These disgraceful capitulations, at which the brave troops involved in them were so much exasperated that it was with difficulty they could be induced to yield obedience to their officers in carrying them into execution, demonstrated that the Prussian

* Dum., xvi., 275, 299. Jom., ii., 308, 312. Bign., vi., 19, 21. Saalf., iii., 309, 310. Hard., ix., 313.

* Dum., xvi., 269, 272, 303, 306. Bign., vi., 23.

generals were so overwhelmed by the magnitude of their misfortunes, that they deemed the monarchy irrevocably ruined, and that *saave qui peut* had become the only remaining principle of their conduct. Astonished at his good fortune in effecting the reduction of such a fortress without firing a shot, Marshal Davoust inspected the fortifications on the day following, which he found in the best condition, and, deeming his base on the Oder now sufficiently secured, pushed on his light troops to Posen, in Prussian Poland; while six thousand Bavarians formed the investment of Glogau, the only remaining stronghold on its banks which was still in the hands of the enemy, and Angereau established himself at Frankfort, the well-known emporium of Eastern Prussia.*

The only corps of the Prussian army which had hitherto escaped destruction was that formed by the union of Blücher's cavalry with the Duke of Saxe Weimar's infantry, and commanded by the former of these generals.† Though its resistance, however, was more honourable, its ultimate fate was not less calamitous. No sooner was he informed of the junction of these two corps in the north of Prussia, than Napoleon ordered their pursuit by forces so considerable that escape became impossible. Bernadotte was instructed to follow closely on its footsteps; while Murat was despatched by a circuit to cut it off on the right from Stralsund and Rostock, under the cannon of which it might have found shelter; and Soult threw himself on the left, to bar the communication with the Lower Elbe. Oct. 28. Blücher arrived at Boitzenberg the day after the ill-fated Hohenlohe had left that town; and, having there learned the catastrophe which had befallen that brilliant portion of the army, he

renounced all hope of retiring before the enemy, and retraced his steps, in order to unite with General Winning and the Duke of Saxe Weimar's corps, which took place at Kratz-emberg on the day following; and, finding himself now at the head of eighteen thousand infantry, six thousand cavalry, and sixty pieces of cannon, he resolved to move to the right, recross the Elbe, raise the siege of Magdebourg, and, supported by that fortress and Hameln, maintain himself as long as possible in the rear of the emperor's army. The project was boldly conceived and intrepidly executed; but the three corps now directed against him, numbering nearly sixty thousand combatants, rendered its execution impossible. A sharp conflict took place with his rearguard at Nossentin, in which five hundred prisoners fell into the hands of the French; but the next day the junction of Bernadotte with Soult rendered it necessary for the gallant Prussian to be more circumspect. An opportunity, however, soon occurred of taking his revenge. Next day the French hussars were charged and put to the route by the Prussian light dragoons, at the entrance of a defile. Colonel Gerard and three hundred horsemen were made prisoners; but the cavalry having fallen back on the support of their infantry, headed by Bernadotte in person, the Prussians were in their turn repulsed with severe loss. Finding the enemy's forces so considerable that all chance of making good his way to the Lower Elbe was out of the question, Blücher resolved to fall back by Gadebush on Lubeck, where he hoped to find resources to recruit his wearied troops, and whose decayed bastions he flattered himself he would soon be able to put in a respectable state of defence. Before arriving at that city, he was summoned by Bernadotte to surrender, and informed that he was beset by forces triple his own. "I will never capitulate," was the brief and characteristic reply of the Prussian general; and, continuing his march, he entered Lubeck on the evening of the 5th, closely followed by his indefatigable pursuers.*†

Unfortunately for Lubeck, it was still surrounded by a ruined wall and deep ditches filled with water; and this gave Blücher an excuse for representing it as a military post, and dis- regarding all the remonstrances of the magistrates, who loudly protested against this violation of their neutrality. Hastily planting the few heavy cannon which he still retained to defend the principal gates, Blücher caused the greater part of his forces to defile through the town, and take post on the low marshy ground on the opposite side, on the confines of the Danish territory. At daybreak on the following morning the French columns were at the gates, and every preparation made for an instant assault. In spite of a heavy fire of grape and musketry from the old walls, the French advanced with their accustomed gallantry to the assault.

* Dum., xvi., 308, 321. Bign., vi., 23, 24. Jom., ii., 317. Saalf., iii., 311, 312.

† In the course of the pursuit, a convoy of twelve hundred Swedes fell into the hands of Bernadotte, who treated them with unusual courtesy and kindness. From the gratitude of the Swedes for this treatment arose the interchange of good deeds which terminated in his elevation to the throne of Gustavus Adolphus. At that period events, in appearance the most trivial, were big with the fate of nations.—See SAALFELD, iii., 313, and BIGNON, vi., 24.

* Hard., ix., 320.

† See Bigu., vi., 7, and Norv., ii., 466.

† Ante, ii., 68.

§ Rapp, 57, 58, 59. Bigu., iv., 406. Ante, ii., 363, 364.

The corps of Bernadotte advanced against the Burg-Thor, or gate which looked to the north; that of Soult approached the Huxter-Thor and Mahlen-Thor, or gates of Hanover. After sustaining a terrible discharge from the bastions, which were armed with the Prussian field-pieces, the French advanced guard, under Generals Merle and Frere, succeeded in breaking through with their hatchets the exterior palisades of the Burg-Thor, and rapidly following the Prussian regiments which held that outwork, entered the gate pell-mell with the fugitives, and made themselves masters of the adjoining bastions. At the same moment Soult's divisions threatened the gates opposed to their attack; but so murderous was the fire which the Prussians kept up from the walls which flanked their approaches, that the assailants were unable to make any progress till Bernadotte's divisions, having penetrated into the town, threatened to take the defenders in rear. Even then, however, the brave Prussians, at this gate, to the number of two thousand, faced both ways, and, besieged in their turn, sustained the double attack within and without. Posted on the roofs of houses, and on the summits of the ramparts, they kept up an incessant fire till their cartridges were exhausted, when they were all either killed or made prisoners. So rapid was the advance of the French through the Burg-Thor that Blücher, who had retired to his lodgings, after having made his dispositions, to dictate orders, had barely time to mount his horse with his son and a single aid-de-camp and ride off; all the rest of his staff were made prisoners. Having joined the remaining troops in the town, that brave general, with his gallant followers, prolonged the defence. He himself repeatedly charged down the König-Strasse at the head of a body of cavalry, but was unable to clear it of the French soldiers, who had now broken into the houses near the gate, and from thence kept up a fire of such severity upon the street as rendered it impossible for the dragoons to advance to its farther extremity. Presently the besiegers brought up their field-pieces, the guns on the ramparts were turned upon the town, and repeated discharges of grape from both sides swept the pavement, and occasioned a terrific slaughter. With invincible resolution, however, the Prussians maintained the combat. From street to street, from church to church, from house to house, the conflict continued. Blood flowed on all sides. The incessant rattle of the musketry was almost drowned in some quarters by the cries of the wounded and the shrieks of the inhabitants, who in that day of wo underwent all the horrors consequent on a town carried by assault. By degrees, however, the superior numbers of the French, who were soon re-enforced by part of Murat's corps, prevailed over the heroic resolution of the Prussians. With difficulty Blücher succeeded, towards evening, in collecting five thousand men, with whom he forced his way through by the gate of Holstein, and rejoined his cavalry, which lay at Schwertau, on the opposite side of the town, near the Danish frontier;* while the remainder of his corps in the town, consisting of eight thousand men, were slain before nightfall in that terrific fight, or fell into the hands of the enemy.†

The situation of Blücher, with his cavalry and this slender body of infantry, was ^{He retires to Ratkau, and is there made prisoner.} now altogether desperate. He was driven up to Ratkau, in the extremity of Germany, on the very edge of the Danish territory, where a powerful body of troops was collected to prevent his entrance. In the night he received intelligence that Travemünde, a fortified town on the sea-coast, to which he proposed to have retired, had been taken by Murat with a battalion which he had sent forward to garrison that important post, where he hoped to have embarked; and, to complete his misfortunes, information arrived in the morning that the salt marshes between Schwertau and that town were not passable by the army. At the same time a flag of truce arrived from Murat, while his numerous squadrons had already driven the Prussian infantry out of Schwertau, and were closing in, in all directions, on his last position. Overcome by stern necessity, the hardy veteran, with tears in his eyes, agreed to a capitulation, in virtue of which all his troops laid down their arms.* On this occasion were taken ten battalions and fifty-three squadrons, amounting to four thousand foot-soldiers, and three thousand seven hundred cavalry, with forty pieces of cannon, the remainder of his fine train of artillery having been left on the ramparts of Lubeck.

To complete the disasters of the Prussian monarchy, nothing was wanting but the surrender of Magdebourg, and that important bulwark was not long of falling into the hands of Marshal Ney. Although its garrison was in great part composed of fugitives of all regiments, who had made their escape into that asylum from the disasters of Jena and Auerstadt, yet such was the strength of its works, and the ample store of provisions and magazines of all sorts which existed within its walls, that a prolonged defence might confidently have been anticipated. Nevertheless, if its fall was not quite so disgraceful as that of Stettin and Custrin, it was such as to affix a lasting stigma on the Prussian arms. After fifteen days of a blockade, Marshal Ney commenced operations in form; but before having recourse to the tedious method of regular approaches, he resolved to try the effect of a bombardment. Furnaces for this purpose were heated to throw four-and-twenty pound shot, red hot, into every part of the town, while a copious shower of bombs was ready to bring terror and conflagration upon the inhabitants. It was not necessary, however, to proceed to these extremities. The citizens of Magdebourg preserved a vivid traditional recollection of the horrors which their forefathers underwent after the memorable storm by Count Tilly in 1631, when the whole town was reduced to ashes. No sooner, therefore, did the first flaming projectiles begin to descend upon

these fortresses fell by assault. It is the duty of the historian to condemn equally such outrages, by whomever committed; and certainly in this work no veil shall be thrown over these atrocities when they come to be recounted. But it would be well if they would reserve a little of their humane indignation for the sufferers under their own soldiery on similar catastrophes. On this occasion, though they pass it lightly over, the cruelties and devastation committed by Bernadotte's and Soult's corps for two days after the town was taken, notwithstanding all the efforts of those marshals, were equal to the very worst deeds that ever stained the British arms.—See the frightful details, drawn with a graphic hand, in *Lettre de Villers à la Comtesse Fanny Beauharnais*, Amst., 1808.

* Dum., xvi., 322, 333. Jom., ii., 317, 318. Bign., vi., 24, 25. Saalf., iii., 313. Hard., ix., 322.

† The French writers make it a just reproach to the English army, that its soldiers committed such disgraceful excesses at St. Sebastian, Ciudad Rodrigo, and Badajoz, when

* Dum., xvi., 333, 339. Jom., ii., 317, 319. Hard., ix., 321, 322. Saalf., iii., 313.

their houses, than they besieged General Kleist, the governor, with entreaties for a capitulation. That officer, deeming the Prussian monarchy destroyed, and seeing no use in singly prolonging a contest now become hopeless, agreed to a capitulation on the same terms as Stettin, in virtue of which this important frontier town, the bulwark of the monarchy, with its redoubtable ramparts still untouched, and not even an outwork lost, containing sixteen thousand troops in arms, and four thousand in hospital, six hundred pieces of cannon, eight hundred thousand pounds of powder, a pontoon train complete, and immense magazines of all sorts, fell into the hands of the enemy, who hardly mustered a greater force without its walls.*

After these stunning calamities, it was not to be expected that the fortresses on and Nieubourg the Weser, which were now left far in the rear of the storm of war, should long continue to hold out. A host of fugitives from Jena and Auerstadt had taken refuge in those strongholds, particularly Hameln and Nieubourg, into the former of which General Lecoq, who had been separated in the confusion of the disastrous night which followed those battles, had thrown himself, with four thousand men, who still preserved a military array. There he speedily found himself blockaded by the forces of the King of Holland, who had advanced by Wurtzbourg and Paderborn to the banks of the Weser. The disastrous state of the monarchy gave him too plausible a ground for assailing the fidelity of the besieged. "You are insulated," said he, "without hope of succour. Abandoned, and more than a hundred leagues in the rear of the victorious invaders, what can your efforts do to avert the fall of the Prussian monarchy?" These arguments, supported by the official intelligence of the fall of Magdebourg and the surrender of almost all the fragments of the army, produced the desired impression, and it was speedily agreed that the fortress should be evacuated, the private soldiers made prisoners, and the officers return on their parole to Prussia.

Nov. 20. A mutiny broke out among the soldiers upon learning the terms of this disgraceful capitulation, but it was speedily suppressed by Savary's dragoons, the men disarmed, and the fortress, in admirable condition, delivered over, with five thousand prisoners, to the French.

Nov. 25. Nieubourg speedily followed the same example, and, with its untouched fortifications and garrison of three thousand men, capitulated to the victors, and with it all the elements of resistance expired between the Elbe and the Weser.†

While the arms of Napoleon, guided by his penetrating eye, were reaping in this astonishing series of successes the fruits of the victories of Jena and Auerstadt, the emperor himself, occupied alike with military and diplomatic objects, was preparing the means of farther triumphs, and a more complete consolidation of the power which fortune and genius had thus combined to place at his disposal. His first care was to detach Saxony from the coalition; and after the defeat of its army in those disastrous days, and occupation of its territory by the conquerors, this was easily accomplished. The Saxons have an hereditary jealousy of the Prussians, by whom

they have a presentiment they are one day to be swallowed up. Necessity, not inclination, had brought them into the field with their ambitious neighbours, and they gladly availed themselves of the first opportunity to range their forces on the side to which their secret inclinations had long pointed, and which seemed to be recommended alike by prudence and necessity. Early in the campaign, Napoleon had addressed them, in a proclamation, in which he called on them to assert their national independence, and throw off that withering alliance with Prussia from which nothing but ultimate ruin was to be anticipated.* This address had already produced a great impression on the Saxon troops, when the victory of Jena seemed to dissolve at once the bonds which held the two nations together. Improving on these dispositions, Napoleon assembled the Saxon officers, three hundred in number, who had been made prisoners at Weimar, and strongly represented to them the impolicy of any longer uniting their arms to those of their natural enemies the Prussians, and offered, upon their subscribing the oath tendered to them of fidelity to its fortunes, to admit them into the Confederation of the Rhine. Gladly the officers, for themselves and the troops under their command, subscribed the conditions, and immediately they were all, with the private soldiers, six thousand in number, sent back to Dresden. The elector shortly after recalled the remainder of his forces from the Prussian standard: he accepted first neutrality, then an alliance with the conqueror, and before the war in Poland was concluded, his troops were to be seen actively engaged under the French eagles. Such was the origin of that intimate union which, down to the close of the war, subsisted between Napoleon and the Saxon government, and which, though in the end fraught with numberless calamities to that electorate, must ever command respect, from the fidelity with which its engagements were adhered to under adverse fortune.†

It was shortly after having detached Saxony from the Prussian and united it to his own alliance, that Napoleon received treat with an answer from the King of Prussia. Refuses to Prussia. to the elusory proposals of accommodation made by him before the battle of Jena, and which that unhappy monarch eagerly caught at after that disaster as the only light that seemed to break upon his sinking fortunes. The times, however, were not the same: there was no longer any need of dissembling; the Prussian army was routed,

* "Saxons! the Prussians have invaded your territory. I have come to deliver you. They have violently dissolved the bond which united your troops, and incorporated them with their own ranks. You must, forsooth, shed your blood, not merely for interests foreign, but adverse to those of your country! Saxons! your fate is now in your own hands. Will you float in uncertainty between those who impose and those who seek to liberate you from the yoke? My success will secure the independence of your country and your prince. The triumph of the Prussians would rivet on you eternal chains. To-morrow they will demand Lusatia; to-day after, the right bank of the Elbe. But what do I say? Have they not already done so! Have they not long endeavoured to force your sovereign to recognise a feudal supremacy which would soon sweep you from the rank of independent nations? Your independence, your Constitution, your liberty, would exist only in recollection, and the spirit of your ancestors, of the brave Saxons, would feel indignant at seeing you reduced, without resistance, by your rivals to a slavery long prepared by their councils, and your country reduced to the rank of a Prussian province." None could descant more fluently than Napoleon on the withering effect to inconsiderable states of an alliance with a greater power, for none put it in force so invariably towards his own tributary states.—DUMAS, xvi., 205.

† Dum., xvi., 204, 207. Bign., vi., 3, 4.

* Dum., xvi., 433, 437. Jom., ii., 319. Bign., vi., 26. Saalf., iii., 313. † Dum., xvi., 347, 351. Bign., vi., 27.

and he was not the man to let slip the opportunity of completing its destruction. He therefore coldly replied that it was premature to speak of peace when the campaign could hardly be said to have commenced, and that, having resolved to try the fate of arms, the king must abide by its issue.*

Following the march of his victorious armies, Napoleon continued his progress, by its Potsdam Weimar, Naumberg, Wittenberg, and the tomb and Potsdam, towards Berlin. On of Frederic. the march he passed the field of October 25. Rosbach, the well-known theatre of the Prussian victory over the French, and ordered the column erected in commemoration of that triumph, which had been thrown down by the soldiers of the army, to be preserved, and transported as a trophy to Paris. At Potsdam he visited, with eager haste, the palace of Sans Souci and the tomb of the Great Frederic. Everything in the apartments of the illustrious monarch remained as when he breathed his last: the book which he read shortly before his death remained on the table; the furniture was untouched; the writing materials still there: their simplicity surprised the conqueror, who was accustomed to the magnificence of St. Cloud. By a singular coincidence, but one of the many with which the history of Napoleon is full, he visited the sepulchre on the anniversary of the

Oct. 25. day on which Alexander, just a year before, on the same spot, had sworn fidelity to Frederic William. Such had been the confusion of the Prussian fight, that on the tomb there still remained the cordon of the black eagle, the scarf and sword of the hero, which he had worn in the Seven Years' War, as well as the standards of his guard. With generous emotion Napoleon approached the awful monument; but even at that solemn moment unworthy feelings gained the ascendancy. He himself seized the venerable relics, and sent them with indecent haste off to Paris. "I will make them a present," said he, "to the Hôtel des Invalides; the old veterans of the Hanoverian war will receive with religious respect all that once belonged to one of the greatest captains of whom history has made mention." Such an act could not injure the dead; his glory was enshrined in imperishable lustre in the page of history; but it lowered the living, and sullied the triumph of Jena by an unbecoming act of rapacity. Little did Napoleon at that moment anticipate the advent of times so soon approaching, when the Prussians, now so humbled, were to have the mastery of his proudest trophies, and naught was to remain but veneration for the remains of the dead to protect his own ashes in a foreign and far-distant land from the rude hand of the spoiler!†

* Dum., xvi., 236, 239. Jom., ii., 301.

† Bign., vi., 11, 12. Jom., ii., 302, 303. Dum., xvi., 249, 250.

‡ How much more honourable as well as magnanimous was the conduct of the Russian officer who, instead of destroying the monument erected at Cologne to commemorate the battle of Austerlitz, simply engraved below the inscription the words, "Seen and approved by the Russian governor of Cologne, May 8th, 1814." It is for the interest of all nations to preserve the trophies of their enemy's victory and the remains of the dead from insult, for it is impossible to foresee how soon they may themselves suffer from an opposite system. Nor is such forbearance without its reward. It obliterates the disgrace of defeat in the magnanimity of subsequent victory. The Pillar of Austerlitz, in the Place Vendôme, is now a monument not less to German generosity than French valour. It would be well for the memory of Napoleon if more instances of moderation in victory and regard for the vanquished were mingled with his military triumphs.

This interesting episode did not interrupt for a moment the military movements of the corps immediately around the person of the emperor. The same weakness and infatuation appeared there as elsewhere to have seized the Prussian authorities. On the same

day Marshal Davoust, agreeably to the promise of Napoleon, headed the splendid vanguard which, with all the pomp of war, entered Berlin. No words can describe the mingled feelings of rage, astonishment, and despair which animated the inhabitants at this heart-rending spectacle, occurring in less than a fortnight after hostilities had commenced. With speechless grief they gazed on the proud array which defiled through their gates, and drank deep, in the agony of that dreadful moment, of the punishment for the political sins of their government during the last ten years. On the same day the strong Oct. 26. fortress of Spandau, with its impregnable citadel and a garrison of twelve hundred men, surrendered, without firing a shot, to Marshal Lannes,* and Napoleon, after inspecting that stronghold on the day following, made Oct. 27. his triumphal entry into the capital. He had not the same delicacy towards the feelings of its inhabitants which he had previously evinced towards those of Vienna: the palace of Charlottenberg would have answered his purpose of a residence as well as that of Schoenbrunn had done; but he was anxious to lacerate the feelings of the Prussians as much as he had been to spare those of the Austrians, and punish ten years of subservience and ten days of warfare more than he had done the inveterate hostility of twelve years. Surrounded, therefore, by all the splendour of the Empire, in the midst of a brilliant staff, and preceded by his dragoon guards, he made his triumphal entry under the arch erected to the honour of the Great Frederic, and surrounded by an innumerable crowd, in whom passion, admiration, and wonder were mingled in some cases with joy,† he proceeded through the streets, and alighted at the gates of the old palace.

Prince Hatzfeld, one of the leaders of the war party, in the total absence of any Affair of Prince authority flowing from the king, had Hatzfeld, and been besought by the principal inhabitants to take an interim direction of affairs, and assume the command of the burgher guard. In doing so he had issued a proclamation, in which he said, "Nothing remains for us now but to assume a pacific attitude: our cares should not extend beyond what is within our own walls; that constitutes our sole interest, and as it is of the highest importance, we should bestow our exclusive attention upon it." This prince, as the chief of the pacific authorities, presented himself at the head of the magistrates before Napoleon at Potsdam, and

* Napoleon spoke thus of this fortress: "The citadel of Spandau, situated on the Spree, fully victualled for two months, is an inestimable acquisition. In our hands it could sustain two months of open trenches. But such was the general confusion that the batteries were not even armed."—19th Bulletin. It is evident that treachery, or selfishness equivalent to treachery, occasioned the sudden fall of so many of the Prussian fortresses at this period; and Bignon tells us that he became convinced of that when, on being sent by the emperor to superintend the capitulation of Spandau, he found the governor, Benckendorf, occupied with no other consideration but disputes with the French commander as to some wretched culinary articles which he alleged the capitulation authorized him to remove!—Bignon, vi., 13.

† Dum., xvi., 250, 252. Bign., vi., 13. Hard., ix., 313.

Berlin, Spandau, and Charlottenberg occupied by the French. October 25.

was well received. He again waited on him when he arrived at the palace; but the conqueror received him with a severe air, and averting his head, said, "Do not present yourself before me; I have no need of your services; retire to your estates." Shortly after the astonished nobleman withdrew he was ordered to be arrested by orders of Napoleon, who had commanded him to be seized and executed before six o'clock that evening. In fact, he had transmitted to Prince Hohenlohe a letter, containing military details in regard to what he had seen at Potsdam when waiting on Napoleon, which had been intercepted by Davoust and brought to the emperor. The imperious commands of the conqueror left his subordinate authorities no alternative but submission; although Berthier, shocked at the deed of violence which was in contemplation, did his utmost to avert the storm, and even refused to write out the warrant, which Rapp was called in to do. He could not, however, prevent Napoleon from ordering another murder as atrocious as that of the Duke d'Enghien, and the death-warrant was signed, and ordered to be sent by Rapp to Davoust for immediate execution. That brave and generous man, at his own imminent hazard, took upon himself to delay its transmission; and in the mean time the Princess of Hatzfeld, having arrived in the antechamber of the palace, was informed of the danger of her husband, and sunk in a swoon on the floor. Rapp advised her, after she recovered, to endeavour to throw herself in Napoleon's way at the hotel of Prince Ferdinand, where he was going in a short time; she did so, and fell at his feet in the extremity of despair. Her grief and beauty touched Napoleon, who, though subject to violent fits of passion, was not insensible to generous emotions. Rapp warmly seconded the return to feelings of humanity, and orders were despatched to Davoust to suspend the execution till farther directions. Meanwhile the princess was enjoined to repair to the palace, whither Napoleon soon after returned. He ordered her to be brought into the room which he occupied. "Your husband," said he, with a benign air, "has brought himself into a distressing situation; according to our laws he has incurred the penalty of death. General Rapp, give me the letter: take it, read it, madam. Is it your husband's writing?" She did so, trembling. "I cannot deny his subscription," she replied, almost fainting with emotion. Napoleon then took it from her, tore it, and threw it into the fire. "I have no longer any proof; your husband is pardoned." He then desired Rapp to bring him back immediately from Davoust's headquarters: that officer ventured to admit that he had not even sent him there; the emperor manifested no displeasure,* but, on the contrary, seemed gratified at the delay which had taken place in the execution of the order.†

* Rapp, 109, 110. Bign., vi., 14. Hard., ix., 315.

† It is always pleasing to record a generous action, and doubly so when it occurs in an enemy; but justice compels the admission that, by delaying the transmission of this order, Rapp conferred a greater favour on Napoleon than on the intended victim of his passion, for the one he saved only from death, the other from the guilt of murder. Rapp informs us that the Prince of Hatzfeld had come to Potsdam on the 25th, and it was for the account transmitted to Hohenlohe on that day of what he there saw that he was about to be condemned. The 25th was the day on which Davoust entered Berlin. The information objected to was collected, and the letter written, therefore, before the prince had come under the military government of the French emperor. There is no law against a private citizen, or a civic authori-

Shortly after his arrival at Berlin, Napoleon paid a visit of condolence to Prince Ferdinand, brother of the great King of Prussia, and father of Prince Louis who fell at Saalfeld, and manifested the most delicate attentions to the widow of Prince Henry, as well as the Princess Electoral of Hesse Cassel. At the same time, he addressed an animated proclamation to his troops, in which he recounted with just pride their astonishing exploits, and promised to lead them against the Russians, who, he foretold, would find another Austerlitz in the heart of Prussia.* Next day he reviewed the corps of Marshal Davoust on the road to Frankfurt, and, assembling the officers in a circle, assured them of the admiration which he felt for their achievements, and the grief which he had experienced at the numerous losses which had thinned their ranks. "Sir," answered the marshal, "the soldiers of the third corps will ever be to you what the tenth legion was to Cæ-

Napoleon's proclamation and addresses to his soldiers. October 30.

ty of one nation, transmitting to its military officers details which have come to his knowledge regarding an enemy, when not yet subject to their authority; Napoleon himself called on the French prefects and magistrates to do so a hundred times. If the circumstance of Hatzfeld having collected and transmitted this information, while on a civil mission to the emperor at Potsdam, exposed him to the penalty of death, what is to be said to Savary the year before, who, by orders of Napoleon, when conferring with the Emperor Alexander on the proposed terms of accommodation, obtained and brought to him military details of inestimable importance in regard to the temper and strength of the allied army on the eve of the battle of Austerlitz;* or to Napoleon himself, who, in 1797, transmitted orders to his brother Joseph, when holding the sacred office of ambassador at Rome, to do all in his power to revolutionize the Eternal City, and overturn the papal authority?† What the Prince of Hatzfeld did was no more than all ambassadors do, and which Napoleon invariably required from all his diplomatic agents. The character of the intended transaction may be judged of by what Berthier, with generous warmth, said on the occasion: "Your majesty will surely not shoot a man connected with the first families of Berlin for so trifling a thing: the supposition is impossible; you will not do so;" and from his positive refusal to write out the order, as well as Rapp's delay in its transmission. Had the prince been shot, it would have been, like the death of the Duke d'Enghien and the bookseller Palm, an act of deliberate murder. History, therefore, cannot award to Napoleon the praise of having pardoned, on this occasion, a criminal who had forfeited his life, either by the laws of war or the principles of justice; but it must not refuse the meed due to a conqueror who returns to generous feelings, after having been led, in a moment of irritation, to the command of an atrocious deed, and joyfully seizes on this incident as illustrative of that ascendancy which, in his cooler moments, humane feelings obtained over ruthless passion in the mind of this extraordinary man.—RAPP, 108.

* "Soldiers! you are worthy defenders of my crown, and of the great people. As long as you are animated with your present spirit nothing can resist you. Behold the result of your labours! One of the first powers in Europe, which recently had the audacity to propose to us a shameful capitulation, is annihilated. The forests and defiles of Franconia, the Saale, the Elbe, which our fathers would not have traversed in seven years, we have surmounted in seven days, besides, during the same period, fighting four combats and a great battle. We have arrived at Potsdam and Berlin sooner than the renown of our victories! We have made sixty thousand prisoners, taken sixty-five standards, including those of the royal guard, six hundred pieces of cannon, three fortresses, twenty generals, while half the army regret their not having had an opportunity of firing a shot. All the Prussian provinces, from the Elbe to the Oder, are in our hands.

"Soldiers! the Russians boast that they are advancing to meet us; let us march to encounter them; we will spare them the half of their journey; they will find an Austerlitz in the heart of Prussia. A nation which has so speedily forgot the generosity which we manifested towards it after the battle, when its emperor, its court, the wreck of its army owed its safety entirely to the capitulation which we granted to it, is a nation that will never be able to contend with us."—DUMAS, *vi.*, 259, 260.

* Sav., ii., 112, 113. Ante, ii., 368.

† Ante, i., 587, and Corresp. Confid. de Napoleon, iv., 199, 201.

sar." Already, in the emulation of the different corps, and the mutual knowledge and attachment of the officers and men, were to be found the happy effects of that permanent organization into separate armies and divisions which, first of the moderns, Napoleon had imitated from the ancient conquerors of the world.*

While Napoleon and his followers were thus indulging in an excusable pride at the retrospect of their wonderful achievements, the Prussian officers who had traversed the country, or reached the capital in virtue of the several capitulations which had been granted, were exposed to the most grievous humiliation. The officers of the guard, especially, who had escaped from the wreck of Hohenlohe's corps, were ostentatiously marched by the emperor through Berlin to Spandau. Words cannot describe the mortification of those high-spirited young men at the unparalleled calamities in which their inconsiderate passions had involved their country: wherever they went crowds beset their steps, some lamenting their sufferings, others reproaching them as the authors of all the public misfortunes. Napoleon made a severe and ungenerous use of his victory. The old Duke of Brunswick, respectable from his age, his achievements under the Great Frederic, and the honourable wounds he had recently received on the field of battle, and who had written a letter to Napoleon, after the battle of Jena, recommending his states to his generosity, was in an especial manner the object of invective: his states were overrun, and the official bulletins disgraced by a puerile tirade against a general who had done nothing but discharge his duty to his sovereign. For this he was punished by the total confiscation of his dominions. So virulent was the language employed, and such the apprehensions in consequence inspired, that this wounded general was compelled, with great personal suffering, to take refuge in Altona, where he soon after died.† The queen, whose spirit in prosperous and constancy in adverse fortune had justly endeared her to her subjects, and rendered her the admiration of all Europe, was pursued in successive bulletins with unmanly sarcasms, and an heroic princess, whose only fault, if fault it was, had been an excess of patriotic ardour, compared to Helen, whose faithless vices had involved her country in the calamities consequent on the siege of Troy.‡

* Dum., xvi., 259, 261.

† "If the Duke of Brunswick," said the Bulletin, "has cruel expressions richly deserved the animadversion of the Prussian people: he has also incurred that of the Prussian army and people: of the latter, who reproach him as one of the authors of the war; of the former, who complain of his manoeuvres and military conduct. The false calculations of the young may be pardoned, but the conduct of that old prince, aged 72, is an excess of insanity, and his catastrophe can excite no regret. What can there be respectable in gray hairs, when to the faults of age it unites the inconsiderateness and folly of youth? For these extravagances he has justly incurred the forfeiture of all his dominions."—23d and 27th Bulletins, *Camp. de Saxe*, ii., 216, 293.

‡ "All the world accuses the queen as the author of all the calamities which have befallen the Prussian nation. The public indignation is at its height against the authors of the war, especially Gentz, a miserable scribbler who sells himself for money. After her ridiculous journey to Erfurt and Weimar, the queen entered Berlin a fugitive and alone. Among the standards we have taken are those embroidered by the hands of this princess, whose beauty has been as fatal to her people as that of Helen was to the citizens of Troy."—27th and

The whole dominions of the Elector of Hesse-Cassel were next seized; and that prince, who had not even combated at Jena, but merely permitted, when he could not prevent, the entry of the Prussians into his dominions, was dethroned and deprived of all his possessions. Animosity to England was the secret motive for all those acts of robbery. So strongly was Napoleon influenced by these feelings, that he made no attempt to disguise that it was the ruling principle which governed all his measures towards the vanquished.* The Prince of Orange, brother-in-law to the King of Prussia, in favour of whom the Prussian plenipotentiaries then at Berlin made the strongest representations, shared the same fate, while to the nobles of Berlin he used publicly the cruel expression, more withering to his own reputation than theirs, "I will render that noblesse so poor that they shall be obliged to beg their bread." When a conqueror, in the midst of his greatest triumphs, uses such insulting language to the vanquished, and makes such an atrocious use of his victory, it is impossible to sympathize with his fall, and Waterloo and St. Helena are felt to be a just measure of moral retribution.†

Meanwhile the French armies, without any farther resistance, took possession of the whole country between the Rhine and the Oder; and in the rear of the victorious bands appeared, in severity unprecedented even in the Revolutionary armies, the dismal scourge of contributions. Resolved to maintain the war exclusively on the provinces which were to be its theatre, Napoleon had taken only twenty-four thousand francs in specie across the Rhine in the military chest of the army. It soon appeared from whom the deficiency was to be supplied.

Enormous contributions levied on Prussia and the north of Germany.

23d *Bulletins, Camp. de Saxe*, ii., 215. It is worthy of observation that M. Gentz, who is here stigmatized as a miserable hireling sold to England, was one of the most distinguished writers of the age, and with whom Sir James Mackintosh, the eloquent apologist of the French Revolution, maintained a constant and valued correspondence down to the time of his death. That distinguished author thus speaks of Gentz's pamphlet, to which Napoleon alluded, in a letter to the author: "I received by the mail your two precious fragments; I assent to all you say, sympathize with all you feel, and admire equally your reason and your eloquence throughout your masterly fragment. I have read your letter fifty times since I received it, with the same sentiment which a Roman in the extremity of Mauritania would have felt if he had received an account of the ruin of his country after the battle of Pharsalia, written the morning after that calamity, with the unconquerable spirit of Cato, and the terrible energy of Tacitus. He would have exulted that there was something which Cæsar could not subdue, and from which a deliverer and avenger might yet spring."—MACKINTOSH'S *Memoirs*, i., 304. Certainly, of all the unaccountable peculiarities in the mind of Napoleon, the most extraordinary is his total insensibility to the ultimate ascendancy of truth over falsehood, and the extent to which he calculated on palming off falsehood and defamation on the credulity or ignorance of mankind.

* M. Bignon, who was present on the occasion, gives the following curious account of the conversation which led to the dethronement of the Elector of Hesse-Cassel: "Duroc and I said everything we could during breakfast in favour of the elector. He only petitioned to be allowed to resume possession of his estates: his fortresses were all to be ceded to the French arms; his troops, twelve thousand strong, were to be joined to their forces, and a heavy contribution paid. These offers appeared to make a considerable impression on the emperor, especially the offer of so many troops; but, after musing a while, he said, abruptly, 'Bah! Brunswick, Nassau, Cassel, all these princes are essentially English; they will never be our friends,' and instantly set out for a review. Two days afterward appeared the 27th bulletin, containing the announcement of their dethronement."—See BIGNON, vi., 35.

† Bignon, vi., 15, 33, 34. 23d and 27th Bulletins, *Camp. de Saxe*, ii., 195, 295, 214.

On the day after the battle of Jena appeared a proclamation, directing the levy of an extraordinary war contribution of 159,000,000 francs (26,200,000) on the countries at war with France, of which one hundred millions was to be borne by the Prussian states on the west of the Vistula, twenty-five millions by the Elector of Saxony, and the remainder by the lesser states in the Prussian confederacy. This enormous burden, equivalent to at least twelve millions sterling, if the difference between the value of money in England and Germany is taken into account, was levied with unrelenting severity; and the rapacity and exactions of the French agents employed in its collection aggravated to a very great degree the weight and odious nature of the imposition. Saxony, in the scourging contributions with which she was overwhelmed, had soon abundant cause to regret the French alliance; while Berlin, as well as the Hanoverian and Prussian states which had been occupied, experienced, in the rapacity of General Clarke and his subordinate agents, all the bitterness as well as the humiliation of conquest. Nor was this all. The whole civil authorities who remained in the abandoned provinces were compelled to take an oath of fidelity to the French emperor: * an unprecedented step, which clearly indicated the intention of annexing the Prussian dominions to the great nation, while General Clarke, governor of Berlin, acting towards the magistrates as if they were already its subjects, barbarously shot a burgomaster of the town of Kiritz, whose only fault was that he had, when destitute of any armed force, been unable to resist the abstraction of the arms of the burgher guard and local militia by Colonel Schill, who commanded a flying detachment that still, in the open country, preserved its fidelity to the colours of the monarchy.† Even the highest authorities gave way to the indiscriminate passion for pillage: "The name of General Clarke," says Bourrienne, "became justly odious from every species of exaction, and a servile execution of all the orders of Napoleon," while the great reputation of the conqueror of Auerstadt was disgraced by the pillage of the noble library at Tempelberg, the country seat of Baron Hardenberg,‡ minister of state, which took place, by his authority, while he was in person occupying the edifice.

These evils, great as they were, and disgraceful to the arms and generals of France, were, however, in the ordinary case, only transitory; but it soon appeared that in the case of Prussia and the adjoining states they were to be permanent, and that the iron grasp of the conqueror was to be not only laid, but retained on the north of Germany. Early in Nov. 3. November there appeared an elaborate ordinance, which provided for the complete civil organization and military occupation of the whole country from the Rhine to the Vistula.

* The oath was in these terms: "I swear to exercise with fidelity the authority which is committed to me by the Emperor of the French, and to act only for the maintenance of the public tranquillity, and to concur with all my power in the execution of all the measures which may be ordered for the service of the French army, and to maintain no correspondence with its enemies."—BIGN., vi., 51.

† At a dinner given by Louis XVIII., in 1815, to the King of Prussia, this massacre became the subject of conversation. "Sire," said Clarke, then Duke of Feltra, "it was an unhappy error." "Say, rather, an unworthy crime," replied the indignant monarch.—HARD., ix., 318.

‡ Hard., ix., 317. Bign., vi., 51, 53. Dum., xvii., 40, 49. Bour., vii., 219.

By this decree the conquered states were divided into four departments, those of Berlin, of Magdebourg, of Stettin, and Custrin; the military and civil government of the whole conquered territory was intrusted to a governor-general at Berlin, having under him eight commanders of provinces, into which it was divided. Receivers-general were appointed in each province, charged with collecting its whole revenue and all the war contributions imposed on it, and their transmission to the French governors. Magistrates, police, gendarmes, all were nominated by the authorities of Napoleon; the whole civil and military government of the country was concentrated in his hands. Clarke was governor-general, aided in the details of government by Count Daru, whose great capacity soon appeared in the admirable order which he introduced into every branch of the administration, and which would have been worthy of the highest admiration if it had not been rendered instrumental to the most cruel and universal system of public extortion. The same system of government was extended to the Duchy of Brunswick, the states of Hesse and Hanover, the Duchy of Mecklenberg, and the Hanse Towns, including Hamburg, which were speedily oppressed by grievous contributions, in exacting which the Dutch generals and troops were peculiarly conspicuous. The emperor openly announced his determination to retain possession of all these states till England consented to his demands on the subject of the liberty of the seas. Careful, at the same time, to mingle with these important civil changes such deeds as might captivate the imaginations of his subjects, he paraded before the deputation which came to Berlin from the Senate of Paris to congratulate him on his victories, three hundred and forty grenadiers of his Imperial Guard, each bearing a standard taken from the enemy in this short campaign—the most splendid display of military trophies seen in Europe since the triumphs of the Roman generals.*

Meanwhile the negotiations for the conclusion of a separate peace between France and Prussia were resumed: the misfortunes of the king rendered it almost indispensable that a respite should be obtained on any terms, while it was not less advantageous for Napoleon to reap at once the fruits of his triumphs without undergoing the fatigues and dangers of a winter campaign in the frozen plains of Poland. Plenipotentiaries, accordingly, were appointed on both sides: on that of France, Duroc; on that of Prussia, M. Lucchesini and Rastrow. There was no need of lengthened conferences: the situation of the parties gave to the one the power of demanding whatever he pleased, to the other the power of withholding nothing which was required. Napoleon insisted that Prussia should renounce all the provinces she possessed between the Rhine and the Elbe, pay a contribution of a hundred millions of francs for the expenses of the war, cease to take any concern in the affairs of Germany, and recognise in the princes of the Confederation of the Rhine whatever titles the conqueror chose to confer upon them. Not daring to refuse these conditions, and yet unwilling to take upon themselves the responsibility of making so great a sacrifice, the Prussian envoys referred the matter to the king or his cabinet.

Negotiations with Prussia, and armistice concluded.

* Dum., xvii., 54, 61. Bign., vi., 72. Bour., vii., 217, 219.

Oct. 27. They returned an answer agreeing to all the exactions which were required; but in the interval matters had essentially changed for the worse: the wreck of the Prussian armies had been almost totally destroyed, and the demands of Napoleon rose in proportion. Perpetually haunted by the idea that it was the influence of England which he required to combat, and that the northern powers were brought into the field only to maintain her cause,* he now insisted that the Prussian troops should retire entirely to Königsberg and the small portion of the monarchy which lies to the east of the Vistula; that Colberg, Dantzic, Graudentz, Thorn, Glogau, Breslau, Hameln, and Nieburg should be placed in the hands of the French; and that no foreign troops should be suffered to enter any part of the Prussian territory. In agreeing to terms so ruinous to the monarchy, the Prussian plenipotentiaries could hardly expect that the king would ratify them; but so desperate had his affairs now become, that it was of importance to obtain a delay even of a few days, in the departure of Napoleon for Posen, in order to gain time for the arrival of the Russian troops on the Vistula. They signed the convention at

Nov. 16. Charlottenberg, accordingly, stipulating only for its ratification by the King of Prussia. In fact, however, no hope remained to either side that it would lead to a permanent accommodation; for, a few days before the truce was concluded, Talleyrand openly announced to the Prussian plenipotentiaries that they must look for no restitution of his conquests by the Emperor Napoleon, and that the vast territory from the Rhine to the Vistula would be retained until a general peace, as a means of compelling England to surrender its maritime acquisitions, and Russia to evacuate the principalities of Wallachia and Moldavia, which had recently been invaded by its arms. Thus the unhappy Prussian monarchy was made responsible for the ambition or successes of other powers over whose measures it had no sort of control; and the negotiations at Berlin, diverging from their original object, were degenerating into a mere manifesto of implacable hostility against the cabinets of London and St. Petersburg.†

The severity of the terms demanded, as well as their express assurances that no King of Prussia would lead to a separate accommodation, ratify as Napoleon was resolved to retain all his conquests until a general peace, led, as might have been expected, to the rupture of the negotiations. Desperate as the fortunes of Prussia were, what was to be gained by the cession of three fourths of its dominions, and its fortresses still unsubdued on the Vistula, to the French? Rest as he was of his kingdom and his army, the king still preserved his honour, and nobly resolved to continue faithful to his engagements. He declined, therefore, to ratify the armistice, which was presented to him at

Osterode for signature, on the part of France, by Duroc, and, at the same time, published a melancholy but noble proclamation, in which, without attempting to disguise his hopes or conceal the deplorable state of his affairs, he rose superior to the storms of fortune, and declared his resolution to stand or fall with the Emperor of Russia.†† This refusal was anticipated by Napoleon. It reached him at Posen, whither he had advanced on his road to the Vistula; and nothing remained but to enter vigorously on the prosecution of the war in Poland.

To this period of the war belongs the famous Berlin decree of the 21st of November, against the commerce of Great Britain. But that subject is too vast to be adequately touched on in the close of a chapter embracing such a variety of subjects as the present; and it will be fully enlarged on in a subsequent one, which will include also the Milan decree which followed, in 1807, the Continental system, and orders of council adopted as a measure of retaliation by the British government.

Napoleon set out from Berlin for the Vistula soon after he had fulminated this anathema against English commerce, and at Posen, in Prussian Poland, gave audience to the deputies of that unhappy kingdom, who came to implore his support to the remains of its once mighty dominion. His words were calculated to excite hopes which his subsequent conduct never realized: "France," said he, "has never recognised the partitions of Poland; but, nevertheless, I cannot proclaim your independence until you are resolved to defend your rights as a nation at every sacrifice, even that of life itself. The world reproaches you with Nov. 29. having, in your continual civil dissensions, lost sight of the true interests and safety of your country. Taught by your misfortunes, now unite, and prove to the world that the same spirit animates the whole Polish nation." Universal acclamations attended his arrival at Posen: all the population advanced to meet his carriage; four magnificent triumphal arches were erected to the victor of Rivoli, Marengo, Austerlitz, and Jena. Count Palatine Radzimirski, at the head of the deputation from Great Poland, addressed him in terms of Eastern adulation, min-

Famous Berlin decree against English commerce.

Affairs of Poland. Napoleon's words to the Polish deputies.

* Dum., xvii., 69, 71. Lucches., ii., 223, 225. Bign., vi., 48, 49.

† Matters, said the proclamation, had arrived at that pass, that Prussia could no longer hope to obtain peace, even at the price of the greatest sacrifices. It was not in his power to make the Russian forces retrograde, since already their own frontiers were menaced. The Emperor of France has shown a determination, even when he acceded to the basis of a negotiation, not to suspend for one moment his military operations; and he has protracted the conferences till his successes enabled him to declare that the conquest of Prussia should afford him the means of dictating peace to England and Russia. Compelled thus to resume hostilities, the king is not without hopes of yet bringing them to a successful issue. He hopes that the governors of the fortresses on the Vistula will not imitate the weakness of those on the Oder and Elbe, and all the disposable forces of the monarchy will hasten to unite their colours on the Vistula and the Warta to the brave Russian battalions. Such a proof of courage and constancy is not new to the Prussian nation. In the Seven Years' War the capital and provinces were also occupied by the enemy, but the firmness and intrepidity of the nation brought it safe through all its perils, and excited alike the admiration and astonishment of posterity. Then Prussia combated alone the greatest powers of Europe: now the powerful and magnanimous Alexander is about to take his place by her side with all the forces of his vast empire. Their cause is the same: they will stand or fall together.—Dum., xvii., 70, 71.

* "He was persuaded," says the Marquis Lucchesini, "that it was the intrigues of England which had arrayed the northern courts against France, which had brought about the refusal of the Emperor Alexander to ratify the treaty of Paris, and pushed forward Prussia into the field of battle. It was England, therefore, which it had become necessary to strike in Prussia; and it was on the conduct of the Cabinet of London, in regard to the restitution of conquests, that the emperor announced he would measure his own steps for the future fate of the Prussian monarchy."—LUCCHESINI, ii., 176, 177. BIGN., vi., 44.

† Dum., xvii., 66, 67. Bign., vi., 48, 49. Lucches., ii., 182, 185, 186. Martens, xi., 380.

gled with strange expressions, which proved prophetic: "The universe knows your exploits and your triumphs; the West beheld the first development of your genius; the South was the recompense of your labours; the East became to you an object of admiration; the *North will be the term of your victories*. The Polish race, yet groaning under the yoke of Germanic nations, humbly implores your august highness to raise up its remnant from the dust." Napoleon replied, "That which has been destroyed by force cannot be restored but by force. I would with pleasure behold the independence of Poland restored, and a barrier formed by its strength against the unbounded ambition of Russia; but petitions and discourses will not achieve this work; and unless the whole nation, including nobles, priests, and burghers, does unite and embrace the firm resolution to conquer or die, success is hopeless. With such a determination it is certain, and you may always rely on my powerful protection."*

While the main body of the French army was advancing by rapid strides from the Oder to the Vistula, Napoleon, ever anxious to secure his communications, and clear his rear of hostile bodies, caused two different armies to advance to support the flanks of the invading force. To Jerome Bonaparte, who commanded the ninth corps, consisting of twenty-five thousand Bavarians and Wirtembergers, and who had Vandamme for his adviser, was intrusted the difficult task of reducing the six fortresses of Silesia, Glogau, Breslau, Brieg, Neisse, Schweidnitz, and Glatz, containing, in all, a force nearly equal to his own. Glogau, however, with its surrounding garrison of three thousand men, made of Glogau. but a show of resistance, and, early December 3. in December, fell into the hands of the French. The other bulwarks of the province exhibited more determination, and operations in form were commenced against them.†

Mortier, on the extreme left, was intrusted with the subjugation of Hanover and the Hanse Towns, and the occupation of Hamburg, which was accomplished with hardly any resistance. Having done this, he advanced to observe Stralsund and the Swedes, while a fresh reserve was collecting on the Elbe, under the command of Louis, king of Holland. Thus, though the grand army was advancing by rapid strides to the shores of the Vistula, its flanks on either side were protected by subordinate corps; and fresh forces, stationed in echelon in their rear, overawed the intermediate states, and kept up the communication with the Rhine. The whole of the north of Germany was overrun by French troops, while a hundred thousand were assembling to meet the formidable legions of Russia in the heart of Poland. Vast as the forces of Napoleon were, such prodigious efforts over so great an extent of surface rendered fresh supplies indispensable. The Senate at Paris was ready to furnish them; and on the requisition of the emperor, eighty thousand were voted from the youth who were to arrive at the military age in 1807. "In what more triumphant circumstances," said the emperor, "can we call on the youth of France to flock to our standards? They will

have to traverse, in joining their comrades, the capitals of their enemies, and fields of battle illustrated by immortal victories." It may easily be conceived with what transports this appeal was received by a nation so passionately attached to military glory as the French, and the emperor resolved to turn it to the best account. Not content with this great addition to his prospective resources, he instituted corps of volunteers to receive the numerous and enthusiastic youth, whom even the conscription could not drain off in sufficient numbers: additional battalions were added to the Imperial Guard, the troops of Hesse taken in a body into French pay, and the most energetic measures adopted to augment as much as possible the military resources of the Confederation of the Rhine. Detailed instructions were at the same time transmitted to Marmont in Illyria, and the Viceroy Eugene Beauharnais, to have their forces disposed on the Austrian monarchy in the most advantageous position; the King of Bavaria was informed by the emperor himself of all that he should do for the defence of his dominions, and the activity displayed in the fortresses on the Adige, the Isonzo, and the Inn, looked as if he was making preparations rather for a defensive struggle in the plains of Bavaria or the fields of Italy than for a stroke at the vitals of Russia on the shores of the Vistula.*

A treaty, offensive and defensive, between Saxony and France was the natural result of these successes. This treaty, convention, arranged by Talleyrand, and Saxony. was signed at Posen on the 12th of December. It stipulated that the Elector of Saxony should be elevated to the dignity of king: he was admitted into the Confederation of the Rhine, and his contingent fixed at twenty thousand men. By a separate article, it was provided that the passage of foreign troops across the kingdom of Saxony should take place without the consent of the sovereign: a provision which sufficiently pointed it out as a military outpost of the great nation, while, by a subsidiary treaty, signed at Posen three days afterward, the whole minor princes of the house of Saxony were also admitted into the confederacy.†

Such was the astonishing campaign of Jena, the most marvellous of all the achievements of Napoleon; that in which the success the most unheard of attended his steps, and his force appeared most irresistible to the bewildered nations. Europe had hardly recovered the shock arising from the fall of Austria in three months, during the campaign of Austerlitz, when she beheld Prussia overthrown in as many weeks by the shock of Jena. Without halting one day before the forces of the enemy, without ever once pausing in the career of conquest, the French troops had marched from the Rhine to the Vistula; the fabric reared with so much care by the wisdom and valour of Frederick the Great had fallen by a single blow; and one of the chief powers of Christendom had disappeared at once from the theatre of Europe. Three hundred and fifty standards, four thousand pieces of cannon, six first-rate fortresses, eighty thousand prisoners, had been taken in less than seven weeks; of a noble array of a hundred and twenty thousand men, who had so lately crowded on the banks of the Saale, not more than fif-

* Dum., xvii., 69, 64.

† Dum., xvii., 88, 89. Martens, Sup., iv., 384, 387.

teen thousand now followed the standards of the king to the shores of the Vistula.* Results so astonishing were altogether unprecedented in modern Europe; they recalled rather the classic exploits of Cæsar or Alexander, or the fierce inroads of Timour or Gengiskhan than anything yet experienced in Christendom; but they possessed this superiority above the achievements of antiquity or the sanguinary conquests of modern barbarism, that it was not over inexperienced tribes or enervated nations that the triumphs had been won, but the most warlike nation of the civilized world that had been overthrown, and the army which had recently withstood the banded strength of Europe which had been dissolved.

The talents displayed by Napoleon in this campaign, though of a very high order, were not equal to the transcendental abilities evinced at Ulm and Austerlitz. Doubtless the celerity with which the hazardous advance of the Duke of Brunswick across the Thuringian Forest to turn the French left and interpose between the Rhine and their army was turned to the best account, and the Prussians cut off from their magazines and communications at the very moment they were endeavouring to inflict that injury on the enemy, the vigour of the fight at Jena, and the incomparable energy with which the mighty host which there conquered was dispersed like a fan in pursuit of the broken remains of the enemy, and incessantly pressed on till they were totally destroyed, were worthy of the highest admiration. But in the very outset of the campaign he exposed himself to unnecessary hazard, and, but for a change of position on the part of the bulk of the Prussian army, of which he was ignorant, might have been involved in as great a catastrophe as the rout on the banks of the Inn had been to the Imperialists. To advance and attack the Prussian army, strongly posted at Jena, through the narrow and rugged defiles of the Landgrafenberg, was a greater error in military conduct than it was in the Archduke John to advance against Moreau through the pines of the Hohenlinden. Napoleon has told us this himself: "The first principle of the military art," says he, "is never to fight with a defile in your rear; for, if defeated in such a station, total ruin is hardly avoidable."† Had the whole Prussian army, a hundred thousand strong, been posted at the opening of the defiles instead of a rear-guard of forty thousand only, the French would probably have never been able to debouche, and a disastrous retreat have been experienced. There was little of the usual calculation of means to end in this great commander, when he himself, with eighty thousand men, was opposed only to Hohenlohe with forty thousand, while Davoust, with thirty thousand, was left to struggle with the king in person, at the head of sixty thousand. No man knew better than Napoleon that such combinations were against the first principles, not merely of the military art, but of common sense applied to such subjects; but the truth is, that the campaign of Austerlitz had given him an undue confidence in his destiny; he deemed himself invincible, because he had always hitherto proved so; and already were to be seen the signs of that fatal rashness which was to lead him to the Moscow retreat and the disasters of Leipzig.

After making every allowance for the magnitude of the defeat sustained by the Prussians at Jena and Auerstadt, the sudden fall and the extraordinary circumstance of Prussia. of the fugitives from these two fields getting intermingled during their nocturnal flight, there is something extraordinary and almost unaccountable in the sudden prostration of the monarchy. Had the people been lukewarm or disaffected in the cause, it would have admitted of easy solution; but this was very far indeed from being the case; public spirit ran high, and unanimity unprecedented against Gallic aggression existed among all classes. Yet, in the midst of this ardent and enthusiastic feeling, pusillanimity the most disgraceful was generally evinced, and fortresses all but impregnable surrendered at the first summons of a contemptible enemy! Where were the soldiers of the Great Frederic, where the constancy of the Seven Years' War, when Magdebourg, Stettin, Custrin, and Glogau lowered their colours without firing a shot, and the weakness of these garrisons permitted the army on the Vistula to be re-enforced at the decisive moment by forty thousand men, who otherwise would have been chained round their walls? These unprecedented capitulations demonstrate that, however high was the spirit of part of the nation, the same feelings were not universal, and that the kingdom of Prussia, newly cemented by the genius of Frederic, had not yet acquired that general patriotic spirit which can withstand the severer shocks of adversity, and constitutes the only secure basis of national independence. And the English historian who recollects how a similar catastrophe prostrated the energies of his own ancestors after the battle of Hastings, will probably feel charitably towards an infant nation placed in such trying circumstances; and feel a deeper thankfulness for that long career of national independence, that unbroken line of national glory, which has formed the indomitable public spirit of his own country, and constitutes the unseen chain which has so long held together the immense fabric of the British dominions.

In proportion to the unbounded enthusiasm which these wondrous events excited in France was the despondency which they diffused through the other states of Europe. Alarm now seized the most sanguine, despair took possession of the most resolute. The power which had risen up in Europe to vanquish and destroy seemed beyond the reach of attack. Every effort made against it, every coalition formed for its overthrow, had led only to fresh triumphs, and a more complete consolidation of its strength. The utmost efforts of Austria, supported by all the wealth of England and all the military strength of Russia, had sunk in the conflict; and now a few weeks had sufficed to dissipate that admirable army which the Great Frederic had bequeathed as the phalanx of independence to his country. The thoughtful and philanthropic, more even than the multitude, were penetrated with apprehensions at these portentous events. They looked back to ancient times, and read in the long degradation of Greece and the Byzantine Empire, the consequences of their subjugation from the military force of Rome, and could anticipate no brighter prospect for futurity than the ultimate resurrection of Europe after many ages of slavery and decline.* So

General despondency which it occasions in Europe.

* Jom., ii., 325.

† Nap. Mem., book ix., 124, 125, on Waterloo.

* See, in particular, Sir James Mackintosh's letter to Gentz on this subject, *Memoirs*, i., 364. It is curious, but not unnatural, to observe the earliest and warmest advo-

little can the greatest intellects anticipate the future course of events in a society so perpetually influenced by new moving powers as that of modern Europe; and so necessary is it, in forming a judgment on the ultimate consequences of existing changes, not merely to look back to the lessons of history, but to take into account also the hitherto inexperienced influence of fresh causes rising into action in the ever-varying scene of human affairs.

That bright dawn, however, which philanthropy looked for in vain, and philosophy was unable to anticipate in the dark gloom of the political horizon, the ardent mind of a hero had already begun to descry; and, what is very remarkable, he fixed on the precise circumstances in the temper of the times which were destined to make it ultimately expand to all the lustre of day. "I reckon much," said Blucher to Bourrienne at Hamburg, whither he had retired on his parole from Lubeck, "on the public spirit of Germany, on the enthusiasm which reigns in our universities. Success in war is ephemeral; but defeat itself contributes to nourish in a people the principles of honour and a passion for national glory. Be assured, when a whole people are resolved to emancipate themselves from foreign domination, they will never fail to succeed. I have no fears for the result. We shall end by having a Landwehr such as the slavish spirit of the French could never produce. England will yield us its subsidies; we will renew our alliances with Russia and Austria. I know well the principles of the coalition. The sole object which the allied sovereigns have in view is to put a limit to the system of aggression which Napoleon has adopted, and which he pursues with the most alarming rapidity. In our first wars against France, at the commencement of its Revolution, we fought for the rights of kings, in which, for my part, I felt very little interest; but now the case is totally changed; the population of Prussia makes common cause with its government, the safety of our hearths is at stake; and reverses, when such a spirit is abroad, destroy armies without breaking the spirit of a nation. I look forward without anxiety to the future, because I foresee that fortune will not always favour your emperor. The time may

come when Europe in a body, humiliated by his exactions, exhausted by his depredations, will rise up in arms against him. The more he enchains different nations, the more terrible will be the explosion when they burst their fetters. Who can now dispute the insatiable passion for aggrandizement with which he is animated? No sooner is Austria subjugated than Prussia is destroyed; and, though we have fallen, Russia remains to continue the strife. I cannot foresee the issue of this struggle; but, supposing it to be favourable to France, it will come to an end. You will speedily see new wars arise, and, if we hold firm, France, worn out with conquests, will at length succumb.*"

Blucher was right in these anticipations. It is not in the suffering, but the prosperity of nations that the seeds of ruin are in general to be found: the anguish and humiliation which are the consequences of weakness, disunion, or corruption, are often the severe school of ultimate improvement. If we would discern the true cause of the fall of Prussia, we must go back to the vacillation and selfishness which characterized its national councils during the ten prosperous years which succeeded the treaty of Bâle in 1795; which caused it to temporize when the moment for action had arrived, and brought it in heedless security to the very edge of perdition; which lowered the national feeling by sacrificing the national honour, and paralyzed the arms of its natural allies by inspiring distrust in the good faith of its government. In the misery and degradation consequent on the battle of Jena is to be found the commencement of the causes destined to produce the glorious resurrection of 1813. Periods of adversity are seldom lost in the end to nations any more than individuals: it is the flow of unbroken prosperity which, by promoting the growth of the selfish passions, is the real source, in most cases, of irremediable ruin. Those twin curses of humanity, despotism and Democracy, act in precisely the same way on the sources of public welfare, by poisoning the fountains of individual exertion, and inducing in the active members of society a slavish submission to the authority of the irresistible executive, or a selfish prosecution of their own interest, instead of a generous devotion to the public good. Till this last stage of national degradation has arrived, there is always a hope of revival to its fortunes: no misfortunes are irremediable as long as the spirit of the people is unbroken; no calamities irreparable but those which undermine their virtue.

ates of the French Revolution most gloomy in their anticipations of its ultimate effects. Ardour of imagination, the habit of looking before the multitude into the ultimate consequences of passing events, a sincere desire for the good of mankind, naturally in the same minds, in 1790 and 1806, produced these opposite results.

CHAPTER XLIV.

CAMPAIGN OF EYLAU.

DEC., 1806—MARCH, 1807.

ARGUMENT.

Advance of the French and Russians to the Vistula.—Military Preparations of Russia.—Composition and Character of her Armies.—Imprudent Division of their Force by the Invasion of Turkey.—Embarrassment of Napoleon on the Polish Question.—Argument in favour of the Restoration of Poland.—Argument on the other Side against interfering in their Concerns.—Napoleon adopts a middle Course, and rouses only Prussian Poland.—His dubious Bulletins on the Subject.—He proposes to Austria to exchange Galicia for Silesia, which is refused.—His strong Declarations in favour of Turkey.—His Proclamation to his Soldiers on the Anniversary of Austerlitz.—Its great Effect.—Formation of the Temple of Glory at Paris.—Secret Designs of Napoleon in the Construction of this Edifice.—Vast Efforts of Napoleon to recruit his Army, and secure its Flanks and Rear.—Enormous Contributions levied on all the conquered States.—Positions of the French on the Vistula; and of the Russians.—Their Dispositions, and Evacuation of Warsaw.—They resume the Offensive.—Proclamation of Alexander to the Soldiers.—Application for Aid in Men and Money to England.—Its impolitic Refusal.—Advance of Napoleon to Warsaw.—General Enthusiasm there.—He resumes the Offensive against the Russians.—Forcing of the Passage of the Ukra by the French.—Kamenski loses his Presence of Mind, and orders the Sacrifice of his Artillery.—Object of Napoleon in these Movements.—Description of the Field at Pultusk, and of the Positions of the hostile Bodies there.—Battle of Pultusk, which turns out to the Disadvantage of the French.—Combat of Golymin.—Its doubtful Issue.—Napoleon stops his Advance, and puts his Army into Winter-quarters.—The Russians also go into Cantonments.—Results of the Winter Campaign, and Impression which it produces in Europe.—Positions of the French Army in its Winter-quarters.—Napoleon's Measures to provide Food and secure his Cantonments.—Successive Reduction of the Fortresses in Silesia.—Capture of Brieg and Schweidnitz, and total Conquest of Silesia.—Operations on the Left towards Pomerania and Dantzic, and of Marmont in Illyria.—Napoleon's Efforts to stimulate the Turks to vigorous Resistance.—Delightful Winter-quarters of the French at Warsaw.—Enthusiastic Reception which they there experienced from the Polish Women.—Kamenski goes Mad.—Benningssen assumes the Command of the Russian Army, and Advances against Bernadotte.—His rapid March towards Königsberg, and Surprise of Ney's Corps.—Bernadotte, attacked near Mohrungen, escapes with Difficulty.—Graudenz is relieved, and the French Left Wing driven back by the Russians.—Extraordinary Energy of Napoleon in reassembling his Army.—He marches to the Rear of Benningssen, who discovers his Design and falls back.—The French pursue the Russians, who at length resolve to give Battle.—Combat of Landsberg.—And of Leibstadt, and retreat of Lestocq.—Relative Forces on both Sides.—Bloody Combats around Eylau the Day before the Battle.—Anxious Situation of both Armies during their night Bivouac.—Description of the Field of Battle, and the Distribution of either Army.—Positions of the French Forces.—Battle of Eylau.—Defeat of Augereau.—Imminent Danger of Napoleon.—Grand Charge by the Cavalry and Imperial Guard on the Russian Centre.—Great Success of Davoust on the French Right.—Benningssen throws back his Left to arrest the Evil.—Lestocq at length appears on the Russian Right, and restores the Battle.—Schloditten is carried by Ney, and retaken by Benningssen, who, contrary to the Opinion of his Officers, resolves to retreat.—Results of the Battle.—Losses on both Sides.—Aspect of the Field of Battle on the following Day.—Inactivity and Losses of the French after the Battle.—Napoleon calls in all his Re-enforcements and proposes Peace to Prussia, which is refused by that Power.—Napoleon retreats, and goes into Cantonments on the Passage.—The Russians advance, and also go into Cantonments.—Both Parties claim the Victory at Eylau.—Operations of Essen against Savary.—Combat of Ostrolenka.—Immense Sensation excited by the Battle of Eylau over Europe.—Universal Consternation at Paris on the News being received of Eylau.—Napoleon demands a third Conscription since the 14th of October, 1806.—Great Activity of Napoleon to repair his Losses.—Extreme Danger of his Situation at this Juncture.—Ruinous Effect

of the Surrender of the Prussian Fortresses.—Observations on the Military Movements of both Parties.

The campaign of Jena had destroyed the powers of Prussia: inconsiderate valour Advance of the French and Russians to the Vistula. had yielded to overwhelming force and skilful combination; with more justice the king than the people could say with Francis I. at Pavia, *Tout est perdu fors l'Honneur*. But Russia was still untouched, and while her formidable legions remained unsubdued, the war, so far from being completed, could hardly be said to be seriously commenced. Napoleon felt this: on the Trebia, at Novi, at Diernstein, and Austerlitz, the French had experienced the stern valour of these Northern warriors; and he counted the hours, as the mortal conflict approached, which was to bring either universal empire or irreparable ruin in its train. Nor were the Russians less desirous to commence the struggle. Confident in the prowess of their arms, proud of the steady growth of an empire, whose frontiers have never yet receded, and which its meanest peasant believes is one day to subdue the world, they anticipated a glorious result from their exertions, and, without underrating the forces of their opponents, indulged a sanguine hope that the North would prove the limits of their power, and that, while they repelled them from their own frontiers, they would afford the means of liberation to oppressed Europe. The severity of a Polish winter could not deter these undaunted combatants: eager for the conflict, both their mighty hosts approached the Vistula; and at a period of the year when some respite is usually given in ordinary war to suffering humanity, commenced a new campaign, and advanced through a snowy wilderness to the bloody fields of Prussisch-Eylau.

Alexander had displayed the greatest activity in repairing the losses which his Military pre-army had sustained in the campaign arations of of Austerlitz. Thirty fresh squad- Russia. rons and fifty-one battalions had been added to its amount, all the chasms occasioned by the casualties of war supplied, and the new French organization into divisions universally adopted.*

* The Russian army was divided into eighteen divisions, each of which was composed of six regiments of infantry, ten squadrons of heavy cavalry, ten of light, two batteries of heavy cannon, three of light, or horse artillery, and a company of pioneers; in all for each, eighteen battalions, twenty squadrons, and seventy-two pieces of cannon: about 12,000 men. The army was thus divided:

	Battalions. Squadrons. Cannon.		
1. Guard under Grand-duke Constantine	33	35	84
2. Polish army, eight divisions under Osterman, Sacken, Galitzin, Tousskof, Barclay de Tolly, Doctoroff, Essen, Gortshakoff, afterward Kamenski	147	170	504.
3. Army of Moldavia, five divisions under Michelson as general-in-chief, commanded by Wolkonsky, Zacomilsky, Milaradowitch, Meindorf, and the			

Nor was this all: anxious to rouse the religious enthusiasm of his subjects, and deeply impressed with the magnitude of the struggle which was approaching, he had called out a defensive militia of six hundred thousand men, and excited their devout loyalty to the highest degree by a proclamation, in which Napoleon was represented as the relentless enemy of the Christian religion, and they were called on to shed their best blood in defence of the faith of their fathers.* This proclamation excited the ridicule of a large part of Europe, still tainted by infidel fanaticism, and not then awakened to the impossibility of combating Revolutionary energy with any other weapons but those of religious fervour; but it was admirably calculated for the simple-minded people to whom it was addressed, and excited such an enthusiasm, that not only was this immense armament without difficulty raised, but, contrary to usual custom, the peasants drawn for the regular army joyfully left their homes, and marched with songs of triumph, amid the blessings of their countrymen, towards the frontier, the anticipated scene of their glory or their martyrdom.†

The troops who were now pressing forward to defend the western frontiers of the Empire—were very different from those with whom the French had hitherto, for the most part, contended in the fields of Germany or the Italian plains. The forces of civilization, the resources of art, were exhausted; the legions of Napoleon had reached the old frontier of Europe; the energy of the Desert, the hosts of Asia were before them; passions hitherto, save in La Vendée, inexperienced in the contest, were now brought into action. Religious enthusiasm, patriotic ardour, the fervour of youthful civilization were arrayed against the power of knowledge, the discipline of art, and the resources of ancient opulence. There were to be seen the serf but recently emancipated from the servitude of his fathers, whose mother and sisters had checked the lamentations of nature when he assumed the military habit, and

Duke of Richelieu.....	90	160	306
4. Intermediate corps under the Count Apraxin, consisted of the divisions of General Ritschhoff, Prince Labanoff, and Gortchakoff	54	30	144
Total.....	324	335	1038

besides the local corps in Georgia, Finland, and garrison battalions. The whole regular force was about 360,000 men; but in no country is the difference between the numbers on paper and in the field so great as in Russia, and the troops in the campaign of Poland never exceeded 80,000 men.—See JOMINI, ii., 335, and WILSON, 4.

* “Bonaparte,” said this proclamation, which was read in all the Russian churches: “after having, by open force or secret intrigue, extended his power over the countries which he oppresses, menaces Russia, which Heaven protects. It is for you to prevent the destroyer of peace, of the faith, and of the happiness of mankind, from seducing the orthodox Christians. He has trampled under foot every principle of truth: in Egypt he preached the Koran of Mohammed, in France manifested his contempt for the religion of Jesus Christ by convoking Jewish synagogues. Do you, you fellow-creatures, fly the persecutor of Christians; do you desire to be saved, oppose an invincible barrier to his advances. He has dared to the combat God and Russia; prove that you are the defenders of the Most High and of your country. Chase far from your frontiers that monster; punish his barbarity to so many innocents, whose blood cries aloud to Heaven for vengeance; God will hear the prayer of the faithful; he will shield you with his power, he will cover you with his grace, your exploits will be celebrated by the Church and by your country; immortal crowns or abodes of eternal felicity await you.”—HARDENBERG, ix., 376.

VOL. II.—N N N

bade him go forth, the champion of Christendom, to present glory or future paradise; there the peasant, inured from infancy to hardy exercise, ignorant alike of the enjoyments and the corruptions of urban society, long accustomed to rural labour, and habituated equally to the glow of a Russian bath or the severity of a Scythian winter; there the Cossack, whose steed, nourished on the steppes of the Don, had never yet felt the curb, while his master, following his beloved Attaman to the theatre of action, bore his formidable lance in his hand, his pistols and sword by his side, and his whole effects, the fruit of years of warfare, in the folds of his saddle. Careless of the future, the children of the Desert joyfully took their way to the animating fields of plunder and triumph: mounted on small but swift and indefatigable horses, they were peculiarly adapted for a country where provisions were scanty, forage exhausted, and hardships universal; the heat of summer, the frost of winter, were alike unable to check the vigour of their desultory operations; but when the hosts on either side were arrayed in battle, and the charge of regular forces was requisite, they often appeared with decisive effect at the critical moment, and urging their blood horses to full speed, bore down, by the length of their spears and the vehemence of their onset, the most powerful cavalry of Western Europe.*†

If the whole disposable Russian forces had been united upon the Vistula, they would have presented an imposing mass of a hundred and fifty thousand warriors, against which all the efforts of Napoleon would, in all probability, have been exerted in vain. But, by a strange and unaccountable infatuation, at the very moment when this formidable contest awaited them on the Polish plains, a large portion of their disposable force was drawn off to the shores of the Danube, and a Turkish super-added to the already overwhelming weight of the French war. Of the causes which led to this unhappy diversion, and the grounds which the cabinet of St. Petersburg set forth in vindication of their aggression on the Ottoman dominions, a full account will be given in the sequel of this work; but, in the mean time, its effect in causing a most calamitous division of the Russian force is too obvious to require illustration. At Eylau the hostile forces on either side were nearly equal, and both retired without any decisive advantage from that scene of blood: ten thou-

* Wilson, viii., 28. Personal observation.

† “Mounted,” says Sir Robert Wilson, “on a little, ill-conditioned, but well-bred horse, which can walk with ease at the rate of five miles an hour, or dispute in his speed the race with the swiftest, with a short whip on his wrist, as he wears no spur, armed with the lance, a pistol in his girdle, and a sword, the Cossack never fears a competitor in single combat; but in the Polish war he irresistibly attacked every opposing squadron in the field. Terror preceded his charge, and in vain discipline endeavoured to present an impediment to the protruding pikes. The cuirassiers alone preserved some confidence, and appeared to baffle the arms and skill of the Cossack; but in the battle of Prussia, when the cuirassiers made their desperate charge on the Russian centre, and passed through an interval, the Cossacks instantly bore down on them, speared them, unhorsed them, and in a few moments five hundred and thirty Cossacks reappeared in the field, equipped with the spoils of the slain. But they did not permanently wear them: the steel trophies were conveyed by subscription to the Don and the Volga, where they are inspected as trophies of their prowess, and respect for the pride of their kindred and glory of their nation.”—WILSON, 27, 28. When the author saw the Cossacks of the Don and the guard at Paris in May, 1814, this description was still precisely applicable. † See chap. li., on the Turkish war.

and additional troops would there have overthrown Napoleon and driven him to a disastrous retreat, while fifty thousand of the best troops of the Empire were uselessly employed on the banks of the Danube. At the same time, it is evident that the war in Moldavia was resolved on, and the necessary orders transmitted before the disasters in Prussia were known, or the pressing necessity for succour on the Vistula could have been anticipated; the battle of Jena was fought on the 14th of October, and on the 23d of Nov. 23. November General Michelson entered Moldavia and commenced the Turkish campaign. But though the Russian cabinet is thus not answerable for having given orders to commence an additional war unnecessarily in the midst of the desperate struggle in the north of Germany, yet it cannot be relieved of the responsibility of having, without any adequate cause, provoked hostilities in the southern provinces of its empire, at a time when the contest in Saxony, if not commenced, might at least have been easily foreseen, when the resolution to annul the treaty, signed by D'Oubril at Paris, had been already taken, and all the strength of Europe was required to meet the encounter with the conqueror of Austerlitz on the banks of the Elbe.*†

While Russia, distracted by the varied interests of her mighty dominions, was thus running the hazard of destruction on the Polish question, her forces in presence of the enemy, Napoleon was extremely perplexed at Posen by the considerations of the Polish question. The destiny of this people, which enters so deeply into the consideration of every political combination of the nineteenth century, here stood in the very foremost rank, and called for immediate decision. The advance of the French armies through Prussian Poland towards Warsaw, the ambiguous, but still encouraging words of the emperor to the numerous deputations which had approached him, had awakened to the highest degree the hopes and expectations of that unfortunate, but impassioned race. A solemn deputation from Great Poland, headed by Count Dzadiniki, waited upon Napoleon, and announced an immediate insurrection of the Polish nation, headed by their nobles, palatines, and chiefs; a great ferment prevailed in Lithuania, and symptoms of alarming effervescence were visible even in Galicia. The crisis was of the most violent kind: an immediate decision was called for by imperative necessity; Napoleon was much at a loss how to act, and the question was warmly debated by the council assembled at his headquarters.

On the one hand, it was urged by the friends of Poland, "that the only ally in the east of Europe, on whom France could really and permanently depend, was now prepared to range itself by her side, and enter into a contest of life or death for her support. The alliances of cabinets may be dissolved, the friendships of kings may be extinguished, but the union of nations, founded on identity of interest and community

of feeling, may be calculated upon as of more lasting endurance. But what people was ever impelled towards another by such powerful motives, or animated in the alliance by such vehement passions as Poland now is towards France? Alone of all great nations, in ancient or modern times, she has been partitioned by her powerful and ambitious neighbours, struck down to the earth by hostile armies, and swept, by repeated spoiliations, from the book of existence. Her nationality is destroyed, her people scattered, her glories at an end. Is it possible that these injuries can be forgotten, that such unparalleled calamities leave no traces behind them, in the breasts of the descendants of the Sarmatian race? Is it not certain, on the contrary, that they have left there profound impressions, ineradicable passions, which are ready, on the first favourable opportunity, to raise throughout the whole scattered provinces of the old Republic an inextinguishable flame? Where has the emperor found such faithful followers, such devoted fidelity, as in the Polish legions of the Italian army, whom Moscovite barbarity drove to seek an asylum in foreign lands? Is it expedient to refuse the proffered aid of a hundred thousand such warriors, who are ready to fly to his standards from the whole wide-spread fields of Sarmatia? True, they are undisciplined—without arms, fortresses, magazines, or resources—but what does all that signify? Napoleon is in the midst of them: his invincible legions will precede them in the fight; from their enemies and their spoilers his victorious sword will wrest the implements of war; in their example they will see the model of military discipline. The Poles are by nature warriors; little discipline or organization is requisite to bring them into the field. When the regular forces of Germany had sunk in the conflict, their tumultuary array chased the infidels from the heart of Austria, and delivered Vienna from Mussulman bondage. Nor is it merely a temporary succour which may be anticipated from their exertions: lasting aid, a durable alliance, may with confidence be expected from their necessities. Surrounded by the partitioning powers, they have no chance of independence but in the French alliance; the moment they desert it, they will be again crushed by their ambition. Not only the nationality of Poland, but the individual safety of its whole inhabitants, must forever bind them to their deliverers; they well know what cruel punishments and confiscations await them if they again fall under the Moscovite yoke. In restoring the oldest of European commonwealths, therefore, not only will a memorable act of justice be done, a memorable punishment of iniquity inflicted, but a durable alliance on the frontier of civilization will be formed, and a barrier erected against the inroads of barbarism in the people who, in every age, have devoted their blood to combating its advances."*

Specious as these arguments were, and powerfully as they appealed to the generous feelings of our nature, it may be doubted whether they were not opposed by others of greater solidity. "It is in vain," it was urged, "to dwell on the misfortunes of Poland, or represent her partition as an unavoidable calamity for which her inhabitants are noways answerable. Such a misfortune may doubtless sometimes occur to a small state surrounded by larger ones;

Arguments on the other side against interfering with the Poles.

* *Jom.*, ii., 336, 337. *Ann. Reg.*, 1806, 209. *Bign.*, vi., 57.

† The determination to refuse the ratification of the treaty signed at Paris by D'Oubril was taken at St. Petersburg on the 25th of August; the Dneister was passed on the 23d of November. The resolution to provoke a Turkish war, therefore, was taken after it was known that a continued struggle with the enemy, whose strength they had felt at Austerlitz, had become inevitable.—*Ann.*, ii., 429.

* *Jom.*, i., 328. *Oginski*, ii., 335, 336, 338.

* *Jom.*, ii., 328. *Oginski*, ii., 337.

but was that the case in the present instance? On the contrary, Poland was originally the most powerful nation in the north: her dominions extended from the Euxine to the Baltic, and from Swabia to Smolensko. All Prussia, great part of the Austrian dominions, and a large portion of Russia, have at different times been carved out of her wide-spread territories. So far from being weaker than Russia, she was originally much stronger; and the standards of the Jagellons and the Piasts have more than once been planted in triumph on the walls of the Kremlin. Nevertheless, her history for the last five hundred years has been nothing but a succession of disasters, illuminated at intervals by transient gleams of heroic achievement; and, notwithstanding the valour of her inhabitants, her frontiers have, from the earliest times, been constantly receding, until at length she became the prey of potentates who had risen to importance by acquisitions reft from herself. So uniform and undeviating a course of misfortune, in a nation so brave, so enthusiastic, and so numerous, as even, at the moment of its partition, to contain sixteen millions of inhabitants, argues some incurable vice in its domestic institutions. It is not difficult to see what this vice was, when we contemplate the uniform and fatal weakness of the executive, the disorders consequent on an elective monarchy, the inveterate and deadly animosity of faction, and the insane Democratic spirit of a plebeian noblesse, which made John Sobieski, a century before its final destruction, prophesy the approaching ruin of the commonwealth.

"Such being the character of Polish institutions, as they have been ascertained by experience, and proved by the ruin of the commonwealth, it becomes a most serious question whether it is for the interest of France, for the aid of such an ally, to incur the certain and inveterate hostility of the three northern powers. That Russia, Prussia, and Austria will thenceforth be combined in an indissoluble alliance against France, if Poland is restored, and the rich provinces now enjoyed by them from its partition wrested from their vast dominions, is evident; and, whatever may be thought of the strength of the Sarmatian levies, there can be but one opinion as to the military resources which they enjoy. What aid can Polish enthusiasm bring to the French standards to counterbalance this strong combination of the greatest military powers of Europe? A hundred thousand horsemen, brave, doubtless, and enthusiastic, but destitute of fortresses, magazines, and resources, and inhabiting a level plain, unprotected by mountains, rivers, or any natural frontier, and open on all sides to the incursions of their well-organized opponents—supposing that, by the aid of the vast army and still vaster reputation of Napoleon, they shall succeed at this time in bearing back the Russian hosts, and wresting Lithuania from their grasp, what may not be apprehended from the appearance of Austria on the theatre of conflict, and the debouching of a hundred and fifty thousand men in the rear of the grand army, when far advanced in the deserts of Moscow? That the cabinet of Vienna is preparing for the conflict is evident; that she is arming is well known; fear and uncertainty as to the future alone restrain her forces; but the stroke which, by restoring Poland, severs Galicia from her empire, will at once determine her policy, and bring the imperial legions in formidable strength to the banks of the Elbe. Even

supposing that, by an unprecedented series of victories, these dangers are averted for the moment, and the French battalions, loaded with honours, regain the Rhine, how is Poland, still torn by intestine faction, and destitute of any solid institutions, to withstand her formidable military neighbours; and how is France, at the distance of four hundred leagues, to protect a power whose internal weakness has always been such that it has never been able to protect itself against its own provinces? If a barrier is to be erected against Russian ambition, and a state formed dependant on the French alliance for its existence, far, better to look for it in Prussia, whose history exhibits as remarkable a rise as that of Poland does a decline, and the solidity of whose institutions, not less than the firmness of its national character, has been decisively exhibited in contending with all the military forces of Europe during the Seven Years' War.*

Pressed by so many difficulties, and struck in an especial manner by the danger of bringing the forces of Austria upon his rear, while engaged in the hardships of a winter campaign in Poland, Napoleon resolved upon a middle course.† Irrevocably fixed upon humbling Prussia to the dust, and entirely indifferent to the irritation which he excited among its people, he resolved to rouse to the uttermost the inhabitants of Prussian Poland, but at the same time sedulously abstain from any invitations to Galicia to revolt, and even held out no encouragement to the Russian provinces of Lithuania to join the standard of Polish independence. Kosciuszko, who, since his heroic achievements in 1794, had lived in retirement near Fontainebleau, was invited by Napoleon to join his countrymen, and a proclamation, drawn in his name, was even published in the French papers, in which he promised speedily to put himself at their head;‡ but the course of time soon dispelled the illusion, and it became painfully evident to the Poles that their illustrious hero, despairing of success, or having no confidence in their pretended allies, was resolved to bear the responsibility of no future insurrections under such auspices. In fact, he had been profoundly affected by the indifference manifested by all the European powers to the fate of Poland on occasion of the last partition, and thoroughly impressed with the idea that no efficacious co-operation could be expected from any of them; and, while he rendered full justice to the military talents of Napoleon, despaired of seeing the deliverance of Sarmatia in good faith attempted by his despotic arms.§ The task of rousing the

* Jom., ii., 329.

† "I love the Poles," said he to Rapp, after having received one of their deputations: "their ardour pleases me. I could wish to render them an independent people, but it is no easy undertaking. Too many nations are interested in their spoils—Austria, Russia, Prussia. If the match is once lighted there is no saying where it would stop. My first duty is towards France, and it is no part of it to sacrifice its interests to Poland; that would lead us too far. We must leave its destinies in the hands of the Supreme Disposer of all things—to Time. It will possibly teach us hereafter what course we ought to pursue."—Bour., vii., 250.

‡ "Kosciuszko," said this fabricated epistle, dated the 1st of November, "is about to place himself in the midst of you. He sees in your deliverers no ambitious conquerors; the great nation is before you; Napoleon expects you; Kosciuszko calls you. I fly to your succour, never more to leave your side. Worthy of the great man whose arm is stretched forth for your deliverance, I attach myself to your cause never again to leave. The bright days of Poland have returned: we are under the ægis of a monarch accustomed to overcome difficulties by miracles."—HARDENBERG, ix., 329.

§ Oginski, ii., 337.

Poles in the Prussian dominions was therefore committed to Dombrowski and Wybicki: the former of whom had acquired a deserved celebrity at the head of the Polish legion in Italy, while the latter possessed such influence with his countrymen as to promise great advantage to the cause of Napoleon.

At the same time, every care was taken to excite the feelings and diminish the apprehensions of the Poles of Prussia: heart-stirring proclamations in Kosciusko's name were addressed to them by the generals of their nation in the Italian army, but that brave man himself, faithful to the oath he had taken to the Emperor of Russia, and aware of the delusive nature of Napoleon's support, refused to take any part in these proceedings, resisted all the brilliant offers which he made to induce him to engage in his service, and even had the boldness, in foreign journals, to disavow the letter which the French government had published in his name. Notwithstanding this reserve, however, the advance of the French armies to Warsaw, and the sedulous care which they took to save the inhabitants from every species of insult or contribution, produced an extraordinary ferment in the Polish provinces: universally they were hailed as deliverers; the substantial benefits, the real protection, the fostering tranquillity of the Prussian administration were forgotten in the recollection of ancient achievements, and, incited by the heart-stirring prospect of coming independence, the nation was fast running into its ancient and ruinous anarchy. The public exultation was at its height when Napoleon arrived at Posen: several regiments were already formed in Prussian Poland, and the arrival of the French troops in Warsaw, which the Russians evacuated at their approach, was universally hailed as the first day of Polish Restoration.*

Napoleon was not insensible to the important effects of this national enthusiasm, both in augmenting the resources of his own army, and intercepting those of his opponents; but, at the same time, he felt the necessity of not rousing all Poland in a similar manner, or incurring the immediate hostility of Austria, by threatening the tenure by which she held her Polish acquisitions. He resolved, therefore, to moderate the general fervour, and confine it to the provinces of Prussia, where it was intended to excite a conflagration; and this was done by the bulletin which appeared on the 1st of December: "The love which the Poles entertain for their country, and the sentiment of nationality, is not only preserved entire in the heart of the people, but it has become more profound from misfortune. Their first passion, the universal wish, is to become again a nation. The rich issue from their chateaus to demand with loud cries the re-establishment of the nation, and to offer their children, their fortune, their influence in the cause. That spectacle is truly touching. Already they have everywhere resumed their ancient costumes, their ancient customs: is, then, the throne of Poland about to be restored, and is the nation destined to resume its existence and independence? From the depth of the tomb is it destined to start into life? God alone, who holds in his hand the combination of great events, is the arbiter of that great political problem, but

certainly never was an event more memorable or worthy of interest." Situated as Napoleon was, the reserve of this language was an act of humanity as well as justice to the unhappy race whose destiny it still held in suspense; but it contributed powerfully to allay the rising enthusiasm of the Russian and Austrian provinces of the ancient commonwealth, and the prudent, despairing of any national resurrection from such an ally, began to ask "if the Restoration of the Republic of Poland could in good faith be expected from the man who had extinguished the liberty of his own country?"†

One chance, and only one, remained to Napoleon of smoothing away the difficulties which surrounded the restoration of Poland, and that consisted in the proposal, which at this time he made to Austria, to exchange its share of Poland for its old province of Silesia. During the negotiation with Prussia for a separate peace, he only held out the prospect of this exchange in a doubtful manner to the cabinet of Vienna; but no sooner had the King of Prussia refused to ratify the armistice of Charlottenberg, than General Anderossey was authorized to propose it formally to that power. Count Stadion replied, that the good faith of the imperial government would not permit them to accept a possession which was not assented to by Prussia; and it would, indeed, have been an extraordinary fault in policy, as well as breach of morality, to have thus despoiled a friendly power and reopened an ancient wound, at the very moment when a concentration of all energies was required to resist the enemy who threatened to destroy all the European states. In consequence of this refusal, the conduct of Napoleon in regard to Poland became still more guarded, and although a provisional government and local administration were formed at Warsaw, yet none but natives of Prussian Poland were admitted to any share in the direction of affairs.‡

While this great political question was under

* Oginski, ii., 339. Bign., vi., 80, 81. Lucches., ii., 226.

† Bign., vi., 90, 91. Hard., ix., 349, 350.

‡ During his stay at Posen the French emperor made, on repeated occasions, the strongest professions Napoleon's strong of his resolution to support the Turks against declaration in fa- the invasion of the Russians. To the Prus- vor of Turkey. sian plenipotentiaries at Charlottenberg he declared, "that the greatest of all the evils which Prussia has occasioned to France by the late war, is the shock they have given to the independence of the Ottoman Porte: as the imperious commands of the Emperor of Russia have brought back to the government of Wallachia and Moldavia the hospodars justly banished from their administration, which, in effect, reduces their principalities to the rank of Russian provinces. But the full and complete independence of the Ottoman Empire will ever be the object most at heart with the emperor, as it is indispensable for the security of France and Italy. He would esteem the successes of the present war of little value if they did not give him the means of reinstating the Sublime Porte in complete independence. In conformity with these principles, the emperor is determined that, until the sultan shall have recovered the full and entire command both of Moldavia and Wallachia, and is completely secured in his own independence, the French troops will not evacuate any part of the countries they have conquered, or which may hereafter fall into their power!" The same resolution was publicly announced in the bulletins, when intelligence of the ill-judged invasion of the principalities arrived; and yet, within six months afterward, Napoleon, though Turkey had faithfully and gallantly stood to the French alliance, under circumstances of extreme peril, as will shortly appear, signed a treaty at Tilsit, by which not only were Wallachia and Moldavia ceded to Russia, but provision was made for the partition of the whole Turkish dominions in Europe!

* Oginski, ii., 337, 338. Hard., ix., 344, 347. Bign., vi., 79, 81.

* Lucches., ii., 186, 187.

His proclamation to his soldiers on the anniversary of Austerlitz.

discussion, during the fortnight that the emperor's stay continued at Posen, the army in great force approached the Vistula; but the severity of the weather, and the incessant fatigue of the troops in the long and dreary marches through that monotonous country at so inclement a season, produced a general feeling of despondency among the soldiers, and gave rise to a fermentation which even Napoleon deemed alarming. To the intoxication consequent on the victory of Jena had succeeded a mortal disquietude, when, immediately after such glorious successes, instead of the cantonments and repose which they expected, they found themselves dragged on in the depth of winter to begin a new campaign, amid pathless snows and gloomy forests. In order to dispel these sinister presentiments, Napoleon took advantage of the anniversary of the battle of Austerlitz to address an animating proclamation to his army: "Soldiers!

Dec. 2. you were on the memorable field of Austerlitz. The Russian battalion fled in terror before you, or, surrounded on all sides, laid down their arms to their conquerors. On the day following they read the words of peace, but they were deceitful. Hardly had they escaped, by the effects of a generosity, perhaps blameable, from the disasters of the third coalition, than they set on foot a fourth; but the new ally on whose skilful tactics they placed all their hopes is already destroyed. His strongholds, his capital, his magazines, two hundred and eighty standards, seven hundred fieldpieces, five first-rate fortresses, are in our power. The Oder, the Warta, the deserts of Poland, have been alike unable to restrain your steps. Even the storms of winter have not arrested you an instant: you have braved all—surmounted all. Everything has flown at your approach. In vain have the Russians endeavoured to defend the capital of the ancient and illustrious Poland. The French eagle hovers over the Vistula; the brave and unfortunate Poles, when they behold you, imagine that they see the soldiers of Sobieski returning from his memorable expedition. Soldiers! we shall not again lay down our arms till a general peace has secured the power of our allies, and restored to our commerce liberty and its colonies. We have conquered on the Elbe and the Oder, Pondicherry, our establishments in the Eastern Seas, the Cape of Good Hope, and the Spanish colonies. Who has given the Russians right to hope that they can balance the weight of destiny? Who has authorized them to overturn such great designs? Are not they and we the soldiers of Austerlitz?"* Even in the forests of Poland, and amid ice and snow, the thoughts of Napoleon were incessantly fixed on England and the East; and it was to overthrow her maritime powers on the banks of the Ganges that a campaign was undertaken in the depth of winter on the shores of the Vistula.

This proclamation, dictated by a profound knowledge of the French character, produced an extraordinary effect upon the soldiers. It was distributed with profusion over all Germany, and none but an eyewitness could credit the influence which it had in restoring the spirit of the men. The veterans in the front line forgot their fatigues and privations, and thought only

of soon terminating the war by a second Austerlitz on the banks of the Vistula: those who were approaching by forced marches in the rear redoubled their exertions to join their comrades in the more forward stations, and counted the days till they gained sight of the eagles which appeared to be advancing to immortal renown. The better to improve upon these dispositions, and at the same time establish a durable record of the glorious achievements of his troops, Napoleon, by a decree published on the same day, gave orders for the erection of a splendid edifice on the site of the convent of the Madeleine, at the end of the Boulevards Italiennes at Paris, with the inscription, "The Emperor Napoleon to the Soldiers of the Grand Army." In the interior were to be inscribed, on tablets of marble, the names of all those who had been present in the battles of Marengo, Austerlitz, and Jena; on tablets of massy gold, the names of all those who had fallen in those memorable conflicts. There also were to be deposited the arms, statues, standards, colours, and monuments of every description taken during the two campaigns by the grand army. Every year a great solemnity was to commemorate the glory of these memorable days; but, in the discourses or odes made on the occasion, no mention was ever to be made of the emperor: like the statues of Brutus and Cassius at the funeral of Junia, his exploits, it was well known, would only be the more present to the mind from being withdrawn from the sight. This project took a strong hold of the imagination of Napoleon: he gave immediate orders for the formation of plans for the edifice, and the purchase of all the buildings in the vicinity, in order to form a vast circular place of uniform buildings around it; and, as a previous decree had directed the construction of the Bourse or public exchange on that situation, he shortly after directed the minister of the interior to look out for another isolated situation for that structure, "worthy of the grandeur of the capital, and the greatness of the business which will one day be transacted within its walls." Such was the origin of those beautiful edifices, the Church of the Madeleine and the Exchange at Paris; and which, carried on through other reigns and completed under another dynasty with that grandeur of conception and perseverance in execution by which all their public edifices are distinguished, will for centuries attract the world to Paris, as the centre of modern architectural beauty. To the world at that time Napoleon revealed no other design in the structure of the Madeleine than that of a monument to the grand army; but, penetrated with the magnitude of the mission with which he was persuaded he was intrusted of closing the wounds of the Revolution, he in his secret heart destined for it another and a greater object. He intended to have made it an expiatory monument to Louis XVI., Marie Antoinette, and the other victims of the Revolution: a design which he did not propose to declare for ten years, when the fever of Revolutionary ideas was in a great measure exhausted; and therefore it was that he directed its front to face the centre of the Place Louis XV., where those august martyrs had perished, and constructed it on the site of the Madeleine, where their uncoffined remains still lay in an undistinguished grave.*†

The commencement of a winter campaign which would obviously be attended with no ordinary bloodshed, required unusual precautions for the protection of the long line of communication of the grand army, and the efforts of Napoleon were incessant to effect this object. The march of troops through Germany was urged forward with all possible rapidity: some attempts at insurrection in Hesse were crushed with great severity; the conscripts, as they arrived from the Rhine or Italy at the different stations in the Prussian States, organized and sent into the field almost before they had acquired the rudiments of the military art; and the subsidiary contingent of Saxony, Hesse Cassel, and the states of the Rhenish confederacy raised to double their fixed amount. By these means not only were the rear and communications of the grand army preserved from danger, but successive additions to its active force constantly obtained; while at the same time Austria was overawed, whose formidable armaments on the Bohemian frontier already excited the attention of the emperor,* and had given rise to pointed and acrimonious remonstrances from his military envoy, General Anderossey, to the cabinet of Vienna.†

How to maintain these vast and hourly increasing armaments was a more difficult question; but here, too, the indefatigable activity of the emperor, and his grinding system of making war support war, contrived to find

Enormous contributions levied on all the conquered states.

Napoleon's secret design in this edifice. The Bourbons being of his family, and resting on external succour, in striving to do so, would have been considered as only avenging their own cause and increasing the public animosity. I, on the contrary, sprung from the people, would have purified their glory by expelling from their ranks those who had disgraced them; and such was my intention; but it was necessary to proceed with caution; the three expiatory altars at St. Denis were only the commencement; the Temple of Glory, on the foundation of the Madeleine, was destined to be consecrated to this purpose with a far greater eclat. It was there that near their tomb, above their very bones, the monuments of men and the ceremonies of religion would have raised a memorial to the memory of the political victims of the Revolution. This was a secret which was not communicated to above ten persons; but it was necessary to allow it to transpire in some degree to those who were intrusted with the preparation of designs for the edifice. I would not have revealed the design for ten years, and even then I would have employed every imaginable precaution, and taken care to avoid every possibility of offence. All would have applauded it, and no one could have suffered from its effects. Everything, in such cases, depends on the mode and time of execution. Carnot would never have ventured, under my government, to write an apology for the death of the king, but he did so under the Bourbons. The difference lay here, that I would have marched with public opinion to punish it, while public opinion marched with him so as to render him unassailable."—LAS CASAS, i., 370, 371.

* Jom., ii., 332, 333. Bign., vi., 94, 95.

† In an audience of the Emperor of Austria, which that general obtained, he said, with more of military frankness than diplomatic ambiguity, "The Emperor Napoleon fears neither his avowed nor his secret enemies. Judging of intentions by public acts, he is too clear-sighted not to dive into hidden dispositions; and in this view he would infinitely regret if he were compelled to arrive at the conclusion that the considerable armaments which your majesty has had on foot since the commencement of hostilities, were intended to be directed, in certain events, against himself. Your majesty appears to have assembled on the flank of the French army all your disposable forces, with magazines beyond all proportion to their amount. The emperor asks what is the intention of this army while he is engaged with Russia on the banks of the Vistula? Ostensibly intended for the preservation of neutrality, how can such an object be its real destination, when there is not the slightest chance of its being threatened?"—BIGNON, vi., 88

resources. Requisitions of enormous magnitude were made from all the cities in his rear, especially those which had been enriched by the commerce of England: Napoleon seemed resolved that their ill-gotten wealth should, in the first instance, be devoted to the necessities of his troops. The decrees against English commerce were everywhere made a pretext for subjecting the mercantile cities to contributions of astounding amount. Fifty millions of francs (£2,000,000) was in the first instance demanded from Hamburg as a ransom for its English merchandise, seized in virtue of the decree of the 21st of November, and it only escaped by the immediate payment of sixteen millions. In addition to this, that unhappy city, which had taken no part in hostilities against France, was ordered to furnish at once fifty thousand greatcoats for the use of the troops, while Lubeck, which had been successively pillaged by the troops of Blucher and Bernadotte, was compelled to yield up four hundred thousand lasts of corn,* and wood to the value of sixty thousand pounds; Leipsic re-deemed its English merchandise, seized for ten millions of francs (£400,000), while all the other Hanse Towns were subjected to equally severe requisitions; and the great impost of one hundred and sixty-nine millions of francs (£6,200,000), imposed after the battle of Jena, was everywhere collected from the Prussian territories with a rigour which greatly added to its nominal amount. Under pretext of executing the decree against English commerce, pillage was exercised in so undisguised a manner by the French inferior agents, that it attracted in many places the severe animadversion of the chiefs of the army. Thus, while the decrees of the emperor professed to be grounded on the great principle of compelling the English government, by the pressure of mercantile embarrassment, to accede to the liberty of the seas, in their execution they had already departed from their ostensible object; and, while the merchandise seized was allowed to remain in the emporium of British commerce, its confiscation was made a pretext for subjecting their neutral inhabitants to inordinate requisitions for the support of the grand army.†

By these different means Napoleon was enabled, before the middle of December, not only to bring a very great force of the force to bear upon the Vistula, but French on the to have the magazines and equipment necessary for qualifying it to undergo and keep the field during the rigours of a Polish winter in a complete state of preparation. Davoust and Murat had entered Warsaw at the end of November, which was abandoned Nov. 30. by the Prussians at their approach, and two days afterward they crossed the Vistula and occupied the important tête du pont of Dec. 2. Prague on its right bank, which was in like manner evacuated without a struggle; on the

* Each last weighs 2000 kilograms, or about half a ton.—BOUR., vii., 249.

† Bour., vii., 247, 248. Bign., vi., 98, 99. Hard., ix., 371, 372.

‡ As an example at once of the enormous magnitude of these contributions, and the provident care of the emperor for the health and comfort of his troops, reference may be made to his letter to the French governor of Stettin, from whom contributions to the amount of twenty millions (£800,000) was demanded, though the city only contained 32,000 inhabitants. "You must seize goods to the amount of twenty millions, but do it by rule, and give receipts. Take payment as much as possible in kind; the great stores of wine which its cellars contain would be of inestimable importance: it is wine which in winter can alone give the victory."—BIGNON, vi., 99.

right Lannes supported them and spread himself as far as the Bug; while on the left, Ney had already made himself master of Thorn, and marched out of that fortress, supported by the cavalry of Bessières and followed by the corps of Bernadotte; in the centre, Soult and Augereau were preparing with the utmost activity to surmount the difficulties of the passage of the Vistula between Modlin and Wyssogrod; thus, eight corps were assembled ready for active service on the Vistula, which, even after taking into view all the losses of the campaign, and the numerous detachments requisite to keep up the communications in the rear, could in all bring a hundred thousand men into the field, while the powerful re-enforcements on their march through Prussia and Poland promised to enable the emperor to keep up the active force in front at that great numerical amount.*

The Emperor Alexander was far from having an equal force at his disposal. The first army, under Benningsen, consisting of 68 battalions and 125 squadrons, could muster forty-five thousand men, divided into four divisions,* under Osterman Tolstoy, Sacken, Prince Gallitzin, and Sidmaratzki. It arrived on the Vistula in the middle of November: the second, consisting also of 68 battalions and 100 squadrons, arranged in the divisions of Tutschakoff, Doctoroff, Essen, and Aurepp, was about thirty thousand strong, its regiments having not yet recovered the chasms made by the rout of Austerlitz. The wreck of the Prussian forces, reorganized and directed under the able management of General Lestocq, was not more than fifteen thousand men, when the numerous garrisons of Dantzic and Graudentz were completed from its shattered ranks: thus the total allied force was not above ninety thousand strong, and for the actual shock of war in the field not more than seventy-five thousand men could be relied on. This imposing array was under the command of Field-marshal Kamen-skoi, a veteran of the school of Suwarow, nearly eighty years of age, and little qualified to measure swords with the Conqueror of Western Europe; but the known abilities of Benningsen and Buxhowden, the two next in command, would, it was hoped, compensate for his want of experience in the novel art of warfare which Napoleon had introduced. Headquarters had been established at Pultusk since the 12th of November: Warsaw, all the bridges of the Vistula were in the hands of the allies, and the firmness of their countenance gave rise to a belief that they were disposed to dispute the passage of that river with the invaders. Until the arrival of the second army, under Buxhowden, however, which was advancing by forced marches from the Niemen, they were in no condition to keep their ground against the French; and it was deemed better to give them the moral advantage arising from the occupation of the Polish capital, than hazard a general engagement with so decided an inferiority of force. After some

Nov. 12. Nov. 30. inconsiderable skirmishes, therefore, the Russians fell back at all points, their advanced posts were all withdrawn across the Vistula, and Warsaw, evacuated on the 28th, was occupied by Davoust on the 30th of November.†

Sensible of the inferiority of its forces to those which Napoleon had assembled on the Vistula from all the states of Western Europe, the Russian cabinet made an application to the British government for a portion of those subsidies which she had so liberally granted on all former occasions to the powers who combated the common enemy of European independence; and, considering that the whole weight of the contest had now fallen on Russia, and the danger had now approached her own frontiers, they demanded, not without reason, a loan of six millions sterling, of which one was to be paid down immediately for the indispensable expenses connected with the opening of the campaign. It was easy to see, from the answer to this demand now, however, that the spirit of Pitt no longer directed the British councils: the request was refused by the ministry on the part of government, but it was proposed that a loan should be contracted for in England for the service of Russia, and that, for the security of the lenders, the duties on English merchandise, at present levied in the Russian harbours, should be repealed, and in lieu thereof, the same duties should be levied at once in the British harbours, and applied to the payment of the interest of the loan to the British capitalists. This strange proposition, which amounted to a declaration of want of confidence, both in the integrity of the Russian government and the solvency of the Russian finances, was of course rejected, and the result was that no assistance, either in men or money, was afforded by England to her gallant ally in this vital struggle: an instance of parsimony beyond all example calamitous and discreditable, when it is considered that Russia was at that moment bearing the whole weight of France on the Vistula, and that England had at her disposal twenty millions in subsidies, and a hundred thousand of the best soldiers in Europe.*

No sooner had the heads of Buxhowden's column began to arrive in the neighbourhood of Pultusk, than Kamen-skoi, whose great age had by no means extinguished the vigour by which he was formerly distinguished, made a forward movement; headquarters were advanced to Nasielsk, and the four divisions of Benningsen's army cantoned between the Ukra, the Bug, and the Narew; while Buxhowden's divisions, as they successively arrived, were stationed be-

under addressed the following proclamation to his soldiers: "Prussia formerly was the barrier between France and Russia, when soldiers.

Napoleon's tyranny extended over all Germany. But now the flame of war has burst out also in the Prussian States, and, after great misfortunes, that monarchy has been struck down, and the conflagration now menaces the frontiers of our territory. It would be useless to prove to the Russians, who love the glory of their country and are ready to undergo every sacrifice to maintain it, how such events have contributed to render our present efforts inevitable. If honour alone compelled us to draw our sword for the protection of our allies, how much more are we now called upon to combat for our own safety? We have, in consequence, taken all the measures which the national security requires: our army has received orders to advance beyond the frontier; Field-marshal Kamen-skoi has been appointed to the command, with instructions to march vigorously against the enemy; all our faithful subjects will unite their prayers to ours to the Most High, who disposes of the fate of empires and battles, that he will protect our just cause, and that his victorious arm and blessing may direct the Russian army employed in the defence of European freedom."—DUMAS, xvii., 94.

‡ Previous to the opening of the winter campaign, Alex-

tween Golymin and Makow; and Lestocq, on the extreme right of the allies, encamped on the banks of the Drewentz, on the great road leading to Thorn, was advanced almost up to the walls of that fortress. The object of this general advance was to circumscribe the French quarters on the right bank of the Vistula; and, as it was known that Napoleon with his Guards was still at Posen, hopes were entertained that his troops would be entirely drawn from the right bank before his arrival, and the river interposed between the winter-quarters of the two armies.*

No sooner did Napoleon hear of this forward movement of the Russians than he broke up from his quarters at Posen, and arrived at Warsaw two days afterward. No words can do justice to the warlike and patriotic enthusiasm which burst forth in that capital when they beheld the hero, whom they hailed as their deliverer, actually within their walls, and saw the ancient arms of Poland affixed to the door of the hotel where the provisional government of Prussian Poland was established. The nobility flocked into the capital from all quarters: the peasantry everywhere assembled in the cities, demanding arms; the national dress was generally resumed; national airs universally heard; several regiments of horse were speedily raised, and, before the conclusion of the campaign, thirty thousand men were enrolled in disciplined regiments from the Prussian provinces alone of the ancient monarchy. Still the general enthusiasm did not make Napoleon forget his policy: the provisional government was established by a decree of the emperor, only "until

the fate of Prussian Poland was determined by a general peace;" and the prudent began to entertain melancholy presages in regard to the future destiny of a monarchy thus agitated by the passion of independence and the generous sentiments of patriotic ardour, with only a quarter of its former inhabitants to maintain the struggle against its numerous and formidable enemies.†

Having taken the precaution to establish strong *têtes du pont* at Prague, Modlin, Thorn, and all the bridges which he held over the Vistula, Napoleon lost not an instant in resuming the offensive, in order to repel this dangerous incursion of the enemy. Davoust, who formed the advanced guard of the army, was pushed forward from Prague on the road towards Pultusk, and soon arrived on the Bug; and, after having reconnoitred the whole left bank of that river, from its confluence with the Narew to its junction with the Vistula, made preparations for effecting the passage at Okernin, a little below the junction with the Ukra. The Cossacks and Russian outposts lined the opposite bank, and the difficulties of the passage were considerable; but the Russians were not in sufficient force to dispute it in a serious manner; and, after some sharp skirmishing, the experienced talents of General Gauthier, who was intrusted with the enterprise, established the French on the right bank, where they soon after sustained a severe action with the Russian advanced guard at Czarnowo. The Russians, however, returned in greater force; and

the result was, that all the French advanced guards which had been passed over were cut off, and their detachment fell back to the *tête du pont* established at the river. Meanwhile Soult advanced on the left to Ploussk, and Ney and Bernadotte, with a portion of Murat's cavalry, moved forward to Soldan and Biezun from Thorn, in such a manner as to threaten to interpose between the detached corps under Lestocq and Benningesen's main body, which was concentrated in the neighbourhood of Pultusk.*

This partisan warfare continued for ten days without any decisive result on either side; but the arrival of Napoleon at Warsaw was the signal for the commencement of more important operations. On the 23d of December, at day-break, he set out from that capital for the army, with the guards and Lannes' corps, and no sooner arrived at the advanced posts of Davoust than he dictated on the spot directions for the forcing the passage of the Ukra, which had hitherto bounded all their incursions.† The operation was carried into effect with the happiest success at Czarnowo, and that ardour with which the presence of the emperor never failed to animate the troops. After a severe action of fourteen hours the passage was forced, and Count Osterman, who commanded the Russian rear-guard, retreated upon Nasielsk. In this well-contested affair each party had to lament the loss of about a thousand men. Kamenskoï, finding the barrier which covered the front of his position forced, gave orders for concentrating his forces towards Pultusk, and the allies accordingly fell back at all points. They were vigorously pursued by the French, and another desperate conflict took place in front of Nasielsk between General Rapp and the Russians under Count Osterman Tolstoy, in which the latter were worsted, but not without a severe loss to the enemy; and the opposite bodies had become so intermingled that Colonel Ouwaroff, an aid-de-camp of Alexander, was made prisoner by the French, while Count Philippe de Ségur, destined for future celebrity as the historian of the still more memorable campaign of 1812, and attached to Napoleon's household, fell into the hands of the Russians. On the same day, Augereau fought from daybreak till sunset at Lochoczyn with the divisions opposed to him, which at length began to retire. Thus the Russians, pierced in the centre by the passage of the Ukra at Czarnowo and the combat at Nasielsk, were everywhere in full retreat. No decisive advantage had been gained, but the initiative had been taken from the enemy, and his divisions, separated from each other, were thrown into eccentric lines of retreat, which promised every moment to separate them more widely from each other.‡

* *Jom.*, ii., 339. *Dum.*, xvii., 126, 132. *Wilson*, 73, 74.

† Napoleon, says Rapp, no sooner arrived in sight of Okernin than he reconnoitred the position of the Russians, and the plain which it was necessary to pass before arriving at the river. Covered with woods, intersected by marshes, it was almost as difficult to traverse as the fieldworks, which were bristling with Cossacks, were to carry on the opposite bank. The emperor surveyed them long and with close attention; but, as the thickets of wood in some places intercepted his view, he caused a ladder to be brought, and ascended to the roof of a cottage, where he completed his observations. He then said, "It will do—send an officer;" and, when he arrived, dictated on the spot the minute directions for the movement of all the corps during the operation, which are preserved in *Dumas*, xvii., 137.—*Vide RAPP*, 125.

Kamenskoi, though a gallant veteran, was altogether unequal to the perilous crisis which had now arrived. The army, separated into two parts, of which one was moving upon Golymin, the other falling back towards Pultusk, was traversing a continual forest, through roads almost impassable from the mud occasioned by a long-continued thaw, and the passage of innumerable carriages, which had broken it up in all parts. Overwhelmed by these difficulties, he issued orders to sacrifice the artillery, which impeded the retreat, gave directions to stop the supplies destined for the army at Grodno, and himself took the road of Lomza.

Deeming such an order wholly unnecessary, and the result of that approaching insanity which soon after entirely overset the mind of the veteran marshal, Benningsen took upon himself the bold step of disobeying it; and, in order to gain time for the artillery and equipages to defile in his rear, resolved to hold fast in the position of PULTUSK, with all the troops which he had at his disposal. Nothing could be more acceptable to the Russians, to whom the fatigues and privations of a retreat, at a season when sixteen hours out of the twenty-four were involved in total darkness, and the roads, bad at all times, were in many places several feet deep of mud, had been the severest trial of discipline and courage. No sooner, however, was it known that they were marching towards a chosen field of battle than their hardships and difficulties were all forgotten, and the troops which, from midday on the 25th, successively arrived at Pultusk, took up their ground in parade order, full of enthusiasm for the battle on the morrow. Before it was dark, sixty battalions and fifty-five squadrons, with one hundred and twenty pieces of cannon, in all about forty thousand men, were here assembled, while the divisions of Doctoroff, Sacken, and Gallitzin were opposed at GOLYMIN to Augereau's corps, two divisions of Davoust's, and part of Murat's cavalry. Three Russian divisions, viz., those of Essen, Aurepp, and Tutschakoff, were at such a distance in the rear both of Pultusk and Golymin, that they could not be expected to take any part in the actions which were approaching.*

The object of Napoleon in these complicated operations was in the highest degree important; and the vigour of movements. Benningsen and Prince Gallitzin, joined to the extreme shortness of the days and the horrible state of the roads, alone saved the allies from a repetition of the disasters of Auerstadt and Jena. His right wing, under Lannes, was intended to cut Benningsen's army off from the great road through Pultusk; his centre, under Davoust, Augereau, Soult, and Murat, was destined to penetrate by Golymin and Makow to Ostrolenka, directly in the rear of that town and two marches between Benningsen and the Russian frontier; while the left wing, under Ney, Bernadotte, and Bessières, interposed between Lestocq and the Russian centre, and threw him back into Eastern Prussia, where, driven up to the sea, he would soon, if the Russians were disposed of, be compelled, like Blücher, to surrender. A more masterly project never was conceived: it was precisely a repetition of the semicircular route of his left wing under Bernadotte, round Mack at Ulm; and the hesitation of Ka-

menskoi between an advance and a retrograde movement served to offer every facility for the success of the enterprise. The celerity of the Russian retreat, the sacrifice of seventy pieces of their heavy artillery, and the dreadful state of the roads, which impeded the French advance, and the impervious intervening country, which separated their numerous corps from each other, alone defeated this profound combination, and brought their corps to Pultusk and Golymin a few hours before the enemy, who were there destined to fall upon their retreating columns, or bar the road to the frontiers of Russia.*

The position of Pultusk is the only one in that country where the ground is so far cleared of wood as to permit of any considerable armies combating each other in a proper field of battle: an open and cultivated plain on this side of the River Narew there stretches out to the south and east of that town, which lies on the banks of its meandering stream—a succession of thickets surround this open space in all directions, excepting that on which the town lies; and on the inside of them the ground rises to a semicircular ridge, from whence it gradually slopes down towards the town on one side, and the forest on the other; so that it is impossible, till this barrier is surmounted, to get a glimpse even of the buildings. There the Russians were drawn up in admirable order in two lines: their left resting on the town of Pultusk, their right on the wood of Moszyn, which skirted the little plain, the artillery in advance; but a cloud of Cossacks swarmed in front of the array, and prevented either the force or composition of the enemy from being seen by the French as they advanced to the attack. Sacken had the command of the left; Count Osterman Tolstoy of the right; Barclay de Tolly, with twelve battalions and ten squadrons, occupied a copse-wood in front of the right; Benningsen was stationed in the centre—names destined to immortal celebrity in future wars, and which, even at this distant period, the historian can hardly enumerate without a feeling of exultation and the thrilling interest of former days.†

Lannes, with his own corps, and the division Gudin from that of Davoust—in all about thirty-five thousand men—resolved to force the enemy in this position, and for this purpose he, early on the morning of the 26th, advanced to the attack. The woods which skirted the little plain occupied by the Russian light troops in front of their position were forced by the French voltigeurs, after an obstinate resistance, and a battery which galled their advance, and which could not be withdrawn, carried by assault; but no sooner had Lannes, encouraged by this success, surmounted the crest of the ridge, and advanced into the open plain, than the cloud of Cossacks dispersed to the right and left, and exposed to view the Russian army in two lines, in admirable order, with a hundred and twenty guns disposed along its front. Astonished, but not panic-struck by so formidable an opposition, Lannes still continued to press forward, and as his divisions successively cleared the thickets and advanced to the crest of the hill, they deployed into line. This operation, performed under the fire of all the Russian cannon, to which the French had as

Description of the field at Pultusk, and of the positions of the two hostile bodies.

Battle of Pultusk.

Dec. 26.

* Wilson, 77, 80. Jom., ii., 341. Dum., xvii., 159, 162. Vol. II.—O o o

* Jom., ii., 340, 341. Dum., xvii., 162, 164.

† Wilson, 77, 78. Jom., ii., 341. Dum., xvii., 162, 165.

yet none of equal number to oppose, was executed with admirable discipline, but attended with a very heavy loss, and the ground was already strewn with dead bodies when the line was so far formed as to enable a general charge to take place. It was attended, however, with very little success: the soil, cut up by the passage of so many horses and carriages, was in many places knee deep of mud; heavy snow showers at intervals obscured the heavens and deprived the French gunners of the sight of the enemy, while the Russian batteries, in position and served with admirable skill, alike in light and darkness sent their fatal storm of grape and round-shot through the ranks of the assailants. Notwithstanding these obstacles, however, the French advanced with their wonted intrepidity to the attack, and gradually the arrival of their successive batteries rendered the fire of cannon on the opposite sides more equal. Suchet, who commanded the first line, insensibly gained ground, especially on the right, where the division of Barclay was stationed; but Benningsen, seeing the danger, re-enforced that gallant officer with fresh troops; a battalion of the French infantry was broken and cut to pieces by the Russian horse, and the rout in that quarter became so serious that Lannes was compelled to advance in person with his reserve to repair the disorder. By these efforts the forward movement of the Russians in that direction was arrested, and their victorious columns, charged in flank, while disordered by the rapidity of their advance, were forced to give ground, and resume their former position in front of Pultusk.*

Meanwhile Suchet, on the left of the French, had commenced a furious attack on the advanced post in the wood on the right of the Russians, occupied by Barclay de Tolly. After a violent struggle the Russians were driven back; re-enforced from the town, they again regained their ground and drove the French out of the wood in disorder. Lannes, at the head of the 34th regiment, flew to the menaced point, and again, in some degree, restored the combat; but Barclay had regained his lost position, and menaced the French extreme left. Osterman Tolstoy brought up the Russian reserve, and after a murderous conflict, which lasted long after it was dark, a frightful storm separated the combatants. Neither party could boast of decided success; but the Russians remained masters of the field of battle till midnight, when they crossed the Narew by the bridge of Pultusk, and resumed their retreat in the most orderly manner, while the French also retreated to such a distance that next day the Cossacks, who patrolled eight miles from the field of battle towards Warsaw, could discover no traces of the enemy. The losses were severe on both sides: on that of the French they amounted to six thousand men; on that of the Russians nearly five thousand; and the twelve guns which they lost in the morning were never regained.†

On the same day on which this bloody battle took place at Pultusk a serious conflict also occurred at Golymin, about thirty miles from the former field of battle. Davoust and Augereau, supported by a large party of Murat's cavalry, there attacked

Prince Gallitzin, who, with fifteen battalions and twenty squadrons, had taken post at the entrance of the town to gain time for his artillery and carriages to defile through the forest in his rear. His force was successively augmented, however, in the course of the day by the arrival of other troops from Sacken and Doctoroff's corps, and before nightfall twenty-eight battalions and forty squadrons were assembled in line. Operations in that quarter began at daylight Dec. 24. on the 24th, which in that inclement season was at eight in the morning; the bridge of Kollosump, over the Ukra, was carried by a brilliant charge by Colonel Savary; but that of Choczyn resisted all their efforts, and it was only when it became no longer tenable, from the number who had crossed at Kollosump, that orders for the evacuation of the post were given. Continuing his march all the succeeding day, Augereau found himself, on the morning of the 26th, in presence of Prince Dec. 26. Gallitzin, who was advantageously posted on the right of Golymin. As the French battalions and squadrons successively arrived on the ground, and deployed to the right or left, they were severely galled by the Russian artillery stationed in front of their positions; but they bravely formed line, and advanced with their accustomed gallantry to the attack, though few of their guns could as yet be brought up to reply to the enemy. The resistance, however, was as obstinate as the assault was impetuous, and, despite all their efforts, the French, after several hours' hard fighting, had not gained any ground from the enemy. But, while this severe conflict was going on in front, a division of Murat's cavalry, advancing on the road from Czarnowo, was discerned driving before it a body of Cossacks who had been stationed in that village, while a powerful mass of Davoust's infantry, which had broken up that morning from Stretzegoczin, joined the horse in front of Czarnowo, and their united mass, above fifteen thousand strong, bore down upon the troops of Gallitzin, already wearied by a severe combat of several hours' duration.*

This great addition to the attacking force must have proved altogether fatal to the Russian troops had they not shortly ^{its doubtful issue.} after received considerable re-enforcements from the corps of Doctoroff and Tutschakoff, which in some degree restored the equality of the combat. Davoust, with the divisions of Morand and Friant, so well known from their heroic conduct on the plateau of Auerstadt, charged vehemently through the woods which skirted the open space in front of Golymin: throwing off their haversacks, the Russian infantry met them with the bayonet, but, after repulsing the French advance, they were themselves arrested by the murderous fire of the tirailleurs in the wood. Nearly encircled, however, by hourly increasing enemies, Prince Gallitzin withdrew his troops towards evening into the village, but there maintained himself with heroic constancy till nightfall, vigorously repulsing the repeated attacks of the conquerors of Jena and Auerstadt. Davoust, after occupying all the woods round the town, detached a brigade of horse to cut off the communication by the great road with Pultusk; and they succeeded in clearing the causeway of the Cossacks and light horse

* Dum., xvii., 164, 168. Jom., ii., 342. Wilson, 79, 80. Rapp, 127.

† Wilson, 79, 80. Jom., ii., 341, 342. Dum., xvii., 168, 174.

* Dum., xvii., 176, 182. Wilson, 82. Jom., ii., 342. Rapp, 127.

who were posted on it. But the French dragons, following up their success, were assailed by so murderous a fire from the Russian voltigeurs stationed in the marshes on either side of the road, that half their number were slain: General Rapp, while bravely heading the column, had his left arm broken, and the discomfited remnant sought refuge behind the ranks of their infantry. When night closed on this scene of blood, neither party had gained any decisive advantage; for if the French had taken twenty-six pieces of cannon and a large train of carriages which had stuck fast in the mud, the Russians still held the town of Golymin, and had inflicted upon them a loss of above four thousand men,* while they had not to lament the destruction of more than half the number, in consequence, chiefly, of their great superiority in artillery to their assailants. As the order for retreat still held good, Prince Gallitzin at midnight resumed his march for Ostrolenka.†

Notwithstanding the obstinate resistance thus experienced by his lieutenants on both the roads on which his corps were advancing, and the unsatisfactory issue of the combats in which they had been engaged, Napoleon was still not without hopes of effecting the grand object of his designs, the isolating and surrounding the enemy's centre or left wing. On the extreme left of the French, Bernadotte and Ney had succeeded, after several

severe actions, particularly one at Soldan, which was taken and retaken several times, and where the Prussians behaved with the most heroic resolution, in interposing between Lestocq and the Russian forces on the Ukra, and throwing the Prussian general back towards Königsberg; and if Soult could have effected the movement on Makow which was prescribed to him, he would have been directly in the rear of the troops who had combated at Pultusk and Golymin, who must have been reduced to the necessity of laying down their arms, or cutting their way through against great odds. But the frightful state of the roads, which in many places were three feet deep of mud, and the rudeness of the season, which alternately deluged the marching columns with drenching rain, driving sleet, and melting snow, rendered it totally impossible for that enterprising officer to effect the forced marches necessary to outstrip and get into the rear of the enemy; and the Russians, retiring to Ostrolenka and Hohenstein, still found the line of their retreat open. On the 28th, Napoleon advanced his headquarters to Golymin, but having received there certain intelligence that the Russians must arrive at Makow before Soult could possibly get there, he saw the object of the campaign was frustrated, and resolved to put his troops into winter-quarters: on that day, accordingly, he issued orders to stop the advance of the troops at all points: they were put into cantonments between the Narew and the Ukra, and the emperor himself returned with the guards to Warsaw.‡

On the side of the Russians repose had become

nearly as necessary: the weather was as unfavourable to them as to the French; their infantry, equally with the enemy's, had shivered up to the knees in mud at Pultusk; their cavalry, equally with his, sunk in the marshes of Golymin; the breaking up of the roads was more fatal to them than their opponents, as the guns or chariots which were left necessarily fell into hostile hands, and experience had already begun to evince,* what more extended observation has since abundantly confirmed, that exposure to an inclement season was more fatal to the troops of the north than the south of Europe. In these circumstances, it was with the most lively satisfaction that they perceived that Napoleon was disposed to discontinue the contest during the remainder of the rigorous season; and their troops, retiring from the theatre of this bloody strife, were put into cantonments on the left bank of the Narew, after having evacuated the town and burned the bridge of Ostrolenka.†

This desperate struggle in the forests of Poland in the depth of winter made the most lively impression in Europe. Independent of the interest excited by the extraordinary spectacle of two vast armies, numbering between them a hundred and fifty thousand combatants, prolonging their hostility in the most inclement season, and engaging in deperate conflicts amid storms of snow, and when the soldiers on both sides were often sunk up to the middle in morasses, bivouacking for sixteen hours together without covering on the cold, damp ground, or plunging fearlessly into streams swollen by the rains and charged with the ice of a Polish winter, there was something singularly calculated to awaken the passions in the result of this fearful contest. Both parties loudly claimed the victory: *Te Deum* was sung at St. Petersburg; the cannon of the Invalides roared at Paris; and Benningsen, imitating in his official despatches the exaggerated accounts of the bulletins, asserted a complete victory at Pultusk, under circumstances where a more faithful chronicler would only have laid claim to the honour of a divided combat. The French indignantly repelled the aspersion on their arms, and pointed with decisive effect to the cantonments of their troops for evidence that the general result of the struggle had been favourable to their arms. But though there was no denying this, when the Russian troops, instead of having their advanced posts between the Bug and the Vistula, had now retired behind the Narew at Ostrolenka, still enough was apparent on the face of the campaign to excite the most vivid hopes on the one side, and serious apprehensions on the other throughout Europe. It was not to win merely eighty miles of forest, interspersed with the wretched hamlets or squalid towns of Poland, that the emperor had left Warsaw at the dead of winter and put so vast an army in motion over a line thirty leagues in length: there was no claiming of the victory on both sides at Austerlitz or Jena; the divided trophies of the late engagements indicated a struggle of a very different character from those which had preceded them; it was evident that the torrent of French conquest, if not averted, had been at least stemmed. The interest excited by these

The Russians also go into winter-quarters.

Results of this winter-campaign, and impression which it produces in Europe.

* The 47th Bulletin admits a loss of 800 killed and 2000 wounded on the part of the French at Golymin and Pultusk; and as their usual practice was to allow only a loss of a third to a fourth of its real amount, this would seem to imply that they lost on these occasions at least 10,000 or 12,000 men.—See 47th Bulletin in *Camp, en Prusse*, iii., 222.

events, accordingly, was intense over all Europe, but especially in England and Germany, and hopes began to be entertained that the obstinate valour of the North would at length put a stop to the calamities which had so long desolated Europe. Happy would it have been if the cabinet either of Vienna or St. James's had improved on these dispositions, and taken advantage of the pause in the career of universal conquest to render effectual aid to the powers who now threw the last die for the independence of Europe on the shores of the Vistula.*

The French army, which was now put into positions of the winter-quarters, amounted to one French army hundred and sixty thousand men, in winter-quarters, and was accompanied by forty thousand horse: so wonderfully had the levies in France and the allied states compensated the prodigious consumption of human life during the bloody battles and wasteful marches which had occurred since they arrived on the banks of the Saale. The cantonments, from the extreme right to left, extended over a space of fifty leagues, forming beyond the Vistula the chord of the arc which that river describes in its course from Warsaw to Dantzic. The left wing, under Bernadotte, was, from its position, most exposed to the incursions of the enemy; but no apprehensions were entertained of its being disquieted, as that marshal had fifty-five thousand men under his command, and could speedily receive succour, in case of need, from Marshal Ney, whose rallying-point was Osterode, and who lay next to his right. The centre and right wing, nearly a hundred thousand strong, were almost detached from the left wing, and lay more closely together on either side of Warsaw.†

How to provide subsistence for so great a multitude amid the forests and marshes of Poland was no easy matter; for its fertile plains, though the granary of Western Europe, raise their admirable wheat crops only for exportation, and present, in proportion to their extent of level surface, fewer resources for an army than any country in Europe. But it was in such subordinate, though necessary cares, that the admirable organization and indefatigable activity of the emperor shone most conspicuous. Innumerable orders, which for a long time back had periodically issued from headquarters, had brought all the resources of Germany to the supply of the army in Poland. Convoys from all quarters were incessantly converging towards the Vistula, and supplies of every sort, not only for the maintenance of the soldiers, but for the sick and the wounded, as well as the munitions of war, transported in many thousand carriages, were, from the Rhine and the Danube, to be had in abundance. So great was the activity in the rear of the army, that the roads through Prussia bore rather the appearance of a country enriched by the extended commerce of profound peace than of a district lately ravaged by the scourge of war. Great hospitals were established at Thorn, Posen, and Warsaw; thirty thousand tents, taken from the Prussians, cut down into bandages for the use of the wounded; immense magazines formed all along the Vistula, and formidable intrenchments erected to protect the *têtes du pont* of Prague, Thorn, and Modlin on the Vistula, and Sierock on the Narew. Though the blockade

of Dantzic was not yet formally commenced, yet it was necessary to neutralize the advantages which the enemy derived from the possession of so important a fortress on the right of their line; and for this purpose a French division, united to the contingent of Baden and the Polish levies, was formed into the tenth corps, and placed under the command of Marshal Lefebvre. It soon amounted to 27,000 men, and began to observe the fortresses of Dantzic and Colberg;* while Napoleon evinced his sense of the dubious nature of the struggle in which he was engaged, by sending for his experienced lieutenant, Massena, from the scene of his easy triumphs amid the sunny hills of Calabria, to a sterner conflict on the frozen fields of Poland.

The repose of the army at Warsaw was no period of rest to the emperor. Great successive re-care was taken to keep alive the duction of the spirits of the Poles, and conceal fortresses in Silesia. from them the dubious issue of the late conflict; and for this purpose it was announced that almost all the prisoners taken from the Russians had either been marched off for France, or already entered the ranks of the grand army, while the eighty pieces of cannon, which they had been forced to leave behind them in their retreat, were ostentatiously placed before the palace of the Republic. Orders were at the same time sent to Jerome to press the siege of the fortresses in Silesia which still remained in the hands of the Prussians. The pusillanimous and unaccountable surrender of Stettin, Custring, and Glogau has already been mentioned;† and in the consequences which immediately flowed from these disgraceful derelictions Dec. 2. of duty was soon made manifest of what vast importance it is that all officers, even in commands apparently not very considerable, should, under all circumstances, adhere to the simple line of duty, instead of entering into capitulations from the supposed pressure of political considerations. The transport of artillery and a siege equipage from the Rhine or the Elbe to the Oder would have taken a very long period, and prolonged the reduction of the interior line of the Prussian fortresses; but the surrender of Custring to the summons of a regiment of infantry and two pieces of cannon, enabled Vandamme speedily to surround Glogau with a formidable battering-train, which, before the first parallel was completed, induced its feeble governor to lower his colours. From the vast military stores captured in that town a battering-train for the reduction of Breslaw was immediately obtained, and forwarded along the Oder with such rapidity that on the 15th of December Dec. 15. the trenches before that place, the capital of Silesia, *à cheval* on the Oder, and a fortress of the first order, were opened, and a heavy bombardment kept up upon the town. The defence, however, was much more creditable to the Prussian character, and proved of what inestimable importance it would have been to the monarchy had the French arms been in like manner delayed before the walls of the other fortresses. Twice during its continuance Prince Anhalt, who, with a few battalions and a levy of peasants, still maintained himself in Upper Silesia, approached the besiegers' lines, and endeavoured to throw succours into the town; but on the first occasion his efforts were frustrated by the vigilance of the

† Ante, ii., 452.

French and Bavarians, who formed the covering force; and in the last attack he was totally defeated, with the loss of two thousand men. Dec. 31. Soon after, a severe frost deprived him of the protections of the wet ditches, and the governor, despairing of being relieved, and seeing the besiegers' succours rapidly and hourly augmenting by the arrival of military stores from Glogau, surrendered, with the garrison of six thousand men: the private men being prisoners of war, the officers dismissed on their parole, not to serve against France till exchanged. By this acquisition, 300 pieces of cannon and immense military stores of all sorts fell into the hands of the conquerors.*

This great achievement made the reduction of the other fortresses in Silesia a matter of comparative ease, by furnishing, close at hand, all the resources necessary for their reduction. They were almost forgotten, accordingly, and fell, without being observed, into the hands of the invaders. Brieg surrendered almost as soon as it was invested. Kosel

Jan. 17. fell in silence, after a siege of a few days! Napoleon, delighted with these acquisitions, which entirely secured the right flank of his army, and were of the greater importance from the menacing aspect of the force which Austria was collecting on the Bohemian frontier, named Jerome Bonaparte governor of the province of Silesia; and, after having drawn all the resources out of its rich cities and powerful fortresses which they were capable of yielding, for the prosecution of operations against Dantzic and the strongholds on the Lower Vistula, despatched Vandamme, with twelve thousand men, to besiege Schweidnitz, Neiss, and Glatz, the only remaining towns in the upper province which still hoisted the Prussian colours. The reduction of these strong fortresses, which had been the object of several campaigns to the Great Frederic, did not take place for some months afterward, and was hardly noticed by Europe amid the whirl of more important events on the Lower Vistula.†

The task of reducing the fortified towns on the Lower Oder, and between that and the Vistula, was allotted to Marshal Mortier. He took a position, in the middle of December, at Anclam; and, upon his approach, the Swedish forces retired to Stralsund. While in this station he drew his posts round Colberg, and several skirmishes occurred with the Prussian garrisons of that place. Matters remained in that situation till the end of January, when the blockade of Stralsund was more closely established, which continued till the conclusion of the campaign. More important operations took

place at Dantzic and Graudentz, the siege of both which places was much facilitated by the great military stores taken in the towns of Silesia. They were brought down the Oder to near its mouth, and then transported by land to the neighbourhood of these fortresses; and with such vigour did Marshal Lefebvre push forward the operations, especially against the former of these towns, that before the end of January considerable progress had been made in the works.*

On the return of Napoleon to Warsaw, he received detailed accounts of the operations of Marmont in Illyria since the commencement of hostilities in Illyria.

October. For a long period, and during the time when it was understood that a negotiation was on foot between the two governments, a sort of tacit suspension of arms existed between the French marshal and the Russians; but when it was distinctly ascertained that hostilities had been resumed, the flames of war extended to the smiling shores of the Adriatic Sea. The Russians, strengthened by the arrival of Admiral Siniavin with a powerful squadron, resumed the offensive, and compelled Marmont to abandon the point of Ostro, and fall back on Old Ragusa, where he fortified himself in a strong position in front of the town, and resolved to await the arrival of his flotilla and re-enforcements. Encouraged by this retrograde movement, the Russians, six thousand strong, supported by some thousand Montenegrs, Sept. 29. advanced to the attack; but they were anticipated by the French general, and after a sharp action the new levies were dispersed, and the regular troops compelled to take refuge within the walls of Castelnuovo, after sustaining a loss of six hundred men.†

At the same period, a courier from Constantinople brought intelligence of the declaration of war by the Porte against Russia. This was an event of the very highest importance, promising, as it did, to effect so powerful a diversion in the Russian forces; and Napoleon therefore resolved to improve to the uttermost so auspicious a change by contracting the closest alliance with the Turkish government. Though General Michelson had early gained considerable advantage, and was advancing towards Belgrade, which had fallen into the hands of Czerny George and the insurgent Georgians, yet the disasters of the Prussian war had opened the eyes of the cabinet of St. Petersburg, when it was too late, to the imprudence of which they had been guilty in engaging at once in two such formidable contests; and thirty-six battalions and forty squadrons (about twenty-five thousand men) were ordered to advance with all possible rapidity from the plains of Moldavia to the banks of the Bug. Desirous to derive every possible advantage from this great diversion, Napoleon sent instructions to his ambassador at Constantinople, General Sebastiani, to use the greatest efforts to induce the Turkish government to enter vigorously into the contest; while to Marshal Marmont he gave orders to send French officers into all the Ottoman provinces, with orders to do their utmost everywhere to rouse the Mussulman population against the Moscovite invaders;‡ while the relations of France with Persia

Napoleon's efforts to stimulate the Turks to vigorous resistance.

* Dum., xvii., 214, 223. Jom., ii., 250. Ann. Reg., 1807, 22. Dum., xvii., 95, 101. Jom., ii., 251.

† As fast as these fortresses in Silesia fell into the hands of Napoleon, they were, by his orders, totally dismantled and their fortifications razed to the ground. Their inhabitants were seized with consternation when they beheld these rigorous orders carried into full execution, and anticipated a total separation from the Prussian monarchy, to which they were much attached, from so complete a destruction of the barrier raised with so much care, both against Austria and Russia. Nothing could more clearly demonstrate the determination of the French emperor to reduce Prussia to the rank of a third-rate power; but the policy, with reference to the future interests both of France and Germany, of destroying the chief barrier of both against Moscovite aggression, was extremely doubtful.—See MONTVERAN, *Hist. Const. de la Situation de l'Angleterre en 1816*, 147, and DUM., xvii., 99, 100.

* Dum., xvii., 223, 237. Jom., ii., 387.

† Dum., xvii., 240, 256.

‡ These instructions to Marmont are well worthy of attention, both as evincing the views Napoleon already enter-

and Turkey were considered of such paramount importance that they were made the subject of a special message to the Senate, which declared "the Emperor of Persia, tormented, as Poland was for sixty years, by the intrigues of Russia, is animated by the same sentiments as the Turks. He has resolved to march upon the Caucasus to defend his dominions. Who could number the duration of the wars, the number of campaigns, which would be required one day to repair the calamities consequent upon the Russians obtaining possession of Constantinople? Were the tiara of the Greek faith raised again, and extended from the Baltic to the Mediterranean, we should see in our own days our provinces attacked by clouds of barbarians; and if, in that tardy struggle, civilized Europe should happen to fall, our culpable indifference would justly excite the reproaches of posterity, and would become a subject of opprobrium in history." Memorable words! when the events which subsequent times have brought about, and the objects of political apprehensions in our own time, are taken into view.*

The residence of the French generals and officers at Warsaw appeared a perfect Delightful residence of Elysium after the fatigues and privations to which they had been exposed. The society of that capital is well known to be one of the most agreeable in Europe, from the extraordinary talents and accomplishments of the women of rank of which it is composed. No person can have mingled in those delightful circles without perceiving that the Polish women are the most fascinating in Europe. Endowed by nature with an ardent temperament, an affectionate disposition, and an exalted imagination, they have, at the same

tained in regard to the Ottoman Empire, and setting in a clear light his subsequent perfidious conduct in abandoning that power to the ambition of Russia, by the treaty of Til-
Jan. 2, 1807. sit. "A courier, just arrived from Constantinople, has announced that war against Russia is declared: great enthusiasm prevails at that capital; twenty regiments of janizaries have just set out from its walls for the Danube, and twenty more will speedily follow from Asia. Sixty thousand men are at Hersova, Paswan Oglou has assembled twenty thousand at Widdin. Send immediately five engineer officers and as many of artillery to Constantinople: aid the pachas in every possible way with counsel, provision, and ammunition. It is not unlikely that I may send you with 25,000 men to Widdin, and there you will enter into the system of the grand army, of which you would form the extreme right. Twenty-five thousand French, supported by sixty thousand Turks, would soon force the Russians not to leave 30,000 men on the Danube, as they have done, but to forward twice that number to defend their own frontiers in that quarter. Send twenty or thirty officers to the pachas, if they demand so many; but the period for the employment of troops is not yet arrived. The Turks may be relied on as faithful allies, because they hate the Russians: therefore be not sparing in your supplies of all sorts to them. An ambassador from Persia as well as Turkey has just been at Warsaw; the court of Ispahan also, as the sworn enemy of Russia, may be relied on as our friend. Our relations with the Eastern powers are now such that we may look forward shortly to transporting 40,000 men to the gates of Ispahan, and from thence to the shores of the Indus: projects which formerly appeared chimerical are now no longer so, when I receive ambassadors from the sultan, testifying a serious alarm at the progress of Russia, and the strongest confidence in the protection of France. In these circumstances, send your officers over all the Turkish provinces: they will make known my disposition towards the grand seignor, and that will exalt the general enthusiasm, while, at the same time, you will be able to acquire for me information which may prove in the highest degree useful. In a word, general, I am the sincere friend of Turkey, and wish to do it all the good in my power; let that principle regulate all your actions. I consider the Turkish declaration of war against Russia as the most fortunate circumstance which could possibly have occurred in my present situation."—JOMINI, ii., 347-349.

* Jom., ii., 345, 349. Bign., vi., 121.

time, all the grace and coquetry which constitute the charm of Parisian beauty, and yet retain, in most cases, the domestic virtues and simplicity of manner which nurse in infancy the national character of the English people.* Speaking every language in Europe with incomparable facility; conversing alternately in French, German, Italian, Russian, and sometimes English, with the accent of a native; versed in the literature and history of all these countries, and yet preferring to them all the ruins of their own wasted land; enthusiastic in their patriotism, and yet extended in their views; with hearts formed in the simplicity of domestic life, minds cultivated during the solitude of rural habitation, and manners polished by the elegance of metropolitan society, they approach as near as imagination can figure to that imaginary standard of perfection which constitutes the object of chivalrous devotion. Melancholy reflection! that the greatest charms of society should be coexistent with the most vicious and destructive national institutions; and that its principal excellences should have been called forth by the miserable and distracted customs which had brought the Polish nation to a premature dissolution!†

If such are the attractions of Warsaw, even to a passing traveller, it may easily be believed what it appeared to the French officers after the storms of Pultusk and Golymin. From all parts of Prussian Poland the great families flocked to her capital, and soon formed a society in the midst of the horrors of war which rivalled any in Europe in splendour and attractions. Abandoning themselves without reserve to the delightful prospects which seemed to be opening on their country, the Polish women saw in the French officers the deliverers of Sarmatia, the invincible allies who were to restore the glories of the Piasts and the Jagellons. A universal enthusiasm prevailed: fêtes and theatrical amusements succeeded each other in varying magnificence; and, following the general bent, even the intellectual breast of Napoleon caught the flame, and did homage to charms which, attractive at all times, were, in that moment of exultation, irresistible. But these fairy scenes were of short duration, and war, in its most terrible form, was destined soon to rouse them from this transient period of enchantment.‡

When the French were put into cantonments on the right bank of the Vistula, the situation of the Russian army was such that it could hard-

* This observation applies to the character of the female part of the Polish rural nobility. Those who have made Warsaw or other great capitals their habitual residence, have too often contracted the vices incident to a polished and corrupted society.

† Personal observation. Savary, iii., 17.

‡ "It may with truth be said," says Savary, "that the Polish women are fitted to inspire jealousy to the most accomplished ladies in the civilized world: they unite, for the most part, to the manners of the great world a depth of information which is rarely to be seen even among the French women, and which is infinitely superior to what is usually to be met with in the most accomplished urban society. It would appear that, being obliged to pass more than half the year on their estates, they devote themselves to reading and mental cultivation; and thence in the capitals, where they go to pass the winter, they so frequently appear superior to all their rivals."—SAVARY, iii., 17.

"I did not require to learn," says Duroc, "that the Polish women are the most agreeable in Europe; but it was not till I arrived in Poland that I became acquainted with the full extent of their charms. The attractions of Warsaw are indescribable. It contains several agreeable circles—one charming."—Letter of Duroc to Junot, Dec. 17, 1806; D'ABRANTES, ix., 350. § Sav., iii., 17.

ly be said to have a commander. Kamenskoi retired far to the rear to Grodno, where he went out in his shirt to the streets, and gave unequivocal proofs of mental derangement. Buxhowden commanded his own corps, while Benningsen did the same with his, and the jealousy of each of these officers for a time prevented the one from obeying the commands of the other; but at length the appointment of the latter to the supreme command restored unity to the operations of the army. Fortunately for the Russians, the suspension of hostilities, and the interval of fifteen leagues which separated them from the enemy, prevented them from suffering under this division of council; and when Benningsen assumed the command, he resolved to continue the design of Buxhowden, and, instead of allowing the army to repose in its cantonments, commence an offensive movement with the whole army against the French left under Bernadotte and Ney, which had extended itself so far as to menace Königsberg, the second city of the Prussian dominions, and the capital of the old part of the monarchy. Many reasons recommended this course. It was evident that Napoleon would turn to the best account the breathing-time afforded him in winter-quarters. His army would be recruited and strengthened, his cavalry remounted, his magazines replenished on the Vistula; the fortresses at its mouth were already observed; and when the mild season returned in May, there was every reason to fear that it would be as solidly established on the line of that river by the capture of Colberg, Graudentz, and Dantzic, as it was now on the Oder and in Silesia by the reduction of the fortresses of that province. And the situation of Bernadotte and Ney, who had extended their cantonments beyond what was either necessary or prudent, and such as almost to indicate an offensive intention, suggested a hope that, by a rapid movement, their corps might be isolated and destroyed before the bulk of the grand army, grouped round Warsaw, could advance to their relief.*

Impressed with these ideas, the Russian army, seventy-five thousand strong, with five hundred pieces of cannon, was everywhere put in motion, crossed the Narew, and marched upon the Bobr. The corps of Benningsen and Buxhowden, so long separated, effected a junction at Biala on the 14th of January, and on the 15th headquarters were established at that place. Essen was left with one division on the Narew to mark this forward movement; and there he was soon after joined by the divisions from Moldavia. This great assemblage of force was the more formidable that it was entirely unknown to the enemy, being completely concealed by the great Forest of Johansberg, and the numerous chain of lakes, intersected by woods, which lie between Arys, in East Prussia, and the shores of the Vistula. Rapidly advancing after its columns were united, the Russian army moved forward between the lakes of Sperding and Lowenthin; and on the 17th headquarters were established at Rhein in East Prussia. Meanwhile the cavalry, consisting of forty squadrons under Prince Gallitzin, pushed on for the Alle, on the roads leading to

Königsberg and Bischofstein; and on the other side of that river surprised and defeated the light horse of Marshal Ney, which had advanced in pursuit of Lestocq to Schippenhal, within ten leagues of Königsberg. Thus, on the 20th of January, the Russian army, perfectly concentrated and in admirable order, was grouped in the middle of East Prussia, and was within six marches of the Lower Vistula, where it might either raise the blockade of Dantzic and Graudentz, or fall with a vast superiority of force upon Bernadotte or Ney, still slumbering in undisturbed security in their cantonments.*

Had Benningsen been aware of the scattered condition of Marshal Ney's corps he might, by the admission of the French military historians, have destroyed the whole before it could by possibility have been united and put in a condition to give battle. As it was, great numbers of his detached bodies were made prisoners, and the conduct of the marshal in first, by his senseless incursions, attracting the enemy, and then, by his undue dispersion, exposing himself to their attacks, drew down a severe reproof from Napoleon.† But a glance at the map must be sufficient to show that great and decisive success was at this moment within the grasp of the Russian general; and that if, instead of making a long circuit to reach the head of Marshal Ney's corps, scattered over a space of eighteen leagues, and drive it back upon its line of retreat towards Warsaw, he had boldly thrown himself, three days earlier, upon its flank, he would have separated it from the centre of the army, and driven both it and Bernadotte to a disastrous retreat into the angle formed by the Vistula and the Baltic Sea. The movement of Benningsen to the head of Ney's column, however, having prevented this, he turned his attention to Bernadotte, who had received intelligence of his approach, and had rapidly concentrated his corps from the neighbourhood of Elbing at Mohrungen. Meanwhile the Russian army continued its advance: on the 22d headquarters were established at Bischofstein, and the Cossacks pushed on to Heilberg; and on the same day a severe action took place at Lecberg, from whence the French cavalry, under Colbert, were driven in the direction of Allenstein. Ney, now seriously alarmed, despatched couriers in all directions to collect his scattered divisions, and on the 23d resumed his headquarters at Neidenberg, extending his troops by the left towards Gilgenberg to lend assistance to Bernadotte.‡

Bernadotte, informed by despatches from all quarters of this formidable irruption into his cantonments, was rapidly concentrating his troops at Mohrungen, when Benningsen, with greatly superior forces, fell upon him. The French troops, eighteen thousand strong, were posted in rugged ground at Georgenthal, two miles in front of that town. General Makow attacked them with the advanced guard of the

* Wilson, 83, 85. Dum., xvii., 295, 302. Jom., ii., 352.

† He severely blamed the marshal "for having, by an inconsiderate movement, attracted the enemy, and even endeavoured to engage Marshal Soult, who declined to follow him, in the same expedition. You will immediately resume the winter-quarters prescribed for your corps, and take advantage of them to give rest to your cavalry, and repair the best way you can, the fault you have committed."—Dum., xvii., 303.

Rapid advance of Benningsen towards Königsberg.

Jan. 15.

Bernadotte, attacked near Mohrungen, escapes with difficulty.

Russians before sufficient forces had come up, and after a sanguinary conflict, in which the eagle of the 9th French regiment was taken and retaken several times, and finally remained in the hands of the Russians, suffered the penalty of his rashness by being repulsed towards Leibstadt. In this bloody affair both parties had to lament the loss of two thousand men, and the Russian General Aurepp was killed. It was the more to be regretted that this premature attack had been made, as Lestocq was at the moment at Wormditt, or five leagues distant on the right; Gallitzin, with five thousand horse, at All-Reichau, at the same distance on the left; Osterman Tolstoy at Heilighenthal, and Sacken at Elditten, all in the immediate neighbourhood, so that, by a concentration of these forces, the whole French corps might with ease have been made prisoners. As it was, Prince Michael Dolgoroucki, who had been detached by Prince Gallitzin towards Mohrungen in consequence of the violent fire heard in that direction, fell upon the rear of Bernadotte's corps, penetrated into the town, made several hundred prisoners, and captured all his private baggage, among which, to his eternal disgrace, were found, as in the den of a common freebooter, silver plate, bearing the arms of almost all the states in Germany, 10,000 ducats, recently levied for his own private use, and 2500 for that of his staff, from the town of Elbing.*

The narrow escape, both of Ney and Bernadotte, from total destruction in consequence of this bold and vigorous enterprise, excited the utmost alarm in the French army. The latter fell back rapidly towards Thorn, on the Lower Vistula, by Deutch-Eylau, severely pressed by the Cossacks, who almost totally destroyed his rear-guard, and made many thousand prisoners. Headquarters were advanced by Benningsen, on the 26th, to Mohrungen, where they remained, from the exhaustion of the troops, till the 2d of

February. Taking advantage of the aid thus obtained, the brave and active Lestocq succeeded in raising the blockade of Graudentz, the key to the Lower Vistula, and throwing in supplies of ammunition and provisions, which enabled that important fortress to hold out through all the succeeding campaign. The whole French left wing raised their cantonments, and fell back in haste, and with great loss, towards the Lower Vistula; and the alarm, spread as far as Warsaw, gave the most effectual refutation of the false accounts published in the bulletins of the successive defeats of the Russian army.† At the same time intelligence was received of the arrival of the Russian divisions from the army of Moldavia, on the Narew and the Bug, where they formed a junction with General Essen, and raised the enemy's force in that quarter to thirty thousand men.‡

* Bign., vi., 115. Wilson, 85. Dum., xvii., 307, 319. Jom., ii., 353.

† "In Bernadotte's baggage, taken at Mohrungen, were found curious proofs of the arrangements for stage effect and false intelligence, made by all the officers of the French army, from the emperor downward. An order was there found, giving the most minute directions for the reception of Napoleon at Warsaw, with all the stations and crossings where 'Vive l'Empereur' was to be shouted; and official despatches of all the actions of the campaign in which Bernadotte had been engaged, for publication, and private despatches giving the facts, as they really occurred, for the emperor's secret perusal. These papers are still in the possession of General Benningsen's family."—WILSON'S *Polish Campaign*, 86, note.

‡ Wilson, 86, 87. Dum., xvii., 307, 332. Bign., vi., 115, 116.

These untoward events made a great impression on the mind of Napoleon, who had never contemplated a renewal of active operations till his reinforcements from the Rhine had arrived at headquarters, and the return of the mild season had enabled him to resume hostilities without the excessive hardships to which his troops, during the later stages of the campaign, had been exposed. The cold was still extreme: the Vistula and the Narew were charged with enormous blocks of floating ice, which daily threatened to break down the bridges over them; the earth was covered with snow, the heavens exhibited that serene, deep blue aspect which indicated a long continuance of intense frost; magazines there were none in the country which was likely to become the theatre of war, and though the highly-cultivated territory of Old Prussia offered as great resources as any of its extent in Europe for an invading army, yet it was impossible to expect that it could maintain, for any length of time, the enormous masses who would speedily be assembled on its surface. But there was no time for deliberation: matters were pressing, the right of Benningsen was now approaching the Lower Vistula, and in a few days the Russian army would raise the blockade of Dantzic, and, resting on that fortress as a base from whence inexhaustible supplies of all sorts might be obtained by sea, would bid defiance to all his efforts. It was in such a crisis that the extraordinary activity and indefatigable perseverance of Napoleon appeared most conspicuous. Instantly perceiving that active operations must be resumed even at that rude season, he despatched orders from the 23d Jan. 23. to the 27th of January, for the assembling of all his army; and as, with the exception of Bernadotte and Ney, they all lay in cantonments not extending over more than twenty leagues, this was neither a tedious nor a difficult operation. Bernadotte was enjoined to assemble around Osterode, Lefebvre at Thorn to observe Dantzic, Soult at Pragnitz, Davoust at Pultusk, Ney at Nudenberg, Bessières and Murat at Warsaw, with the Imperial Guard and cavalry: though breathing only victory in his proclamations to his troops, he in reality was making every preparation for defeat; Lefebvre received orders to collect all the forces at his disposal, without any regard to the blockade of Dantzic, in order to secure the fortress and bridge of Thorn, the direct line of retreat across the Vistula from the theatre of war, while Lannes was disposed as a reserve on the right, and Augereau on the left bank of that river. On the 27th orders were given to all the columns to march, and early on the morning of the 30th the emperor set out from Warsaw.†

* The territory of Old Prussia is not naturally more fertile than the adjoining provinces of Poland, but, nevertheless, it is as rich and cultivated as they are sterile and neglected. On one side of the frontier line is to be seen numerous and opulent cities, smiling, well-cultivated fields, comfortable hamlets, and an industrious and contented population; on the other, endless forests of pine, wretched villages, a deplorable agriculture; squalid huts beside a few gorgeous palaces. Nothing can more clearly demonstrate the vicious and ruinous political institutions which have prevailed amid the mingled anarchy, tyranny, and Democracy of Old Poland. This difference, so well known to travellers, repeatedly attracted the attention even of the military followers of the French army.—See SEGUIER, *Camp de Russie*, i., 127; and JOMINI, ii., 354.

† Dum., xvii., 322, 325. Jom., ii., 354, 355.

‡ The orders given by Napoleon to all the marshals and chief officers of his army on this trying emergency may be considered as a masterpiece of military skill and foresight;

Extraordinary energy of Napoleon in re-assembling his army.

Following his usual plan of marching with the bulk of his forces, so as to get in the rear of the enemy during his advance, Napoleon marched towards Allenstein, where he arrived on the 2d of February with the corps of Soult, Augereau, and Ney, while Davoust was, at a short distance still farther on his right, at Wartenberg. Already he had interposed between Benningsen and Russia: the only line of retreat which lay open to that officer was to the northeast, in the direction of Königsberg and the Niemen. The Russian army was stationed between the Passarge and the Alle, from Guffstadt and Heilsberg on the latter river, to Leibstadt and Wormditt in the neighbourhood of the former; but these movements of Napoleon induced Benningsen to concentrate his divisions and move them to the eastward, in the direction of Spiegelberg and the Alle, on the 1st and 2d of February, in order to preserve his communications with the Russian frontier. The whole army assembled in order of battle on the following day, in a strong position on the heights of Jonkowo, covering the great road from Allenstein to Leibstadt, its right resting on the village of Mondtken. Napoleon instantly directed Davoust to march from Wartenberg to Spiegelberg with his whole corps, in order to get entirely round the left flank of the Russians in this position and attack them in rear, while Soult received orders to force the bridge of Bergfried, by which their retreat and communications lay across the Alle. It was all over with the Russians if these orders had been carried into full execution without their being aware how completely they were in course of being encircled; but, by a fortunate accident, the despatches to Bernadotte, announcing the design, and enjoining him to draw Benningsen on towards the Lower Vistula, had previously fallen into the hands of the Cossacks, and made that general aware of his danger; he immediately despatched orders to the officer at Bergfried to hold the bridge to the last extremity, which was so gallantly obeyed that, though Soult assailed it with all his corps, and it was taken and retaken several times, yet it finally remained in the hands of the Russians. The situation of Benningsen, however, was now very critical: he was compelled to fall back to avoid being turned in presence of very superior forces, and by his lateral movement from Mohrungen he had become entirely separated from Lestock, who saw the most imminent danger of being cut off and destroyed by the superior forces of Bernadotte. Fortunately, however, from the despatches being intercepted, that marshal remained entirely ignorant both of what was expected from him, and of the great advantages which remained in his power; and Lestock, without being disquieted, was enabled to check his advance and make preparations for a retreat, which was presented to him from Freystadt, where he had been covering the revictualling of Graudentz, by Deutch-Eylau, Osterode, Mohrungen to Leibstadt, while Benningsen himself, on the night of the 3d, broke up from Junkowo, and retired in the same direction.*

and deserve especial attention from all who desire to make themselves acquainted either with his extraordinary activity and resources, or the multiplied cares which, on such an occasion, devolve on a commander-in-chief.—See the whole in DUMAS, xvii., 330–374; *Pièces Just.*

* Wilson, 89, 92. Jom., ii., 355, 356. Dum., xvii., 330, 349.

By daybreak the French army, headed by Murat, with his numerous and terrible dragoons, were in motion to pursue the enemy; and as the Russians had been much retarded during the night by the passage of so many pieces of cannon and wagons through the narrow streets of Junkowo, they soon came up with their rear-guard. By overwhelming numbers, the Russians were forced from the bridge of Bergfried; but they rallied in the village, and forming barricades with tumbrils, wagons, and chariots, effectually checked the advance of the enemy, until the carriages in the rear had got clear through, when they retired, obstinately contesting every inch of ground, which they did with such effect that the French lost fifteen hundred men in the pursuit, without inflicting a greater loss on their adversaries. Nor were any cannon or chariots taken: a striking proof of the orderly nature of the retreat, and the heroism with which the rear-guard performed its duty, when it is recollected that Napoleon, with eighty thousand men, thundered in close pursuit, and that, from the state of the roads, the march which had been ordered upon three lines could take place on two only. Soult and Davoust continued to manoeuvre, in order to turn the Russian left, while Murat and Ney pressed their rear-guard. On the night of the 4th the Russians retired to Frauendorf, where they stood firm next day. But this continued retreat in presence of the enemy was now beginning to be attended with bad effects, both upon the health and spirits of the soldiers. The Russian commissariat was then wretched: magazines there were none in the country which was now the theatre of war; and the soldiers, when worn out with a night march over frozen snow, had no means of obtaining subsistence but by prowling about to discover and dig up the little stores which the peasants had buried for the use of their families. The men everywhere lay on the bare ground in intense frost, with no other bed but the snow, and no covering but their great-coats, which were now little better than rags. They were not as yet inured to retire before the enemy, and the murmur against any farther retreat was so loud that Benningsen resolved to fall back only to a chosen field of battle; and, upon examining the map, that of PRUSSICH-EYLAU was selected for this purpose. No sooner was this announced to the troops than their discontents were appeased, the hardships of the night marches were forgotten, and from the joyful looks of the men it would rather have been supposed they were marching to tranquil winter-quarters than the most desperate struggle which had occurred in modern times.*

Severe actions, however, awaited these brave men ere they reached the theatre of final conflict. On the night of the 5th the army moved to Landsberg, where the troops from Heilsberg joined them, notwithstanding a bloody combat with Marshal Davoust. On the following day the rear-guard, under Bagrathion, posted between Hoff and that town, was assailed with the utmost vehemence by Murat, at the head of the cavalry and the principal part of the corps of Soult and Augereau.* The approach of these formidable masses, and the imposing appearance of their cavalry, as well as the balls which began to fall from the

Combat of Landsberg.

Feb. 6:

* Wilson, 92, 94. Jom., ii., 356. Dum., xvii., 349, 352.

French batteries, occasioned great confusion among the cannon and carriages in the streets of the town. But with such resolution did the rear-guard maintain their position that, though they sustained a heavy loss, the enemy were kept at bay till night closed the carnage, and relieved the Russian general from the anxieties consequent on so critical a situation in presence of such enormous forces of the enemy. Two battalions of Russians were trampled under foot in the course of the day or cut down, chiefly by one of their own regiments of horse dashing over them, when broken and flying from Murat's dragoons. Benningsen, upon this, supported the rear-guard by several brigades of fresh troops, and the combat continued with various success till night, when both armies bivouacked in presence of each other: that of the French on the heights of Hoff, that of the Russians on those which lie in front of Landsberg, and the little stream of the Stein separating their outposts from each other. In this untoward affair the Russians sustained a loss of 2500 men, among whom was Prince Gallitzin, whose chivalrous courage had already endeared him to the army; but the French were weakened by nearly as great a number. During the night the whole army again broke up, and, without farther molestation, reached Prussich-
Feb. 7. Eylau at seven the next morning, when they passed through the town, and moved quietly to the appointed ground for the battle on the other side, where it arrived by noonday.*

This rapid concentration and retreat of the Russians isolated the Prussian corps of Lestocq, and gave too much reason to fear that it might be cut off by the superior forces of Bernadotte or Ney, who were now pressing on it on all sides. But the skilful movements of the Prussian general extricated him from a most perilous situation.
Feb. 5. On the 5th he set out from Mohrungen, and his horse encountered the cavalry of Murat near Deppen, while the head of the column of infantry was at the same time charged by Ney, who had crossed the Passage to intercept his progress near Waltersdorf. The heroic resistance of the advanced guard, only three thousand strong, gave time for the main body to change the line of its march, and escape in the direction of Schlodein; but it proved fatal to itself, as almost the whole were slain or made prisoners, with twelve pieces of cannon. The firm countenance of the cavalry, however, defeated all the efforts of Murat, who in vain charged them repeatedly with six thousand horse, and, after baffling all his attacks, they retired leisurely and in the best order, covering the march of the infantry all the way; crossed the Passage
Feb. 7. at Spandau, and arrived on the 7th in safety at Hussehn in the neighbourhood of Prussich-Eylau.†

Thus, after sustaining incredible hardships, and undergoing serious dangers, the whole Russian army was at length concentrated in one field of battle, and about to measure its strength with the enemy. It was reduced, by the fatigues and losses of this winter campaign, to sixty-five thousand men, assembled around Eylau, to which, if ten thousand be added as Lestocq's division, which might be expected to co-operate in the approaching action, the whole amount that could be relied on for the

shock was seventy-five thousand, with 460 pieces of cannon. The French, after deducting the losses of this dreadful warfare, exclusive of Bernadotte, who did not arrive on the ground for two days after, could still bring eighty-five thousand men into the field, including nearly sixteen thousand horse; but they had not above three hundred and fifty pieces of artillery.* Thus the two armies were nearly equal—the French superiority in numbers, and especially in cavalry, being counterbalanced by the advantage which the Russians had in that important arm, the artillery. Their spirit and courage were at the same level; for if the French could recall with deserved pride the glorious achievements of the campaign, and a long course of almost unbroken victories, the Russians, on their side, had the triumphs of Suwarrow in Turkey, Poland, and the Italian plains, to commemorate; and if the former were impelled by the ardour of a revolution, converted by consummate genius into that of military conquest, the latter were buoyant with the rising energy of an empire, whose frontiers had never yet receded before the standards of an enemy.†

The Russian rear-guard, ten thousand strong, under Bagration, was leisurely retiring towards Eylau, and at the distance of about two miles from that village, when it was attacked by the French infantry. The Russians were at first compelled to give way, but the St. Petersburg dragoons, whose rout had occasioned such damage to their own comrades on the preceding day, emulous to wipe away their disgrace, assailed the enemy so opportunely in flank, when emerging from the tumult of the charge, that they instantly cut to pieces two battalions, and made prize of their eagles. Disconcerted by this check, the French gave no farther molestation to the Russian rear-guard, which retired into Eylau. By a mistake, however, the division destined to occupy that important station evacuated it, along with the rest of the army; and though Benningsen instantly ordered it to be reoccupied by fresh troops, the French had meanwhile entered in great numbers, and the assailing division, under Barclay de Tolly, had a rude contest to encounter in endeavouring to regain the lost ground. By vast exertions, however, they at length succeeded in expelling the enemy: the French again returned in greater force; the combat continued with the utmost fury till long

Bloody combats around Eylau the day before the battle.

* The following is the account given by Dumas of the troops present under arms, in January, 1807, under Napoleon on the Vistula:

	Infantry and Artillery.	Cavalry.
Imperial Guard under Bessières.....	9,199	3,889
“ Oudinot.....	6,046	
First corps, Bernadotte.....	18,073	950
Third do., Davoust.....	19,000	757
Fourth do., Soult.....	26,329	1,495
Fifth do., Lannes.....	16,720	1,399
Sixth do., Ney.....	15,158	881
Cavalry do., Murat.....	753	14,868
Total on the Vistula.....	109,238	20,350
Detached, viz., Mortier, in Pomerania.....	15,866	1,254
“ Jerome and Vandamme, in Silesia.....	18,232	2,207
“ Lefebvre, Dantzic.....	23,248	547
“ Hanover, Dumonceau.....	6,898	689
Total.....	173,464	25,047

If from this mass of 109,238 infantry and 20,000 cavalry there be deducted 18,000 absent under Bernadotte, 16,000 under Lannes, and 10,000 lost or left behind during the march from Warsaw, there will remain, on their own showing, 85,000 in line at Eylau, and that agrees nearly with Sir Robert Wilson's estimate.—DUMAS, vol. xviii., 592; WILSON, 99. † DUMAS, xviii., 1, 10. WILSON, 98, 99.

* DUMAS, xviii., 354, 365. WILSON, 94, 95. JOM., ii., 356.

† JOM., ii., 356, 357. DUMAS, xviii., 352, 356.

after sunset; fresh re-enforcements came up to the Russians; twice Barclay carried the village after dark, by the light of the burning houses; and when, at length, driven out of the town, which, from lying in a hollow and being commanded on all sides, was no longer tenable after the enemy had brought up their heavy artillery, that gallant commander, with this heroic rear-guard, intrenched himself in the church and churchyard, which stands on an eminence by the road on issuing from the town on the other side, and there maintained a sanguinary resistance till past ten at night, when he was severely wounded. Then the object of the strife having been gained by the heavy artillery having all arrived by the road of Schloditten and taken up its position on the field of battle behind the village, the unconquered Russians were withdrawn from the churchyard, which, with its bloodstained graves and corpse-cased slopes, remained in the hands of Napoleon.*

Never in the history of war did two armies pass a night under more awful and impressive circumstances than the rival hosts who now lay, without tent or covering, on the snowy expanse of the field of Eylau. The close vicinity of the two armies; the vast multitude assembled in so narrow a space, intent only on mutual destruction; the vital interests to the lives and fortunes of all which were at stake; the wintry wildness of the scene, cheered only by the watch-fires, which threw a partial glow on the snow-clad heights around; the shivering groups who in either army lay round the blazing fires, chilled by girdles of impenetrable ice; the stern resolution of the soldiers in the one array, and the enthusiastic ardour of those in the other; the liberty of Europe now brought to the issue of one dread combat; the glory of Russia and France dependant on the efforts of the mightiest armament that either had yet sent forth—all contributed to impress a feeling of extraordinary solemnity, which reached the most inconsiderate breast, oppressed the mind with a feeling of anxious thought, and kept unclosed many a wearied eyelid in both camps, notwithstanding the extraordinary fatigues of the preceding days. But no sooner did the dawn break, and the quick rattle of musketry from the outposts commence, than these gloomy presentiments were dispelled, and all arose from their icy beds with no other feelings but those of joyous confidence and military ardour.†

The evacuation of Eylau on the preceding night had led Napoleon to suppose that the enemy were not to give battle on the succeeding day; and, overwhelmed with the extraordinary fatigues he had undergone since leaving Warsaw, during which time he had been occupied in business or marching twenty hours out of the twenty-four, he retired to a house in the town, and there, amid all the horrors of a place carried by assault, fell into a profound sleep. The two armies were within half cannon-shot of each other, and their immense masses disposed in close array on a space not exceeding a league in breadth. The field of battle was an open expanse of unenclosed ground, rising into swells, or small hills, interspersed with many lakes; but as the whole surface was cov-

ered with snow, and the lakes so thoroughly frozen as to bear any weight either of cavalry or artillery, the whole surface was accessible to military operations. The Russian right, under Tutschakoff, lay on either side of Schloditten; the centre, under Sacken, occupied a cluster of little open hills, intercepted by lakes, in front of Kuschniten; the left, under Osterman Tolstoy, rested on Klein-Saussgarten; the advanced guard, ten thousand strong, with its outposts extending almost to the houses of Eylau, was under the command of Bagrathion; the reserve, in two divisions, was led by Doctoroff. The whole army in front was drawn up in two lines with admirable precision: the reserve, in two close columns behind the centre; the foot artillery, consisting of 400 pieces, was disposed along the front of the lines; the horse artillery, carrying sixty guns; cavalry and Cossacks, under Platoff, in reserve behind the centre and wings, in order to support any point which might appear to require assistance. Lestocq, with his division, was not yet in line, but he had lain at Hussehn the preceding night, which was only three leagues off, and might be expected to join before the battle was far advanced.*

The French position, generally speaking, was more elevated than that of the Russians, with the exception of the Distribution of the French right, where it was commanded by forees. the heights of Klein-Saussgarten. The town of Eylau, however, occupied in force by their troops, was situated in a hollow, so low that the roofs of the houses were below the range of the cannon-shot, and the summit of the church steeple, which stands on an eminence, alone was exposed to the destructive storm. Davoust was on the right, and received orders to attack the villages of Klein-Saussgarten and Serpallen, occupied by the enemy. Soult, in the centre, was destined to advance against the Russian main body and the strong batteries placed opposite to Eylau; Augereau was on the left, to support his attack; the Imperial Guard and cavalry of Murat in reserve behind the centre, ready to support any attack which might appear likely to prove unsuccessful. Orders had been despatched to Ney to attack the Russian right as soon as the action was warmly engaged; and it was hoped he would arrive on the field at least as soon as Lestocq on the other side, upon whose traces he had so long been following. Lannes had been detained by sickness at Pultusk, and his corps, placed under the orders of Savary, afterward Duke of Rovigo, was observing the Russian forces left on the Bug and the Narrew.†

Napoleon's design, when he saw that the Russians stood firm, and were resolved Battle of Eylau. Defeat by the corps of Marshal Davoust, of Augereau. and throw it back, as at Austerlitz, on the middle of the army; but, the better to conceal this object, he commenced the action soon after daylight by a violent attack on their right Feb. 8. and centre. The Russian cannon played heavily, but rather at hazard, on the hostile masses in front of Eylau, while the French guns replied with fatal effect from their elevated position down upon the enemy, whose lines were exposed from head to foot to the range of their shot. Presently the left, under Augereau, ad-

* Wilson, 97, 98, 100. Jom., ii., 357, 358. Dum., xviii., 46, 8. Bign., vi., 126. † Wilson, 101. Jom., ii., 358.

* Dum., xvii., 12, 13. Jom., ii., 359, 360. Wilson, 101. † Wilson, 101. Jom., ii., 360, 361. Dum., xviii., 9, 15.

vanced in massy columns towards Schloditten, while Soult's corps, preceded by a hundred and fifty pieces of artillery, marched with an intrepid step against the Russian centre, and forty guns of the Imperial Guard, posted on an eminence near the church of Eylau, opened a heavy fire on the great central Russian battery. These troops had not advanced above three hundred yards, driving the Russian tirailleurs before them, when the Russian cannon-shot from two hundred pieces, admirably directed, ploughed through the mass, and so shattered it that the whole body inclined to the left, to get under the shelter of a detached house which stood in the way. A snowstorm at the same time set in, and darkened the atmosphere, so that neither army could see its opponent; but, nevertheless, the deadly storm of bullets continued to tear the massy columns of Augereau, and the fire was so violent as to prevent Soult from rendering him any effectual support. Augereau's divisions were already severely shaken by this murderous fire, when they were suddenly assailed on one side by the right wing of the Russians, under Tutschakoff, and on the other by their reserve and a powerful cavalry under Doctoroff. So thick was the snowstorm, so unexpected the onset, that the assailants were only a few yards distant, and the long lances of the Cossacks almost touching the French infantry when they were first discerned. The combat was not of more than a few minutes' duration: the corps, charged at once by foot and horse with the utmost vigour, broke and fled in the wildest disorder back into Eylau, closely pursued by the Russian cavalry and Cossacks, who made such havoc that the whole, above sixteen thousand strong, were, with the exception of fifteen hundred men, taken or destroyed; and Augereau himself, with his two generals of divisions, Desgardens and Heudelet, desperately wounded.*

Napoleon was apprized of this disaster by the imminent torrent of fugitives which rushed into danger of Eylau; and the snowstorm clearing Napoleon away at the same time, showed him the Russian right and centre far advanced, with their light troops almost at the edge of the town. He himself was stationed at the churchyard on its eastern side, which had been the scene of such a sanguinary conflict on the preceding night; and already the crash of the enemy's balls on the steeple and walls of the church showed how nearly danger was approaching. Presently one of the Russian divisions, following rapidly after the fugitives, entered Eylau by the western street, and charged, with loud hurrahs, to the foot of the mound where the emperor was placed with a battery of the Imperial Guard and his personal escort of a hundred men. Had a regiment of horse been at hand to support the attack, Napoleon must have been made prisoner; for, though the last reserve, consisting of six battalions of the Old Guard, were at a short distance, he might have been enveloped before they could get up to his rescue. The fate of Europe then hung by a thread, but in that terrible moment the emperor's presence of mind did not forsake him: he instantly ordered his little body-guard, hardly more than a company, to form line, in order to check the enemy's advance, and despatched orders to the Old Guard to attack the column on one flank, while a brigade of Murat's horse charged it on

the other. The Russians, disordered by success, and ignorant of the inestimable prize which was almost within their grasp, were arrested by the firm countenance of the little band of heroes who formed Napoleon's last resource; and before they could re-form their ranks for a regular conflict, the enemy were upon them on either flank, and almost the whole division was cut to pieces on the spot.**

The disorder produced by the repulse of Soult and the almost total destruction of Augereau's corps, however, was such that the French emperor was compelled to strain every nerve to repair it. For this purpose he prepared a grand charge by the whole cavalry and Imperial Guard, supported by the divisions of Soult, which were again formed and led back to the attack. The onset of this enormous mass, consisting of fourteen thousand cavalry and twenty-five thousand foot-soldiers, supported by two hundred pieces of cannon, was the more formidable that the thick storm of snow prevented them from being perceived till they were close upon the first line. The shock was irresistible: the front line of the Russians was forced to give ground, and in some places thrown into disorder; their cavalry crushed by the enormous weight of the seventy squadrons which followed the white plume of Murat; and a desperate *mêlée* ensued, in which prodigious losses were sustained on both sides; for the Russian battalions, though broken, did not lay down their arms or fly, but falling back on such as yet stood firm, or uniting in little knots together, still maintained the combat with the most dogged resolution. Instantly perceiving the extent of the danger, Benningsen, with his whole staff, galloped forward from his station in the rear to the front, and at the same time despatched orders to the whole infantry of the reserve to close their ranks and advance to the support of their comrades engaged. These brave men inclining inward, pressed eagerly on, regardless of the shower of grape and musketry which fell in their advancing ranks, and, uniting with the first line, charged home with loud hurrahs upon the enemy. In the shock, Essen's Russian division was broken, and the French horse, pursuing their advantage, swept through several openings and got as far as the reserve cavalry of Benningsen; but no sooner did Platoff see them approaching with loud cries, and in all the tumult of victory, than he gave orders to the Cossacks of the Don to advance. Regardless of danger, the children of the desert joyfully galloped forward to the charge: their long lances are in rest, their blood-horses are at speed; in an instant the French cuirassiers are broken, pierced through, and scattered. Retreat was impossible through the again-closed ranks of the enemy, and eighteen only of

Grand charge by the cavalry and Imperial Guard on the Russian centre.

* Bign., vi., 130. Dum., xviii., 19, 20. Jom., ii., 362, 363. Wilson, 101, 102.

** "I never was so much struck with anything in my life," said General Bertrand at St. Helena, "as by the emperor at Eylau at the moment when, alone with some officers of his staff, he was almost trodden under foot by a column of four or five thousand Russians. The emperor was on foot, and Berthier gave orders instantly for the horses to be brought forward; the emperor gave him a reproachful look, and, instead, ordered a battalion of his guard, which was at a little distance, to advance. He himself kept his ground as the Russians approached, repeating frequently the words, 'What boldness! what boldness!' At the sight of the grenadiers of his guard the Russians made a dead pause; the emperor did not stir, but all around him trembled."—LAS CASAS, ii., 151. See also *Relation de la Bataille d'Eylau, par un Témoin Oculaire. Camp. en Prusse et Pol.*, iv., 45.

* Wilson, 101, 102. Jom., ii., 361. Dum., xviii., 17, 18. Bign., vi., 129, 130.

the whole body regained their own lines by a long circuit, while five hundred and thirty Cosacks returned, each cased in the shining armour which they had stripped from the dead bodies of their opponents. At all other points the enemy were, after a desperate struggle, driven back; and several eagles, with fourteen pieces of cannon, remained in the hands of the victors.*

The battle appeared gained: the French left and centre had been defeated with ^{Great success of Davoust on the French right.} extraordinary loss; their last reserves, with the exception of part of the guard, had been engaged without success; to the cries of "Vive l'Empereur!" and the shouts of enthusiasm with which they commenced the combat, had succeeded a sullen silence along the whole line in front of Eylau; the Russians were several hundred paces in advance of the ground which they occupied in the morning; and a distant cannonade on both sides evinced the exhaustion and fatigue which was mutually felt. Lestocq had not yet arrived, but he was hourly and anxiously expected, and the addition of his fresh and gallant corps would, it was hoped, enable Benningsen to complete the victory. But while all eyes were eagerly turned to the right, where it was expected his standards would first appear, a terrible disaster, wellnigh attended with fatal consequences, took place on the left. Davoust, who was intrusted with the attack which was intended to be the decisive one in that quarter, had long been delayed by the firm countenance of Bagavout and Osterman Tolstoy; but at length the increasing numbers and vigorous attacks of the French prevailed, and the village of Klein-Saussgarten fell into their hands. It was again reconquered by the Russians, but finally remained in the possession of their antagonists. Nor was the action less warmly contested at Serpallen. Supported by a battery of thirty pieces of artillery, Bagavout there for three hours made head against the superior forces of St. Hilaire and Morand; at length the two lines advanced to within pistol-shot, when the Russians gave way; the cannoniers, bravely resisting, were bayoneted at their guns, and the pieces were on the point of being taken, when they were re-enforced by two regiments which Benningsen sent to their support, and the French, in their turn, were charged in flank by cavalry, broken and driven back upward of three hundred yards. But, notwithstanding this success at Serpallen, the progress of the enemy at Klein-Saussgarten was so alarming that the Russians were unable to maintain themselves on the ground they had so gallantly regained. Friant debouched in their rear in great strength, and rapidly continuing his advance from left to right of the Russian position, he had soon passed, driving everything before him, the whole ground occupied by their left wing; and continuing his triumphant course in their rear, carried by assault the hamlet of Anklappen, and was making dispositions for the attack of Kuschnitten, which had been the headquarters of Benningsen during the preceding night, and lay directly behind the Russian centre. Never was change more sudden: the victorious centre, turned and attacked both in flank and rear, seemed on the point of being driven off the field of battle; already the shouts of victory were heard from Davoust's divisions, and vast volumes of black smoke, blown along the whole Russian centre and right from the flames of Ser-

pallen, evinced in frightful colours the progress of the enemy on their left.*

The firmness of Benningsen, however, was equal to the emergency. Orders were despatched to the whole left wing to fall back, so as to come nearly at right angles to the centre and right; and although this retrograde movement, performed in presence of a victorious enemy, was necessarily attended with some disorder, yet it was successfully accomplished; and, after sustaining considerable loss, the Russian left wing was drawn up, facing outward, nearly at right angles to the centre, which still retained its advanced position, midway between the ground occupied by the two armies where the fight began in the morning. As the Russian left fell back to the neighbourhood of the centre, it received the support of the reserves, while Benningsen wheeled about to the assistance of the discomfited wing;† and although St. Hilaire carried Kuschnitten, this was the last of his advantages in that quarter, and the victorious Davoust was at length arrested.

The battle was in this critical state, with the French victorious on one wing and the Russians on the centre and the other, but without any decisive advantage to either side, when the corps of Lestocq, so long expected, at length appeared on the extreme Russian right, driving before him the French battalions which were stationed near the village of Althof. Orders were immediately despatched to him to defile as quickly as possible in the rear of the Russian right, so as to assist in the recapture of Kuschnitten behind their centre, where St. Hilaire had established himself in so threatening a manner. These directions were rapidly and ably performed: moving swiftly over the open ground in the rear of the Russian right in three columns, he arrived in the neighbourhood of Kuschnitten an hour before it was dark, with seven thousand men, having left two thousand to occupy Althof, and lost nearly a thousand in the course of the march that morning, which had been a constant fight with Marshal Ney's corps. Dispositions for attacking the village and cutting off the retreat of the enemy were instantly made: a terrible cannonade was kept up on its houses, and the Prussians, under cover of the guns, charging in three columns, carried it with irresistible force, destroying or making prisoners the 51st and one battalion of the 108th regiments stationed there, with an eagle, and recovering the Russian guns which had been abandoned on the retreat from Serpallen. Not content with this great success, Lestocq immediately re-formed his divisions in line, with the cavalry and Cosacks in rear, and advanced against the hamlet of Anklappen and the wood adjoining. The division of Friant, wearied by eight hours' fighting, was little in a condition to withstand these fresh troops, flushed by so important an advantage. The combat, however, was terrible: Davoust was there, and his troops, though exhausted, were more than double the numbers of the enemy, and he made the utmost efforts to maintain his ground. "Here," said the marshal, "is the place where the brave should find a glorious death; the cowards will perish in the deserts of

† Wilson, 104, 105. Jom., ii., 363, 364. Dum., xviii., 21, 29.

* Dum., xviii., 19, 20. Jom., ii., 362. Wilson, 103, 104.

Siberia." Notwithstanding all his exertions, however, Friant was driven out of the wood, after an hour's combat, with the loss of three thousand men; the Russians, by a bold attack of cavalry, regained the smoking walls of Anklappen, and the whole allied line was pressing on in proud array, driving the enemy before them over the open ground between that ruin and Saussgarten, when night drew her sable mantle over this scene of blood.*

The battle was over on the centre and left, and Schloditten is already the French lines were illuminated by the fire of innumerable muskets, and retaken by bivouacs, when both armies were startled by a sharp fire succeeded by loud shouts on the extreme right of the Russians, towards Schloditten: it was occasioned by Marshal Ney's corps, which, following fast on the traces of Lestocq, had at nightfall entered Althof, driving the Prussian detachment which occupied it before him, and had now carried Schloditten, so as to interrupt the Russian communication with Königsberg. Benningsen immediately ordered the Russian division of Kamenskoi, which had suffered least in the preceding action, to storm the village, which was executed at ten at night in the most gallant style. The loud cheers of their victorious troops were heard at Preussich-Eylau; and Napoleon, supposing that a general attack was commencing, for which he was little prepared, gave orders for his heavy artillery and baggage to defile towards Landsberg, and ordered Davoust to draw back to the position which he had occupied in front of the wood when the action commenced in the morning, and this terminated the changes of this eventful day.†

From the mortification, however, of retiring for the first time in his life from before an enemy in an open field, Napoleon was relieved by the measures adopted by the Russian general. At 11 at night, a council of war was held by the generals on horseback as to the course which the army should pursue. It was strongly represented by Osterman Tolstoy, the second in command, and Generals Knoring and Lestocq, that at last Bonaparte had now been defeated in a pitched battle, and that it would be to the last degree impolitic to destroy the moral effect of such an advantage by retreating before him, and thus giving him a fair pretext for representing it as a victory; that they were ready instantly or next day to follow up their success, and attack the enemy wherever they could find him; and that, at all events, they would pledge their heads that, if he would only stand firm, Napoleon would be driven to a disastrous retreat. Strong as these considerations were, they were overbalanced, in Benningsen's estimation, by still stronger. He knew that his own loss was not less than twenty thousand men, and though he had every reason to believe that the enemy's was still heavier, yet the means of repairing the chasm existed to a greater degree in the hands of Napoleon than his own: Ney, whose corps had comparatively suffered little, had just joined him; Bernadotte, it was to be presumed, would instantly be summoned to headquarters, and these fresh troops might give the enemy the means of cutting them off from Kön-

igsberg, in which case, in the total destitution for provisions which prevailed, the most dreadful calamities might be apprehended. Influenced by these considerations, Benningsen, who was ignorant of the enormous magnitude of the losses which the French had sustained, and who, though a gallant veteran, had lost somewhat of the vigour of youth, and had been thirty-six hours on horseback with hardly any nourishment, persevered in his opinion, and directed the order of march, which began at midnight, through Schloditten towards Königsberg, without any molestation from the enemy. They took post at Wotenberg, three leagues in front of that town, where the wearied soldiers, after a struggle of unexampled severity, were at length enabled to taste a few hours of repose.*

Such was the terrible battle of Eylau, fought in the depth of winter, amid ice and snow, under circumstances of unexampled horror; the most bloody and obstinately-contested that had yet occurred during the war; and in which, if Napoleon did not sustain a positive defeat, he underwent a disaster which had wellnigh proved his ruin. The loss on both sides was immense, and never, in modern times, had a field of battle been strewn with such a multitude of slain. On the side of the Russians twenty-five thousand had fallen, of whom above seven thousand were already no more: on that of the French, upward of thirty thousand were killed or wounded, and nearly ten thousand had left their colours, under pretence of attending to the wounded, and did not make their appearance for several days afterward. The other trophies of victory were nearly equally balanced: the Russians had to boast of the unusual spectacle of twelve eagles taken from their antagonists, while they had made spoil of sixteen of the Russian guns, and fourteen standards. Hardly any prisoners were made on either side during the action; but six thousand of the wounded, most of them in a hopeless state, were left on the field of battle, and fell into the hands of the French.†

Never was spectacle so dreadful as the field of battle presented on the following morning. Above fifty thousand men lay in the space of two leagues, weltering in blood. The wounds were, for the most part, of the severest kind, from the

* Wilson, 108, 109. *Jom.*, ii., 365, 366. *Dum.*, xviii., 37, 39.

† *Jom.*, ii., 365. *Dum.*, xviii., 39, 40. Wilson, 108, 109, 111.

‡ The official accounts of this great battle on both sides are so much interwoven with falsehood as to furnish no clew whatever to the truth. That of Napoleon is distinguished by more than his usual misrepresentation. He states his loss at 1900 killed and 5700 wounded, in all 7600. Judging by his usual practice, which was to avow a loss about a fourth of its real amount, this would imply a loss of 30,000 men. At St. Helena he admitted that he lost 18,000; and considering that the Russians admit a loss of above 20,000, that their artillery throughout the day was greatly superior to that of the French, and that they sustained no loss in any quarter comparable to that of Augereau's corps, which was so completely destroyed that its remains were immediately incorporated with the other corps, and the corps itself disappeared entirely from the Grand Army, it may safely be concluded that this estimate is not exaggerated. "Our loss," says the Duchess of Abrantes, "at Eylau was enormous—why conceal the truth? The emperor avowing the truth at Eylau would have appeared to me more truly great than putting forth an official falsehood which no child could believe, more especially if he was nephew or son of Colonel Semelé of the 24th regiment of the line, one of the finest in the army, and itself equal almost to a brigade, which was to a man destroyed."—D'ABRANTES, ix., 367.

† Monte Melange 268.

extraordinary quantity of cannon-balls which had been discharged during the action, and the close proximity of the contending masses to the deadly batteries, which spread grape at half-musket-shot through their ranks. Though stretched on the cold snow, and exposed to the severity of an arctic winter, they were burning with thirst, and piteous cries were heard on all sides for water, or assistance to extricate the wounded men from beneath the heaps of slain, or load of horses by which they were crushed. Six thousand of these noble animals encumbered the field, or, maddened with pain, were shrieking aloud amid the stifled groans of the wounded. Subdued by loss of blood, tamed by cold, exhausted by hunger, the foemen lay side by side amid the general wreck. The Cossack was to be seen beside the Italian; the gay vinedresser, from the smiling banks of the Garonne, lay athwart the stern peasant from the plains of the Ukraine. The extremity of suffering had extinguished alike the fiercest and the most generous passions. After his usual custom, Napoleon in the afternoon rode through this dreadful field, accompanied by his generals and staff, while the still burning piles of Serpallen and Saussgarten sent volumes of black smoke over the scene of death; but the men exhibited none of their wonted enthusiasm; no cries of "*Vive l'Empereur!*" were heard; the bloody surface echoed only with the cries of suffering, or the groans of woe. It is this moment which the genius of Le Gros has selected for the finest and most inspired painting that exists of the emperor, in that immortal work which, amid the false taste and artificial sentiment of Parisian society, has revived the severe simplicity and chastened feeling of ancient art.*

For nine days after the battle the French remained at Eylau, unable to advance, unwilling to retreat, and apparently awaiting some pacific overture from the enemy. The only movement of any consequence which was attempted was by Murat, with twelve regiments of cuirassiers, who approached the Russian position in front of Königsberg; but they were defeated by the allied horse, with the loss of four hundred killed and three hundred prisoners. Elated with this success, the Cossacks became daily more enterprising in their incursions: night and day they gave the enemy no rest in their position; their foraging parties were all cut off; and to such a length was this partisan warfare carried, and so completely did the superiority of the Cossacks in its conduct appear, that, during the ten days the French remained at Eylau, upward of fifteen hundred of their cavalry were made prisoners, and brought into Königsberg. Meanwhile the relative situation of the two armies was rapidly changing: the Russians, with the great seaport of Königsberg in their rear, were amply supplied with everything, and their wounded carefully nursed in the great hospitals of that city; while the French, still starving on the snows of Eylau, and unable, from the superiority of the Russian horse, to levy requisitions in the surrounding country, were daily reduced to great-

er straits from want of provisions, and totally destitute of all the accommodations requisite to withstand the rigour of the season.*

Meanwhile Napoleon, however, was not idle.

The day after the battle he issued orders for all the troops in his rear to advance by forced marches to the scene of action. The cuirassiers of Nansouty, which had not been engaged, arrived, in consequence, two days after. Lefebvre received orders to suspend the blockade of Dantzic and concentrate his corps at Osterode, in order to form a reserve to the army and co-operate with Savary, who had the command of Lannes' corps on the Narew. All the bridges on the Lower Vistula were put in a posture of defence, and Bernadotte was brought up to Eylau. Such, however, had been the havoc in the army, that the emperor, notwithstanding these great re-enforcements, did not venture to renew hostilities, or advance against Königsberg, the prize of victory, where he would have found the best possible winter-quarters, and the steeples of which were visible from the heights occupied by his army.† Even the critical position of the Russian army, with its back to the sea and the River Pregel, where defeat would necessarily prove ruin, could not induce Napoleon to hazard another encounter; and, finding that the Russians were not disposed to propose an armistice, he determined himself to take that step. For this purpose General Bertram Feb. 15. was sent to Benningsen's outposts with proposals of peace both to the Emperor of Russia and the King of Prussia. The Russian general sent him on to Memel, where the latter was, with a letter strongly advising him not to treat, and representing that the fact of Napoleon proposing an armistice after so doubtful a battle was the best evidence that it was not for the interest of the allies to grant it. The terms proposed were very different from those offered after the triumph of Jena: there Feb. 17. were no more declarations that the house of Brandenburg must resign half its dominions;‡ or that he would make the Prussian nobles so poor that they should be reduced to beg their bread.§

Frederic William, however, was not led to

* Wils., 109, 111. Dum., xviii., 49, 51.

† When Napoleon began the battle of Eylau he never doubted he would be in Königsberg next day. In his proclamation to his soldiers, before the action commenced, he said, "In two days the enemy will cease to exist, and your fatigues will be compensated by a luxurious and honourable repose." And on the same day Bernier wrote to Josephine, "The Russians have fled to Gumbinnen on the road to Russia; to-morrow Königsberg will receive the emperor."—WILSON, 113.

‡ Hard., ix., 395, 399. Lucches. Bign., vi., 154, 155.

§ Napoleon's letter to the King of Prussia was in these terms: "I desire to put a period to the misfortunes of your family, and organize as speedily as possible the Prussian monarchy, whose intermediate power is necessary for the tranquillity of Europe. I desire peace with Russia; and, provided the cabinet of St. Petersburg has no designs on the Turkish Empire, I see no difficulty in obtaining it. Peace with England is not less essential to all nations; and I shall have no hesitation in sending a minister to Memel to take part in a congress of France, Sweden, England, Russia, Prussia, and Turkey. But as such a congress may last many years, which would not suit the present condition of Prussia, your majesty therefore will, I am persuaded, be of opinion that I have taken the simplest method, and which is most likely to secure the prosperity of your subjects. At all events, I entreat your majesty to believe in my sincere desire to re-establish amicable relations with so friendly a power as Prussia, and that I wish to do the same with Russia and England."—HARD., ix., 396; SCHOEL, viii., 37-405.

* Dum., xviii., 40, 41. Wilson, 109. Ann. Reg., 1807, 14, 15.

† This admirable painting, the master-piece of modern French art, is to be seen in the Luxembourg, at Paris, standing forth in dark simplicity amid its meretricious competitors: it is worthy to be placed beside the finest battle-pieces of Le Brun or Tempesta, and in grandeur of thought and of effect greatly excels any British work of art since the days of Reynolds.

Which are re- sswered from the path of honour even
fused by Prus- by this tempting offer. Widely as
sia. the language of the French emperor
differed from that which he had formerly employ-
ed, and clearly as his present moderation evinced
the extent of the losses he had sustained at Eylau,
still the existing situation and recent engage-
ments of the Prussian monarch precluded his
entering, consistently with national faith, into a
separate negotiation. The Emperor of Russia
had just given the clearest indication of the he-
roic firmness with which he was disposed to
maintain the contest, by the vigorous campaign
which he had commenced in the depth of winter,
and the resolution with which he had sustained
a sanguinary battle of unexampled severity.
The conduct of England, it is true, had been
very different from what it had hitherto been dur-
ing the Revolutionary war, and hardly any as-
sistance had been received either from its arms
or its treasures by the allies engaged in a contest
of life or death on the shores of the Vistula; but
this parsimonious disposition had recently re-
lented, and some trifling succours had just been
obtained from the British government, which, al-
though unworthy for England to offer, were yet
gratefully received, as indicating a disposition
on the part of its cabinet to take a more active part
in the future stages of the struggle.* Under the in-
fluence of these feelings and expectations, the
Prussian government, notwithstanding the almost
desperate situation of their affairs, and the occu-
pation of nine tenths of their territories by the
enemy's forces, refused to engage in any separate
negotiation: an instance of magnanimous
firmness in the extremity of danger which is
worthy of the highest admiration, and went far
to wipe away the stain which their former vacil-
lating conduct towards Napoleon had affixed to
the Prussian annals.†

Foiled in his endeavours to seduce Prussia into
a separate accommodation, Napo-
leon was driven to the painful alter-
native of a retreat. Orders were
given on the 17th for all the corps to
fall back, the advanced posts being
strengthened, in order to prevent the enemy from
becoming aware of what was going forward, or
commencing a pursuit. Eylau was evacuated,
and six hundred wounded abandoned to the hu-
manity of the enemy, and the army, retiring by
the great road through Landsberg, spread itself
into cantonments on the banks of the Passarge
from Hohenstein, where it takes its rise, to
Braunsberg, where it falls into the Baltic Sea.
Headquarters were established at Osterode, in
the rear of the centre of the line; the bulk of the
army was quartered between that place and
Wormditt. Lefebvre received orders to return
to Thorn, unite with the Polish and Saxon con-
tingents, and resume the siege of Dantzic, the
preparations for which had been entirely sus-
pended since the general consternation which
followed the battle of Eylau.‡

Benningen hastened to occupy the country
which the enemy had evacuated, and on the 25th

of February his headquarters were The Russians.
advanced to Landsberg. As the advance, and
sian army passed over the bloody also go into
fields of Preussich-Eylau and Hoff, cantonments.
still encumbered with dead, and strewed with
the remains of the desperate contest of which
they had recently been the theatre, they felt
that they had some reason to claim the advan-
tage in those well-fought fields; and Benning-
sen issued a proclamation to his troops, in which
he now openly claimed the victory.* Both parties
Napoleon also addressed his sol- claim the vic-
diers; but though it was with his tory at Eylau.
usual confidence, yet it was impossible to con-
ceal from the men or from Europe that the Grand
Army had now for the first time retreated, and
that the remains of their comrades on the field
of battle had to trust to the humanity of an en-
emy for their sepulture.† In truth, however, not
only the battle, but the objects of the winter cam-
paign had been equally divided. It was not to
draw the French army from the Vistula to the
Passarge, a distance of above a hundred miles,
that Benningen had concentrated his troops and
resumed offensive operations in the depth of win-
ter; and it was not to retire from within sight of
the steeples of Königsberg to the wretched villa-
ges on the latter stream that Napoleon had fought
so desperate a battle at Eylau. The one struck
for Dantzic, the other for Königsberg, and both
were foiled in their respective objects: fifty thou-
sand men had perished without giving a decisive
advantage to either of the combatants.‡

To this period of the Polish war belong the
operations of Essen and Savary on the
Narew and the neighbourhood
of Ostrolenka. Savary had occu-
pied that town with a large part
of Lannes' corps, who, as already men-
tioned, was sick; and Essen having received con-
siderable accessions of force from the army of
Moldavia, which raised his disposable numbers
to twenty thousand men, received orders, early in
February, to attack the French in that quarter,
and engage their attention, in order to prevent
any re-enforcements being drawn from that corps
to the main army, then advancing to the decisive

Operations of
Essen against
Savary. Com-
bat of Ostro-
lenka.

* Benningen said, "Soldiers! as the enemy was man-
oeuvring to cut us off from our frontiers, I made my army
change its position, in order to defeat his projects. The
French, deceived by that movement, have fallen into the
snare laid for them. The roads by which they followed us
are strewn with their dead. They have been led on to the
field of Eylau, where your incomparable valour has shown
of what the Russian heroism is capable. In that battle
more than thirty thousand French have found their graves.
They have been forced to retire at all points, and to aban-
don to us their wounded, their standards, and their baggage.
Warriors! you have now reposed from your fatigues: for-
ward, let us pursue the enemy, put the finishing stroke to
our glorious deeds, and after having, by fresh victories, given
peace to the world, we will re-enter our beloved country."
—DUMAS, xviii., 67.

† Napoleon's address was as follows: "Soldiers! we
were beginning to taste the sweets of repose in our winter-
quarters when the enemy attacked the first corps on the
Lower Vistula: we flew to meet him; pursued him, sword
in hand, for eighty leagues; he was driven for shelter be-
neath the cannons of his fortresses, and beyond the Pregel.
In the combats of Bergfried, Dippen, Hoff, and the battle
of Eylau, we have taken sixty pieces of cannon, sixteen
standards, killed, wounded, or taken more than 40,000 Rus-
sians; the brave who have fallen on our side have fallen
nobly, like soldiers. Their families shall receive our pro-
tection. Having thus defeated the whole projects of the
enemy, we will draw near to the Vistula, and re-enter our
winter-quarters: whoever ventures to disturb our repose
shall repent of it—for beyond the Vistula, as beyond the
Danube, in the depth of winter as in the heat of summer,
we shall always be the soldiers of the Grand Army." —
DUMAS, xviii., 63.

‡ Dum., xviii., 64, 67. Wilson, 116.

* They consisted only of £80,000 in money. A farther
subsidy of £100,000 and £200,000 worth of arms and amu-
nition, which, with the promise of future succours, were
furnished by the British government in May following, in
return for a solemn renunciation, on the part of the cabinet
of Berlin, to all claim to the Electorate of Hanover.—HARD,

‡ Wilson, 115-116. *Dum.*, xviii., 56, 64.

battle of Eylau. Essen advanced with his corps on each side of the River Narew. That commanded by the Russian general in person on the right bank encountered Savary, who was supported by Suchet with his brilliant division: a rude conflict ensued, in which the Russians were finally worsted. Greater success, however, attended their efforts on the left bank: supported by the fire of fifty pieces of artillery, they drove back the French to the walls of Ostrolenka, and, entering pellmell with the fugitives, penetrated into the principal square, and were on the point of obtaining decisive success, when Oudinot, who was marching with 6000 of the Guard to join the Grand Army from Warsaw, arrived with his division of fresh troops, and uniting with Suchet, who halted in the midst of his pursuit on the right bank to fly to the scene of danger, succeeded, after a bloody encounter in the streets, in driving them into the sandhills behind the town, where a destructive cannonade was kept up till nightfall. In this affair the Russians lost seven guns and fifteen hundred men, and the French as many; but having succeeded in their object in defending the town, and keeping the communication of the Grand Army open with Warsaw, they with reason claimed the victory.*

The battle of Eylau excited a prodigious sensation in Europe, and brought Napoleon to the very verge of destruction. Had a ministry of more capacity in military combination been then at the head of affairs in England, there cannot be the smallest doubt that the triumphs of 1813 might have been anticipated by seven years, and the calamities of Europe at once arrested. The first accounts of the battle received through the French bulletins rendered it evident that some disaster had been incurred, and the anxious expectation everywhere excited by this unsatisfactory communication was increased to the highest pitch of transport when, from Benningsen's report, it appeared that he claimed the victory, and, from the stationary condition of the Russian army in front of Königsberg, and the ultimate retreat of the French to the banks of the Passarge, that these pretensions were not devoid of foundation. It was confidently expected that, now that Napoleon had for once been decisively foiled, the Austrians would instantly declare themselves, and their forty thousand men in observation in Bohemia be converted into a hundred thousand in activity on the Elbe.† To stimulate and support such a combination, the public voice in England loudly demanded the immediate despatch of a powerful British force to the mouth of the Elbe; and recollecting the universal exasperation which prevailed in the north of Germany at the French, in consequence of the enormous requisitions which they had everywhere levied from the inhabitants, whether warlike or neutral, there cannot be a

doubt that the appearance of fifty thousand English soldiers would have been attended with decisive effects both upon the conduct of Austria and the future issue of the war. Nothing, however, was done: the English ministry, under the direction of Lord Howick, notwithstanding the most urgent entreaties from Russia and Prussia, sent no succours in men or money. The decisive period was allowed to pass by without anything being attempted in support of the common cause, and the British nation, in consequence, had the Peninsular war to go through to regain the vantage-ground which was then within their grasp.*

In proportion to the sanguine hopes which this bloody contest excited in Germany and England was the gloom and depression which it diffused through all ranks in France. The Parisians were engaged in a vortex of unusual gayety: balls, theatres, and parties succeeded one another in endless succession, when the news of the battle of Eylau fell at once on their festivity like a thunderbolt. They had learned to distrust the bulletins: they saw clearly that Augereau's divergence had been occasioned by something more than the snowstorm. The funds rapidly fell, and private letters soon circulated and were eagerly sought after, which rendered a true and even exaggerated account of the calamity. Hardly a family in Paris but had to mourn the loss of some near relation: the multitude of mourners cast a gloom over the streets, the general consternation suspended all the amusements of the capital. The most exaggerated reports were spread, and found a ready entrance in the excited population: one day it was generally credited that Napoleon had fallen back behind the Vistula; the next, that a dreadful engagement had taken place, in which he himself, with half his army, had fallen. So far did the universal consternation proceed, that the members of the government began to look out for their own interests in the approaching shipwreck; and even the imperial family itself was divided into factions, Josephine openly supporting the pretensions of her son, Eugene, to succeed to the throne, and the Princess Caroline employing all the influence of her charms to secure Junot, governor of Paris, in the interest of her husband, Murat.†

The general gloom was sensibly increased when the message of Napoleon, dated March 26, to the Conservative Senate, announced that a fresh conscription was to be raised of eighty thousand men, in March, 1807, for September, 1808. This was the third levy which had been called for since the Prussian war began: the first when the contest commenced, the second during the triumph and exultation which followed the victory of Jena, the third amid the gloom and despondency which succeeded the

Universal consternation at Paris on news being received of Eylau.

Napoleon demands a third conscription from the 14th of October.

* Sav., iii., 36, 39. Wilson, 119. Jom., ii., 367, 368. Dum., xviii., 69, 75.

† "I trembled," says Jomini, speaking in the person of Napoleon, "lest 150,000 of those mediators had appeared on the Elbe, which would have plunged me in the greatest difficulties. I there saw that I had placed myself at the mercy of my enemies. More than once I then regretted having suffered myself to be drawn on into those remote and inhospitable countries, and received with so much asperity all who sought to portray its danger. The cabinet of Vienna had then a safer and more honourable opportunity of re-establishing its preponderance than that which it chose, in 1813, but it had not resolution enough to profit by it, and my firm countenance proved my salvation."—JOMINI, ii., 369.

* "Repeated and urgent applications were made in February and March, 1807, for an English army, consisting of cavalry, infantry, and artillery, to co-operate with the Swedish forces in Pomerania, but in vain. Some subsidies were granted in April, but no troops sailed from England till July, when they consisted only of 8000 men, who were sent to the Island of Ruügen." To the earnest request for an auxiliary force, Lord Howick replied, on March 10, "Doubtless the spring is the most favourable period for military operations, but at the present juncture the allies must not look for any considerable land-force from Great Britain." This was after the battle of Eylau was known by the cabinet of London.—See *Annual Register*, 1807, 23; and *Luccchesini*, ii., 295, 296. † Sav., iii., 42, 43. D'Abr., ix., 356, 364.

carnage of Eylau. No words can do justice to the consternation which this third requisition excited among all classes, especially those whose children were likely to be reached by the destructive scourge. In vain the bulletins announced that victories were gained with hardly any loss. The terrific demand of three different conscriptions, amounting to no less than two hundred and forty thousand men in seven months, too clearly demonstrated the fearful chasms which sickness and the sword of the enemy had made in their ranks. The number of young men who annually attained the age of eighteen in France, which was the period selected for the conscription, was about two hundred thousand. Thus, in half a year, more than a whole annual generation had been required for a service which experience had now proved to be almost certain destruction. So great was the general apprehension, that the government did not venture to promulgate the order until, by emissaries and articles in the public journals, the public mind had been in some degree prepared for the shock; and when it was announced, Regnaud St. Angely, the orator intrusted with the task, shed tears, and even the obsequious Senate could not express their acquiescence by any of the acclamations with which they usually received the imperial mandates. So powerful was the public feeling, so visible and universal the expression of terror in the capital, that it was found necessary to assuage the general grief by a clause, declaring that the new levy was at first to be merely organized as an army of reserve for the defence of the frontier, under veteran generals, members of the Conservative Senate. These promises, however, proved entirely elusory. The victory of Friedland saved the new conscripts from the slaughter of the Russian bayonets, only to reserve them for the Caudine Forks, or the murder of the Guerillas in the fields of Spain.*

Meanwhile the prodigious activity of the emperor was employed, during the cessation of hostilities in Poland, in the most active measures to repair his losses, organize the new levies, wring the sinews of war out of the conquered provinces, and hasten forward the conscripts as fast as they joined their depôts on all the roads leading to the theatre of war. All the highways converging from France and Italy to the Vistula were covered with troops, artillery, ammunition, and stores of all sorts for the use of the army. Extensive purchases of horses in Holstein, Flanders, and Saxony provided for the remounting of the cavalry and artillery-drivers; while enormous requisitions everywhere in Germany† fur-

nished the means of subsistence to the unwieldy multitude who were now assembled on the shores of the Vistula. Nay, so far did the provident care of the emperor go, and so strongly did he feel the imminent danger of his present situation, that, while his proclamations breathed only the language of confidence, and spoke of carrying the French standards across the Niemen, he was, in fact, making the most extensive preparations for a defensive warfare, and anticipating a struggle for life or death on the banks of the Rhine. All the fortresses on that river and on the Flemish frontier were armed and put in a posture of defence, and the new levy directed to be placed in five camps, to cover the most unprotected points of the territory of the empire; while the whole veterans in the interior were called out and organized into battalions with the coast-guard, to protect the coasts of Flanders and the Channel, and overawe the discontented in Brittany and La Vendée. "It is necessary," said he, "that, at the sight of the triple barrier of camps which surround our territory, as at the aspect of the triple line of fortresses which cover our frontier, the enemy should be undeceived in their extravagant expectations, and see the necessity of returning, from the impossibility of success, to sentiments of moderation."^a

Neither Napoleon nor his enemies were mistaken in the estimate which they formed of the perilous nature of the crisis which succeeded the battle of Eylau: nothing can be more certain than that a second dubious encounter on the Vistula would have been immediately followed by a disastrous retreat beyond the Rhine. Metternich afterward said to the ministers of the French emperor, "We can afford to lose many battles, but a single defeat will destroy your master;" and such, in truth, was the situation of France during the whole reign of Napoleon. It is the precarious tenure by which power is held by all those who rest for their support upon the privilege of opinion or popular passion, whether Democratic or military, which is the secret cause of their ultimate fall. Constant success, fresh victories, an unbroken series of triumphs, are indispensable to the existence of such an authority: it has no middle ground to retire to, no durable interests to rouse for its support; it has perilled all upon a single throw; the alternative is always universal empire or total ruin. This was not the case in a greater degree with Napoleon than any other conqueror in similar circumstances: it obtained equally with Cæsar, Alexander, and Tamerlane; it is to be seen in the British empire in India; it is the invariable attendant of power in all ages, founded on the triumphs of passion over the durable and persevering exertions of reason and interest. It is a constant sense of this truth which is the true key to the character of Napoleon, which explains alike what the world erroneously called his insatiable ambition and his obstinate retention of the vantage-ground which he had gained, which was the secret reason of his advance to the Kremlin, and of his otherwise inexplicable stay at Moscow and Dresden. He

Extreme danger of Napoleon's situation at this juncture.

* Ann. Reg., 1806, 167, 169. Bign., vi., 239.

† The requisitions from the city of Hamburg and the Hanse Towns will give an idea of the almost incredible extent to which these exactions were carried by Napoleon at this time, and of the blind violence with which he pursued the English commerce at the very time that it had become, from his own acts, indispensable for the equipment of his own troops. By an imperial decree, in March, 1807, Hamburg was ordered to furnish

200,000 pairs of shoes,
50,000 greatcoats,
16,000 coats,
37,000 waistcoats.

M. Bourrienne, the resident at Hamburg, who was charged with the execution of this order, had no alternative but to contract with English houses for these enormous supplies, which all the industry of the north of Germany could not furnish within the prescribed time; and as the same necessity was felt universally, the result was, that when the Grand Army took the field in June, it was almost all equipped in the cloth of Leeds and Halifax, and that, too, at a

time when the penalty of death was affixed to the importation of English manufactures of any sort. A full enumeration of all the contributions levied on Germany during the war of 1807 will be given in a succeeding chapter, drawn from official sources, the magnitude of which almost exceeds belief.—See BOURRIENNE, vii., 293, 294.

* Bign., vi., 238, 239. Ann. Reg., 1807, 3.

knew that, throughout his whole career, he could not retain but by constantly advancing, and that the first step in retreat was the commencement of ruin.

The Polish winter campaign demonstrates, in the most striking manner, the ruinous effect of the surrender of the Prussian fortresses on the most striking manner, the ruinous effects to the common cause, and in an especial manner the interests of their own monarchy, which resulted from the disgraceful capitulations of the Prussian fortresses in the preceding autumn. When the balance quivered at Eylau, the arrival of Lestocq would have given the Russians a decisive victory, had it not been for the great successes of Davoust on the left and the tardy appearance of Ney on the right; yet, if the governors of the Prussian fortresses on the Elbe and the Oder had done their duty, these two corps would have been engaged far in the rear, Ney around the walls of Magdebourg, Davoust before Stettin, Custrin, and Glogau. Saragossa, with no defence but an old wall and the heroism of its inhabitants, held out after fifty days of open trenches; Tarragona fell after as many. If the French marshals had, in like manner, been detained two months, or even six weeks, before each of the great fortresses of Prussia, time would have been gained to organize the resources of the eastern provinces of the monarchy, and Russia would have gained a decisive victory at Eylau, or driven Napoleon to a disastrous retreat from the Vistula: a striking proof of the danger of military men mingling political with warlike considerations, or adopting any other line, when charged with the interests of their country, than the simple course of military duty.

Benning's assembling of his army in silence behind the dark screen of the Johannesberg forest; the hardihood and resolution of his winter march across Poland, and his bold stroke at the left wing of the French army when reposing in its cantonments, were entitled to the very highest praise, and, if executed with more vigour at the moment of attack, would have led to the most important results; his subsequent retreat in presence of the Grand Army without any serious loss, and the desperate stand he made at Eylau, as well as the skill with which the attacks of Napoleon were baffled on that memorable field, deservedly place him in a very high rank among the commanders of that age of glory. Napoleon's advance to Pultusk and Golymin, and subsequently his march from Warsaw towards Königsberg, in the depth of winter, were distinguished by all his usual skill in combination and vigour in execution; but the results were very different from what had attended the turning of the Austrian and Prussian armies at Ulm and Jena: columns were here cut off, communications threatened, corps planted in the rear, but no serious disasters followed; the Russians fronted boldly and fought desperately on every side, and from the hazardous game the assailant suffered nearly as much as the retreating party: a striking proof of what so many other events during the war conspired to demonstrate, that a certain degree of native resolution will often succeed in foiling the greatest military genius, and that it was as much to the want of that essential quality in his opponents as his own talents that the previous triumphs of Napoleon had been owing.

Observations on the military movements of both parties.

CHAPTER XLV.

DOMESTIC AND FOREIGN MEASURES OF MR. FOX'S ADMINISTRATION.

FEB., 1806—MARCH, 1807.

ARGUMENT.

Important Civil Changes which originated during the War.—Effects of the Accession of the Whigs to Power.—Their Plan for a new System for the recruiting of the Army.—Great Changes introduced in this Particular.—Argument in support of it by Mr. Windham.—Reply of the former Ministers on the Subject.—The Bill passes.—Reflections on this Subject.—Error of the ministerial Measure as far as regards the Volunteers.—Temporary Service now in a great Degree abandoned.—Abolition of the Slave-trade.—Argument against the Change by the West India Planters.—Argument of Mr. Wilberforce and others for the Abolition.—The Abolition is carried.—Deplorable Effects of the Change hitherto on the Negro Race; but they are not chargeable on its Authors, but on subsequent Alterations.—Lord Henry Petty's Plan of Finance.—Argument in favour of it.—Argument against it by Lord Castlereagh and Mr. Perceval.—Counter Plan proposed by them.—Reflections on this Subject.—Prejudicial Effect in the End of these Discussions.—General Character of the Whig Measures at this Period.—Their combined Humanity and Wisdom.—Foreign Transactions.—First Expedition to South America.—Capture of Monte Video.—A second Expedition against Buenos Ayres is resolved on.—Its Failure.—Court-martial on General Whitelocke, the Commander, who is cashiered.—Capture of Curaçoa, and establishment of the Republic of Hayti.—State of Affairs in Turkey.—Dismissal of the Waywodes of Wallachia and Moldavia by Sultan Selim.—Violent Remonstrances of Russia and England, which produce the Repeal of the Measure.—Meanwhile the Russian Armies invade the Principalities, and War is declared.—Rapid Progress of their Troops in these Provinces.—They require the Aid of a naval Attack by England on Constantinople, which is agreed to.—Description

of the Dardanelles.—Ultimatum of Great Britain, and Declaration of War by Turkey.—Sir John Duckworth passes the Dardanelles.—The Divan resolve on Submission, but are roused to exertion by General Sebastiani.—The Turks negotiate to gain Time and complete their Preparations.—The English renounce the Enterprise, and with Difficulty repossess the Dardanelles.—Blockade of those Straits, and naval Action off Tenedos.—Descent by the British on the Coast of Egypt, which is defeated.—Great Discontents at these repeated Disasters throughout Great Britain.—Bill for introducing the Catholics into the Army and Navy brought in by Lord Howick.—Argument in favour of it by Lord Howick.—Argument against it by Mr. Perceval.—Change of Ministry.—Cause which led to it.—Composition of the new Cabinet.—Arguments in Parliament against the King's Conduct, and in support of it by Mr. Perceval and Mr. Canning.—Dissolution of Parliament.—General Election, and great Majority in favour of the new Ministry.—Character of the Whig Ministry, and Effects of their Fall.—Reflections on their foreign Measures.—Violent Irritation arising from them in Russia.—Repeated and ineffectual Applications which Alexander had made for Aid from England during the Polish War.—The Dardanelles Expedition is an Exception to the general Inexperience of their foreign Policy.—The Defeats of England during their Administration were ultimately beneficial.

If history were composed merely of the narrative of wars and campaigns, it would, how interesting soever to the lovers of adventure, or important to those intrusted with the national defence, be justly subject to the reproach of being occupied only with the passions and ca-

Important civil changes which originated during the war.

lamities of mankind. But even in the periods when military adventure appears to be most conspicuous, and battles and sieges seem to occupy exclusively the attention of the historian, great and important civil changes are going forward; and the activity of the human mind, aroused by the perils which prevail, and the forcible collision of interests and passions which is induced, is driven into new channels, and turned to the investigation of fresh objects of thought. It is the tendency of those periods of tranquillity, when no serious concerns, whether of nations or individuals, are at stake, to induce a state of torpor and inactivity in the national mind: mankind repose after their struggles and their dangers; the arts of peace, the social dispositions, the abstract sciences are cultivated; the violent passions, the warm enthusiasm, the enduring fortitude of former days, pass into the page of history, and excite the astonishment or provoke the ridicule of their pacific successors. Such a period is, of all others, the most conducive to general happiness, but it is far from being that in which the greatest and most original efforts of human thought are made. The age of the Antonines in ancient, the era of the Georges in modern times, were unquestionably those when the greatest sum of general happiness prevailed in the Roman and British empires; but we shall look in vain in the authors or statesmen of either for the original thought and vigorous expressions which characterized the stormy periods of Cæsar and Pompey, of Cromwell and Napoleon.

The accession of the Whig ministry to the direction of affairs was an event eminently calculated to afford full scope to the practical application, to the measures of the Legislature, of those ideas of social improvement which the agitation and excitement of the preceding fifteen years had caused to take deep root among a large proportion of the thinking part of the people. The men who had now succeeded to the helm embraced a considerable part of the aristocracy, much of the talent, and still more of the philanthropy of the state. For a long course of years they had been excluded from power, and during that time they had been led, both by principle and interest, to turn their attention to those projects of social amelioration which the French Revolution had rendered generally prevalent among the Democratic classes, and which were in an eminent degree calculated to win the affections of the popular party throughout the kingdom. The period, therefore, when their leaders, by their installation in power, obtained the means of carrying their projected changes into effect, is of importance, not merely as evincing the character and objects of a party justly celebrated in English history both for their talents and achievements, but as illustrating the modification which Revolutionary principles receive by falling upon the highest class of persons, long trained to the habits and speculations of a free country.

The composition of the army was the first matter which underwent a thorough discussion, and was subjected to a different system in consequence of the accession of the new administration. Notwithstanding the uniform opposition which the Whigs had offered to the war, and the censures which they had in general bestowed upon all Mr. Pitt's measures for increasing the naval and military establishments of the country, it had now become painfully evi-

dent, even to themselves, that the nation was involved in a contest, which might be of very long duration, with a gigantic foe, and that the whole resources of the country might be speedily required to combat for the national existence with the veteran legions of Napoleon on the shores of Britain. The means of recruiting which can ever exist in a free country are altogether unequal to those which are at the command of despotism, whether monarchical or Democratic, unless in those rare periods of public excitement when the intensity of patriotic feeling supplies the want of powers of compulsion on the part of the executive; and, accordingly, throughout the whole war, great difficulty had been experienced by the British government in providing a proper supply of soldiers for the regular army. The only method pursued was voluntary enlistment; the jealousy of a free Constitution not permitting a conscription, except for the militia, which could not legally be sent out of the kingdom; and the success of the attempt to extend this system to the raising of troops of the line by balloting for fifty thousand men to compose the army of reserve in 1803, had not been such as to hold out any inducements for a repetition of the attempt. Enlistment for life was the system universally pursued, it being thought that in a country where the pay of the soldier was necessarily, from the expense of the establishment, less than the wages of ordinary workmen, to allow a power of retiring after a stated period of service was over, might endanger the state by thinning the ranks of the army at the most critical periods. To this point the attention of former administrations had frequently been directed, and a recent change had been made by Mr. Pitt, which had considerably increased the annual supply of recruits by enlistment; but the new ministry introduced at once a total change of system by the introduction of enlistments for a limited period of service.*

* It was argued in Parliament by the supporters of this change, and especially Mr. Windham, "The fate of nations at all times, when contending with one another, has been determined chiefly by the composition of their armies. The times are past, if they ever existed, when one country contended against another by the general strength of its population, when the strength of the army was the mere amount of the physical force and courage of the individuals who composed it. Armies are now the champions on either side to which the countries engaged commit their quarrel, and when the champion falls the cause is lost. The notion of a *levy en masse* or voluntary force, therefore, would seem to be one to which it would be wholly unsafe to trust. In how many instances has it ever happened, that when the army was defeated the contest has been restored by a contest of the people at large? The people in mass are like metal in the ore; and as all the iron that ever came from a Swedish mine would never hew a block or divide a plank till it was wrought and fashioned into the shape of a hatchet or a saw, so the strength of a people can never, perhaps, be made capable of producing much effect in war till it is extracted partially, and moulded into that facitious and highly-polished instrument called an army. What are the two events which, more than any other two, have decided the fate of the present world? The battles of Marengo and Austerlitz. Yet what were the numbers there employed, the space occupied, or the lives lost, compared to the states and kingdoms whose fate was then decided? Yet such was the fact; millions hung upon thousands; the battles were lost, and Europe submitted to the conqueror. It was not because there did not exist in those countries a brave and warlike people, animated by the strongest feelings of devotion to their sovereign, and abhorring the idea of a foreign yoke. All these were there; twenty-five millions of men burning with patriotic ardour were around the emperor; but the regular armies were defeated, and submission was a matter of necessity.

"Assuming, then, the importance of regular armies, which no one denies, but every one seems disposed to forget, the question is, How are they to be obtained? above

Great change in the composition of the army. Arguments in support of it by Mr. Windham.

The bill met with a most strenuous opposition, although the early divisions which took

place upon it evinced a clear preponderance in favour of the ministers;* but it passes.

all, how are we to ensure to this country, what unquestionably it has never had, a never-failing and adequate supply of regular soldiers? The nature of things here yields us but the option of two things, choice or force. In the Continental monarchies recourse is usually had to the latter of these modes, and undoubtedly, wherever the power of government is such that it has nothing to do but send its officers forth to seize the peasantry and force them to become soldiers, there can be no process so easy, effectual, and certain. But every one must be conscious that this is a mode of proceeding impracticable, except in extreme emergencies, in this country; not that the power is wanting in government of ordering such a levy, but that the measures of force we can employ are so abhorrent to public feeling, so restricted and confined by legal forms, that their effect is almost reduced to nothing. Even if it could be enforced, the real character of such a compulsory service is only that of a tax, and of the worst of all taxes, a tax by lot. We hear every day that half measures will no longer do—that something effectual must be done; but if from these generalities you descend to particulars, and propose to renew the act for the army of reserve, the feeling is immediately changed, and all declare they are decidedly against any measure of the sort. It is impossible to say to what the exigencies and necessities of the times may drive us; but, unless a more urgent necessity is generally felt than exists at this moment, measures so oppressive in their immediate effects, so injurious in their ultimate results, should not be resorted to till it is proved by experience that all others have failed.

"Voluntary enlistment, therefore, is the only resource which remains to us, and yet the experience of thirteen years' warfare has now sufficiently demonstrated that from this source, in the present state and habits of our population, it is in vain to expect a sufficient supply of soldiers. If, however, you cannot change the habits or occupations of your people, what remains to be done but to increase the inducements to enter the army? Without this, our means of recruiting must be little better than deception and artifice. We are in the state of men selling wares inferior in value to the price they ask for them, and, accordingly, none but the ignorant and thoughtless will ever be tempted to become buyers. To such a height has this arisen, that of late years our only resource has been recruiting boys; men grown up, even with all the grossness, ignorance, and improvidence incident to the lower orders, are too wary to accept our offers; we must add to the thoughtlessness arising from situation the weakness and improvidence of youth. The practice of giving bounties is decisive proof of this; whatever is bestowed in that way, shows that the service does not stand upon its true footing. Men require no temptation to engage in a profession which has sufficient inducements of its own. Never can the system of supplying the army be considered as resting upon its proper basis, till the necessity of bounties shall have ceased, and the calling of a soldier shall be brought to the level with other trades and professions, for entering into which no man receives a premium, but where, on the contrary, a premium is frequently paid for permission to enter.

"The great change by which this might, at first sight, appear to be effected, is by raising the pay. But, independently of the financial embarrassments which any considerable alteration in that respect would produce, there is an invincible objection to such a change in the licentious habits, inconsistent with military discipline, which an undue command of money would generate among the soldiers. Provisions in sickness and old age; pensions for the wounded; honorary distinctions suited to the rank, situation, and condition of the party, are much safer recommendations; but, above all, a change in the service of enlistment from life to a limited period is the great alteration to which we must look for elevating the attractions of the army. This is the system of service in all the states of Europe except our own, and it is the condition of entering that large and efficient part of our own forces, now 100,000 strong, which is composed of the regular militia. That this system will have the effect of inducing men to enter is so clear, so certain, so totally incontrovertible, that it is unnecessary to urge it. There is no man who would not prefer having an option to having none. Our immense armies in India are all raised, and that, too, without the slightest difficulty, for limited service. A system of rewards for the regular and faithful soldier should also be established; and that severity of discipline, which is at present so much an object of terror to all persons of regular habits, should be materially softened; not that it will, in all probability, ever be possible to dispense entirely with corporeal punishment in the army, for there are some turbulent spirits who can only be repressed by the fear of it, but the discipline may be rendered infinitely less rigorous. By this means a better description of men will be induced to enter the army; and the better

men you get, the less necessity will there be for severe punishment. By these changes, also, the temptation to desertions will be greatly diminished, the great and alarming frequency of which, of late years, has been mainly owing to high bounties and bad regulations; and in legislating for this matter, it is material to invest courts-martial with a discretionary power to modify the penalty of desertion most materially, or take it away altogether, if it has been committed only in a moment of intoxication, or from the influence of bad example, or the soldier has made amends by returning to his colours.

"It is a mistake to argue that the benefits I have proposed to introduce, being for the most part prospective, and to be reaped only at the end of seven or fourteen years, will not influence the inconsiderate description of men who form the great bulk of our common soldiers. That may be true as it relates to the description of men who, under the combined influence of bounties and intoxication on the one hand, and service for life and flogging on the other, almost exclusively enter our service. But the great benefit which may fairly be expected to result from a measure of the sort now proposed is, that it will introduce a new and better description of persons into the army, not altogether so thoughtless or inconsiderate, but who are attracted by the advantages which the military service holds out. Such considerations may frequently, indeed, have little weight with the young man himself, but will they prove equally unavailing with his relations, arrived at a more advanced period of life, and familiar, from experience, with the difficulty of getting on in every profession? What attracts young men of family into the East India Company's service, notwithstanding all the disadvantages of a lifetime spent in exile, and a climate so deadly that not one in ten ever survives it? Not present advantage, for the pay, for the first ten years, barely equals the young man's expenses. It is ultimate benefits; the spectacle of nabobs frequently returning with fortunes; the certainty that all who survive will become entitled, after a specific period of service, to pensions considerable, with reference to the rank of life to which they belong. Such considerations may not be so decisive with the lower orders as the higher, but there is no rank to whom the sight of the actual enjoyment of the advantages of a particular profession will not speedily prove an attraction.

"To effect these objects, I propose that the term of military service should be divided into three periods, viz., for 7, 14, and 21 years for the infantry, but for 10, 6, and 3 for the artillery and cavalry, in consideration of the additional time requisite to render men efficient in those branches of service. At the end of each of those periods, the soldier is to have right to his discharge. If discharged at the close of the first, he is to have right to exercise his trade or calling in any town of the kingdom; at the end of the second, besides that advantage, to a pension for life; at the end of the third, to the full allowance of Chelsea, which should be raised to 9d., and in some cases 1s. a day. If wounded or disabled in the service, to receive the same pension as if he had served out his full time. Desertion to be punished, in the first instance, by the loss of so many years' service; in very aggravated cases only by corporeal infliction.

"Great exaggeration appears to have prevailed as to the benefits to be derived from the volunteer system. It is impossible, in the nature of things, that such a force can be brought to such a state of efficiency as to be able to cope with regular forces. Essential service may be derived from such a force, but not in the line to which they have at present been directed. With a view to bring them back to their proper sphere, as they were originally constituted in 1798, it would be advisable to reduce their allowances and relax their discipline. Those corps only which are in a rank of life to equip themselves, and are willing to serve without pay, should be retained; the remainder of the population should be loosely trained, under regular officers, to act as irregular troops. It is not by vainly imitating the dress, air, and movements of regular troops, that a voluntary force can ever be brought to render effectual service. These are my fixed ideas; but as I find a volunteer force already existing, it would not be politic at once to reduce it. All I propose, in the mean time, is to reduce the period of drilling from 85 days to 26, and make other reductions which will save the nation £857,000 a year; all future volunteers to receive their pay only, and the trained bands to receive a shilling a day for 14 days a year, but not to be dressed as soldiers, and not drilled or exercised as such. Rank should be taken from the volunteer officers; their holding it is a monstrous injustice to the regular army."*

* The division which decided the principle of the bill took place on March 14, 1806, when the numbers were, Ayes, 235; Noes, 119; Majority, 116.—*Ann. Reg.*, 1806, p. 54.

at length passed both houses by a decided majority, the number in the Peers being 97 to

To these admirable arguments it was answered by Lord Castlereagh and Mr. Canning, "At no period of our history has the science, uniformity, and discipline of the army been comparable to what it is at this moment; and for these

immense benefits, the profession at large are aware we are more indebted to the improvements of the present commander-in-chief (the Duke of York) than of any other individual in existence. Under his able administration, the army is considerably superior in number to what it ever was at any former period.* The recruiting, as it now exists, is steadily producing 16,000 soldiers a year; and when the act for its future regulation is generally enforced, which is not yet the case, this number may be expected to be greatly increased. Is this a crisis to break up a system producing, and likely to produce, such results? The average wear and tear of the army is about 15,000 a year; so that the present system is not only adequate to the maintenance of its numbers, but likely to lead to its increase. The proposed alteration on the term of service in the army is one of the most momentous that Parliament can be called on to discuss; and for this, above all other reasons, that the change once introduced is irreparable: be it good or be it bad in its results, it cannot be departed from; for when the soldiers have once tasted the sweets of limited, they never submit to the restraint of unlimited service. Surely, on so vital a subject, and where a false step once taken is irretrievable, it is expedient to proceed with caution, and make the experiment on a small scale before we organize all our defenders on the new system.

"The system of enlisting for a limited period is no novelty; its application on a great and universal scale alone is so. For the last three years, our endeavours have been directed, while a superior encouragement was held out to persons entering for general service, to obtain, at the same time, the utmost possible number of men for limited service in the army—both in the army of reserve, and latterly under the additional force act. If, then, we have failed in obtaining an adequate supply of men, even under a limited scale, both in time and space, how can we expect to obtain that advantage by taking away one of these limitations? If, indeed, we could not, under the present system, obtain an adequate force liable to be detached abroad, there might be a necessity for some change in our system; but when we have 165,000 liable to be sent abroad, and the only check upon so employing them is the necessity of not weakening ourselves too much at home, why should we preclude ourselves from raising, by the present method, such a description of force as experience has proved, in this country at least, is most easily obtained? The expiry of the soldier's term of service must, independent of any casualties, produce a large chasm in the army; and what security have we, that, if the whole or the greater part of the army is raised in that way, a great, it may be a fatal, breach may not at some future period occur in our ranks at the very time when their service is most required? What the inconvenience of the soldiers being entitled to their discharge at the end of each period during a war is likely to prove upon experience, may be judged of by recollecting how embarrassing this system, some years back, was found to be in the militia, notwithstanding the great comparative facility of replacing men when serving at home—an embarrassment so great, that it led, as a matter of necessity, to the extension of the service in that branch of our military system. What reason is there to suppose that the soldiers in the regular army will not be as prone as their brethren in the militia to take advantage of the option of a discharge when their title to demand it arrives? And if so, and this heavy periodical drain be added to the existing casualties of the troops, what chance have we of keeping up a force which even now wants 25,000 men to complete its ranks?

"It is in vain to refer to foreign states as affording precedents in point; their situation is totally different from ours. In Russia unlimited service prevails, and the same was the case in Austria during the best days of the monarchy. In 1797, a similar regulation to the one under discussion was passed prospectively for the future, to take effect at the expiration of a certain number of years, but it has not yet, I believe, been acted upon; and if it has, the disasters of Ulm and Hohenlinden afford but little reason to recommend its adoption. Napoleon's soldiers are all raised by the conscription for unlimited service; and although, in the old French monarchy, troops in sufficient numbers were certainly obtained by voluntary enlistment for limited periods, yet the period of service was more extended than that now proposed; and the circumstances of that country abounding in men, with few colonies to protect, and still fewer manufactures to draw off its superfluous hands, and

40, giving a majority to ministers of 57. The clauses regarding the volunteer force, however, were abandoned or modified in the ultimate stages of the discussion, the effect of the bill as to them being limited to a proper restriction of the period of permanent duty. But the great principle of enlisting for a limited service was by its passing introduced into the British army, and has never since been totally abandoned; and considering the great achievements which it subsequently wrought, and the vast consumption of life which the new system adequately supplied,

a strong military spirit in all classes, can afford no precedent for this country, where employment from the prevalence of manufactures is so much more frequent; whose population is by nearly a half less, which is burdened with a vast colonial empire, all parts of which require defence, and where the natural bent of the people is rather to the sea than the land service. Nor is the reference to our East India possessions more fortunate; for the enlistment for a limited period prevailed in the Company's European regiments for a number of years, yet their battalions raised in this way were always weak in numbers and inefficient, and were all reduced on that very account during Lord Cornwallis's first government of India. All the prepossessions of Mr. Pitt were in favour of limited service: his opinions on this subject were repeatedly stated to the House. "The opinions of a great variety of military men were taken on the subject; but these opinions were so much divided, that he arrived at the conclusion that the inconveniences and risks with which the change would be attended more than counterbalanced its probable advantages.

"The proposed changes on the volunteer force appear to be still more objectionable. Admitting that it is desirable to diminish the great expense of that part of our establishment; allowing that, now that the corps have attained a considerable degree of efficiency, it may be advisable to diminish considerably the number of days in which they are to serve at the public expense, is that any reason for substituting a tumultuary array, without the dress, discipline, or habits of soldiers, for a body of men qualified not only to act together, but capable, if draughted into the militia or the line, of at once acting with regular soldiers? Will the volunteer corps exist for any length of time under so marked a system of discouragement as it is proposed to impose upon them, without pay, without rank, without public favour? And is this the moment, when the whole military force of the Continent, with the exception of Russia, is in the hands of our enemies, to incur the hazard of substituting, for a voluntary disciplined, a motley array of undisciplined forces, and run the risk of exciting the disaffection of the powerful bands who, at the call of their sovereign, have so nobly come forward in the public defence?"

"At the commencement of the present war we raised 80,000 men by the operation of the ballot. That system has its evils; but when it is indispensable, in a given time, to raise a large force for the public service, there is no alternative. In recognising this right, however, which flows necessarily from the acknowledged title of the sovereign power to call for the assistance, in times of public danger, of all its subjects, Parliament has been careful to fence it round with all the safeguards which the exercise of a prerogative so liable to abuse will admit of: it is determined by lot; the person drawn has the option to provide a substitute; and this is the footing upon which the militia stands. A still farther limitation exists where the call is made, not upon the individual, but the district; and the district is allowed the option, instead of providing the man, to pay a fine; and this is the principle on which the additional force bill, at present in operation, which we are now called on to repeal, is founded. But the ballot for the militia is, by the proposed change, to cease on the termination of the war; if then ceases to be a militia, and becomes a part of the regular force raised by the crown. The act proposed to be repealed is producing at the rate of 18,000 recruits a year, besides the men raised by ballot for the militia. Proposing, as the ministers now do, to abandon at once both these resources, are they prepared to show that the new measures will supply this great deficiency? Would it not be expedient first to try the experiment on a small scale, to be assured of its success before we commit the fortunes of the state to the result of the experiment? It is an old military maxim not to manoeuvre in presence of an enemy; but the measures now in agitation do a great deal worse, for they not only change the composition of your force, but shake the loyalty and submission of the soldiers, in presence of the most formidable military power Europe has ever witnessed."

its introduction is to be regarded as a memorable era in the history of the war.*

If called upon to decide in favour of one or other of the able arguments urged on the opposite sides of this important question, it might, perhaps, be no easy matter to say on which the weight of authority and reason preponderated. But experience, the great resolver of political difficulties, has now settled the matter, and proved that Mr. Windham rightly appreciated the principles of human nature on this subject, and was warranted in his belief that, without any increase of pay, limited service, with additional encouragements in the way of retiring allowances and privileges, would provide a force perfectly adequate even to the most extensive military operations of Great Britain. From the official returns it appears that the rate of recruiting rose in a rapid and striking manner after the system of limited service was adopted, and before the expiration of a year from the time it was first put in force, had more than doubled the annual supply of soldiers for the army.† Though variously modified, the same system has ever since prevailed with perfect success in every branch of the service, and to its influence, combined with the improved regulations for its discipline, pay, and retired allowances, great part of the glories of the Peninsular campaigns is to be ascribed. On examining the confident opinions expressed by many eminent and respectable military men on the impossibility of providing a supply of adequate force for the English army by such a method, it is difficult to avoid the inference, that implicit reliance is not always to be placed on the views of practical men in legislative improvements; that their tenacity to existing institutions is often as great as the proneness of theoretical innovators to perilous change; that little credit is to be given to the most eminent professional persons when they claim for the people of a particular country an exemption from the ordinary principles of human nature; and that true political wisdom is to be gathered, not by discarding the lessons of experience, but extending the basis on which they are founded, and drawing conclusions rather from a general deduction of the history of mankind than the limited views, however respectably supported, of particular individuals.

To these observations on Mr. Windham's military system, however, one exception must be made in regard to that part of his plan which related to the volunteers. There can be no doubt that in this particular he did not display the same knowledge of human nature which was elsewhere conspicuous. Admitting that the volunteers were very far indeed from being equal to the regular forces; that their cost was exceedingly burdensome, and that they could not be relied on as more than auxiliaries to the

army; still in that capacity they were most valuable, and not only qualified to render some service by themselves, but as forming a reserve to replenish the ranks of the regular forces of incalculable importance. The campaigns of 1812 and 1813 demonstrate of what vast service such a force, progressively incorporated with the battalions of the regular army, comes to be when their ranks are thinned in real warfare, and how rapidly they acquire the discipline and efficiency of veteran troops; and in this view the tumultuary array of Mr. Windham, without the clothing, discipline, or organization of soldiers, could have been of little or no utility. Nor is it of less moment that the volunteer corps, by interesting vast multitudes in the occupations, feelings, and honour of soldiers, powerfully contribute to nourish and expand that military ardour in all ranks which is indispensable to great martial achievements. Veteran troops, indeed, may smile when they behold novices in the military art imitating the dress, manners, and habits of soldiers; but the experienced commander, versed in the regulating principles of human exertion, will not deem such aids to patriotic ardour of little importance, and willingly fan the harmless vanity which makes the young aspirant imagine that his corps has in a few weeks acquired the efficiency of regular forces. Imitation even of the uniform, air, and habits of soldiers is a powerful principle in transferring the military ardour to the breasts of civilians. Philopomen judged wisely when he recommended his officers to be sedulously elegant in their dress, arms, and appointments. He was well acquainted with human nature who said that to women and soldiers dress is a matter of no ordinary importance. Many nations have been saved from slavery by the passion for what an inexperienced observer would call mere foppery.

In later times the system of temporary service has been in some degree superseded in the British army, and the majority of recruits are now enlisted for life. And in weighing the comparative merit of these two opposite systems, it will probably be found that the plan of enlisting men for limited periods is the most advisable in nations in whom the military spirit runs high, or the advantages of the military service are such as to secure at all times an ample supply of young men for the army, and where it is of importance to train as large a portion as possible of the population to the skilful use of arms, in order to form a reserve for the regular force in periods of danger; and that enlistment for life is more applicable to those nations or situations where no national danger is apprehended, and it is the object of government to secure rather a permanent body of disciplined men, subject to no causes of decrease but the ordinary casualties of the service, for the ordinary pacific duties, rather than spread far and wide through the nation the passion for glory or the use of arms. A provident administration will always have a system established, capable either of contraction or expansion, which embraces both methods of raising soldiers; and this, for nearly thirty years, has been the case with the British army.

Important as the matter thus submitted to Parliament in its ultimate consequences undoubtedly was, when it is recollected what a great and glorious part the British army bore in the close of the struggle, it yet yielded in magnitude to the next great

subject which the new ministers brought forward for consideration. This was the ABOLITION OF THE SLAVE-TRADE: a measure which, in its remote effects, appears to affect the fortunes of half the human race. This great change was not finally completed till the following session of Parliament; but the preparatory steps were taken in this, and it belongs properly to the present period of English history, which treats of the measures of the Whig administration.

It was urged by Mr. Hibbert and the advocates of the West India interest, both in and out of Parliament, "That the British West India islands were settled, and have ever been cultivated under the solemn faith of those charters and proclamations, and those acts of Parliament which have confirmed the West India islands in the most perfect assurance that they should continue to receive supplies of negroes from Africa; that the cultivation of these colonies cannot be carried on but by means of slave labour; and the cultivation of their interior, which is indispensable to their security, cannot be promoted if the slave-trade be abolished. If this bill shall pass into a law, the very worst effects may be anticipated from the change, not only to the colonies themselves, but the general interests of the empire. The commerce which the West Indies maintain is the most important of the whole British dominions. It pays annually in duties to the public treasury upward of £3,000,000; employs more than 16,000 seamen; contributes one third to the whole exports, and one third to the imports; takes off £6,000,000 a year worth of domestic manufactures, and is pre-eminently distinguished above all others by this important feature, that it is all within ourselves, and not liable, like other foreign trade, to be turned to our disadvantage on a rupture with the power with whom it is conducted. This measure, however, if carried into effect, must in a few years diminish the property vested in the British West India islands, and open the means of hastening the progress of rival colonies, to whom the advantages of a full supply of negroes will still remain open. It must forbid the supply of losses to the negro population, which originate in accident or diseases peculiar to the climate, and which the most humane and provident management is unable altogether to prevent, stop the completion of establishments already begun, and altogether prevent the extension of cultivation into the interior of the islands, without which they can never either attain a state of security or reach the degree of wealth and splendour of which they are susceptible.

"The most disastrous effects, both to individuals and the public, may be anticipated from the ultimate consequences of the measure under consideration, not to mention the confusion and ruin which it must occasion to families: the capital now sunk in cultivation which it must destroy; the calamities attendant on revolt and insurrection which it must occasion; the emigration it will induce in all who have the means of extricating themselves or their capital from so precarious a situation; the despair and apathy which it must spread through those who have not the means of escape; what incalculable evils must it produce among the black population? The abolition of the slave-trade is a question which it is at all times perilous to agitate, from the intimate connexion which it has in the minds of the negroes with the abolition of slavery itself,

and the necessary effect which it must have in perpetuating the discussion of that subject in the mother-country, to the total destruction of all security in the planters, or repose in the minds of the slave population. From the moment that this bill passes, every white man in the West Indies is sleeping on the edge of a volcano, which may at any moment explode and shiver him to atoms. Throwing out of view altogether all considerations of interest, and viewing this merely as a question of humanity, it is impossible to contemplate without the utmost alarm the perils with which it is fraught. The existence of a black power in the neighbourhood of the most important island of the British West Indies affords a memorable and dreadful lesson, recorded in characters of blood, of the issue of doctrines intimately, constantly, and inseparably connected with the abolition of the slave-trade. It is impossible to contemplate that volcano without the deepest alarm, nor forget that its horrors were produced by well-meant but ill-judged philanthropy, similar to that which is the prime mover in the present question.*

"It is a total mistake to suppose that the evils, enormous and deplorable as they are, of Central Africa, arise from the slave-trade. These evils are the consequence of the cruel habits and barbarous manners of its inhabitants: they existed for thousands of years before the slave-trade was heard of, and will continue for thousands of years after it is extinct. Civilize the interior of that vast continent—humanize their manners—abolish the savage practice of selling or putting to death captives made in war, and you indeed make a mighty step in extirpating the evils which we all lament. But as long as these savage customs prevail; as long as the torrid zone is inhabited by a thousand tribes all engaged in contests with each other, and with all of whom slavery to prisoners made in war is the only alternative for death, it is hopeless to expect that the stoppage even of the whole vent which the purchase of negroes by Europeans affords, would sensibly affect the general prevalence of the slave-traffic. What are the 50,000 whom they annually transport across the Atlantic, to the innumerable multitudes who are driven across the Sahara Desert, or descend to Egypt for the vast markets of the Mussulman world? But to suppose that the partial stoppage of it in the British dominions, that the prohibition to transport the fifteen thousand negroes who are annually brought to our shores, could have a beneficial effect, is ridiculous. So far from producing such a result, its tendency will be diametrically the reverse: it will drive the slave-trade from the superior to the inferior channel; from the great merchants of Liverpool, who have done so much, for their own interests, perhaps, but still done so much to diminish its horrors, to the Spaniards and Portuguese, who are as yet totally unskilled in its management, and treat the captives with the utmost barbarity: as our own colonies decline from the stoppage of this supply of labourers, those of the other nations who have not fettered themselves in the same way will augment; the cultivation of sugar for the European market will ultimately pass into other hands, and we shall, in the end, find that we have cut off the right arm of our commerce and naval strength, only to augment the extent and increase the horrors of the slave-trade throughout the world."†

Arguments of
Mr. Wilber-
force and
others for the
abolition.

On the other hand, it was argued by Mr. Wilberforce, Lord Howick, and Lord Grenville: "A higher principle than considerations of mere expedience, the dictates of justice, require that this infamous traffic should be abolished. Were it merely a question of humanity, we might consider how far we should carry our interference; were the interests of the British Empire alone involved, it might possibly be a matter of expedience to stop a little short of total abolition. But in this instance, imperious justice calls upon us to abolish the slave-trade. Is it to be endured that robbery is to be permitted on account of its profits? Justice is still the same; and you are called upon in this measure, not only to do justice to the oppressed and injured natives of Africa, but to your own planters; to interfere between them and their otherwise certain destruction, and, despite their fears, despite their passions, despite their prejudices, rescue them from impending ruin. This trade is the most criminal that any country can be engaged in: when it is recollected what guilt has been incurred in tearing the Africans, by thousands and tens of thousands, from their families, their friends, their social ties, their country, and dooming them to a life of slavery and misery; when it is considered, also, that the continuance of this atrocious traffic must inevitably terminate in the ruin of the planters engaged in it, surely no doubt can remain that its instant abolition is called for by every motive of justice and expedience.

"Much is said of the impossibility of maintaining the supply of negroes in the West Indies if the slave-trade is abolished. Are we, then, to believe that the Divine precept, 'Increase and multiply,' does not extend to those islands; that the fires of youth, adequate to the maintenance and growth of the human species in all other countries and ages of the world, are there alone, in the midst of plenty, unequal to their destined end? But the fact is adverse to this monstrous supposition, and it is now distinctly proved that the slave colonies are perfectly adequate to maintain their own numbers.* The excess of deaths above births in Jamaica is now only 1-24th *per cent.*; and when it is recollected that the registers of mortality include the deaths among the negroes who are newly arrived and set to work, which always amounts, between those who perish in the harbours and shortly after being set to work, to at least 10 *per cent.*, it is evident that the numbers of the settled Africans are more than maintained by their own increase. Nor is the argument that the importation of negroes is requisite to cultivate the waste lands in the interior of the islands, better founded. If the numbers of the Africans increase, it is altogether incredible that their labours should not be adequate to clear the wastes of those diminutive islands. According to the most moderate computation, it would require the slave-trade to be continued for two centuries to cultivate the whole interior of Jamaica and Trinidad; and can it be endured that so frightful a traffic as this, fraught as it must be with the tearing of above two millions of Africans from their families and country,

should be endured for such a period, for an object which, in one fourth of the time, might by the native increase of their numbers in those islands be attained?*

"Let us, then, instantly abolish this infamous traffic, and we may then with confidence look forward to the period when the slaves, become in a great degree the natives of the islands, will feel the benefits of the protection afforded them; and they may gradually be prepared for that character, when the blessings of freedom may be securely extended to them. Throughout all history we shall find that slavery has been eradicated by means of the captives being first transformed into predial labourers, attached to the soil, and from that gradually ascending to real freedom. We look forward to the period when the negroes of the West India islands, become labourers rather than slaves, will feel an interest in the welfare and prosperity of the country which has extended to them these benefits, and when they may be securely called on to share largely in the defence of those islands, in which at present they are only a source of weakness. The grand, the decisive advantage which recommends the abolition of the slave-trade is, that, by closing that supply of foreign negroes to which the planters have hitherto been accustomed to trust for all their undertakings, we will compel them to promote the multiplication of the slaves on their own estates; and it is obvious that this cannot be done without improving their physical and moral condition. Thus, not only will the inhuman traffic itself be prevented, in so far, at least, as the inhabitants of this country are concerned, but a provision will be made for the progressive amelioration of the black population in the West Indies, and that, too, on the securest of all foundations, the interests and selfish desires of the masters in whose hands they are placed.

"It is in vain to argue that, according to the barbarous customs of Africa, captives made in war are put to death, and that, if the outlet of the slave-trade is closed, the reproach to humanity arising from the sale of captives will be prevented from taking place. The most recent and intelligent travellers, on the contrary, have informed us, what every consideration on the subject *a priori* would lead us to expect, that the existence of the slave-trade is itself, and ever has been, the great bar to the civilization of the interior of Africa, by the temptation held out to the chiefs on the coast to engage in the traffic of negroes, and the continual encouragement thus afforded to the princes in the interior to carry on constant wars, from the vast profit with which the sale of their captives is attended. It forms, in fact, with a great many of those robber chieftains, a chief branch of revenue. If we would promote, therefore, the great and truly Christian work of civilizing Central Africa, we must first commence with abolishing the slave-trade; for as long as it continues, the selfishness and rapacity of the native chiefs will never cease to chain its unhappy inhabitants to a life of violence and rapacity in the powerful, of misery and degradation in the poor.

* It is now completely demonstrated, by an experiment on the greatest scale, that the African race, even when in a state of slavery, is not only able to maintain its own numbers, but rapidly increase them. In the slave states of America there are 2,200,000 negroes; and from 1790 to 1830, the whites have augmented in proportion of 80 to 100; but the blacks in that of 112 to 100.—TOCQUEVILLE'S *Democracy in America*, ii., 345, 346, note.

* Excess of deaths above births in Jamaica
from 1698 to 1730, 34 *per cent.*
" " 1730 to 1755, 24 *per cent.*
" " 1755 to 1769, 18 *per cent.*
" " 1769 to 1780, 3-5ths *per cent.*
" " 1780 to 1800, 1-24th *per cent.*

"The argument that, if we do not carry on the slave-trade, some other nations will, possibly with less commiseration for the sufferings of the captives, if admitted, would shake to their foundation every principle of public and private morality. At that rate, every band of robbers might plead in their justification that, if they did not knock down and plunder travellers, other banditti might do the same, and possibly superadd murder to their other atrocities, and therefore the lucrative rapine should not be discontinued. This argument, however, bad as it is, has not even the merit of being founded on fact. If we abolish the slave-trade, who is to take it up? The Americans have already preceded us in the race of humanity, and fixed a period, in 1808, when the traffic is immediately to cease; and a bill is at present in progress through their Legislature to affix the penalty of death to a violation of this enactment. How are France and Spain to carry it on, when they have hardly a ship on the ocean? Sweden never engaged in it. There remains only Portugal, and where is she to get capital to carry it on?"

"The dangers, so powerfully drawn, as likely to result from this measure, are really to be apprehended, not from it, but from another with which it has no connexion, viz., the immediate emancipation of the negroes. This, it is said, flows necessarily from the step now about to be taken; if you do not follow it up in this manner, you stop short half way in your own principles; in fact, the ulterior measure, if the first be adopted, cannot be averted. It is to be hoped, indeed, that this great step will, in the end, lead to the abolition of slavery in all our colonies, but not in the way or with the dangers which are anticipated. On the contrary, it is here that another of the great benefits of the measure under consideration is to be found. By the effects of this measure it is to be hoped slavery will gradually wear out without the intervention of any positive law, in like manner as it did in a certain degree in the states of Greece and Rome, and some parts of the states of modern Europe, where slaves have been permitted to work out and purchase their own freedom; and as has been permitted with the happiest effects in the colonies of Spain and Portugal. In America, measures for the gradual emancipation of the negroes have been adopted, and nothing could conduce more powerfully to insubordination than if, by the continuance of the slaves, similar steps were not to be induced in the West India islands, and the slaves there were perpetually tantalized by the sight of the superior comforts of their brethren on the mainland. The dangers apprehended would, indeed, be real, if immediate emancipation were to be proposed, for that would produce horrors similar to those which have happened in St. Domingo; but nothing of that kind is in contemplation; on the contrary, it is expressly to exclude them, and induce that gradual emancipation which is called for, alike by justice to the planters and the interests of the slaves themselves, that the measure under discussion is proposed."[†]

* Parl. Deb., 652, 666, 947, 955.

† Lord Grenville concluded his speech with these eloquent words: "I cannot conceive any consciousness more truly gratifying than must be enjoyed by that eminent person (Mr. Wilberforce), on finding a measure to which he has devoted the labour of his life carried into effect: a measure so truly benevolent, so admirably conducive to the virtuous prosperity of his country, and the welfare of mankind; a measure which will diffuse happiness among mill-

The latter arguments, enforced with much eloquence, and supported by the great principles of Christian charity, prevailed with the Legislature. By a series of enactments, passed in the course of the sessions of 1806, the slave-trade was restrained within very narrow limits; and at length, in the succeeding session, it was entirely abolished, and the penalty of transportation affixed to every British subject engaged in it; the numbers were, in the Commons, 283 to 16, majority 267; in the Peers, 100 to 36, majority 64; and thus was the stain of trafficking in human flesh forever torn from the British name.*

There can be no question that this great step was recommended by every consideration of justice and humanity; nevertheless, its effects hitherto have been in the highest degree deplorable. Never was a more striking example than this subject has afforded in its later stages, of the important truth that mere purity of intention is not sufficient in legislative measures, and that, unless human designs are carried into execution with the requisite degree of foresight and wisdom, they often become the sources of the most heart-rending and irremediable calamities. The prophecy of Mr. Hibbert and the opponents of the abolition, that the slave-trade, instead of ceasing, would only change hands, and at length fall into the management of desperate wretches, who would double its horrors, has been too fatally verified, and to an extent even greater than they anticipated. From the returns laid before Parliament, it appears that the slave-trade is now four times as extensive as it was in 1789, when European philanthropy first interfered in St. Domingo in favour of the African race, and twice as great as it was when the efforts of Mr. Wilberforce procured its abolition in the British dominions. Great and deplorable as were the sufferings of the captives in crossing the Atlantic, in the large and capacious Liverpool slave-ships, they are as nothing compared to those which have since, and are still endured by the negroes in the hands of the Spanish and Portuguese traders, where several hundred wretches are stowed between decks in a space not three feet high; and, in addition to the anguish inseparable from a state of captivity, they are made to endure, for weeks together, the horrors of the Black Hole of Calcutta. Nearly two hundred thousand captives, chained together in this frightful manner, now annually cross the Atlantic; and they are brought, not to the comparatively easy life of the British West India islands, but to the desperate servitude of Cuba or Brazil; in the latter of which several hundred negroes are worked, like animals, in droves together, without a single female among them, and without any attempt to perpetuate their race,† they are worn down by their cruel taskmasters to the grave by a lingering process, which on an average terminates their existence in seven years!‡

ions now in existence, and for which his memory will be blessed by millions yet unborn."—*Parl. Deb.*, viii., 664.

* *Parl. Deb.*, viii., 672, 995.

† *Walsh's Brazil*, ii., 474, 485.

‡ The number of slaves annually imported into the slave countries of the world from Africa in 1789 was somewhat under 50,000, of which about 15,000 crossed in English vessels; now the number is at least 200,000. It appears from the Consular Returns to Parliament, that in 1829, 74,653 slaves were em-

This lamentable and heart-rending result of such persevering and enlightened benevolence, however, must not lead us to doubt the soundness as well as humanity of the principles which Mr. Wilberforce so eloquently advocated, or to imagine that the general rules of morality are inapplicable to this question, and that here alone in human affairs it is lawful to do evil that good may come of it. The observation that it was our duty to clear our own hands of the iniquity, leaving it to Providence to eradicate the evil in others at the appointed time, was decisive of the justice of the measure; the evident necessity which it imposed on the planters of attending, for their own sakes, to the comfort of the negroes, and providing means for the multiplication of their numbers, conclusive as to its expedience. It is not the abolition of the slave-trade, but the subsequent continuance of ruinous fiscal exactions, and, at last, the irretrievable step of unqualified emancipation, which have given this deplorable activity to the foreign slave-trade. The increase in the foreign slave colonies for the last twenty years, at a time when the British West India islands were comparatively stationary, has been so rapid, that it is evident some powerful and lasting causes have been at work to occasion the difference.* These causes are to

barked for Brazil alone from the African coast, of whom 4579 died in the short passage of one month; and in the first half of 1830 the numbers were no less than 47,258, of whom eight per cent. died on the passage. At the same period 13,000 were annually imported into the Havana, and at least an equal number into the other slave colonies, making in the year 1830 about 130,000.* But these numbers, great as they are, have now received a vast increase from the effects of the British Slave Emancipation Act, passed in 1833. In fifteen months, ending January, 1835, there sailed from the single port of Havana 170 slave-ships, capable of containing, on an average, each at least 400 persons; the importation of slaves into Cuba is now above 55,000 a year, while the numbers imported into Brazil, from the stimulus given to slave labour by the anticipated decline of produce in the British islands consequent on that measure, have increased in nearly the same proportion. Nor is it surprising that, in spite of all the efforts of the British government, and all the vigilance of the British cruisers, this infernal traffic should now advance at this accelerated pace: for such is the demand for slaves, occasioned by the continual decline in the cultivation of sugar in the British West India islands, under the combined influence of heavy taxation and the Emancipation Act, that the profit on a single cargo of slaves imported into the Havana is 150 per cent., and the adventurers cannot be considered as losers if one vessel arrives safe out of three despatched from the coast of Africa.—*Parl. Pap.*, 1830, A., 115, 116.

* Twelve years ago, the only exports of Puerto Rico were cattle and coffee, and the only sugar she received was from importation. In 1833 she exported 33,750 tons, more than a sixth of the whole British consumption. The export of sugar from Cuba was, on an average of 1814, 1815, and 1816, 51,000 tons; in 1833 it had risen to 120,000 tons. In 1814, 1815, and 1816, the average exports of sugar from Brazil was 26,250 tons; in 1833, though a bad year, the exports were 70,970 tons. The increase since the Emancipation Act passed has been still greater; but no official accounts of these years have yet been made public.—See *Parl. Report* “On the Commercial State of the West Indies,” p. 288.

On the other hand, the produce of the British West India islands during the same period has been comparatively stationary. The colonial produce exported from those islands to Great Britain in the year 1812 was 154,200 tons of sugar, and 6,290,000 gallons of rum; in 1830, 185,000 tons of sugar, and 7,892,000 gallons of rum; the shipping in the former period was 180,000, in the latter 203,338 tons. The total value of the produce of the islands in the former period was £18,516,000; in the latter, including all the colonies gained by the Peace of Paris in 1814, only £22,496,000.—*PEPPER*, 399. COLQUHOUN, 378-341. *PORTER'S Parl. Tables*, 1-124, 126.

* *Parl. Pap.*, 1830, B., 52, 89, 138.

be found, in a great measure, in the heavy duties on British colonial produce, amounting at first to 30s., then to 27s., and latterly to 24s. on each hundred weight of sugar, from which the foreign growers were exempted in the supply of foreign markets. This enormous burden, which, on an average of prices since 1820, has been nearly 75 per cent. on that species of produce, has, notwithstanding all their efforts, for the most part, if not entirely, fallen on the producers.*

Nor is this all: the precipitate and irretrievable step of emancipation, forced on the Legislature by benevolent but incautious, and, perhaps, mistaken feeling, has already occasioned so great a decline in the produce of the British West Indies, and excited such general expectations of a still greater and increasing deficiency, that the impulse thereby given to the foreign slave-trade to fill up the gap has been unbounded, and, it is to be feared, almost irremediable.†

* There is no opinion more erroneous than that commonly entertained, that the import duties on Enormous fiscal sugar, like other taxes on consumption, fall injustice to which on the purchaser. There is always, indeed, they have been ex- posed. a struggle between the producer and consumer as to who should bear the burden; but it is not always in the power of the former to throw it on the latter. In this instance the attempt has almost totally failed. It appears, from the curious table of prices compiled by Mr. Colquhoun, that even during the high prices of the years from 1807 to 1812, the West India proprietors paid from a third to a half of the duties on sugar, without being able to lay it on the consumers: the average of what they paid for those years being £1,115,251 per annum. The estimated revenue of these proprietors, during these years, was under £4,000,000; so that at that period they paid 20 per cent. on their incomes to government. In addition to this, it was proved by the documents laid before the committee of the House of Commons in February, 1831, that an annual burden of £1,023,299 was laid on the British West India islands, in consequence of the enhancement of the price of necessary articles to which they were exposed under the restrictive system. In this way, even under the high prices from 1807 to 1812, they were paying at least 50 per cent. on their incomes in taxation; and as the price, since that time, of their produce has fallen at least two thirds, with a reduction of only a ninth (3s.) on the import duty, it may be safely concluded that, since 1820, the West India proprietors have paid, directly and indirectly, at least seventy-five per cent. on their income to government, and in the years when prices were low at least a hundred per cent. Nothing more is required to explain the distressed condition of these colonies, even before the Emancipation Bill was passed, which at once, without any equivalent, confiscated at least 60 per cent. on their remaining property. The value of slaves was estimated by Colquhoun in 1812 at £55 a head; but in 1833, when the act passed, it had risen to at least £75 over head, notwithstanding the change in the value of money; and the compensation money (£20,000,000 on 634,000 slaves) will not, after all deductions are made, yield £25 a head, or more than 33 per cent. to the proprietors. Few such instances of the destruction of property by fiscal and legislative enactments are to be found in the history of mankind.—See *PEPPER*, 394 and 397. COLQUHOUN, 59, 325; and *Report on West India Affairs*, Commons, February 7, 1831.

It is frequently said that the increase in the produce of these colonies since the peace is a proof that their alleged distresses are either unfounded or exaggerated. This is a complete mistake: the planters had no other way to meet the enormous fiscal burdens laid upon them, since a diminution in the cost of production was out of the question, after the abolition of the slave-trade, but by making the utmost exertions to augment its quantity, and thence the increase of colonial produce, which, by perpetuating the lowness of price, rendered it totally impossible for them to lay the enormous import duty, now 100 per cent., on the consumers. Like a man sunk in a bottomless bog, all the efforts they could make for their extrication tended only to land them deeper and more irretrievably in the mire.

† The following table shows the decline of colonial produce exported from Jamaica under the first year of the Emancipation Act:

Sugar.			Rum.		Coffee.	
Years.	Cwts.	Hogsheads.	Punch.	Galls.	Casks.	lbs.
1834	1,525,154	79,465	30,676	3,189,949	22,384	17,559,277
1835	1,319,023	68,087	27,038	2,660,687	13,495	10,489,292
Decrease	206,131	11,378	3,638	529,262	8,889	7,369,985

It is in these measures that the real cause of the lamentable increase in the foreign slave-trade is to be found: it is the multitude who forced on these measures, who frustrated all the benevolent efforts of Mr. Wilberforce and Mr. Fox, and rendered the abolition of the slave-trade in the British dominions the remote and innocent cause of boundless misfortunes to the negro race. The British slaves, since the slave-trade was abolished, had become fully equal to the wants of the colonies: their numbers, without any extraneous addition, were on the increase; their condition was comfortable and prosperous beyond that of any peasantry in Europe; and large numbers were annually purchasing their freedom from the produce of their own industry. Here, then, was a *stationary* negro population, rapidly approaching the condition of the most opulent feudal serfs of Europe, and from which they might, in like manner, have been emancipated singly, as they acquired property, which all had the means of earning, without either risk to themselves, injury to their masters, or increase to the demand for foreign slave labour. But now all these admirable effects of the abolition of the slave-trade have been completely frustrated, and the humane but deluded inhabitants of Great Britain are burdened with twenty millions, to ruin, in the end, their own planters, consign to barbarism their own negroes, cut off a principal branch of their naval strength, and double the slave-trade in extent, and quadruple it in horrors throughout the world. A more striking instance never was exhibited of the necessity of attending, in political changes, not only to benevolent intentions, but prudent conduct; and of the fatal effect of those institutions which, by giving the inhabitants of a particular part of the Empire an undue share in the general administration, or admitting the torrent of public feeling to sway directly the measures of government, too often destroy prosperity the most extensive, and occasion calamities the most unbounded.*

Taking an average of these various sorts of produce, it is evident that, notwithstanding an uncommonly fine season, and the vigorous exertions of the stipendiary magistrates, the produce of the island has fallen off in one year nearly a fourth of its total amount! The Parliament of Jamaica, in their address to the governor of the island on August 10, 1835, observed, "There never was a finer season or more promising appearance of canes; but, nevertheless, the crop is greatly deficient, and many British ships have, in consequence, returned with half cargoes, some with none at all. Our decided opinion is, that each succeeding crop will progressively become worse. In a few cases the apprentices do work for wages; but the opposite disposition so immeasurably preponderates, that no confidence whatever can be placed on voluntary labour. Knowing, as we do, the prevailing reluctance of the negroes to work of any kind, the thefts, negligences, and outrages of every sort which are becoming of frequent occurrence; seeing large portions of our neglected cane-fields overrun with weeds, and a still larger extent of our pasture-lands returning to a state of nature; seeing, in fact, desolation already overspreading the very face of the land, it is impossible for us, without abandoning the evidence of our senses, to entertain favourable anticipations, or divest ourselves of the painful conviction that the progressive and rapid deterioration of property will continue to keep pace with the apprenticeship, and that the termination thereof must, unless strong preventive measures are applied, complete the ruin of the colony." Making every allowance for the passions and exaggerations of a tropical climate, the statement here made is too strongly borne out by the decrease in the official returns, and example of corresponding measures in St. Domingo, to leave a doubt that they are, in the main at least, founded in truth.—See *Custom Return, Kingston, Jamaica, August 29, 1835; and Address of Assembly, August 10, 1835.*

* The British ministry who, in 1834, passed the measure of Slave Emancipation, are noways answerable for these consequences; on the contrary, they deserve the highest

An important change in the British system of finance was also made by the same administration, which, although not brought forward till the spring of 1807, may be fitly considered now, in order not to interrupt the narrative of the important military events which at that period occurred on the Continent of Europe.

The foundation of this plan, which was brought forward by Lord Henry Petty on the 29th of January, 1807, was, that the time had now arrived when it had become expedient to make a provision for a permanent state of warfare; that the bad success of all former coalitions had demonstrated the slender foundation on which any hopes of overthrowing the military power of France on the Continent of Europe must rest, while the hostile disposition and immense power of Napoleon gave little hope that any durable accommodation could be entered into with him. "All nations," said his lordship, "that still preserve the shadow even of their independence, have their eyes fixed on us as the only means of regaining the freedom they have lost. It becomes the government of Great Britain, seeing the proud eminence on which they are placed, to take an enlarged view of their whole situation, and to direct their attention to that future which, notwithstanding the signal deliverance they have hitherto obtained, seems still pregnant with evil. Our present permanent revenue is above £32,000,000 a year, being more than three times what it was at the close of the American war; and there can be no doubt that means might be found in additional taxes to pay the interest of loans for several years to come. But looking, as it is now our duty to do, to a protracted contest, it has become indispensable to combine present measures with such a regard for the future as may give us a reasonable prospect of being enabled to maintain it for a very long period."

"In considering our resources, the two great objects of attention are the sinking fund and the system of raising the supplies as much as possible within the year, which has given rise to the present amount of war taxes. The first of these is a durable monument to Mr. Pitt's wisdom; it had the support of his illustrious political opponent, Mr. Fox; and, however widely these two great men were divided on most other subjects, it at last received that weight of authority which arises from their entire coincidence of approbation. When this system was commenced in 1786, the sinking fund was only 1-238th part of the debt; whereas it is now 1-63d of the whole debt, and only 1-42d of the unredeemed portion: a result at once striking and satisfactory, more especially when it is recollected that it has been obtained in twenty years, whereof fourteen have been

Argument in favour of it.

credit for the courage they displayed, in opposition to the wishes of many of their supporters, in carrying through the great grant of twenty millions to the planters: a relief so seasonable and extensive, that hitherto, at least, it has, almost entirely to the persons who received it, prevented the natural consequences of the emancipation from being felt. The torrent of public feeling was irresistible: all they could do was to moderate its effects, which, by the protracted period of apprenticeship, and the grant to the slave-owners, was done to a very great degree. The English people must answer for the measure, be its ultimate effects on themselves and the negro race good or bad. The reflection suggested is, What is the character of national institutions which permit a measure, likely to be attended with such cruel and disastrous consequences, to be forced against their will on a reluctant government?

years of war. The war-taxes, which have been raised to their present amount chiefly by the operation of the heavy direct taxes, are, first, the treble-assessed taxes introduced by Mr. Pitt, and more lately the property-tax, which has been substituted in its room. The experience of the last year has amply demonstrated the expedience of the augmentation of that impost to ten per cent., which it was our painful duty to propose last year; for under its operation the war-taxes have now reached £21,000,000 a year, and the sinking fund amounts to £8,300,000 annually.

"In the present state of the country our war expenses cannot be calculated at less than thirty-two millions annually. To provide for this, independent of additional war-taxes, which are now so heavy that we are not warranted in calculating on any considerable addition to their amount as likely to prove permanently productive, is the problem we have now to solve. To effect this, it is proposed in this and the three following years to raise a loan of £12,000,000; for the fourth year, or 1810, £14,000,000; and for the ten succeeding years, if the war should last so long, £16,000,000 annually. In each successive year in which these loans shall be raised, it is proposed to appropriate so much of the war-taxes as will amount to ten per cent. on the sum so raised. Out of this ten per cent. the interest and charges of management are first to be defrayed, and the remainder is to constitute a sinking fund to provide for the redemption of the capital. When the funds are at 60, or interest at five per cent., such a system will extinguish each loan in fourteen years after it was contracted. The moment this is done, the war-taxes impledged for the redemption of that loan should be repealed. Thus, as the loan of £12,000,000 will, on this supposition, be paid off by 1821, the £1,200,000 a year of war-taxes now pledged to its redemption will in that year be remitted. Upon examining this system, it will be found that it may be carried on for seven years, viz., from 1807 to 1814, without impledging any part of the income-tax; so that, if peace is thus concluded, the whole income-tax may, without violating any part of the present system, be at once remitted: a most desirable object, as that is a burden which nothing but the last necessity should induce us to perpetuate beyond the continuance of hostilities.

"As, however, the ten per cent. on the loan annually contracted is in this manner to be taken from the war-taxes, means must be provided to supply that deficiency, which, if the war continues for a long tract of years, will, from the progressive growth of those burdens on the war-taxes, become very considerable. To provide for this deficiency, it is proposed to raise in each year a small supplementary loan, intended to meet the sum abstracted for the charges of the principal loan from the public treasury, and this supplementary loan is to be borrowed on Mr. Pitt's principle of providing by fresh taxes, laid on in the indirect form, or by the falling in of annuities for the interest of the debt, and one per cent. more to create a fund for its redemption. The loan so required this year will, from the excess of the war-taxes above the war expenditure, be only £200,000; the annual charges of which, on this principle, will be only £13,333; and as annuities to the amount of £15,000 will fall in this year, it will not be necessary, either for the principal or supplementary loan, to lay on any new taxes this year. Taking an average so as to diffuse

the burden created by these supplementary loans as equally as possible over future years, and setting off against them the sums which will be gained annually by the falling in of annuities, the result is, that it will only be necessary to raise in seven years immediately subsequent to 1810, £293,000 annually by new taxes: a sum incredibly small, when it is recollected that we are now in the fifth year of a renewed war, the most costly and momentous in which the country ever was engaged.

"Under the present system, with regard to the public debt, framed upon the acts of 1786, 1792, and 1802, no relief whatever will be experienced from the public burdens till a very distant period, probably from 1834 to 1844; and during the latter years of the operation of the sinking fund it will throw immense sums, not less than forty millions annually, loose upon the country, as cannot fail to produce a most prejudicial effect upon the money market, while the sudden remission of taxes to the amount of £30,000,000 a year would produce effects upon artisans, manufacturers, and holders of property of every description, which it is impossible to contemplate without the most serious alarm. In every point of view, therefore, it seems to be highly desirable to render the sinking fund more equal in its progress, by increasing its present power, and diffusing over a greater number of years those extensive effects which would, according to the present system, be confined to the very last year of its operation. The arrangements prepared with this view are founded on the superior advantage of applying to the redemption of debt a sinking fund of five per cent. on the actual money capital, instead of one per cent. on the nominal capital or amount of stock. This is to be the system applied to the loans of the first ten years; and in return for this advantage, it is proposed that, when the present sinking fund shall have so far increased as to exceed in its amount the interest of the debt then unredeemed, such surplus shall be at the disposal of Parliament. By this means a larger sum will be annually applied to the sinking fund from henceforward than could have been obtained under the old system: the whole loans contracted in future during the war will be redeemed within forty-five years from the date of their creation, and without violating any of the provisions of the act of 1792 establishing the present sinking fund. Parliament, during the years of its final and greatest operation, will be enabled to administer a very great relief to the public necessities, and obviate all the dangers with which an undue rapidity in the contraction of debt would otherwise be attended.*†

In opposition to these able arguments, it was urged by Lord Castlereagh, Mr. Canning, and Mr. Perceval, "That the proposed plan of finance proposes gradually to mortgage for fourteen years the whole of the war-taxes for the interest of loans in war, a decided departure from all our former principles, which were to preserve religiously the distinction between war and permanent taxes, and would, if carried into effect for any considerable time, de-

* Parl. Deb., viii., 566, 594.

† The speech of Lord Henry Petty on this occasion is well worthy of the attention of all who wish to make themselves masters of the British finances during the Revolutionary war. It is the most distinct, luminous, and statesmanlike exposition on the subject which is to be found in the whole range of the Parliamentary debates after the death of Mr. Pitt.

prive the nation of almost all the benefit to which it is entitled to look upon the termination of hostilities. The new plan, moreover, will require loans to a greater amount to be raised in each year than would be required if the usual system of borrowing were adhered to. At the end of twenty years it appears, from the calculations laid before Parliament, that this excess will amount to the enormous sum of £193,000,000. The whole machinery of the new plan is cumbersome and complicated; the additional charges arising from that circumstance will amount to a very considerable sum. The ways and means intended to prevent the imposition of new taxes in future, viz., the expired annuities, together with the excess of the sinking fund above the interest of the unredeemed debt, are equally applicable *pro tanto* to mitigate their increase under any other mode of raising loans that may be decided on; and their application in this way would be more advantageous than in the other, inasmuch as it is better to avoid contracting debt than gain relief by a remission of taxation.

"It is futile to say that the public necessities compel us to have recourse to the dangerous system of mortgaging the war-taxes for the interest of future loans. It is here that the great danger of the new system is to be found: it is in breaking down the old and sacred barrier between the war and peace expenses that the seeds of inextricable confusion to our finances in future are to be found. It is quite possible, as appears from the authentic calculations before Parliament, to obtain the eleven millions a year required for the deficiency of the war-taxes below the war charges, without mortgaging the war-taxes, without the immense loans required under the new system, and without any material or unbearable addition to the public burdens. The mode in which this great object is to be attained is by resolving that, when the loan of the year in war does not exceed the amount of the sinking fund in such year, instead of making provision for the interest of such loan in the taxes, the same shall be provided for out of the interest receivable on the amount of stock redeemed by the Commissioners for the Reduction of the National Debt in that year. Any excess of national expenditure above the thirty-two millions to be fixed as the average amount of war expenditure, to be provided for in the usual manner. The data laid before Parliament prove that, under this plan, in fourteen years of war, one hundred and ten millions less will be borrowed than under that proposed by the Chancellor of the Exchequer; and though, doubtless, the sinking fund will be greatly impaired, yet, after making allowance for its restricted operation from the charge of future loans on its amount, yet the total debt at the expiration of that period will be upward of forty millions above that now proposed.* Great evils, both to

the stockholders and the country, must arise from the adoption of the new plan, in consequence of the enormous and inordinate loans, amounting, before the close of the new plan, to not less than forty or fifty millions of stock annually, which must be contracted. Such immense loans must tend powerfully to lower the value of the public securities, lead to an extensive and undue increase of the circulating medium, and a rapid depreciation in the value of money, attended with the most prejudicial effects upon many branches of industry, and a general insecurity on the part of the holders of property. Above all, the principle of placing at the disposal of Parliament the excess of the sinking fund above the interest of the debt unredeemed, is calculated to lead to a much more extensive diversion of that fund from its destined purpose than the system which Mr. Pitt had established: inasmuch as the latter only proposed to derive aid from the sinking fund during war, and only to the precise extent of the interest of the sum redeemed within the year, leaving the fund in undiminished extent to operate upon the public debt on the return of peace; whereas the former places the surplus of the sinking fund above the interest of the unredeemed debt, absolutely and unreservedly at the disposal of Parliament, in peace as in war, without any other limitation than that a sum equal to the debt subsisting in 1802 shall be redeemed within forty-five years from that period. It is easy to foresee that such a power of appropriating a large part of the sinking fund will be too powerful a temptation for the virtue of future governments; and that the practical result will be, that that noble institution will be irretrievably mutilated, and the nation lose the whole benefit of the immense sacrifices for the benefit of posterity which it has made during the whole continuance of the present contest. The equivalent proposed to the fundholders of an additional five per cent. sinking fund on the war loans is entirely deceptive; inasmuch as the depreciation of his property which must ensue from the improvident accumulation of loans in the market, with their necessary concomitant, an extensive and undue paper currency, must much more than compensate any additional value which it might acquire from this augmentation of the means of its liquidation."*

The budget for the year 1807 was based on the new plan of finance: it included a loan of only £12,000,000, Budget for 1807, March 4. which was contracted on very advantageous terms, and the whole expenditure was calculated on that system of making preparations for a long and protracted struggle,† which the disastrous issue of the Prussian war gave too much reason to apprehend awaited the country.†

The debates on Lord Henry Petty's able plan

* Lord H. Petty's plan:

War loans for 14 years	£210,000,000
Supplementary loans for do.	94,200,000
.....	314,200,000
War-taxes rendered permanent	401,231,000
Unredeemed debt in 1820, at the end of the same time	9,150,000
New taxes imposed	2,051,000
New loans in 1820	32,000,000
Sinking fund in 1820	17,744,021

Lord Castlereagh's plan:

War loans, 11 millions a year for 14 years	154,000,000
Debt unredeemed at the end of 1820	358,000,000

War-taxes rendered permanent	none.
New taxes imposed	2,547,000
New loan in 1820	11,000,000
Sinking fund in 1820	9,180,896

—*Parl. Deb.*, viii., 1014.

* *Parl. Deb.*, viii., 1004, 1018.

† *Ib.*, viii., 1075.

† The budget for 1807 was stated by Lord Henry Petty as follows:

Supply.	
Navy	£16,997,637
Army, ordinary	15,456,311
Extraordinaries arising	4,233,710
Ordnance	3,743,715
Miscellaneous	1,860,000
Vote of credit	3,000,000
Interest of Exchequer bills	1,200,000
Carried forward	£46,591,573

Reflections on
this subject.

of finance are of little moment at this time, abandoned as his system soon was amid the necessities and changes of future years; but the views brought forward on both sides were an essential deviation from the great principle of Mr. Pitt's financial policy, and presaged the approach of times when the provident policy so long upheld by his unshaken foresight was to be abandoned, with the common consent of both the great parties alternately intrusted with the administration of affairs. Mr. Pitt's principle was, to provide the interest of each loan annually contracted, and the one per cent. destined for the extinction of its principal, by means of indirect taxes, which thereafter formed part of the permanent revenue of the country till the debt was extinguished; out both Lord H. Petty and Lord Castlereagh seem to have imagined that the time had now arrived when it would be difficult, if not impossible, to raise any increased revenue in this form; and, accordingly, the plans of both were characterized by the great and decisive step of providing for the charges of future debt, not by future and permanent taxes, but by other means imposing no additional present burden on the country, but, of course, for that very reason trenching on its ultimate resources. The former proposed to do this by mortgaging the war-taxes for the charges of all the debt which might hereafter be contracted, and rendering the amount of those taxes thus mortgaged a permanent part of the peace revenue: the latter, by leaving untouched the war-taxes, but appropriating to the interest of future loans part of the present sinking fund, and thereby impairing to a proportionate extent its efficiency on the return of peace. Both implied a deviation from the cardinal point of Mr. Pitt's system, the providing for the discharge of the interest of all debts out of *indirect taxes religiously set apart for that purpose*; and it is remarkable, as an example how much the fortunes and destinies of a state are often determined by the character and life of a single master-spirit, that this vast change, fraught, as experience has since proved it to have been, with the ruin of our financial prospects and probable ultimate subjugation as an independent state, was simultaneously proposed by the leaders of both Whigs and Tories, the moment that great statesman and his illustrious rival were mouldering in their graves.

Had the period arrived when it was totally impossible to provide for the charges of additional loans by progressive additions to the peace revenue, this change, however prejudicial, would not have been a matter of regret more than any other unavoidable calamity. But experience has now sufficiently demonstrated that

this was very far indeed from being the case, for down to the very end of the war, new taxes were imposed to an extent that, *a priori*, would have been thought impossible. As it was, therefore, the discussions which ensued on the rival finance projects of Lord H. Petty and Lord Castlereagh unnecessarily gave the first rude shock to the firm and provident system of Mr. Pitt's finance, by breaking down the barrier which had hitherto kept the funds destined for the discharge of the debt sacred from the avidity and shortsighted desires of the people, and accustoming them to regard both the revenue set apart for that purpose and the war-taxes during peace as a fund to which they might have recourse to relieve the war pressure of the moment. Of the two, if it had become necessary to make choice of one or other, the system of Lord Henry Petty was the most manly and statesmanlike with reference to domestic administration; inasmuch as it was not calculated to trench upon the sinking fund until it had become equal to the loans annually contracted, by which means the increase of the amount of the whole debt, after that period, would have been rendered impossible, and, in the mean time, to pledge the war-taxes for the interest and charges of the sums borrowed; whereas that of Lord Castlereagh proposed at once to lay violent hands upon the sinking funds for the charges of all future loans, and yet give the nation the full benefit of the remission of all the war-taxes on the return of peace. The former system, however, though well adapted for a state of uniform and long-continued hostility, was totally unsuitable to the varying circumstances and fleeting changes which were likely to ensue in the course of the contest in which the nation was actually engaged; and by encouraging a morbid sensitiveness to any extraordinary advances at a particular time, beyond what the general system warranted, was too likely to occasion the loss of the fairest opportunities of bringing it to a successful issue. Of this unhappy tendency the issue of the war in Poland, starved out, as we shall presently see it was, by an ill-judged economy on the part of Great Britain, afforded a memorable example. And in the habit acquired by the nation in these discussions to regard the sinking fund, not as a sacred deposit set apart, like the life insurance of an individual, for the benefit of posterity, but as a resource which might be instantly rendered available to present necessities, is to be found the remote cause of the great change of 1813 in our financial policy, and the total departure from any regular system for the redemption of the public debt: a change which is, perhaps, to be regarded as the greatest evil entailed upon the nation by the moneyed embarrassments and Democratic ascendancy in later times.

Long as the preceding summary of the principal domestic measures of the Whig administration has been, it will not, in all probability, be regretted by the reflecting reader. It is not as the record of mere events, but of thoughts and the progress of opinion, that history is valuable; and independent of the importance of the changes which have been discussed upon the future history of the Empire, they are in an especial manner worthy of attention, as embodying the principal domestic designs of the great party which, after so long a seclusion from office, at that period held the reins of power, and which, besides the acknowledged

ability of its leaders, embraced a large portion of the thought and learning of the state. And upon an attentive consideration of these measures, it must be obvious to the candid reader that they were founded on just principles, and directed to important ends; that humanity and benevolence breathed in their spirit, and wisdom and foresight regulated their execution. Above all, they were characterized, equally with the measures of Mr. Pitt, by that regard for the future, and resolution to submit to present evils for the sake of ultimate advantage, which is the mainspring of all that is really great or good, both in individuals and nations. On comparing the statesmanlike measures of the Whigs at that period in England with the frantic innovations which tore society in pieces in France on the commencement of their Revolution, the difference appears prodigious, and is highly deserving of attention. Thence may be learned both the important tendency of free institutions to modify those ardent aspirations after equality, which, when generally diffused, are, of all other political passions, the most fatal to the cause of freedom, and the wide difference between the chastened efforts of a liberal spirit, when guided by aristocratic power, and modifying, not governing, the measures of government, and the wild excesses or atrocious crimes, destructive at once to the present and future generations, which spring from the surrender of the actual direction of affairs to the immediate control or the passions of the people.

It remains to detail, with a very different measure of encomium, the principal foreign policy of the Whig administration, from the period when the Prussian war commenced on the Continent of Europe.

It has been already mentioned how Sir Home Popham, without authority from the British government, proceeded from the Cape of Good Hope to Buenos Ayres with a small military force, and the disastrous issue of that expedition.* But the general transports of joy at the brilliant prospects which this acquisition was supposed to open to British commerce were so excessive that government, while they very properly brought Sir Home to a court-martial for this unauthorized proceeding, which, in March, 1807, reprimanded him for his conduct, had not firmness enough to withstand the general wish that an expedition should be sent to the river La Plata, to wipe away the disgrace which had there been incurred from the British arms, and annex such lucrative dependances to the British crown. No sooner, accordingly, had it become evident, from the failure of the negotiations for peace at Paris, that a protracted struggle was to be apprehended, than a re-enforcement of 3000 men was sent to the British troops in that quarter, under the command of Sir Samuel Auchmuty. On arriving at the Rio de la Plata, he found the remnant of the English force cooped up in Maldonado, with hardly any provisions, and daily exposed to the insults of the accomplished horsemen of that country. Deeming that town unfit for being rendered a dépôt and place of security for the army, Sir Samuel resolved to direct his forces against Monte Video, a fortified sea-port, admirably calculated for all these purposes. After great diffi-

culties, the troops were transported to that neighbourhood, but, on commencing the siege, great and apparently insurmountable difficulties were encountered. The defences of the place were found to be much stronger than had been expected: the whole powder in the fleet was almost blown away in the first five days' firing; intrenching tools were wanting to make the breaches, and four thousand regular troops, with twenty pieces of cannon, a force fully equal to the besiegers', was rapidly approaching to raise the siege. In these critical circumstances, he resolved to hazard an assault, though the breach could as yet scarcely be called practicable, and orders were issued for the attack an hour before daybreak. ^{Feb. 2, 1807.} Owing to the darkness of the night the head of the column missed the breach, and remained under the ramparts for twenty minutes exposed to a heavy fire, every shot of which told in their dense ranks; but as the day dawned, it was discerned by Captain Renny, of the 40th regiment, who gloriously fell as he mounted it; the troops emulated his bright example, rushed in with irresistible violence, cleared the streets of all the cannon which had been placed to enfilade them, and made prisoners all the enemy who attempted any resistance. In this glorious storm the loss of the British was about six hundred, but twice that number of the enemy fell, and two thousand were made prisoners, besides a thousand who escaped in boats, so that the numbers of the garrison at first had been greater than that of the besieging force.*

It would have been well for the British arms if their attempts on South America ^{A second expedition against Buenos Ayres is resolved on.} had terminated here; but the discomfiture of Sir Home Popham's expedition to the Rio de la Plata unhappily led both the government and the nation to conceive that the honour of the British arms was implicated in regaining the ground they had lost in that quarter. With this view, an additional expedition, under the command of General Craufurd, consisting of 4200 men, which had been sent out in the end of October, 1806, destined originally to effect the conquest of Chili, on the other side of Cape Horn, was, when news arrived of the expulsion of the English from Buenos Ayres, ordered to stop short, and attempt the reconquest of that important city. General Craufurd, agreeably to these orders, made sail for the Rio de la Plata, and effected a junction with Sir Samuel Auchmuty at Monte Video in the beginning of June. ^{June 2, 1807.} As the united force now amounted to above nine thousand men, it was deemed advisable to make an immediate attempt on Buenos Ayres, and, in pursuance of express directions from government,† the command of the force for this purpose was given to General Whitelocke. That officer arrived at Monte Video on the 9th of May, and preparations were immediately made for the proposed enterprise.‡

The force which set out on this expedition consisted of 7800 men, including eighteen pieces of field artillery. After sev- ^{Its failure.}

Oct., 1806.

Capture of Monte Video.

eral fatiguing marches the whole reached Reduccion, a village about nine miles from Buenos Ayres, and, having manœuvred so as to deceive the enemy as to the real point of passage, succeeded in crossing the river, with very little loss, at the ford of Passo Chico. The army having been assembled on the right bank, orders were given for a general attack on the town. Great preparations for defence had been made by the inhabitants: above two hundred pieces of cannon were disposed, in advantageous situations, in the principal streets, and fifteen thousand armed men were stationed on the flat roofs of the houses to pour their destructive volleys on the columns who might advance to the attack. The measures of the English general, so far from being calculated to meet this danger, the magnitude of which is well known to all experienced military men, betrayed a fatal and overweening contempt for his opponents. The different columns of attack were directed to advance by the principal streets to the great square near the River Plata; but, by an inconceivable oversight, they were not allowed to load their pieces, and no firing was permitted till they had reached the final place of their destination. The consequence was, that those brave men were exposed, as they advanced through the long streets leading to the great square, without the possibility of returning it, to a destructive shower of musketry, hand-grenades, and stones from the tops of the houses, all of which were flat and covered with an armed and enthusiastic population; while

strong barricades were drawn at intervals across the streets, mounted by a plentiful array of heavy artillery. Notwithstanding all these obstacles, however, the formidable nature of which were so fatally experienced by Charles X. in the streets of Paris in 1830, Sir Samuel Auchmuty, by a vigorous attack on the right, made himself master of the Plaza de Toros, took eighty-two pieces of cannon, an immense quantity of ammunition, and six hundred prisoners. General Whitelocke himself had gained possession of an advanced post in the centre, and the Residencia, a commanding station on the left, had also fallen into the hands of the British. But these advantages were dearly purchased, and in other quarters the plunging fire to which the troops had been exposed, without the possibility of returning it, had proved so destructive that three regiments were compelled to lay down their arms, and the attacking force was weakened by the loss of 2500 men. On the following morning the Spanish general, Linieres, offered to restore all the prisoners which had been taken, on condition that the British forces should withdraw altogether from Monte Video, and all the settlements which they held on the Rio de la Plata. Such was the consternation produced by the disasters of the preceding day, and such the difficulties with which the farther prosecution of the enterprise appeared to be attended, that, notwithstanding the brilliant success of Sir Samuel Auchmuty, and the capture of so large a portion

of the enemy's artillery, these terms were agreed to, and a capitulation, in virtue of which the whole British troops were withdrawn from the River Plata, was signed on the following day.*

The public indignation knew no bounds when the calamitous issue of this expedition was made known in Great Britain; and the outcry was

the more vehement from the glorious success at Monte Video having inspired the people with an unreasonably low estimate of the South American forces. So violent was the clamour that government, in order to appease it, were compelled to bring General Whitelocke to trial, and the court-martial which investigated the charges brought against him, in January, 1809, sentenced him to be cashiered and dismissed from his majesty's service. No opinion, however, can be formed of the real merits of the case from this decision, whatever may have been the respectability of the officers composing it; for such was the happy ignorance which then generally prevailed in Great Britain on military subjects, that the members of the court-martial required to be told what the right bank of a river, in military language, means;† and such is frequently the vehemence and unreasonableness of the public mind in England on such occasions, that the strength of scarcely any intellect is equal to withstanding the torrent. The examples of Saragossa, Gerona, and Paris also, have, since that time, abundantly demonstrated that the resistance of an insurgent population in barricaded streets and on the roofs of stone houses is often extremely formidable, even to powerful bodies of disciplined troops. But on a calm retrospect of the transactions, at this distance of time, it cannot be denied that an energetic and skilful general might, in all probability, have extricated the British army, if not with honour, at least without disgrace, from this ill-concerted enterprise. The orders to traverse the streets with muskets unloaded, after a desperate resistance was prepared and foreseen, though expressly approved of by the court-martial, seems hardly reconcilable to any rule of military policy or common sense; and, above all, the omission to take advantage of the great success of Sir Samuel Auchmuty, and the powerful train of artillery which he had captured, if not to achieve success, at least to avert dishonour, must justly be considered as a matter of reproach to the British general. Much allowance must, however, be made for the critical situation of an inexperienced officer plunged, in his first essay in a separate command, in difficulties, under which the intellects of Marmont and Lefebvre subsequently reeled; but the same excuse cannot be made for the government, which selected an officer unknown to fame for so important a service, where many others had proved their capacity even in the comparatively inconsiderable military operations in which England had hitherto been engaged.‡ But this weight of secret Parliamentary influence is the inherent bane of a free constitution: it appeared afterward, on a still greater scale, on occasion of the Walcheren expedition, and continued to paralyze all the military operations of England, till the commanding genius of Wellington burst through the trammels, and fixed the flickering light of its glory in a star of unquenchable lustre.†

Court-martial on General Whitelocke, who is cashiered.

* South., Pen. War, i., 73.

† The appointment of General Whitelocke over the head of Sir Samuel Auchmuty, the hero of Monte Video, appears the strongest confirmation of these remarks, but in reality it is not so; for that town was stormed on Feb. 2, and General Whitelocke's appointment is dated March 3, in the same year; so that the one was not known till the other took place. It is the overlooking the many officers who had distinguished themselves in Egypt, Maida, and India, which forms the real reproach to the British government on this occasion.

‡ Ann Reg. 1807, 219, 224. Dum., xv., 82, 83.

* Ann. Reg., 1807, 219, 221.

In other colonial transactions the British arms during this administration were more prosperous. Curaçoa, early in the year, was taken, with hardly any resistance, by a squadron of frigates, under the command of Captain Brisbane: the advantages of sharing in British commerce, and obtaining the protection of the British flag, having now disposed the planters in all the colonial possessions of other states to range themselves under its banners. Soon after, a regular Constitution was proclaimed in Hayti, by which slavery was forever abolished; property and persons placed under the safeguard of the law; the first magistrate of the Republic declared the generalissimo of its forces by sea and land; and a code established breathing a spirit of wisdom, philanthropy, and moderation. The establishment of such a Republican government, coming so soon after the heroic resistance which the negroes had opposed to the attempt at their subjugation by Napoleon, would have been a subject of the highest interest, and deserving of the warmest sympathy of every friend to humanity, were it not that experience has since abundantly proved, what historical information might even then have too clearly led the well informed to anticipate, that all such attempts at the regeneration of mankind, by immediate changes, are not only delusive, but pernicious; that to give to savages the liberty and institutions of civilization, is to consign them to immediate suffering and ultimate slavery; and that every attempt to transfer suddenly into one age or nation the institutions of another, is as hopeless a task as to expect in the nursery seedling the strength and solidity of the aged oak, or in the buoyancy and irreflexion of childhood the maturity and perseverance of maturer years.

This untoward expedition to the shores of the La Plata was not the only one which brought disgrace upon the arms of England at this period: enterprises equally unfortunate took place both on the shores of the Bosphorus and the banks of the Nile.

It has been already mentioned* that Russia had, unhappily, selected the moment when the Prussian war, if not actually commenced, was at least obviously approaching, to invade the provinces of Wallachia and Moldavia by the army of General Michelson, and we have noticed the disastrous effect which that distraction of force had upon the issue of the contest on the Vistula. This irruption, however ill-timed or imprudent, when so serious a war nearer home awaited the Russian forces, was not, however, unjustifiable; on the contrary, it was provoked by the ambition of the French government, and the intrigues of their ambassador at Constantinople, which, by precipitating the Divan into a breach of the existing treaty with the court of Russia, gave to that power too plausible a ground for resuming its long-established schemes of ambition on the banks of the Danube.

By the treaty of Jassy, which terminated the bloody and disastrous war which the Turks had long waged with the might of Moscow and the genius of Suwarrow, it had been covenanted that the hospodars, or governors of Wallachia and Moldavia, should not be dismissed from their high functions for the space of seven years; and

by the supplementary treaty of the 24th of September, 1802, it had been expressly stipulated that they should not be removed without the consent of Russia.* No sooner, however, had it become evident to Napoleon that a war was impending with Prussia and Russia than he despatched a firm and skilful ambassador to Constantinople, with instructions to do everything in his power to produce a rupture between the Turks and Russians, and in this manner effect a powerful diversion to the Moscovite forces on the banks of the Danube.† This diplomatic agent was General Sebastiani, a military officer of great experience, and whose subtle and penetrating genius, formerly nourished in a cloister, and since matured by the experience of camps, was admirably adapted for the mingled acuteness and resolution required in the mission with which he was now intrusted. His secret instructions were, in the first instance, to endeavour to procure the dismissal of the Princes Ipsilanti and Morusi from the government of these provinces, who were in the interest of Russia, and place in their stead princes of the rival families of Suzzo and Callimachi, who, it was known, would incline to the French alliance.‡

When Sebastiani arrived at the Turkish capital in August, 1806, he found matters in a situation extremely favourable to the attainment of these objects. Sultan Selim, in his attempts to introduce the European tactics and discipline into his armies, of the need of which the recent wars with Russia had given repeated and fatal experience, of which a detailed account will be given in a future chapter,‡ had become embarrassed with very serious difficulties, and found himself obstinately resisted not only by the proud and disorderly bands of the janizaries, but that powerful party in all the Ottoman provinces who were attached to their national and religious institutions, and regarded the introduction of European customs, whether into the army or the state, as the first step in their national ruin. In this extremity he gladly embraced the proffered counsel and assistance of the French ambassador, who represented a power which naturally connected itself with the innovating party in every other state, and whose powerful armaments, already stationed in Dalmatia, promised the only effectual aid which could be looked for from the European nations against the Turkish malecontents, whom it was well known Russia was disposed to support. The difficulty arising from the necessity, in terms of the treaty, of consulting Russia in regard to the removal of the obnoxious hospodars, was strongly felt; but the art of Sebastiani prevailed over every difficulty. At a private conference with the sultan in person, he succeeded in persuading that unsuspecting sovereign that the clause in the convention of 1802 applied only to the removal of the waiwodes on the ground of maladministration in their respective provinces, but could not extend to a case where it was called for by the general interests of the Empire; that the present was an instance of the latter description, from the notorious intrigues of those princes with the hereditary enemies of the Ottoman faith; and, in pursuance of these representations, a hatti-scheriff appeared on the 30th of August, dismissing the reigning

Dismissal of the Waiwodes of Wallachia and Moldavia by Sultan Selim.

waiwodes, and appointing Princes Suzzo and Callimachi in their room.*

This decisive step was taken by the Sublime

Porte not only without the concurrence of Russia, but without the knowledge of any members of the diplomatic body at Constantinople, and as its immediate effect in producing a rupture between the Divan and the court of St. Petersburg was distinctly foreseen, the effect produced by its promulgation was very great. The Russian ambassador, M. Italinski, loudly complained of the infraction of the treaty, in which he was powerfully supported by Mr. Arbuthnot, the minister of Great Britain, who openly threatened an immediate attack on the Turkish capital from the fleets of their respective sovereigns. Sebastiani, however, skilfully availed himself of the advantages which the course of events gave him to secure and increase the French influence with the Divan. No sooner, therefore, did intelligence arrive of the refusal of the Russian government to ratify the treaty concluded by D'Oubril at Paris, than he renewed his efforts, and representing the cause of France as now identified with that of the Sublime Porte, loudly demanded that the Bosphorus should be closed to Russian vessels of war or transports, and announced that any continuation or renewal of alliance with England or Russia would be considered as a declaration of war against the French emperor.† These remonstrances proved successful, and a few days afterward a Russian brig, which presented itself at the mouth of the Bosphorus, was denied admission. These measures irritated so violently the Russian ambassador, that he embarked on board the English frigate Canopus, and threatened instantly to leave the harbour if the dismissed waiwodes were not forthwith reinstated in their possessions. In these efforts he was powerfully seconded by Mr. Wellesley Pole, who, in the absence of Mr. Arbuthnot, who was detained by fever at Bujuchdere, presented himself before the Divan in his riding-dress, with a whip in his hand, and peremptorily announced that, if the demands of Russia were not instantly acceded to, a British fleet would enter the Dardanelles and lay the capital in ashes. Intimidated by this bold language, and the haughty air of the person who used measure, it, and secretly aware of the weakness of the defences of the capital on that side, the counsellors of Selim recommended a temporary concession to the demands of the allied powers: the waiwodes were reinstated in their governments, and ample promises made to the Russian ambassador of satisfaction for all his demands. But these conciliatory measures were only intended to gain time; and in a secret conference with Sebastiani, the sultan informed that minister that he had only yielded to the storm till he was in a condition to brave it, and that his policy, as well as his inclinations, were inseparably united with the Emperor Napoleon.‡

Matters were now, to all appearance, accommodated between the Divan and the cabinet of St. Petersburg; but the great distance between the two capitals brought on a rupture when all causes of irritation had ceased, at the point

Meanwhile the Russian armies invaded the principalities.

* Dum., xvii., 257, 264. Bign., vi., 177, 179. Hard., ix., 364, 365. † Note of 16th Sept., 1806. ‡ Ann. Reg., 1806, p. 208, 209. Bign., vi., 182, 184. Hard., ix., 364, 365.

where their interests came into collision. As soon as intelligence of the dismissal of the waiwodes reached the Russian cabinet, they despatched orders to General Michelson, as soon as he could get his preparations ready, to enter the Turkish territory; and when intelligence was received of their being reinstated on the 15th of October, which did not arrive at the Russian capital till the beginning of November, it was too late to prevent the operations of the previous orders and the commencement of hostilities. Michelson, accordingly, entered Moldavia on the 23d of November, and, having once drawn the sword, the cabinet of St. Petersburg had not sufficient confidence in the sincerity of this forced submission on the part of the Sublime Porte to restore it to its sheath, or, possibly, they were not sorry of an opportunity of extending themselves towards the Danube, and advancing their permanent schemes of conquest towards Constantinople. Notwithstanding the restoration of the hospodars, therefore, their armies continued to advance, driving the Turks before them, to the no small confusion of M. Italinski, who had uniformly declared, both in public and private, that, as soon as that event was known at St. Petersburg, their march would be countermanded. Sebastiani, meanwhile, made the best use of this now unjustifiable invasion, as well as of the consternation produced by the victories of Napoleon in Prussia, to increase the French influence at the Divan; and strongly represented that now was the time, when Russia was already hard pressed by the victorious arms of the French emperor on the Vistula, to throw their weight into the scale, and regain, in a single successful campaign, the influence and possessions which had been wrested from them by their inveterate enemies during more than a century of previous misfortunes. Persuaded by such plausible arguments, and irritated at the continued stay of the Russian troops in the principalities after the causes which had justified their entrance into them had ceased, the hesitations of the Divan were at length overcome, and war was formally declared against Russia in the end of the year. To protect the Russian ambassador from the fury of the Mussulmans, which was now fully aroused, the sultan stationed a guard of janizaries over his palace. Mr. Arbuthnot strongly remonstrated against his being sent, according to previous custom, to the Seven Towers. General Sebastiani had the generosity to employ his powerful influence for the same purpose, and by their united influence this barbarous practice was discontinued, and M. Italinski was permitted to embark on board the English frigate Canopus, by which he was soon after conveyed into Italy. Less humane, however, towards his own satraps than the ambassadors of his enemies, the sultan despatched his messengers with the bowstring to Prince Ipsilanti; but that nobleman, in whom energy of mind supplied the want of bodily strength, succeeded in throwing down the executioners after they had got hold of his person, and had the good fortune to escape into Russia.*

Though war was thus resolved on, the Porte was far from being in a condition at the moment to oppose any effectual resistance to the powerful army of General Michelson, which

Rapid progress of the Russians in the principalities.

* Hard., ix., 365. Bign., vi., 184, 189. Ann. Reg., 1806, 208, 211.

had entered the principalities of Wallachia and Moldavia: forty thousand Russian troops, amply provided with every necessary, were irresistible. Moldavia was speedily overrun: the victorious bands, following up their success, entered Wallachia; a tumultuary force which the Pacha of Rudchuck had raised to arrest their progress was defeated; and Bucharest, the capital of the latter province, and a city containing Dec. 27. eighty thousand inhabitants, fell into their hands. Before the end of the year, and before war had been formally declared on either side, they were already masters of all the Danube; and their outposts, preparing to cross that river, were already in communication with Czerni George, the chief of Servia, who had revolted from the grand signior, defeated his forces in several encounters, and was at this time engaged in the siege of the important fortress of Belgrade.*

The rapidity and magnitude of these successes, however, was the occasion of no small disquietude to the court of St. Petersburg: they had now felt the weight of the French troops on the Vistula; their arms had retired from doubtful and well-debated fields at Golymin and Pultusk; and they were fully sensible of the imprudence of engaging at the same time in another contest, and dispersing the troops so imperiously required for the defence of their own frontier on the banks of the Danube. Already an order had been despatched to recall four divisions to support the extreme left of the army in Poland, whose arrival and operations under Essen, against Bernadotte at Ostrolenka, have already been noticed.†

But this was not sufficient: their diminished forces on the Danube might be exposed to serious danger from the efforts, and now fully aroused national spirit, of the Turks; and as the duration of the contest with France could not be foreseen, it was of the utmost moment to deprive the Emperor Napoleon of that powerful co-operation which he was likely to derive from the war so imprudently lighted up on the southern frontier of the empire. The naval forces of England appeared to be precisely calculated to effect this object; and, as they were cruising at no great distance in the *Ægean* Sea, it was hoped that a vigorous demonstration against Constantinople might at once terminate the contest in that quarter. Application was made to the British government for this purpose, and the cabinet of St. James's, however unwilling, under the direction of Mr. Fox's successors, to engage in any military enterprises in conjunction with the Continental powers, was not averse to the employment of its naval forces in the support of the common cause, and felt the necessity of doing something, after the refusal of both subsidies and land-forces to Russia, to convince that power of the sincerity of its desire, with its appropriate weapons, to maintain the contest. Orders, therefore, were given to Sir John Duckworth, who, at the close of the year, was cruising off Ferrol with four ships of the line, to proceed forthwith to the mouth of the Dardanelles, where Admiral Louis was already stationed with three line-of-battle ships and four frigates; and his orders were to force the passage of these celebrated straits, and compel the Turks, by the threat of an immediate bombardment, into a relinquishment of the

French and adoption of the Russian and English alliance.*

The Hellespont, which, from the days of Homer and the war of Troy to these times, Description has been the theatre of the most important operations in which the fate of *Danellies*. Europe and Asia was concerned, is formed by the narrow strait through which the waters of the Black Sea discharge themselves from the lesser expanse of Marmora into the Mediterranean. Its breadth varies from one to three miles; but its course, which is very winding, amounts to nearly thirty; and the many projecting headlands which advance into the stream afford the most favourable stations for the erection of batteries. Its banks are less precipitous and beautiful than those of the Bosphorus, which is the appellation bestowed on the still more bold and romantic channel which unites the Sea of Marmora to the Euxine; but they possess, both from historical association and natural variety, the highest interest; and few persons possessed even of the rudiments of education can thread the devious way through the winding channel and smiling steeps, which resemble the shores of an inland lake, rather than the boundary of two hemispheres, without recurring in imagination to the exploits of Ajax and Achilles, whose tombs still stand at the entrance of the strait, the loves of Hero and Leander, the memorable contests of which it was the theatre during the Byzantine Empire, the glowing picture by Gibbon of the Latin crusade, and the thrilling verses of Lord Byron on its classic shores.

The fortifications of these important straits, the real gates of Constantinople, had been allowed to fall into disrepair. The castles of Europe and Asia, indeed, still stood in frowning majesty to assert the dominion of the Crescent at the narrowest part of the passage, but their ramparts were antiquated, their guns in part dismounted, and such as remained, though of enormous calibre, little calculated to answer the rapidity and precision of an English broadside. The efforts of Sebastiani, seconded by the spirit of the Turks, whose religious enthusiasm was now fully awakened, had endeavoured in vain to attract the attention of the Divan to the danger which threatened them in this quarter. True to the Mussulman principle of foreseeing nothing, and judging only of the future by the past, they bent their whole attention to the war on the Danube, and despatched all their disposable forces to arrest the progress of the Servians and Czerni George, when a redoubtable enemy threatened them with destruction at the mouth of the Dardanelles. Duly informed of these circumstances, Mr. Arbuthnot was no sooner apprized of the arrival of Sir John Duckworth off Tenedos, than he delivered the ultimatum of Great Britain, which was Jan. 26, 1807. the immediate dismissal of M. Sebastiani; the entrance of Turkey into the alliance of Russia and Great Britain, and the opening of the Dardanelles to the vessels of Russia. These offers were peremptorily declined, and their refusal accompanied by a significant hint from General Sebastiani, that the Berlin decree, recently received at the Turkish capital, required the immediate arrest of all British subjects in all the territories of the allies of France, and that Turkey

* Ann. Reg., 1806, 211.

† Ante, ii., p. 488.

* Bign., vi., 189, 190. Jom., ii., 372. Ann. Reg., 1807, 195.

was one of these allies. Deeming his stay at Constantinople no longer secure, Mr. Arbuthnot, under colour of going to dine with Admiral Jan. 29. Louis, who in the *Endymion* frigate lay off Seraglio Point, withdrew from Constantinople, having first recommended his family to the care of General Sebastiani. That general honourably discharged the trust, but he was too skillful not to turn to the best advantage so unexpected an occurrence in his favour, and war was immediately declared by the Divan against Great Britain.*

Hitherto everything had seconded beyond his Sir John Duckworth's most sanguine expectations the effort passes the forts of the French ambassador, Dardanelles, but he was unable to persuade the Turkish government to take the requisite measures of precaution against this new enemy who had arisen. In vain he urged them instantly to put in repair the fortifications of the Dardanelles; in vain he predicted a formidable immediate attack from the fleet of England; nothing was done to give additional security to the strait, and the Divan, persuaded that the only serious danger lay on the side of the Danube, continued to send all their disposable forces in that direction. Meanwhile the squadrons of Sir John Duckworth and Admiral Louis having effected a junction off Tenedos, their united forces amounted to eight ships of the line, two frigates, and two bomb-vessels; but the *Ajax* of 74 guns having, unfortunately, been destroyed by fire at this critical moment, the squadron was reduced to seven line-of-battle ships. With these, however, the British admiral resolved to force the passage. Having taken his measures with much skill, he advanced with his ships in single file at moderate intervals, and with a fair wind, on the morning of the 19th Feb. 19. of February, entered the straits. So completely were the Turks taken by surprise, that a feeble desultory fire alone was opened upon their ships as they passed the first batteries, to which the English did not deign to reply; but when they reached the castles of Europe and Asia, where the straits are little more than a mile broad, a tremendous cannonade assailed them on both sides, and enormous balls, weighing seven and eight hundred weight, began to pass through their rigging; but the British sailors, meanwhile, were not idle; deliberately aiming their guns, as the ships slowly and majestically moved through the narrow channel, they kept up an incessant discharge to the right and left, with such effect that the Turkish cannoniers, little accustomed to the rapid fire of modern times, and terrified at the crash of the shot on the battlements around them, took to flight. Following up his triumphant course, the English admiral attacked and burned the vessel of the capitan pacha lying at anchor in the straits; Sir Sydney Smith, the second in command, compelled four frigates to surrender, which were immediately after committed to the flames; a fifth, after an obstinate resistance, shared the same fate; and a brig, which with difficulty escaped from the conflagration, had scarcely announced the alarming tidings at Constantinople, when the British fleet, with all sails set, was seen proudly advancing, and cast anchor off the Isle of Princes, within three leagues of Seraglio Point.†

No words can adequately paint the terror

which prevailed in Constantinople when the increasing sound of the approaching cannonade too surely announced that the defences of the straits had been forced; and shortly after, the distant light of the conflagration gave token of the rapid destruction of the fleet. This was much increased when a message was received from Admiral Duckworth, half an hour after his arrival, which, after recapitulating all the instances of fidelity to the Turkish alliance which England had so long afforded, concluded by the declaration that if, in twenty-four hours, the demands of Great Britain were not acceded to, he would be reduced to the painful necessity of commencing hostilities. The capital was totally defenceless: not ten guns were mounted on the sea batteries, and a furious crowd was already assembled in the streets, demanding the head of the reis effendi and General Sebastiani, the authors of all the public calamities. The consternation was universal: the danger, from having been never anticipated, was now felt with stunning force; and the Divan having been assembled in the first moments of alarm, sent an intimation to General Sebastiani that no defence remained to the capital; that submission was a matter of necessity; and that, as the people regarded him as the author of all their misfortunes, his life was no longer in safety, and he would do well instantly to leave the capital.* But his answer was worthy the great and gallant nation which he represented. Receiving the messenger of the sultan in full dress, surrounded by all his suite, he immediately replied, "My personal danger cannot for an instant occupy my attention, when the maintenance of the French alliance and the independence of the Ottoman Empire are at stake. I will not quit Constantinople, and I confidently expect a new decision more worthy of Sultan Selim and the Turkish nation. Tell your powerful monarch that he should not for a moment think of descending from the high rank where the glorious deeds of his ancestors have placed him, by surrendering to a few English vessels a city containing nine hundred thousand souls, and abundantly provided with magazines and ammunition. Your ramparts are not yet armed, but that may soon be done: you have weapons enough; use them but with courage, and victory is secure. The cannon of the English fleet may set fire to part of the town—granted; but without the assistance of a land army it could not take possession of the capital, even if you were to open your gates. You sustain every year the ravages of accidental conflagration and the more serious calamities of the plague, and do you now scruple at incurring the risk of inferior losses in defence of your capital, your country, your holy religion?"†

This noble reply produced a great effect upon the Divan, and it was resolved that, before submitting, they should at least try whether, by gaining time in parleying, they could not, in some degree, complete their preparations. Sebastiani accordingly dictated a note in answer

The Divan resolves on submission, but are roused to exertion by General Sebastiani.

* I have been informed by Sir Stratford Canning, the well-known and able British diplomatist at Constantinople, that a tradition prevails in the East that Sebastiani was at first disposed to submit, and that it was the Spanish ambassador's remonstrances which awakened him to the energetic conduct which has shed such a lustre around his name.

to the communication from the English admiral, in which the sultan professed an anxious desire to re-establish amicable relations with the British government, and announced his appointment of Allet-Effendi for the purpose of conducting the negotiation. The unsuspecting English admiral, who, from the illness of Mr. Arbuthnot, was intrusted with the negotiation, was no match for the wily French general in the arts of diplomacy, fell into the snare. The British ultimatum

Feb. 21. was sent ashore the following morning, which consisted in the provisional cession of their fleet to England, the dismissal of Sebastiani, and the re-establishment of amicable relations with Russia and the British government. Half an hour only was allowed to the Divan, after the receipt and translation of this note, to deliberate and reply. Had this vigorous resolution been acted upon, it must have led to immediate submission: for the batteries were not yet armed; the fleet, the arsenals, the seraglio, and great part of the town lay exposed to the fire of the English squadron, and during the terror produced by a bombardment, the greater part of the capital, which is chiefly built of wood, must have been reduced to ashes.*

Unfortunately, instead of doing this, Sir John Duckworth, possessed with the belief that the sultan was sincerely desirous of an accommodation, and that the desired objects might be obtained without the horrors of a conflagration, or an irreparable breach with the Ottoman Empire, imprudently gave time, and suffered himself to be drawn into a negotiation. Day after day elapsed in the mere exchange of notes and diplomatic communications; and meanwhile the spirit of the Mussulmans, now raised to the highest pitch, was indefatigably employed in organizing the means of defence. The direction of the whole was intrusted to General Sebastiani, for whom a magnificent tent was erected in the gardens of the seraglio, and who communicated to the ardent multitude the organization and arrangement which long warlike experience had given to the officers of Napoleon. Men and women, gray hairs and infant hands, the Turks, the Greeks, the Armenians, were to be seen promiscuously labouring together at the fortifications. Forgetting, in the general transports, the time-worn lines of religious distinction, the Greek and Armenian patriarchs set the first example of a cordial acquiescence in the orders of government: Selim himself repeatedly visited the works; his commands were obeyed by two hundred thousand men, animated by religious and patriotic ardour to the greatest degree; while the French engineers, who had been sent by Marmont to aid in the war with the Russians, communicated to the busy multitude the inestimable advantages of scientific direction and experienced skill. Under such auspices, the defences of the harbour were speedily armed and strengthened: the naval arsenal furnished inexhaustible resources; in three days three hundred pieces of cannon were mounted on the batteries; at the end of a week their number was increased to a thousand; temporary parapets were everywhere formed with gabions and fascines, where regular defences were wanting; the tower of Leander was armed with heavy artillery; a hundred gunboats were drawn across the

mouth of the Golden Horn; twelve line-of-battle ships within stood apparently ready for action; * fireships were prepared, and numerous furnaces with red-hot shot kept constantly heated to carry into the British fleet the conflagration with which they menaced the Turkish capital.†

Although the English officers perceived, by means of their telescopes, the preparations which were going forward, and though the peril to the fleet was hourly increasing, from the long continuance of a southwest wind, which rendered it impossible to re-pass the straits, yet nothing was done adequate to the emergency. The fleet, indeed, was brought nearer to the seraglio, and every effort made to bring the enemy, by negotiation, to an accommodation; but the pride of the Mussulmans, now fully aroused, would not have permitted the government to come to terms, even if they had been so inclined; and the influence of Sebastiani was successfully exerted to protract the conferences till the preparations were so far completed as to enable them to bid defiance to the enemy. Four days after the English fleet appeared off Constantinople, the coasts were so completely armed with artillery as to render an attack eminently hazardous; in a week it was totally hopeless. The object of the expedition having failed, nothing remained but to provide for the safety of the fleet; but this was now no easy matter, for during the week lost in negotiation the batteries of the Dardanelles had all been armed, and the castles of Europe and Asia so strengthened as to render it an extremely hazardous matter to attempt the passage. To complete the difficulties of the English admiral, the wind, which generally blows at Constantinople from the northeast, continued, ever after his arrival, fixed in the southwest, so as to render it totally impossible for him to retrace his steps. At length, on the 1st of March, a breeze having sprung up from the Black Sea, all sails were spread, and the fleet re-entered the perilous straits. But it was not without difficulty, and with considerable hazard, that the passage was effected. A heavy fire was kept up from all the batteries; the headlands on either side presented a continued line of smoke; the roar of artillery was incessant; and enormous stone balls, some of them weighing seven or eight hundred pounds, threatened at one stroke to sink the largest ships. One of these massy projectiles carried away the mainmast of the Windsor Castle, which bore the admiral's flag; another penetrated the poop of the Standard, and killed and wounded sixty men. At length the fleet cleared the straits and cast anchor off Tenedos, in such a situation as to blockade the Dardanelles, having sustained a loss of 250 men in this audacious expedition, which, though it proved unsuccessful from the errors attending its execution, was both boldly and ably conceived, and produced a very great impression in Europe by revealing the secret weakness of the Ottoman Empire, and demonstrating how easily an adequate maritime force, by thus bursting through its defences, and aiming a stroke at once at the

The English renounce the enterprise, and with difficulty re-pass the Dardanelles.

rytals of the state, could subdue all the strength of Islamism, and at once compel the submission of a power before which, in former times, all the monarchies of Europe had trembled.*

After the departure of the English fleet all amicable relations were, of course, suspended by the Turkish government; the preparations of the naval action off Tenedos, July 1. sultan to strengthen the batteries both of the Bosphorus and the Dardanelles continued with undiminished activity, and the influence of General Sebastiani with the Divan became unbounded. The ease, however, with which the British fleet had surmounted all the defences of Constantinople, and the imminent risk which he had run of being deprived, by one blow, of the powerful auxiliary aid of Turkey, gave the utmost uneasiness to Napoleon; and he despatched, without delay, orders both to Marmont in Illyria, and Eugene in Italy, to forward instantly a number of able officers, among whom were Colonel Haco of the engineers, and Colonel Foy of the artillery, to co-operate in the strengthening of the defences of Constantinople; while six hundred men were directed to be forthwith put at the disposal of the grand signior, and authority given for the transmission of five thousand, with abundant supplies in money and ammunition, if required. These re-enforcements, however, were not required; for though the English fleet was shortly after joined by the Russian squadron, under Admiral Siniavin, yet they had too recently experienced the dangers of the straits to venture a second time into them, after their defences had been so materially strengthened, as they soon were by the operations of the French engineers. Contenting themselves, therefore, with taking possession of Lemnos and Tenedos for the service of their fleet, they established a close blockade of the entrance to the straits from the Archipelago; and as a similar precaution was adopted at the mouth of the Bosphorus, the supply of the capital by water-carriage on both sides was interrupted, and before long a very great dearth of provisions was experienced. The Turkish government made the utmost efforts to man their squadron, but this was no easy matter, as the blockade by the Russians deprived them of all intercourse with the Greeks, who constituted almost exclusively the nautical portion of their population. At length, however, the scarcity became so great that serious commotions took place in the capital; and the government having at length forced an adequate number of hands on board the fleet, the capitan pacha ventured to leave the protection of the forts in the Dardanelles, and give battle to the Russian fleet. But the result was what might have been expected from a contest between an inexperienced body of men, for the most part unacquainted with naval affairs, and a squadron manned by seamen who yield to none in Europe in the resolution with which they stand to their guns.† Though the Turks fought with great gallantry, they could not withstand the superior skill and more rapid fire of their antagonists: four of their ships were early in the day drifted out of the line, and their unskilful crews were unable to bring them again into fire; the remainder, after this great loss, were sur-

rounded, and in great part destroyed. Four ships of the line were taken with the vice-admiral, three were burned, and the remainder driven for shelter under the cannon of the Dardanelles. So overbearing did the pressure of the Russians at sea now become, that it threatened the utmost dangers to the Ottoman government; when the blockade of the capital was raised, and a temporary respite obtained by the treaty of Tilsit, which, as will immediately appear, established a short and fallacious truce between these irreconcilable enemies.*

Not content with this attack on the Turkish capital, the British government, at the same time, effected a descent on the coasts of Egypt. Deeming the opportunity favourable for regaining possession of that important country, which was still warmly coveted by Napoleon, and the cession of which into the feeble hands of the Mussulmans had been long a subject of regret, the British government resolved to send an expedition to the shores of the Nile, at the same time that it threatened with bombardment the Turkish capital. The land-troops, under General Mackenzie, set sail from Messina on the 6th of March, and landed near Rosetta on the 18th. Alexandria speedily capitulated; Damieta was also occupied without resistance, and General Fraser detached with two thousand five hundred men to effect the reduction of Rosetta, which commands one of the mouths of the Nile, and the possession of which was deemed essential to the regular supply of Alexandria with provisions. This place, however, held out; and, as immediate succour was expected April 22. from the Mamelukes, Colonel Macleod was stationed with seven hundred men at El Hammeh, in order to facilitate their junction with the besieging force. This detachment was speedily surrounded by an overwhelming body of Turkish horse, and, after a gallant resistance, which repelled the attacks of their numerous squadrons till the whole ammunition was exhausted, entirely cut off; the promised Mamelukes never made their appearance; and General Stewart, severely weakened by so great a loss, with difficulty made good his retreat, fighting all the way, to Alexandria, where he arrived with a thousand fewer men than he had set out. The fortifications of that place, however, enabled the British to bid defiance to their desultory opponents; and it was soon found that the apprehensions of scarcity which had prompted this ill-fated expedition to Rosetta were entirely chimerical, as provisions speedily became more abundant than ever. But the British government, in whom an important change at this time Which is defeated. took place, became sensible of the impolicy of longer retaining this acquisition at a crisis when every nerve required to be exerted to protect their shores from the forces of Napoleon. It was with lively satisfaction, therefore, that they heard of the conclusion of a convention in autumn, by which it was stipulated that all the British prisoners in the hands of the Turks should be released, and Alexandria surrendered to their arms; in virtue of which the English troops set sail from the mouth of the Nile in the end of September, and were brought to Sept. 23. Gibraltar, where they were stationed, to co-operate in the retreat of the royal family of

Portugal from the Tagus, and ultimately took a share in the glories of the Peninsular campaigns.*

The public dissatisfaction arising from these repeated defeats was so strong that it seriously shook the stability of ministers, and produced a very general impression even among that portion of the community who had hitherto supported them, that, however well qualified to direct the state during a period of profound peace, and when ample leisure was to be had for carrying into effect their projected reforms, they were not calculated for the existing crisis, in which these pacific ameliorations were of comparatively little consequence, and what was imperatively called for was the capacity of warlike combination. But room was not afforded for this growing discontent to manifest itself in the usual way, so as to affect the fortunes of the administration, from another event at this time, which brought them into collision with the religious feelings of the sovereign, and ultimately led to their retirement from office.

Measures for introducing the Catholics into the army and navy brought in by Lord Howick.

It has been already mentioned that the general question of Catholic Emancipation was brought forward in the session of 1805, and supported with all the weight and eloquence of the Whig party. The ministerial leaders felt the necessity of making some effort, when in power, to redeem the pledges which they had so freely given when on the opposition benches. Lord Grenville, in particular, who had formed part of the administration which resigned in 1801 in consequence of the declared repugnance of the sovereign to those concessions to the Catholics which Mr. Pitt then deemed essential to the security of the country, considered himself called upon by every consideration, both of public policy and private honour, again to press them upon the Legislature. In consequence of these impressions, Lord Howick (afterward Earl Grey) moved, on the 5th of March, for leave to bring in a bill which should enable persons of every religious persuasion to serve in the army and navy, without any other condition but that of taking an oath specified in the bill, which was repugnant to no religious opinions. By the existing law, a Catholic in Great Britain could not rise to the rank even of a subaltern, in consequence of the necessity of officers of every grade taking the test oath; while in Ireland, under an act passed in the Irish Parliament in 1793, persons of that religious persuasion were permitted to rise to any situation in the army, excepting commanders-in-chief of the forces, master-general of the ordnance, or general on the staff.

Arguments in favour of it by Lord Howick. "Was it prudent," said Lord Howick, "when we were contending with so powerful an enemy, to prevent, in this manner, a large portion of the population of the country from concurring in the common defence? What can be more anomalous than that in one united empire so great a discrepancy should prevail as that on one side of St. George's Channel a Catholic may rise to the highest rank in the army, but on the other he cannot hold even an ensign's commission? It was declared in 1793, when this restriction was removed by the Irish Parliament, by his majesty's ministers in both houses, that in two months

they would grant a similar indulgence to persons of the Romish persuasion in Great Britain; but this had never yet been done, and this monstrous inconsistency continued to disgrace the laws of the United Kingdom. It may fairly be admitted that the principle of this relaxation applies equally to dissenters of every description, and that it must lead to a general admission of persons of every religious persuasion to the army and navy; but where is the danger of such liberality? The proposed measure only enables the sovereign to appoint such persons to offices of high importance. It does not compel him to do so: their appointment would still depend on the executive government, who would, of course, avoid any dangerous or improper use of their authority; and would, on the contrary, be enabled to take advantage in the common defence of the whole population of the country, without any of those restrictions which now, with a large proportion, damped the spirit or soured the affections."*

On the other hand, it was strongly contended by Mr. Perceval, "The objections Arguments to this measure, strong as they are, against it by Mr. Perceval. are not so insuperable as to the system of which it forms a part, which originates in a laxity of principle on matters of religion, which is daily increasing, and threatens in its ultimate results to involve all our institutions in destruction. If it is desirable to preserve anything in our ancient and venerable establishments, it is indispensable to make a stand at the outset against any innovations in so essential a particular. This measure is, in truth, a partial repeal of the Test Act; if passed, it must at no distant period lead to the total repeal of that act, and with it the downfall of the Protestant ascendancy in Ireland. The advocates of the Catholics argue as if their measures were calculated to support toleration, whereas, in reality and in their ultimate effects, they are calculated to destroy that great national blessing, by subverting the Protestant establishment, by whom toleration has been always both professed and practised, and reinstating the Romish, by whom it has been as uniformly repudiated. From the arguments that are advanced at the present day, one would be inclined to imagine that there was no such thing as truth or falsehood in religion; that all creeds were equally conducive to the temporal and eternal interests of mankind; and that, provided only the existing heats and dissensions on the subject could be allayed, it mattered not to what religious tenets either a government or a people inclined. True toleration is, indeed, an inestimable blessing, but it consists in permitting to every man the free exercise of his religion, not in putting into the hands of the professors of a hostile creed the means of overturning what they will never cease to regard as a pestilent heresy, and resuming from its present Protestant possessors the lost patrimony of St. Peter in these islands. In point of law, it is incorrect to say that a Catholic who has obtained a commission in Ireland is liable to any penalties; the Mutiny Act authorizes the king to require in any part of his dominions the services of every man in his army, and this is of itself a practical repeal of the disability affecting Catholics; for no man can be compelled to do what would subject him to a penalty. The argument that all offices should be thrown open to persons of all religious persua-

* Ann. Reg., 1807 203, 205. Bign., vi., 215, 219.

* Parl. Deb., ix., 1, 7.

sions is inconsistent with the British Constitution as settled in 1688, which is root and branch a Protestant establishment. If pushed to its legitimate length, it would throw open all offices, even the crown itself, to Catholic aspirants. What, then, becomes of the Act of Settlement, or the right of the house of Hanover to the throne? If this is to be the policy of their country, there is but one thing to be done, to do everything to transfer the church lands in Ireland to the Catholics, re-establish the Catholic faith, and call over the pretender to the throne of these realms. These are the great and dazzling objects which the Romish party have in view: it was to exclude them that all the restrictions were imposed by our ancestors on the persons professing that faith; it is to gain them that all these minor concessions are demanded by their adherents; their advances are only the more dangerous that they are gradual, unperceived, and veiled under the colour of philanthropy. The Catholics already enjoy everything which toleration can demand; to ask more is to demand weapons to be used against ourselves. The consequences of a storm are little to be apprehended; it is the gradual approaches which are really dangerous. If Parliament goes on allowing this accumulation, it will ultimately have that extorted from its weakness which its wisdom would be desirous to withhold.*†

The second reading of this interesting bill was adjourned from time to time without the nation being either alive to its importance or aware of the quarter in which obstacles to its progress existed. But on the 24th of March it was suddenly announced in the newspapers that ministers had been dismissed, and two nights after, Lord Grenville, in the House of Lords, and Lord Howick, in the House of Commons, gave a full statement of the circumstances which led to so unlooked-for a change. The draught of the bill, as usual in all matters of importance, had been submitted to his majesty for his consideration, and it contained a recital of the Irish Act which opened the army to Catholics for every grade, with the restriction of the master-general of the ordnance, commander-in-chief of the forces, and general of the staff; and then provided that the services of the Catholics should be received without any restriction, and the condition only of taking the oath of allegiance. On this bill being proposed, the king manifested considerable objections, but these were at length so far overcome that ministers were authorized to bring in the bill, and communications were made to the heads of the Catholics in Ireland, that they were to be admitted to every situation in the army without exception. The king, however, had laboured under some misapprehension as to the extent and tendency of the measure which was to be brought forward, and believed that it was not intended to enlarge the facilities of admission created by the act of 1793 for Ireland, but only to make that act the general law of the Empire; for no sooner was its import explained in the de-

bate which occurred on the first reading in the House of Commons, of which an abstract has already been given, than he intimated to the government that he had invincible objections to the proposed change. After some ineffectual attempts at a compromise, ministers, finding the king resolute, determined to withdraw the bill altogether, and intimated this decision to his majesty, accompanied, however, with the conditions that they should not be precluded from stating their opinions on the general policy of the measure in Parliament, and that they should be at liberty, from time to time, to bring the matter again under his majesty's consideration. The answer of the king, after expressing regret at the difference of opinion which had arisen, rejected these conditions as inconsistent with the fundamental principle of the Constitution, that the acts of government are to be held as those of the responsible ministers, and that the adoption or rejection of no measure is to be laid upon his majesty; and not less at variance with the fundamental basis of the Act of Settlement, which is rested on the exclusion of Catholics from the highest office in the realm; and it therefore required a written pledge from ministers that they would propose no farther concessions to the Catholics. This pledge, ministers, on their side, considered as inconsistent with the fundamental principle of a free constitution, which is that the king can do no wrong, and that the responsibility of all public measures must rest with his advisers, and equally repugnant to that progressive change in human affairs which might, at no distant period, render a repetition of the proposal a matter of necessity. They therefore declined, though in the most respectful terms,* to give the proposed pledge, and the consequence was that the king, in gracious terms, sent them an intimation that their services were no longer required; and on the same day the Duke of Portland, Lord Hawkesbury, and Mr. Perceval received the royal commands to form a new administration.

Parliament, after this unexpected event, was adjourned till the 8th of April, and on that day the new ministers took their seats.† The change of administration, of course, formed the first and most anxious subject of debate, and the interest of the country was excited to the highest degree by the arguments which were urged for and against that important and unwonted exercise of the royal prerogative. On the side of the former ministers, it was urged by Sir Samuel Romilly and Lord Howick: "The true question at issue is, whether or not it would have been

† Subsequent events have rendered these early debates and predictions on the effects of concession to the Catholics in the highest degree curious and interesting. Without pronouncing any decided opinion on a subject on which the light of experience is only now beginning to shine upon the world, it is the duty of the historian to point out the discussions on this subject to the attentive consideration of every candid inquirer either into political wisdom or historic truth.

constitutionally justifiable, or, rather, would not have been a high crime and misdemeanour for any minister to subscribe a written pledge that he would never in future bring a particular measure or set of measures under his majesty's consideration. If any statesman could be found base enough to give such a pledge, he would deserve impeachment, and the house would be guilty of a dereliction of its duty if it did not impeach a minister who so far forgot his duty to the country. This is a matter in which the interests of the crown were more at stake than even those of the people; for, if the precedent is once to be allowed that a minister is at liberty to surrender his own private judgment to the will of the reigning sovereign, it is impossible that the legal fiction that the king can do no wrong can any longer be maintained, and the great constitutional principle that the acts of the king are those of his responsible advisers would be at an end. Who could, in such a view, set bounds to the dangerous encroachments of unknown and irresponsible advisers upon the deliberation of government, or say how far the ostensible ministers might be thwarted and overruled by unknown and secret influence, which might totally stop the action of a constitutional government? The danger of the measure which has been adopted is only rendered the greater by the announcement now openly made, that in this, the most important step, perhaps, taken in his whole reign, his majesty had no advisers. The Constitution recognises no such doctrine: the advisers of the king throughout must be held to be those who have succeeded to his councils. There is no desire to bring the sovereign to the bar of the House of Commons: it is the new ministers who are really the objects of deliberation. The late administration was dismissed because they refused to bind themselves by a specific pledge never to renew the subject of Catholic concession: a new ministry have succeeded them; they must be held, therefore, to have given that pledge, and it is for the house to say whether such a dereliction of public duty is not utterly at variance with every principle of constitutional freedom.*

On the other hand, it was argued by Mr. Perceval and Mr. Canning: "The question, on which the imprudent zeal of the late administration has brought them into collision with the religious scruples and political wisdom of the sovereign, is not one of trivial moment, in which the monarch may be expected to abide by the judgment of his constitutional advisers. It lies, on the contrary, at the foot of the whole Constitution: it constitutes one of the foundations *non tangenda non movenda*, on which the entire fabric of our Protestant liberties has been reared. The present question regards the transference of the sword to Catholic hands; the same question on which Charles I. erected his standard at Northampton—the intrusting the direction of the military force to a party necessarily and permanently inimical to our Protestant constitution, both in church and state. It is absurd to suppose this concession would do anything towards satisfying the Catholics: it would only lead them to make fresh demands, and empower them to urge them with additional weight; and the consequence of the measure could be nothing else, in the end, but to bring Catholic bishops into the House of Lords. Was it surprising that the king paused

on the threshold of such a question, striking, as it evidently did, at the root of the tenure by which his own family held their right to the throne? In demanding a pledge that such a proposal should not be renewed, he acted without any adviser, upon the unaided dictates of his own masculine understanding, aided by the conscientious scruples of his unsophisticated heart. All the talent of the cabinet could not blind him to the evident and inevitable, though possibly remote, consequences of such a fatal precedent as was now sought to be forced upon him. It is a palpable mistake to say he drew back in the later stages of the negotiation from what he had previously agreed to: he first gave a reluctant consent to the extension of the Irish Act of 1793 to Great Britain, in the firm belief that this was all that was required of him; so the proposed measure was explained to and understood by him, and that he was not singular in that belief is proved by the fact that the Irish secretary had his doubts upon it, and that the Irish chancellor of the Exchequer, in answer to a question as to the second reading of the bill, said there was no particular reason for the Irish members being present on that occasion, as they were already acquainted with the measure. Three cabinet ministers, viz., the lord-chancellor, Lord Sidmouth, and Lord Ellenborough, refused to concur in the measure, when they understood how far it was to be carried: the chancellor was not even summoned to the council at which it was to be discussed, though he was in a peculiar manner the keeper of the king's conscience; and even the person who was commissioned to procure the king's consent to the measure did not understand the extent to which it was to be carried. Having thus been misled, whether designedly or inadvertently it mattered not, in so vital a particular by his ministers, was it surprising that the king should have required from them a pledge that they would not again harass him on the same subject? Undoubtedly no minister should give a pledge to fetter the exercise of his own judgment on future occasions; but that was not required; for, if circumstances in future might render a renewal of the measure necessary, they might at once resign. The king regarded this measure as a violation of his coronation oath, as destructive to the Protestant Church in Ireland, and in its ultimate effects likely to endanger our whole Protestant constitution. Unquestionably it was to be regretted that on any occasion the private opinion of the sovereign should be brought forward apart from that of his constitutional advisers; but for this evil those must answer who, by forcing on a rash and unnecessary measure, compelled him to rely on his own judgment alone; and it is some consolation to reflect that, in proportion as the sovereign has been made more unconstitutionally responsible in his own person, he must become better known to his people; and the soundness of judgment, promptness, and vivacity of intellect which have enabled him to bear up alone against the united weight of the cabinet, have only evinced, in the more striking manner, how worthy he is to fill the throne which his family attained by the principle he has now so manfully defended.*

Upon a division, there appeared 258 for the new ministers and 226 for the old, leaving a majority of thirty-two for the existing government.†

* Parl. Deb., ix., 327, 330, 338, 341.

* Parl. Deb., ix., 314, 321, 342, 346. † Ib., ix., 348.

This majority, though sufficient to enable ministers to conduct the public business during the remainder of that session, was not adequate to carry on the government during the arduous crisis which awaited them in the administration of foreign affairs. They resolved, therefore, to strengthen themselves by a dissolution of Parliament; and the event decisively proved that the king had not miscalculated the loyalty and religious feeling of the English people on this trying emergency. Parliament was prorogued on the 27th of April, and soon after dissolved by royal proclamation. The utmost efforts were made by both parties on this occasion to augment their respective forces: to the usual heats and excitement of a general election being superadded the extraordinary passions arising from the recent dismissal of an administration from office, and consequent elevation of another in their stead. All the usual means of exciting popular enthusiasm were resorted to without scruple on both sides: the venality and corruption of the Tories, so strikingly evinced in their recent elevation of Lord Melville, after the stain consequent on the Tenth Report of the Commissioners, were the subject of loud declamation from the Whigs; the scandalous attempt to force the king's conscience, and induce a popish tyranny on the land, yet wet with the blood of the Protestant martyrs, was as vehemently re-echoed from the other: "No Popery," "No Popery," were the war-cries of the respective parties; and amid banners, shouts, and universal excitement, the people were called on to exercise the most important rights of free citizens. To the honour of the Empire, however, this great contest was conducted without bloodshed or disorder in any quarter; and the result decisively proved that, in taking his stand upon the inviolable maintenance of the Protestant constitution, the king had a great majority of all classes throughout the Empire on his side. Almost all the counties and chief cities of Great Britain returned members in the interest of the new ministry: defeat after defeat in every quarter told the Whigs how far they had miscalculated the spirit of the age; and on the first division in the ensuing Parliament they were defeated by a great majority in both houses, that in the Peers being 97, in the Commons no less than 195.*†

On reviewing the external measures of the Whig administration, it is impossible to deny that their removal from office at that period was a fortunate event for the British Empire in its ultimate results, and proved eminently favourable to the cause of freedom throughout the world. Notwithstanding all their talent—and they had a splendid array of it in their ranks—notwithstanding all their philanthropy—and their domestic measures were generally dictated by its spirit—they could not at that period have long maintained the confidence of the English people; and their unfortunate shipwreck on the Catholic Question only accelerated a catastrophe already prepared by many concur-

rent causes. External disaster, the reproaches of our allies, the unbroken progress of our enemies, must ere long have occasioned their fall. The time was not suited, the national temper not then adapted for those domestic reforms on which the wishes of their partisans had long been set, and which in pacific times were calculated to have excited so powerful a popular feeling in their favour. The active and ruling portion of the nation had grown up to manhood during the war with France: the perils, the glories, the necessities of that struggle were universally felt; the military spirit had spread with the general arming of the people to a degree unparalleled in the British islands. Vigour in the prosecution of the contest was then indispensably necessary for general support; capacity for warlike combination the one thing needful for lasting popularity. In these particulars the Whig ministry, notwithstanding all their talents, were eminently deficient; and the part they had taken throughout the contest disqualified them from conducting it to a successful issue. They had so uniformly opposed the war with France, that they were by no means equally impressed with the nation either with its dangers or its inevitable character: they had so strenuously on every occasion deprecated the system of coalitions, that they could hardly, in consistency with their former principles, take a suitable part in that great confederacy by which alone its overgrown strength could be reduced. Their system of warfare, accordingly, was in every respect adverse to that which the nation then desired: founded upon a secession from all alliances, when the people passionately desired to share in the dangers and glories of a Continental struggle; calculated upon a defensive system for a long course of years, when the now aroused spirit of the Empire deemed it practicable, by a vigorous and concentric effort, to bring the contest at once to a successful termination.

The foreign disasters which attended their military and naval enterprises in all parts of the world profoundly affected the British people, more impatient than any in Europe of defeat in warlike adventure. The capitulation at Buenos Ayres, the flight from the Dardanelles, the defeat in Egypt, succeeding one another in rapid succession, were felt the more keenly that they occurred on the theatres of our greatest triumphs by land and sea, or blasted hopes the most extravagant of commercial advantage. And yet it is now abundantly evident that defeat on the shores of the La Plata and the banks of the Nile was more to be desired than victory; and that no calamity could have been so great as the successful issue of these expeditions. They were framed in the most inconsiderate manner, and aimed at objects which, if gained, would have paralyzed the strength of the Empire. At the moment when the armies of Napoleon were crossing the Thuringian forests, ten thousand English soldiers embarked for South America: when the scales of war hung even on the fields of Poland, five thousand men were sent to certain destruction amid the cavalry of Egypt. Their united force, if thrown into the scale at Eylau, would have driven the French emperor to a disastrous retreat across the Rhine, and induced, seven years before they occurred, the glories of Leipzig and Waterloo. What could be more impolitic than, after Russia had given such decisive proof of its extraordinary resolution and devotion to the

cause of Europe, in February, 1807, to send out a miserable little expedition to Alexandria in March following, too large for piracy, too small for conquest, and the success of which could have no other effect but that of riveting the hostility of Turkey to Russia and its allies, and thereby securing to Napoleon the inestimable advantage of a powerful diversion on the side of the Danube? What more impolitic than, when the finances of that great power were exhausted by the extraordinary expenses of the contest, to refuse to the emperor not only a subsidy, but even the British guarantee to a loan which he was desirous of contracting in the British dominions, unless accompanied by the cession of custom-house duties in Russia in security; dealing thus with the greatest potentate in Europe, at the very moment when he was perilling his very crown in our cause, as well as his own, in the same manner as a Jewish pawnbroker does with a suspicious applicant for relief? The battle of Eylau should have been the signal for the contracting the closest alliance with the Russian government; the instant advance of loans to any amount; the marching of sixty thousand English soldiers to the nearest points of embarkation. This was the crisis of the war: the imprudent confidence of Napoleon had drawn him into a situation full of peril; for the first time in his life he had been overmatched in a pitched battle, and hostile nations, besetting three hundred leagues of communication in his rear, were ready to intercept his retreat. No effort on the part of England could have been too great in order to turn to the best account so extraordinary a combination of favourable circumstances; no demonstration of confidence too unreserved to an ally capable of such sacrifices. Can there be a doubt that such a vigorous demonstration would at once have terminated the hesitations of Austria, revived the spirit of Prussia, and, by throwing a hundred thousand men on each flank of his line of communication, driven the French emperor to a ruinous retreat? Is it surprising that when, instead of such co-operation, Alexander, after the sacrifices he had made, met with nothing but refusals in his applications for assistance, and saw the land-force of England wasted on useless distant expeditions, when every bayonet and sabre was of value on the banks of the Alle, he should have conceived a distrust of the English alliance, and formed the resolution of extricating himself as soon as possible from the hazardous conflict in which he was now exclusively engaged?*

* "In the Foreign Office," said Mr. Canning, when minister of foreign affairs in 1807, "are to be found not one, but twenty letters from the Marquis of Douglas, ambassador to the Whigs at St. Petersburg, intimating, in the strongest terms, that, unless effectual aid was sent to the Emperor of Russia, he would abandon the contest." Ample proof of this exists in the correspondence relating to that subject which was laid before Parliament. On the 28th of November, 1806, the marquis wrote to Lord Howick, afterward Earl Grey, from St. Petersburg, "General Budberg lately told me that his imperial majesty had expressly directed him to urge the expedience of partial expeditions on the coast of France and Holland, for the purpose of distracting the attention of the enemy and impeding the march of the French reserves. The extraordinary expenses arising from the disasters of Prussia have rendered a loan of six millions sterling indispensable, which his imperial majesty is exceedingly desirous should be negotiated in England." On the 18th of December, 1806, he again wrote: "At court this morning his imperial majesty again urged, in the strongest terms, the expedience of a diversion on the enemy in the north of Eu-

To these general censures on the foreign policy of England at this juncture, an exception must be made in the case of the expedition to the Dardanelles. It was ably conceived and vigorously entered upon. The stroke there aimed by England was truly at the heart of her adversary: the fire of Duckworth's broadsides was concentric with that of the batteries of Eylau; if successful, they would have added forty thousand men to the Russian standards. This object was so important that it completely vindicates the expedition: the only thing to be regretted is, that the force put at the disposal of the British admiral was not such as to have rendered victory a matter of certainty. As it was, however, it was adequate to the object; and this bold and well-conceived enterprise would certainly have been crowned with deserved success, but for the extraordinary talents and energy of General Sebastiani, and the unfortunate illness of Mr. Arbuthnot, which threw the conduct of the negotiation into the hands of the British admiral, who, however gal-

The Dardanelles expedition is an exception to the general inexpedience of their foreign policy.

lope by a powerful expedition to the coasts of France or Holland." On the 2d of January, 1807: "I have again heard the strongest complaints that the whole of the enemy's forces are directed against Russia, at a moment when Great Britain does not show any disposition to diminish the danger by a diversion against France and Holland." On January the 14th: "I must not conceal from your lordships that the silence of his majesty's government, respecting a military diversion on the coast of France, has not produced a favourable impression either on the ministry or people of this country." January the 26th: "Baron Budberg has again complained of the situation in which Russia has now been placed, having been left alone against France, without either support on one side or diversion on the other." On February the 4th: "During this interview, General Budberg seized every opportunity of complaining that the Russians were left without any military assistance on the part of Great Britain." On February the 15th: "I cannot sufficiently express the extreme anxiety felt here that some expedition should be undertaken by Great Britain to divert the general concentration of the enemy's forces on the banks of the Vistula." "Notwithstanding these and numberless similar remonstrances and urgent calls for aid, the British government did nothing: they declined to guaranty the loan of six millions which was indispensable to the equipment of the Russian militia and reserves; they sent neither succours in men, money, nor arms, grounding their refusal on the necessity of husbanding their resources for a protracted contest, or a struggle on their own shores. On January the 13th Lord Howick wrote: "In looking forward to a protracted contest, for which the successes and inveterate hostility of the enemy must oblige this country to provide, his majesty feels it to be his duty to preserve, as much as possible, the resources to be derived from the affections of his people." It is difficult to find in history an example of a more ill-judged and discreditable parsimony: "husbanding," as Mr. Canning afterward said, "your muscles till you lose the use of them."

The infatuation of this conduct appears in still more striking colours, when the vast amount of disposable force then lying dormant in the British islands is taken into account. Notwithstanding the useless or pernicious expeditions to Buenos Ayres and Alexandria, England had still a disposable regular force of eighty thousand men in the British islands. Her military force, January, 1807, was as follows:

Regulars.		Militia.		Volunteers.
Cavalry at home,	20,041	In Great Britain,	53,810	Infantry, 254,544
Infantry ditto,	61,447	In Ireland,	24,180	Cavalry, 25,342
				Artillery, 9,420
Total ditto,	81,488		77,990	
Infantry abroad,	98,114			258,306
Cavalry ditto,	6,274			

Total, 180,876
Total in arms in the British Isles, of whom 81,488 were regulars, 448,784.

But of this immense force, lying within a day's sail of France and Holland, and including eighty thousand regulars, certainly seventy or eighty thousand might without difficulty have been sent to the Continent. In fact, in 1809, England had above seventy thousand regular soldiers at one time in Spain and Holland. Little more than half this force conquered Napoleon at Waterloo. Thrown into the scale in March or April, 1807, it would at once have decided the contest.—See *Parl. Papers*, July 18, 1807. *Parl. Deb.*, ix., 111. Appendix.

stant in action, was no match for his adversary in that species of contest, and wasted in fruitless efforts for an accommodation those precious moments which should have been devoted to the most vigorous warlike demonstrations.

After all, the unsuccessful issue of these expeditions, and the severe mortification which their failure occasioned to the British people, had a favourable effect on the future stages of the contest. It is by experience only that truth is brought home to the masses of mankind. Mr. Pitt's external policy had been distracted by the number and eccentric character of his maritime expeditions; but they were important in some degree, as wresting their colonial possessions from the enemy, and overshadowed by the grandeur and extent of his Continental confederacies. Now, however, the same system was pursued when hardly any colonies remained to be conquered, and Continental combination was abandoned at the very time when sound policy counselled the

vigorous and simultaneous direction of all the national and European resources to the heart of the enemy's power. The absurdity and impolicy of this system, glaring as they were, might have long failed in bringing it into general discredit; but this was at once effected by the disasters and disgrace with which its last exertions were attended. The opinion, in consequence, became universal, that it was impolitic as well as unworthy of its resources for so great a nation to waste its strength in subordinate and detached operations: England, it was felt, must be brought to wrestle hand to hand with France before the struggle could be brought to a successful issue; the conquerors of Alexandria and Maida had no reason to fear a more extended conflict with land-forces; greater and more glorious fields of fame were passionately desired, and that general longing after military glory was felt which prepared the nation to support the burdens of the Peninsular war, and share in the glories of Wellington's campaigns.

CHAPTER XLVI.

CAMPAIGN OF FRIEDLAND AND TILSIT.

ARGUMENT.

Negotiations and Treaties between the Allies for the vigorous Prosecution of the War.—Treaties between Prussia and Russia at Bartenstein, to which England accedes, but too late to prevent the Irritations of Russia.—Unwise Refusal of military Succour by England.—Violent Irritation which it occasioned in the Breast of Alexander.—Negotiations of Napoleon during the same Period.—Auxiliary Force obtained under Romana from Spain.—Operations in Pomerania, and Views of Napoleon regarding Sweden.—Armistice between the Swedes and French.—Sweden again reverts to the Alliance.—Formation of an Army of Reserve on the Elbe.—Negotiation with Turkey and Persia by Napoleon.—Jealousy excited in the Divan by the Summoning of Parga.—Measures taken to Organize the military Strength of Poland.—Winter-quarters of the French Army.—Cantonments of the Russians.—Combat of Guttstadt.—Great Views of Napoleon at this Period for the Interior of his Empire.—He fixes on a Design for the Madeleine at Paris.—Finances of France during this Period.—Receipts and Expenditure of the Year.—Statutes of the Grand Sanhedrim of the Jews at Paris.—Progress of the Sieges in Silesia during the Interval of Hostilities.—Fall of Schweidnitz; and of Neiss, and Glatz.—Siege of Dantzic.—Description of that Fortress.—First Operation of the besieging Force.—Capture of the Isle of Nehrung.—Progress of the Siege.—Unsuccessful Attempt of the Allies to raise it.—Growing Difficulties of the Besieged, and Fall of the Place.—Re-enforcements which arrived to the Russian main Army.—Its Strength and Position.—Strength and Distribution of the French Army.—Defensive Measures previously adopted by the Russians.—Design on Ney's Corps, and Plan of Operations.—Feigned Assault on the Bridge of the Passage, and real Attack on Marshal Ney.—Napoleon concentrates his Army, and the Russians fall back; and, pursued by the French, retire to Heilsberg.—Different Plans of Operations which present themselves to Napoleon.—His Advance upon Heilsberg.—Description of the Position and entrenched Camp of the Russians.—Battle of Heilsberg, which is unsuccessful to the French.—Fresh Attack by Lannes, which is also repulsed.—Violent Explosion between Lannes, Murat, and Napoleon in Consequence.—Frightful Appearance of the Slain after the Battle.—Napoleon turns the Russian Flank, and compels them to evacuate Heilsberg.—Movements of the two Armies before the Battle of Friedland.—Description of the Field of Battle.—Benningesen resolves to attack Lannes' Corps.—Its Situation.—He crosses the Alle and attacks the French Marshal.—No decisive Success is gained on either Side, before the Arrival of the other French Corps.—Preparatory Disposition of Forces by Napoleon.—Battle of Friedland.—Splendid Attack by Ney's Corps.—Gallant Charge of the Russian Guard nearly regains the Day.—Progress of the Action on the Russian Centre and Right.—Measures of Benningesen to secure a Retreat.—Immense Re-

sults of the Battle.—The Russians retire without Molestation to Allenberg and Wehlaw.—Capture of Königsberg.—Movements of Napoleon, and Retreat of the Russians to the Niemen.—The Emperor Alexander proposes an Armistice.—Reasons which made Napoleon rejoice at that Step.—Considerations which rendered the Russians also desirous of an Accommodation.—Conclusion of an Armistice.—Napoleon's Proclamation thereon to his Troops.—Interview on the Raft at Tilsit between the two Emperors.—Commencement of the Negotiations at that Town.—Napoleon's Interviews with the Queen of Prussia.—Napoleon's Character of the Queen of Prussia.—Convivialities between the Russian and French Officers.—Napoleon's Admiration of the Russian Imperial Guard.—Treaty of Tilsit.—Its leading Provisions.—Crenation of the Grand-duchy of Warsaw and Kingdom of Westphalia.—Treaty with Prussia.—Immense Losses of that Power by this Treaty.—Secret Treaty for the Partition of Turkey, and regarding England and all neutral Fleets; and the Dethronement of the Princes of the Spanish Peninsula.—Decisive Evidence of these Projects of Spoliation which exists both from the Testimony of the French and Russian Emperors.—Measures of Napoleon to follow up his anticipated Turkish Acquisitions.—Convention regarding the Payment of the French Contribution in Prussia.—Noble Proclamation of the King of Prussia to his lost Subjects.—Enormous Losses sustained by the French during these Campaigns.—Memorable Retribution for the Partition of Poland, which was now brought on the partitioning Powers.—Terrible Punishment that was approaching to France.—Evil Consequences of the Treaty of Tilsit in the End to Napoleon.—His disgraceful Forfeiture towards the Turks.—No Defence can be made for it, in consequence of the Revolution at Constantinople.—Mutual Projects of the two Emperors for the Spoliation of the other European Powers.—Napoleon's leading Object in the Treaty was the humbling of Great Britain, but England could not complain of its Conditions.—It was ultimately Fortunate for Europe that the War was prolonged.

The change of ministry in England was attended with an immediate alteration in the policy pursued by that power with respect to Continental affairs. The men who now succeeded to the direction of its foreign relations had been educated in the school of Mr. Pitt, and had early imbibed the ardent feelings of hostility with which he was animated towards the French Revolution, and the insatiable spirit of foreign aggrandizement to which the passions springing from its convulsions had led. Mr. Canning and Lord Castlereagh were strongly

Negotiations and treaties between the allies for the vigorous prosecution of the war.

impressed with the disastrous effects which had resulted from the economical system of their predecessors, and the ill-judged economy which had led them to starve the war at the decisive moment, and hold back at a time when, by a vigorous application of their resources, it might at once have been brought to a triumphant conclusion. No sooner, therefore, were they in possession of the reins of power than they hastened to supply the defect, and take measures for bringing the might of England to bear on the contest in a manner worthy of its present greatness and ancient renown. An immediate advance of £100,000 was made to the King of Prussia; arms and military stores were furnished for the use of his troops to the amount of £200,000; and negotiations set on foot for concluding with the cabinets of St. Petersburg, Berlin, and Stockholm, conventions for concerted operations and a vigorous prosecution of the war. In April, the cabinet of Vienna interposed its good offices to effect an adjustment of the differences of the allied powers; but Mr. Canning, while he accepted the offer of a mediation, did so under the express condition of its being communicated to the other belligerent powers, and their accession to its condition. But, as they had already concluded engagements for the active prosecution of the contest, the proposed negotiation never took place, and England, under the guidance of its new administration, instead of entering into terms with France, reverted, in the most decided manner, to Mr. Pitt's system of uncompromising hostility to its ambition. A treaty was signed at Bartenstein, in East Prussia, in the end of the same month, between Russia and Prussia, for the future prosecution of the war. By this convention it was stipulated that neither of the contracting powers should make peace without the concurrence of the other; that the Confederation of the Rhine, which had proved so fatal to the liberties of Germany, should be dissolved, and a new confederacy, for the protection of its interests, formed, under the auspices of its natural protectors, Austria and Prussia; that the latter power should recover the dominions which it had held in September, 1805, and that Austria should be requested to accede to it, in order to recover its possessions in Tyrol and the Venetian provinces, and extend its frontier to the Mincio. Finally, Great Britain was formally invited to accede to this convention by furnishing succours in arms, ammunition, and money to the belligerent powers, and the debarcation of a strong auxiliary force at the mouth of the Elbe, to co-operate with the Swedes in the rear of the enemy, while Austria should menace his communications, and the combined Russian and Prussian armies should attack him in front.*

April 2, 1807.

King of Prussia; arms and military stores were furnished for the use of his troops to the amount of £200,000; and negotiations set on foot for concluding with the cabinets of St. Petersburg, Berlin, and Stockholm, conventions for concerted operations and a vigorous prosecution of the war. In April, the cabinet of Vienna interposed its good offices to effect an adjustment of the differences of the allied powers; but Mr. Canning, while he accepted the offer of a mediation, did so under the express condition of its being communicated to the other belligerent powers, and their accession to its condition. April 25.

signed at Bartenstein, in East Prussia, in the end of the same month, between Russia and Prussia, for the future prosecution of the war. By this convention it was stipulated that neither of the contracting powers should make peace without the concurrence of the other; that the Confederation of the Rhine, which had proved so fatal to the liberties of Germany, should be dissolved, and a new confederacy, for the protection of its interests, formed, under the auspices of its natural protectors, Austria and Prussia; that the latter power should recover the dominions which it had held in September, 1805, and that Austria should be requested to accede to it, in order to recover its possessions in Tyrol and the Venetian provinces, and extend its frontier to the Mincio. Finally, Great Britain was formally invited to accede to this convention by furnishing succours in arms, ammunition, and money to the belligerent powers, and the debarcation of a strong auxiliary force at the mouth of the Elbe, to co-operate with the Swedes in the rear of the enemy, while Austria should menace his communications, and the combined Russian and Prussian armies should attack him in front.*

To this convention Sweden had already given its adherence by the signature of a treaty, six days before, for the employment of an auxiliary force of twelve thousand men in Pomerania, and England hastened to unite itself to the same confederacy. By a convention signed at London on the 17th of June, England gave its accession to the treaty of Bartenstein, and engaged to support the Swedish force in Pomerania by a corps of twenty thousand British soldiers to act against the rear and left flank of the French army, while,

June 17. Treaties between Prussia and Russia at Bartenstein, to which England accedes.

* Lucches, ii., 297, 300. Parl. Deb., x., 103, 104. Hard., ix., 401, 402. Bign., vi., 234.

by a relative agreement on the 23d, the Swedish auxiliary force in British pay was to be raised to eighteen thousand men, and the provisions of the fundamental treaty of alliance in April, 1805, were again declared in force against the common enemy. Shortly after a treaty was signed at London, between Great Britain and Prussia, by which a subsidy of a million sterling was promised to the latter power for the campaign of 1807, and a secret article stipulated for succours yet more considerable, if necessary, to carry into full effect the purposes of the convention of Bartenstein. Thus, by the return of England to the principles of Mr. Pitt's foreign policy, were the provisions of the great confederacy of 1805 again revived in favour of the Northern powers; and it is not the least honourable part, as Mr. Canning justly observed, of these transactions to Great Britain, that the treaty with Prussia was signed when that power was almost entirely bereft of its possessions, and agreed to by Frederic William in the only town that remained to him of his once extensive dominions.*

But it was too late: the succours of England came too late to counterbalance the disasters which had been incurred, the change of system too tardy to assuage the irritation which had been produced. By withholding these at an earlier period, the former ministry had not only seriously weakened the strength of the Russian forces by preventing the arming of the numerous militia corps which were crowding to the imperial standards, but left the seeds of irreconcilable dissatisfaction in the breast of the Czar, who, not aware of the total change of policy which the accession of the Whig ministry had produced in the cabinet of St. James, and the complete revolution in that policy which had resulted from their dismissal, was actuated by the strongest resentment against the British government, and loudly complained that he was deserted by the ancient ally of Russia at the very moment when, for its interests even more than her own, he was risking his empire in a mortal struggle with the French emperor.† Such was the state of destitution to which the ill-judged parsimony of the

* Schoell, ix., 141. Lucches, ii., 302, 303. Bign., vi., 234. Dum., xviii., 216, 217. Hard., ix., 402, 405. Parl. Deb., ix., 974, and x., 102, 103.

† It is the most signal proof of the obstinacy with which the British government, under the direction of Lord Howick, adhered to their ill-timed military system of withdrawing altogether from Continental affairs, that they clung to it even after the account of the battle of Eylau had arrived in London, and it was universally seen over Europe that a crisis in Napoleon's fate was at hand. In the end of February, 1807, earnest applications were made by the cabinets of St. Petersburg and Berlin for the aid of a British auxiliary force to menace the coasts of France and Holland, and land on the coast of Pomerania. The advantage was pointed out of "despatching, without a moment's delay, on board the swiftest ships of Great Britain, a strong British auxiliary land-force to co-operate with the army of Gustavus Adolphus, and thereby compel the French to retreat. They were engaged in the siege of Stralsund, and in laying waste that province, and if the British force did not arrive in sufficient time to dislodge them, they might steer for some harbour in the Baltic, from whence their junction with the allied armies could certainly be effected." Lord Howick replied on the 10th of March: "The approach of spring is doubtless the most favourable period for military operations; but in the present juncture the allies must not look for any considerable aid from the land-force of Great Britain." — See LUCCHES, ii., 295, 296, and Despatches between England and Russia in 1806 and 1807, London, 1808, p. 130. ‡ Hard., ix., 417.

§ These angry feelings are very clearly evinced in General Budberg's answer to Lord Leveson Gower's (the British ambassador at St. Petersburg) remonstrance on the con-

late administration had reduced the British arsenals, and such the effect of their total dismissal of transports in the royal service, that it was found impossible by their successors to fit out an expedition for the shores of the Baltic for several months after their accession to office; and, in consequence, the formidable armament under Lord Cathcart, which afterward achieved the conquest of Copenhagen, and might have appeared with decisive effect on the shores of the Elbe or the Vistula at the opening of the campaign, was not able to leave the shores of Britain till the end of July, a fortnight after the treaty of Tilsit had been signed, and the subjugation of the Continent, to all appearance, irrevocably effected.*†

While the allies were thus drawing closer the

clusion at Tilsit of a separate peace with Russia with France. "The firmness and perseverance with which his majesty, during eight months, maintained and defended a cause common to all sovereigns, are the most certain pledges of the intentions which animated him, as well as of the loyalty and purity of his principles. Never would his imperial majesty have thought of deviating from that system which he has hitherto pursued, if he had been supplied by real assistance on the part of his allies. But having, from the separation of Austria and England, found himself reduced to his own resources; having to combat with his own means the immense military forces which France had at her disposal, he was authorized in believing that, in continuing to sacrifice himself for others, he might ultimately come to compromise the fate of his own empire. The conduct of the British government in later times has been of a kind completely to justify the determination which his majesty has now taken. The diversion on the Continent which England so long promised, has not to this day taken place; and even if, as the latest advices from London show, the British government has at length resolved on sending 10,000 men to Pomerania, that succour is noways proportioned to the hopes we were authorized to entertain, or the importance of the object to which these troops were destined. Pecuniary succours might, in some degree, have compensated the want of English troops; but not only did the British government decline facilitating the loan the imperial court had intended to negotiate in London, but when it did, at length, resolve upon making some advances, it appeared that the sum destined for this purpose, so far from meeting the exigencies of the allies, would not even have covered the indispensable expenses of Prussia. In fine, the use which, instead of co-operating in the common cause, the British government, during this period, has made of its forces in South America and in Egypt, the latter of which was not even communicated to the imperial cabinet, and was entirely at variance with its interests, at a time when, by giving them a different destination, the necessity of maintaining a Russian army on the Danube might have been prevented, and the disposable force on the Vistula proportionally increased, sufficiently demonstrates that the Emperor of Russia was virtually released from his engagements, and had no course left but to attend to the security of his own dominions." It is impossible to dispute the justice of these observations.—*Note, General BERNARD to Lord LEVISON GOWER, Tilsit, 30th of June, 1807. Parl. Deb., x., 111, 112.*
* *Parl. Deb., ix., 1035, 1036. Hard., ix., 425. Ann. Reg., 1807, 22, 23.*

† "When the present ministers came into office," said Mr. Canning, then foreign minister, on July 31st, 1807, "they found the transport department totally dismantled. This originated in the economical system of Lord H. Petty; but it was a false parsimony, evidently calculated, at no distant period, to render necessary a profuse expenditure. The mandate of dismissal came from the treasury, and was applicable to all transports but those necessary to maintain the communication with Ireland, Jersey, and Guernsey. The saving produced by this order did not amount to more than £4000 a month, and it dispersed 60,000 tons of shipping which was left to the late ministry by their predecessors. Ministers thus, in the beginning of April last, had not a transport at their disposal; and, from the active state of trade at the same time, it required several months before they could be collected. If they had existed, a military force would in that very month have been sent out, and twenty thousand British troops would have turned the scale at Friedland. This ill-judged economy was the more criminal, that, by having a fleet of transports constantly at command, and threatening various points, 20,000 men could easily paralyze three times that force on the part of the enemy. The Whigs had apparently parted with this transport force for no other purpose but that of registering their aban-

bonds which united their confederacy, and England, rousing from its unworthy slumber, was preparing to resume its place at the head of the alliance, Napoleon on his side was not idle, and, from his camp at Finkensteen, carried on an active negotiation with all the powers in Europe. In his addresses to the French Senate, calling out the additional conscription of 80,000 men, which has been already mentioned, he publicly held out the olive branch: the surest proof of the magnitude of the disaster sustained at Eylau, and the critical situation in which he felt himself placed, with Austria hanging in dubious strength in his rear on one side, and Great Britain preparing to organize a formidable force on the other. "Our policy is fixed," said he: "we have offered to England peace before the fourth coalition; we repeat the offer; we are ready to conclude a treaty with Russia on the terms which her ambassador subscribed at Paris; we are prepared to restore its eight millions of inhabitants and capital conquered by our arms to Prussia." There was nothing said now about making the Prussian nobility so poor that they should have to beg their bread; nor of the queen, like another Helen, having lighted the fires of Troy. But, amid these tardy and extorted expressions of moderation, the emperor had nothing less at his heart than to come to an accommodation; and his indefatigable activity was incessantly engaged in strengthening his hands by fresh alliances, and collecting from all quarters additional troops to overwhelm his enemies. The imprudent and premature proclamation has been already mentioned, by which the Prince of Peace* announced, on the eve of the battle of Jena, his preparations to combat an enemy which no one could doubt was France. Napoleon dissembled for a while his resentment, but resolved to make this hostile demonstration the ground for demanding fresh supplies from Spain; and, accordingly, great numbers of the Prussian prisoners were sent into the Peninsula to be fed and clothed at the expense of the court of Madrid, while an auxiliary force was peremptorily demanded from that power to co-operate in the contest in the north of Europe. Trembling for its existence, the Spanish government had no alternative but submission; and, accordingly, sixteen thousand of the best troops of the monarchy, under a leader destined to future celebrity, the MARQUIS DE ROMANA, crossed the Pyrenees early in March, and arrived on the banks of the Elbe in the middle of May. Thus was the double object gained of obtaining an important auxiliary force for the grand army,† and of securing, as hostages for the fidelity of the court of Madrid, the flower of its troops in a remote situation, entirely at the mercy of his forces.

Sweden was another power which Napoleon was not without hopes, notwithstanding the hostile disposition of its sovereign, of detaching, through dread of Russia, from the coalition. Immediately after the battle of Eylau he began to take measures to excite

Negotiations of Napoleon during the same period. Auxiliary forces obtained under Romana from Spain.

Operations in Pomerania, and views of Napoleon regarding Sweden.

donment of the Continent." The facts here alleged Mr. Windham, on the part of the late government, did not deny, alleging only "the absurdity of sending British forces to the Continent, which required no reply;" a curious argument from so able a man, when it is recollected that the nation was on the verge of Wellington's career.—*See Parl. Deb., ix., 1035-1038.*

* *Ante, ii., 438.*

† *Bign., vi., 239, 242.*

the court of Stockholm against the alliance.* "Should Swedish blood," said he, in the bulletin on the 23d of April, "flow for the defence of the Ottoman Empire, or its ruin; should it be shed to establish the freedom of the seas, or to subvert it? What has Sweden to fear from France? Nothing. What from Russia? Everything. A peace, or even a truce with Sweden, would accomplish the dearest wish of his majesty's heart, who has always beheld with pain the hostilities in which he was engaged with a nation generous and brave, linked alike by its historic recollections and geographical position to the alliance with France."† In pursuance of these instructions, Mortier inclined with the bulk of his forces towards Colberg, to prosecute the siege of that town, leaving only General Grandjean with a weak division before Stralsund. Informed of that circumstance, General Essen, the governor of the fortress, conceived hopes of capturing or destroying the presumptuous commander who maintained a sort of blockade with a force so much inferior to that which was assembled within its walls. Early in April, accordingly, he issued from the fortress, and attacked the French with such superior numbers that they were compelled to retire, first to Anklam, where they sustained a severe defeat, and ultimately to Stettin, with the loss of above two thousand men. No sooner did he hear of this check, than Mortier assembled the bulk of his troops, about fourteen thousand strong, under the cannon of that fortress, and prepared for a serious attack upon the enemy. The Swedes, though nearly equal in number, were not prepared for a conflict with forces so formidable, and retired to Stralsund with the loss of above a thousand prisoners, and three hundred killed and wounded; among the latter of whom was General Arnfeld, the most uncompromising enemy of France in their councils.†

After this repulse Mortier renewed his secret proposals of a separate accommodation to the Swedish generals, and on this occasion he found them more inclined to enter into his views. The Swedish government at this period was actuated by a strong feeling of irritation towards Great Britain for the long delay which had occurred in the remittance of the stipulated subsidies; and its generals at Stralsund were ignorant of the steps which were in progress, since the change of ministry in England, to remedy the defect. Deeming themselves, therefore, deserted by their natural allies, and left alone to sustain a contest in which they had only a subordinate interest, they lent a willing ear to Mortier's proposals, and concluded an armistice, by which it was stipulated that hostilities should cease between the two armies; that the islands of Usedom and Wollin should be occupied by the

French troops; the lines of the Peene and the Trebel separate the two armies; no succours, direct or indirect, should be forwarded through the Swedish lines either to Dantzic or Colberg; and no debarkation of troops hostile to France take place at Stralsund.* The armistice was not to be broken without ten days' previous notice, which period was, by a supplementary convention on the 29th of April, extended to a month. No sooner was this last agreement signed than Mortier in person resumed the blockade of Colberg, while a large part of his forces was despatched to aid Lefebvre in the operations against Dantzic, and took an important part in the siege of that fortress, and the brief but decisive campaign which immediately ensued. The conditions of the new treaty between England and Sweden, signed at London on the 17th of June, came too late to remedy these serious evils; and thus, while the previous ill-timed defection of the cabinet of London from the great confederacy for the deliverance of Europe had sown the seeds of irreconcilable enmity in the breast of the Emperor Alexander, it entirely paralyzed the valuable force in the rear of Napoleon, which, if thrown into the scale at the decisive moment, and with the support of a powerful British auxiliary force, could not have failed to have had the most important effects, both upon the movements of Austria and the general issue of the campaign.†

In justice to the Swedish monarch, however, who, though eccentric and rash, was Sweden again animated with the highest and most reverent to the romantic principles of honour, it alliance. must be noticed that, no sooner was he informed of the change of policy on the part of the cabinet of London, consequent on the accession of the new administration, and even before the conclusion of the treaty of the 17th of June, by which efficacious succours were at length promised on the part of Great Britain, than he had manifested the firm resolution to abide by the confederacy, and even pointed to the restoration of the Bourbons as the condition on which alone peace appeared practicable to Europe, or a curb could be imposed on the ambition of France. Early in June he wrote to the King of Prussia with these views, and soon after refused to ratify the convention of the 29th of April for the extension of the period allowed for the denouncing the armistice with France, in a conversation with Marshal Brune, successor to Mortier, so

* In fartherance of this design, early in March he explained to Marshal Mortier, who was intrusted with the prosecution of the war in Pomerania, that the real object of hostilities in that quarter was not to take Stralsund, nor inflict any serious injury on Sweden, but to observe Hamburg and Berlin, and defend the mouths of the Oder. "I regret much what has already happened," said he, "and, most of all, that the fine suburbs of Stralsund have been burned. It is not our interest to inflict injury on Sweden, but to protect that power from it. Hasten to propose an armistice to the governor of Stralsund, or even a suspension of arms, in order to lighten the sufferings of a war which I regard as criminal, because it is contrary to the real interests of that monarchy."—72d Bulletin, *Camp. en Saxe et Pologne*, iv., 243-246.

† Dum., xviii., 108, 117. Bign., vi., 244, 245.

* In the letter of Napoleon, which Mortier despatched to Essen on that occasion, he said, "I have nothing more at heart than to re-establish peace with Sweden. Political passion may have divided us, but state interest, which ought to rule the determinations of sovereigns, should reunite our policy. Sweden cannot be ignorant that, in the present contest, she is as much interested in the success of our arms as France itself. She will speedily feel the consequence of Russian aggrandizement. Is it for the destruction of the Empire of Constantinople that the Swedes are fighting? Sweden is not less interested than France in the diminution of the enormous maritime power of England. Accustomed by the traditions of our fathers to regard each other as friends, our bonds are drawn closer together by the partition of Poland and the dangers of the Ottoman Empire; our political interests are the same: why, then, are we at variance?" And, in the event of the Swedish general acceding to these propositions, the instructions of Mortier were, "instantly to send to Dantzic and Thorn all the regiments of foot and horse which can be spared; to resume without delay the siege of Colberg, and at the same time hold himself in readiness to start with the whole blockading force, at a moment's warning, either for the Vistula or the Elbe."—JOMINI, ii., 389, 391.

† Dum., xviii., 118, 121. Bign., vi., 245, 246. Jom., ii., 388, 392.

curious and characteristic as to deserve a place in general history.*

Not content with thus drawing to the northern contest the force of the monarchy of Charles V., and neutralizing the whole forces of Sweden with the important *point d'appui* for British co-operation in his rear, Napoleon, at the same time, directed the formation of a new and respectable army on the banks of the Elbe. The change of ministry in England had led him to expect a much more vigorous prosecution of the war by that power: the descent of a large body of English troops in the north of Germany was known to be in contemplation, and with his advanced and critical position in Poland, the preservation of his long line of communication with France was an object of vital importance. To counteract any such attempt as might threaten it, two French divisions, under Boudet and Molitor, were summoned from Italy, and, united with Romana's corps of Spaniards and the Dutch troops with which Louis Bonaparte had effected the reduction of the fortresses of Hanover, formed an army of observation on the Elbe, which it was hoped would be sufficient at once to avert any danger in that quarter, hold in respect Hamburg and Berlin, and keep up the important communications of the Grand Army with the banks of the Rhine.†

With a view still farther to strengthen himself in the formidable contest which he foresaw was approaching, Napoleon, from his headquarters at Finckenstein, opened negotiations both with Turkey and Persia, in the hope of rousing those irreconcilable enemies of the Moscovite Empire to a powerful diversion in his favour on the Danube and the Caucasus. Early in March a magnificent embassy was received by the emperor at Warsaw, both from the Sublime Porte and the King of Persia. A treaty, offensive and defensive, was speedily concluded between the courts of Paris and Teheran, by which mutual aid and succour was stipulated by the two contracting parties; and, the better to consolidate their relations, and turn to useful account the military resources of the Persian monarchy, it was agreed that a Persian legation should reside at Paris, and General Gardanne, accompanied by a skilful body of engineers, set out for the distant capital of Persia. Napoleon received the Turkish ambassador, who repre-

sented a power whose forces might more immediately affect the issue of the combat, with the utmost distinction, and lavished on him the most flattering expressions of regard. In a public audience given to that functionary at Warsaw on the 28th of May, he said, "That his right hand was not more inseparable from his left than the Sultan Selim should ever be to him." Memorable words! and highly characteristic of the emperor, when his total desertion of that potentate in two months afterward, by the treaty of Tilsit, is taken into consideration. In pursuance, however, of this design, at that time at least sincerely conceived, of engaging Turkey and Persia in active hostilities with Russia, he wrote to the minister of marine: "The Emperor of Persia has requested four thousand men, ten thousand muskets, and fifty pieces of cannon; when can they be embarked, and from whence? They would form a rallying-point, give consistency to eighty thousand horse, and would force the Russians to a considerable diversion. Send me without delay a memoir on the best means of fitting out an expedition to Persia." At the same time he conceived the idea of maritime operations in the Black Sea, in conjunction with the Ottoman fleet; and, in a long letter to the minister of marine, enumerated all the naval forces at his disposal and on the stocks, in order to impress him with the facility with which a powerful squadron might be sent to the Bosphorus, in order to co-operate in an attack upon Sebastopol.*

Still more extensive operations were in contemplation with land-forces: orders were sent to Marmont to prepare for the transmission of twenty-five thousand men across the northern provinces of Turkey to the Danube, and a formal application was made at Constantinople for liberty to march them through Bosnia, Macedonia, and Bulgaria. In these great designs, especially the missions of General Gardanne to Persia, more important objects than even a diversion to the war in Poland, vital as it was to his interests, were in the contemplation of the emperor; the appearance of the ambassadors of Turkey and Persia at his headquarters when five hundred leagues from Paris, on the road to Asia, had strongly excited his imagination; his early visions of Oriental conquest were revived, and the project was already far advanced to maturity of striking, through Persia, a mortal stroke at England in her Indian possessions.

These extensive projects, however, which the rapid succession of events on the Vistula prevented from being carried into execution, were wellnigh interrupted by a precipitate and ill-timed step on the part of the government of the Ionian Islands, Cæsar Berthier. The consent of the Divan had just been given to the march of the French troops across the northern provinces of the Empire, when intelligence was received that the towns of Parga, Previso, and Butrin, on the coast of the Adriatic, though then in the possession of the Turks, had been summoned in the most peremptory manner by that officer, as dependances of the Venitian States, out of which the modern Republic of the Seven Islands had been formed, with the threat to employ force if they were not immediately surrendered. This intelligence May 29.

* "Nothing," said he, in his letter of the 2d of June to the King of Prussia, "would gratify me more than to be able to contribute with you to the establishment of general order and the independence of Europe; but to attain that end, I think a public declaration should be made in favour of the legitimate cause of the Bourbons, by openly espousing their interests, which is plainly that of all established governments. My opinion on this point is fixed and unalterable, as well as on the events which are passing before our eyes." And two days afterward the following conversation passed between the King of Sweden and Marshal Brune: "Do you forget, marshal, that you have a lawful sovereign, though he is now in misfortune?" "I know that he exists," replied the marshal. "He is exiled," rejoined the king: "he is unfortunate; his rights are sacred; he desires only to see Frenchmen around his standard." "Where is that standard?" "You will find it wherever mine is raised." "Your majesty, then, regards the Pretender as your brother?" "The French should know their duties without waiting till I set them an example." "Will your majesty, then, consent to the notification of ten days before breaking the armistice?" "Yes; but if a month should be secretly agreed on—?" "You know me little, if you deem me capable of such a deception."—See HARDY, ix., 411, 412, and DUM., xix., 139.

† Jom., ii., 393, 394.

excited the utmost alarm at Constantinople; the Turks recollected the perfidious attack which, under the mask of friendship, the French had made on their valuable possessions in Egypt, and anticipated a similar seizure of their European dominions from the force for whom entrance was sought on the footing of forwarding succours to the Danube. Napoleon, though this step was taken in pursuance of orders emanating from himself, expressed the utmost dissatisfaction at their literal execution at so untimely a crisis: the governor was recalled, and the utmost protestations of friendship for the sultan made. But the evil was done, and was irreparable: Turkish honesty had conceived serious suspicions of French fidelity; the passage of the troops was refused, and the foundations laid of that well-founded distrust which, confirmed by Napoleon's desertion of their interests in the treaty of Tilsit, subsequently led to the conclusion of a separate peace by the Osmanlis with Russia in 1812, and the horrors of the Beresino to the Grand Army.*

A nearer and more efficacious ally was presented to Napoleon in the Polish provinces. The continuance of the war in their neighbourhood, the sight of the Russian prisoners, the certainty of the advance of the French troops, and the exaggerated reports everywhere diffused of their successes, had, notwithstanding the measured reserve of his language, excited the utmost enthusiasm for the French emperor in the gallant inhabitants of that ill-fated monarchy. Of this disposition, so far as it could be done without embroiling him with Austria, he resolved to take advantage. His policy towards that country uniformly was to derive the utmost aid from the military spirit of its subjects which could be obtained, without openly proclaiming its independence, and thereby irrevocably embroiling him with the partitioning powers. In addition to the Polish forces organized under former decrees, and which now amounted to above twenty thousand men, he took into his pay a regiment of light-horse raised by Prince John Sulkowski, subsequently decreed the formation of a Polish-Italian legion, and the incorporation of one of their regiments of hussars with his guards, and authorized the provisional government at Warsaw to dispose of royal domains in Polish Prussia to the extent of eighteen millions of francs, and Prussian stock to the extent of six millions. His cautious policy, however, shortly after appeared in a decree, by which the commissary-general at Warsaw was enjoined to limit his requisitions to the territory described by the original decree establishing his powers, which limited them to Prussian Poland. By these means, though he avoided giving any direct encouragement to rebellion in the Russian and Austrian shares of the partitioned territory, he succeeded in generally diffusing an enthusiastic spirit, which, before the campaign opened, had brought above thirty thousand gallant recruits to his standards. This disposition was strongly increased by two decrees which appeared early in June, on the eve of the resumption of hostilities, by the first of which Prince Poniatowski was reinstated in a starosty of which he had been dispossessed by the Prussian cabinet, while by the second the provisional gov-

ernment at Warsaw was directed to set apart 20,000,000 of francs (£800,000) as a fund to recompense those who should distinguish themselves in the approaching campaign.*

The headquarters of Napoleon in the first instance had been fixed at Osterode, on the margin of one of the lakes which form the feeders of the Drewentz; but, on the representations of the learned and humane Larrey, that that situation was low and unhealthy for the troops, he moved to Finken-stein, where all the important negotiations which ensued in that cessation of active hostilities were conducted. The guard were disposed around the emperor's residence, and not only that select corps, but the whole army, were lodged in a more comfortable manner than could have been anticipated in that severe climate. After a sharp conflict in the end of February, the important fortified post of Braunsberg, at the entrance of the River Passarge into the Frisch-Haff Sea, was wrested from the Prussians by Bernadotte, and the *tête du pont* there established secured all the left of the army from the incursions of the enemy. On the left bank of that river no less than four corps of the army were cantoned, while all the passes over it were occupied in such strength as to render any attempt at a surprise impossible. Secure behind this protecting screen, the French army constructed comfortable huts for their winter-quarters, and all the admirable arrangements of the camp at Boulogne were again put in force amid the severity of a Polish winter. The streets in which they were disposed resembled, in regularity and cleanliness, those of a metropolis. Constant exercises, rural labours, warlike games, and reviews, both confirmed the health and diverted the minds of the soldiers, while the inexhaustible agricultural riches of Old Prussia kept even the enormous multitude, which was concentrated over a space of twenty leagues, amply supplied with provisions. Immense convoys constantly defiling on all the roads from the Rhine, Silesia, and the Elbe, provided all that was necessary for warlike operations; while the numerous conscripts, both from France and the allied states, and the great numbers of wounded and sick who, on the return of spring, were discharged from the hospitals, both swelled the ranks and reassured the minds of the soldiers. The magnitude of the requisitions by which these ample supplies were obtained, and the inflexible severity with which they were levied from the conquered states, was, indeed, spreading the seeds of inextinguishable animosity in his rear; but the effects of that feeling were remote and contingent, the present benefits certain and immediate; and the Russians had too much reason to feel their importance in the numbers and incomparable discipline of the troops by whom they were assailed upon the opening of the campaign.†

The Russian army was far from being equally well situated, and the resources at its disposal were by no means commensurate to those which were in possession of the French emperor. The bulk of the allied army was cantoned between the Passarge and the Alle, around Heilsberg, where a formidable intrenched camp had been constructed. The only contest of any moment which took place while the army

* Bign., vi., 252, 253.

Winter-quarters of the Russians, Combat of Guttstadt.

March 3. occupied this position was in the beginning of March, at Guttstadt, which was attacked and carried by Marshal Ney, with the magazines which it contained; but the French troops having imprudently advanced into the plain beyond that town, several regiments were surrounded by the Cossacks, pierced through, and broken; so that both parties were glad to resume their quarters without boasting of any considerable advantage. Headquarters were at Bartenstein, and the advanced posts approached to those of Marshal Ney on the right bank of the Passarge. These cantonnements, with the great commercial city of Königsberg in their rear, were very comfortable, and the army was daily receiving important accessions of strength from the sick and wounded who were leaving the hospitals. Thirty thousand fresh troops, also, including the Grand-duke Constantine with the remainder of the guard, and several batteries of light artillery, joined the army while they lay in their winter-quarters; and in the end of

March 28. March the Emperor Alexander left St. Petersburg and arrived at Bartenstein, where the King of Prussia had already taken up his headquarters, and where the imperial and royal courts were established.* But although the Russian and Prussian governments both made the utmost efforts to recruit their forces and bring up supplies from their rear, yet the succours which they were enabled to draw from their exhausted provinces were very different from what Napoleon extracted from the opulent German states which he held in subjection; and the addition to the respective forces which the cessation of hostilities occasioned was, in consequence, widely different. Now was seen how immense was the advantage which the French emperor had gained by having overrun and turned to his own account the richest part of Europe, as well as the magnitude of the error which the British government had committed in refusing to the Northern powers, now reduced to their own resources, and with nine tenths of Prussia in the hands of the enemy, the supplies by which alone they could be expected to maintain the contest.†

During the pause in military operations which took place for the three succeeding months, the active mind of Napoleon resumed the projects

which he had formed for the internal ameliorations of his immense empire. Early in March he wrote to the minister of the interior as to the expedience of granting a loan, without interest, to the mercantile classes who were labouring under distress, on the footing of advancing one half of the value of the goods they could give security over; and he announced his design of establishing a great bank in connexion with the state for the advance to manufacturers or merchants in difficulties of sums on the security of their unsold property. Orders were sent to the French ambassadors at the courts of Madrid and Constantinople to use their endeavours to obtain the removal of certain restrictions which existed on French manufactures, and which, in the mortal commercial struggle between France and England, it might be of importance to have recalled. The bridge recently built in front of the Champs de Mars received the name of Jena, an appellation April 14. destined to bring that beautiful structure to the verge of destruction in future times; March 17. a statue was ordered to be erected to D'Alembert in the hall of the Institute; the prize formerly promised to the ablest treatise on galvanism was directed to be paid May 7. to the author who had deserved it; the important and difficult subject of the liberty of the press occupied his serious thoughts, April 19. engrossed much of his correspondence with the minister of the interior;‡ the project for establishing a university for literary and political information was discussed;† a prize of twelve

Great designs of Napoleon at this time for the interior of his empire. March 7.

* "An effective mode of encouraging literature," said Napoleon, "would be to establish a journal, of which the criticism is enlightened, actuated by good intentions, and free of that coarse brutality which characterizes the existing newspapers, and is so contrary to the true interests of the nation. Journals now never criticise with the intention of repressing mediocrity, guiding inexperience, or encouraging rising merit: all their endeavour is to wither, to destroy. I am not insensible to the danger that, in avoiding one rock, you may strike upon another. It may doubtless happen that, if they dare not criticise, they may fall into the still greater abuse of indiscriminate panegyric; and that the authors of those books with which the world is inundated, seeing themselves praised in journals which all are obliged to read, should believe themselves heaven-born geniuses, and, by the facility of their triumphs, encourage still more despicable imitation. Articles should be selected for the journals where reasoning is mingled with eloquence, where praise for deserved merit is tempered with censure for faults. Merit, however inconsiderable, should be sought for and rewarded. A young man who has written an ode worthy of praise, and which has attracted the notice of the minister, has already emerged from obscurity; the public is fixed; it is his part to do the rest."—*NAPOLEON'S Letters*, 19th April, 1807, to the Minister of the Interior. BION., vi., 262, 264.

* Dum., xviii., 203, 207. Wilson.

† Dum., xviii., 86, 91, 203, 207. Wilson, 122, 133.

‡ While occupying these cantonnements, a truce in hostilities, as usual in such cases, took place between the advanced posts of both armies, and this led to an incident equally characteristic of the gallantry and honourable feelings of both. The Russian and French outposts being stationed on the opposite banks of the river, some firing, contrary to the usual custom, took place, and a French officer advancing, reproached the Russians with the discharge; and a Russian officer approaching the Frenchman, requested him to stop the firing of his people, in order that, if necessary, they might determine by single combat who was most courageous. The French officer assented, and was in the act of commanding his men to cease firing, when a Russian ball pierced him to the heart. The Russian officer instantly rushed forward, and cried out to the French soldiers, "My life shall make reparation for this accident: let three marksmen fire at me as I stand here," and, turning to his own soldiers, ordered them "to cease firing upon the French, whatever might be his fate, unless they attempted to cross the river." Already a Frenchman had levelled his piece, when the French subaltern next in command struck it down with his sword, and, running to the Russian, took him by the hand, declaring that no man worthy of the name of Frenchman would be the executioner of so brave a man. The French soldiers felt the justice of the sentiment, and confirmed the feeling by a general acclamation.—See Wilson, 120. With truth did Montesquieu say that honour was, under a monarchical government, the prevailing feeling of mankind.

† "You should occupy yourself with the project of establishing a university for literature, understanding by that word, not merely the belles-lettres, but history and geography. It should consist of at least thirty chairs, so linked together as to exhibit a living picture of instruction and direction, where every one who wishes to study a particular age should know at once whom to consult, what books, monuments, or chronicles to examine; where every one who wishes to travel should know where to receive positive instructions, both as to the government, literature, and physical productions of the country which he is about to visit. It is a lamentable truth, that in this great country a young man who wishes to study, or is desirous of signaling himself in any department, is obliged for long to grope in the dark, and literally lose years in fruitless researches, before he discovers the true repositories of the information for which he seeks. It is a lamentable fact, that in this great country we have no dépôt for the preservation of knowledge on the situation, government, and present state of different portions of the globe, but the student must have recourse either to the office of foreign affairs, where the collections are far from complete, or to the office of the minister of marine, where he will with difficulty find any

June 4. thousand francs (£4800) announced for the best treatise on the best means of curing the croup, which at that period was committing very serious ravages on the infants of France, and of which the child of the Queen of Holland had recently died; a daily correspondence was carried on with the minister of finance, and long calculations, often erroneous, but always intended to support an ingenious opinion, transmitted to test the accuracy and stimulate the activity of the functionaries in that important department;* and the great improvement of keeping accounts by double entry was adopted from the example of commerce, first by the recommendation of the emperor, and, after its advantages had been fully demonstrated by experience, formally enforced by Jan. 8, 1808. a decree of the government. Nor, amid weightier cares, were the fine arts neglected: the designs for the Temple of Glory, ordered by the decree of the 9th of November from Posen, were submitted to the emperor's consideration, and that one selected which has since been realized in the beautiful peristyle of the Madeleine, while all the departments of France were ordered to be searched for quarries of granite and marble capable of furnishing materials of durability and elegance for its interior decorations worthy of a monument calculated for eternal duration.†

one who knows anything of what is asked. I desire such institutions: they have long formed the subject of my meditation, because in the course of my various labours I have repeatedly experienced their want."—*NAPOLÉON to Minister of Interior, 19th April, 1807.* BIGN., vi., 267, 269.

* "The good order which you have established in the affairs of the treasury, and the emancipation which you have effected of its operations from the control of bankers, is an advantage of the most important kind, which will eminently redound to the benefit of our commerce and manufactures."—*NAPOLÉON to the Minister of Finance, Osterode, 24th March, 1807.* In truth, however, what the emperor here called the emancipation of the treasury from the bankers arose, not so much from the regulations of the minister of that department, as from the extraneous sources from whence the chief supplies for the army were now derived, and which rendered the anticipation of revenue by discounting long-dated treasury bills at the Bank of France unnecessary. He admitted this himself in the same letter: "I am now discharging the arrears of the army from the beginning of October, 1806, to the end of February, 1807; we shall see hereafter how this will be arranged with the treasury; in the mean time, the payment comes from Prussia, and that will put us greatly at ease." The pay thus extracted from the conquered states amounted to the enormous sum of 3,300,000 francs, or £132,000 a month, supposing 150,000 men only so maintained, which for these five months alone was no less than 16,500,000 francs, or £660,000 sterling.—*See BIGN., iv., 274, 276.* † BIGN., vi., 257, 278.

‡ "After having attentively considered," said Napoleon, "the different plans submitted to my examination as a design for nation, I have not felt the smallest doubt on the Madeleine that which I should adopt. That of M. Vignon alone fulfilled my wishes. It is a temple which I desire, and not a church. What could you erect as a church which could keep its ground against the Pantheon, Notre Dame, or, above all, St. Peter's at Rome? Everything in the temple should be in a chaste, severe, and durable style; it should be fitted for solemnities at all times, at all hours; the imperial throne should be a curule chair of marble, seats of marble for the persons invited, an amphitheatre of marble for the performers. No furniture should be admitted but cushions for the seats: all should be of granite, of marble, and of iron. With this view, searches should be made in all the provinces for quarries of marble and granite. They will be useful, not merely for this monument, but for others, which I have it in view to construct at future times, and which by their nature will require thirty, forty, or fifty years for their construction. Not more than 3,000,000 of francs (£120,000) should be required, the temples of Athens having not cost much more than the half of that sum; fifteen millions have been absorbed, I know not how, in the Pantheon, but I should not object to an expenditure of five or six millions for the construction of a temple worthy of the first city in the world."—*NAPOLÉON to the Minister of Interior, Pinkinsten,*

The finances of France during this year exhibited the most flattering prospect; but the exposition published was entirely fallacious, so far as the total expenditure was concerned, because a large portion of the supplies were drawn by war contributions from foreign states, and upward of half the army were quartered for all its expenses on the vanquished territories. The revenue of the Empire, as exhibited in the budget, amounted to 683,057,933 francs, or £25,507,000, and its expenditure to 777,850,000 francs, or £32,000,000;* but the emperor did not reveal to the public, what was not less true, that the sums levied on the countries lying between the Rhine and the Vistula, between the 14th of October, 1806, when the war commenced, and the 14th of June, 1807, when it terminated, amounted to the enormous, and if not proved by authentic documents, incredible sum of 604,227,922 francs, or £24,000,000; that above a million annually was levied on the kingdom of Italy;† that the arrears paid up by Austria for the great war contribution of 1805 were double that sum; that the war subsidies extracted from Spain and Portugal, in virtue of the treaty of St. Ildefonso, were above £3,000,000 yearly. Finally, that the Grand Army, two hundred thousand strong, had, since it broke up from the heights of Boulogne, in September, 1805, been exclusively fed, clothed, lodged, and paid at the expense of the German States.‡ The revenues of France, therefore, did not furnish more than half the total sum required by the expensive and gigantic military establishment of the emperor, while its inhabitants received almost the whole benefit from its expenditure: a state of things which at once explains the necessity under which he lay of continually advancing to fresh conquests; the extraordinary attachment which the French so long felt to his government; the vast internal prosperity with which it was attended, and the grinding misery as well as inextinguishable hatred with which it soon came to be regarded in foreign states.§

18th April, 1807. BIGN., vi., 270, 272. It was from this determination of the emperor that the present exquisite structure of the Madeleine took its rise; but his real design in the formation, on so durable and gigantic a scale, of this noble monument was, as already mentioned, still more extensive than the honour of the Grand Army; and he in secret intended it as an expiatory monument to Louis XVI., Marie Antoinette, and the other victims of the Revolution.—*Vide Ante, ii., and LAS CAS, i., 370, 371.*

‡ Jan., ii., 437.

§ The receipts and expenditure of France, as exhibited in the budget of the minister of finance for this year, were as follows:

	Receipts.	
	Francs.	
Dutch taxes	311,840,685,	or £12,040,000
Register and crown lands	172,227,000	6,900,000
Customs	90,115,726	3,360,200
Lottery	12,233,887	369,000
Postoffice	9,968,134	400,000
Excise	75,808,358	3,032,000
Salt and tobacco	6,900,000	276,000
Salt mines of government	3,230,000	130,000
	682,323,740 fr.	£26,507,000
	Expenditure.	
	Francs.	
Public debt	105,959,000,	or £4,240,000
Civil list	28,000,000	1,120,000
Public Justice	22,042,000	880,000
Foreign ministers	10,379,000	420,000
Interim ministers	54,902,000	2,170,000
Finance ditto	25,624,000	1,632,000
Public treasury	8,571,000	335,000
Carried forward,	255,477,000	10,797,000

Receipts and expenditure of the year.

Early in March a grand convocation of the Jews assembled in Paris, in pursuance of the commands of Napoleon, issued in the July preceding. Seventy-one doctors and chiefs of that ancient nation attended this great assembly, the first meeting of the kind which had occurred since the dispersion of the Israelites on the capture of Jerusalem. For seventeen hundred years the children of Israel had sojourned as strangers in foreign realms; reviled, oppressed, persecuted, without a capital, without a government, without a home; far from the tombs of their forefathers, banished from the land of their ancestors; but preserving unimpaired, amid all their calamities, their traditions, their usages, their faith; exhibiting in every nation of the earth a lasting miracle to attest the verity of the Christian prophecies. On this occasion the great Sanhedrim, or assembly, published the result of their deliberations in a variety of statutes and declarations, calculated to remove from the Israelites a portion of that odium under which they had so long laboured in all the nations of Christendom; and Napoleon, in return, took them under his protection, and, under certain modifications, admitted them to the privileges of his empire. This first approach to a reunion and settlement of the Jews, impossible under any other circumstances but the rule of so great a conqueror as Napoleon, is very remarkable. The immediate cause of it, doubtless, was the desire of the emperor to secure the support of so numerous and opulent a body as the Jews of Old Prussia, Poland, and the southern provinces of Russia, which was of great importance in the contest in which he was engaged, but it is impossible not to see in its result a step in the development of Christian prophecy. And thus, from the mysterious manner in which the wisdom of Providence makes the wicked-

ness and passions of men to work out its great designs for the government of human affairs, did the French Revolution, which, nursed in infidelity and crime, set out with the abolition of Christian worship, and the open denial of God by a whole nation, in its secondary results lead to the first great step which had occurred in modern Europe to the reassembling of the Jews, so early foretold by our Saviour; and in its ultimate effects is destined, to all human appearance, by the irresistible strength which it has given to the British navy, and the vast impulse which it has communicated to the Russian army, to lead to the wresting of Jerusalem from the hands of the infidels, and the spread of the Christian faith alike over the forests of the New and the deserts of the Old World.*

The two grand armies, in their respective positions on the Passarge and the Alle, remained for nearly four months after the sanguinary fight of Eylau in a state of tranquillity, interrupted only by skirmishes at the outposts, followed by no material results, and too inconsiderable to deserve the attention of the general historian. Both parties were actively engaged in measures to repair the wide chasms which it had occasioned in their ranks, and preparing for the coming struggle, which was to decide the great contest for the empire of Europe. But Napoleon felt too strongly the imminent risk which he had run of total ruin by a defeat on the frontiers of Russia, before the fortresses in his rear were all subdued, to incur it a second time, until his right flank was secured by the reduction of the remainder of the powerful chain of fortresses in Silesia, which still hoisted the Prussian colours, and his left by the surrender of the great fortified emporium of Dantzic. To these two objects, accordingly, his attention was directed during the cessation of active hostilities in the front of the Grand Army; and his operations in these quarters were not only great in themselves, but had the most important effect upon the future fortunes of the campaign.†

Schweidnitz and Neiss were invested about the same time, in the end of January; but serious operations were not at-tempted against the latter fortress, which was the chief stronghold of the province, till the former was reduced. The siege, accordingly, was carried on with great activity of the former, and with such success that it capitulated, after a feeble resistance, in the middle of February. The reduction of the capital of Silesia was of the highest importance, not merely as putting at the disposal of Napoleon a powerful fortress, commanding a rich territory, but giving him a supply of extensive stores in ammunition and artillery, which were forthwith forwarded to Dantzic and Neiss, and proved of the utmost service in the siege of both these towns. The resources of Silesia, now almost entirely in the hands of Vandamme, were turned to the very best account by that indefatigable and rapacious commander: heavy requisitions for horses, provisions, and forage, followed each other in rapid succession, besides grievous contributions in money, which were so considerable, and levied with such severity on that opulent province, that before the end of March 1,500,000 francs (£60,000) were regularly trans-

Brought forward,	255,477,000	10,797,000
War	195,895,000	7,900,000
Ordnance	147,654,000	5,850,000
Marine	117,307,000	4,900,000
Public worship	12,342,000	550,000
General police	708,000	34,000
Roads and bridges ..	38,215,000	1,800,000
Incidental charges ..	10,252,000	410,000
France	777,850,000	£32,241,000

But as the Grand Army, 200,000 strong, was solely maintained, paid, and equipped at the expense of Germany, this table exhibited a most fallacious view of the real expenditure and receipts of Napoleon during the year. Without mentioning lesser contributions, the following table exhibits the enormous sums which, by public or private plunder, for it deserves no better name, he was enabled, during the same period, to extract from the tributary or conquered states, and their application to the expenses of the war or otherwise:

Receipts.		Francs.
War contribution levied on Germany from October, 1806, to July, 1807	604,227,922, or £24,090,000	
Tribute from Italy	30,000,000	1,200,000
— from Spain	72,000,000	2,880,000
— from Portugal	16,000,000	640,000
War contribution from Austria, arrears of 1805	50,000,000	2,000,000
	772,227,922 fr.	£30,810,000
Expended.		
Costs of the Grand Army from October, 1806, to July, 1807	228,944,363, or £9,130,000	
Leaving to be applied to internal service of France in this or succeeding years	543,283,559	21,740,000
	772,226,922 fr.	£30,870,000

—DARU'S Report on the Finances of 1806; DUM., xix., 464, 465; BIGN., vii., 279, 280; GAETA, i., 305; ANTE, ii., 280, 281.

mitted once a week to the headquarters of Napoleon, and this plentiful supply continued undiminished till the end of the war.*

No sooner was the besieging force before Neiss and of Neiss, strengthened by the artillery and reinforcements which were forwarded from Schweidnitz, than the operations of the French for its reduction were conducted with more activity. This fortress, originally situated exclusively on the right bank of the river which bears the same name, was extended by Frederic the Great to the left bank, where the principal arsenals and military establishments were placed. The works surrounding the whole were extensive, but in some places not entirely armed or clothed with masonry, but a garrison of six thousand men, great part of which occupied an intrenched camp without the fortress, promised to present a formidable resistance. Finding, however, that the trenches had been opened, and that the place was hard pressed, an attempt to relieve

April 20. it was made by General Kleist with four thousand men, drawn from the garrison of Glatz. Their efforts, which took place on the night of the 20th, were combined with a powerful sortie from the walls of the place; but, though the attack at first was attended with some success, it was finally defeated by the opportune arrival of Jerome Bonaparte with a powerful reinforcement, who had received intelligence of the projected operation, and arrived in time to render it totally abortive. The defeated troops took refuge in Glatz, after sustaining a loss of seven hundred men. Immediately after, the bombardment was resumed with fresh vigour: the town was repeatedly set on fire in many different places; the outwork of the Blockhausen was carried by assault; already the rampart was beginning to be shaken by the breaching batteries; and the explosion of one of their June 1. magazines spread consternation through the garrison, when the governor offered to capitulate on the same conditions as the other fortresses of Prussia. This offer was agreed to; and on the 16th of June this great stronghold, with three hundred and twenty pieces of cannon, 200,000 pounds of powder, a garrison still above five thousand strong, but entirely destitute of provisions, fell into the hands of the enemy.†

Glatz alone remained to complete the reduction of the province, and it did not And of Glatz. long survive its unfortunate compeers. Prince Jerome commanded the attacking force, and though the garrison was numerous, it was so much discouraged by the bad success of the besieged in all the other fortresses of the province, that it made but a feeble resistance. The intrenched camp which communicated with the town having been attacked and carried, this last bulwark of Silesia capitulated on the 14th of June 14. June, the very day when the battle of Friedland was fought. Thus were all the strongholds of this province, so long the bulwark of Prussia, reduced, by a force hardly equal to the united strength of their garrisons, and Vandamme, with a corps not exceeding twenty-five thousand men, had the glory of wresting from the enemy six first-rate fortresses, containing above twelve hundred pieces of cannon. The defence which they made did little credit to the Prussian arms, as not one of them had resolution enough to stand an assault, and almost all

lowered their colours while the rampart was still unbreached.*

The siege of Dantzic was an operation of more difficulty, and of much more immediate influence upon the fate of the campaign. Napoleon felt the imminent danger which he would have run if Benningsen's army, during the irruption which preceded the battle of Eylau, had succeeded in throwing a powerful re-enforcement into that fortress: thirty thousand men, resting on its formidable ramparts, and amply supplied with every necessary from the sea, would have paralyzed all the movements of the Grand Army. This important city, formerly one of the most flourishing of the Hanse Towns, had fallen to the lot of Prussia on occasion of the last partition of Poland in 1794; and though it had much declined in wealth and population since the disastrous era when it lost its independence, yet it was still a place of great importance and strength. Its situation at the mouth of the Vistula gave it a monopoly of all the commerce of Poland: it served as the great emporium of the noble wheat crops which, in every age, have constituted almost exclusively the wealth of that kingdom, and imported, in return, the wines, fruits, dress, and other luxuries which contributed to the splendour of its haughty nobles, and the rude garments which clothed the limbs of its unhappy cultivators. The River Mottaw, a tributary stream to the Vistula, traverses the whole extent of the city, and serves as a canal for the transport of its bulk in merchandise, while its waters fill the wet ditches, and contribute much to the strength of the place. Previous to the war its fortifications had been much neglected, as its remote situation seemed to afford little likelihood of its being destined to undergo a siege; but after the battle of Jena, General Manstein, the governor, had laboured indefatigably to put the works in a good posture of defence; and such had been the success of his efforts, that they were in March all armed and in a condition to undergo a siege. It was surrounded in all places by a rampart, wet ditch, and strong palisades, in most by formidable outworks; the fort of Weischelmunde, in its vicinity, commanding the opening of the Vistula into the sea, required a separate siege for itself, and was connected with the town, from which it was distant four miles, by a chain of fortified posts. But the principal defence of the place consisted in the marshy nature of the ground in its vicinity, which could be traversed only on a few dikes or chaussées, and the power which the besieged had, by the command of the sluices of the Vistula, the waters of which, from their communication with the Baltic, are almost always at the same level, of inundating the country for several miles in breadth round two thirds of the circumference of the walls. The garrison consisted of twelve thousand Prussians and five thousand Russians, under the command of Field-marshal Kalkreuth, a veteran whose intrepid character formed a sufficient guarantee for a gallant defence.†

To form the besieging force, Napoleon had drawn together a large body of Italian, First operations of the besieging force.
Saxons, Hessians, troops of Baden, with a division of Polish levies, and two divisions of French, in all 27,000 men. The most inefficient part of this motley

group was employed in the blockade of Colberg and Graudentz; and the flower of the troops, consisting of the French divisions, a Saxon brigade, and the Baden and Polish hussars, amounting to about twenty thousand men, was destined to the more arduous undertaking of the siege of Dantzic. The artillery was commanded by the gallant General Lariboissiere, the engineers under the able directions of General Chasseloup; Marshal Lannes, with the grenadiers of the guards, formerly under Oudinot, who was confined by sickness, formed in the rear of the Grand Army the covering force; and he was in communication with Massena, who had superseded Savary in the command of the corps which had combated at Ostrolenka,* and was re-enforced by the warlike Bavarian grenadiers of Wrede. Thus, while twenty thousand men were assembled for the siege, thirty thousand, under the most experienced marshals of France, were stationed so as to protect the operations against any incursions of the enemy.

So early as the middle of February the advanced posts of the besiegers had begun to invest the place, and on the 22d of that month a sanguinary conflict ensued between the Polish hussars, who composed their vanguard, and a body of fifteen hundred Prussians, at Dirschau, which terminated, after a severe loss on both sides, in the retreat of the latter under the cannon of the ramparts. After this check, General Manstein no longer endeavoured to maintain himself on the outside of the walls; and as the French troops successively came up, the investment of the fortress was completed. The first serious conflict took place on the island or peninsula of Nehrung, the well-known tongue of land which separates the waters of the salt lake, called the Frische-haff, and the Vistula from the Baltic Sea. It is twelve leagues in length, but seldom more than a mile or two in breadth, composed of sandhills thrown up by the meeting of the river with the ocean, in one part of which the waves have broken in and overflowed the level space in its rear, which now forms the Frische-haff; and as it communicates with Dantzic, which stands at its eastern extremity, the approaches to the town on that side could not be effected until it was cleared of the enemy. Sensible of its value, the besieged had spared no pains to strengthen themselves on this important neck of land, and the besiegers were equally resolute to dislodge them from it, and thereby complete the investment of the fortress. Early in the morning of the 20th of March, a French detachment crossed the Frische-haff in boats, and surprised the Prussian posts on the opposite shore; fresh troops were ferried over in rapid succession, and the besiegers, before evening, established themselves in such force in the island, that, though Kalkreuth despatched a body of four thousand men out of the place to re-enforce his posts in that quarter, they were unable to dislodge the enemy, who not only kept their ground, but progressively advancing two days afterward, entirely cleared the peninsula of the Prussians, and completed the investment of the town on that side. By this success the communication of Dantzic with the land was entirely cut off; but the besieged, by means of the island of Holm and

fort of Weischelmunde, with the intrenched camp of Neufahrwasser, which commands the entrance of the Vistula into the Baltic, had still the means of deriving succour from the sea-side.*

After full deliberation among the French engineers, it was determined to commence the siege by an attack on the fort of Hagelsberg, which stands on an eminence without the rampart on the western side of the town, which was the only one entirely free from inundations. The first parallel having been completed, a heavy fire was opened on the works in that quarter on the night of the first of April, though at the distance of eight hundred toises. A fortnight after, the second parallel was also finished, notwithstanding several vigorous sorties from the garrison; and by the 23d, amid snow and sleet, the batteries were all armed and ready to play on the ramparts at the distance of only sixty toises. On the following night, a tremendous fire was opened from fifty-six pieces of heavy cannon and twelve mortars, which, notwithstanding the utmost efforts on the part of the garrison, soon acquired a marked superiority over the batteries of the besieged. For a week together this cannonade continued without intermission night and day; a brave sortie was unable to arrest it more than a few hours; but, although the city was already on fire in several places and the artillery on the ramparts in part dismounted, yet, as the exterior works were faced with earth, not masonry, little progress was made in injuring them, and no practicable breach had been as yet effected. Finding themselves foiled in this species of attack, the French engineers had recourse to the more certain, but tedious method of approach by sap; the besieged countermined with indefatigable perseverance; but, notwithstanding their utmost efforts, the mines of the French were pushed to within eighteen yards of the salient angle of the outermost works of Hagelsberg. At the same time a separate expedition against the island of Holm, which formed the western extremity of the peninsula of Nehrung, from whence it was separated only by one of the arms of the Vistula, proved successful; the garrison, consisting of five hundred men with fifteen pieces of cannon, were made prisoners, and the city by that means deprived of all the succour which it had hitherto obtained by the mouths of that river.†

Invested now on all sides, with its garrison weakened by the casualties of the siege, and the enemy's mines ready to blow its outworks on the side assailed into the air, Dantzic could not be expected to hold out for any length of time. Not deeming himself in sufficient strength to attempt the raising of the siege by a direct at-

* Dum., xviii., 133, 141. Bign., vi., 284, 285. Wilson, 129.

† Dum., xviii., 146, 169. Bign., vi., 285, 286. Wilson, 129, 130.

‡ A remarkable incident occurred on this occasion, highly characteristic of the heroic spirit with which both parties were animated. A chasseur of the 12th regiment of French light infantry, named Fortunus, transported by the ardour of the attack, fell, in the dark, into the midst of a Russian detachment, and in a few minutes that detachment itself was surprised by the company to which the French soldier belonged. The Russian officers exclaimed, "Do not fire, we are French;" and threatened the chasseur with instant death if he betrayed them. "Fire instantly!" exclaimed the brave Fortunus, "they are Russians!" and fell pierced by the balls of his comrades.—DUMAS, xviii., 169.

* *Jom.*, ii., 396, 397. *Dum.*, xviii., 126, 129. *Ann. Reg.*, 1807, 23.

tack upon the enemy's cantonments on the Passarge, Benningsen, with the concurrence of the Emperor Alexander, had resolved to attempt the relief of the fortress by a combined attack by land and sea, from the peninsula of Nehrung and the mouths of the Vistula. The preparations made with this view were of the most formidable kind, and had wellnigh been crowned with success. General Kamenskoi, with five thousand men, was embarked at Pillau, under convoy of a Swedish and English man-of-war, and landed at Neufahrwasser, the fortified post at the mouth of the Vistula, distant four miles from Dantzic; while two thousand Prussians were to co-operate in the attack, by advancing along the peninsula of Nehrung, and the Grand Army was to be disquieted and hindered from sending succours by a feigned attack on Marshal Ney's corps; and at the same time General Tutschikoff, who had succeeded Essen in the command of the troops on the Narew and the Bug, was to engage the attention of Massena's corps in that quarter. All these

May 7 operations took place, and, but for an accidental circumstance, would, to all appearance, have proved successful: the proposed feints were made with the desired effects on the side of Guttstadt and the Narew; but, unfortunately, the delay of the Swedish man-of-war, which had twelve hundred men on board, rendered it impossible for Kamenskoi to commence his attack before the 15th inst. In the mean while, Napoleon, who had received intelligence of what was in preparation, and was fully aware of the imminent danger to which Lefebvre was exposed, had time to draw a large body of troops from Lannes' covering corps by the bridge of Marienswerder to the scene of danger. This great re-enforcement, comprising among other troops the grenadiers of the guard under Oudinot, turned the scale, which at that period quivered on the beam. Early on the morning of the 15th, Kamenskoi marched out of the trenches of Neufahrwasser, and, after defiling over the bridge of the Vistula into the peninsula of Nehrung, advanced with the utmost intrepidity to the attack of the strong fortifications which the enemy had erected to bar their advance among the hills and copsewoods of that sandy peninsula. Their first onset was irresistible. The intrenchments were carried in the most gallant style, and all their cannon taken: success appeared certain, as the defeated Saxons and Poles were flying in great disorder out of the woods into the sandy hills which lay between them and the town of Dantzic, when the victors were suddenly assailed in flank, when disordered by success, by Marshal Lannes, at the head of Oudinot's formidable grenadiers of the guards. Unable to resist so vehement an onset, the Russians were, in their turn, driven back, and lost the intrenchments; but rallying again with admirable discipline, they renewed the assault and regained the works; again they were expelled with great slaughter; a third time, stimulated by desperation, they returned to the charge, and routed the French grenadiers with such vigour, that Oudinot had a horse shot under him, and fell upon Marshal Lannes, and both these valiant chiefs thereafter combated on foot in the midst of their faithful grenadiers. But fresh re-enforcements from the left bank were every moment received by the enemy: Kalkreuth, confining himself to a heavy cannonade, had made no sortie to aid this gallant effort to cut through the lines; and, to complete Ka-

menskoi's misfortune, he received intelligence, during the action, that the Prussian corps of two thousand men, which was advancing along the Nehrung to co-operate in the attack, had been assailed by superior forces at Karlsberg, and routed with the loss of six hundred men and two pieces of cannon. Finding the undertaking in these circumstances hopeless, the brave Russian, at eight at night, ordered his heroic troops to retire, and they regained the shelter of the cannon of Weischelmunde without being pursued, but after sustaining a loss of seventeen hundred soldiers; while the French had to lament nearly as great a number of brave men who had fallen in this desperate conflict.*

No other serious effort was made by the allies for the relief of Dantzic. The besieged had provisions enough, but it was well known that their ammunition was almost exhausted, and that, without a speedy supply of that indispensable article, the place must ere long capitulate. An English brig of 22 guns, under Captain Strachey, with one hundred and fifty barrels of powder on board, made a brave attempt to force its way up the river, though the Vistula is a rapid stream, not more, in general, than sixty yards broad, and the passage was both defended by numerous batteries and a boom thrown across the channel; but a cannon-shot having struck the rudder, and the rigging being almost entirely cut to pieces by the French fire, she was forced to surrender. Meanwhile the operations against the Hagelsberg were continued without intermission: the springing of several mines, though not attended with all the ruin

Growing difficulties of the besieged, and fall of the place.

May 20 which was expected by the besiegers, had the effect of ruining and laying open the outworks, and preparations were already made for blowing the counterscarp into the ditch. In vain a sortie from the ramparts was made, and at first attended with some success, to destroy these threatening advanced works of the enemy: the besieged were at length driven back, and on the next day the arrival of Marshal Mortier, with a large part of his corps from the neighbourhood of Stralsund and Colberg, nearly doubled the effective strength of the enemy. Kalkreuth, however, was still unsubdued, and the most vigorous preparations had been made on the breaches of the ramparts to repel the assault which was hourly expected, when a summons from Lefebvre offered him honourable terms of capitulation. The situation of the brave veteran left him no alternative: though his strength was unsubdued, his ammunition was exhausted, and nothing remained but submission. The terms of capitulation were without difficulty arranged: the garrison was permitted to retire with their arms and the honours of war, on condition of not serving against France or its allies for a year, or till regularly exchanged; and on the 27th this great fortress, containing

May 21
May 24
May 27
nine hundred pieces of cannon, but hardly any ammunition, was taken possession of by the French troops. The garrison, now reduced to nine thousand men, was marched through the peninsula of Nehrung to Königsberg: Kamenskoi, unable to render any assistance, set sail from Fort Weischelmunde with his own division,† and its original garrison and a few invalids

* Wilson, 131, 133. Bign., vi., 285, 287. Dum., xviii., 173, 183.

only remained on the 26th to open its gates to the enemy.

While this desperate struggle was going on round Dantzic, the Russians were making the utmost efforts to re-enforce their principal army; but the time which they had was not sufficient to bring up from its im-

Re-enforcements which arrived to the Russian army. Its strength and positions. mense extent the distant resources of their empire, and though men were in abundance in the nearer provinces, both money and arms were wanting to equip them for the field. In the end of March and beginning of April, however, re-enforcements to a considerable amount arrived on the Alle, among which were chiefly to be noticed the superb corps of the guards under the Grand-duke Constantine, consisting of thirty battalions and thirty-four squadrons, full twenty thousand men, the flower of the imperial army. A powerful reserve, drawn from the dépôts in the interior of the Empire, of thirty thousand men, was also advancing under Prince Labanoff, but it was so far in the rear that it could not arrive at the scene of action before the end of June, and was, therefore, not to be relied on for the early operations of the campaign. The whole army which Benningsen had at his command, on the resumption of hostilities, was only one hundred and twenty thousand men, including in that force the detached corps of sixteen thousand Prussians and Russians in front of Königsberg under Lestocq, and the left wing on the Narew under Tolstoy, which was fifteen thousand strong, so that the force to be relied on for the immediate shock on the Alle or the Passarge was scarcely ninety thousand. These were, however, all veterans inured to war, and animated in the highest degree both by their recent success at Eylau,* and the presence of their beloved emperor, who, since the end of March, had been at the headquarters of the army.†

By incredible exertions Napoleon had succeeded in assembling a much greater force. Notwithstanding the immense losses of his bloody winter campaign in Poland, such had been the vigour of his measures for recruiting his army, and such the efficacy of the continued influence of terror, coercion, military ardour, and patriotic spirit which he had contrived to bring to bear upon the warlike population of France, Germany, and Poland, that a greater host than had ever yet been witnessed together in modern Europe were now assembled round his eagles.‡ Exclusive of the army of observation on the Elbe, and the garrisons and blockading corps in his rear, no less than a hundred and fifty thousand infantry, and thirty-five thousand horse, were ready for im-

mediate action on the Passarge and the Narew. Nor was it merely from its nominal strength that this immense force was formidable: its discipline and equipment had attained the very highest perfection; the requisitions enforced by the terrors of military execution had wrenched out of Germany all the supplies of which it stood in need; the cavalry were remounted, the artillery-wagons and carriages repaired and in the best condition; the reserve parks and pontoon trains fully supplied; the return of spring had restored numbers of the veterans to their ranks, the never-failing conscription filled up the chasms produced by Pultusk and Eylau, while the recent successes in Silesia and at Dantzic had revived in the warlike multitude that confidence in themselves and in their renowned leader which the disasters of the winter campaign had much impaired, but which has ever been found, even more than numbers or skill, to contribute to military success.* Vast as the resources of Russia undoubtedly are when time has been afforded to collect into one focus its unwieldy strength, it was now fairly overmatched by the banded strength of Western Europe on its own frontier;† and, though Alexander might possibly have combated on equal terms with Napoleon on the Wolga or the Dneister, he was inadequate to the encounter on the Alle or the Narew.

The Emperor Alexander had arrived at the headquarters of his army on the Defensive 28th of March, and resided since measures of that time with the King of Prussia the Russians. at Bartenstein, a little in the rear of the cantonments of the soldiers. There they had, for two months, carried on a sort of negotiation with the French emperor by means of confidential agents;‡ but this shadow of pacific overtures, which were only intended on either side to give time and propitiate Austria, by seeming to listen to her offers of mediation, was abandoned in the middle of May, and both parties prepared to determine the contest by the sword. To compensate for his inferiority of force, and provide a point of support for his troops, even in the first line Benningsen had, with great care, constructed a formidable intrenched camp, composed of six great works regularly fortified, and sixteen lunettes, or armed ravelins, astride on the opposite banks of the River Alle. Thither he proposed

* The composition and distribution of this force, previous to the resumption of hostilities, were as follows:

	Infantry.	Cavalry.	Stationed at
First Corps, Bernadotte ..	23,547	3,744	Braunsberg and Spandau.
Fourth do., Soult.....	30,199	1,366	Lubstadt and Altkin.
Sixth do., Ney.....	15,883	1,117	Guttstadt and the right of the Passarge.
Third do., Davoust.....	28,445	1,125	Osterode and Allenstein.
Imperial Guard, Bessières	7,319	1,808	Finkenstein.
Reserve Cavalry, Murat..		21,428	Lower Vistula and Passarge.
Reserve Corps, Lannes...	15,090	250	Marienburg.
Eighth Corps, Mortier....	14,000	1,000	Lower Vistula.
Second Corps, Massena...	17,580	2,604	Narew.
	152,063	34,442	

Exclusive of officers, which made the force at least 155,000 infantry and 35,000 cavalry. The corps of Lefebvre, after the capture of Dantzic, was melted down and divided between those of Lannes and Mortier and the garrison of the place; the second corps was in Dalmatia, under Marmont, the ninth in Silesia, under Vandamme. Augereau's corps was divided among the other corps after its terrific losses in the battle of Eylau.—DUM., xviii., 222, 223; *Pièces Just.*, No. 3, and Jom., ii., 403.

The militia, which the patriotic ardour of the Russians led them to raise, were unable to march from want of arms and ammunition, which the ill-timed parsimony of England withheld. One hundred and sixty thousand muskets, sent out in haste by the British government after the change of ministry, arrived at Königsberg in June, just in time to be seized by the French after the battle of Friedland.—HARD., iv., 417.

to retire in the event of the enemy bringing an overwhelming force to bear upon his columns; but he did not conceive himself sufficiently strong until the re-enforcements under Prince Labanoff arrived, to commence any serious offensive movement against the French army, and in consequence allowed the siege of Dantzic, as already mentioned, to be brought to a successful issue, without any other demonstration for its relief than the cannonade against Ney's corps, intended as a diversion in favour of Kamenskoi's attack. The army, though so much inferior in numerical strength to the French, was animated with the best spirit, and the great magazines and harbour of Königsberg supplied it with every necessary; although the situation of that city, without fortifications, and with its back to the gulf of the Curishé, from whence retreat was impossible, rendered it a situation extremely ill-adapted, as the event proved, for the stores on which its operations depended.*

After the fall of Dantzic, and when the French Designs of the army was re-enforced by full thirty Russians on thousand men from the covering Ney's corps. and besieging force, Benningsen was seduced, by the exposed situation of Marshal Ney's corps at Guttstadt, on the right bank of the Passarge, midway between the two armies, to hazard an attack on that insulated body. He had been stationed there by Napoleon expressly in order to serve as a bait to draw the Russian generals into that perilous encounter; and the event proved with perfect success. Early in June all the corps of their army were put in motion, in order to envelop the French marshal. For this purpose he proposed to make a feint of forcing the passage of the Passarge, at the two points of Spandau and Lomitten, and at the same time assail Ney in his advanced position at Guttstadt, in front and both flanks. If, by these means, the corps which he commanded could be destroyed, it was intended on the following day to renew the attack on the bridges in good earnest, and fall with the whole centre of the Russian army on the corps of Soult, cantoned behind the Passarge, and at such distance from that of Davoust as to afford some ground for hope that it, too, might be seriously injured before the remainder of the French troops could advance to its relief. Should this daring attack fail, it was always in their power to retire to the fortified central position of Heilsberg,† and there endeavour to arrest the enemy, as Kray had done with Moreau at Ulm, till the great re-enforcements, under Labanoff, should enable them to resume the offensive.

Early on the morning of the 5th of June, the whole Russian army was put in motion for the execution of this well-conceived enterprise. The feigned attacks, intended to distract the enemy's attention on the two fortified bridges of Spandau and Lomitten, took place at the prescribed time, and perfectly answered the object in view. The Prussians at the former point, and the Russians at the latter, pressed the enemy so severely, and with forces so considerable, that they supposed the forcing of the bridges was really intended, and in consequence, when they drew off in the evening, with the loss of several hundred killed and wounded, from each of

these places, represented their retreat as evidence of a repulse. Bernadotte, who commanded at Spandau, and had collected his whole corps to defend that important passage, was wounded by a musket-ball on the head, during the heat of the action, and replaced in command by General Dupont. Meanwhile, the real attack was directed against Ney's corps in its advanced position at Guttstadt, full seven miles to the right of the Passarge, and so completely in the midst of the Russian army, now that their advanced columns were assailing the bridges over that river, that its destruction appeared inevitable. In effect, the marshal was taken so completely by surprise, that, if Benningsen had pressed the retiring columns with anything like the vigour which Napoleon would have exerted on a similar occasion, they must inevitably have been destroyed. But, unfortunately, orders had been issued for the different corps to delay the onset till they were in a condition to render assistance to each other; and as some were impeded in the march by unforeseen accidents, the serious attack on Guttstadt did not take place till two o'clock in the afternoon. It was then carried by assault, and four hundred prisoners, with considerable magazines and several guns, were taken; but, after having thus made themselves masters of his headquarters, the Russians, though more than double the number of the enemy, exerted so little activity in following up their success, that Ney, who displayed on this trying occasion all his wonted skill and firmness, was enabled to effect his retreat, with comparatively little loss, to Ankendorf and Heiligenthal, where he passed the night. On the following morning he resumed his march, though pressed on all sides by greatly superior forces, imposed on the enemy in the middle of it by a bold and well-conceived return to Heiligenthal, which gave time for his artillery and horse to defile over the bridge in his rear; and at length passed the Passarge at Dippen, with the loss, in the whole of his retreat, of only a thousand killed and wounded, and an equal number made prisoners. On arriving at the heights of Dippen, as the rear-guard of Ney was defiling over, the Russians had the mortification of discovering that the bridge was not only altogether unprotected by a *tête de pont*, but completely commanded by the heights on which they stood on the right bank; so that, if they had exerted ordinary vigour in the attack of the preceding day, the negligence of Napoleon had given them the means of totally destroying the exposed corps of his gallant lieutenant.*

This sudden and unfortunate attack on the centre of his position very much disconcerted the Emperor Napoleon, the more especially as he received the intelligence, the same day, of the passage of the Alle by Platoff, at the head of his Cossacks, and the surprise of five hundred men, who were made prisoners,† and

Napoleon concentrates his army, and the Russians fall back.

† The French officer in command owed his life to the fortunate incident of his giving the Russian commander the freemasons' sign when seizing his hand just as a lance was about to pierce his breast.—WILSON, 138. In reviewing Sir Robert Wilson's work, the Edinburgh Review says this is an anecdote so incredible, that no amount of testimony could make them believe it; but this only shows the critic's ignorance. The same fortunate presence of mind, in making use of the freemasons' sign, saved the life of a gallant officer, the author's father-in-law, Lieutenant-colonel Tytler, during the American war, who, by giving one of the enemy's officers the freemasons' grip when he lay on the ground with

Feigned attacks on the bridges of the Passarge, and real attack on Marshal Ney. June 5.

also of a regiment of Cossacks having swam the Passarge, and cut to pieces an escort of cavalry, and captured some artillery and baggage. He instantly commenced the concentration of his army. The corps of Ney, escaped from so serious a danger, was united to that of Lannes, which had suffered no loss; the guard and reserve cavalry under Murat commanded to assemble and support him with the utmost expedition; Mortier was ordered up by forced marches by Mohrungen; the corps of Bernadotte, which, since his wound, was intrusted to the directions of Victor, ordered to concentrate itself for the protection of Elburg; and Soult, who had assembled his corps at Lubstadt, enjoined to force the passage of the Passarge at Wolfendorf, in order to threaten the communications of the enemy with their intrenched camp at Heilsberg, while Davoust connected himself by the right with Ney, and formed an imposing mass behind the Passarge, against which, it was hoped, all the efforts of the enemy would be shattered. But these great preparations were suitable rather to the confidence which Napoleon felt in himself than that with which his adversaries were inspired. Having failed in his original and well-conceived project of cutting off the corps of Marshal Ney in its advanced position close to his cantonments, Benningsen had no intention of hazarding his army by commencing offensive operations against a force so greatly superior, with a few bridges over the Passarge

June 7. for his only retreat in case of disaster. On the morning of the 8th, the increasing forces which the enemy displayed at Dippen, and the vivacity of their cannonade at that point, prognosticated some decisive movements, and about noon the loud shouts of the soldiers announced the arrival of Napoleon in person. Soon after, General Havoiski, with a body of Cossacks, part of the army opposed to Soult, surprised three regiments of horse, the advanced guard of Soult's corps, which had obeyed its orders by crossing the river at Wolfendorf, and made three hundred prisoners, besides killing a still greater number. But these partial successes were insufficient to arrest the progress of the enemy, whose masses, now rapidly arriving on its banks, gave him a decided superiority; and Benningsen resolved to fall back to the intrenched camp at Heilsberg, while Bagrathion covered the retreat on the left with five thousand foot and two thousand horse, and Platoff with three thousand Cossacks on the right.*

The retreat, however, which was now commenced, was far more hazardous than that which they had just effected with such skill, for it was to be made in presence of Napoleon and a hundred thousand men. No sooner had the Russian carriages begun to defile to the rear, than the French crossed the Passarge in great strength at all points: the guards and cavalry, with the emperor at their head, at Elditten, and the other marshals at Spandau, Lomitten, and Dippen. Their immense masses converged from all these different points towards Guttstadt and Altkirch, whither the Russian army had retired in one compact body, following the direct road to their intrenchments at Heilsberg. The great bulk of the army was so far

The Russians, pursued by the French, fell back to Heilsberg. June 9.

menaced, was far more hazardous than that which they had just effected with such skill, for it was to be made in presence of Napoleon and a hundred thousand men. No sooner had the Russian carriages begun to defile to the rear, than the French crossed the Passarge in great strength at all points: the guards and cavalry, with the emperor at their head, at Elditten, and the other marshals at Spandau, Lomitten, and Dippen. * Wilson, 138, 139. *Jom.*, ii., 405. *Dum.*, xviii., 248, 258.

advanced as to be beyond the reach of danger; but the rear-guard, under Bagrathion and Platoff, was exposed to the most imminent hazard, especially when, towards evening, it became necessary to halt and arrest the enemy, in order to give time to the numerous carriages and guns in their rear to defile over the Alle by the four bridges by which alone Heilsberg could be reached. The brave Russian, however, took post at Glottaw, and sent forth the cavalry of the Imperial Guard and Cossacks into the plain to check the advance of his pursuers. The French infantry instantly halted and formed squares, while twelve thousand of Murat's dragoons rushed upon the rear-guard at full speed, threatening to annihilate them by their thundering charge. Such, however, was the steadiness and intrepidity of the Russian horse, that they successfully combated against the fearful odds by which they were assailed: several brilliant charges took place without any decisive result on either side; but not one square of the retreating rear-guard was broken, not one squadron dispersed; and after a sanguinary conflict, Bagrathion, having gained time for the whole artillery and carriages in his rear to defile over the bridge, withdrew to the other side of the Alle, abandoning Guttstadt, with no greater loss in killed and wounded than he had inflicted upon the enemy: a rare example of intrepidity and skill in such trying circumstances, even more remarkable than the retreat of Marshal Ney two days before, as his own force was much less, and the pursuing host incomparably greater. At the same time, Platoff, on his side, also gained the river and crossed the bridges in safety, having, in order to give an example of coolness to his men, dismounted from his horse, and, with the tranquillity of parade exercise, withdrawn his forces in small bodies, with large intervals between them, which so effectually imposed upon the enemy, that he sustained no serious molestation in his retreat.*

Having thus succeeded in throwing the River Alle between themselves and the French army, and broken down all the bridges over that river, the Russians were enabled, without farther molestation, to withdraw all their troops into the intrenched camp at Heilsberg, where they stood firm under the cover of most formidable fieldworks. Napoleon had now one of two courses to follow. In his front was the great fortified camp of the enemy, by storming which he might hope to terminate the war in a single bloody battle; a little to his left was the city of Königsberg, containing the whole magazines and reserve stores of their army. The most obvious course would have been to have executed a general movement with the right in front, passing Heilsberg, so as to establish the French lines between that place and Bischoffstein, with the right extending towards Bartenstein, and the left reaching to Guttstadt; repeating thereby the circuitous sweep round the enemy's position, which his great numerical superiority so easily gave him the means of effecting, and which had proved so fatal to the Austrians at Ulm, and the Prussians at Jena; the second was to advance with the main body of the army straight against their intrenchments at Heilsberg, and, in the event of their proving so strong as to defy open force, threatening to turn them by the

* *Ann. Reg.*, 1807, 171. *Wilson*, 140, 143. *Dum.*, xviii., 258, 264. *Jom.*, ii., 405.

advance of fifty thousand men on the left towards Eylau, so as to menace the communications of the enemy with his magazines at Königsberg. The first plan offered the most decisive results, as the Russian army, if cut off from its own frontier, by being turned on the right, would have been exposed to total destruction in the event of being thrown, after a defeat, upon Königsberg and the *cul-de-sac* of the Curishé; but the second was most easy of immediate execution, from its avoiding the difficult and intricate country into which an advance upon Biehoffstein would have led the army; and, notwithstanding the obvious risk to which his left wing would be exposed by advancing between a superior mass of the enemy and the sea, Napoleon flattered himself that he would so engage his attention in front as to prevent him from taking advantage of the chances thus offered in his favour.*

On the 10th of June, accordingly, preparations Advance upon Heilsberg, the intrenched camp of Heilsberg, June 10. while Davoust and Mortier moved forward on the French left to turn its right flank, and menace the enemy's communication with Königsberg. For this purpose the cavalry of Murat led the advance against the Russian intrenchments, which were about ten miles distant; bridges were speedily thrown across the Alle at various points; they were immediately followed by the corps of Soult, Lannes, Ney, and the infantry of the guard, who pursued on both sides of that river to Heilsberg, which is situated farther down its course. As long as Bagrathion was pursuing his way through the broken ground on the other side of Guttstadt, he was enabled to keep the enemy tolerably at bay; but when he was obliged to evacuate that favourite cover, and enter upon the open plain which extended on both sides of the Alle to Heilsberg, his task of covering the retreat became much more difficult. In vain the Russian cavalry, by repeated charges, strove to retard the advance of their indefatigable pursuers; in vain the infantry retired by echelon in alternate lines to sustain by continued fire their retrograde movements: the French cavalry and horse artillery incessantly pressed on; by degrees the losses of the Russians became more severe, and they were beginning to fall into confusion, when the opportune arrival of fifteen squadrons of Prussian cavalry, with a troop of horse artillery which Benningsen sent to his succour, gave him great relief, and, by their gallant bearing, enabled Bagrathion to maintain the fight, though with serious loss, till six at night, when the whole allied army had got within its lines. Then, on the word given, the Russian and Prussian cavalry withdrew by their flanks, exposing to view within half-cannon shot the formidable intrenchments, bristling with bayonets, and armed in this part with one hundred and fifty pieces of artillery. Instantly a fire of grape of extraordinary severity was opened upon the enemy, which speedily swept off all the squadrons who could not escape from its fury; and, though Murat brought up several batteries of cannon, and swarms of tirailleurs occupied every thicket and kept up an incessant rattle along the whole front of the lines, yet they produced no impression, and the superiority of the Russian fire was very apparent.†

The position of Heilsberg, however, was too important for Napoleon to relinquish the prospect of making himself master of it by main force without a struggle. Situated on a cluster of heights on both banks of the Alle, of which the town covered a part, it commanded the three roads of Wormditt, Mohlsack, and Landsberg, which intersected each other within the intrenched camp, and in this way blocked up the access to Eylau and Königsberg. As long as the Russians held this important position, and at the same time maintained the course of the Lower Passarge towards Braunsberg, their line might be considered unassailable. But from the moment that they were driven from the latter ground; and the enemy's columns began to interpose between the intrenched camp and the sea, threatening Eylau and Friedland, its advantages were at an end, because it was cut off from its communication with the very depôts which it was designed to protect. Its weakest side was that on the left bank of the Alle, which was connected with the redoubt on the other side by four bridges. Nearly eighty thousand men were here assembled, under the cover of above five hundred pieces of cannon, in nine divisions: of whom seven, under the Grand-duke Constantine, occupied the left bank of the river, and two, under Prince Gortchakoff, the right bank; while Kamenskoi was stationed in the redoubts which covered the front of the position.*

Napoleon having collected forty pieces of artillery, under the command of General Battle of al Dulauloy, on his left, pushed them forward, and, by the vivacity of their fire, in some degree weakened that of the enemy. The divisions of St. Cyr and Legrand, part of Soult's corps, with Murat's cavalry, advanced, about seven in the evening, by the villages of Lauden, Langwiesse, and Bewernicken, to the attack of the enemy's redoubts on the right bank of the river. These brave men had no sooner quitted the cover of the ravine which for some time sheltered them from the enemy's fire, than they rushed forward with such vigour that, in the first onset, they carried the principal redoubt of the Russians in that quarter, with all the guns which it contained; while St. Hilaire, with his division, penetrated between that intrenchment and the neighbouring works. The moment was critical, and the least wavering would have exposed the Russians to total ruin, for a line of redoubts broken in upon at one point is wellnigh lost; but Benningsen was at the head of men who were equal to any emergency. Prince Gortchakoff, who commanded the Russian right wing, instantly ordered the divisions under his command to charge; the animating hurrahs of his men demonstrated that he had not calculated in vain on their intrepidity at that trying crisis: on they rushed with fixed bayonets, and the two regiments which occupied the redoubt were almost totally destroyed, and their eagles taken. Following up their success, the Russians burst out into the plain between the wood and the redoubts, and forced Soult's divisions to give ground. With the steadiness of discipline, however, they retired in hollow square by echelon, which vomited forth an incessant rolling fire upon their pursuers: the approach of night gave these moving citadels the appearance of being encircled with flame, while the intrench-

Description of the position and intrenched camp of Heilsberg.

ments represented a line of volcanoes in vehement eruption. At length, however, the retreat of Legrand and St. Cyr obliged St. Hilaire, who had penetrated to the very foot of the redoubt, and had borne without flinching their terrible discharge of grape, also to retire; Savary, with two regiments of the guard and twelve guns, came up to cover his retreat; he, in his turn, however, was surrounded. The French at all points retired to the cover of the woods, and narrowly escaped being made prisoners by the allied cavalry; and at length, grievously shattered, the victorious Russians were again withdrawn into their intrenchments.*

The vehement cannonade which had so long illuminated the heavens now ceased, and the cries of the wounded, in the plain at the foot of the intrenchments, began to be heard above the declining roar of the musketry. At 11 at night, however, a deserter came into the Russian lines, and announced that a fresh attack was preparing. Suitable arrangements were accordingly made; and hardly were they completed, when dark masses of the enemy were seen, by the uncertain twilight of a midsummer night, to issue from the woods, and advance with a swift pace across the bloody plain which separated them from the redoubts. Instantly the batteries opened on the moving masses; they staggered under the discharge, but still pressed on, without returning a shot; but when they arrived within reach of the musketry the fire became so vehement that the heads of the columns were entirely swept away, and the remainder driven back in great disorder, after sustaining a frightful loss. At length, at midnight, after twelve hours' incessant fighting, the firing entirely ceased, and nothing was heard in the narrow space which separated the two armies but the groans of the wounded, who, anticipating a renewal of the combat in the morning, and tortured by pain, implored removal, relief, or even death itself, to put a period to their sufferings.†

* Wilson, 145, 146. Dum., xviii., 272, 277. Bign., vi., 299. Savary, iii., 53.

† "I had on this occasion," says Savary, "an exceedingly warm altercation with the Grand-duke de Berg (Murat), who sent to me, in the very thickest of the action, orders to move forward and attack; I bade the officer who brought the order go to the devil, asking, at the same time, if he did not see how we were engaged. That prince, who would have commanded everywhere, wished that I should cease firing, at the hottest period of the fight, to march forward; he would not see that, if I had done so, I should infallibly have been destroyed before reaching the enemy. For a quarter of an hour I exchanged grape with the enemy—nothing enabled me to keep my ground but the rapidity of my fire. The coming on of night was most fortunate—while every one slumbered the emperor sent for me. He was content with my charge, but scolded me for having failed in the support of Murat. When defending myself, I had the boldness to say he was a fool, who would some day cause us to lose a great battle; and that it would be better for us if he was less brave and had more common sense. The emperor bade me be silent, saying I was in a passion, but did not think the less of what I said. Next day he was in very bad humour; our wounded were as numerous as in a pitched battle."—SAVARY, iii., 54. "He was particularly angry at the cavalry, saying they had done nothing he had ordered."—WILSON, 149.

‡ Wilson, 146, 147. Dum., xviii., 276, 278. Bign., vi., 299. Sav., iii., 53, 54.

§ The bad success of the attack on Heilsberg gave rise to a furious altercation between Lannes and Murat, and an explosion of the former, who was subject to ungovernable fits of passion, even with the emperor himself. It is thus narrated, with dramatic power, by the Duchess of Abrantes: "Your brother-in-law is a mountebank, sir—a tight-rope dancer, with his white dancing plume." "Come, now, you are joking," answered Napoleon, in good-humour: "is he not

Heavy rain fell in the early part of the night, which, though it severely distressed the soldiers who were unhurt in their bivouacks, assuaged the thirst and diminished the sufferings of the host of wounded of both armies, who lay mingled together on the plain. With the first dawn of day the Russians again stood to their arms, expecting every moment to be attacked; but the morning passed over without any movement on the part of the enemy. As the light broke the French were descried on the skirts of the wood, in order of battle, but, more even than by their well-appointed battalions and squadrons, the eyes of all were riveted on a spectacle inconceivably frightful between their lines and the redoubts. This space, about a quarter of a mile broad and above a mile in length, presented a sheet of naked human bodies, the greater part dead, but some showing by their motions that they preserved consciousness or implored relief. Six thousand corpses were here lying together as close as they had stood in their ranks, stripped during the night of every rag of garment by the cupidity of the camp-followers of either army, ghastly pale, or purple with the blood which was still oozing from their wounds. How inured soever to the horrors of a campaign, the soldiers of both armies, even while they loathed it, felt their eyes fascinated by this harrowing spectacle, which exhibited war, stripped of all its pomp, in its native barbarity; and, by common consent, the interval of hostilities was employed in burying the dead, and removing the shivering wounded to the rear of the armies.*

Napoleon was extremely disconcerted by this repulse, and vented his ill-humour in violent sallies of passion against his generals. The butchery had been worse than useless—it had been hurtful. The Russians still held, in unshaken strength, their intrenchments; twelve thousand French had fallen around their redoubts, without having gained, at the close of the day, the mastery of one of them; the ditches were filled with their dead bodies, but no part of them had been crossed. Eight thousand Russians also were killed or wounded; and this loss, though less than that of their opponents, from their having fought in part under cover, was still greater, perhaps, in proportion to the relative strength of their army. The French emperor, however, had felt too severely the strength of

Frightful appearance of the slain after the battle.

Napoleon turns their flank, and compels them to evacuate Heilsberg.

brave? "And who is not so in France? We point with the finger at a coward. Soulé and I have done our duty: we refuse to allow the honour of that day to your brother-in-law—to his serene and imperial highness, Prince Murat! Truly, these titles make one shrug his shoulders! The mania of royalty has seized him also; and it is to tack his mantle to your own that you wish to rob us of our glory. You have only to speak: we have enough remaining—we will willingly give it to him." "Yes!" exclaimed Napoleon, no longer able to contain himself: "I will bestow or take away glory as I please: for hear ye! it is I ALONE who give you both glory and success." On this Lannes became pale with rage; and with a voice quivering with passion he exclaimed, "Yes! yes! because you have marched up to the ancles in gore on this bloody field, you think yourself a great man; and your fine emplumed brother-in-law crows on his own dunghill. I will have no more of this. And this fine victory of yours—a great triumph, truly! twelve thousand corpses lying on the plain to keep the field for your honour, where you can only trace the French uniform by fractures and mutilation; and yet to deny to me—to me, Lannes—my due share in the honours of the day!"—D'ARBANTES, ix., 369, 372. The lively duchess, with her usual inaccuracy on military details, recounts this scene as relating to the battle of Eylau; but that is impossible, as Lannes was not in that battle at all, but sick in the rear.—*Vide ante*, ii., 473.

* Wilson, 147. Sav., iii., 54.

the enemy's position to venture upon a renewal of the attack, and therefore he resolved to compel the Russians to evacuate it by manoeuvring on their flank. For this purpose he took advantage of the arrival of Marshal Davoust's corps to push it forward at noon on the Landsberg road towards Eylau and Königsberg. This movement alarmed Benningsen, who, though not apprehensive of being forced in his intrenched position, was extremely afraid of being cut off from his supplies at Königsberg, on which the army depended for its daily subsistence; and at the same time an order of Napoleon to Victor was intercepted, which contained commands to attack Lestocq and the right wing of the allies at all points, and push on for Königsberg. Seeing the movement of the enemy to turn his right flank and threaten his magazines now clearly pronounced, the Russian general gave orders to retreat: the intrenched camp was evacuated at nightfall, and the army marched all the night of the 11th, and established themselves, at break of day, in a position in front of Bartenstein, headquarters being transferred to that town. Though great part of this operation was performed after daybreak on the 12th, in sight of the enemy, yet such was the respect produced by the battle of Heilsberg, that they made no attempt whatever to molest the retreat.*

Movements of the two armies before the battle of Friedland.

No sooner was this retrograde movement perceived by the French emperor, on the morning of the 12th, than he detached Murat's dragoons to follow upon the traces of the enemy; and he himself, moving forward his whole army, established his headquarters in the evening on the bloody fields of Preussisch-Eylau. It was no longer a shivering scene of ice and snow: green fields were to be seen on all sides; clear and placid lakes gave variety and animation to the landscape; woods, resplendent with the early green of summer, fringed the rising grounds, and numerous white villages, with handsome spires, rose above their summit, attesting the industry and prosperity of the inhabitants under the paternal government of Old Prussia. The French soldiers could hardly recognise, in the gay and smiling objects around them, the frightful scene of devastation and blood which was imprinted in such sombre colours in their recollection during the preceding winter.

June 12. Meanwhile, General Lestocq resolved to break up from Braunsberg and the Lower Passarge, and retire by the margin of the Frischaff towards Königsberg: a measure which had become indispensable to prevent his being entirely cut off from his communication with the main army, and thrown back without resource on the margin of the sea. Kamenskoi was also directed by Benningsen to march upon Königsberg, but on arriving at Mulhausen, on the road to that city, he found it already occupied by the advanced guard of Davoust, and only reached the object of his destination by making a very long circuit. During the night of the 12th the Russians resumed their march through Schippenheil, and on the following morning had reached the banks of the Alle. On arriving there, however, Benningsen received information that the French had, by the rapidity of their movements and by following the chord of the arc which led to Königsberg, while his own troops were traversing the circumference, anticipated

him in his march upon that city, and were already so far advanced on the road that they could not be overtaken. Murat and Victor were in full advance from Eylau to Königsberg. Soult was marching on Creutzburg; Napoleon himself, at the head of the corps of Lannes, Ney, and Mortier, was approaching to Friedland by Dornau, at which latter place the Imperial Guard was already arrived. A glance at the map must be sufficient to show that by these different movements, not only was the bulk of the French army interposed between the Russian general and Königsberg, where all his magazines were placed, but Napoleon was in a situation, by a rapid advance upon Wehlau, to threaten his line of retreat to the Russian frontier. In these circumstances no time was to be lost, and, though the troops were dreadfully fatigued, orders were given to continue the march all day, and by great exertions the army reached Friedland, where headquarters were established in the evening.*

Friedland, which has acquired immortal celebrity by the memorable battle of Description which it was the theatre, is a considerable town situated on the left bank of the River Alle, which there flows in a northern direction towards the Baltic Sea. It is situated between the river and a large artificial lake or fishpond, which lies to the north, and has been formed by damming up a rivulet called the Mill Stream, which flows from the high grounds to the westward near Posthenen into the Alle, and falls into it at right angles. The windings of the Alle serve as a natural wet ditch round Friedland on the south and east; the artificial lake protects it on the north; in a military point of view, therefore, it is only accessible on the western side, where it is approached by the road from Eylau, which the French were pursuing, and from which side also set out the roads to Königsberg to the north, and Wehlau and Tilsit on the northwest. In that direction there is a large open space dotted with villages and cultivated ground, neither hill nor plain, but an undulated surface, intersected only along its whole extent, by the ravine formed by the Mill Stream, which is very deep, with rugged sides, and in many places, from the reflux waters, scarcely fordable. At the distance of two miles from Friedland as a centre, the cultivated plain to the westward is bounded by a semicircle of woods, which fringe the higher grounds and form the horizon when looking in that direction from the town. The banks of the Alle on the eastward are very steep; and though there are three bridges over that river, two of which were formed by the Russians with pontoons at the town itself, in other quarters it could be passed only at a few fords, which were unknown to the allies till late in the evening, and at that period, from the recent heavy rains, were scarcely practicable.†

In the night of the 13th, Benningsen received information that the corps of Lannes, which had suffered so severely at Heilsberg, was lying at Posthenen, a village about three miles from Friedland on the road to Königsberg. The exposed situation of that corps, which formed the vanguard of the French army, and the well-known losses which it had sustain-

Benningsen resolves to attack Lannes's corps. Situation of that corps.

ed at Heilsberg, inspired the Russian general with the hope that, by a sudden attack, it might be destroyed before the main body of Napoleon's forces could advance to its relief. This resolution was taken at two o'clock on the morning of the 14th: orders were immediately despatched, and at four the Russian vanguard was already defiling over the bridge of Friedland. The opportunity was tempting, and, to all appearance, the corps of Lannes was placed in a situation of great danger: it consisted now of only twelve thousand infantry and three thousand horse; and though the corps of Mortier, Ney, and Victor, with great part of the cavalry of Murat, might be shortly expected to arrive at the scene of action, yet some hours must elapse before the foremost of these powerful auxiliaries could be relied on, and in the mean while this detached body was exposed to the shock of above fifty thousand veteran troops, who, by proper exertion, might be directed against it. Here, in short, as at Marengo, the French army was to be attacked when on a line of march in echelon, by the concentrated masses of the enemy, who fell first on the leading corps; but there was this essential distinction between its position on these two memorable days, that on the former occasion the army was stationary or retreating, so that the distant corps could not arrive till late on the field of battle, whereas here it was advancing, and, consequently, unless decisive success were gained in the outset, the assailants would have the whole hostile body upon their hands;* and, in case of defeat, could retreat only by the bridge of the Alle, which was wholly inadequate to afford an issue to so large a force.

No sooner were the advanced posts of the Russians descried by the videttes of Lannes's corps than a sharp fire of musketry began, which was soon increased to a heavy cannonade as the dark masses of infantry and cavalry were seen swiftly advancing through the gray twilight of the summer morning. The French tirailleurs fell back, skirmishing, however, sharply as they retired; the alarm was speedily communicated to the rear, and the whole corps stood to arms. A single Russian division had at first been passed over, but the enemy's troops were so constantly fed from the rear, and the resistance opposed so considerable, that Benningsen soon found himself under the necessity of passing over another to its support: three pontoon bridges were constructed to facilitate the passage, and by degrees, as the increasing masses of the enemy showed that other corps had arrived to the support of Lannes, the whole army was brought across. Thus was the Russian general, who at first contemplated only a partial operation, insensibly drawn into a general action, and that, too, in the most disadvantageous of all possible situations, with a superior force of the enemy in front, and a deep river traversed only by a few bridges in his rear.†

The corps of Mortier arrived to the support of Lannes in a short time after the firing commenced, and both corps withdrew to the heights stretching from Posthenen to Heinrichsdorf, about three miles to the westward of the River Alle. Deeming these the only forces with which

he had to contend, and considering himself adequate to their destruction, Benningsen drew up his whole forces, as they successively arrived on the field from the bridges, in the narrow plain, backed by Friedland and the Alle, facing towards the westward, about half a mile in front of that town. The Mill Stream flowing in a perpendicular direction to his line, nearly cut it in two equal parts: the right wing extended from the rivulet to the Alle, through the wood of Domerauer; the left, which was less considerable in length, stretched in a southerly direction also to the Alle, across the wood of Sortlack, and barring the roads of Eylau, Bartenstein, and Schippenheil, nearly at the point where they intersected each other. The whole army was drawn up in two lines facing to the west: the first and third battalions of each regiment, in battle array, composing the first line; the second, in close columns behind the intervals between them, forming the second. Thus the Russians stood on the arc of the segment of a circle formed by the River Alle in their rear. Only one division, of nine regiments and twelve squadrons of horse, remained on the right bank. Gortchakoff commanded the right wing, Bagration the left: Uvaroff and Gallitzin the cavalry of the right, Kollagriboff the horse on the left. After taking into view the losses in the preceding actions, and the large detachment, under Kamenskoi, to the right to the support of Lestock, the whole force of the Russians, on both sides of the river, did not exceed 55,000 men, of whom about ten thousand were cavalry. They were all brave and experienced soldiers, but exhausted by fatigue and want of sustenance for several days; and every man in the array was entirely exposed to fire, and every movement distinctly seen, while that of the enemy was for the most part concealed or sheltered by the woods and rising grounds which fringed the plain to the westward, and bounded the horizon on that side.*

Even with this comparatively inconsiderable force, however, the Russian general might at least, in the earlier part of the day, have gained considerable, perhaps decisive success, against the corps of Lannes and Mortier, which alone had come up to the field of battle, had he acted at once with the vigour and decision which the opportunity afforded, and the critical circumstances in which he was placed imperatively required. But, unfortunately, he was so prepossessed with the idea that he had no other antagonist to expect than the two corps actually on the spot, that the precious hours, big with the fate of Europe and the world, were allowed to elapse without any decided movement being attempted. Lannes gradually fell back from the place in front of Friedland, as the successive divisions of the enemy crossed the bridges, and established themselves on the left bank of the river; skilfully availing himself, however, of every advantage which the inequalities of the ground afforded to retard the advance of the enemy, and covering his movements with a cloud of light troops, whose incessant fire concealed the real amount of his force. A severe action took place on the right, while a body of thirty French squadrons tried to turn the Russian right in front of Heinrichsdorf, and at first with some success; but the

No decisive success is gained on either side before the arrival of the other French corps.

advance of some fresh regiments compelled the assailants to give ground in that quarter. Soon after a column of three thousand men advanced straight against Friedland: they were permitted to approach close to the Russian cannon without a single shot being fired, when suddenly the whole opened with grape, and with such effect that in a few minutes a thousand men were struck down, the column routed, and an eagle was taken. Encouraged by this success, the Russians advanced their left wing, and drove back the French right with such vigour, that it was thought they were retiring altogether towards Eylau; but this success was of short duration: fresh re-enforcements arrived to the enemy, the lost ground was regained, and a tremendous cannonade along the whole line announced that the other corps were arriving, and that a general battle was at hand.*

Napoleon was at Domnau, ten miles distant, when the first sound of distant cannon was heard. He immediately mounted on horseback and rode rapidly forward to the front, where the increasing cannonade and the quick rattle of musketry announced that a serious conflict was already engaged in, despatching, at the same time, orders for the corps in the rear to hasten their march. About one o'clock in the afternoon he arrived on the heights behind Heinrichsdorf, which overlooked the field of battle, and immediately sent out the officers of his staff in different directions to observe the motions of the enemy. Savary speedily returned with information that the march of troops over the bridge of Friedland was incessant; that none were retracing their steps; that three additional bridges had been constructed to facilitate the passage, and that the masses in front were every minute increasing and extending themselves. "Tis well," replied the emperor: "I am already prepared; I have gained an hour upon them, and, since they wish it, I will give them another: this is the anniversary of Marengo; the battle could not have been fought on a more propitious day." Orders were despatched for all the corps of infantry, as they came up, to concentrate themselves in the immense woods behind Heinrichsdorf, on the skirts of which Marshal Lannes was combating; the artillery alone was placed on the great roads leading from Eylau and Domnau; the cavalry in the large apertures which had been cut for the objects or agriculture in these extensive forests. The firm countenance and dense masses of the enemy, who appeared even more numerous than they really were, as seen from the heights of Heinrichsdorf, at first made the emperor doubtful whether he should not postpone the attack till the following day, when the remainder of the cavalry of Murat and the corps of Davoust might be expected to join from the side of Königsberg;† but the successive arrival of the corps

of Ney and Victor,* with the infantry and cavalry of the guard, and part of Murat's dragoons, at two and three o'clock, joined to the obvious and flagrant disadvantages of the enemy's position, induced him not to lose a moment in bringing matters to a decisive issue. Orders were accordingly despatched for all the troops to prepare for action in an hour. Meanwhile the soldiers were ordered to sit down and rest themselves, while the most minute inspection took place in the ranks to see that the firelocks were in good condition, and the cartridge-boxes amply supplied. The order of battle was soon fixed. Ney occupied the right, directly in front of Friedland; next stood Mortier, on the extreme right of Lannes. In the second line Victor's corps was stationed immediately behind Ney; the Imperial Guard, with a numerous brigade of fusileers, under the orders of Savary; and the cavalry, under Grouchy, Latour Maubourg, and Nansouty, behind the centre and right. The whole army was directed to advance in echelon, with the right in front and the left slightly thrown back; thus Ney would be first engaged; and the artillery received orders to redouble their fire along the whole line as soon as the heads of their columns were seen emerging from the woods. By four o'clock seventy thousand infantry and ten thousand horse were assembled, in the highest spirits and the finest state of discipline and equipment; while Benningsen, who, from seeing the formidable accumulation of forces in his front, had deemed it necessary to detach six thousand men to his rear to secure the bridge of Wehlau over the Pregel, had not more than thirty-eight thousand foot and eight thousand horse to oppose to their attack.†

The cessation of any serious attack for some hours after noon led the Russian general, who had long since abandoned his original project of surprising Lannes, and was desirous only of maintaining his ground till the approach of night gave him the means of regaining, without molestation, the right bank of the Alle, to indulge a hope that nothing farther would be undertaken during that day; but he was soon painfully undeceived. At five o'clock, on a signal given by a discharge of twenty pices of cannon from the French centre, the whole army stood to their arms, and immediately the heads of Marshal Ney's column were seen emerging from the woods behind Postehen, and rapidly advancing straight upon Friedland. On all sides the enemy's forces at once were seen: from the steeples of Friedland, through the interstices of the trees, or in the openings of the forest, they were descried in masses of enormous power and depth. From the plain, the horizon appeared to be bounded by a deep girdle of glittering steel. At one glance the most inexperienced could see the imminence and magnitude of the danger, for no preparations to cover the retreat over the Alle had been made, and the enemy's force appeared at least double that of the Russians. But there was no time for consultation or defensive measures. On came Ney's column with the fury of a splendid at-
tempt, driving before them, like tacks by Ney's foam before the waves, the Russian corps.

I may engage only in a cannonade to-day, and await your arrival before commencing serious operations."—JOMINI, ii., 414.

Preparatory
dispositions
and forces of
Napoleon.

* Dum., xix., 12, 14. Jom., ii., 412. Wilson, 154, 156.

† Accordingly, at one o'clock, he wrote to that general from the field: "The enemy is in battle array in front of Friedland, with all his army. At first he appeared desirous of moving on by Stocken on Königsberg; but now he appears only desirous of receiving battle on the ground he has chosen. I hope that, by this time, you have entered Königsberg; and as the corps of Soult is sufficient for the protection of that city, you will, without doubt, retrace your steps as rapidly as possible, with the remainder of the cavalry and Davoust's corps, towards Friedland. It is the more necessary that you should do so, as very possibly the affair may be protracted till to-morrow. Use your utmost efforts, therefore, to arrive here by one o'clock in the morning. If I perceive, in the outset of the action, that the enemy is in such strength as to render the result doubtful, it is possible that

chasseurs of the guards and several regiments of cavalry and Cossacks who were placed in advance, and had endeavoured to check their progress. Some regiments of militia, stationed on the low grounds near the Alle, also broke and fled towards the bridges, spreading confusion and alarm through the whole rear of the army. At the same time Victor's corps, placed at first in the second line, advanced to the ground originally occupied by Ney, and its artillery, consisting of forty pieces, under the command of General Senarmont, pushed on four hundred paces farther, and from a rising ground thundered over the whole Russian line, and effectually prevented any succours being sent to the distressed left. That portion of their army was now everywhere shaken: the loud shouts of Ney's column were heard along the whole line; their advanced guards were close to Friedland, and, encouraged by this rapid and splendid success,* they were already preparing to storm the town and complete the ruin of the enemy by gaining possession of the bridges in his rear.

At this instant the Russian Imperial Guard, which was placed in reserve behind the artificial lake to the north of Friedland, was ordered to advance. Gallant charge of the Russian guard nearly regains the day. They rushed forward with fixed bayonets, but not in compact order, yet with such vigour, that the leading divisions of Ney's corps, assailed in front and flank, were pierced through, trodden down, and driven back with prodigious slaughter. Such was the change produced by this vehement onset, that the day seemed all but regained: they were repulsed to a considerable distance, and the Russian left wing, in its turn, became the assailants. Then it was that the six thousand men detached in the forenoon to Wehlau might have changed the destinies of Europe. But the Russian guards, being unsupported by any farther reserve, could not singly maintain the contest with the overwhelming odds which were directed against them. As they hurried on in pursuit of Ney, they came upon the reserve under Victor, which had advanced to his support; and one of his divisions, under Dupont, charged them so opportunely in flank while disordered by the vehemence of their pursuit, that they were in their turn repulsed to the edge of the town. Encouraged by this turn of fortune, Ney's soldiers now returned to the charge. Dupont's division, emulating the deeds of its old comrades in the camp of Boulogne, pressed on in hot pursuit; Senarmont's terrific battery advanced, playing without intermission on the crowded ranks of the retiring Russians, and soon the confusion and press in Friedland appeared so great, that the leading French divisions were tempted to hazard an assault.† After an obstinate resistance, the streets were forced: some of the principal buildings in the town took fire; in the first moments of consternation the fugitives applied the torch to the bridges over the river; in a few minutes they were wrapped in flames, and the volumes of smoke which rolled over the whole field of battle spread a dismal feeling in the breasts of the soldiers.

While this decisive success was gaining on the left, the centre and right of the Russians kept their ground with undaunted firmness under a

Progress of the actions on the centre and right of the Russians. dreadful cannonade, which told with fatal effect on the dense masses which, from the limited extent of the ground, were there accumulated between the front and the river. They had even gained considerable success; for some battalions, having broken their array in crossing the deep ravine of the Mill Stream, with which they were unacquainted, were charged before they could reform by the Russian cavalry, and cut to pieces. But when the retreat of the left wing and the guards had uncovered their flank, the infantry in the centre were exposed to the most serious danger, and must have given way, had not the Russian cavalry galloped forward at full speed and charged the corps who threatened them, who were the left of Oudinot's grenadiers, with such vigour that they were in a few minutes trampled under foot and destroyed. Encouraged by this success, the infantry of the centre also moved forward, and threw in so destructive a flanking fire as effectually covered the retreat of their horse; but at this moment the flames of Friedland and the bridges were seen to arise, and the vast clouds of black smoke which darkened the atmosphere told too plainly that their retreat was cut off, and that success was hopeless. Then, indeed, their hopes fell, and despair took possession of every heart. Still, however, the Russian courage was unshaken: uniting the fronts of battalions, closing the ranks of the soldiers, they presented, in circumstances which seemed wellnigh desperate, an unbroken front to the enemy. In vain the artillery, approaching to half cannon-shot distance, ploughed through their dense array; in vain the French infantry threw in a destructive fire with ceaseless vigour; in vain the grenadiers of their guard charged repeatedly with the shouts and confidence of victory: not one square was broken—not one gun was taken. Slowly and in solid order they retired, leisurely retracing their steps towards the river, keeping up an incessant rolling fire from the rear, which faced the enemy, and charging with the bayonet whenever hard pressed by their pursuers.*† Whoever witnessed the conduct of that devoted host during these trying hours, must have felt that Russia, if adequately directed, was destined in the end to take the lead in the deliverance of Europe.

Benningesen, meanwhile, without losing his

* Wilson, 160, 161. Sav., iii., 59. Jom., ii., 418, 419. Dum., xix., 20, 21. Saalf., i., 646.

† "But yet, though thick the shafts as snow,
Though charging knights like whirlwinds go,
Though bill-men ply the ghastly blow,
Unbroken was the ring;

* * * * *

Each stepping where his comrade stood,
The instant that he fell.
No thought was there of dastard flight:
Link'd in the serried phalanx tight,
Groom fought like noble, squire like knight,
As fearlessly and well;
Till utter darkness closed her wing
O'er their thin host and wounded king.
Then skill'd Napoleon's sage commands
Led back from strife his shatter'd bands;
And from the charge they drew,
As mountain-waves, from wasted lands,
Sweep back to ocean blue.

Then did their loss his foemen know:
Their chiefs, their lords, their mightiest low,
They melted from the field as snow,
When streams are swollen and south winds blow,
Dissolves in silent dew.

Alle's echoes heard the ceaseless plash,

While many a broken band,

Disorder'd through her currents dash,

To gain the Russian land." *Marmion*, canto vi.

Benningsen's measures to secure a retreat.

presence of mind in the general wreck, did all that prudence could suggest to repair the consequences of the error into which he had been drawn in the earlier part of the day. His first care was to discover a ford for the cannon, as Friedland was in the hands of the enemy, and the bridges were no longer passable by friends or foes. Happily, some peasants pointed out one where the great park of artillery might be got across: it was in the first instance withdrawn, with the exception of a few pieces which fell into the enemy's hands, while the firm countenance of the infantry warded off the assault of his impetuous columns; but the water came up to the horses' middles, and what remained of the ammunition was utterly spoiled. A hundred guns were immediately after the passage planted on the right bank to retard the enemy; but so closely were the columns on the opposite sides intermingled that it was dangerous to fire, lest the balls should fall in the Russian lines. Meanwhile two of their divisions, impatient of the slow progress at the ford, and unable to endure any longer the incessant showers of musketry and grape, threw themselves, sword in hand, into Friedland, and endeavoured to open a passage with fixed bayonets to the bridge. A desperate struggle ensued with the troops of Ney and Victor in the streets, but the despair of the Russians prevailed over the enthusiasm of the French, and they made their way through the burning houses to the water's edge. There, however, they found the bridges destroyed; and these brave men, after having so heroically cut their way through the hostile ranks, found themselves stopped by an impassable barrier, while the increasing masses of the enemy now enclosed them, amid fire and darkness, on every side. Still, however, no one thought, even in circumstances all but desperate, of surrender: with heroic courage they fought their way back, though with prodigious slaughter, to the ford, and during the darkness of the night plunged into the stream. The water was breast high, and many, missing the fords, were drowned; several guns were abandoned, from the impossibility of dragging them through the press; but such was the unconquerable valour of the rear-guard to the very last, that not one battalion capitulated, and, with the exception of five thousand wounded, few prisoners fell into the enemy's hands.*†

Such was the disastrous battle of Friedland, which at one blow dissolved the great results of the confederacy which the genius and foresight of Mr. Pitt had formed for the coercion of Napoleon's ambition, and left Great Britain alone to maintain the contest with the whole force of the Continent arrayed under his banners. Grievously, then, was felt the want of British aid, and woful were the consequences of the ill-timed parsimony which had withheld all subsidies from Russia during this desperate

struggle: thirty thousand of the militia, whom even a small loan would have clothed and armed, might have averted the catastrophe; twenty thousand British auxiliaries would have converted it into a glorious victory, and thrown Napoleon back upon the Vistula and the Elbe. The losses of the Russians, though nothing like what they had experienced in the decisive overthrow of Austerlitz, were still very severe. Seventeen thousand men had fallen, either killed or wounded, and five thousand of the latter had been made prisoners; but of those unhurt not more than five hundred had become captives; no colours were taken, but seventeen guns remained in the enemy's power. The French had lost eight thousand men, and two eagles wrested from them in fair combat. Nothing can illustrate more clearly the desperate resistance made by the Russians than the small number of guns taken, under circumstances when, with less steady troops, the whole artillery would have been abandoned.*†

During the evening, the right wing of the Russians and part of the cavalry retired by the left bank of the Alle, and crossed without molestation at the bridge of Allenberg. Thither, on the morning after the battle, the remainder of the army retired by the other bank without being at all harassed on the march; indeed, it is a remarkable and unaccountable circumstance that, though fifteen thousand French horse were in the field, they were little engaged in the action after Napoleon arrived on the spot, nor once let loose in the pursuit. On the day following they reached Wehlau, where the Alle and the Pregel unite in the midst of a marshy plain, traversed by a single chaussée. By that defile, not only the artillery and carriages of the main army, but the immense baggage and ammunition train, which had evacuated Königsberg, had to pass; and although no enemy was in sight, yet such was the confusion produced by the enormous accumulation of cannon and chariots on a single chaussée, and such the apprehensions inspired by the evident dangers which would ensue if the rear-guard were to be attacked, that, on a few muskets being accidentally discharged, a general panic took place, and horse, foot, and cannon rushed tumultuously together to the bridge, and, the strongest throwing down and trampling under foot the weaker, broke through and spread in the wildest disorder into the town. Such was the uproar and consternation which ensued, that it was with the utmost difficulty that order could be restored by the personal efforts of

The Russians retreat without molestation to Allenberg and Wehlau. June 15.

June 16.

* Wilson, 163. Dum., xix., 21, 23. Jom., ii., 420, 421. 79th Bull., Camp. de Saxe, iv., 334. Sav., iii., 59, 60.

† The French say in the bulletins, that they took 80 pieces of cannon, and that the Russians had 18,000 killed, and that they lost on their own side only 500 killed and 3000 wounded. Berthier estimated the real loss at Tilsit to Sir R. Wilson at more than 8000; and that officer makes the Russian loss only 12,000 men. The latter estimate, however, is obviously too low, as the peace which immediately followed demonstrated; the account in the bulletin was, as usual, from a third to a fourth of its real amount.—79th Bulletin, Camp de Saxe, iv., 334; and WILSON, 163.

‡ "The Russians had on their right 22 squadrons of cavalry, who covered their retreat; we had more than 40, with which we should have charged them, but, by a fatality without example, these forty squadrons received no orders, and never so much as mounted their horses; they remained during all the battle on foot behind our left; on seeing that, I lamented the Grand-duke de Berg had not been there; if he had, these forty squadrons would certainly have been employed, and not a Russian would have escaped."—SAVARY, iii., 60.

* Saalf., i., 647–8. Wilson, 159, 161. Jom., ii., 419, 421. Dum., xix., 19, 23. Sav., iii., 59. Bign., vi., 304, 305.

† In describing this battle, Lord Hutchinson, who witnessed it, stated, in his official despatches to the British government, "I want words sufficiently strong to describe the valour of the Russians, and which alone would have rendered their success undoubted, if courage alone could secure victory; but, whatever may be the event, the officers and men of the Russian army have done their duty in the noblest manner, and are justly entitled to the praise and admiration of every person who was witness of their conduct."—LORD HUTCHINSON'S Despatch, June 15, 1807; SIR ROBERT WILSON, 162.

Sir Robert Wilson and a few Russian officers who happened to be on the spot; and it inspired these gallant chiefs with the melancholy conviction that, if Napoleon had followed up his success with his wonted vigour, the Russian host would have been utterly annihilated.* But on this occasion, as on many others in the memorable campaign of 1812, it was apparent that the vigour of the emperor in following up his victories was by no means proportioned, either to what it had been in the German or Italian wars, or to the successes which he claimed at the moment: a circumstance for which his panegyrists find it difficult to offer any explanation, but which, in truth, is susceptible of a very easy solution, when the desperate nature of the resistance opposed to him in these northern latitudes, and the consequent magnitude of his losses, is taken into consideration.†

The catastrophe at Friedland, and subsequent retreat of the allies behind the Pregel, rendered the city of Königsberg, which was situated considerably in advance of that river on the left bank or front of its course, no longer tenable. General Lestocq had, with his wonted ability, conducted the retreat of his little army with very little loss, till he was joined on the 12th, in front of Königsberg, by the corps of Kamenskoi. Even their united forces, however, not more than twenty-four thousand strong, could hardly hope to save that town without the assistance of the main army, when they were attacked by the corps of Soult and Davoust, and the greater part of the cavalry under Murat, amounting to full fifty thousand men, of whom above twelve thousand were horse in the finest condition. Notwithstanding this overwhelming odds, however, Lestocq made the attempt, and by the firm countenance which he assumed, and the devoted heroism of his rear-guard in the retreat from the lower Passarge, succeeded in so far retarding the enemy as to gain time for the evacuation of almost all the magazines and stores in the city, even by the narrow and crowded defile of Wehlau. But this great object was not gained

without sustaining a considerable loss. A battalion was surrounded and made prisoners which had been left to defend the passage of the Frisching; and on the following

day, a column of twelve hundred men, which was enveloped by St. Cyr's division and Murat's cavalry, was, after a gallant resistance, compelled to surrender. Weakened by these losses, Lestocq, however, still maintained his ground in Königsberg, repeatedly repulsed the attempts to storm it which were made by the Brandenburg gate, and remained there all the day, putting the mouldering fortifications in a respectable posture of defence, and pressing the evacuation of the magazines; but on the day

following, having received accounts of the battle of Friedland, he ordered the garrison to be under arms, under pretence of making a sally, and when evening approached, the whole took the direction of Labian and the Pregel, leaving General Sutterheim with two battalions of light infantry to man the walls. He also evacuated the place at midnight, and on the following morning the magistrates sent the keys of the city

to Marshal Soult. Three thousand sick or wounded fell into the hands of the enemy; but such was the activity of General Lestocq, and the skill with which Sutterheim conducted his measures, that no magazines or stores of any importance were taken, and the rear-guard, though frequently molested, effected its retreat, without any serious loss, to Wehlau, where they joined the main army as it was defiling over the bridge.*†

Meanwhile Napoleon, after his usual custom, rode on the following morning over the field of battle. It presented a ghastly spectacle, second only to the terrific field of Eylau in circumstances of horror. Then might be seen evident proofs of the stern and unconquerable valour with which the Russians had combated: the position of the squares of infantry could be distinctly traced by the dead bodies of the men, which still preserved their regular array; the station of the cavalry was seen by the multitude of horses, which lay dead as they had stood in squadrons or batteries on the field. In the pursuit, however, he exerted none of his usual vigour, and threw away, in the prosecution of a minor object, the fairest opportunity he had ever enjoyed of destroying the Russian army. Intent only on cutting the enemy off from Königsberg, and securing to himself that noble prize of victory, he totally neglected the following up of his success on the right bank of the Alle, and suffered the disorganized and shattered Russian army to retire without molestation through the narrow defile that penetrated the marshes of Wehlau and over the single bridge of the Pregel, when a little additional vigour in the pursuit would at least have compelled them to abandon, at the entrance

* Wilson, 167, 169. Dum., xix., 33, 36.

† Napoleon, with his usual mendacious policy, gave out, in his 79th bulletin, that he had taken in Königsberg not only twenty thousand prisoners and immense public magazines, but 160,000 British stand of arms! It appeared a happy stroke to make the Parisians believe that the tardy succours of Great Britain had arrived just in time to arm the French troops. "This assertion," Sir R. Wilson justly observes, "is a falsehood of the most extravagant character, and which finds no parallel but in the catalogue of their own compositions." In truth, the British arms escaped by a circumstance more discreditable to England than the falsehood which Napoleon asserted; they had not yet arrived. The cannon, ammunition, and arms for Prussia were sent by Lord Hutchinson, after the armistice, to a Swedish port; those for Russia were landed at Riga, and delivered to the Russian troops.—*Parl. Returns*, 1807. *Parl. Hist.*, ix., App.; and Wilson, 167. The falsehood in regard to the stores taken at Königsberg appeared in the bulletin giving the details of the battle of Friedland, dated Wehlau, June 17, the very day on which that town was taken by the French troops. He there said, "Marshal Soult has entered Königsberg, where we found many hundred thousand quintals of wheat, more than 20,000 Russians and Prussians wounded, and all the military stores which England had sent out; among the rest, 160,000 muskets, still on shipboard." This fabrication was made at Wehlau on the 17th, which is 30 miles from Königsberg, before it was possible that anything farther than the bare capture of the city could have been heard of by the French emperor. The falsehood in the first bulletin, which corresponded to his wishes rather than the reality, was so gross, that it could not be repeated in the succeeding one, dated Tilisit, 19th June, which, after recapitulating the successes of Soult and the fall of Königsberg, said, "In fine, the result of all these affairs has been, that 4000 or 5000 prisoners and 15 pieces of cannon have fallen into our hands. Two hundred Russian vessels, and great stores of subsistence, wine, and spirits, have been found in Königsberg." Yet so little do the French writers attend to accuracy in their detail, that the enormous falsehood in the first bulletin, even when abandoned by the second, has been adopted by all their historians, even Jomini and Dumas, whose accuracy is in general so praiseworthy.—See Dum., xiv., 33; and Jom., ii., 422; and 79th and 80th Bullet., *Camp. de Saxe*, iv., 338, 342; and BIGN., vi., 308; and NORVINS, iii., 27.

* Et si continuo, victorem ea cura subisset, Ultimus ille dies bello gentique fuisset.

In the first alarm, the Cossacks crowded down to the right bank of the Alle, and, swimming the river, advanced on the opposite side, and discharged a volley of arrows with considerable effect at the enemy.—Wilson, 163, 165.

† Wilson, 164, 165. Dum., xix., 34, 35.

of these passes, the greater part of their baggage and artillery. On the evening of the

June 18. 18th, the allied army, which had united at Wehlau with the troops under Kamenskoi and Lostocq, falling back from Königsberg, reached Tilsit on the Niemen, and early on the following morning the mighty array began to de-file over the bridge. For forty hours successively the passage continued without intermission; horse, foot, cannon, baggage-wagons, store-chariots, succeeded each other in endless array.

June 19. it seemed as if the East was swallowing up the warlike brood which had so long contended with the West for the mastery of Europe. Still, though a hundred thousand men, flushed with victory, were hardly a day's march in the rear, no attempt was made by Napoleon to molest their passage. A few cannon-shots alone were exchanged between the Cossacks and the horse-artillery of Murat,* which, on the morning of the 20th, approached the town

June 20. of Tilsit, which was shortly after evacuated by Bagrathion with the Russian rear-guard, who withdrew without molestation across the river, and burned the bridge.

In truth, hostilities were no longer either required or expedient. Disheartened by the defeat which he had experienced; chagrined at the refusal of succours either in men or money from England; irritated at the timid policy of Austria, when the fairest opportunity that ever yet had occurred was presented for her decisive interposition; foiled in the objects for which he had originally begun the war, and deserted by those for whose advantage, more than his own, it had been undertaken, the Emperor Alexander had taken his resolution. He deemed it unnecessary and improper to risk the independence of Russia in a quarrel not directly affecting its interests, and from which the parties immediately concerned had withdrawn. On the 18th, therefore, General Benningsen wrote a letter to Prince Bagrathion, desiring him to make known to the French generals the emperor's desire for an armistice; this was accordingly communicated to

June 19. Murat on the forenoon of the following day, and orders were immediately transmitted for hostilities to cease at all points. Thus was this mighty conflagration, which originally commenced on the banks of the Danube, finally stilled on the shores of the Niemen.†

These proposals on the part of the Russian emperor gave the highest satisfaction to Napoleon. It had ever been his policy to offer peace to his enemies during the first tumult and consternation of defeat; and more than once, by such well-timed advances, he had extricated himself from a situation of the utmost peril. To be anticipated in this manner in his desires, and have the public demonstration afforded of the reality of his victory by the enemy proposing an

armistice, was a circumstance of all others the most gratifying, which raised him at once to the highest point of glory. He was not ignorant that here, as at Leoben and Austerlitz, a farther continuance of the contest might be attended with very serious dangers. England, it is true, had hitherto, in an unaccountable manner, kept herself secluded from the struggle: but a change had taken place in her councils; a close alliance had been contracted with Prussia; powerful succours in arms and ammunition were on their route, and the greatest military expedition she had ever sent forth was preparing to hoist the flag of a national war on the banks of the Elbe. The dubious policy of Austria rendered it more than probable that, in such an event, she would throw off the mask, and that eighty thousand armed mediators might suddenly make their appearance under the walls of Dresden, and totally intercept the communications of the Grand Army with France. Russia, it was true, was defeated; the army of Bagrathion was little more than half its former amount; but thirty thousand men were advancing, under Prince Labanoff, to repair its losses; and if its frontiers were invaded, and a national resistance aroused, there were four hundred thousand militia enrolled, who would speedily fill the ranks of the regular army. Napoleon, indeed, could collect, notwithstanding the losses of the short campaign, a hundred and fifty thousand men on the Niemen; but even this mighty host appeared hardly adequate to the task of subduing an empire whose dominions on this side of the Ural Mountains exceeded all the rest of Europe put together. How were the conquered provinces to be kept in subjection; how the fortresses taken garrisoned; how the immense lines of communication kept up when the war was to commence at the distance of nearly a thousand miles from the Rhine, and the Scythian monarch, if resolute on preserving his independence, might retreat a thousand miles farther without coming to the verge of his European dominions?*

Nor were the considerations less powerful which induced Alexander to desire an accommodation. By engaging in the war on this desperate principle, indeed, and drawing the enemy into the heart of his dominions, he had every chance of defeating the invasion of this second Darius into the deserts of Scythia; but this could only be done by great sacrifices, and at the hazard of throwing back, for a long period, the internal improvement of his rising dominions. For what object were these sacrifices to be made? For the preservation of Prussia? She was already crushed, and a few inconsiderable forts, with the town of Graudentz, were all that remained to Frederic William of the dominions of his illustrious ancestors. For the safety of England? She was sufficiently protected by her invincible fleets;

Considerations which rendered the Russians also desirous of an accommodation.

* Wilson, 168, 170. Dum., xix., 35, 40. Bign., vi., 308, 309.

† Wilson, 170, 171. Dum., xix., 42, 44.

‡ During this desperate struggle between the Passarge, a conflict of some importance, but overlooked amid the shock of such mighty hosts, took place on the banks of the Narew. Tolstoy had there gained some successes over Masseana, and in particular, made himself master of the entrenched camp of Borki; but the French having at June 15. tacked it some days after with increased forces, it again fell into their hands, and the Russians, following the retreat of their principal army, had retired from Ostrolenka towards Ticozin, when the armistice of Tilsit put a period to their operations.—DUMAS, xix., 41, 43.

* Hard., ix., 426.

† The following regular forces, exclusive of 400,000 militia, were still at the command of the Russian government:

Remains of the army which fought at Friedland . . .	28,000
Kamenskoi's corps	9,000
Re-enforcements which joined at Tilsit, or on march . .	9,000
At Olita half of Labanoff's corps	15,000
Prussians retired with Lestocq	18,000
Tolstoy's corps on the Narew	18,000
On march from Wilna	15,000
Total regulars	112,000

—WILSON, 176.

and the interest she had evinced in the struggle had not been such as to render it imperative on the Czar, either in honour or policy, to continue the contest on her account.* For the sake of the balance of power? That was an object, however important, which could not be brought about by the unaided efforts of a single empire; and if Austria, whose interests were more immediately concerned in its preservation, was not inclined to draw the sword in the conflict, it did not appear that Russia, whose independence had never yet been seriously threatened, was called upon to continue it unaided for its restoration. Now was an opportunity when the war might be terminated, if not with advantage, at least without dishonour: in the fields of Pultusk, Eylau, and Heilsberg, the Russians had sufficiently vindicated their title to military glory; and objects of immediate importance were to be gained nearer home both on the Danube and the Neva,† amply sufficient to indemnify the empire for a temporary withdrawal from the general theatre of European strife.

When such were the dispositions on both sides, there was little difficulty in coming to an armistice. to an understanding. France had June 22. nothing to demand of Russia except that she should close her ports against England: Russia nothing to ask of France but that she should withdraw her armies from Poland, and permit the emperor to pursue his long-cherished projects of conquest in Turkey. The map of Europe lay before them, out of which these two mighty potentates might carve at pleasure ample indemnities for themselves or acquisitions for their allies. No difficulty, in consequence, was experienced in settling the terms of the armistice: the Niemen separated the two armies; the headquarters of Napoleon were fixed at Tilsit, on the left bank of the river; those of Alexander at Piktuhpohnen, a mile distant on the right bank. A friendly intercourse was immediately established between the officers and men of the two armies: they had felt each other's valour too strongly not to be inspired with sentiments of mutual respect; while Napoleon, in eloquent terms, addressed his soldiers on this glorious termination of their labours, in one of those proclamations which made Europe thrill from side to side.‡

* The secret motives which induced the Emperor Alexander to conclude the treaty of Tilsit were the refusal by Lord Howick (now Earl Grey) to guaranty the Russian subsidies, and that, too, in a manner peculiarly painful to the feelings of the emperor: a refusal the more inexplicable, as that minister was the very person who had, after the catastrophe of Jena, warmly solicited the Czar to fly to the succour of Prussia; the delay in the arrival of the troops promised by England in the island of Rugen; the tardiness of the new administration in furnishing the promised supplies in money, arms, and ammunition, circumstances which had warmly irritated him against the English government; the refusal of Austria to accede to the convention of Bartenstein, or take any part in the contest, as well as the exhaustion of his own finances, the penury of arms and ammunition, the famishing state of the troops, and the risk of total overthrow to which they were exposed.—HARDENBERG, ix., 425, and LUCCHESINI, i., 322, 323.

† Boutourlin, Camp. de 1812, i., 21, 22. Hard., ix. Lucchesi, i., 322, 223.

‡ Bign., vi., 308, 312. Dum., xix., 44, 50.

§ "Soldiers! on the 5th of June, we were attacked in Napoleon's our countenances by the Russian army; the unexpected proclamation my misunderstanding the cause of our inactivity. He has learned, when it is too late, that our repose was that of the lion; he now repents having forgotten it. In the days of Guttstadt, of Heilsberg, in the ever-memorable field of Friedland, in a ten days' campaign; in short, we have taken 120 pieces of cannon, 7 standards, killed or wounded 60,000 Russians,

An armistice having been thus concluded, it was agreed that the two emperors should meet to arrange, in a private Interview on the raft at Tilsit, the destinies of the world. It took place, accordingly, on the 25th, under circumstances eminently calculated to impress the imagination of mankind. By the direction of the French general of engineers, Lariboissiere, a raft of great dimensions was constructed on the River Niemen: the raft of Tilsit, which will be recollected as long as the cage of Bajazet or the conquests of Alexander. It was moored in the centre of the stream, and on its surface a wooden apartment, surmounted by the eagles of France and Russia, framed with all the possible magnificence which the time and circumstances would admit. This was destined for the reception of the emperors alone; at a little distance was stationed another raft, less sumptuously adorned, for their respective suites. The shore on either side was covered with the Imperial Guard of the two monarchs, drawn up in triple lines, in the same firm and imposing array in which they had stood on the fields of Eylau and Friedland. At one o'clock precisely, amid the thunder of artillery, each emperor stepped into a boat on his own side of the river, accompanied by a few of his principal officers: Napoleon was attended by Murat, Berthier, Bessières, Duroc, and Caulaincourt; Alexander by the Grand-duke Constantine, General Benningssen, Prince Labanoff, General Ouvaroff, and Count Lieven; the numerous and splendid suite of each monarch followed in another boat immediately after. The bark of Napoleon, rowed by the marines of his Guard, advanced with greater rapidity than that of Alexander. He arrived first at the raft, entered the apartment, and himself opened the door on the opposite side to receive the Czar, while the shouts of the soldiers on either shore drowned even the roar of the artillery. In a few seconds Alexander arrived, and was received by the conqueror at the door on his own side; their meeting was friendly, and the very first words which he uttered bespoke both the lacerated feelings occasioned by the conduct of the government of Great Britain during the war, his deep penetration, and clear perception of the ruling passion of Napoleon: "I hate the English," said he, "as much as you do, and am ready to second you in all your enterprises against them." "In that case," replied Napoleon, "everything will be easily arranged, and peace is already made." The interview lasted two hours, during which Napoleon exercised all the ascendancy which his extraordinary talents and fortune, as well as singular powers of fascination gave him, while the Russian emperor

wrested from the enemy's army all its magazines and hospitals, the fortress of Königsberg, with three hundred vessels which it contained, loaded with ammunitions of war of all sorts, and especially 160,000 muskets sent by England to arm our enemies. From the shores of the Vistula we have arrived on those of the Niemen with the rapidity of the eagle. You celebrated at Austerlitz the anniversary of my coronation, but you have this year worthily commemorated that of Marengo, which terminated the war of the second coalition. Frenchmen, you are worthy of yourselves, and of me. You will return to your country covered with laurels, and after having gained a peace which will be its own guarantee. It is time that our country should live in repose, sheltered from the malignant influence of England. My benefactions to you shall testify the large measure of my gratitude, and the whole extent of the love which I bear you." Already was to be seen, not merely in Napoleon's thoughts, but in his words, a return to the celebrated maxim of Louis XIV., "L'état c'est moi."—BIGNON, vi., 311, 312.

gave proof of the tact and finesse, as well as diplomatic ability, by which his nation beyond any other in Europe is gifted. Before they parted the outlines of the treaty were arranged between them—it was not difficult to come to an understanding—the world afforded ample room for the aggrandizement of both.*†

On the day following a second interview took place at the same town, at which the King of Prussia was present; the first had been arranged, and the preliminary terms agreed to, without any concert with that unhappy prince. He was no longer in a situation to stipulate any conditions: bereft of his dominions, driven up into a corner of his territories, destitute of everything, he had no alternative but submission to the stern law of the conqueror.‡ As it was now evident that an accommodation was about to take place, arrangements were made for conducting it with more convenience to the exalted personages concerned. Part of the town of Tilsit was declared neutral, and allotted to the accommodation of the Emperor of Russia and his suite; thither he repaired on the afternoon of the same day, and was received with all imaginable courtesy by Napoleon himself, upon landing on the left bank of the river from his boat. Amid discharges of artillery, and the acclamations of a vast multitude of spectators, whom the extraordinary spectacle had collected together, did these two sovereigns, whose hostility had so lately dyed the fields of Poland with blood, ride side by side to the quarters prepared for the Czar, through a triple line of the French Imperial Guard. The attention of Napoleon descended to the most minute particulars: the furniture in the Emperor of Russia's rooms was all sent from the French headquarters; a sumptuous train of cooks and other attendants were in readiness to make him forget the luxuries of St. Petersburg; even his couch was prepared in a camp-bed of the French emperor's which he had made use of in his campaigns. The King of Prussia also arrived, two days after, in Tilsit with his beautiful and unfortunate queen; and the ministers on both sides, Talleyrand on the part of France, and Prince Kourakin on that of Russia, and Marshal Kalkreuth on that of Prussia; but they were of little service, for such was the extraordinary length to which the intimacy of the two emperors had gone, that not only did they invariably dine and pass the evening together, but almost all the morning conferences, during

which the destinies of the world were arranged, were conducted by themselves in person.*

"Had the Queen of Prussia arrived earlier at our conferences," says Napoleon, "it might have had much influence on the result of the negotiations; but, happily, she did not make her appearance till all was settled, and I was in a situation to decide everything in twenty-four hours. As soon as she arrived I went to pay her a visit; she was very beautiful, but somewhat past the first flower of youth. She received me in despair, exclaiming, 'Justice! justice!' and throwing herself back with loud lamentations; I at length prevailed on her to take a seat, but she continued, nevertheless, her pathetic entreaties. 'Prussia,' said she, 'was blinded in regard to her power: she ventured to enter the lists with a hero, oppose herself to the destinies of France, neglect its fortunate friendship! she has been well punished for her folly—the glory of the Great Frederic, the halo his name spread round our arms, had inflated the heart of Prussia—they have caused her ruin.' Magdebourg, in an especial manner, was the object of her entreaties; and when Napoleon, before dinner, presented her with a beautiful rose, she at first refused it, but immediately after took it with a smile, adding, at the same time, 'Yes! but at least with Magdebourg.' "I must observe to your majesty," replied the emperor, "that it is I who give, and you only who must receive." Napoleon had the talents of Cæsar, but not the chivalry of Henry IV. "After all," said he, "a fine woman and gallantry are not to be weighed against affairs of state." He had frequently, during the repast, found himself hard pressed by the talent and grace of the queen, and he resolved to cut the matter short. When she had retired, he sent for Talleyrand and Prince Kourakin, arranged the few remaining points of difference, and signed the treaty. The queen was violently affected next day when she learned that all was concluded: she refused to see the emperor, and loudly protested she had been deceived by him, an assertion which he positively denies, and which his selfish intellectual character rendered highly improbable. At length she was prevailed on by Alexander to be again present at dinner; and when Napoleon conducted her down stairs after it was over, she stopped in the middle, pressed his hand as he bade her farewell, and said, "Is it possible that, after having had the good fortune to be so nearly the Hero of the Age, he has not left me the satisfaction of being able to assure him that he has attached me to him for life?" "Madame," replied the emperor, "I lament, if it is so; it is the effect of my evil destiny;" and they separated, never again to meet in this world.†

* Savary, iii., 76, 77. Bign., vi., 315, 316. Dum., xix., 53, 55.

† Savary, who had been nominated governor of Königsberg, received orders, when the French army first approached the Niemen, to get ready a pontoon-train, which had been left in the arsenal of that city, for immediate operation. Next day, however, he received the following significant note from Talleyrand: "Be in no hurry with your pontoons: what would we gain by passing the Niemen? what is there to be acquired beyond that river? The emperor must abandon his ideas in regard to Poland: that nation is fit for nothing; disorder alone is to be organized out of its inhabitants. We have another far more important matter to settle: here is a fair opportunity of terminating the present dispute; we must not let it escape." Already the Spanish invasion had entered into the calculations of the rulers of Europe on the Niemen.—SAVARY, iii., 76.

‡ At this period he wrote to the King of Sweden: "Immediately after the armistice, my imperial ally concluded peace on his own account alone. Abandoned in this manner, and left without support on the great theatre of war, I found myself forced, how painful soever to my feelings, to do the same, and to sign a peace, though its conditions were to the last degree hard and overwhelming."—SCHÖELL, viii., 410, and LUCCHES., i., 328.

* Savary, iii., 77, 78. Bign., vi., 316, 317. Dum., xix., 55, 57.

† Las Cas., iv., 224, 228.

‡ "The Queen of Prussia," said Napoleon, "unquestionably possessed talents, great information, and singular acquaintance with affairs; she was the real character of the sovereign for fifteen years. In truth, in spite of my address and utmost efforts, she constantly led of Prussia. The conversation, returned at pleasure to her subject, and directed it as she chose, but still with so much tact and delicacy, that it was impossible to take offence. And, in truth, it must be confessed that the objects at stake were of infinite importance; the time short and precious. One of the high contracting parties frequently repeated to me, that I should forgive everything or nothing at all; but I answered that I had done everything in my power to put things in such a train. The King of Prussia requested an interview that very day to take leave: I put it off for twenty-four hours, at the secret solicitation of Alexander: he never forgave me that postponement. I discovered, in all

The Russians at Tilsit did not consider themselves as vanquished; on the contrary, they felt, after all their misfortunes, much of the exultation of victory. Proud of having so long arrested the progress of the conqueror of the world, glorying even in the amount of their losses and the chasms in the ranks, which told the desperate strife in which they had been engaged, they mingled with their recent enemies with feelings unlacerated by the humiliation of defeat. It was obvious that peace was equally necessary to both emperors; it was soon whispered that it was to be concluded on terms eminently favourable to the Russian Empire. The utmost cordiality, in consequence, soon prevailed between the officers and soldiers of the two armies: fêtes and repasts succeeded one another in rapid order, given by the warriors so recently hostile to each other. In these entertainments the officers of the two Imperial Guards, and in particular Prince Murat and the Grand-duke Constantine, were peculiarly cordial and complimentary to each other. On one of these occasions, to such a length did the effusions of mutual respect and regard proceed, that the officers of the two Guards, amid the fumes of wine and the enthusiasm of the moment, mutually exchanged their uniforms; French hearts beat under the decorations won amid the snows of Eylau, and Russian bosoms warmed beneath the orders bestowed on the fields of Austerlitz. Last and most singular effect of civilized life and military discipline, to strengthen at once the fierceness of national passions and the bonds by which they are to be restrained, and join in fraternal brotherhood one day those hands which, on another, had been dyed by mutual slaughter, or lifted up in relentless hostility against each other!*

In the course of their rides together, the two emperors had frequent opportunities of observing the flower of their respective armies. Napoleon afterward acknowledged that he had never seen anything which impressed him so much as the appearance of one of the regiments

of the Russian Guard. Albeit noways an admirer of the rigid formality of German tactics, and trusting rather to the effect of proclamations on the spirit of his troops than the influence of discipline on their movements, he was inexpressibly struck with the military aspect of its soldiers, and could not avoid the conclusion, that an army thus constituted would be the first in the world, if to the firmness and precision which it had already attained, it should come to unite the fire and enthusiasm of the French. The docility with which they submitted to the orders they received, whatever they were, struck him as particularly admirable. "My soldiers," said he, "are as brave as it is possible to be, but they are too much addicted to reasoning on their position. If they had the impassable firmness and docility of the Russians, the world would be too small for their exploits. The French soldiers are too much attached to their country to play the part of the Macedonians."*

After a fortnight of conference, the treaty of Tilsit, which had been agreed on in the leading articles in the first four days after the armistice, was formally signed and published to the world. The first treaty, between France and Russia, was signed on the 7th; the second, between France and Prussia, on the 9th of July. By the first, the Emperor Napoleon, as a mark of his regard for the *Emperor of Russia*, agreed to restore to the King of Prussia Silesia, and nearly all his German dominions on the right bank of the Elbe, with the fortresses on the Oder and in Pomerania. The provinces which, prior to the first partition in 1772, formed part of the kingdom of Poland, and had since been annexed to Prussia, were detached from that monarchy and erected into a separate principality, to be called the GRAND-DUCHY OF WARSAW, and bestowed on the King of Saxony, with the exception of the province of Bialystock, containing two hundred thousand souls, which was ceded to Russia, which thus participated, in the hour of misfortune, in a share, small, indeed, but still a share, of the spoils of its ally. Dantzic, with a limited portion of territory around it, was declared a free and independent city, under the protection of the Kings of Prussia and Saxony, which was in effect declaring it, what it immediately after became, a frontier town of France. A right to a free military road was granted to the King of Saxony across the Prussian States, to connect his German with his Polish dominions; the navigation of the Vistula was declared free to Prussia, Saxony, and Dantzic; the Dukes of Oldenburg and Mecklenburg were reinstated in their dominions, but under the condition that their harbours should all be occupied by French troops, so as to exclude the introduction of English merchandise; the mediation of the Emperor of Russia was accepted with a view to the arrangement of a general peace; the Kings of Naples and Holland, with the Confederation of the Rhine, were recognised by the Emperor of Russia; a new kingdom, to be called the KINGDOM OF WEST-PHALIA, was erected in favour of Jerome Bonaparte, the emperor's brother, composed of the whole provinces ceded by Prussia on the left bank of the Elbe, which was recognised by the

Treaty of Tilsit. Its leading provisions. July 7 and 9.

Article 9. Creation of the Grand-duchy of Warsaw, and kingdom of Westphalia.

Art. 5.

Art. 6.

Art. 7.

Art. 8.

Art. 12.

his unfortunate ally.—SAVARY, iv., 92, note.

- Art. 20. Emperor of Russia. Hostilities were to cease between Russia and the Ottoman Porte, and the principalities of Wallachia and Moldavia to be evacuated by the Russian troops, but not occupied by those of the sultan, till the ratification of a general peace; the Emperor of Russia accepted the mediation of Napoleon for the conclusion of his differences with Turkey; the Emperors of Russia and France mutually guaranteed their respective dominions, and agreed to establish commercial relations with each other on the footing of the most favoured nations.*

By the second treaty, concluded two days after, between France and Prussia, the King of Prussia recognised the Kings of Naples, Holland, Westphalia, and the Confederation of the Rhine, and concluded peace with the sovereigns of those respective states, as well as with the Emperor of France: he ceded to the kings or princes who should be designated by the Emperor Napoleon all the dominions which at the commencement of the war he possessed between the Rhine and the Elbe, and engaged to offer no opposition to any arrangement in regard to them which his imperial majesty might choose to adopt:

- Art. 12. King of Prussia ceded, in addition, to the King of Saxony the circle of Gotha, in Lower Lusatia; he renounced all right to his acquisitions in Poland subsequent to the 1st of January, 1772, and to the city and surrounding territory of Dantzic; and consented to their erection into a separate duchy in favour of the King of Saxony, as well as to the military road through his dominions to connect the Polish with the German possessions of the latter sovereign: he agreed to the extension of the frontiers of Russian Poland, by the cession of the provinces of Bialystock; consented, till the conclusion of a general maritime peace, to close his harbours without exception to the ships and commerce of Great Britain; and concurred in the formation of a separate convention, having for its object the restoration of the strongholds of Prussia at certain fixed periods, and the sums to be paid for their civil and military evacuation.†

The losses of Prussia by this treaty were enormous. Between the states forming part of her possessions ceded to by this treaty, the grand-duchy of Warsaw and those acquired by the kingdom of Westphalia, she lost 4,236,048 inhabitants, or nearly a half of her dominions, for those retained contained only 5,034,504 souls.‡ But, overwhelming as

the losses were, they constituted but a small part of the calamities which fell on this ill-fated monarchy by this disastrous peace. The fortresses left her, whether in Silesia or on the Oder, remained in the hands of France nominally, as a security for payment of the war contributions which were to be levied on the impoverished inhabitants, but really to overawe its government, and entirely paralyze its military resources. A garrison of twenty thousand French soldiers was stationed in Dantzic: a frontier station of immense importance, both as hermetically closing the mouths of the Vistula, giving the French authorities the entire command of the commerce of Poland, and affording an advanced post which, in the event of future hostilities, would be highly serviceable in a war with Russia. The newly-established kingdoms of Westphalia and Saxony, with the military road through Prussia, terminating in the Grand-duchy of Warsaw, gave the French emperor the undisputed control of Northern Germany; in effect, brought up the French frontier to the Niemen, and enabled him to commence any future war with the same advantage from that distant river as he had done the present from the banks of the Rhine. At the same time, enormous contributions, amounting to the stupendous, and, if not proved by authentic documents, incredible sum of *six hundred millions of francs*, or twenty-four millions sterling, were imposed on the countries which had been the seat of war between the Rhine and the Niemen; a sum at least equal to a hundred millions sterling in Great Britain, when the difference in the value of money and the wealth of the two states are taken into consideration. This grievous exaction completely paralyzed the strength of Prussia, and rendered her for the next five years totally incapable of extricating herself from that iron net in which she was enveloped by the continued occupation of her fortresses by the French troops.*†

* Hard., ix., 490, 491.

† This war contribution on the north of Germany was so prodigious a burden, and in its first effects was so instrumental in increasing the power of France, and in its ultimate results in occasioning its overthrow, that the particulars of it are here given, taken from the authentic archives of Count Daru, the chief commissioner intrusted by Napoleon with its collection, as one of the most instructive and curious monuments of the revolutionary wars.

War contributions imposed since the 15th of October, 1806, and levied before the 1st of January, 1808.....			France.
			474,352,650, or £19,000,000
Remaining still to recover.....			39,391,759 1,600,000
Contributions levied in kind.....			90,483,511 3,600,000
			604,227,920 £24,200,000

—See DARU'S *Report to NAPOLEON, 1st of January, 1808*; DUM., xix., 462, 465; *Pièces Just.*

In the Prussian estimate the amount is stated considerably higher, even in so far as it was levied on the Prussian States alone. It stood thus:

War contributions, in specie....			France.
			220,000,000, or £8,800,000
Maintenance of the fortresses....			40,000,000 1,600,000
Contributions in kind, without counting the balloting of soldiers.....			346,800,000 14,600,000
Miscellaneous losses.....			8,000,000 320,000
Losses sustained in the local taxes.....			75,000,000 3,000,000
Ditto in the general revenue....			50,000,000 2,000,000
			739,800,000 £30,320,000

—See SCHÖELL, vi., 518.

When it is recollected that the whole revenues of Prussia were only about £6,000,000; that money at that period was at least of twice the value there that it was in England; and that the monarchy was already exhausted by the immense efforts made for the campaign of 1806, either of these estimates must appear among the most enormous instances of military exaction on record in history.

Important as the changes introduced by these public treaties of Tilsit were to the political interests of Europe, they were far inferior in daring and magnitude to the provisions of the secret conventions concluded at the same place between the French emperor and the Russian autocrat. These two mighty potentates, who so lately had been actuated by the strongest hostility against each other, deeming themselves invincible when they had united their arms together, had conceived, beyond all question, the project of dividing the world between them. To Russia was assigned, with hardly any limitations, the Empire of the East: France acquired absolute sway in all the kingdoms of the West; both united in cordial hostility against the maritime power of Great Britain. Turkey, in consequence, was abandoned almost without reserve to the Russian autocrat. To the cession of Constantinople alone Napoleon never would agree, and rivalry for the possession of that matchless capital, itself worth an empire, was one of the principal causes which afterward led him into the desperate chances of the Moscow campaign. The clause on this subject was in the following

Art. 8. Secret treaty.

terms: "In like manner, if, in consequence of the changes which have recently taken place in the government of Constantinople, the Porte shall decline the intervention of France; or in case, having accepted it, the negotiations shall not have led to a satisfactory adjustment in the space of three months, France will make common cause with Russia against the Ottoman Porte, and the two high contracting parties will unite their efforts to wrest from the vexations and oppression of the Turkish Empire all its provinces in Europe, Rometia and Constantinople alone excepted.*"

The abandonment of all Turkey, with the exception of its capital and the small adjacent province, to the ambition of its hereditary and inveterate enemies, called for a similar concession to the leading objects of French ambition. This was provided for in the articles regarding the prosecution of the war against England, and the cession of the Spanish Peninsula to the French emperor. In regard to the first object, it was provided that, in case the proffered mediation of France to adjust the differences with the cabinet of St. James should not be accepted, Russia should make common cause with France against England, with all its forces by sea and

land; or "if, having accepted it, peace was not concluded by the 1st of November, on terms stipulating that the flags of every power should enjoy a perfect and entire equality on every sea, and that all the conquests made of French possessions since 1805 should be restored—in that case, also, Russia shall demand a categorical answer by the 1st of December, and the Russian ambassador shall receive a conditional order to quit London." In the event of the English government not having made a satisfactory answer to the Russian requisition,

In addition to all this, Napoleon and his generals, with disgraceful rapacity, carried off from the different palaces in Prussia no less than 127 paintings, most of them by first-rate masters, and 238 marbles or statues, besides all the manuscripts, curiosities, and antiquities they could lay their hands on. The movables thus carried away contrary to all the laws of war, were worth above £300,000. They were all reclaimed and got back by the Prussians on the capture of Paris in 1815.—See the *Official List* in SCROELL, vi., 261, 269.

* Bign., vi., 339, 340. Hard., ix., 430.

"France and Russia shall jointly summon the three courts of Copenhagen, Stockholm, and Lisbon, to close their harbours against English vessels, recall their ambassadors from London, and declare war against Great Britain." Hanover was to be restored to England in exchange for the whole colonies she had conquered during the war; Spain was to be compelled to remain in the alliance against Great Britain; and the Emperor of France engaged to do nothing tending to augment the power of the Grand-duchy of Warsaw, or which might lead to the re-establishment of the Polish monarchy.*†

This was the whole extent to which the formal secret treaty of Tilsit went; but, extensive as the changes which they contemplated were, they yet yielded in magnitude to those which were also agreed on, in a convention still more secret, between the two emperors. By this, which may literally be called spoiling agreement, the shares which the two imperial robbers were to have respectively in the partition of Europe were chalked out. The mouths of the Cattaro, which had been ostensibly, at least, the original cause of the rupture, were ceded by Russia to France, as well as the seven Ionian islands. Joseph Bonaparte was to be secured in the possession of Sicily, as well as Naples; Ferdinand IV., the reigning King of Sicily, was to receive an indemnity in the Isle of Candia, or some other part of the Turkish Empire; the dominions of the pope were to be ceded to France, as well as Malta and Egypt; the sovereigns of the houses of Bourbon and Braganza in the Spanish Peninsula were to be replaced by princes of the family of Napoleon; and when the final partition of the Ottoman Empire took place, Wallachia, Moldavia, Servia, and Bulgaria were to be allotted to Russia; while Greece, Macedonia, Dalmatia, and all the seacoasts of the Adriatic, were to be enjoyed by France, which engaged, in return, to throw no obstacles in the way of the acquisition of Finland by the Russian emperor.‡

* Bign., vi., 336. Hard., ix., 431. Jom., ii., 434, 435.

† These secret articles of the treaty of Tilsit, which are of such moment, both as illustrating the general character of Napoleon's policy, and affording an unanswerable vindication of the Copenhagen expedition, have been literally transcribed from Bignon's work. As that author was not only for long the French ambassador at Berlin, but was also nominated by Napoleon in his testament as the author to whom was committed, with a legacy of 100,000 francs, the task of writing a history of his diplomacy, which he has executed with great ability, it is impossible to quote them from a more unexceptionable authority; and he himself says he has given them "textuellement." They are not yet to be found in any diplomatic collection.—BIGN., vi., 342.

‡ Bign., vi., 347, 348. Hard., ix., 431, 432.

§ As the secret articles of the treaty of Tilsit are given chiefly on the authority of M. Bignon, as a chosen partisan of Napoleon, and therefore a valuable unwilling witness, it is proper to mention that he does not admit the express signature of a convention regarding the dethroning of the Spanish and Portuguese sovereigns, and the partition of the Turkish Empire, but says that "these projects were merely sketched out in the private conferences of the two emperors, but without being actually reduced to writing;" while the author of Prince Hardenberg's memoirs, whose accuracy and extent of secret information are in general equally remarkable, asserts that they were embodied in an express treaty.—See BIGN., vi., 345, and HARD., ix., 433. It is of little importance whether they were or were not embodied in a formal convention, since there is no doubt that they were verbally agreed on between the two emperors. We have the authority of the Emperor Alexander that Napoleon said to

Secret agreement between the emperors about Spain and Italy.

Decisive evidence of these projects of spoliation which exists both on the testimony of the French and Russian emperors.

Napoleon was not long of taking steps to pave the way for the acquisition of his share of the Ottoman dominions. On the day after the secret treaty with Russia was signed, he despatched a letter to the King of Naples, informing him of the cession of Corfu to France, and directing him to assemble, in the most secret manner, four thousand men at Otranto and Tarentum, to take possession of that island, and of the mouths of the Cattaro.* On the same day he enjoined Eugene, viceroy of Italy, to send a force of six thousand men into Dalmatia,† while Marshal Marmont, who commanded in that province, was directed, instead of attacking the Montenegrins, as he was preparing to do, to do everything in his power to make these mountaineers receive willingly the French government, beneath which they would soon be placed; and, at the same time, to transmit minute information both as to the resources, population, and revenue of Bosnia, Thrace, Albania, Macedonia, and Greece, and what direction two European armies should follow, entering that country, one by Cattaro, the other by Corfu.‡ At the same time Count Guilleminot

him at Tilsit, "I lay no stress on the evacuation of Wallachia and Moldavia by your troops; you may protract it if you desire. It is impossible any longer to endure the presence of the Turks in Europe; you are at liberty to chase them into Asia; but observe only, I rely upon it that Constantinople is not to fall into the hands of any European power."—HARD., ix., 432. Napoleon, in conversation with Escoiquiz at Bayonne in the following year, said, "The Emperor Alexander, to whom I revealed at Tilsit my designs against Spain, which were formed at that period, approved of them, and gave me his word of honour he would throw no obstacle in the way."—ESCOQUIZ. This coincides with what Savary affirms, who says, "The Emperor Alexander frequently repeated to me, when I was afterward ambassador at St. Petersburg, that Napoleon had said to him that he was under no engagements with the new sultan, and that the changes which had supervened in the world inevitably changed the relations of states to each other. I saw at once that this point had formed the subject of their secret conference at Tilsit; and I could not avoid the conviction that a mutual communication of their projects had taken place, because I could not believe that the Emperor would have abandoned the Turks without receiving some compensation in some other quarter. I have strong reasons for believing that the Spanish question was brought under discussion at Tilsit. The Emperor Napoleon had that affair strongly at heart, and nothing could be more natural than that he should frankly communicate it to the Czar: the more especially as he had on his side a project of aggrandizement, in which, without previous concert, France might be disposed to throw obstacles. I was the more confirmed in this opinion by observing the conduct and language of the Emperor Alexander when the Spanish war broke out."—SAVARY, iii., 98, 99. And Napoleon said at St. Helena, "All the Emperor Alexander's thoughts are directed to the conquest of Turkey. We have had many discussions about it, and at first I was pleased with his proposals, because I thought it would enlighten the world to drive those brutes, the Turks, out of Europe. But when I reflected upon its consequences, and saw what a tremendous weight of power it would give to Russia, on account of the number of Greeks in the Turkish dominions, who would naturally join the Russians, I refused to consent to it, especially as Alexander wanted to get Constantinople, which I would not allow, as it would have destroyed the equilibrium of power in Europe. I reflected that France would gain Egypt, Syria, and the islands, which would have been nothing in comparison with what Russia would have obtained."—O'MEARA, i., 382. "Was there," says Bignon, "any express treaty assigning to each emperor his share of the Turkish dominions? No; but that there was an agreement on that subject between the two emperors, is beyond a doubt, but no formal treaty." We shall find numberless proofs of this, in the sequel of this work, in the language used by the Emperor Alexander and the actions of Napoleon. They had even gone so far as to assign a portion, also, to the Emperor Francis: "Something," in Alexander's words, "to Austria, to soothe her vanity rather than satisfy her ambition."—BIGNON, vi., 343.

* Nap. to Murat, Tilsit, 8th July.

† Nap. to Eugene, 8th July.

‡ To Marmont Napoleon wrote, on July 8, from Tilsit,

was deputed from Tilsit on a double mission: the first, open and ostensible, to General Michelson's army on the Danube, the other, secret, to General Sebastiani at Constantinople; in the course of which he was to acquire all the information he could on the subject of the population, riches, and geographical position of the country through which he passed.* Finally, to General Sebastiani himself he fully explained the whole design, which was, as stated in his letters, that, as no European power would be permitted to possess Constantinople and the Hellespont, the first thing to be done was "to draw a line from Bourgas, on the Black Sea, to the Gulf of Enos in the Archipelago; and all to the eastward of that line, including Adrianople, was to remain to Turkey; Russia was to obtain Moldavia, Wallachia, and all Bulgaria, as far as the left bank of the Hebrus; Servia was to be allotted to Austria; and Bosnia, Albania, Epirus, Peloponnesus, Attica, and Thessalia to France."† Sebastiani at the same time received orders to prepare and transmit, without delay, to the French emperor, a memorial, containing exact details, to define the geographical boundaries of the acquisitions of the three powers entered in the partition.

While Napoleon and Alexander were thus adjusting their differences at Tilsit, by the spoliation of all the weaker powers in Europe, partitioning Turkey, and providing for the dethronement of the sovereigns in the Spanish Peninsula, the chains were drawn yet more closely round unhappy Prussia. In the treaty with that power, it had been provided that a subsidiary military convention should be concluded regarding the period of the evacuation of the fortresses by the French troops, and the sums of money to be paid for their ransom. Nominally, it was provided that they should be evacuated by the 1st of October, with the exception of Stettin, which was still to be garrisoned by French troops; but, as it was expressly declared, as a *sine qua non*, that the whole contributions imposed should be paid up before the evacuation commenced, and that the King of Prussia should levy no revenue in his dominions till these exactions were fully satisfied, and that the Prussians, meanwhile, should feed, clothe, and lodge all

Convention regarding the payment of the French contributions on Prussia.

Art. 2 and 3.

Art. 4.

"Set to work as vigorously as possible to obtain, by officers whom you shall send forward with that view, or in any other way, and address directly to the emperor, in order that he may know by confidential officers, both geographically and civilly, all the information you can acquire regarding Bosnia, Macedonia, Thrace, Albania, &c. What is the amount of its great population; what resources in clothing, provisions, or money those provinces would furnish to any European power which might possess them? In fine, what revenue could be drawn from them at the moment of their occupation, for the principles of their occupation are at present without any proper foundation? In a second memoir state, in a military point of view, if two European armies should enter these provinces at once, the one by Cattaro and Dalmatia into Bosnia, the other by Corfu, what force would be required for each to ensure success; what species of arms would be most advantageous; how could the artillery be transported; could horses for its transport be found in the country; could recruits be raised there; what would be the most favourable times for military operations? All these reports should be transmitted by confidential persons, in whom you have perfect reliance. Keep on good terms with the Pacha of Bosnia; but, nevertheless, gradually let your relations with him become more cold and reserved than formerly."—NAPOLEON to MARMONT, Tilsit, July 8, 1807; Dum., xix., 341, 342.

* Nap. to Count Guilleminot, 9th July.

† Bign., vi., 344, 345. Dum., xix., 337, 344. Which contains Pièces Just.

the French troops within their bounds, the French emperor had, in reality, the means of retaining possession of them as long as he chose, which he accordingly did. In addition to the enormous war contributions already mentioned,* of which 513,744,000 francs, or £20,500,000, fell on Prussia alone, farther and most burdensome commissions were forced on Prussia in the end of the year, in virtue of which Count Daru, the French collector-general, demanded 154,000,000 francs, or £6,160,000, more from that unhappy and reduced state: an exaction so monstrous and utterly disproportioned to its now scanty revenue, which did not exceed £3,000,000 sterling, that it never was or could be fully discharged; and this gave the French a pretence for continuing the occupation of the fortresses, and wringing contributions from the country till five years afterward, when the Moscow campaign commenced.†

Bereft by this disastrous treaty of half his dominions, nothing remained to the King of Prussia but submission; and he won the hearts of all the really generous in Europe by the resignation and heroism with which he bore so extraordinary a reverse of fortune. In a dignified proclamation, which he addressed to the inhabitants of his lost provinces upon liberating them from their allegiance to the Prussian throne, he observed, "Dear inhabitants of faithful provinces, districts, and towns! My arms have been unfortunate. The efforts of the relics of my forces have been of no avail. Driven to the extreme boundary of my empire, and having seen my powerful ally conclude an armistice and sign a peace, no choice remained to me but to follow his example. That peace imposed on me the most painful sacrifices. The bonds of treaties, the reciprocal ties of love and duty, the fruit of ages of labour have been broken asunder. All my efforts, and they have been most strenuous, have proved in vain. Fate ordains it. A father is compelled to depart from his children. I hereby release you from your allegiance to me and my house. My most ardent prayers for your welfare will always attend you in your relations to your new sovereigns. Be to them what you have ever been to me. Neither force nor fate shall ever sever the remembrance of you from my heart."‡

Vast as had been the conquests, unbounded the triumphs of France during the campaign, the consumption of life to the victors had been, if possible, still greater; and it was already apparent that war, conducted on this gigantic scale, was attended with a sacrifice of human beings which, for any lengthened time, would be insupportable. The fearful and ominous call of eighty thousand conscripts, thrice repeated during the short period of eight months, had already told the French people at what cost, of their best and bravest, they followed the car of victory; and the official details which have since come to light, show that even the enormous levy of two hundred and forty thousand men in that short period was not disproportioned to the expenditure of the campaign. Authentic documents prove that the number of sick and wounded who were received into the French hospitals

during the campaign, from the banks of the Saale to those of the Niemen, amounted to the stupendous number of FOUR HUNDRED AND TWENTY THOUSAND, of whom, at an average, not more than a ninth were prisoners taken from the allies!*

If such were the losses to the victors, it may readily be believed that those of the vanquished were still greater; and, putting the two together, it may fairly be concluded that, from the 1st of October, 1806, to the 31st of June, 1807, that is, during a period of nine months, a million of human beings were consigned to military hospitals, of whom at least a hundred thousand perished, independent of those slain in battle, who were at least as many more! The mind finds it impossible to apprehend such enormous calamities: like the calculations of the distance of the sun, or the fixed stars, they elude the grasp of the most vivid imagination; but even in the bewildering impression which they produce, they tend to show how boundless was the suffering then occasioned by human ambition; how awful the judgment of the Almighty then executed upon the earth!†

Nor is it difficult to discern what were the national sins which were thus visited with so terrible a punishment. Memorable retribution for the partition of Poland on the partitioning powers. Fourteen years before, Austria, Russia, and Prussia had united their armies to partition Sarmatia, and Szwabro had entered Warsaw while yet reeking with Polish blood. In the prosecution of this guilty object, they neglected the vol-

* The following are the details of this enormous catalogue of human suffering:

In hospital of the army on the 1st of October, 1806.	403
Admitted till the 31st of October, 1807.	421,416
Total treated in the hospital.	421,819
Of whom died there.	31,916
Dismissed cured.	370,473
Sent back to France.	11,455
Remained in hospital on the 17th of October, 1808.	7,957
	421,819

The average stay of each patient in the hospital was 29 days. The proportions of maladies out of 200 were as follows:

Fevers.	105
Wounded.	47
Veneral.	31
Various.	17
	200

This is a striking proof how much greater the mortality occasioned by fevers and the other diseases incident to a campaign is than the actual number killed or wounded in the field. Applying these proportions to the total number of 420,000, we shall have the whole numbers nearly as follows:

Fevers.	210,000
Wounded.	100,000
Veneral.	62,000
Miscellaneous.	48,000
	420,000

The immense number of wounded being at least five times what the bulletins admitted, demonstrates, if an additional proof were wanting, the total falsehood in the estimate of losses by which these reports were invariably distinguished. The great number of venerable patients is very curious, and highly characteristic of the French soldiers.—DARU'S REPORT TO NAPOLEON. Dum., xix., 486, 487.

It appears from Savary's report of the number of sick and wounded in the great hospital at Königsberg, of which city he received the command after the battle of Friedland, that, at the end of June, 1807, they amounted to the immense number of 27,376. Preparations were made for the reception of 57,000, but the sudden conclusion of the peace at Tilsit rendered them in a great degree unnecessary. Nevertheless, the whole hospitals of the army were again overflowing in spring, 1808, in every part of the north of Germany.—SAVARY, iii., 66, 69.

‡ Scott's Nap., v., 411, 412.

Enormous losses sustained by the French during the campaign.

cano which was bursting forth in the west of Europe: they starved the war on the Rhine to feed that on the Vistula, and opened the gates of Germany to French ambition. Prussia, in particular, first drew off from the European alliance, and after the great barrier of frontier fortresses had been broken through in 1793, and revolutionary France stood, as Napoleon admits, "on the verge of ruin," allowed her to restore her tottering fortunes, and, for ten long years, stood by in dubious and selfish neutrality, anxious only to secure or increase her ill-gotten gains. And what was the result? Poland became the great theatre of punishment to the partitioning powers; her bloodstained fields beheld the writhing and the anguish of the victors. Pierced to the heart by hostile armies, driven up to a corner of her territory, within sight almost of the Sarmatian wilds, Austria saw her expiring efforts for independence overthrown on the field of Austerlitz. Reft of her dominions, bound in chains for the insult of the conqueror, with the iron driven into her soul, Prussia beheld her last hopes expire on the shores of the Vistula. Banished almost from Europe, conquered in war, sullied in fame, Russia was compelled to sign the ignominious peace on the banks of the Niemen, the frontier of her Lithuanian spoils. The measure of her retribution is not yet complete: the grand-duchy of Warsaw is to become the outwork of France against Moscow; the tide of war is to roll on to Red Russia; the sacred towers of Smolensko are to be shaken by Polish battalions, the sack of Praga is to be expiated by the flames of Moscow. That Providence superintends the progress of human affairs; that the retributions of justice apply to political societies as well as single men; and that nations, which have no immortality, are destined to undergo the punishment of their flagrant iniquities in this world, was long ago announced in thunders from Mount Sinai, and may be observed in every subsequent page of civilized history. But it is often on the third and fourth generation that the retribution descends, and in the complicated thread of intervening events, it is sometimes difficult to trace the connexion which we know exists between the guilty deeds and the deserved suffering. In the present instance, however, the connexion was immediate and palpable: the actors in the iniquitous spoliation were themselves the sufferers by its effects; it was the partition of Poland which opened the gates of Europe to France; it was the partitioning powers that sunk beneath the car of Napoleon's ambition.

And was France, then, the instrument of this terrible dispensation, to escape herself that the punishment of her sins? Was she, stained with the blood of the righteous, wrapped in the flames of the Church, marked with the sign of the miscreant, to be the besom of destruction to others, and to bask only in the sunshine of glory herself? No! the dread hour of her retribution was steadily approaching; swift as was the march of her triumphant hosts, swifter still was the advance of the calamities which were to pre-empt her fall. Already to the discerning eye was visible the handwriting on the wall which foretold her doom. At Tilsit she reached the highest point of her ascendancy; every subsequent change was a step nearer to her ruin. True, the Continent had sunk beneath her arms; true, Austria, Prussia, and Russia had suc-

cumbently fallen in the conflict; true, she had advanced her eagles to the Niemen, and from the Rock of Gibraltar to the Baltic Sea: no voice dared to breathe a whisper against her authority; still the seeds of destruction were implanted in her bosom. Her feet were of base and perishable clay. The resources of the Empire were wasting away in the pursuit of the lurid phantoms which its people worshipped; its strength was melting under the incessant drains which the career of victory demanded; a hundred and fifty thousand men were annually sacrificed to the Moloch of its ambition. They saw it not, they felt it not; joyfully its youth, "like reapers, descend to the harvest of death." "They repented not of their sins, to give glory to the Lord."* But the effect was not the less certain, that the operation of the circumstances producing it was not perceived; and among the many concurring causes which at this period were preparing its fall, a prominent place must be assigned to that very treaty of Tilsit which apparently carried its fortunes to their highest elevation.

In this treaty were to be discerned none of the marks of great political capacity on the part of the conqueror: in the harshness and perfidy with which it was accompanied, the foundation was laid for the most powerful future allies to the vanquished. The formation of the kingdom of Westphalia, and the grand-duchy of Warsaw, with three or four millions of souls, each connected only by a military road across the impoverished and indignant remaining dominions of Frederic William, could not be supposed to add, in any considerable degree, to the strength of the French Empire. The indignities offered to Prussia, the slights shown to her beautiful and high-spirited queen, the enormous contributions imposed upon her inhabitants, the relentless rigour with which they were levied, the forcible retention of her fortresses, the tearing away of half her dominions, were injuries that could never be forgiven. Her people, in consequence, imbibed the most unbounded horror at French oppression; and though the fire did not burst forth for some years in open conflagration, it smouldered incessantly in all ranks, from the throne to the cottage, till at length its force became irresistible. And what allies did Napoleon rear up on the Vistula by the arrangements of Tilsit, to prove a counterpoise to the deadly hostility of Prussia thus gathering strength in his rear? None equal to the enemies whom he created. Saxony, indeed, was made a faithful ally, and proved herself such in the hour of disaster, as well as the day of triumph; but the hopes of the Poles were cruelly blighted, and that confidence in the restoration of their empire by his assistance, which might have rendered their warlike bands so powerful an ally on the shores of the Vistula, forever destroyed.† Instead of seeing their nationality revived, the ancient line of their princes restored, and their lost

* Rev. xvi., 8, 9.

† "The treaty of Tilsit," says Oginski, "spread consternation through all the Polish provinces. Numbers in Lithuania and Wolhynia had left their homes to join the army raised under the auspices of Napoleon, and knew that their safety was compromised. Those who waited only for his passage of the Niemen to declare themselves, were disappointed. Universally the treaty was regarded as the tomb of all the hopes which had been entertained of the restoration of the ancient monarchy; and from that moment the confidence of all the Poles in the good intentions of the Emperor Napoleon were irrecoverably weakened."—OGINSKI, *Mem. Sur La Pologne*, ii., 345.

provinces again reunited under one sceptre, they beheld only a fragment of their former empire wrested from Prussia, and handed over, too weak to defend itself, to the foreign government of the house of Saxony. The close alliance with Russia, and, still more, the extraordinary intimacy which had sprung up between the two emperors, precluded all hope that the vast provinces of Lithuania would ever again be restored to the dominion of the Jagellons or the Sobieskis. The restoration of Poland thus seemed farther removed than ever, in consequence of the successful efforts which a portion of its inhabitants had made for their liberation; they appeared to have now as much to fear from the triumphs of the French as the Russian arms. Thus, the treaty of Tilsit irrevocably alienated Prussia, and at the same time extinguished the rising ardour of Poland; and while it broke down the strength of all the intervening states, and presaged a future desperate strife between the despots of the East and the West on the banks of the Niemen, laid no foundation in the affections of mankind for the moral support by which its dangers were to be encountered.

But if the treaty of Tilsit involved serious errors in policy, so far as Poland and Prussia were concerned, much more was it worthy of reprehension when the provisions for the immediate partition of Turkey are taken into consideration. Six months had not elapsed since he had written to Marmont "to spare no protestations or assistance to Turkey, since she was the faithful ally of the French Empire."* Seven months had not elapsed since he had publicly declared at Posen "that the full and complete independence of the Ottoman Empire will ever be the object most at heart with the emperor, as it is indispensable to the security of France and Italy. He would esteem the successes of the present war of little value, if they did not give him the means of reinstating the Sublime Porte in complete independence:"† *one month* had not elapsed since he had said to the Turkish ambassador, in a public audience

at Finkenstein, that "*his right hand was not more inseparable from his left than the Sultan Selim should ever be to him.*"‡ In consequence of these protestations, Turkey had thrown itself into the breach: she had braved the whole hostility of Russia, and defied the thunders of England when her fleets were anchored off the Seraglio Point. And what return did Napoleon make to these faithful allies for the exemplary fidelity with which they had stood by his fortunes when they were shaking in every quarter, and Europe, after the battle of Eylau, was ready to start up in fearful hostility in his rear? The return he made was to sign a convention with Alexander for the partition of all their European dominions; and, not content with assuring the Czar that he was at perfect liberty to chase the Ottomans into Asia, provided only he did not lay violent hands on Constantinople, he stipulated for the largest share of the spoils, including Thrace, Albania, Dalmatia, Epirus, and Greece, for himself, while the consent of Austria was to be purchased by the acquisition of Servia! A more iniquitous and shameless instance of treachery is not to be found even in the dark annals of Italian perfidy; and it is sufficient to demonstrate, what so many other circumstances

conspire to indicate, that this great man was as regardless of the sanctity of treaties as he was of the duty of veracity; that vows were made by him only to be broken, and oaths intended to be kept only till it was for his interest to violate them; and that in prosperous, equally as adverse fortune, no reliance could be placed upon his feelings of gratitude, if a present interest was to be served by forgetting them.

The excuse set up for this monstrous tergiversation by the French writers, viz., that a few weeks before the battle of Friedland an insurrection of the janizaries had taken place at Constantinople, and the ruling powers there had been overturned by open violence, is totally without foundation. The deposition of one sultan—no unusual occurrence in Oriental dynasties—had made no change whatever in the amicable disposition of the Divan towards France, or their inveterate hostility to the ancient and hereditary rivals of the Mohammedan faith: on the contrary, the party of the janizaries which had now gained the ascendancy was precisely the one which has ever been inclined to prosecute hostilities with Russia with the most fanatical fervour. It ill became France to hold out a revolution in the seraglio as a ground for considering all the existing obligations with Turkey as annulled, when her own changes of government since the Revolution had been so frequent that Talleyrand had already sworn allegiance to *ten* in succession. And, in truth, this violation of public faith was as short-sighted as it was dishonourable: the secret articles soon came to the knowledge of the British government; they were communicated by their ambassador to the Divan, and produced an impression which was never forgotten. Honest and sincere, without foresight equally as deceit, the Turks are as incapable of betraying an ally as they are of forgetting an act of treachery committed to themselves. The time will come in this history when the moment of retribution arrives, when Napoleon, hard pressed by the storms of winter and the arms of Russia, is to feel the bitterness of an ally's desertion, and when the perfidy of Tilsit is to be awfully avenged on the shores of the Berezina.*

* The perfidious conduct of Napoleon towards Turkey has been almost overlooked by the liberal writers of Europe, in the vehemence of their indignation at him for not re-establishing the kingdom of Poland. Without doubt, if that great act of injustice could have been repaired by his victorious arm, and a compact, powerful empire of sixteen millions of souls re-established on the banks of the Vistula, it would have been alike grateful to every lover of freedom, and important as forming a barrier against Moscovite aggrandizement in Europe. But was it possible to construct such an empire, to form such a barrier, out of the disjointed elements of Polish anarchy? That is the point for consideration; and if it was not, then the French emperor would have thrown away all the advantages of victory, if, for a visionary and impracticable scheme of this description, he had incurred the lasting and indelible animosity of the partitioning powers. With the aid of two hundred thousand brave men, indeed, which Poland could with ease send into the field, he might, for a season, have withstood the united armies of Russia, Austria, and Prussia; but could he rely on their tumultuary assemblies sustaining the steady and durable efforts requisite for permanent success? What made Poland originally fall a victim to the coalesced powers, once little more than provinces of its mighty dominion? "The insane ambition," as John Sobieski said, "of a plebeian noblesse;" the jealousy of six hundred thousand electors, incapable alike of governing themselves, or of permitting the steady national government of others. Was this fatal element of discord eradicated from the Polish heart? Is it yet eradicated? Was it possible, by re-establishing Poland in 1807, to have done anything but, as Talleyrand well expressed it, "organized anarchy?" These are the considera-

No defence can be made for it in consequence of the revolution at Constantinople.

Disgraceful perfidy of Napoleon towards the Turks. Jan. 2, 1807.

* *Ante*, ii., 468. † *Id. ib.*, 468. ‡ *Ibid.*, ii., 521.

Towards the other powers of Europe the conduct of the two imperial despots was alike at variance with every principle of fidelity to their allies or moderation towards their weaker neighbours. France abandoned Finland to Russia, and Alexander felt no scruples at the prospect of rounding his territories in the neighbourhood of St. Petersburg by wresting that important province from his faithful ally, the King of Sweden; and even went the length of advancing his western frontier, by sharing in the spoils of his unhappy brother, the King of Prussia; while Russia surrendered Italy to France, and engaged to shut her eyes at the appropriation of the papal states by Napoleon, who had resolved upon seizing them, in return for the condescension of the head of the Church in recently travelling to Paris to place the imperial crown on his head. The rulers of the Continent drew an imaginary line across Europe, and mutually gave each other *carte blanche* in regard to spoiliations, how unjustifiable soever, committed on their own side of the division. Napoleon surrendered half the European territories of Turkey to Alexander, and appropriated the other half to himself; while Alexander engaged to throw no obstacles in the way of the dethronement of the sovereigns of the Spanish Peninsula, to make way for the elevation of princes of the Bonaparte family. Both appear to have conceived that, in thus suddenly closing their deadly strife, and turning their irresistible arms against the secondary states in their vicinity, they would gain important present objects, and mutually find room for the exercise of their future ambition, without encroaching on each other; forgetting that the desires of the human heart are insatiable; that, the more powerful empires become, the more ardently do they pant after universal dominion; and that the same causes which arrayed Rome against Carthage in ancient, and brought Tamerlane and Bajazet into fierce collision in modern times, could not fail to become more powerful in their operation from the mutual aggrandizement which their gigantic empires received. "Nec mundus," said Alexander the Great, "duobus solibus regi potest, nec duo summa regna salvo statu terrarum, potest habere."*

The great and ruling principle which actuated Napoleon in the negotiations at Tilsit was the desire to combine all Europe into a cordial

union against Britain. For this end he was willing to forego or postpone his rivalry with Russia; to permit her to emerge, apparently crowned with the laurels of victory, from defeat; and derive greater advantages from the rout of Friedland than she had reaped even from the triumph of Pultowa or the sack of Ismael. All these sources of aggrandizement to his great Continental rival were to Napoleon as nothing, provided only they led to the overthrow of the maritime power of England. That accomplished, he anticipated little comparative difficulty even with the colossal strength of the Scythian monarch. In yielding to his seductions, Alexander appears to have been impressed with a belief that he was the man of destiny, and that, in continuing the combat, he was striving against fate.*

Nor had England any great cause of complaint against him for violating his engagements to her, whatever Sweden or Turkey might have for the ambitious projects entertained at their expense. The cabinet of St. James had themselves receded from the spirit as well as the letter of the confederacy; the subsidies promised by Mr. Pitt had disappeared; the cabinet of St. Petersburg had been drawn for the interest of Germany and England into the contest, and both had withdrawn or been overthrown, leaving Russia alone to maintain it. So circumstanced, Great Britain had no reason to be surprised if Alexander took the first opportunity to extricate himself from a struggle in which the parties chiefly interested no longer appeared to take any share; nor could she complain if she was left alone to continue a contest which she seemed desirous of reducing to a mere maritime quarrel. Deeply did England and Austria subsequently suffer from this infatuated and ill-timed desertion of the confederacy at the very moment when the scales hung nearly even, and their aid might have been thrown in with decisive effect upon the balance. They might have stood in firm and impregnable array beside the veterans of Russia on the Vistula or the Elbe; they were left to maintain singly the contest on the Danube and the Tagus; they might have shared in the glories of Pultusk and Eylau, and converted the rout of Friedland into the triumph of Leipzig; and they expiated their neglect in the carnage of Wagram and the blood of Talavera.

But though the timidity of Austria, when her forces were capable of interfering with decisive effect on the theatre of European contest, and the supineness of England, when she had only to appear in adequate force to conquer, were the causes to which alone we are to ascribe the long subsequent continuance, multiplied disasters, and unbounded ultimate bloodshed of the war, yet for the development of the great moral lesson to France and mankind, and the illustration of the glories of patriotic resistance, it was fortunate that, by protracting it, opportunity was afforded for the memorable occurrences of its later years. But for that circumstance the annals of the world would

Napoleon's leading object in the treaty was the humbling of Great Britain.

England could not complain of its conditions.

tions which then presented, and still present, an invincible obstacle to a measure, in other points of view recommended by so many considerations of justice and expedience. It is evident that the passions of the people, their insane desire for Democratic equality, were so powerful, that, if re-established in its full original extent, it would speedily have again fallen under the dominion of its former conquerors: the same causes which formerly proved fatal to its independence would, without doubt, again have had the same effect.

* Quint. Curtius, l. iv., c. 11.

† "It cannot admit of a doubt," says Bignon, "that in the treaty of Tilsit, as in all the actions of his life, it was the desire to force England to conclude peace that was the sole, the only principle of Napoleon's actions. A prolonged state of war with Russia, or even the conclusion of a treaty which would have only put a period to the bloodshed, would not have satisfied him. It was necessary, not merely that he should have an enemy the less, he required an ally the more. Russia, it is true, had ceased to combat his army, but he required that she should enlist herself on his side; that she should enter into the strife with England, if not with arms, at least by joining in the Continental blockade, which was to aim a deadly thrust at her power. All his lures held out to Alexander were calculated for that end; it is with reference to that object that all the minor arrangements to which he consented are to be regarded."—BIGNON, vi., 351, 352.

* "Sire," said one of the Russian counsellors to Alexander at Tilsit, "I take the liberty of reminding you of the fate of your father, as the consequence of French alliance." "Oh! my God!" replied the emperor, "I know it, I see it; but how can I withstand the destiny which directs me!"—SAVARY, iii., 92.

have lost the strife in the Tyrol, the patriotism of Aspern, the siege of Saragossa, the fields of Spain. Peace would have been concluded with France as an ordinary power; she would have retained the Rhine for her boundary, and Paris would have remained the depository of revolutionary plunder; the Moscow campaign would not have avenged the blood of the innocent, nor the capture of their capital entered like iron into the soul of the vanquished. The last act of the mighty drama had not yet arrived: it was the design of Providence that it should terminate in

yet deeper tragedy, and present a more awful spectacle of the Divine judgments to mankind. England would have saved three hundred millions of her debt, but she would have lost Vittoria and Waterloo; her standards would not have waved in the Pass of Roncesvalles, nor her soldiers entered in triumph the gates of Paris; she would have shared with Russia, in a very unequal proportion, the lustre of the contest, and to barbaric force, not freeborn bravery, future ages would have awarded the glory of having struck down the Conqueror of the World.

CHAPTER XLVII.

CONTINENTAL SYSTEM AND IMPERIAL GOVERNMENT OF NAPOLEON.

JULY, 1807—AUGUST, 1812.

ARGUMENT.

Change in Napoleon's Projects for the Subjugation of England.—Plan of uniting all Europe in the Continental System, and getting the Command of and concentrating their Fleets in the French and Flemish Harbours.—Object of the Berlin Decree.—Its Provisions and vigorous Execution.—First Order in Council by the British Government, January 7, 1807.—Reasons which led to a farther and more rigorous Measure.—Order in Council of the 11th of November, 1807.—Import of these Orders.—Milan Decree of the 17th of December, 1807, published by Napoleon.—Argument in Parliament against the Orders in Council.—Reply of their Supporters in both Houses.—Able Note of Lord Howick on this Subject to the Danish Minister.—Reflections on this Debate, and the Justice of the Orders.—Comparative Blame attaching to each Party.—Reflections on their Policy.—Jesuits' Bark Bill in England.—Vast ultimate Effects of the Continental System.—Introduction of the License System.—Evasions of the Decrees on both Sides by the great Extension of this System.—Universal Joy at Napoleon's Return to Paris.—Unbecoming Adulation of the Orators in the Senate and Chamber of Deputies.—Grand Fête in Honour of the Grand Army.—Suppression of the French Tribunal.—Slavish Submission with which the Change was received in France.—Establishment of a Censorship of the Press.—Identity of the Imperial Tyranny of Napoleon and the Democratic Tyranny of the United States.—Banishment of Madame de Staël and Madame Recamier.—The Judges are rendered removable at Pleasure.—Severe Decrees against any Connivance at English Commerce.—Rapid Progress of the System of Centralization in France under the Imperial Government.—Policy of the Emperor in this Particular.—He re-establishes Titles of Honour.—Principles on which the Change was founded.—Re-establishment of hereditary Titles in Addition to personal Ones.—Speeches on the Subject in the Legislative Body.—Address of the Senate to the Emperor on the Occasion.—Endowment of the new Peers with Revenue drawn from foreign States.—List of the Revenues bestowed from the Electorate of Hanover.—System of Fusion which Napoleon pursued of the ancient and modern Noblesse.—Total Departure thus made from the Principles of the Revolution.—Rapid Progress of Court Etiquette at Paris.—Great internal Prosperity of France under the Empire.—Its Revenues from 1808 to 1813.—Vast Effects of the foreign Plunder and Contribution on its Industry.—Striking Account of the Public Works in Progress in August, 1807, by the Minister of the Interior.—General Delirium which it produced.—French Finances under the Empire.—Budget of 1808.—Despotic Character of the new Law of High Treason.—Decree establishing eight State-prisons in the French Empire.—Extraordinary Assemblage of Persons who were brought together in them.—Slight Causes for which Prisoners were immured.—Vast Extent of Napoleon's Power, and great Aggravation it was of his Persecution.—Universal and slavish Obedience to his Authority.—Enormous Consumption of human Life under his foreign Wars, and the System of the Conscription.—Excessive Rigour of the Conscriptive Laws.—System of the Imperial Education.—Ecclesiastical Schools, Lyceums, and Military Academies.—Formation of the Imperial University, Lyceums, or Military Academies.—Their Constitution and great Importance.—Rapid Transition in France from Republican to despotic Ideas.—Remarkable Difference between the English and French Revolutions in this

Respect.—Its Causes.—Superior Violence and Injustice of the French Convulsion.—But this alone will not explain the Difference.—It was not the Love of Freedom, but the Desire for individual Elevation which was the ruling Principle in France.—The Principles of Freedom never were attended to in the French Revolution.—General Corruption of Public Opinion which it produced.—Rapid Growth of Centralization in this State of Public Feeling.—But this, how great soever an Evil, was unavoidable in the State in which France was on the Termination of the Revolution.—Striking Opinion of M. de Tocqueville on this Subject.—Ability with which Napoleon took Advantage of these Circumstances to establish despotic Power.—Ultimate Effect to general Freedom of the Resistance to Democracy in England, and its Triumph in France.

WHEN the battle of Trafalgar annihilated the prospect of invading England, and extinguished all his hopes of soon bringing the maritime war to a successful issue, Napoleon did not abandon the contest in despair. Quick in perception, he saw at once that the vast preparations in the Channel must go for nothing; that the flotilla at Boulogne would be rotten before a fleet capable of protecting its passage could be assembled; and that every successive year would enable England now exclusively to engross the commerce of the world, and banish his flag more completely from the ocean. But he was not on that account discouraged: fertile in resources, indomitable in resolution, implacable in hatred, he resolved to change the method, not the object of his hostility; and indulged the hope that he would succeed, through the extent and terror of his Continental victories, in achieving the destruction of England, by a process more slow, indeed, but in the end, perhaps, still more certain. His design in this view consisted of two parts, both essential to the success of the general project, and to the prosecution of which his efforts, during the whole remainder of the war, were directed.*

The first part of his plan was to combine all the Continental states into one great alliance against England, and compel them to exclude, in the most rigid manner, the British flag and British merchandise from their harbours. This system had long obtained possession of his mind; he had made it the conditions of every treaty between a maritime state and France, even before he ascended the consular throne.† The adroit flattery which he applied to the mind of the Em-

Change in Napoleon's projects for the subjugation of England.

Plan of uniting all Europe in the Continental system.

* Las Cas., v., 8, 15.

† Ante, ii., 133.

peror Paul, and the skill with which he combined the Northern powers into the maritime confederacy in 1800, were all directed to the same end; and, accordingly, the exclusion of the English flag from their harbours was the fundamental condition of that alliance.* The proclamation of the principles of the armed neutrality by the Northern powers at that crisis, filled him with confident expectations that the period had then arrived when this great object was to be attained; but the victory of Nelson at Copenhagen dissolved all these hopes, and threw him back to the system of ordinary warfare, so cruelly afterwards defeated by the battle of Trafalgar. The astonishing results of the battle of Jena, however, again revived his projects of excluding British commerce from the Continent; and thence the BERLIN DECREE, to be immediately considered, and the anxiety which he evinced at Tilsit to procure, by any sacrifices, the accession of Alexander to the confederacy.

The second part of the plan was to obtain possession, by negotiation, force, or fraud, of all the fleets of Europe, and gradually bring them to the great central point near the English coast, from whence they might ultimately be directed, with decisive effect, against the British shores. By the Continental system he hoped to weaken the resources of England, to hamper its revenue, and, by the spread of commercial distress, break up the unanimity which now prevailed among its inhabitants. But he knew too well the spirit of the ruling part of the nation to expect that, by the spread of commercial distress alone, he would succeed in the contest. He was desirous of reducing its strength by a long previous blockade, but it was by an assault at last that he hoped to carry the day. In order to prepare for that grand event, he was at the utmost pains to increase his naval force: amid all the expenditure occasioned by his military campaigns, he proposed to construct, and, to a certain extent, actually did construct, from ten to twenty sail of the line every year, while vast sums were annually applied to the great naval harbours at Antwerp, Flushing, Cherbourg, and Brest. The first, from its admirable situation and close proximity to the British shores, he considered as the great outwork of the Continent against England; he regarded it, as he himself has told us, as "itself worth a kingdom;" and, but for the invincible tenacity with which he held to this great acquisition, he might with ease have obtained peace in 1814,

* The Directory had previously adopted the system of compelling the exclusion of English goods from all the European harbours; but the multiplied disasters of their administration prevented them from carrying it into any general execution. By a decree, issued on the 18th Jan. 18, 1798, of January, 1798, it was declared, "That all ships having for their cargoes, in whole or in part, any English merchandise, shall be held good prize, whoever is the proprietor of such merchandise, which should be held contraband from the single circumstance of its coming from England, or any of its foreign settlements; that the harbours of France should be shut against all ships having touched at England, except in cases of distress, and that neutral sailors found on board English vessels should be *put to death*." Napoleon, soon after his accession to the consular throne, issued a decree, revoking this and all other decrees passed during the Revolution, and reverting to the old and humane laws of the monarchy in this particular;* but, in the exultation consequent on the battle of Jena, he very nearly returned to the violence and barbarity of the decrees of the Directory.—*Vide Ann. Reg.*, 1800, 54, 55, and 1807, 226, 227.

* *Ante*, ii., 143.

and have left his family at this moment seated on the throne of France.* But it was not with the fleets of France alone that he intended to engage in this mighty enterprise: those of all Europe were to be combined in the attempt; the navies of Denmark and Portugal, in virtue of the secret article in the treaty of Tilsit,† were to be required from their respective sovereigns, and seized by force, if not voluntarily surrendered; that of Russia was to come round from the Black Sea and the Baltic to Brest and Antwerp, and join in the general crusade, until at length a hundred ships of the line and two hundred thousand men were prepared, on the coasts of the Channel, to carry to the shores of England the terrors of Gallic invasion. "When in this manner," said Napoleon, "I had established my ground, so as to bring the two nations to wrestle, as it were, body to body, the issue could not be doubtful, for we had forty millions of French against fifteen millions of English. I would have terminated by a battle of Actium."‡

It was, therefore, no momentary burst of anger or sudden fit of exultation, occasioned by the sioned by his unparalleled triumphs, Berlin Decree, which induced Napoleon, by his celebrated decree from Berlin, to declare the British islands in a state of blockade. It was the result of much thought and anxious deliberation, of a

* *Las Casas*, v., 8, 15.

† *Las Casas*, v., 8, 14. *Jom.*, ii., 449.

‡ *Ante*, ii., 545.

§ Napoleon's projects, in regard to the maritime war against England, have been already explained;† but this is a point of such vital importance to the future security of the British Empire, that it will bear a second note from an additional authority. "He said," says *Las Casas*, "that he had done much for Antwerp, but nothing to what he proposed to have done. By sea, he proposed to have made it a mortal point of attack against the enemy; by land, he wished to render it a sure resource in case of great disasters—a true point of refuge for the national safety; he wished to render it capable of containing an entire army in its defeat, and of resisting a year of open trenches, during which the nation might have risen in a mass for its relief. The world admired much the works already executed at Antwerp—its numerous dockyards, arsenals, and wet docks; but all that, said the emperor, was nothing—it was but the commercial town; the military town was to have been on the other bank, where the land was already purchased; three-deckers were to have been there constructed, and covered sheds established to keep the ships of the line dry in time of peace. Everything there was planned on the most colossal scale. Antwerp was itself a province. That place, said the emperor, was the chief cause of my having been here; for, if I could have made up my mind to give up Antwerp, I might have concluded peace at Chatillon in 1814."—*Las Casas*, vii., 43, 44.

Gigantic as these designs for Antwerp were, they were but a part of what Napoleon meditated or had constructed for his grand enterprise against England. "Magnificent works," says *Las Casas*, "had been set agoing at Cherbourg, where they had excavated, out of the solid rock, a basin capable of holding fifteen ships of the line and as many frigates, with the most splendid fortifications for their protection; the emperor intended to have prepared that harbour to receive thirty more line-of-battle ships of the largest size. Innumerable works had been prepared to receive and protect the flotilla which was to be immediately concerned in the invasion of England; Boulogne was adapted to hold 2000 gunboats; Vimereux, Etaples, and Ambleteuse, 1000 more. The harbour of Flushing was to have been rendered impregnable, and enlarged so as to hold twenty of the largest ships of the line; while dockyards for the construction of twenty line-of-battle ships were to be formed at Antwerp, and constantly kept in full activity. So immense were the preparations on the French coast for the invasion of England! The emperor frequently said that Antwerp was to him an entire province; a little kingdom in itself. He attached the greatest importance to it, often visited it in person, and regarded it as one of the most important of all his creations."—*Las Casas*, vii., 51, 57. It is not a little curious that, within twenty years after his fall, the English government should have united its forces to those of France to restore this great outwork against British independence to the dominion of Belgium, and the rule of the son-in-law of France.

* *Ante*, ii., 273.

calm survey of the resources at his disposal, and the means of resistance which yet remained to his antagonists. The treaty of Tilsit gave the English government ample room for serious reflection on the danger which now beset them. The accession of Russia to the Continental League was thereby rendered certain; the secret articles of the treaty, of which, by great exertions, they soon obtained possession,* made them acquainted with the intention of France and Russia, not only to unite their forces against Great Britain, but to compel Denmark and Portugal to do the same. In addition to having their flag proscribed from the Straits of Gibraltar to the Gulf of Bothnia, they had the prospect of seeing all the maritime forces of Europe arrayed against their independence. The assistance of Sweden could not much longer be relied on, pressed as she would soon be by her colossal neighbour; the harbours of South America were still closed to her adventure; the neutrality of North America was already more than doubtful, and would certainly be soon abandoned to range the United States by the side of France, in open enmity with Great Britain. Thus had England, proscribed from all civilized commerce over the whole world, and weakened in her resources by the internal suffering consequent on such a deprivation, the prospect of soon being compelled to maintain a contest with all the naval and military forces of Europe, directed by consummate ability, and actuated by inveterate hostility against her independence and renown. A clear and constant perception of this prospect is indispensable both to the formation of a just opinion on the measures to which she was speedily driven in her own defence, and of the character of the illustrious men who, called to the direction of her councils and armies in such a gloomy situation, speedily raised her fortunes to an unparalleled pitch of glory and prosperity.

The English government, in 1806, after the occupation of Hanover by the Prussian troops, had issued an order, declaring the coasts of Prussia in a

* They were obtained by the agency of the Count d'Antraigues.—HARD., ix., 431, *note*. In the king's speech on the 21st of January, 1808, it was said, "We are commanded by his majesty to inform you that, no sooner had the result of the negotiations at Tilsit confirmed the influence and control of France over the powers of the Continent, than his majesty was apprized of the intention of the enemy to combine those powers in one general confederacy, to be directed either to the entire subjugation of this kingdom, or to the imposing upon his majesty an insecure and ignominious peace. That for this purpose it was destined to force into hostility against this country, states which had hitherto been allowed by France to maintain or to purchase their neutrality; and to bring to bear upon different points of his majesty's dominions the whole of the naval force of Europe, and specifically the fleets of Denmark and Portugal. To place those fleets out of the power of such a confederacy became, therefore, the indispensable duty of his majesty." The complete accuracy of these assertions has been abundantly proved by the quotations from the secret articles of the treaty of Tilsit, already given; and ample confirmation of them will appear in the sequel of this chapter. Ministers, in the course of the debates which ensued on the Copenhagen expedition, were repeatedly called upon to produce their secret articles, or specify what private information they had received; but they constantly declined doing so, and, in consequence, it became a very general opinion at the time that there, in reality, were no such secret articles, and that this assertion was put forward without foundation in the king's speech, to palliate an aggression which, on its own merits, was indefensible. It is now proved, however, that they had the secret information, and that they had the generosity to bear this load of obloquy rather than betray a confidence which might prove fatal to persons high in office in the French government. This was fully explained, many years afterward, when the reasons for concealment no longer existed, by Lord Liverpool in Parliament.—See *Parl. Deb.*, x., 1.

state of blockade. That the English navy was amply adequate to establish an effectual blockade of the two rivers which constitute the only outlet to Prussian commerce, cannot be doubted.* This blockade, however, and one at the same time declared, of the coasts of the Channel, gave Napoleon an excuse for the famous Berlin Decree against English commerce, which, on the narrative, "that the British government had violated the law of nations, so far as regarded neutral vessels; that it regards as enemies every individual belonging to a hostile state, and, in consequence, makes prize, not merely of the crews of merchant vessels equipped as privateers, but also those of such vessels when merely engaged in the transport of merchandise; that it extends to the ships and the objects of commerce that right of conquest which does not properly belong but to public property; that it extends to commercial cities and harbours, and mouths of rivers, the hardships of blockade which, on the best interpretation of the law of nations, is applicable only to fortified places; that it declares blockaded harbours, before which it has not a single ship of war, although a place cannot be considered as blockaded till it is in such a manner beset that entry cannot be obtained without imminent danger; that it even declares blockaded places, which all its naval forces are inadequate to blockade, as entire coasts and a whole empire; that this monstrous violation of the law of nations has no other object but to obstruct the communications of other people, and elevate the industry and com-

* As this order in council is referred to by the French writers and their supporters in this country as a vindication of the Berlin Decree, its provisions merit attention. It proceeds on the narrative, "that the Prussian government has, in a forcible and hostile manner, taken possession of the electorate of Hanover, and has also notified that all British ships shall be excluded from the ports of the Prussian dominions, and from certain other ports in the north of Europe, and not suffered to enter or trade therein;" and then declares, "That no ship or vessel belonging to any of his majesty's subjects be permitted to enter or clear from any ports of Prussia, and that a general embargo or stop be made of all Prussian ships and vessels whatever, now within, or hereafter which shall come into, any of the ports, harbours, or roads of the United Kingdom of Great Britain and Ireland, together with all persons and effects on board the said ships and vessels; but that the utmost care be taken for the preservation of the cargoes on board of the said ships or vessels, so that no damage or embezzlement whatever be sustained."—*Ann. Reg.*, 1806, 677. This was followed, upon the 16th of May, 1806, by an order in council, signed by Mr. Fox, which, "considering the new measures adopted by the enemy for the obstruction of British commerce, declared the whole coasts, harbours, and rivers, from the Elbe to Brest inclusive, as actually blockaded; provided, always, that this blockade shall not extend to neutral vessels having on board merchandise not belonging to the enemies of his majesty, and not contraband of war; excepting, however, the coast from Ostend to the mouth of the River Seine, which is hereby declared subject to a blockade of the strictest kind." There can be no doubt that the coasts thus declared in a state of blockade were, in the strictest sense, subject to such declaration, when the peril of leaving the harbours they contained was such that not one of the enemy's armed vessels ventured to incur it. This decree, such as it was, was repealed as to all ports from the Elbe to the Ems inclusive, by a British order in council of the 25th of September, 1806.—See MARTENS, v., 469, *Supp.* These orders in council, thus providing only for the blockade of harbours and coasts, which it was at the moment in the highest degree perilous to enter, or for the interim detention of the Prussian cargoes, in retaliation for the unprovoked invasion of Hanover by the Prussian troops, and exclusion of British commerce, in pursuance of the orders of Napoleon already detailed,† was clearly within the law of nations, as admitted by the French emperor himself, and, in truth, a most moderate exercise of the rights of war. They afford, therefore, no excuse or palliation whatever for the Berlin Decree.—See *Ann. Reg.*, 1806, 677. And see the previous Prussian proclamation excluding British trade on the 25th of March, 1806. *Ibid.*, 692, and MARTENS, *Supp.*, v., 435.

† Mart., *Supp.*, v., 437.

† *Ante*, ii., 424.

merchandise of England upon the ruins of that of the Continent; that this being the evident design of England, whoever deals on the Continent in British merchandise, by that very act favours its designs, and becomes participant in them; that this conduct of England, worthy of the first barbarous ages, has hitherto turned to its own great profit and the detriment of all other states; and that the law of nature entitles every belligerent to oppose its enemy with the arms with which it combats, and the mode of hostility which it has adopted, when it disregards every idea of justice and liberality, the result of civilization among mankind;" therefore it declared:

"1. The British islands are placed in a state of blockade. 2. Every species of commerce and communication with them is prohibited; all letters or packets addressed in English, or in the English characters, shall be seized at the postoffice, and interdicted all circulation. 3. Every British subject, of what rank or condition whatever, who shall be found in the countries occupied by our troops, or those of our allies, shall be made prisoners of war. 4. Every warehouse, merchandise, or property of any sort, belonging to a subject of Great Britain, or coming from its manufactories or colonies, is declared good prize. 5. Commerce of every kind in English goods is prohibited; and every species of merchandise belonging to England, or emanating from its workshops or colonies, is declared good prize. 6. The half of the confiscated value shall be devoted to indemnifying those merchants whose vessels have been seized by the English cruisers for the losses which they have sustained. 7. No vessel coming directly from England, or any of its colonies, or having touched there since the publications of the present decree, shall be received into any harbour. 8. Every vessel which, by means of a false declaration, shall have effected such entry, shall be liable to seizure, and the ship and cargo shall be confiscated as if they had also belonged to England. 9. The prize court of Paris is intrusted with the determination of all questions arising out of this decree in France, or the countries occupied by our armies; that of Milan, with the decision of all similar questions in the kingdom of Italy. 10. This decree shall be communicated to the Kings of Spain, Naples, Holland, and Etruria, and to our other allies, whose subjects have been the victims, like our own,* of the injustice and barbarity of English legislation. 11. The ministers of foreign affairs, of war, of marine, of finance, and of justice, of police, and all postmasters, are charged, each in his own department, with the execution of the present decree."

Such was the famous Berlin Decree against English commerce, which was only an extension to all Europe of the declaration and order that all English

merchandise should be liable to confiscation, which had been issued by Napoleon at Leipsic on the 18th of October preceding, and at Hamburg on the 3d of November.* It was not allowed an instant to remain a dead letter. Orders were despatched in all directions to act upon it with the utmost rigour; and with undisguised reluctance, but trembling hands, the subject monarchs and prefects prepared to carry the stern requisition into execution. So strongly was its unjust character and ruinous tendency felt in Holland, that Napoleon's own brother, Louis, king of that country, at first positively refused to submit to its injustice; and at length could only be prevailed on, in the first instance, to promulgate it in the foreign countries occupied by the Dutch troops, reserving its execution in his own dominions till it should be ascertained whether the measures already in force should prove insufficient.† So strongly did this opposition on the part of his brother irritate Napoleon, that he declared, in a fit of ill-humour, "that, if Louis did not submit to his orders, he would cause domiciliary visits to be made through the whole of Holland." Nevertheless, as Louis perceived, what every person in the country knew, that this rigorous decree, if fully acted upon, would occasion the total ruin of his dominions, it was enforced in a very loose manner in the United Provinces. In the north of Germany, however, it was not only most rigorously put in force, but the decree was made a pretence for a thousand iniquitous extortions and abuses, which augmented tenfold its practical oppression. An army of locusts, in the form of inspectors, custom-house-officers, comptrollers, and other functionaries, fell upon all the countries occupied by the French troops, and made the search for English

* *Ante*, ii., 451.

† "This decree," says Louis Bonaparte, king of Holland, "was as unjust as it was impolitic. The command that it should be obeyed by the Kings of Spain, Holland, Naples, and Etruria, was the commencement of universal empire, if it had any meaning; if not so intended, it was senseless. The ground of justification put forth in the decree, viz., 'that England applies the right of blockade, not only to fortified places and the mouths of rivers, but to whole coasts, when the law of nations only authorizes that rigour in the case of places so closely invested that they cannot be entered or quitted without danger,' is itself its chief condemnation; for a nation whose vessels can proceed to a distance from its frontiers, even to the waters of the countries belonging to its enemies, is undoubtedly better entitled to say that it blockades coasts and ports, than a nation without a navy to say that it blockades an island surrounded by numerous fleets. In this last case, it is the Continental power which voluntarily places itself in a state of blockade. Besides, wrong cannot authorize wrong, nor injustice injustice. The fourth and fifth articles of the Berlin Decree are atrocious. What, because the English seize merchants travelling from one place to another, and subject the vessels of individuals to ill treatment, shall we, in an age of reason, dare to seize every Englishman, and whatever of their property we can lay hold of? This was augmenting and justifying the injury of the English government. The sixth article is barbarous, the eighth still worse. Here, by a single stroke of the pen, the property of all Frenchmen who, up to that period, had traded in English goods, is taken from them: vessels even thrown on the coast by tempests are to be refused admission into any port. Enough has been said to justify the extreme repugnance of the King of Holland to carry this decree into execution: it threw him into the utmost consternation; he felt at once that it would speedily prove the ruin of Holland, and afford a pretext for oppressing it. This measure appeared to him as singular and revolutionary as denationalizing. He ventured to write to the emperor that he believed this gigantic measure to be imposed, and calculated, to effect the ruin of France, and all commercial nations connected with it, before it could ruin England. Obligated, however, to carry it into effect, under the penalty of a complete rupture with France, he only endeavoured to do so in the least illegal and most independent manner possible."—LOUIS BONAPARTE, *Documents Sur La Hollande*, i., 294, 307, 308.

* *Ann. Reg.*, 1806, 201. *Schoell*, ix., 344, and *Dum.*, xvii., 46, 47.

† Two days after the publication of the Berlin Decree Napoleon wrote the following highly characteristic letter to Junot, then governor of Paris: "Take especial care that the ladies of your establishment take Swiss tea; it is as good as that of China. Coffee made from chicorie is noways inferior to that of Arabia. Let them make use of these substitutes in their drawing-rooms, instead of amusing themselves with talking politics, like Madame de Staël. Let them take care, also, that no part of their dress is composed of English merchandise: tell that to Madame Junot: if the wives of my chief officers do not set the example, whom can I expect to follow it? It is a contest of life or death between France and England; I must look for the most cordial support in all those by whom I am surrounded."—*NAP. to JUNOT*, 23d Nov., 1806; *D'ABRANTES*, ix., 267, 268.

goods a pretext for innumerable frauds, vexations, and iniquities. "They pillaged, they plundered," says Bourrienne, "in a systematic manner, in all the countries of the north of Germany, to which my diplomatic mission extended. Rapine was in a manner established by law, and executed with such blind fury, that often the legalized robbers did not know the value of the articles they had seized. All the English merchandise was seized at Hamburg, Lubeck, Bremen, and the other Hanse Towns; and Berthier wrote to me, that in that way I should obtain ten millions of francs for the emperor. In point of fact, I compounded with the proprietors for twenty millions (£800,000); and yet such was the demand for these useful articles, that, when exposed to sale by the proprietors, after paying this enormous ransom, their advanced prices brought them a very handsome profit."*†

The English government replied to the Berlin Decree, in the first instance, by an order in council of the 7th of January, 1807, issued by Lord Howick, which, on the preamble of the French decree, and the right of retaliation thence arising to Great Britain, declared, "That no vessel shall be permitted to trade from one port to another, if both belong to France or her allies, and shall be so far under their control as that British vessels are excluded therefrom; and the captains of all British vessels are hereby required to warn every neutral vessel coming from any such port, and destined to such other port, to discontinue her voyage; and any vessel, after being so warned, or after having had a reasonable time allowed it for obtaining information of the present order in council, which shall, notwithstanding, persist in such voyage to such other port, shall be declared good prize." The spirit of this order was to deprive the French, and all the nations subject to their control, which had embraced the Continental system, of the advantages of the coasting-trade in neutral bottoms; and, considering the much more violent and extensive character of the Berlin Decree, there can be no doubt that it was a very mild and lenient measure of retaliation. This order was relaxed, soon after, as to vessels containing grain or provisions for Great Britain, and as to all vessels whatever belonging to the Hanse Towns, if employed in any trade to or from the dominions of Great Britain.‡

After the treaty of Tilsit, however, had completely subjected the Continent to the dominion or control of the French emperor, it soon appeared that some more rigorous and extensive

system of retaliation was called for. A few months' experience was sufficient to show that the Berlin Decree, while it rigorously excluded every species of British manufacture or colonial produce from the ports of the Continent, by no means inflicted a proportional injury upon the inhabitants of the countries where its provisions were put in force; and that, in truth, it opened up a most lucrative commerce to the industry and colonies of neutral powers, at the expense of the vital interests of the British Empire. By prohibiting, under the penalty of confiscation, the importation of every species of British produce, it necessarily left the market of the Continent open to the manufacturing industry and colonial produce of other states; and this, in the end, could not but prove highly injurious to English industry. The obvious and direct retaliation would have consisted in prohibiting the importation into the British dominions of the produce of France or its dependances which had embraced the Continental system, whether in their own or neutral bottoms; but it was extremely doubtful whether this would have been by any means a retribution of equal injury. England was essentially a commercial state. The resources from which she maintained the contest were in great part drawn from the produce of her colonies or manufactories; and the general cessation of commercial intercourse, therefore, could not fail to be felt with more severity in her dominions than in the Continental nations. What to them, considered as a whole, was secondary, to her was vital; the suffering which with them would be diffused over a wide circle, to her would be concentrated in the narrow space of a few counties. In these circumstances, some measure seemed indispensable which should inflict upon the enemy not merely the same *injustice*, but the same *suffering* which he had occasioned; and, by causing his own subjects to feel in their own persons the consequences of his aggression, produce that general discontent which might arm them against his authority, or render necessary a return to more equitable measures.

Under the influence of these ideas, the celebrated orders in council of the 11th of November, 1807, were issued, which, on the preamble of the British islands having been declared by the Berlin Decree in a state of blockade, and of all importation of British merchandise having been absolutely prohibited, and of the mitigated measures of retaliation adopted in the order in council of the 7th of January, 1807, having proved inadequate to the object of effecting the repeal of that unprecedented system of warfare, declared that from henceforth "all the ports and places of France and her allies, from which, though not at war with his majesty, the British flag is excluded, shall be subject to the same restrictions, in respect of trade and navigation, as if the same were *actually blockaded in the most strict and rigorous manner*; and that all trade in articles the produce or manufacture of the said countries or colonies, shall be deemed to be unlawful, and all such articles declared good prize; declaring, always, that nothing herein contained shall be construed to extend to capture or detention of any vessel or cargo which shall belong to a country not declared by this order subject to a strict blockade, which shall have cleared out with such cargo from such port to which she belongs, ei-

* Bour., vit., 265, 326, 327. Louis Bonaparte, Doc. sur Hollande, i., 295, 309.

† A striking instance occurred, a few months after the promulgation of the Berlin Decree, of the utter impossibility of carrying such a monstrous system of legislation into execution. Shortly after the Berlin Decree had been issued, there arrived at Hamburg a thundering order for the immediate furnishing of 50,000 greatcoats; 200,000 pairs of shoes, 16,000 coats, 37,000 waistcoats, and other articles in proportion. The resources of the Hanse Towns were wholly unequal to the supply of so great a requisition in so short a time; and after trying in vain every other expedient, Bourrienne, the French diplomatic agent, was obliged to contract with English houses for the supply, which speedily arrived; and while the emperor was denouncing the severest penalties against the possession of English goods, and boasting that, by the Continental system, he had excluded British manufactures from the Continent, his own army was clothed with the cloth of Leeds and Halifax, and his soldiers would have perished amid the snow of Prussich-Eylau but for the seasonable efforts of British industry.—See BOURRIENNE, vi., 292, 294.

‡ Parl. Deb., x., 127, 130. Ann. Reg., 1807, 671, 672.

Reasons which led to a farther and more rigorous measure.

Orders in council of 11th Nov., 1807.

ther in Europe or America, or from some free port in the British colonies, under circumstances in which such trade from such free port is permitted, direct to some port or place in the colonies of his majesty's enemies, or from those colonies direct to the countries to which such vessel belongs, or to some free port in his majesty's colonies; nor to any vessel or cargo belonging to a country not at war with his majesty, which shall have cleared out from some port in this kingdom, and shall be proceeding direct to the port specified in her clearance; nor to any vessel or cargo belonging to any country not at war with his majesty, which shall be coming from any port or place in Europe, declared by this order to be subject to a strict blockade, destined to some port or place in Europe belonging to his majesty, and be on her voyage direct thereto." All vessels contravening this order are declared good prize. "And whereas countries not engaged in the war have acquiesced in the orders of France, and have given countenance and effect to these prohibitions by obtaining from agents of the enemy certain documents styled 'certificates of origin,' therefore if any vessel, after having had reasonable time to receive notification of the present order, shall be found carrying any such certificate, it shall be declared good prize, together with the goods on board."*†

Divested of the technical phraseology, in which, for the sake of legal precision, these orders are couched, they in effect amount to this: Napoleon had declared the British islands in a state of blockade, and subjected all goods of British produce or manufacture to confiscation within his dominions, or those of the countries subjected to his control, and prohibited all vessels from entering any harbour which had touched at any British port; and the English government, in reply, proclaimed France and all the Continental states in a state of blockade, and declared all vessels good prize which should be bound for any of their harbours, excepting such as had previously cleared out from, or touched at, a British harbour. Thus France prohibited all commerce with England, or traffic in English goods, and England prohibited all commerce between any of the states which had embraced the Continental system and each other, unless in vessels bound for some British harbour.

Napoleon was not slow in replying to these orders in council. By a decree dated from Milan on the 17th of December, 1807, he declared, "1. That every vessel, of whatever nation, which shall have submitted to be searched by British cruisers, or paid any impost levied by the English government, shall be considered as having lost the privileges of a neutral flag, and be considered and dealt with as English vessels. 2. Being so considered, they shall be declared good prize. 3. The British islands

are declared in a state of blockade. Every vessel, of whatever nation, and with whatever cargo, coming from any British harbour, or from any of the English colonies, or from any country occupied by the English troops, or bound for England, or for the English colonies, or for any country occupied by the English troops, is declared good prize.* 4. These rigorous measures shall cease in regard to any nations which shall have caused the English government to respect the rights of their flag, but continue in regard to all others, and never be released till Great Britain shows a disposition to return to the law of nations as well as those of justice and honour."

It may safely be affirmed that the rage of belligerent powers, and the mutual violation of the law of nations, could not go beyond those furious manifestoes. They produced, as might have been expected, most important effects, both on the Continent and the British isles, and gave rise to memorable and luminous debates in Parliament, in which all that could be advanced, both for and against the justice and expedience of these measures, was fully brought forward.

On the one hand, it was strongly urged by Lord Grenville, Lord Howick, and Lord Erskine: "Let the case at once be stated in the manner which has produced the whole controversy. France, on the 21st of November, issued her decree, which announced the intention to distress this country in a way unauthorized by the public law, subjecting to confiscation the ships and cargoes of neutrals with British merchandise, or going to, or coming from Great Britain, with their accustomed trade. Such a decree undoubtedly introduced a rule which the law of nations forbids, as being, even as between belligerents, and much more as with neutrals, an aggravation of the miseries of war, and unauthorized by the practice of civilized states. If carried into execution, it would vest the suffering belligerent with the right of retaliation; and, indeed, as between the belligerents only, it may be admitted that the mere publication of such a decree would authorize the nation so offended to disregard the law of nations towards the nation so offending. But that is not the present question: the point here is, not whether we would have been justified in retaliating upon France the injury she has inflicted upon us, but whether we are justified in inflicting, in our turn, a new and still more aggravated species of injury on neutral states. If A strikes me, I may retaliate by striking him, and neither law nor reason will weigh very nicely the comparative severity of the blow given from that at first received. But it is a new application of the term retaliation to say that, if A strikes me, I may retaliate by striking B. If the interdiction of a neutral from trading with us is submitted to by him from favour to the belligerent, he directly interposes in the war, and his character of a neutral is at an end; if he does so from terror or weakness, in that case, too, he ceases to be a neutral, because he suffers an unjust pressure to be affixed upon us. But admitting that, the question remaining, what right have we to retaliate upon a neutral upon whom the decree has never been executed; who in no shape has been made either the instrument or the victim of oppression by the enemy?"

"Now that is the real question, and the only

* Parl. Deb., x., 134, 138.

† By a supplementary order in council, the severe enact-

ments of this regulation were declared not to extend to "articles of the produce and manufactures of the blockaded countries which shall be laden on board British ships;" and by a more material one, passed six weeks afterward, it was provided, "that nothing in the order of the 11th of November shall be construed so as to permit any vessel to import any produce or manufactures of the enemy's colonies in the West Indies, direct from such colonies to any port in the British dominions."*

* Parl. Deb., x., 148.

* Mart., Sup., v., 453. Ann. Reg., 1807, p. 779. State Papers.

question here. America, the only great maritime power which has not now taken a decided part in the contest, was virtually excluded from its operation. The air was white with her sails; the sea was pressed down with her shipping, nearly half as numerous as our own, bringing her produce into every port of England, and carrying our commodities and manufactures into every corner of Europe. Up to the date of the orders in council, she continued to take, without the least defalcation, ten millions of our manufactures, and she carried to other nations what was beyond her own consumption. She carried on this traffic, in the face of the French decree of the 21st of November, when we could not have done it for ourselves. She did this, it is true, from no feeling of friendship towards us, but from self-interest to herself; but Providence has so arranged human affairs, that, by a wise pursuit of self-interest, everything is full and stands in its proper place. We had so much the start of other nations, that we had only to lie by, and they, for their own purposes, came to our relief. America smuggled our goods into France for her own interest, and France bought them for hers. The people cheered the emperor at the Tuileries every day, but they broke his laws every night. The Berlin Decree, in fact, had become a dead letter, either from the connivance, or licenses for contraband trade issued by the French government: she had no ships to carry her decrees into effect, and the barbarous system of the enemy was rapidly falling into that neglect in which Mr. Pitt, with great sagacity, left the corresponding decree of the Directory in 1798.

"Such was the state of matters, when, in an evil hour, our own government interfered, and gave a helping hand to the enemy. The orders in council were the real executors of the Berlin Decree. Under it we employ our own shipping to stop our own trade upon the sea; we make prisons of our own ports to terrify away the neutral seaman, who otherwise would carry on our traffic, and find a vent for our manufactures; and playing the very game of France, by throwing neutral powers into her arms instead of our own. And this, it seems, is retaliation! Can we, who do such things, object to the Irish rebels, who burned the notes of an obnoxious banker to ruin his trade? Our orders in council have turned the mistake of the ignorant Irish into the shade.

"The order of the 7th of January, 1807, was liable to none of these objections. It introduced or adopted no new or illegal principle; it merely reprobated the illegal decree of France, and asserted the right of retaliation by actual blockade: a restriction which, it is admitted on all hands, neutrals must submit to. But the order of the 11th of November stands in a very different situation. Sir William Scott has told us, in the case of the *Maria* (Robinson, i., 154), that no blockade can be made, by the law of nations, unless force sufficient is stationed to prevent an entry. Can this be predicated of all Europe put together? Is every harbour and river, from Hamburg to Cadiz, so closely watched that no vessel can enter any of them without evident risk of capture? Such a proposition is clearly out of the question; and therefore government has issued an order in council, which its own prize courts, if adjudicating in conformity with their former principles, must declare to be contrary to the law of nations, and therefore refuse to execute.

"Nor is it in this view only that these orders are illegal. They purposed to interrupt the commerce of neutral and unoffending nations, carrying on their accustomed traffic in innocent articles, between their own country and the ports of our enemies, not actually blockaded, and even between their own country and our allies; they compel neutrals, under the pain of confiscation, to come to our ports, and there submit to regulations, restrictions, and duties which will expose them to certain destruction the moment they approach the enemy's shore; they declare all vessels good prize which carry documents or certificates declaring that the articles of the cargo are not the produce of his majesty's dominions, contrary alike to the law of nations and the rights and liberties of the people of this realm: such a monstrous system of aggression never was, and never should be, successful. Let us leave to our enemies the guilt of discord and bloodshed, and seek to support our country by the virtues of beneficence and peace.*

"The idea that you can starve the enemy into submission, or the adoption of a more reasonable mode of hostility, is founded on an essential and fatal mistake in regard to the relative situation of Great Britain and the Continental states in the contest. The former must of necessity be the greatest sufferer. The Continental nations will lose only articles of luxury, but the British will be deprived of those of necessity; sugar may rise to an extravagant price in Germany, but the manufacturers will be deprived of their daily bread in England. The greatest calamity which could befall this country, in her present predicament, would be a war with America, both as depriving her of the chief vent for her manufactured industry, and of the advantage of neutral carriers, who would contrive, for their own profit, to elude every Continental blockade, in order to introduce them into the Continental states. And surely the present moment, when we have all Europe, from the North Cape to Gibraltar, arrayed against us, is not that when it is expedient, gratuitously and unnecessarily, to withdraw so beneficial a customer from our markets, and add his forces to those of the enemy."

On the other hand, it was argued by Lord Hawkesbury, the advocate-general, ^{Reply of the} and Lord-chancellor Eldon: "It is ^{supporters of} in vain to refer to the law of nations ^{the orders in} for any authority on this subject, in ^{both houses.} the unprecedented circumstances in which this country is now placed. What usually passes by that name is merely a collection of the *dicta* of wise men who have devoted themselves to this subject in different ages, applied to the circumstances of the world at the period in which they wrote, or circumstances nearly resembling them, but none having the least resemblance to the circumstances in which this country is now placed. Such as they are, however, they all admit, what, indeed, common sense dictates, the right of retaliation, or of resisting an enemy by the same means by which he attacks ourselves. Nothing can be more expedient in the general case than to adhere, with scrupulous exactness, to the law of nations; but if one belligerent commences a violation of them, it is sometimes indispensable, in order to put an end to the enormity, to make the enemy feel its effects. In some cases the most civilized nations have been

* Parl. Deb., x., 682, 930, 970.

driven to the melancholy necessity of putting prisoners to death to terminate a similar practice on the part of their enemies; doubtless, in the general case, quarter should be given, but during the fury of a charge or the tumult of an assault, it is universally felt by the experience of mankind that a less humane rule must be followed. Every belligerent should usually adhere to the ordinary instruments of human destruction; but if your enemy fires red-hot shot, you are entitled to do the same. Russia herself acted on this principle in repelling, when still a neutral power, the aggressions of France: she authorized the seizure of all ships proceeding to France. Lord Howick himself, in his letter to the Danish minister, in relation to the order of the 7th of January, had clearly vindicated the justice, not only of his own measure,* but of the more extensive measure, based on the same principles, which was ultimately adopted.†

"The Berlin Decree of the 21st of November is at once the foundation and the justification of the present proceeding. That decree declared the British islands in a state of blockade, and prohibited all commerce, even in neutral ships, in the produce or manufactures of this country: it went so far as even to exclude the possibility of one neutral nation trading in safety with another. But it is said that this threatened blockade was not, in point of fact, carried into effect; and that, in some other exceptionable mode, its consequences might have been avoided. But it is immaterial whether it was executed at sea or not: unquestionably it received execution, and the most rigorous execution, at land. Foreign ships were only enabled to come to this country with their foreign produce: they were not permitted, under the pain of confiscation, to take away our goods in return; and can it be said that this is not a real execution?

"The French government justify, in the pre-

* Parl. Deb., x., 674, 971, and 975.

† Lord Howick's letter to the Danish minister, who complained of the British order of the 7th of January, was a very able state paper, and, among other things, observed, "The French government, in adopting a measure at once so violent in itself, and so unjust in its consequences, committed a manifest act of aggression, though immediately levelled at Great Britain, against the rights of every state not engaged in the war, which, if not resisted on their part, must unavoidably deprive them of the privilege of a fair neutrality, and suspend the operation of treaties formed for the protection of their rights in relation to Great Britain. The injury which would be sustained by England, if she suffered her commerce with foreign nations to be thus interdicted, while that of the enemy with them should remain unmolested, is so manifest, that it can require no illustration. It never could have been supposed that his majesty would submit to such an injury, waiting in patient acquiescence till France might think proper to attend to the slow and feeble remonstrances of neutral states, instead of resorting immediately to steps which might check the violence of the enemy and retort upon him the evils of his own injustice. Other powers would have no right to complain, if, in consequence of this unparalleled aggression, the king had proceeded immediately to declare all the countries occupied by the enemy in a state of blockade, and to prohibit all trade in the produce of those countries; for, as the French decree itself expresses it, the law of nature justifies the employment against our enemies of the same arms he himself makes use of. If third parties suffer from these measures, their demand for redress must be directed against that country which first violates the established usages of war, and the rights of neutral states. Neutrality, properly considered, does not consist in taking advantage for the neutral profit of every situation between the belligerents, whereby emolument may be made, but in observing a strict and honest impartiality, so as not to afford advantage in the war to either, and particularly in so far restraining its trade to its accustomed trade in time of peace, as to prevent one belligerent escaping the effect of the other's hostilities." —Lord Howick's Letter to Mr. Riser, 17th March, 1807. Parl. Deb., x., 403, 406.

amble of their decree, their proceedings on the previous proclamation of the late administration in April, 1806, which declared the coasts of the Channel in a state of blockade. But that is a mistake in point of fact, for in no one single instance did they declare either a harbour, or a coast containing several harbours, in a state of blockade, without having previously invested it. The coasts of the Channel, it is well known, when this blockade was declared, were so closely blockaded that not a pram could venture to leave the range of their own batteries without incurring the most imminent risk of capture. The French government, on the other hand, in their decree, declared this country in a state of blockade, not only without making any attempt to invest it, but without being able to send out a single vessel to endanger the neutral vessels which might attempt to violate their blockade. Therein lay the difference, the vital difference between the proceedings of the two countries: the British government declared coasts and rivers blockaded when their maritime force was so great, and so stationed, that the enemy themselves evinced their sense of the reality of the investment by never venturing to leave their harbours; the French declared an imaginary blockade on the seas, and acted upon it in their condemnations on land, when they not only had not a single vessel at sea to maintain it, but their enemies were insulting them daily in their very harbours. Such a proceeding was as absurd as if England, without having a soldier on the Continent, were to declare Bergen-op-Zoom or Lisle in a state of blockade, and act upon this order by seizing all goods belonging to citizens of those towns, wherever she could find them in neutral bottoms on the high seas.

"But it is said the neutral nations did not acquiesce in these decrees, and therefore we were not justified in retaliating in such a way as would affect their interests. Where, then, did they resist? What followed the Berlin Decree? did the three nations, whose next decree materially affected Denmark, Portugal, and America, either remonstrate or take up arms to compel its repeal? Not one of them did so. The Danish government, indeed, complained in strong terms of the British order of the 7th of January, 1807, but were completely silent on the previous and far stronger Berlin Decree of the 21st of November, 1806, to obviate which alone it was issued. This temper savoured pretty strongly of the principle of the armed neutrality, which it has ever been the anxious wish of the Danish government to establish as the general law of the seas. Portugal was not to be blamed, because she had no force at her command to make any resistance; and, accordingly, the port of Lisbon was made the well-known *entrepôt* for violating our orders of the 7th of January, and restoring to the enemy, under neutral colours, all the advantages of a coasting trade. But America was completely independent of France, and has she done anything to evince a repugnance to the French decree? When the corresponding decree of the French Directory was issued in 1798, it was noticed in the president's speech as highly injurious to the interests of the United States, and such as could not be allowed to exist without subverting the independence of their country. What has America now done in relation to the Berlin Decree? Nothing; and that, too, although Napoleon himself announced his resolution to make no distinction between the United States and other

neutrals in this particular, and acted upon this resolution in the Spanish decree issued on the 17th of February, which contained no exception whatever in favour of the Transatlantic states. Having acquiesced in the violation of the law of nations in favour of one belligerent, America is bound, if she would preserve her neutral character, to show a similar forbearance in regard to the other.

"But it is said these orders are injurious to ourselves, even more than our enemies, and that they exclude us from a lucrative commerce we otherwise might have carried on in neutral bottoms, either by connivance or licenses with our enemies. Let it be recollected, however, that, when these orders were issued, we were excluded from every harbour of Europe except Sweden and Sicily; and these answered what trade we could have carried on with the Continental states, or what we can have lost by our retaliatory orders. It is in vain to pretend that these orders were never meant to be acted upon by Bonaparte, and that, but for our orders in council, they would have sunk into oblivion. Such a dereliction of a great object of settled policy is entirely at variance with the known character of the French emperor, and his profound hostility to this country, the ruling principle of his life. It is contradicted by every newspaper, which, before the orders were issued, were full of the account of the seizure of English goods in every quarter of Europe; and by his unvarying state policy, which, in every pacification, and especially at Tilsit, made the rigorous exclusion of British goods the first step towards an accommodation."^{*}

Upon a division, both houses supported ministers: in the upper by a majority of 127 to 61, in the lower by 214 to 94.[†]

In endeavouring, at the distance of thirty years, to form an impartial opinion on this most important subject, it must at once strike the most cursory observer, that the grounds on which this question were debated in the British Parliament were not those on which its merits really rested, or on which they were placed by Napoleon at the time, and have been since argued by the Continental historians. On both sides in England it was assumed that France was the first aggressor by the Berlin Decree, and that the only question was, whether the orders in council exceeded the just measure of retaliation, or were calculated to produce more benefit or injury to this country. Considered in this view, it seems impossible to deny that they were at least justifiable in point of legal principle, whatever they may have been with reference to political expedience. The able argument of Lord Howick to the Danish minister is invincible on this subject.[‡] If an enemy adopts a new and unheard-of mode of warfare, which affects alike his opponent and neutral states, and they submit without resistance to this novel species of hostility, either from a feeling of terror or a desire of profit, they necessarily contract the obligation to be equally passive in regard to the measures of retaliation which the party so assailed may think it necessary to adopt. If they act otherwise they lose the character of neutrality, and become the disguised, but often the most effective and the most valuable allies of the innovating belligerent.

But was the Berlin Decree the origin of the

commercial warfare; or was it merely, as Napoleon and the French writers assert, a retaliation upon England, by the only means at the disposal of the French emperor, for the new and illegal species of warfare which, in the pride of irresistible maritime strength, they had thought fit to adopt? That is the point upon which the whole question really depends; and yet, though put in the foremost rank by Napoleon, it was scarcely touched on by either party in the British Parliament. Nor is it difficult to see to what cause this extraordinary circumstance was owing; both the great parties which divided that assembly were desirous of avoiding that question: the Whigs, because the measure complained of by Napoleon, and on which the Berlin Decree was justified by the French government, had been mainly adopted by Mr. Fox, and subsequently extended by Lord Howick; the Tories, because they were unwilling to cast any doubt on the exercise of maritime powers, in their opinion of essential importance to this country, and which gave them the great advantage of having their political adversaries necessarily compelled to support the general principle on which the measures in question had been founded.

History, however, must disregard all these temporary considerations, and in good faith approach the question blame attaching to each party.

And on this point, as on most others in human affairs, where angry passions have been strongly excited, it will probably be found that there were faults on both sides. Unquestionably the most flagrant violation of the law of nations was committed by Napoleon; as, without having a ship on the ocean, or a single harbour of England invested, he took upon himself to declare the whole British islands in a state of blockade—a proceeding similar to what it would have been had England proclaimed a strict blockade with her men-of-war of Strasbourg or Magdebourg. Most certainly, also, the resolution of the French emperor to reduce England, by means of a Continental system, had been formed long before the blockade of the French coasts in April, 1806, by Mr. Fox; inasmuch as it had been announced and acted upon eight years before, on occasion of the conquest of Leghorn, and had formed the first condition of his pacification with every maritime state since that period. But still the English historian must lament that the British government had given him so plausible a ground for representing his measures as retaliatory only, by issuing, in May, 1806, the blockade of the French coasts of the Channel. True, this was anything rather than a mere paper blockade; true, it was supported by the greatest maritime force in existence; true, it was so effective, that not a French ship of war could venture, without imminent risk, out of the protection of their batteries; still, the declaration of a whole coast, several hundred miles in length, in a state of blockade, was a stretch unusual in war, and which should, in an especial manner, have been avoided in a contest with an antagonist so unscrupulous in the measure in return which he resorted to, and so dexterous at turning any illegal act to good account as the French emperor.

In regard to the policy of the orders in council, there is, perhaps, less difficulty in forming a decided opinion. It was foretold at the time, what subsequent experience has since abundantly veri-

Reflections on their policy.

[‡] *Ante*, ii., 558.

fied, that, in the mutual attempt to starve each other out, the manufacturing state, the commercial emporium, would of necessity be more exposed to suffering than the nations with whom she carried on mercantile transactions, on the same principle on which a besieged town must, in the end, be always reduced by the concentric fire of a skilful assailant. The ruin and suffering on the one side is accumulated on a single spot, or within a narrow compass; on the other it is spread over an extensive surface;—the sum total of distress may be, and probably will be, equal on both sides; but how wide the difference between the garrison which sustains it all on a single breach, or a few hospitals, and the army without, which repairs its losses by the resources of a great empire. Sound policy, therefore, recommended, on the commencement of this novel and dangerous species of hostility, the adoption of a system on the part of Great Britain which should bind more closely the cords which united her to the few remaining neutrals of the world; and which, by opening up new markets for her produce in states beyond the reach of the French emperor, might enable her to bid defiance to the accumulated hostility of all the nations who were subjected to his control. This important subject, however, will more properly come under consideration in a subsequent volume, when the practical operation of the Continental system, and the orders in council for several years, is to be developed; and the able arguments on the part of the English opposition are recounted, which, together with the multiplied complaints of the neutral powers, and the abandonment of the Continental system by Napoleon, at length brought about their repeal.

There is one measure on the part of the British government connected with commercial transactions, however, on land, which, from the very outset, a decided opinion may be hazarded. This is the bill introduced by Mr. Perceval, and which passed both houses of Parliament,* for prohibiting the exportation of Peruvian bark to the countries occupied by the French troops, unless they took it with a certain quantity of British produce or manufactures. This was a stretch of hostility unworthy of the character of England, and derogatory to the noble attitude she had maintained throughout the war. No excess of intemperance or violence on the part of the enemy should have betrayed the British government into such a measure, which made war, not on the French emperor, but the sick and wounded in his hospitals. How much more dignified, as well as politic, was the conduct of the Duke of York in 1794, who, when the French Committee of Public Safety had enjoined their troops to give no quarter, issued the noble proclamation already noticed,† which commanded the British soldiers to deviate in no degree from the usages of civilized warfare. But such was the exasperation now produced on both sides by the long continuance and desperate character of the contest, that the feelings of generosity and the dictates of prudence were alike forgotten, and an overwhelming, and, in some instances, mistaken feeling of state necessity led men to commit many actions foreign alike to their usual principles and previous conduct.‡

April 7, 1808.

Jesuits' Bark Bill in England. — which, from the very outset, a decided opinion may be hazarded. This is the bill introduced by Mr. Perceval, and which passed both houses of Parliament,* for prohibiting the exportation of Peruvian bark to the countries occupied by the French troops, unless they took it with a certain quantity of British produce or manufactures. This was a stretch of hostility unworthy of the character of England, and derogatory to the noble attitude she had maintained throughout the war. No excess of intemperance or violence on the part of the enemy should have betrayed the British government into such a measure, which made war, not on the French emperor, but the sick and wounded in his hospitals. How much more dignified, as well as politic, was the conduct of the Duke of York in 1794, who, when the French Committee of Public Safety had enjoined their troops to give no quarter, issued the noble proclamation already noticed,† which commanded the British soldiers to deviate in no degree from the usages of civilized warfare. But such was the exasperation now produced on both sides by the long continuance and desperate character of the contest, that the feelings of generosity and the dictates of prudence were alike forgotten, and an overwhelming, and, in some instances, mistaken feeling of state necessity led men to commit many actions foreign alike to their usual principles and previous conduct.‡

Long as the preceding disquisition on the Continental system and the orders in council has been, it will not, to those who consider the importance of the subject, appear misplaced. It relates to the ruling principle, the grand object of Napoleon's life: one which he pursued with a degree of perseverance with which no other object was followed, and which, by imposing on him the necessity of general obedience, left him no other alternative but universal empire or total ruin. As such, it is closely linked with the attack on Spain and Portugal, and the long-continued carnage of the Peninsular war; the seizure of the Roman States, and incorporation of the ecclesiastical dominions by the successor of Charlemagne; the incorporation of the ephemeral kingdom of Holland with the great empire; in fine, the grand invasion of Russia in 1812, and the unspeakable horrors of the Moscow campaign. In the history of Napoleon, more, perhaps, than that of any other man that ever existed, the close connexion between one criminal act and another, and the irresistible force of the moral law by which the audacious in wickedness are impelled from one deed of darkness to those which succeed it, till a just retribution awaits them in the natural consequences of their own iniquities, is clearly evinced. The lustre of his actions, the bright effulgence of his glory, has shed an imperishable light over every step of his eventful career; and that mysterious connexion between crime and punishment, which in most men is concealed by the obscurity of their lives, and can only be guessed at from the result, or believed from the moral laws of the universe, is there set forth, link by link, in the brightest and most luminous colours.* The grandeur of his intellect precludes the idea of any cause having co-operated in his fall but the universal and irresistible laws of nature; and the first capacity of modern times was subjected to the most memorable reverse, as if to demonstrate the utter inability of the greatest human strength to combat the simple law which brings upon the impassioned prodigal the consequences of his actions.

It is observed by Dr. Johnson, that no man ever rose to supreme power among men in whom great qualities were not of the system combined with certain meannesses of license, which would be deemed inconceivable in ordinary men. Never was the truth of this singular but just remark more clearly evinced than by Napoleon on this great subject of the Continental system. While it was the great object of his life from this period—while it was the secret key to all his negotiations, all his wars, and all his conquests—while, to enforce its rigorous execution, he put all the forces of Christendom in motion, and hurled the strength of the South in desperate fury at the power of the North, he himself was the first to set the example of the evasion of his own decrees, and, for a temporary profit to himself, to establish a system which, in a great degree, subverted the whole objects for which these mighty risks and sacrifices were undergone. Many months had not elapsed after the publication of the Berlin Decree before it was discovered that a lucrative source of revenue might be opened up by granting, at exorbitant prices, licenses to import British colonial produce and

manufactures; and though this was done under the obligation of exporting French or Continental produce to an equal amount, this condition soon became illusory. Old silks, satins, and velvets, which had completely gone out of fashion, were bought up at fictitious prices, and, when the vessels which took them on board were clear of the French coasts, thrown into the sea, and rich cargoes of English goods brought back in return; and such were the exorbitant prices at which they were sold, that they yielded a very handsome profit to the merchants, after paying an enormous ransom to the emperor for the licenses, and defraying the cost of all the French goods which were lost to give a colour to the transactions. British manufactures and colonial produce rose to an extravagant height, and, as a natural consequence, they became the fashion and the object of universal desire. A pair of cotton stockings were sold for six or seven shillings, and worn by ladies, and in dress, in preference to the finest silk; sugar was soon five shillings, coffee ten shillings a pound. Such enormous prices excited the cupidity alike of those who were engaged in promoting, and whose duty it was to repress the contraband traffic; the vast profits of such cargoes as could be sold, on any terms, compensated the loss of several in the perilous undertaking; and fiscal corruption, taking example from the open sale of licenses at the Tuileries, seized every opportunity of realizing a temporary profit from the sufferings of the people.*†

England was not slow in following the example thus set by the French emperor. Even more dependant than her great antagonist on the disposal of the national produce, the British government gladly availed themselves of a system which promised to mitigate, in so important a particular, the severity of the Continental blockade, and restore, under the safeguard of imperial licenses, the wonted encouragement of European wealth to British industry. Thence arose a system on both sides the most extraordinary and inconsistent that ever existed upon earth. While the two governments were daily carrying on their commercial warfare with increased virulence; while Napoleon was denouncing the punishment of death against every government functionary who should connive in any way at the introduction of British merchandise;† and con-

signing to the flames all the bales of English manufactures that could be discovered by fiscal cupidity in all the extensive dominions subjected to his control; while these terrible severities were carried into rigorous execution wherever his influence reached, and piles of British goods were frequently burned in the public market-places of all the chief Continental cities, and unhappy wretches shot for conniving at the lucrative contraband traffic in the forbidden articles;* while the English Court of Admiralty was daily condemning merchant vessels which had contravened the orders in council, and issuing the strictest injunctions to its cruisers to carry them into full execution, both governments were the first to set the example of the open and undisguised violation of the very decrees to which they required such implicit obedience in others. British licenses were openly sold at the public offices in London, and became the vehicles of an immense commerce with the Continent; and Napoleon at length carried the system of authorizing this illicit traffic to such a height, that, by a decree issued from Antwerp, in July, 1810, it was expressly declared, "Subsequent to the first of August no vessel shall issue from any of our ports, bound for any foreign port, without being furnished with a license signed with our own hand."† Thus the Continental system and the retaliatory measures of the orders in council were mutually abandoned by the government on both sides, though rigorously exacted as the first of public duties from their subjects; the whole prohibitions of the orders in council disappeared before the magic of a writing from Downing-street, and the boasted *grande pensée* of Napoleon degenerated into a mere pretext for exacting, under the name of licenses, an immense annual profit for the behoof of the Great Imperial Smuggler in the Tuileries. To such a height was this practice carried by the French emperor, that it opened up new channels of commerce to British industry, quite equal, on the Continent of Europe, to those his decree had destroyed; and the suffering experienced in England during the continuance of the Continental system was almost entirely owing, not to this Berlin Decree, but to the loss of the great North American market, which the orders in council ultimately closed against British industry. Thus, in this the greatest measure of his life, on which he staked his influence, his fame, his throne, the mighty intellect of Napoleon was governed by the same regard to inferior interests which prompted the Dutch, in former times, to sell ammunition and provisions at an exorbitant rate to the inhabitants of a town besieged by their armies; resolved, at all events, to make profit by their hostilities, and, if they could not reduce their enemies to subjection, at least realize a usurious profit from their necessities. To such

* Bour., vii., 233, 237.

† The following instance will illustrate the mode in which the love of gain in all the imperial functionaries, from the highest to the lowest, counteracted all the state objects of the Berlin Decree. The English, in the summer of 1807, had made themselves master of Heligoland, from whence enormous quantities of British produce were smuggled into Holstein, from whence they were conveyed, at a charge of from 33 to 40 per cent., within the French custom-house line. This regular traffic being well known to the imperial authorities, and probably secretly connived at by them for a share of its enormous profits, Bourrienne, then the French resident at Hamburg, represented to Napoleon that he had much better at once authorize the trade on these terms, and realize for himself this contraband profit. Napoleon adopted the proposal, and, in consequence, 60,000,000 worth of English produce (£2,400,000) was, in 1811, imported openly into that town alone, at a profit of 33 per cent. to the emperor! The same system was soon after adopted in Prussia, but, notwithstanding this relaxation, the legions of douaniers and coast-guards who were quartered on the country were so prodigious that they were of necessity in part lodged in the public prisons and hospitals, and the unhappy captives and patients crowded into confined and unhealthy corners.—See BOURRIENNE, vii., 237, 238, 240.

† The imperial decree, November 18, 1810, created post-officers for the summary punishment of all custom-house officers, carriers, coach-guards, tide-waiters, and oth-

ers engaged in repressing illicit commerce, and authorized them to pronounce and carry into instant execution the most severe and infamous punishments, including death, without appeal or respite of any kind.—*Moniteur*, 18th Nov., 1810, and MONTGAILLARD, vii., 54.

* At Hamburg, in 1811, under the government of Davoust, an unhappy father of a family was shot for having introduced into his house a little sugar loaf, of which his family stood in need; and at that very moment, perhaps, Napoleon was signing a license for the importation of a million such loaves. Smuggling on a small scale was punished with death, and the government carried it on on the greatest scale; the same regulations filled the European prisons with victims, and the imperial coffers with riches.—BOURRIENNE, vii., 233, 234.

† Mart., Sup., v., 512

a length did the License System proceed under the imperial government, that it constituted a principal source of the private revenue of the emperor; and we have the authority of Napoleon himself for the assertion, that the treasure thus accumulated, in hard specie, in the vaults of the Tuileries, amounted, at the opening of the Russian war in 1812, to the enormous and unprecedented sum of four hundred millions of francs, or above sixteen millions sterling.*†

The return of Napoleon to Paris, after the glorious termination of the Polish campaign, diffused a universal enchantment. Never, since the commencement of the Revolution, had the triumph of their arms been so glorious, and never had the French people such universal cause for exultation. No commercial crisis had brought the treasury to the brink of ruin as at the close of the campaign of Austerlitz; no gloomy presentiments of a future desperate war in the North, as at Jena, alloyed the buoyancy of their present transports. The great contest appeared to be over: the forces of the South and the North had been brought into collision, and the latter had been discomfited; the strength of Russia, instead of an inveterate antagonist, had been converted into the firmest support of the French Empire; and, emerging from all the gloom and darkness of a Polish winter, the star of Napoleon again appeared resplendent in the zenith. Their standards had been advanced in triumph to the Niemen; the strength of Prussia was, to all appearance, irrevocably broken; Austria had been throughout overawed; Russia at last defeated. No power of the Continent seemed to be longer capable of withstanding the French emperor; for the forces of Sweden, far removed from the theatre of European strife, would soon, it was foreseen, be compelled to yield to the domineering influence of Alexander. England alone maintained, with unconquerable resolution, the maritime contest; but the very greatness of the triumphs of the two hostile powers on their respective elements precluded, to all appearance, the possibility of their being brought into collision; and, like land and sea monsters, the Colossus of the earth and the deep regarded each other with fruitless rage and impotent fury.‡

So unprecedented a series of triumphs might have turned the heads of a nation less passionately devoted than the French to military glory, and it will excuse much in the way of flourishing declamation. But the oratorical effusions of the public bodies in France went beyond every allowable limit. Theirs was not the exultation of freemen, but the adulation of slaves, and the classical scholar recognised with pain, in their studied flowers,

the well-known language of Byzantine servitude. Already it had become evident that the passions of the Revolution, withdrawn from their original objects, had become wholly centred on military aggrandizement; and that the generous glow of freedom, chilled by suffering, or extinguished by disappointment, was wholly absorbed in selfish ambition—the grave in every age of durable liberty. “We cannot adequately praise your majesty,” said Lacépède, the president of the Senate: “your glory is too dazzling; those only who are placed at the distance of posterity can appreciate its immense elevation.” “The only eulogy worthy of the emperor,” said the president of the Court of Cassation, “is the simple narrative of his reign; the most unadorned recital of what he has wished, thought, and executed; of their effects,* past, present, and to come.” “The conception,” said Count de Fabre, a senator, “which the mother of Napoleon received in her bosom, could only have flowed from *Divine inspiration*.”

Shortly after the return of the emperor, a military spectacle of the most animating and imposing kind took place in the French capital. The Imperial Guard made its entry in state into Paris, amid an enthusiasm and transport which can hardly be imagined by any but those who were eyewitnesses to the vehemence of the military ardour which in France had succeeded to the passions of the Revolution. A triumphal arch was erected on the road to Mayence, at a considerable distance from Paris, from which, to the capital, the way was thronged by innumerable spectators; in brilliant order and proud array the guard marched, through a double file of soldiers, by the Port St. Martin to the Tuileries, where they defiled under the new triumphal arch, opened for the first time on that day. There they deposited their eagles in the palace; they piled their arms, and then passed through the gardens of the Tuileries to the Champs Elysées, when they sat down to a repast laid with ten thousand covers. The animating strains of the military bands, which made the air resound along the whole length of this magnificent procession; the majestic aspect of the soldiers, who were almost all picked men, bronzed by service, but undaunted in aspect; the admirable discipline which they preserved, and the recollection of their recent glorious exploits, with the renown of which the world resounded, filled every heart with transport. In the evening the theatres were all opened gratis; universal delirium prevailed. It was spectacles of this heart-stirring kind, intermingled with the astonishing external triumphs which he achieved, which gave Napoleon his magical influence over the French people, and makes them still look back to his reign, notwithstanding the numberless calamities with which it was at last attended, as a brilliant spot in existence, the recollection of which obliterates all the remembrance of later times, and fixes every eye by a glow of almost insupportable brightness.†

Napoleon, seeing his advantage, took the favourable opportunity which this burst of enthusiastic feeling afforded to eradicate the last remnants of the French Tribunal, popular institutions from the Constitution. In the speech which he addressed to the Legislative Body on his return from Poland,

Slavish adulation of the orators in the Senate, and Chambers of Deputies.

* Las Casas, iv., 115.

† The accounts and details of this immense treasure were all entered in a little book kept by the emperor's private treasurer, and no part of them appeared in the public accounts of the nation or the armie. The greater part of it was drawn out and applied to the necessities of the state during the disasters of 1813 and 1814, and in this resource is to be found one great cause of the stand made by him against the forces of combined Europe in those memorable years. As the expenses of the state always exceeded the income under Napoleon's government, and the contributions levied by the armies, how vast soever, were all absorbed in the cost of their maintenance, this secret fund must have been chiefly, if not entirely, realized from the sale of licences, and its great amount furnishes an index to the extent to which that traffic was carried.—See LAS CASAS, iv., 115.

Great fête in honour of the Grand Army. November 25.

he announced his intention "of simplifying and bringing to perfection the national institutions." It soon appeared what was in contemplation: the "simplifying" consisted in the destruction of the only remaining relic of Democratic power; the "bringing to perfection," in vesting the whole powers of legislation in a Council of State, presided over by the emperor, and composed entirely of persons paid by government, and appointed by himself. It has been already mentioned* that, by the existing Constitution, three public bodies were required to concur in the formation of the laws: the Council of State, the members of which were richly endowed, and all appointed by the emperor; the Tribunal, in which they were discussed and approved of, and the members of which, though also in the receipt of salaries from government, were, to a certain degree, dependant on popular election; and the Legislative Body, which, without enjoying the privilege of debate, listened in silence to the pleadings of the orators appointed by the Council of State, for the measures proposed by government and those of the Tribunal, either for or against their adoption. But, notwithstanding the influence of the emperor over a legislature thus in a great part appointed, and wholly paid by himself, the debates in the Tribunal occasionally assumed a freedom which displeased him; and, while he was willing to allow any latitude in argument to the discussions in the Council of State, addressed to himself or his confidential advisers, he could not tolerate public harangues in another assembly, calculated to arouse extraneous or controlling influence, or revive in any form the passions of the Revolution. For these reasons, he resolved on the entire suppression of the Tribunal, which, having been already reduced from a hundred to fifty members, and stripped by imperial influence of its most distinguished orators, had lost much of its consideration; and on the elevation of the age requisite for admission into the Legislative Body to forty from thirty years, a period of life when it might be presumed that much of the fervour in support of political innovation would be extinguished. The previous discussion on the laws proposed by government, which alone enjoyed the power of bringing them forward, was appointed to take place in three commissions, chosen from the Legislative Body by the emperor; but their debates were not to be made public. Thus was a final blow given to popular influence in France, and the authority of the executive rendered absolute in the Legislature, as it had long been in the other departments of government, just eighteen years after it had been established, amid such universal transports, by the Constituent Assembly.†

* *Ante*, ii., 574.

† De Staël, *Dix Ans d'Exil*, 37, 38. *Montg.*, vi., 277, 278. *Bign.*, vi., 398. *Petit*, 150, 153.

‡ The project of extinguishing the Tribunal had been long entertained by Napoleon. In the Council of State, on the 1st of December, 1803, he said, "Before many years have elapsed, it will probably be advisable to unite the Tribunal to the Legislative Body, by transferring its powers to committees of the latter assembly. The Senate, too feebly constituted in the outset, will require some strengthening. The other legislative bodies have no consistency: none of them could secure the nation from becoming the prey of a colonel of hussars who may have four thousand men at his disposal. The only institutions which offer any security to the public safety are the Senate and Electoral Colleges." "The Legislative Body," said he, on the 29th of March, 1806, "should be composed of individuals who, after the termination of their public services, have some private fortune to fall back upon, without the necessity of giv-

What effect did this important change, which annihilated all the objects for which the Revolution had been commenced, and restored government to a despotic form, more strict and powerful than that of the old monarchy, produce in France? Did it convulse that enthusiastic empire to its centre, and revive again the terrible Democratic fervour of 1789? Did clubs reappear, and popular ambition arise from its ashes, and the stern virtue of the old patriots obliterate the more modern illusions of military glory? It did none of these things: it was hardly noticed amid the blaze of the emperor's triumphs; it did not excite a murmur, or awaken an expression of discontent from Calais to the Pyrenees. Numbers of pamphlets appeared on the subject, but they were all in warm and earnest commendation of the change: one would have supposed that two centuries, instead of eighteen years, had rolled over the head of the nation; that the days of Mirabeau and Danton had passed into the vaults of forgotten time; that the transports of Gracchus had melted away into the servility of Constantinople. The very body which was to be annihilated was the first to lick the hand which was destroying it; if liberty arose in France amid the tears of suffering and by the light of conflagration, it expired amid the servility of eunuchs and the adulation of the East. When the fatal decree was read in the hall of the Tribunal, thunders of applause shook the walls, and Carrion Nisas, a member of that body, and cousin of Cambacères exclaimed, "This communication has been accompanied with so many expressions of esteem and affection, on the part of our sovereign, for his faithful subjects in the Tribunal; these assurances are of such inestimable importance; they have been brought forward with so much lustre, that I am sure, gentlemen, I am the organ of your sentiments when I propose that we should lay at the foot of the throne, as the last act of our honourable existence, an address which may impress the people with the idea that we have received the act of the Senate without regret at the termination of our political existence, without disquietude for the destinies of our country, and that the sentiments of love and devotion to the monarch which animated our body will live forever in the breasts of all its members." The address was voted by acclamation, and these sentiments found a responsive echo in the Legislative Assembly. Its president, Fontanes, said, in the name of the whole body, "The majesty of the National Assembly is about to revive under the auspices of a great man; these walls, which

Slavish submission which this change was received in France.

ing them a pension for their subsistence. Nevertheless, there are every year sixty legislators discharged from the Legislative Body, whom you know not what to make of: those who are not in office carry back nothing but ill-humour to the departments. I would wish to see there proprietors of a certain age, married, attached by the bond either of children or some fortune to the public welfare. These men would come annually to Paris, would speak to the emperor, and live in his circle, and return to their departments illuminated with the slender share of his lustre which had fallen on their heads. The public functionaries should also be members of the Legislative Body: you cannot render the legislature too manageable; if it becomes so strong as to be seized with the desire of ruling, it would destroy the executive, or be destroyed by it."—See *PELLET*, 148, 152. An able and authentic brief record of the discussions in the Council of State, at which the emperor presided, and his opinions on the most important subjects of government; of which an accurate and valuable translation has just been published by Mr. Cadell at Edinburgh, executed by the author's valued friend, Captain Basil Hall.

once resounded with so much clamour, were astonished at their silence, and that silence is about to terminate. Popular tempests shall no longer roll there: they will be succeeded by wise and temperate discussions. He who has enchained the demon of faction, no longer desires that voices respectful, but free, should be banished from these walls. Let us show ourselves worthy of such a gift: let the Tribune reappear without its storms; let truth shine there in its native lustre, mingled with the radiance of wisdom. A great prince must love its *éclat*; it alone can fitly illuminate his path. What has he to fear from it? The more he is regarded, the more majestic he appears; the more he is scrutinized, the more subjects of admiration are discovered." These extravagant sallies excited no general burst of indignation: they were silently read in the *Moniteur*; and the Tribune, the last relic of freedom, sunk unheeded into the grave.* "When the citizens," says Rousseau, "fallen into servitude, enjoy neither liberty nor the power of choice, terror and selfishness convert their suffrages into acclamations: deliberation is at an end; every one adores in public, or execrates in private. Such was the manner in which the Senate was regarded under the Roman emperors."† How little did the eloquent apostle of freedom anticipate another confirmation of the same remark, from the very people whom his fervent declamations had roused to such unanimous enthusiasm in the cause of liberty!

The complete success of this great infringement on the only remaining popular part of the Constitution, encouraged Napoleon to undertake still more decisive measures against the liberties of the people. Six weeks after, an imperial decree, professing to establish the freedom of the press, in reality annihilated it, by enacting that no bookseller was to publish any work without its having previously received the sanction of the censors of the press! The same restriction had previously been imposed on journals and periodical publications: so that, from this time forward down to the fall of Napoleon, no thought could be published to the world without having previously received the sanction of the imperial authorities. Under the active administration and vigilant police of the Empire, these powers were so constantly and rigorously exercised, that not only was the whole information on political subjects or public affairs, which was permitted to reach the people, strained through the imperial filters, but all passages were expunged from every work which had a tendency, however remote, to nourish independent sentiments, or foster a feeling of discontent with the existing government. So far was this carried, that, when the allies entered France in 1814, they found a large proportion of the inhabitants ignorant of the battle of Trafalgar. The years of the Empire are an absolute blank in French literary annals in all matters relating to government, political thought, or moral sentiment. The journals were filled with nothing but the exploits of the emperor, the treatises by which he deigned to enlighten the minds of his subjects on the affairs of

state, or the adulatory addresses presented to him from all parts of his dominions; the pamphlets and periodicals of the metropolis breathed only the incense of refined flattery, or the vanity of Eastern adulation. Talent in literature took no other direction but that pointed out by the imperial authorities; genius sought to distinguish itself only by new and more extravagant kinds of homage. The press, so far from being the safeguard of the people against these evils, became their greatest promoter, by exerting all its powers on the side of despotism. Whoever attentively considers the situation of France, the most enlightened monarchy of Europe, and so recently teeming with Democratic fervour, during the ten years of the imperial government, will at once perceive the groundless nature of the common doctrine that the press is, under all circumstances, the bulwark of liberty, and that despotism is impossible where it exists. They will rather concur in the opinion of Madame de Staël, that the effect which this mighty instrument produces is entirely dependant on the power which gains possession of its resources; that it is only in a peculiar state of the public mind, and when a certain balance exists between political parties, that it is exerted beneficially on the side of freedom; and that at other periods, or under the influence of more corrupted feelings, it may become the instrument of the most immovable popular or imperial despotism which ever was riveted upon mankind.*†

* Montg., v., 282. De Staël, *Rév. Franc.*, ii., 381, 382.

† Observe the picture of the identity of the effects of the press under the imperial despotism of Napoleon and the Democratic tyranny of the majority in the American Union, as delineated by two masters, Madame de Staël and M. de Tocqueville. "This police, for which we cannot find terms adequately contemptuous, was the instrument which Bonaparte made use of to direct public opinion in France; and, in truth, when there is no such thing as the freedom of the press, and the censors of the press not confining themselves to erasing, dictate to writers of every description the opinions they are to advance on every subject of politics, religion, manners, books, and individual character, it may be conceived into what state a nation must fall which has no other nutriment for its thoughts but such as a despotic authority permits. It is not surprising, therefore, that French literature and criticism descended to the lowest point during the Empire. The restrictions on the press were far less severe under Louis XIV. than Napoleon. The profound saying, 'Paper will receive anything,' never received a more appalling illustration. The journals were filled only with addresses to the emperor, with his journeys, those of the princes and princesses of his family, the etiquettes and presentations at court. They discovered the art of being tame and lifeless at the epoch of the world's overturn; and, but for the official bulletins which from time to time let us know that half the world was conquered, one might have believed that the age was one only of roses and flowers, and sought for words in vain but those which the ruling powers let fall on their prostrate subjects. A few courageous individuals published books without the censorship of the press, and what was the consequence? they were prosecuted, the impression seized, banished, or shot like the unhappy Palm. Such terrible examples spread such a universal terror, that submission became universal. Of all the grievances which the slavery of the press produced, perhaps the most bitter was the daily spectacle of those we held most dear insulted or reviled in the journals or works published by authority, without the possibility of making a reply, over half of Europe."—DE STAËL, *Rév. Franc.*, ii., 377, 383.

So far Madame de Staël, in painting the perversion of the press to the purposes of despotism in imperial France; mark now the picture of its operation in America, under the unrestrained sway of a numerical majority of electors. "Among the immense crowd," says Tocqueville, "who, in the United States, take to the career of politics, I have met with few men who possess that independence of thought, that manly candour which characterized the Americans in their war of independence. You would say, on the contrary, that all their minds are formed on the same model, so exactly do they adopt the same opinions. I have sometimes

* "The change," says Bignon, "in the age of eligibility to the Legislative Body, and even the suppression of the Tribune, now so important in our eyes, were hardly thought of in 1807; and so little was public opinion regarded, that the former change was introduced by the sole authority of the emperor, without the concurrence of any of the legislative bodies."—BIGNON, vi., 398-9.

† Montg., vi., 277, 280. Bign., vi., 397, 393.

Under the combined influence of the entire suppression of the liberty of the press and the unwearied activity of imperial censors and police agents, every approach even to a free discussion on public affairs or the principles either of government or social prosperity was stifled in France and its dependant monarchies, and one half of Europe, in the opening of the nineteenth century, and the close of a struggle for extended privileges and universal information, was brought back to a darkness more profound than that of the Middle Ages. Never did papal ambition draw so close the fetters on human thought as imperial France; the Jesuits were not such active agents in the extension of spiritual, as the police were in the establishment of temporal power. Madame de Staël and Madame Recamier were illustrious instances that the jealousy of the imperial government could not be relaxed even by the most brilliant or captivating qualities of the other sex. The former, long the object of Napoleon's hostility, from the vigour of her understanding and the fearlessness of her conduct, was at first banished forty leagues from Paris, then confined to her chateau on the Lake of Geneva, where she dwelt many years, seeking in vain, in the discharge of every filial duty to her venerable father, to console herself for the loss of the brilliant, intellectual society of Paris. At length the rigour of the *espionage* became such,

met with true patriotism among the people, but rarely among their rulers. This is easily explained: Supreme power ever corrupts and depraves its servants before it has irrevocably tainted its possessors. The courtiers in America, indeed, do not say sire! your majesty! Mighty difference! But they speak without intermission of the natural intelligence of their many-headed sovereign; they attribute to him every virtue and capacity under heaven; they do not give him their wives and daughters to make his mistresses, but, by sacrificing their opinions, they prostitute themselves to his service. What revolts the mind of a European in America, is not the extreme liberty which prevails, but the slender guarantee which exists against tyranny. When a man or a party suffers from injustice in the United States from the majority, to whom is he to apply for redress? To public opinion? It is formed by the majority. To the legislative body? It is elected by the majority. To a jury? It is the judicial committee of the majority. To the executive power? It is appointed by the majority, and is the mere executor of its wishes. How cruel or unjust soever may be the stroke which injures you, redress is impossible and submission unavoidable. I know no country in which there is so little true independence of mind and freedom of discussion as in America. The majority raises such formidable barriers to liberty of opinion, that it is impossible to pass them; within them an author may write whatever he pleases, but he will repent it if he ever step beyond them. In Democratic states, organized on the principles of the American Republics, the authority of the majority is so absolute, so irresistible, that a man must give up his rights as a citizen, and almost abjure his quality as a human being, if he means to stray from the track which it lays down. If ever the free institutions of America are destroyed, that event will arise from the unlimited tyranny of the majority; anarchy will be the result, but it will have been brought about by despotism." To the same purpose is the opinion of President Jefferson, the ablest advocate for Democratic principles that ever appeared in the United States: "The executive power," says he, "is not the chief danger to be feared; the tyranny of the legislature is the danger most to be feared." What testimonies from such minds to the identity of the effect so long observed by political writers, by unrestrained power, whether in an absolute despot or an irresponsible numerical majority; and of the necessity of establishing the foundations of the breakwater which is to curb the force of either imperial or Democratic despotism in another element than that by which its own waves are agitated! And how remarkable a confirmation of the profound remark long ago made by Aristotle, that courtiers and demagogues not only bear a strong resemblance to each other, but are, in fact, the same men, varying only in their external character according to the ruling power which they severally worship!—See TOCQUEVILLE, *De l'Amérique*, ii., 145, 146, 156, 157; JEFFERSON'S *Correspondence*, iv., 452; and ARISTOTLE, *De Pol.*, c. 21.

that she fled in disguise through the Tyrol to Vienna, and hunted out thence by the French agents, continued her route through Poland into Moscow, where she arrived shortly before the invasion of 1812, happy to find in the dominions of the imperial autocrat that freedom which old Europe could no longer afford. Her immortal work on Germany was seized by the orders of the police and consigned to the flames; and France owes the preservation of one of the brightest jewels in her literary coronet to the fortuitous concealment of one copy from the myrmidons of Savary. The world has no cause to regret the severity of Napoleon on the illustrious exile, whatever his biographer may have; for to it we owe the *Dix Années d'Exil*, the most admirable of her moral sketches; the three volumes on Germany, the most eloquent of her critical dissertations; and the profound views on the British Constitution, with which she has enriched her great work on the French Revolution. Madame Recamier shared the rigours of Napoleon from her generous attention to her persecuted friend; a transient visit of a few days to Coppet was the pretence for including her also in the sentence of banishment; the graces which had won the admiration of all Europe, and which had disdained the advances of the emperor himself,* were consigned, in a distant province, to the privacy of rural retirement, and the ruler of the East and West deemed himself insecure on the throne of Charlemagne, unless the finest genius then in Europe, and the most beautiful woman in France, were exiled from his dominions.†

Another decree of the Senate soon after inflicted a mortal wound on the independence of the judicial establishment, by en- Judges are rendered removable at pleasure, 12th October.
acting that their commissions for life should not be delivered to them till after five years' previous service, and then only on the condition that their conduct had been entirely satisfactory to the emperor. He reserved to himself the exclusive power of judging on the continuance or dismissal of every judicial functionary, from the highest to the lowest, with the aid of commissioners, ap-

‡ Napoleon's jealousy of Madame Recamier's beauty and influence carried him to still more unjustifiable lengths. Her husband, who was a great banker in Paris, became bankrupt, and he seriously proposed in the Council of State that she should be subjected to a joint responsibility with him for the debts of the bank! "I am of opinion," said he, "that, in case of bankruptcy, the wife should be deprived of all her conjugal rights; because our manners sanction the principle that a wife must follow the fortune of her husband, and that would deprive her of all inducement to make him continue his extravagances." "The class of bankers," says Pelet, the impartial reporter of these important debates, "always excited the emperor's jealousy, because they were an independent class who had no need of the government, while the government often stood in need of their assistance. Besides that, in wishing to render Madame Recamier responsible for her husband's debts, he was actuated by a special spite against that celebrated lady. The little court with which she was surrounded, on account of her incomparable beauty, excited his jealousy, as much as the talents of Madame de Staël. Elevated as he was above all others, he could not see, without pain, that she shared with him the public attention. He was more irritated by it than he would have been by a decided opposition to his government. Even the celebrity of M. Gall, and his well-known system of craniology, excited his jealousy; he could not endure that he should be more talked of than himself."—PELET, *Opinion de Napoléon, dans le Conseil d'Etat*, 261. The well-known story in Boswell of Goldsmith, at Antwerp, taking the pet, because two handsome young ladies at the window of the inn excited more attention than Goldsmith, is nothing to this.—See BOSWELL'S *Johnson*.

pointed and exclusively directed by himself. From this time the independence of the bench, over the whole French Empire, was totally destroyed, and practically every judge held his office during the pleasure merely of the emperor. Several instances of arbitrary dismissal of judges, if they pronounced decrees disagreeable to government, took place; but they were less frequent than might have been expected, from the universal spirit of slavish submission which seized the magistrates of every grade, and rendered them not merely, during the whole reign of Napoleon, the servile instruments of his will, but led them formally, after his fall, to invoke the re-establishment of despotic power.*

Following up the same arbitrary system, it was enacted, by an imperial decree on the 11th of January, that not only should every seaman or passenger on board a vessel arriving in any harbour of France who should declare that it came from an English harbour, or been searched by English cruisers, receive a third of the value of the vessel or cargo, but that every public functionary who should connive, in the slightest degree, at the infringement of any of the decrees against English commerce, should be brought before the criminal court of the department of the Seine, which was erected into a tribunal for that special purpose, and indicted for *high treason*. Bales of English goods, of great extent, were publicly burned in all the chief cities of the countries which directly or indirectly acknowledged the French influence; and at the moment that the unhappy owners were begging from the executioners a few shreds which the flames had spared, to cover their children from the inclemency of the weather, the emperor, by means of licenses, was daily carrying on an extensive commerce in these very articles, and amassing enormous sums at the Tuileries by the sale of the right to deal in those goods which brought death to any inferior functionary.†

Meanwhile, the thirst for public employment in France, always great among that energetic and aspiring people, rose to a perfect mania. The energy of the Revolution, the ardent passion for individual elevation, which constituted its secret but main spring, was now wholly turned into that channel, and by a change of circumstances, remarkable, indeed, but not unnatural, the same desire which, when revolutionary elevation was practicable, convulsed all the nation with Democratic fervour, now that court favour was the only avenue to promotion, led to the extremity of Oriental obsequiousness. The prefects, who had the patronage of all the numerous government offices within their jurisdictions, held a court, and exercised an influence equal to that of petty sovereigns; the ministers of state were besieged with innumerable applications for every office which fell vacant; the emperor himself received hundreds of petitions for every situation in his gift, from the highest to the lowest. All ranks, classes, and parties concurred in this selfish struggle; the old noblesse, with a few honourable exceptions, vied with each other for the most trifling appointments in the imperial antechambers; the patriots of 1789 burned with ardour to share in the advantage of the imperial government; even such of the bloodstained Jac-

obins of 1793 as the guillotine and subsequent proscriptions had spared, sunk down into obscure pamphleteers or functionaries in the employment of the despot who had extinguished their extravagant chimeras.* When such was the disposition of the leading parties in the Revolution, both on the Royalist and Republican side, it may readily be conceived with what eagerness the rising generation, the young men who had grown up to manhood under the star of Napoleon's glory, who knew of the fervour of Democracy only as a hideous dream of former days, the immense mass who looked to advancement in life, and saw no hope of attaining it but in the favour of government, rushed into the same career, and how completely every feeling, down to the fall of Napoleon, was absorbed in the general desire to bask in the sunshine of imperial favour. Such was the universality and vehemence of this passion, that it superseded every other feeling, whether private, social, or political, and with the exception of a few rigid Republicans, such as Carnot and Lafayette, swept before it the whole Democratic principles of France.†

The Constituent Assembly had paved the way for this great alteration by the suppression of the privileges of the nobles, and the annihilation of all provincial and local authority, which necessarily devolved in every branch of the administration, either on the popular assemblies or the Central Government; the Legislative Assembly followed it up by banishing all the clergy and landholders, and issuing the iniquitous decrees for the confiscation of their property, and the Convention put the finishing stroke by inhumanly massacring their leading members, and rendering the reparation of this injustice even to their heirs impossible, by alienating their possessions to the innumerable millions of revolutionary proprietors. It is in these frightful deeds of national injustice that we are to look for the remote but certain cause of the rapid centralization of the subsequent governments and the unbounded extent of the imperial authority. When Napoleon succeeded to supreme power, he found all local or subordinate sources of influence or authority closed up or annulled, and nothing remained but the Central Government. The people had effectually succeeded in destroying the counteracting influence of all other bodies or individuals in the state; but they had been unable to retain in their own hands the power which they had, in the first instance, erected on their ruins. Such had been the corruption, selfishness, incapacity, or wickedness of the functionaries appointed by the masses, that, by common consent, they had been deprived, either formally or tacitly, of their power of nomination; and every appointment, without exception, in the Empire, flowed from the Central Government. Not only were the whole members of the Council of State, the Senate, and the Legislative Body selected by the emperor, but he had the appointment of the whole officers in the army and navy, and the police, whether local or general; the whole magistrates of every degree; the judges, whether supreme or inferior; all persons employed in the

collection of the revenue, the customs, and excise; the whole ministers of the Church; all the teachers of youth; all the professors in the universities, academies, and schools; all persons in the postoffice, or concerned in the administration of the roads, bridges, harbours, fortresses, and cities in the Empire. In a country deprived of its great landed proprietors by the confiscations of the Revolution, bereaved of commerce and colonies by the events of the war, and almost destitute of capital or private fortunes from the preceding convulsions, these different employments constituted the only avenues to subsistence or eminence which remained to those who were either averse to, or above the rank of manual labour, or retail trade. This state of matters, incident to a people highly excited and inspired with the strongest feelings of individual ambition, can alone account for the universal passion for government employment which seized all ranks of the French nation during the latter years of the reign of Napoleon; and before we censure them as volatile and inconsistent, when we contrast this mania with the Democratic fervour of 1789, we would do well to reflect, whether any other people, under similar circumstances, would have remained more steadfast to their original professions; and whether both dispositions of the public mind were not, in truth, at bottom, the result of the same thirst after individual distinction, varying in the effect it produced* according to the change in the means of obtaining elevation which the altered circumstances of society had occasioned.†

Napoleon seized, with all his wonted ability, Policy of the on the extraordinary combination of emperor in circumstances which had thus in a this respect. manner thrown absolute power into his hands. "His system of government," says Madame de Staël, "was founded on three bases: to satisfy the interests of men at the expense of their virtue; to deprave public opinion by falsehoods or sophisms perpetually repeated from the press; and to convert the passion for freedom into that for military glory. He followed up this system with rare ability." The emperor himself has given us some important information on his designs, and what he had effected in this respect. "I had established," said he, "a government the most compact, carrying on its operations with the utmost rapidity, and capable of the most nervous efforts that ever existed upon earth. And, truly, nothing less was required to triumph over the immense difficulties with which we were surrounded, and produce the marvels which we accomplished. The organization of the prefectures, their action and results were alike admirable. The same impulse was given at the same instant to more than forty millions of men; and by the aid of these centres of local activity the movement was as rapid at all the extremities as at the heart of the Empire. Strangers who visited us were astonished at this system; and they never failed to at-

tribute the immense results which were obtained to that uniformity of action pervading so great a space. Each prefect, with the authority and local patronage with which he was invested, was in himself a *little emperor*; but, nevertheless, as he enjoyed no force but from the central authority, owed all his lustre to official employment, and had no natural or hereditary connexion with the territory over which his dominion extended, the system had all the advantages of the feudal government without any of its inconveniences. It was indispensable to clothe them with all that authority; I found myself made dictator by the force of circumstances; it was necessary, therefore, that all the minor springs should be entirely dependant on and in complete harmony with the grand central moving power. The spring with which I covered the soil required a prodigious elasticity, an unbounded tension, if we would avert the strokes which were levelled at our authority. Education may subsequently effect a change; but our generation were inspired with such a thirst for power, and exercised it in so arrogant a manner, to give it the mildest name, and, at the same time, were so headlong in their passion to fawn upon greatness and wear the chains of slavery, that no other system of government was practicable."*

But, with all his admiration for the centralized government which he had established, and of the machinery of prefects, mayors, adjoints, and other functionaries, by which it was carried into effect, no man knew better than Napoleon that it was not in such a system that the foundation for a durable dynasty on the throne could be laid. The system of prefects enjoying absolute power, but deriving all their consideration from transient government appointments, was, in reality, nothing else but the system of Oriental pachaics, held in subjection by a vigorous sultan; and all history told that such governments rarely descended to the third generation from their original founder. "An aristocracy," says Napoleon, "is the true, the only support of a monarchy; without it, the state is a vessel without a rudder—a balloon in the air. A true aristocracy, however, must be ancient; therein consists its real force; and that was the only thing which I could not create. Reasonable Democracy will never aspire to anything more than obtaining an equal power of elevation to all. The true policy in these times was to employ the remains of the aristocracy with the forms and the spirit of Democracy. Above all, it was necessary to take advantage of the ancient historic names: it was the only way to throw the halo of antiquity over our modern institutions. My designs on this point were quite formed, but I had not time to bring them to maturity. It was this: that every lineal descendant of an old marshal or minister should be entitled at any time to get himself declared a duke by the government, upon proving that he had the requisite fortune; every descendant of a general, or governor of a province, to obtain the title of count upon obtaining a similar endowment. This system would have advanced some, excited the hopes of others, awakened the emulation of all without injuring any one: pretty toys, it is true, but such as are indispensable for the government of men. Old and corrupted nations cannot be governed on the same principle

He re-establishes titles of honour. Principles on which it was founded.

* Las Cas., vii., 101. De Staël, *Rév. Franç.*, ii., 372, 374. *Id.*, *Dix Ans d'Exil*, 38, 39.

† Napoleon has left some precious observations on this important subject. "Our excuse for the boundless thirst for employments which existed under the Empire," said he, "is to be found in the misfortunes and convulsions of the Revolution. Every one was displaced; every one felt himself under the necessity of seating himself again; and it was in order to aid that feeling, and give way to that universal necessity, that I felt the propriety of endowing all the principal offices with so much riches, power, and consideration; but, in time, I would have changed that by the mere force of opinion."—LAS CAS., vii., 102.

* Las Cas., vii., 97, 99.

as simple and virtuous ages; for one, in these times, who would sacrifice all to the public good, there are thousands and millions who are governed only by their interests, their vanity, or their enjoyments; to attempt to regenerate such a people in a day would be an act of madness. The true genius of the workman consists in making a right use of the materials which he has at his disposal, to extract good even from the elements which appear at first sight most adverse to his designs; and there is the real secret of the revival of titles, ribands, and crosses. And, after all, these toys are attended with few inconveniences, and are not without some advantages. In the state of civilization in which we are placed, they are proper to awaken the respect of the multitude, and not without influence in producing a feeling of self-respect in their owners; they satisfy the vanity of the weak, without giving any just cause of offence to the strong.*

Proceeding on these principles, a *senatus consultum*, in March, 1808, re-established hereditary titles of honour, under the denomination of prince, duke, count, baron, and chevalier. The persons so ennobled were empowered to entail a certain income, under the name of majorats, in favour of their direct descendants. This was the first formal re-establishment of a nobility; but Napoleon had previously, on repeated occasions, exercised the power of conferring titles on the leading persons in his government or army without any other authority than his own will; and among others had, by a patent dated the 28th of May, 1807, created Lefebvre Duke of Dantzic, with an hereditary succession to his son; and all the marshals of the Empire, as well as grand officers of the imperial court, had already been created princes or dukes, shortly after the campaign of Austerlitz.† But these titles were all connected with foreign estates or possessions, or named after some glorious foreign exploit, and did not infringe, except indirectly, on the equality in France itself, which it had been the great object of the Revolution to establish. Now, however, this fundamental principle was openly violated; and in the lifetime of the generation which had waded through oceans of blood to abolish these distinctions, they were re-established in greater numbers, and on a more rigid style of etiquette than ever.‡

Such a stretch, coming so soon after the universal passion for equality, which, bursting forth in 1789, had since convulsed France and Europe, was of itself sufficiently remarkable; but it was rendered still more so by the speeches by which it was ushered into the Legislative Body. "Senators!" said Cambacérés, "know that you are no longer obscure plebeians or simple citizens. The statute which I hold in my hand confers on you the *majestic title of Count*. I myself, Senators, am no longer merely the citizen Cambacérés; as well as the great dignitaries of the Empire, I am a prince, your most serene highness! and my most serene person, as well as all the other holders of the great dignities of the Empire, will be endowed with one of the grand duchies reserved by the imperial decree of the 30th of March, 1806.§ As the son of a prince cannot, in the noble hierarchy, descend to a low-

er rank than that of a duke, *all our children* will enjoy that title. But the new order of things erects no impassable or invidious barrier between the citizens: every career remains open to the virtues and talents of all; the advantage which it awards to tried merit will prove no injury to that which has not yet been put to the test." Thunders of applause shook the Senate at this announcement; and that body, composed almost entirely of persons of plebeian birth, whom success in the Revolution had raised to eminence, and many of whom had voted in the convention for the death of Louis, not only accepted with gratitude the imperial gift, which was thus the price of abandoning all their former principles, and put on with alacrity the state livery which was the badge of their servitude, but *unanimously* imbibed their devotion in an address to the emperor on the occasion, which must be given entire, as one of the most memorable monuments of political tergiversation and baseness which the history of the world has to exhibit.*†

The institution of this new hereditary noblesse was attended with one peculiarity, which was at once indicative of the ephemeral basis on which it was founded, and the incapability of the infant order to answer any of those

* Montg., vi., 304, 306.

† "Sire! The Senate presents to your august majesty the tribute of its gratitude for the goodness which has prompted you to communicate, by his most serene highness the chancellor of the Empire, the two statutes relative to the erection of imperial titles of the 30th of March, 1806, and the 19th of August in the same year. By that great institution, sire! your majesty has affixed the seal of durability to all the others which France owes to your wisdom. In proportion, sire, as one observes the mutual links which connect together the different parts, so multiplied and yet so firmly united, of that great fabric; in proportion as time, which alone can develop the full extent of its benefits, shall have fully unfolded them, what effects may not be anticipated from your august wisdom! A new value awarded to the recompenses which your majesty never fails to award to real merit, in what obscurity soever fortune may have placed it, and how varied soever may be the services which it has rendered to the state; new motives to imitate such great examples; fresh bonds of fidelity, devotion, and love towards our country, its sovereign and his dynasty; a closer bond of union between our institutions and those of confederate or friendly nations; fathers recompensed in what is most dear to them; the recollections of families rendered more touching; the memory of our ancestors enshrined; the spirit of order, of economy, and of conservatism strengthened by its most obvious interest, that of its descendants; the first bodies of the empire, and the most noble of our institutions drawn closer together; all dread of the return of the *odious Feudal System* forever abolished; every recollection foreign to what you have established extinguished; the splendour of the new families deriving fresh lustre from the rays of the crown; the origin of their illustration rendered contemporary with your glory; the past, the present, and the future attached to your power, as in the sublime conceptions of the great poets of antiquity, the first link of the great chain of destiny was placed in the hands of the gods. Such, sire, are the results of the institution to which your majesty has given life. The combination of such important results, giving security to those to whom the present is as nothing, when there is no guarantee for the future, consolidates in its foundations, fortifies in all its parts, brings to perfection in its proportions, and embellishes in its ornaments, the immense social edifice, at the summit of which is placed the resplendent throne of the greatest of monarchs."—See *Moniteur*, 11th March, 1807, and Montg., vi., 306, 308. The extraordinary nature of this address will not be duly appreciated unless it is recollected that a considerable proportion of these obsequious senators, now so ready to wear the imperial livery and form a part in the great pyramid which supported the throne, were once furious Jacobins, stained with the worst atrocities of the Reign of Terror, and almost all at one period ardent supporters of the principles of liberty and equality. It is sufficient to mention the names of Cambacérés, Fouché, Siéyes, Merlin de Douai, Carnot, Beugnot, Cornudet, Pastout, Viennot-Vaublanc, Fontanes, Fabre de l'Aude, &c., besides a host of others.

important purposes in the state which an ancient and independent aristocracy afford. Most of the new nobles were soldiers of fortune; almost all of them were destitute of any property, but such as their official emoluments or the opportunities they had enjoyed of foreign plunder had afforded. To obviate this inconvenience, and prevent the new nobility from degenerating into a mere set of titled menials or pensioned functionaries, Napoleon fell upon the expedient of attaching to these titles rich endowments drawn from the revenue of foreign countries conquered by the French arms, or held by them in subjection. All the French marshals and the chief dignitaries of the Empire were in this manner quartered on the German or Italian States, and large sums, drawn from the industry or resources of their inhabitants, annually brought to the great central mart of Paris to be expended.* The increase of opulence to the imperial capital was thus, indeed, most sensible; and in a similar proportion did the imperial government, the author of so many benefits to its citizens, become popular and respected; but the effects of this perpetual abstraction of wealth from other countries to the metropolis of the great nation were, to the last degree, vexatious to their inhabitants, and proved one considerable cause of the deep-felt and far-spread hatred which ultimately occasioned its fall. In this respect Napoleon not only evinced none of his wonted sagacity, but acted in direct opposition to what common sense dictated as the fitting course for the monarch of a great and varied empire. How different was the policy of

the Romans, who not only left at the disposal of the municipalities in their extensive dominions the greater proportion of their local revenues, but annually remitted large sums from the imperial treasury for the construction of edifices of utility or embellishment in all their principal cities; so that the sway of the emperors was felt chiefly in the increasing opulence and splendour of their provincial capitals.*

It was another part of Napoleon's system, which he laboured assiduously to promote, to effect an amalgamation, or fusion, as he called it, of the ancient with the modern noblesse, that, burying in oblivion former discord, they should cordially unite in resisting any farther changes, and supporting the imperial throne. With this view he not only opened his antechambers to the old nobility, who rushed in in crowds to occupy them, but promoted to the utmost of his power the distribution of the old families through the innumerable offices of his dominions, and did all that he could, by the offer of splendid establishments, to overcome the repugnance of the ancient noblesse to matrimonial alliances with the soldiers of fortune who had risen from the ranks to greatness under the banners of the Empire. In one respect, this system succeeded even beyond his expectation. Fondly attached, notwithstanding all their reverses, to feudal ideas, clinging still, notwithstanding a total change of manners, to antiquated customs, the old nobility found themselves suddenly elevated to an extraordinary and unhopèd-for degree of importance in the court of the new emperor; and, by the grace of their manners, the brilliancy of their conversation, and their perfect familiarity with the formalities and etiquette of the ancient régime, soon acquired a marked superiority in that field over the soldiers or civilians of humble birth whom the changes of the Revolution had elevated to greatness. By a singular, but not unnatural feeling, also, they were destitute of the scruples at accepting offices in the household which persons of less illustrious descent might have felt. A Montmorency would willingly become maid of honour to the empress, or even descend to lace her shoe, which a lady of plebeian birth might have deemed a degradation. Thus the court was soon filled with the descendants of the old noblesse, and widely as the emperor opened his doors for their reception, amply as he multiplied the chamberlains, equeries, lords in waiting, ladies of the bedchamber, squires, pages of the antechambers, and other functionaries of the palace, he found it impossible to keep pace with the crowds of titled applicants who incessantly besieged its gates for admission. The new nobility soon conceived a violent jealousy at these intruders who had supplanted them in the court circles, and openly testified their animosity even in presence of the emperor himself. The system of fusion met with very little success with the ladies of the rival classes of nobility; but the substantial advantages of great fortune and dignified station reconciled the plebeian duchesses to the superior favour shown to their patrician rivals, while the brilliant uniforms, high stations, and military lustre of the young generals induced not a few of the descendants of the oldest families in France to ally their fortunes to the sons of those upon

System of fusion which Napoleon pursued of the ancient and modern noblesse.

* As a specimen of the manner in which the imperial generals or dignitaries were endowed out of the revenues of the conquered or subject states, it may be sufficient to cite those who were located on the domains of the small electorate of Hanover.

whom their parents would have deemed it a degradation to have bestowed a look.*

Notwithstanding all his efforts, however, it was impossible for Napoleon to conceal from the clearsighted Republicans of France that the restoration of hereditary titles of honour was an entire departure, in the most vital points, from all the principles of the Revolution. In fact, the only surprising thing is, that he himself did not perceive how completely its ultimate effect was subversive of all the passions which had agitated France in 1789, and during the whole fervour of its subsequent changes. It was in vain to say that titles of honour were now restored as a personal, not an hereditary distinction; that the career of merit, both in the civil and military department, was open to all; and that every peasant's son might indulge the hope, by bravery in the field, of fighting his way from the humble rank of a grenadier to a marshal's baton and dukedom; or, by skill and address in diplomacy, of advancing from the counter of the tradesman to the dignity of ambassador and prince of the Empire. During the reign of Napoleon, indeed, and under the pressure of those national difficulties which rendered it indispensable to look for talent in every grade, even the lowest in the state, there might be some foundation for this observation; and doubtless the aspiring temper of the *tiers état* could not but feel gratified at beholding the number of their own, or an inferior rank, who now, as warriors or statesmen, occupied the highest stations in the Empire. But to those who carried their views beyond the reign of the emperor or the existing generation, and looked to the present institutions as a guarantee for Republican equality in future times, these considerations afforded little matter for consolation. They could not disguise from themselves that the new imperial dignities, though the reward of merit to the present holders, would become the birthright of descent to the next generation; they could not hope that the same stirring and anxious times would always continue which rendered it necessary for government to throw themselves for support on the middling classes of the people; and they anticipated the time with dismay when, during the pacific periods of subsequent reigns, the imperial nobility would come to monopolize the influence, offices, and power of the state, as completely as ever had been the case by their feudal predecessors in the days of Francis I. or Louis XIV. What was the origin of all nobility but personal merit? every family, how great soever in its subsequent stages, had some obscure citizen for its original founder; the first king had been a fortunate soldier. If an aristoc-

racy existed at all obstructing the rise of inferior citizens, and monopolizing for a privileged class the influence and riches of the state, it would be no consolation to the friends of equality to assert that it took its origin from the revolutionary, not the feudal wars, and that its paladins were to be found, not in the Round Table of Charlemagne, but the marshals of Napoleon.

In truth, the emperor was too far-sighted not to feel the justice of these observations; and although, in his addresses to the people, he was cautious to hold out the new nobility as the reward of merit only, yet he secretly felt that it was, in fact, the revival of a family distinction. But he was also aware that the favour of the populace cannot be relied on for the durable support of government; that an hereditary monarchy cannot exist without an hereditary aristocracy, whose interests are entwined with its fate; and that without such lasting support, founded on the permanent interests of a privileged class, his throne would be lost by his descendants as speedily as it had been won by himself. All history, and especially that of the Asiatic empires, prove that no family, how great soever in its original founder, could long keep possession of the throne, unless it had cast its anchor either in the interests of an hereditary nobility or religious attachment centred in the descendants of a single family. And the friends of freedom, had they possessed more penetration than at that time, or even now prevails on this subject in France, might have been consoled by the reflection that, however hostile to the equality, the passion for which formed the leading principle of the Revolution, such an aristocracy formed an essential element in the formation of lasting freedom; and that, although there were many instances in which such an aristocracy had proved an insurmountable bar to the elevation of the middling classes of society, there was not one example of liberty not having entirely perished, without such a barrier to resist its encroachments, under the debasing influence of a centralized despotism.

The rapidity with which court etiquette and all the minutiae of regal manners now spread exceeds belief, and, notwithstanding the abundance of contemporary proof, appears almost incredible in a country so recently convulsed with revolutionary passions. The old archives of the monarchy were ransacked to discover the whole details of the ancient ceremonials; whoever could point out an additional bow to be made, a more respectful mode of presenting an address to be adopted, a more gorgeous display of pomp or splendour to be introduced, was received as a benefactor of the human race. The old ceremonies at the rising and retiring to rest of the kings were re-established, though abridged in some of their details; the ancient forms of presentation were revived; and it was seriously debated at court whether the fatiguing form of dining in public once a week should not be restored. Magnificence and splendour the imperial court far exceeded not only anything in Europe, but all that the pride of Louis XIV. had conceived. The whole royal palaces, with the exception of Versailles, were refurbished in the most sumptuous style; the value of the plate and furniture which they contained was estimated at fifty millions of francs, or two millions sterling. At the marriage of the Empress Marie Louise, four queens held her train. In the antechambers of

* The reasons assigned by Napoleon in the Council of State for the employment of the ancient in preference to the modern noblesse was as follows: "It is among the old families that you can alone find still some remains of great fortune; by that means they exercise a great influence on government. How could you compose a court with the men of the Revolution! You find in their ranks only honourable functionaries without fortune, or opulent contractors without character: a court of salaried officials would be at once onerous to the state, and without dignity in the eyes of the people. If the old fortunes are divided by distributions on death, they are restored by successions: the new fortunes have nothing to look to in that way; on the contrary, they are surrounded with needy relatives. Government can now no longer enrich, as formerly, its servants by the domains of the crown or confiscations; it ought, therefore, as much as possible, to take advantage of fortunes already made, and employ them in its service."—FELET, *Conseil d'Etat de Napoléon*, 107, 108.

the emperor, seven kings were sometimes to be seen.* And when this occurred, it was just seventeen years since it had been written, with universal consent, over the principal archway in the Tuileries: "Monarchy is abolished in France, and *will never be restored.*"†

While not merely the forms of monarchical, but the essence of despotic power, were in this manner re-established in France, amid the general concurrence of the nation, the emperor was careful to accompany the change with such substantial benefits and real ameliorations as amply reconciled the great mass of the citizens to the loss of the once prized Democratic powers which had brought such unheard-of disasters on their possessors and the whole community. Though completely despotic, the imperial government had one incalculable advantage: it was regular, conservative, and systematic. The taxes were heavy, but the government expenditure was immense, and enabled the people to pay them with facility: no forced loans or arbitrary confiscations swept off, as in the time of the Republic, the accumulations of years by one fell exaction; no uncertainty as to enjoying the fruits of industry paralyzed in any branch of employment the hand of the labourer. Everything was orderly and tranquil under the imperial sway; the emperor demanded, indeed, more than half their sons from his subjects of every degree, but a boundless career was opened to the conscripts; and visions of a marshal's baton or a general's staff danced before the eyes of many a youthful aspirant, who was destined to an early and unheeded grave in the field of battle or amid the horrors of the military hospital. The stoppage of all external commerce, combined with the vast and constantly increasing expenditure of government, produced an extraordinary degree of vigour in domestic industry and internal communication; the roads, the canals which connected the provinces with each other, were covered with wagons or boats laden with the richest merchandise; the cultivators everywhere found an ample market for their produce in the vast consumption of the armies; the manufacturing cities vied with each other in activity and enterprise; and even commercial wealth, reviving from its ashes under the firm rule of the emperor, exerted its energies on internal traffic, and, turning inward, promoted internal circulation through the great arteries of the Empire. Beet-root was largely cultivated as a substitute for the sugar-cane, and though the saccharine matter obtained from that useful vegetable was inferior in sweetness and richness to that which the West India islands yielded, yet it was superior in clearness and delicacy, and, as a native production, was justly admired. Lyons, Rouen, and the Flemish cities again resounded with the activity of the artisan; their ruined fabrics were restored, the empty warehouses replenished; and the vast internal consumption of the Empire, deprived of all foreign competition, rapidly raised from the dust the prosperous manufactures of the monarchy, which the confiscation of the Revolution had, to all appearance, irrevocably destroyed.‡

Much as this extraordinary flood of internal prosperity was owing to the rapid circulation of wealth, occasioned by the great expenditure, exceeding thirty millions sterling, which was drawn

from the ordinary revenue of the Empire,* more still was to be ascribed to the enormous sums which were extracted from one half of Europe in the shape of subsidies, contributions, or the maintenance of the imperial armies, which was all expended, directly or indirectly, for the benefit of the French people. The immense sums, amounting to above twenty-four millions sterling, have been already mentioned which were extracted from Prussia, and the countries between the Elbe and the Vistula, in two years subsequent to the irruption of the French armies into their territories in October, 1806. But, exorbitant as this was, it constituted but a part of the great system of foreign plunder which formed so important an element in the general system of the imperial government. We have the authority of the able and impartial biographer of Napoleon for the assertion, "that, since their departure from the heights of Boulogne, two hundred thousand French soldiers had been constantly fed, clothed, paid, and lodged at the expense of foreign states; above four hundred millions of contributions (£16,000,000) had, in addition, been levied in money or goods from the countries occupied by the imperial troops: the treasury had received part of this sum, and the remainder, expended on the services of the army, had reduced by one half the amount required from the French exchequer for its support." A few years before, Louisiana had been sold by the First Consul to America, to obtain a supply for the pressing wants of the treasury; on his return from the campaign of Austerlitz, the emperor found the treasury exhausted, and the bank on the eve of insolvency; but the campaigns of the two next years gave him a year's revenue in advance in the coffers of the state, besides a large reserved treasure in the vaults of the Tuileries.‡ When such extraordinary supplies were obtained by foreign plunder for the French treasury, it is not surprising that a very great degree of prosperity should have pervaded all its departments, and in an especial manner made itself felt at the metropolis; and, in truth, all the great and splendid works thenceforward undertaken by the emperor, and which have shed such an imperishable lustre round his name, were carried on by funds wrung, directly or indirectly, from the suffering inhabitants of his subject territories.§

And these works, undertaken under the imperial government, were really such as to justify the enthusiastic admiration of a people even less pas-

Great effect of the foreign plunder and contribution on the industry of France.

—DUPRÉ DE GAETIA, i., 307, 308.

It is not going too far to say, that the sums drawn during these years, directly or indirectly, by plunder, contributions, tribute in subsidies from foreign states, amounted to at least half as much more; and the sums, from the difference in the value of money, were equal to almost double their nominal amount in the currency of Great Britain. Thus, during the last six years of Napoleon, an expenditure equal to nearly a hundred millions sterling in England took place in the French Empire, of which more than a third was drawn from foreign countries. It is not surprising that such a government for the time should be popular, notwithstanding its despotic character and the conscription.

Striking account of the public works of France by the minister of the interior, Aug. 16, 1807. sionately devoted than the French to public splendour. They were thus noticed in the report of the minister of the interior in August, 1807, when Napoleon met the chambers after his return from Tilsit; and, after making every allowance for the exaggerated style of such state papers, much remains to attract the admiration of succeeding ages, and demonstrate the great objects to which, in domestic administration, the ambition of the emperor was directed. "Thirteen thousand leagues of public roads have been kept in order or repaired: the two greatest works undertaken for centuries, the roads of Mont Cenis and of the Simplon, have, after six years of labour, been completed. The road from Spain to Italy is in progress; the Apennines are the theatre of a series of works which will unite Piedmont to the shores of the Mediterranean, and complete the union of Liguria to France; eighteen rivers have seen their navigation improved or prolonged beyond hitherto impassable barriers by means of locks, dikes, or towing paths; four bridges have been erected during the last campaign; ten others are in full progress; ten canals, almost all commenced during the present reign, are in full activity. Nor do the maritime harbours offer fewer prodigies. Antwerp, so recently insignificant, has become the centre of our great maritime preparations: for the first time that part of the Scheldt sees vessels of 74 and 80 guns floating on its bosom; fourteen ships of the line are on the stocks within its walls; many are finished, and have descended to Flushing; that harbour has seen its docks deepened, its entrance improved, and it is already capable of containing a squadron; at Dunkirk and Calais piers have been constructed; at Cherbourg two vast breakwaters erected; at Rochefort and Marseilles equally important maritime improvements are in progress. The existence of our cotton manufactures being secured, investigations are in progress for the discovery of places suited to the culture of that important article: the improvement of the linen fabrics has been the object of constant solicitude; veterinary schools have been established, and already fill the army and the fields with skilled practitioners; a code is preparing for the regulation of commerce; the school of arts and mechanics at Compeigne flourishes, and has been transferred to Chalons; others on a similar plan are in the course of formation; Italy opens an extensive mart for our industry; the war, changed into a contest for commercial independence, has become the greatest stimulant to French industry; every one of our conquests, while it is a market closed to England, is a new encouragement afforded to French enterprise. Nor has the capital of this great empire been neglected; it is the emperor's wish that that illustrious city, become the first in the universe, should befit by its splendour so glorious a destiny. At one extremity of Paris a bridge has been completed, to which victory has given the name of Austerlitz; at another, a second is commencing, to which Jena will afford a still more glorious appellation; the Louvre advances to its completion, marking, in its matured progress through centuries, the successive ages of Francis I., of Henry IV., of Louis XIV., restored to life by the voice of Napoleon; fountains without number flow night and day in all parts of the city, testifying, even to the humblest classes, the care which the emperor bestows on their most

trifling accommodation. Two triumphal arches are already erected, or founded, one in the centre of the palace inhabited by the Genius of Victory, the other at the extremity of the most beautiful avenue of the finest city in the world. The tomb of Dessaix has been erected on the summit of the Alps, whose rugged precipices are not less startled at the monument of our perfection in the arts, than they were at the passage of the artillery drawn by the arms of valour. The fine arts in France are occupied almost entirely in tracing on marble or canvass the glorious exploits of our armies, while the mind of the emperor, ever meditating fresh triumphs, has selected for his antagonist the Demon of Ignorance; and, by the establishment of twelve colleges for the study of law, and gratuitous schools for the teaching of medicine in all the principal cities of the Empire, has laid the foundation of the extension of general knowledge in the most essential subjects of public instruction.*

When the French people saw this magnificent announcement of internal improvement, contemporaneous with the official promulgation of the treaty of Tilsit, the conquest of Prussia, the restoration of the grand-duchy of Warsaw, and the erection of the kingdom of Westphalia, it is not surprising that they were dazzled by the brilliancy of the spectacle, and yielded to the pleasing illusion that the Revolution, nursed in violence and baptized in blood, was to set amid a blaze of unprecedented glory. But the querulous discontent and substantial oppression of other nations might have even then taught them that this splendid fabric rested on a dangerous foundation, and that the system was not likely to be durable which impoverished all others to enrich one favoured state; while a sagacious observer of this long and glowing enumeration of the internal projects of the emperor could hardly have avoided the inference that the government had now drawn to itself the patronage and direction of domestic improvement of every description; that the very magnitude and universality of public undertakings proved that private enterprise had sunk into the dust; and that, reversing the whole principles of the Revolution, the welfare of society had come to depend on the point of the Pyramid.

The finances of France, in an especial manner, occupied the attention of the French emperor; and the talent of his subjects under the jects, adapted beyond any other people in Europe to organization and accuracy in matters of detail, brought that important branch of administration to an extraordinary degree of perfection. The official exposition set forth by his ministers annually, exhibited an excess of income above expenditure;† but no reliance can

be placed on these statements as a true picture of the financial condition of the Empire, when ten or fifteen millions sterling were annually drawn from foreign nations by contributions or subsidies, which did not appear in the yearly budgets; and all the armies quartered beyond the frontiers of the Empire, whether in Germany, Italy, or the Spanish Peninsula, were systematically and invariably maintained and paid at the exclusive expense of their inhabitants. It is sufficient to observe, therefore, that, as long as the empire of Napoleon endured over foreign nations, no want of money was ever experienced at the imperial headquarters, and that the sums extracted from them during its continuance amounted to at least a half of those derived from the legitimate taxation of his own subjects. The longer his experience extended, the more was he attached to the admirable system of indirect taxation, the only secure basis for the permanent income of a great nation. "The principle I should wish to see established," said he, on the 20th of February, 1806, "is to introduce a great number of moderate indirect taxes, susceptible of augmentation, when the public necessities call for their elevation."*

But the march of despotism is not forever on flowers; nor is it always blessings and splendid improvements only which it confers upon its subjects. It soon appeared that the brilliant public works and bewildering enumerations of great undertakings with which the minister of the interior dazzled the eyes of the people, were but the splendid covering with which Napoleon was gilding over the old and well-known chains of Roman servitude. On the 1st of February, 1810, the Penal Code made its appearance; and the few real patriots who had survived the storms of the Revolution perceived with grief, that, out of 480 crimes which it enumerated, no less than 220 were for state offences.† In this long and portentous enumeration were included almost all the offences embraced under the denomination of lese-majesty in the jurisprudence of the lower empire: among others, the non-revelation of crimes affecting the security of the state, which have come to any one's knowledge; illegal societies or assemblages of any kind; and seditious offences, committed either by writings published or unpublished, images or engravings. The punishment of such non-revelation was declared to be the galleys, if the crime not disclosed was

lese-majesty; imprisonment from two to five years, if sedition. So special and minute are the crimes against the security of the state, and so slender the evidence required to establish them, that in troubled times, and in the hands of a despotic monarch, they furnished the most ample means of totally extinguishing the liberties of the people, and rendering every person amenable to punishment who in the slightest degree obstructed the measures of government.*

Imprisonment has ever been the great instrument of despotic power: it is not by heart-rending punishments inflicted on its victims in presence of the people, but by the silent, unseen operation of confinement and seclusion, that the spirit of freedom has in general been broken. Founded, as the empire of Napoleon was, on the suppression of all the passions of the Revolution, and succeeding, as it did, to a period when great political parties had been interested in their preservation, it was not to be expected that this great engine was to remain powerless in his hands. It is a remarkable fact, highly characteristic of the ambitious spirit which inspired, and the absence of all regard for real freedom which distinguished the whole changes of the Revolution, that not one of the successive parties which were elevated to power during its progress ever thought of the obvious expedient essential to anything like freedom, of limiting by law the period to which imprisonment, at the instance of government, without bringing the accused to trial, could extend. Each was perfectly willing that arbitrary imprisonment should continue, provided only that they enjoyed the power of exercising it. During the Reign of Terror, this iniquitous system was carried to a height unparalleled in any former age; and above two hundred thousand captives at one time groaned in the state prisons of France. Even under the comparatively regular and constitutional sway of the Directory, it was still largely acted upon: the first use of their power made by each faction, as they got possession of the executive, was to consign all the dangerous persons of the opposite parties to prison; and we have the authority of Napoleon for the assertion that, at one time, the state prisoners under their rule amounted to sixty, and when he took possession of power, were still nine thousand.† Under his more vigorous, but humane administration, the amount was much lessened, but still it was considerable; and great numbers of persons constantly remained in jail, without any means either of procuring their liberation or forcing on their trial. Their number and unhappy condition had long attracted the attention of the emperor, and at March 3. length a decree was passed regulating their treatment and places of confinement, and defining the authorities by whom their detention was to be authorized. By this decree eight state prisons were established in France, viz., Saumur, Ham, If, Landskrown, Pierre Chatel, Fenestrelles, Campiano, and Vincennes. The detention of prisoners in them required to be on a warrant of the private council of the emperor, on a report of the minister of police or public justice. The former was invested with the power of putting any person that he thought proper under the surveillance of the police. The captives in the state prisons retained the

power of disposing of their effects, unless it was otherwise ordered; but they could not receive any money or movables but in the presence of the governor of the prison, and by his authority. All correspondence or intercourse with the rest of the world was rigorously forbidden; and any jailer who should permit or connive at the correspondence of any prisoner with any person whatever was to be dismissed, and punished with six months' confinement.*

Under this rigorous system, great numbers of persons of the highest rank and noblest character were confined in these state prisons during the whole reign of Napoleon, not only from France itself, but from Piedmont, Lombardy, the Roman States, Germany, and Switzerland. An order, signed by Napoleon, the minister of police, or the Privy Council, was a sufficient warrant in all those countries, not only to occasion the arrest of any suspected person, but his detention in one of these gloomy fortresses, to all appearance for the whole remainder of his life: nobles of the highest rank, priests of the most exalted station, citizens of the most irreproachable lives, were seized in every part of Europe subject to the French influence, paraded through the towns of the country to which they belonged, with shackles on their hands, or chains round their necks, and then consigned to the gloomy oblivion of the state prisons, there to languish in captivity for the remainder of their lives. The offences for which this terrible penalty, worse than death itself, was inflicted, were of the most trivial kind; their being regarded as punishable at all, savoured rather of the dark policy of Tiberius than the more lenient administration, even of despotic countries, in modern times. An unhappy *bon mot*, a cutting jest at the expense of any of the imperial authorities, a few sarcastic lines, were sufficient to consign their unfortunate authors to close confinement for the rest of their days.† The state prisons exhibited the most extraordinary assemblage of persons: those on the north of the Empire were chiefly filled with ardent Democrats, or devoted partisans of the house of Bourbon; those in the southern provinces with ecclesiastics, or priests who had expressed themselves incautiously regarding the captivity and dethronement of their spiritual sovereign; but numbers were there immured against whom no definite charge or overt

act could be brought, but who, from some unknown cause, had excited the jealousy of the emperor or some of the imperial authorities. One day there arrived at the doors of these gloomy abodes a young nobleman of elegant figure, gay manners, and dissipated habits; the next an aged priest, in the decline of life, whose gray hairs were sent to bleach amid the snows of the Alps; next came a violent Democrat, who, untaught by the disasters of twenty years, was still raving about the Rights of Man; then a faithful adherent of the fallen dynasty, or an uncompromising assertor of the wrongs of the conquered provinces. All who in any way, or from any motive, had excited either the displeasure or the fear of the emperor, were sent into captivity; but the greater proportion were ecclesiastics, among whom was the intrepid and able Cardinal Pacca who had, in an especial manner, roused his indignation by his bold counsels to the pope, soon the companion of his captivity, to resist the imperial aggressions on the Holy See.††

One circumstance of peculiar and unprecedented severity attended the state victims of Napoleon, which had been unknown in Europe since the fall of the Roman Empire. The extent of his dominions, the wide sway of his influence, rendered it almost impossible to fly from his persecution. By passing the frontier, and escaping into other states, no asylum, as in former times, was obtained; the influence of the imperial authorities, the terrors of the imperial sway, pursued the fugitive through the whole of Europe; and, as in the days of Caligula or Nero, the victim of imperial jealousy could find no resting-place on the Continent till he had passed the utmost limits of civilization, and amid the nomade or semi-barbarous tribes on the frontiers of Europe found that security which the boasted institutions of its ancient states could no longer afford. The mandates of the emperor, the inquiry of his police, reached the trembling fugitive as effectually on the utmost verge of the Austrian or Spanish dominions, in the extremity of Calabria, or in the marshes of Poland, as in the centre of Paris; and it was not till he had escaped into the Ukraine or the Turkish provinces, or had found an asylum in the yet unsubdued realm of Britain, that the victim of imperial persecution could find a secure resting-place. The knowledge of this, which universally prevailed, added fearfully to the terrors of the imperial government; the firmest mind, the most undaunted resolution despaired of entering the lists with an authority which the whole civilized world seemed constrained to obey; and the immense majority of the prudent and the selfish quailed under the prospect of incurring the displeasure of a power whose lightest measure of animadver-

Universal extent of Napoleon's power, and great aggravation it was of his persecutions.

* Decree, March 3, 1810. *Moniteur* and *Montg.* vii., 11, 12.

† Cardinal Pacca, long a victim of the tyrannical government of Napoleon, on account of the courageous stand which he made against his spoliation of the Holy See, and who, for six years, was confined in the state prison of Fenestrelles among the solitude of the Alps, has given us the following account of some of his fellow-captives: "On my arrival in the prison, one of the first persons I met was the arch-priest of Fontaine, in the Duchy of Parma, *vir simplex et timens Deum*, who had been sentenced to three years' confinement for having written, in 1809, to a neighbouring curate that the Archduke John was advancing with his army; the next was Tognetti de Pisa, condemned to six months' imprisonment for having imprudently repeated a satire he had heard against the emperor; Girolamo de Forte, also, for having composed some poems in favour of the Austrians, when in 1800 they chased the French from Italy; and Leonard de Modigliano, dean of Forlì, for having been imprudent in his language against the French emperor, were sentenced to an unlimited period of captivity, and only received their liberation on the downfall of Napoleon. They traversed the most populous cities of Lombardy in the course of their transmission to prison, the former with handcuffs, the latter with a chain about his neck, of which he still bore the marks when I saw him in the prison of Fenestrelles."—*Mémoires de CARDINAL PACCA*, i., 237, 238.

* Pacca's *Mem.* i., 237, 270, 271, 274.

† These ecclesiastics were sentenced to unlimited imprisonment for the most trifling causes. Out of nineteen who were imprisoned along with Cardinal Pacca in the fortress of Fenestrelles, amid the Savoy Alps, three Spaniards by birth were there for having declared, at Parma, against the iniquitous war which the emperor was waging against their nation; another for being suspected of having carried on a secret correspondence with the pope when in confinement in France; others for having refused to take the oath of fidelity to the French emperor in the Roman States; one from Bastia, in Corsica, for having preached a sermon containing some passages which were thought to be a satire on the emperor, in regard to the affairs of the Church. He was seized before he had concluded his discourse, and instantly conducted to prison.—*PACCA*, i., 271, 272.

sion would be banishment into the savage or uncivilized parts of the earth.* Such was the weight of this despotism, that even the brothers of Napoleon could not endure it. Louis resigned the throne of Holland, and Lucien sought in England that freedom, for the loss of which all the grandeur and power of the brother, whom his presence of mind had seated on the consular throne, could afford no compensation.

With such powers to support his authority, and such terrors to overawe discontent or stifle resistance, Napoleon succeeded, without the least difficulty, in maintaining a despotism in France during the whole remainder of the Empire, unparalleled for rigour and severity in modern times. Not a whisper of resistance was anywhere heard to his orders throughout all his vast dominions. The Senate joyfully and servilely registered his decrees, voted his taxes, and authorized his conscriptions; the press was occupied only with narrating his journeys, transcribing his eulogies, or enforcing his orders; the Chamber of Deputies vied with their dignified brethren in the upper chamber in addressing the emperor only with the incense of Eastern adulation. The Legislature voted, and the nation furnished to their ruler, during the ten years which elapsed from his assuming the imperial throne to his abdication, the stupendous number of two millions three hundred thousand conscripts, of which above two millions two hundred thousand perished in his service.† The taxes, enormous-

ly heavy, were only prevented from being screwed up to the highest possible amount by the systematic plunder of all the tributary countries of Europe. Yet this government was not only obeyed without a murmur during all that time, but these terrible sacrifices, draining as they did its brave's blood from the nation, were passively yielded by all classes; and the despot, who was visibly leading them to perdition, was surrounded on all sides and at all times by the incense of flattery and the voice of adulation.*

So severely, however, did the conscription press upon the natural feelings of the human heart, both in parents and their offspring, that, although the salaried dependants of the emperor, in the Legislature and elsewhere, obsequiously voted all his demands for men, and the press lavished nothing but encomiums on his measures, yet it was not without extreme difficulty and excessive rigour that it could be carried into execution, especially in the rural districts of the Empire. The infirmities which might be pleaded in exemption were severely scrutinized, and inveterate asthma, habitual spitting of blood, or incipient consumption, alone sustained as a sufficient excuse. Exemptions at first were allowed to be purchased for three hundred francs; but this privilege was soon repealed, and in the latter years of the Empire a substitute could not be procured for less than eight hundred or a thousand pounds. No Frenchman, liable, or who once had been liable to the conscription, could hold any public office, receive any public salary, exercise any public right, receive any legacy, or inherit any property, unless he could produce a certificate that he had obeyed the law, and was either legally exempted, in actual service, discharged, or that his services had not been required. Those who failed to join the army, when drawn, within the prescribed time, were deprived of their civil rights, and denounced to all the gendarmerie in the Empire as deserters. Eleven dépôts were appointed for the punishment of the refractory, where they wore the uniform of convicts, received their fare, and were employed to labour on fortifications or public works without any pay. The terrors of this treatment, however, being at length found to be insufficient to bring the conscripts to their colours, it was decreed that a deserter or person who failed to attend should be fined fifteen hundred francs, and sentenced to three years' hard labour in the interior, with his head shaved, but his beard long; if he deserted from the army, his punishment was to be undergone in a frontier place, where he was sentenced to hard labour for ten years, on bread and water, with a bullet of eight pounds' weight chained to his leg, and with a shaved head and unshaved beard: a penalty, in comparison of which death itself would have appeared an act of mercy. Such were the punishments which awaited, without distinction, all the youth of France if they tried to evade a conscription which was cutting them off at the rate of two hundred and twenty thousand a year. The practical result of this excessive severity, joined to the known impossibility of earning a subsistence in a coun-

* De Staël, *Dix Ans. d'Exil*, 219, 229. *Id.*, *Rév. Franç.*, ii., 400.

† Madame de Staël has left a graphic picture of the terrors with which the jealousy of Napoleon were attended even to the softer sex, and which prompted her to undertake a perilous journey from Geneva by the Tyrol, Vienna, and Galicia, into Russia, in the depth of winter, in order to fly the intolerable anxiety of her situation. The Austrian police, acting under his orders, continued the same odious system; and it was not till she reached the frontiers of Old Russia, and war was declared between that power and Napoleon in 1812, that she was able to draw breath. The Duchess of Abrantes has given a still more romantic and interesting account of the extraordinary adventure of Mrs. Spencer Smith, wife of the British resident at Stutgard, who incurred the real or feigned displeasure of Napoleon in 1804, at the time of the Duke of Enghien's murder, and the alleged counterplot in which he was participant to dethrone the emperor. * She was actively pursued by the bloodhounds of the French police, solely on account of her husband's acts, from the neighbourhood of Vienna, across the Julian and Tyrol Alps to the romantic shores of the König Sea, near Salzburg, where she for the first time got beyond their reach, by escaping into the Austrian territories, which were not at that period (1804) subjected to the disgrace of being forced to yield obedience to the mandates of the French police.—See *D'ARR.*, xiii., 124. A few years later she could have found no security till she had traversed the whole imperial territories, and reached the Ottoman dominions.—*Dix Ans. d'Exil*, 239, 250.

‡ The following is a summary of the men levied and destroyed in France during the ten years of the emperor's reign; the most extraordinary instance of the destruction of the human species by the operation of regular government that exists in the annals of the world:

Dates of the decrees of the Senate.		
Sept. 24th, 1805.....	80,000 men.	
Nov., 1806.....	80,000	
April 7th, 1807.....	50,000	
Jan. 21st and Sept. 10th, 1808.....	240,000	
April 18th and Oct. 5th, 1809.....	76,000	
Dec. 13th, 1810.....	160,000	
Dec. 20th, 1811.....	120,000	
March 13th, Sept. 1st, 1812.....	237,000	
Jan. 16th, April 3d, Aug. 24th, Oct. 9th, Nov. 11th, 1813.....	1,040,000	
In ten years.....	2,113,000, exclusive of voluntary enlistment.	
Army in existence in 1804.....	640,000	
	2,753,000	

* *Ante*, ii., 291, 292.

Departmental Guards, Voluntary Levies, and Levy en masse, in 1814.....	250,000
	3,003,000
Remained alive in arms, or prisoners, in 1814.....	802,600
Destroyed in 10 years.....	2,200,400

	* Montg., vi., 276, 277.

try where landed property was already subdivided into eight millions of hands, and commercial enterprise annihilated, by any other means than the favour or employment of government, was, that the whole youth of the nation, of the requisite age and capable of undergoing its fatigues, were voluntarily or involuntarily enrolled in the profession of arms.*

The public instruction established in France under the Empire was eminently calculated to favour the same tendency. The schools were of two kinds, the ecclesiastical schools and the lyceums. The ecclesiastical schools were established by the bishops and clergy, chiefly for the education of the young persons destined for their own profession, and in them the elements of grammar were taught along with a system of religious education. As they were supported, however, by voluntary contributions alone, they were few in comparison with the numbers of the people, and totally inadequate for the purposes of national instruction. Such as they were, however, they excited the jealousy of the emperor, who was unwilling that any considerable establishment in the Empire, especially in relation to so important a matter as public education, should exist independent of the patronage and authority of government. It was decreed, therefore, that there should be no more than one ecclesiastical school allowed in each department; and that that one should be in a large town where a lyceum or government academy was established; all others were to be shut up in a fortnight, under heavy penalties, and their property of every description applied to the use of the great imperial establishment called the University.†

The imperial University was the chief instrument which the emperor had set on of the imperial Constitution for obtaining the entire direction of public education in all its branches. This body was totally different from a university in our sense of the term: it was rather a vast system of instructing police diffused over the country, in connexion with and dependent on the central government. At its head was placed a grand master, one of the chief dignitaries of the state, with a salary of 150,000 francs (£6000) a year. Under him were an ample staff, all of whom were nominated by himself, and extending over the whole Empire, viz., a treasurer and chancellor, ten counsellors for life, twenty in ordinary, and thirty inspectors-general, all endowed with ample salaries; under them were the rectors of academies, as they were called, who in no respect corresponded to the English functionaries of the same name, but were elevated officers, analogous to and ranking with the bishop of the diocese, as numerous in the Empire as there were courts of appeal, and each possessing an inferior jurisdiction and staff of officers similar to the grand master. Under each rector were placed the faculties or schools of theology, jurisprudence, medicine, physical sciences, the lyceums, colleges, institutions, and pensions, and even the schools of primary instruction. The teachers in all these various schools were either nominated directly by the grand master, or by the inspectors, counsellors,

or rectors who owed their appointments to him; so that, directly or indirectly, they were all brought under the control of the central government. Voluntary schools, or communal colleges, as they were called, established by the communities or rural divisions of the Empire, were not prohibited, and about four hundred of them were set on foot in the early years of the Empire; but it was required that every person who taught in them should take out a graduation at the University, and pay for his license to teach from 200 to 600 francs every ten years; and, besides, that the whole sums which they drew should be thrown in a common fund, to be apportioned out by the central government, not according to the number of the scholars which each could produce, or the expenditure which it might require, but the pleasure of the minister to whom the distribution was confided. Under such restrictions, it may easily be believed that the communal or voluntary schools rapidly died away, and nearly the whole education of the Empire was brought directly under the direction and appointment of government.*

The government schools, which thus, under the successive gradation of schools of primary instruction, colleges, and lyceums, pervaded the whole Empire, were the great instrument to which Napoleon trusted, both for the formation of the national temper into a docile and submissive character, and the direction of its whole moral energies to the purposes of military aggrandizement. All the boys who, in the primary schools, evinced talent, spirit, or aptitude for military exploit, were transferred to the colleges, and from thence to the lyceums. In the latter academies everything bore a military character; the pupils were distributed into companies, having each its sergeant and corporal; their studies, their meals, their rising and going to bed, were all performed by beat of drum; from the age of twelve they were taught military exercises; their amusements, their games were all of a military character. Nor were other encouragements of a more substantial description wanting. To each lyceum one hundred and fifty bursaries were annexed, paid by government, and bestowed on the most deserving and clever of the young pupils, in order to defray their expenses at the higher military academies, or polytechnic school at Paris; and from the many thousand salaried scholars thus chosen, two hundred and fifty were annually transferred to the special military academies, where they were exclusively maintained at the expense of the state, and when they arrived at the proper age, provided with commissions in the army, or offices in the civil departments of government. Nor was this all: two thousand four hundred youths of the greatest promise were annually chosen from the conquered or dependant territories, and educated at the military schools at the public expense, and in like manner apportioned out, according to their disposition and talents, into the military or civil services of the Empire. At all these schools religion was hardly mentioned; political studies were altogether prohibited; moral disquisitions little regarded; but geography, mathematics, mechanics, the physical sciences, fortification, gunnery, engineering, and whatever tended di-

rectly or indirectly to the art of war, sedulously taught and encouraged. The professors in the lyceums and colleges were bound to celibacy; the primary teachers might marry, but in that case they were compelled to lodge without the precincts: a regulation which, to persons of their limited income, seldom exceeding twenty pounds a year, amounted to a prohibition. All the teachers, of whatever grade, were liable to instant dismissal on the report of the rectors or inspectors that any of the rules were infringed. Their emoluments were all derived from government, and their promotion depended entirely on the same authority. The scholars were debarred from all correspondence except with their parents, and letters even from them could only be received in presence of the master. Thus, not only were the whole schools of the Empire directed to the purposes of war or abject submission, and directly placed under the control of government, but a spiritual militia established in them all, to enforce everywhere the mandates and doctrines which it promulgated. Napoleon did not discourage education, but rendered it solely and exclusively subservient to his purposes. He did not destroy the battery, but seized its guns, and skillfully turned them on the enemy. Combining into one government all the known modes of enslaving and degrading mankind, by the conscription, he forced, like Timour or Genghis Khan, all the physical energies of his subjects into the ranks of war, and the prosecution of military aggrandizement; by the police, the state prisons, and the censorship of the press, he enforced everywhere, like the Byzantine emperors, implicit obedience to his civil administration, and directed at pleasure the thoughts of his subjects; while, by means of a vast system of centralized education skillfully directed to the purposes of conquest or despotism, and maintained by an order of educational Jesuits abjectly devoted to his will, he aimed, like Loyola or Hildebrand, at throwing still more irremovable chains over the minds of the future generations of mankind.*

On one occasion, when the learned and intrepid M. Suard had concluded, in Napoleon's presence, a warm eulogium on the talent with which Tacitus had portrayed the lives and vices of the Roman emperors, he observed, "You say well; but he would have done still better if he had told us how it happened that the Roman people tolerated, and even loved, those bad emperors. It is that which it would have been of the most importance for posterity to know."† If this observation is just, as it undoubtedly is, with reference to the Roman emperors, how much more is it applicable to Napoleon himself; for nothing is more certain than that, in the midst of all this despotic rule, when the emperor was overturning all the principles of the Revolution, draining France of its heart's blood, and training the generation, educated amid the fumes of equality, to the degradation of slavery, he was not only tolerated, but almost worshipped by his subjects. This extraordinary change took place, not as in the Roman Empire, after the lapse of centuries, but in one generation. The age of Gracchus was, in France, instantly succeeded by that of Caligula; the Democratic fervour of the contemporaries of Marius, plunged at once

into the Eastern adulation of the successors of Constantine.

In this respect, there is a most remarkable difference between the English and French Revolutions. In both, indeed, a brief period of Democratic fervour was succeeded, as it ever must be in an old state, by a military despotism; but the temper with which this change of government was received in the two countries was totally at variance, and the frame of government which has been left in each is essentially different. "The English aristocracy," says Madame de Staël, "had more dignity in their misfortunes than the French; for they did not commit the two immense faults from which the French will never be able to exculpate themselves: the first, that of having united themselves to strangers against their native country; the second, that of having condescended to accept employments in the antechambers of a sovereign who, according to their principles, had no right to the throne."‡ But this remarkable difference was not confined to the aristocracy: all classes in England evinced an early and decided aversion to the violent measures of the army and its chiefs; the nobles and landed proprietors kept aloof from the court of the Protector, neither assisting at his councils nor accepting his repeated offers of lucrative situations; and such was the temper of the Commons, that Cromwell soon found they were totally unmanageable, and therefore disused them as jurymen, and they returned such refractory representatives to Parliament, that none of the houses which he summoned were allowed to sit more than a few days. England, therefore, was overwhelmed by a military usurpation; but the spirit of the nation was not subdued, and even in its gloomiest periods might be seen traces of a free spirit, and growing marks of that independent disposition which waited only for the death of the unfortunate usurper to re-establish the national liberties. In France, on the other hand, all classes seemed to vie with each other in fawning upon the triumphant conqueror who had subverted the Revolution: the nobles rushed in crowds into his antechambers, and laid the honours of the monarchy at his feet; the burghers vied with each other in obsequious submission to his will, or graceful flattery to his actions; the *tiers état* joyfully clothed themselves with his titles, or accepted his employment; the peasantry gave him their best blood, and cheerfully yielded up their children to his ambition. The Senate was the echo of his sentiments; the Council of State the organ of his wishes; the Legislative Body the register of his mandates; the Legislature was submissive; the electors pliant; the jurymen obedient; and, in the whole monarchy, so recently convulsed with the fervour of Democracy, was to be heard only the mandates of power, the incense of flattery, or the voice of adulation.

Much of this extraordinary difference between the immediate effects of the Revolutions in the two countries is, without doubt, to be ascribed to the greater devastation, more sweeping changes, and deeper guilt of the French convulsion. The bloody proscriptions, and unbounded confiscations of the popular party, were the causes which at once occasioned

Remarkable difference between the English and French Revolutions in this respect.

Its causes. Superior violence and injustice of the French convulsion.

and justified the emigrations of the noblesse. Though political wisdom, equally as true patriotism, should have forbid their uniting their arms, under any circumstances, with the stranger against their native land, yet some allowances must be made for the lacerated feelings of men first driven into exile by a bloodthirsty faction, and then deprived of their estates and reduced to beggary, because they declined to return and place their necks under the guillotine. We can sympathize with the implacable vengeance of those who had seen their parents, brothers, sisters, or children massacred by an inhuman party, who, by rousing the cupidity of the working classes, had succeeded in establishing the most infernal despotism in their country which had ever disgraced mankind. The excessive misery, too, which Democratic ascendancy had produced upon all ranks, and especially the lowest, induced, as its natural result, that universal and ardent desire for the establishment of a powerful and energetic government which woful experience had proved to be the only practicable mode of terminating the general calamities. The reaction of order and tranquillity against Republican violence and misery was more powerful and widespread in France than England, because the suffering which had preceded it had been more acute and universal. The despotism of Napoleon was more oppressive and more willingly acquiesced in than that of Cromwell, from the same causes which had rendered the atrocities of the Revolutionists in France more excessive than those of the Republicans in England.

But, after making every allowance for the weight and importance of these circumstances, it is evident that something more is required to explain the extraordinary change in the national disposition which took place from the days of the Revolution to those of the Empire. That suffering should produce an alteration of opinion in regard to the merits of the changes which had occasioned it; that the now universally-felt evils of Democratic government should incline all classes to range themselves under the banners of a single chief, is, indeed, intelligible, and, in truth, nothing more than the operations of experience upon the great body of mankind. But that this experience should produce individual baseness—that the fumes of Republicanism should be succeeded, not by the caution of wisdom, but the adulation of selfishness—and that the riot of European liberty should plunge at once into the servility of Eastern despotism, is the extraordinary thing. It is in vain to attempt the explanation of this phenomenon in the influence of an extraordinary man, or the mingled sway of the ambitious passions, which an unprecedented career of success had brought to bear upon the nation. These circumstances will never at once alter the character of a people; they cannot convert public spirit into selfishness; they cannot do the work of centuries of progress, or change the age of Fabricius into that of Nero.

An attentive consideration of these particulars must, with every impartial mind, lead to the conclusion that it was not the spirit of genuine freedom which convulsed France and desolated Europe, but the bastard passion for individual elevation. Both these passions are, indeed, essential to a success-

ful struggle in the later stages of society in favour of liberty, because such a struggle requires the general concurrence of mankind; and such concurrence, except in cases of extraordinary fervour or rural simplicity, is not to be gained but by the combined influence of the selfish and the generous passions of our nature. But everything, in the final result, depends on the proportion in which these noble and base ingredients are mingled in the public mind. In either case, if Democracy becomes triumphant, suffering will be induced, and a reaction must ensue; but if the generous flame of liberty is the ruling passion, the period of despotic sway and military force will be one of indignant silence, convinced reason, or compulsory submission; if the selfish passion for distinction, or the ardent thirst for authority is the moving power, it will be distinguished by the baseness of servility, the lust of corruption, the rhetoric of adulation. The reason is obvious. In the excesses of power, whether regal, aristocratic, or republican, the disinterested friends of freedom, either in the conservative or liberal ranks, can discover nothing but a matter of unqualified hatred and aversion; but the aspirants after distinction, the candidates for power, the covetous of gold, find in those very excesses the precious objects of their desire, provided only that their benefits accrue to themselves. If, therefore, from the temper of the public mind, it has become evident that Democratic anarchy can no longer be maintained, and that the stern sway of authority has, for a season at least, become unavoidable, the selfish and corrupt hasten to throw themselves into its arms, and lavish that flattery on the single which they formerly bestowed on the many-headed despot, in the hope that they may thus secure to themselves the real objects of their ambition; while the virtuous and patriotic retire altogether from public life, and seek in the privacy of retirement that innocence which can no longer be found in the prominent stations of the world. Then is the period when the indignant lines of the poet are indeed applicable:

"When vice prevails, and impious men bear sway,
The post of honour is a private station."

That the spirit of freedom was at no period the ruling passion of the French Revolution, has been declared by all its observers, and clearly demonstrated by the events of its progress. Napoleon and Madame de Staël have concurred in stating that the desire for equality was the moving principle; and this desire is but another name, in an advanced age, for the selfish passion for individual aggrandizement. Men profess, and for the time perhaps feel, a desire that all should start equal, in order that their own chance of being foremost in the race should be improved; but if they can turn the advantage to their own side, they are in no hurry to share it with those whom they have outstripped. The most ardent of the French Revolutionists showed, by their subsequent conduct, that they had no sort of objection to the most invidious and exclusive distinctions being re-established, provided only that they were conceived in their own favour. The remarkable and luminous facts that not one of the successive factions which rose to power in the course of the convulsion, ever thought either of limiting the period within which an accused party may be detained in prison without being brought to trial or abolishing the odious and degrading fetters of the

The principles of freedom never were attended to in the French Revolution.

But this alone will not explain the difference.

It was not the love of freedom, but the desire of elevation which convulsed France.

police, or securing to the minority, in opposition to the ruling power, the means of influencing public opinion, by a practically free press, and the undisturbed right of assembling to discuss the measures of government in public meetings, afford insurmountable proofs that nothing was ever farther from their real intentions than the establishment of the principles of genuine freedom. All these parties, indeed, when struggling for power, were loud in their demand for these essential guarantees to liberty, without the full establishment of which its blessings must ever be an empty name; but none, when they attained it, ever thought of carrying their principles into practice, or putting that bit in their own mouths which they had been so desirous of placing in those of their antagonists. None of them evinced the slightest hesitation in taking advantage of, and straining to the utmost, those arbitrary powers which, by common consent, seemed to be left at the disposal of the executive government. The conclusion is unavoidable that, throughout the whole period, it was selfish ambition which was the real principle of action; and that, if the love of freedom existed at all, it glowed in so inconsiderable a number of breasts as to be altogether incapable of producing any durable impression on the national fortunes. Nor is this surprising, when it is recollected in what an advanced age of society, and among what a corrupted, and, above all, irreligious people the Revolution broke out. The degrees in which the spirit of public freedom and the desire of private aggrandizement will be mingled in every Democratic convulsion, must always be almost entirely dependant on the proportion in which the generous and disinterested, or the selfish and grasping passions, previously prevail in the public mind. And without disputing the influence of other causes, it may safely be affirmed that the main cause of the difference is to be found in the prevalence or the disregard of religious feeling; that it is in its ascendancy that the only effectual safeguard can be found against the temptations to evil, which arise during the progress of social conflicts; and that, of all desperate attempts, the most hopeless is to rear the fabric of civil liberty or public virtue on any other basis than that Faith which alone is able to overcome the inherent principles of corruption in the human heart.

Of all the manifold and lasting evils which the thorough ascendancy of Democratic power, even for a short time, produces, perhaps the most lamentable, and of which France, under the Empire, afforded the most memorable example, is the utter corruption of public opinion and confusion of ideas which it necessarily induces, terminating at last in the general application to public actions of no other test but that of success. The way in which this deplorable consequence ensues is very apparent, and it points in the clearest manner to the principle on which alone a good government can be formed. Where property is the ruling, and numbers the controlling power, the opinion of the multitude is necessarily, in the general case, in favour of a virtuous administration, and adverse to the corruptions or oppression of government, because the majority have nothing to gain by such abuses; and where private interest does not intervene, it will always, as in a theatre, be on the side of virtue. However much disposed the holders of authority in such a state may be unduly to extend its limits, or apply it to their own

private purposes, as well as the public service, they are prevented from pushing such abuses to any great excess by the watchful jealousy of the popular classes in the state. But when the people are themselves, or by means of their demagogues, in possession, not merely of the power of controlling and watching the government, but of actually directing its movements and sharing in its profits, this salutary and indispensable check is at once destroyed. From being the determined enemies, the Democratic party become at once the most decided supporters of every species of corruption, because they are now to profit by its effects; and although the opposite party, now excluded from office, may be loud in their condemnation of such proceedings, yet, being overthrown in the conflict, they are no longer able to direct the measures of government, and, but a minority in the state, they are not, at least till after the lapse of a very long period, able to bring over the majority to their sentiments, or form that general concurrence which can properly be called public opinion. In the interim, every species of abuse is not only practised, but loudly applauded by the Democratic body now interested in their continuance; and hence, not only the destruction of that invaluable check which, under other circumstances, the opinion of the majority in opposition forms to the misdeeds of the few in power, but the total corruption and deprivation of the feelings on public matters of that majority itself. The restraining has now become the moving power; the check upon evil the stimulant to corruption; the flywheel instead of the regulator of the machine, the headlong force which is to hurl it to destruction. Such is the extent of this evil, and such the rapidity with which, under the combined influence of temptation to themselves and impotence in their adversaries, the tyrant majority are seduced into depraved principles and a course of iniquity, that it may perhaps be pronounced the greatest, because the most lasting and irremediable, of the evils of Democratic government.

CENTRALIZATION in such a state of public feeling is the great enemy which freedom has to dread, because it is the

Rapid growth of centralization in this state of public feeling.

principles which possess the most durable sway over the human heart. More than military force or anarchical misrule, it has in every age been the grave of real liberty. If such a withering system is attempted in the healthful state of the body politic, that is, where property and education are the ruling, and numbers and popular zeal the controlling power, it will always experience, from the natural jealousy of government on the part of all who do not participate in its advantages, the most decided opposition, and, except in extraordinary circumstances, is not likely to meet with any considerable success. But the case is widely different when the Democratic rulers are themselves in power. Centralization then goes on at the gallop; and for a very obvious reason, that both the necessities of government, the interests of its Democratic supporters, and the experienced evils of the popular election of public functionaries, concur in recommending it. The executive being erected on the ruins of, or against the wishes of the holders of property, has nothing to expect from their support, and, therefore, is fain to extend its influence, and provide for its numerous and needy followers, by the multiplication of offices, all in the appointment of the Central Govern-

General corruption of public opinion which the French Revolution produced.

ment; the popular leaders, hoping to profit largely by this accumulation of official patronage in the hands of their chiefs, not only in no ways oppose, but give their most cordial support to the same system; while the great mass of the people, disgusted with the weak or corrupt administration of the municipal or local functionaries who owed their elevation to popular election, rapidly and inevitably glide into the opinion that no mode of appointment can be so bad as that under the evils of which they are now suffering, and that a practically good government can never be attained till the disposal of all offices of any importance is vested in the executive authority. Thus all classes, though for very different reasons, concur in supporting the system of centralization; a system, nevertheless, which, though doubtless often productive of improvement, in the outset, in practical administration and local government, is the most formidable enemy, in the end, which the cause of freedom has to combat, and against which, therefore, it behoves its real friends, in an especial manner, to be on their guard. The anarchy which is the first effect of Democratic ascendancy, necessarily and rapidly terminates in military despotism; that despotism itself, from its brutality and violence, cannot, in any well-informed state, be of very long endurance; but the irresistible sway of a centralized government, established by a Democratic executive, and sustained by the aid of selfish support from the popular party, may finally crush the spirit and extinguish all the blessings of freedom by removing all the practical evils which preceding convulsions had occasioned, enlisting alike the friends of order and the partisans of Democracy in its ranks, and engaging the most influential portion of the people by interested motives in its support. It was neither the vengeance of Marius nor the proscriptions of Sylla, neither the aristocracy of Pompey nor the genius of Cæsar, which finally prostrated the liberties of Rome: it was the centralized government of Augustus which framed the chains which could never be shaken off. There is the ultimate and deadly foe of freedom: there the enemy ever ready to break in and reap the last spoils of the discord and infatuation of others. And wherever such a centralized system has grown up in an old-established state, after a severe course of Democratic suffering, it is not going too far to assert, that the cause of freedom is utterly hopeless, and that the seeds of death are implanted in the community.*

* I am happy to find this opinion, which I have long entertained, supported by the great authority of M. de Tocqueville. "If absolute power," says he, "should re-establish itself, in whatever hands, in any of the Democratic states of Europe, I have no doubt it would assume a new form unknown to our fathers. When the great families and the spirit of clanship prevailed, the individual who had to contend with tyranny never felt himself alone: he was supported by his clients, his relations, his friends. But when his estates are divided, and races are confounded, where shall we find the spirit of family? What force will remain to the influence of habit among a people changing perpetually, where every act of tyranny will find a precedent in previous disorders, where every crime can be justified by an example; where nothing exists of sufficient antiquity to render its destruction an object of dread, and nothing can be figured so new that men are afraid to engage in it? What resistance would manners afford which have already received so many shocks? What could public opinion do, when twenty persons do not exist bound together by any common tie; when you can no more meet with a man, a family, a body corporate, nor a class of society, which could represent or act upon that opinion; when each citizen is equally poor, equally impotent, equally isolated, and can only oppose his individual weakness to the organized strength of the central government?"

Striking opinion of M. de Tocqueville on this subject.

It is in these predisposing circumstances that we must look for the real causes, not merely of the despotism of Napoleon, but of the ready reception which it met with from all classes, and the alacrity with which the fervent passions of Democracy were converted at once into the debasing servility of Asiatic despotism. The Republican writers fall into the most palpable error when they accuse that great man of having overturned the principles of the Revolution, and of being the real cause of its terminating in the establishment of arbitrary power. So far from it, he worked out these principles to their natural and unavoidable result; he did no more than reap the harvest from the crop which had been sown by other and very different hands. The real authors of the despotism of Napoleon were those who overturned the monarchy of Louis. It was Siyès and Mirabeau, and the exalted spirits of the Constituent Assembly, who set in motion the chain of causes and effects which necessarily, in their final result, induced the chains of the Empire. Doubtless, Napoleon availed himself with great skill of the extraordinary combination of circumstances which had thus in a manner presented despotism to his grasp. The leading principles of his government, as Madame de Staël has well observed, were to respect studiously the interests which the Revolution had created, to turn its passions into the career of military conquest or civil ambition, to open the career of success alike to all who deserved it, and to govern public opinion by a skillful use of the influence of the press.* No maxims more likely to govern an active, energetic, and corrupted people, could possibly have been devised; but still they would have failed in producing the desired effect, and the attempt to enslave France would have proved abortive, even in his able hands, if success had not been rendered certain by the madness and guilt which preceded him. And in executing the mission on which he firmly believed he was sent, to close the wounds and put a stop to the horrors of the Revolution, we are not to imagine that he was to blame, so far, at least, as his domestic government was concerned. On the contrary, he took the only measures which remained practicable to restrain its excesses, or put a period to its suffering; and subsequent experience has abundantly proved that every government which was founded on any other principles, or practically gave the people any share of that power for which they had so passionately contended, involved in itself the seeds of its speedy destruction.

And although nothing can be more certain than

To figure anything analogous to the despotism which would then be established among us, we would require to recur not to our own annals, we would be forced to recur to the frightful periods of Roman tyranny, when manners being corrupted, old recollections effaced, habits destroyed, opinions wavering, liberty deprived of its asylum under the laws, could no longer find a place of refuge; where, no guarantee existing for the citizens, and they having none for themselves, men in power made a sport of the people, and princes wore out the clemency of the heavens, rather than the patience of their subjects. They are blind indeed who look after Democratic equality for the monarchy of Henry IV. on Louis XIV. For my own part, when I reflect on the state to which many European nations have already arrived, and that to which others are fast tending, I am led to believe that soon there will be no place among them but for Democratic equality or the tyranny of the Cæsars."—Tocqueville, ii., 258, 259. What a picture of the effects of Democratic triumph from a liberal writer, himself an eyewitness to its effects!

* Rév. Franç., ii., 255.

But this, how great soever an evil, was unavoidable in the state in which France was on the termination of the Revolution.

that centralization is the ultimate extinguisher of freedom, and the insidious foe which, elevated on its triumphs, is finally destructive of its principles, yet it is not, in such a state of society as France was in the time of Napoleon, to be regarded as an evil which it was the duty of a real patriot to resist. As long, indeed, as the elements of freedom exist in a state—that is, as long as the higher and middling classes retain their public spirit and their possessions—it is impossible that public jealousy can be too strongly aroused on this subject, or that it can be too strongly impressed upon the people; that, if all the interests of the state are centred in the hands of the executive, be it monarchical or Democratic, the extinction, not only of the rights, but of the spirit of freedom, is at hand, and nothing remains to the state but an old age of decrepitude and decline. But, if the people would shun these evils, they must pause in the threshold of their career, and avoid the destruction of those classes inferior to the throne, though superior to themselves, whose influence forms an essential ingredient in the composition of public freedom. The English did so: the rights of the middling ranks, the Church, and the aristocracy, survived the triumphs of Cromwell, and, in consequence, two hundred years of liberty have been enjoyed by the British nation. The French did not do so: the Church, the middling ranks, and the aristocracy were utterly destroyed during the fervour of the Revolution; and in consequence, notwithstanding all their sufferings since that time, they have not enjoyed one hour of real freedom. Many struggles have ensued and may ensue for the possession of supreme power; many revolutions of the palace have shaken, and may hereafter shake, the fabric of their society; but no attempt has been made or will be made to limit the power of their executive, or extend the liberty of their people. The centralized, despotic government of Napoleon still remains untouched: the question with all parties is, not whether its powers shall be restrained, but who shall direct them. The more popular and Democratic the faction is which gains the ascendancy, the more formidable does the action of the state machine become, because the weaker is the counter-acting force which is to restrain its motions. If the extreme Democratic party were to succeed to power, the force of the centralized government, based on the support of the people, would, in a short time, become wellnigh insupportable. In the triumphs which they achieved, and the crimes

which they committed, the early Revolutionists poured the poison which ever proves fatal to freedom through the veins of their country; with their own hands they dug the grave of its liberties; nothing remained to their descendants but to lie down and receive their doom. When this last deplorable effect has taken place, it becomes the duty of the patriot no longer to resist the centralizing system, but to support it as the only species of administration under which, since freedom is unattainable, the minor advantage of a tranquil despotism can be attained.

It was a rule in one of the republics of antiquity, that no public monument should be voted to any person who had been engaged in the administration of affairs till ten years after his death, in order that the ultimate effect of his measures, whether for good or for evil, should be first fully developed. Judging by this principle, to how few characters in the French Revolution will the friends of freedom, in future times, rear a mau-soleum; to how many will the abettors of arbitrary power, if their real opinions could be divulged, be inclined to erect statues! Looking forward for the short period of only eighteen years, not a month in the lifetime of a nation, and seeing in the servility and sycophancy of the Empire the necessary effects of the vehemence and injustice of the Constituent Assembly, what opinion are we to form of the self-styled patriots and philosophers of the day who thus, in so short a time, blasted the prospects and withered the destiny of their country? Who were the real friends of freedom? Mr. Pitt and Mr. Burke, who, by combating the ambition of Democracy and coercing its extravagance in this country, have bequeathed to their descendants the glorious and enduring fabric of British liberty; or Mirabeau and Danton, who, by achieving for its votaries a bloody triumph on the banks of the Seine, plunged their children and all succeeding ages into the inextricable fetters of a centralized despotism? It is fitting, doubtless, that youth should rejoice; but is fitting, also, that manhood should be prosperous and old age contented; and the seducers, whether of individuals or nations, are little to be commended, who, taking advantage of the passions of early years or the simplicity of inexperience, precipitate their victims into a course of iniquity, and lead them, through a few months of vicious indulgence or delirious excitement, to a life of suffering and an old age of contempt!

Ultimate effect on general freedom of resistance to Democracy in England, and its triumph in France.

CHAPTER XLVIII.

FOREIGN TRANSACTIONS OF EUROPE FROM THE PEACE OF TILSIT TO THE OPENING OF THE SPANISH WAR.

JULY, 1807—SPRING, 1808.

ARGUMENT.

General Suffering and Dismay produced in Russia by the Treaty of Tilsit.—Universal Feeling of Despondence which it occasioned in Great Britain.—Continental Changes by which it was followed.—Constitution for the Grand-duchy of Warsaw.—Constitution of the Kingdom of Westphalia.—Oppressive Military Government of the Confederation of the Rhine and Hanse Towns.—Excessive Rigour of the Treatment which Prussia experienced.—Fresh Requisitions imposed on its Inhabitants.—Limitation of its regular Forces, and Intersection of its Territory by Military Roads.—Wise internal Measures adopted by the Prussian Government.—Accession of Baron Stein to the Ministry.—His firm Character and admirable Measures.—Salutary Reforms which he introduced into the Kingdom.—Varied Causes of Distress in Prussia, which lead to the Exile of Stein.—History, Character, and great military Reforms of Scharnhorst.—Rise and Progress of the Tugendbund and Secret Societies in the North of Germany.—Illustrious and patriotic Characters which that Secret Society embraced.—Situation, Statistics, and Power of Austria at this Period.—She joins the Continental System, and thereby obtains the Evacuation of Brauman.—Resources, Statistics, and Strength of the Austrian Monarchy.—Affairs in Sweden: its Continental Forces are shut up in Stralsund.—Siege and Fall of that Fortress.—Capture of the Islands of Danholm and Rugen.—Reasons which led to the Copenhagen Expedition.—Resolution of the British Cabinet in regard to it.—Equipment and Departure of the Expedition.—Ineffectual Negotiation with Denmark.—Proclamation of Lord Cathcart to the Inhabitants of Zealand, and Reply of the Prince Regent of Denmark.—Siege of Copenhagen.—First Action of Sir Arthur Wellesley in Europe.—Surrender of the City and Fleet to the English Forces.—Great Sensation excited in Europe by the Expedition.—Justification of it soon afforded by Napoleon.—General Feeling of England on the Subject.—Argument in Parliament against the Expedition.—Argument in Support of it by the Ministers.—The secret Article of the Treaty of Tilsit regarding the Danish Fleet is at length produced, which settles the Question.—Napoleon's real Opinion regarding it.—Ineffectual Mediation of Russia between England and France.—Rupture of that Power with Great Britain.—Concurring Statement of the English and French Ambassadors on its Causes.—The Russians declare War against Sweden.—Russian Manifesto against England.—Declaration by Great Britain in Reply.—Denmark enters cordially into the War against Sweden and England.—Affairs of Russia and Turkey.—Curious secret Despatch from Savary at St. Petersburg to Napoleon on this Subject.—The Turks, finding themselves betrayed by the French, prepare themselves to renew the War.—Changes in the Constitution of the Italian States.—Union of Parma and Placentia to France.—Great Works undertaken at Milan, and State of Italy at this Period.—Further Encroachments of Napoleon on the Side of Holland, Germany, and Italy.—Reflections on the imminent Hazard to Europe from the Treaty of Tilsit, and from the Division of its Kingdoms between two Potentates.—Importance of the Blow already struck by England at Napoleon's new Naval Confederacy.

If the treaty of Tilsit was productive of glory to the Emperor Napoleon, and transport and opulence to the citizens of his victorious capital, it was the commencement of a period of suffering, ignominy, and bondage to the other capitals of Continental Europe. Russia, it was true, had extricated herself unscathed from the strife; her military renown had suffered no diminution on the field of Eylau, or in the agony of Friedland; it was apparent to all the world that she had been outnumbered by banded Europe, not conquered by France in the strife. But still she had failed in the object of the war: her arms, instead of being

advanced to the Rhine, were thrown back to the Niemen; in indignant silence her warriors had re-entered their country, and surrendered to their irresistible rivals the mastery of Western Europe. If the Czar had been seduced by the artifice of Napoleon, or dazzled by the halo of glory which encircled his brows; if the army was proud of having so long arrested, with inferior forces, the conqueror before whom the Austrian and Prussian monarchies had sunk to the dust, the nobles were not carried away by the general illusion; they saw clearly, amid the flattery which was lavished on their rulers, the gilded chains which were imposed on their country. They could not disguise from themselves that France had not only acquired by this treaty an irresistible preponderance in Western and Central Europe, but subjected Russia herself to her command; that the price at which all the advantages of the treaty to the empire of the Czar had been purchased was its accession to the Continental system, and the closing of its ports to the ships of Great Britain; and that thus not only were they likely to be deprived of half their wonted revenue from their estates, by losing the principal market for their produce, but compelled to contribute to the aggrandizement of a rival empire, already too powerful for their independence, and which, it was foreseen, would, ere long, aim a mortal stroke at their national existence. So strong and universal were these feelings among the whole aristocratic and commercial circles, that when General Savary, whom Napoleon had chosen as his ambassador at the Russian capital, on account of the address he had exhibited, and the favour with which he had been received by Alexander at the time of the battle of Austerlitz,* arrived at St. Petersburg, he experienced, by his own avowal, the utmost difficulty in finding any furnished hotel where he would obtain admission; and during the first six weeks of his stay there, though he was overwhelmed with attention from the emperor, he did not receive one invitation from any of the nobility; and while he saw the guests whom he met at the palace depart in crowds to the balls and concerts of that scene of festivity, he himself returned, mortified and disconsolate, from the imperial table to his own apartments.†

* *Ante*, ii. 373.

† Savary, *ibid.* 98, 100. *Hard.* x. 26, 29.

‡ In Savary's case, the general aversion to the cause of France was increased by the part which he was known to have taken in the murder of the Duke d'Enghien, which had been one of the leading causes of the irritation which led to the war. Napoleon, charmed as he was by the contest, gave the most positive injunctions to his envoy at the Russian court at all hazards to avoid its renewal. "I have just concluded peace," said he to Savary; "they tell me I have done wrong, and that I shall repeat it; but, by my faith, we have had enough of war—we must give repose to the world. I am going to send you to St. Petersburg as chargé d'affaires till an ambassador is appointed; you will have the direction of my affairs there; lay it down as the ruling principle of your conduct that any farther contest is to be avoided; nothing would displease me so much as to be involved in that quarter in fresh embarrassments. Talley-

In the British dominions the disastrous intelligence produced a different, but, perhaps, still more mournful feeling. England was, by her maritime superiority, relieved from the apprehensions of immediate danger, and the general resolution to maintain the contest continued unabated; but a feeling of despondence pervaded the public mind, and the strife was persevered in rather from the stern principle of dogged resistance, or a sense of the impossibility of making a secure accommodation, than from any hope that the war could be brought to a successful issue. This general impression cannot be better portrayed than in the words of Sir James Mackintosh, the able champion, in its early days, of the French Revolution: "I do not, indeed, despair of the human race; but the days and nights of mighty revolutions have not yet been measured by human intellect. Though the whole course of human affairs may be towards a better state, experience does not justify us in supposing that many steps of the progress may not be immediately for the worse. The race of man may at last reach the promised land, but there is no assurance that the present generation will not perish in the wilderness. The prospect of the nearest part of futurity, of all that we can discover, is very dismal. The mere establishment of absolute power in France is the least part of the evil: it might be necessary, for a time, to moderate the vibrations of the pendulum in that agitated state; but what are the external effects of these convulsions? Europe is now covered with a multitude of dependant despots, whose existence depends on their maintaining the paramount tyranny in France. *The mischief has become too intricate to be unravelled in our day*; an evil greater than despotism, or, rather, the worst and most hideous form of despotism approaches; a monarchy literally universal seems about to be established; then all the spirit, variety, and emulation of separate nations, which the worst forms of internal government have not utterly extinguished, will vanish. And in that state of things, if we may judge from past examples, the whole energy of human intellect and virtue will languish, and can scarce be revived otherwise than by an infusion of barbarism.* Such were the anticipations of the greatest intellects of the age, even among those who had originally been most favourable to the Democratic principle, and that, too, on the eve of the Peninsular campaigns, and at no great distance from the general resurrection of Europe after the Moscow retreat: a memorable example of the fallacy of any political conclusions founded upon the supposed durability of the causes at any one time in operation; and of the oblivion of that provision for the remedy of intolerable evils, by the reaction of mankind against their suffering, and of the general intermixture of the principles of good and evil in human affairs,

and will tell you what to do, and what has been arranged between the Emperor of Russia and me. I am about to give repose to the army in the country we have conquered, and to enforce payment of the contributions; that is the only difficulty which I anticipate; but regulate yourself by this principle, that *I will on no account be again drawn into the contest*. Never speak of war; in conversation, studiously avoid everything which may give offence; contravene no usage; ridicule no custom. Neglect nothing which may draw closer and perpetuate the bonds of alliance now contracted with that country."—SAVARY, iii., 96, 97, and 1 HARD., x., 29.

* Sir James Mackintosh to W. Ogilvie, February 24th, 1808, Mem., i., 383, 384.

which, as it is the most general lesson to be deduced from history, so is it fitted above all others to inspire moderation in prosperous, and constancy in adverse affairs.

The political changes consequent in Central Europe on the treaty of Tilsit were speedily developed. On his route for the Grand-duchy of Warsaw, Napoleon met a deputation of eight of the principal nobles, in the French interest, of Prussian Poland at Dresden; and Talleyrand, in a few days, produced a constitution for the grand-duchy, calculated, as he thought, at once to satisfy the general wish for a restoration of their nationality, and accord with the despotic views of the emperors of the East and West. By this deed, which was produced with more than usual rapidity, even in those days of constitution manufacture, the ducal crown was declared to be hereditary in the Saxon family: the grand-duke was invested with the whole executive power, and he alone had the privilege of proposing laws to the Diet, with whom the prerogative remained of passing or rejecting them. This diet was composed of a Senate of eighteen, named by the grand-duke, embracing six bishops and twelve lay nobles, and a Chamber of Deputies of a hundred members; sixty being named by the nobility, and forty by the boroughs. The Chambers, like those at Paris, were doomed to silence: they could only decide on the arguments laid before them, on the part of the government, by the orators of the Council of State, and of the Chambers by commissions appointed by them. This mockery of a Parliament was to assemble only once in two years, and then to sit only fifteen days. The ardent plebeian noblesse of Poland, whose Democratic passions had so long brought desolation on their country, found little in these enactments to gratify their wishes; but a substantial improvement was made in the condition of the peasantry, by a clause declaring that the whole serfs were free. No time, however, was left for reflection: the deputies were constrained to accept it; and the new Constitution of Poland was not only framed, but sworn to at Dresden during the brief period of Napoleon's sojourn there on his route to Paris.*

The constitution given to the new kingdom of Westphalia was, in like manner, founded entirely upon the model of that of France. It contained a King, Council of State, Senate, silent aristocratic Legislature, and public orators, like all those cast at this period, from the Parisian mould. The throne was declared hereditary in the family of Jerome Bonaparte, the emperor's brother, and first sovereign; one half of the allodial territories of the former sovereigns, of which the new kingdom was composed, were placed at the disposal of Napoleon, as a fund from which to form estates for his military followers; provision was made for payment of the military contributions levied by France, before any part of the revenue was obtained by the new sovereign; the kingdom was declared to form part of the Confederation of the Rhine, and its military contingent, drawn from a population of about two millions of souls, fixed at 25,000 men; in default of heirs-male of his body, the succession to the throne was to devolve to Napoleon and his heirs by birth or adoption. Every corporate

* Hard., ix, 448, 449. Bign., vi., 387, 388. Lucches., ii., 14, 19.

right and privilege was abolished—trial by jury and in open court introduced in criminal cases; all exclusive privileges and exemptions from taxation annulled—the nobility preserved, but deprived of their former invidious rights. The Chamber of Deputies consisted of a hundred members, of whom seventy were chosen from the landed aristocracy, fifteen from the commercial, and fifteen from the literary classes. Salutary changes! if the equality which they were calculated to induce was the enjoyment of equal rights and general security, but utterly fatal to freedom, if they were only fitted to introduce an equality of servitude, and disable any individuals or associated bodies from taking the lead in the contest for the public liberties with the executive power.*

The states of the Rhenish Confederacy had flattered themselves that the general peace concluded on the shores of the Niemen would finally deliver them from the scourge of warlike armaments and military contributions, but they were soon cruelly undeceived. Shortly after the general pacification, and before they had recovered from the burden of maintaining, clothing, and lodging the numerous corps of the Grand Army which Sept., 1807. traversed their territories on the road to the Rhine, they were overwhelmed by the entry of a fresh body of forty thousand men, who issued from France and took the route of the Vistula, still at the sole expense of the allied states. They were speedily followed by a body of Spaniards, drawn from Italy, Oct., 1807. and which went to augment the corps of Romana, under the orders of Bernadotte, on the shores of the Baltic: a sad omen for succeeding times, when the conclusion of peace was immediately succeeded by fresh irruptions of armed men, and burdensome preparations, at the cost of the allied states, for future hostilities. It soon appeared that the stipulations in favour of the conquered territories in the formal treaties were to be a mere empty name: it had been provided at Tilsit that Dantzic was to be a free city, governed by its own magistrates; but Rapp, the new governor, was speedily introduced at the head of a numerous French garrison, who summarily expelled the Prussian inhabitants, and began the rigorous enforcement of the French military contributions and the Continental system. The same system of government was sternly acted upon in Hamburg, Bremen, Lubeck, and all the Hanse Towns; Bourrienne continued to enforce it with such severity at Hamburg, that the trade of the place was entirely ruined, and large sums remitted quarterly to the Tuileries, out of the last fruits of the commercial enterprise of the Hanse Towns.†

But most of all did the ruthless hand of conquest fall with unmitigated rigour on the inhabitants of Prussia. Hard as their lot appeared to be, as it was chalked out in the treaty of Tilsit, it was yet enviable, compared to that which, in the course of the pacification which followed, actually ensued from the oppressive exactions of the French government and the unbounded insolence of its soldiery. Immediately after the conclusion of the treaty

which reft them of half their dominions, the king and queen repaired to Memel, where July 19. they were compelled to sign a fresh convention, which, under the pretext of providing for the liquidation of the contributions and speedy evacuation of their territories, in effect subjected them, without any appearance of termination, to those intolerable burdens. By this treaty it was provided that the evacuation of the fortresses, with the exception of Stettin, Custrin, and Glogau, should take place before the 1st of November; but that on the condition only that the whole contributions were previously paid up: a condition which it was well known could not be complied with, as they amounted to above four times the revenue of the whole kingdom before its dismemberment,* in addition to the burden of feeding, clothing, paying, and lodging above one hundred and fifty thousand men, for which no credit was given in estimating their amount by the French commissaries. By a second convention, concluded at Elbing three months afterward, the unhappy monarch, instead of the single military road through his territories from Oct. 13. Dresden to Warsaw, stipulated by the treaty of Tilsit, was compelled to allow five passages, two for troops and five for commercial purposes, to Saxony, Poland, and their respective allies: a stipulation which, in effect, cut them through the middle, and subjected the inhabitants on these roads to unnumbered exactions and demands both from the French and allied Nov. 5. troops. Rapp soon after, instead of a territory of two leagues in breadth around the walls of Dantzic, as provided in the treaty, seized upon one two German miles, or eight English miles broad, counting from the extreme point of its outworks; while by a third convention, Nov. 9. in the beginning of November, Prussia was not only forced to cede to the Grand-duchy of Warsaw New Silesia and the circle of Mischelau, no inconsiderable addition to the losses, already enormous, imposed by the treaty of Tilsit, but to ratify the ample grants out of the hereditary revenues of the Prussian crown made by the Emperor Napoleon in favour of Berthier, Mortier, and other of his military chiefs.†

Vexatious as these fresh demands were, and cruelly as their bitterness was aggravated by the arrogant manner in which compliance was demanded by the French authorities, they were Fresh requisitions imposed on Prussia, limitation of its regular forces, and imposition of fresh military roads. inconsiderable to the enormous burden of the military requisitions which, from this time to the opening of the Russian campaign, perpetually drained away all the resources of Prussia. Not content with the crushing exactions, to the amount of 600,000,000 of francs (£24,000,000), already imposed during the war, Daru, the French receiver-general for the north of Germany, brought forward after the peace fresh claims to the amount of 154,000,000 (£6,200,000); and although that able functionary, on the earnest representations of the king, consented to take 35,000,000 of francs off this enormous requisition, the French minister, Champagny, by the directions of Napoleon, raised it again to the original sum. It was at length fixed at 140,000,000 (£5,600,000), and Glogau, Stettin, and Custrin pledged for its final liquidation, on condition

* Ann. Reg., 1807, 783. State Papers. Bign., vi., 389, 390. Mart., Sup., iv., 493.

† Bourr., vii., 231, 240. Hard., ix., 442, 443. Lucches., ii., 14, 17.

* They amounted to 600,000,000 francs, or £24,000,000; and the revenue of Prussia, before the war, was about £4,500,000.—*Vide Ante*, ii., 288, 344.

† Hard., ix., 451, 454. Mart., Sup., iv., 452, 474.

that, till that took place, a French corps of ten thousand men should be put in possession of these fortresses, and maintained there entirely at the expense of Prussia. All this was exclusive of the cost of feeding, paying, and clothing the whole French troops, still on or passing through the Prussian territory, who were not short of a hundred thousand men. In addition to this, the king was obliged to bind himself not to keep on foot, during ten years, more than forty-two thousand men, and to permit his dominions to be traversed by five additional military roads between Warsaw, Dresden, Dantzic, and Magdebourg. Thus, while his territory was intersected in every direction by military chaussées for the benefit of his enemies, his chief fortresses still in their hands, and his subjects oppressed by the merciless exactions of a prodigious army, quartered, apparently without end, upon their industry, his own troops were reduced to so low an amount as to be barely equal to the collection of the revenue required by so vast a host of depredators. And, to complete the picture of his misfortunes, the king was immediately compelled to adopt the Continental system, and declare war against Great Britain: a measure which, by exposing his harbours to blockade, and totally destroying his foreign commerce, seemed to render utterly hopeless the discharge of the overwhelming pecuniary burdens with which his kingdom was loaded!*

To all human appearance the power of Prussia was now completely destroyed, and the monarchy of the Great Frederic seemed to be bound in fetters more strict and galling than had ever, in modern times, been imposed on an independent state. And, doubtless, if these misfortunes had fallen on a people and a government not endowed in the highest degree with the spirit of patriotism and constancy in misfortune, this effect would have taken place. But adversity is the true test of political as well as private virtue, and those external calamities which utterly crush the feeble or degenerate, serve only to animate the exertions and draw forth the energy of the uncorrupted portion of mankind. While the diplomatists of Europe were speculating on the entire extinction of Prussia as an independent power, and the only question appeared to be, to what fortunate neighbour the remnant of her territories would be allotted, a new and improved system of administration was adopted in all the branches of her government, and the foundation was laid, in present suffering and humiliation, of future elevation and glory. Instead of sinking in despair under the misfortunes by which they were oppressed, the king and his ministers were only roused by them to additional exertions to sustain the public fortunes. During the long period of peace which Prussia had experienced since the treaty of Bâle, in the midst of wars and disasters all around her, Frederic William had enjoyed ample opportunities for cultivating his natural taste for the fine arts; and already a gallery of paintings was, at the opening of the campaign, far advanced at Berlin, which promised ere long to rival the far-famed museums of Munich, Dresden, or Paris. But all these gems in his crown were torn away by the ruthless hand of conquest, and his much-loved monuments of genius now adorned the halls of the Louvre or

graced the palace of the French emperor. Driven by necessity to more important pursuits, the first care of the king, upon the termination of hostilities, was to free the public service from those whose temporizing and unworthy policy, or treacherous and pusillanimous conduct, had induced the general calamities. Haugwitz remained forgotten and neglected at his country residence; Hardenberg, whose great abilities were loudly called for in the present crisis, and who had been the leading minister since hostilities had been resolved on, was compelled by the jealousy of Napoleon, not only to leave the government, but retire from the country; and it was only after the withdrawal of the French armies that he obtained leave to re-enter Prussia and return to his rural seat of Templeberg. The Chancellor Goldbeck and all the inferior ministers, Massow, Reck, D'Auger, Thulmeyer, and their coadjutors, were dismissed, to the great satisfaction of the public; and the generals and inferior officers, who had so disgracefully yielded up the bulwarks of the monarchy after the catastrophe of Jena, were in a body removed from the army. Yet even here the humane and perhaps prudent disposition of the king prevailed over the justly roused feeling of general indignation at such unworthy betrayers of national trusts; and, instead of grounding their dismissal on their notorious dereliction of duty, it was in general rested on the destitute state of the public treasury and the necessity of rigorous economy in every branch of administration. The inquiry, however, under the direction of the princes royal, was carried through every department and grade in the army; and, to demonstrate its entire impartiality, the heroic Blücher himself was subjected to the same test with his less intrepid brethren in arms!*

Deprived, by the unworthy jealousy of Napoleon, of the assistance of Hardenberg's counsels, the King of Prussia had still the courage, in the almost desperate state of his fortunes, to have recourse to a statesman who, like him, had been distinguished in an especial manner by his hatred. It is to the great abilities, enlightened patriotism, and enduring constancy of the BARON STEIN, that Prussia is indebted for the measures which laid the foundation of the resurrection of the monarchy. This eminent man, born in 1756, had entered the public service in the administration of the State Mines, under the Great Frederic, in 1780; but his admirable talents for business soon raised him to the direction of the customs and excise in 1784, which he held till the breaking out of the war in 1806, when he withdrew to his estates, and remained in retirement till again called to the public service, in the beginning of October, 1807. During his active employment he acquired, by the accuracy and fidelity of his administration, the esteem both of his sovereign and his fellow-citizens; and, during his subsequent retirement, he had ample opportunities for meditating on the causes which had brought such calamities on his country. So clearly were his ideas formed, and so decided his conviction as to the only means which remained of reinstating the public affairs, that he commenced at once a vigorous, but yet cautious system of amelioration; and, only four days after his appointment as minister of the

Accession of Baron Stein to the ministry. His firm character and admirable measures.

interior, a royal decree appeared, which introduced a salutary reform into the Constitution.*

By this ordinance, the peasants and burghers obtained the right, hitherto confined to the nobles, of acquiring and holding landed property, while they in their turn were permitted, without losing caste, to engage in the pursuits of commerce and industry. Landholders were allowed, under reservation of the rights of their creditors, to separate their estates into distinct parcels, and alienate them to different persons. Every species of

slavery, whether contracted by birth, marriage, or agreement, was prohibited subsequent to the 11th of November, 1810; and every servitude, *corvée*, or obligation of service or rent, other than those founded on the rights of property or express agreement, was forever abolished. By a second ordinance, published six weeks afterward, certain important franchises were conferred on municipalities.

By this wise decree, which is in many respects the magna charta of the Prussian burghs, it was provided that the burghers should enjoy councillors of their own election, for regulating all local and municipal concerns; that a third of the number should go out by rotation, and be renewed by an election every year; that the council thus chosen should assemble twice a year to deliberate on the public affairs; that two burgo-masters should be at the head of the magistracy, one of whom should be chosen by the king, from a list of three presented, and the other by the councillors; and that the police of the burgh should be administered by a syndic appointed for twelve years, and who should also have a seat in the municipal council. The administration of the *Haute Police*, or that connected with the state, was reserved to government. By a

third ordinance, an equally important alteration was made in favour of the numerous class of debtors, whom the public calamities had disabled from performing their engagements, by prohibiting all demand for the capital sum till the 24th of June, 1810, providing, at the same time, for the punctual payment of the interest, under pain of losing the benefit of the ordinance. Thus, at the very moment that France, during the intoxication consequent on the triumphs of Jena and Friedland, was losing the last remnant of the free institutions which had been called into existence during the fervour and crimes of the Revolution, Prussia, amid the humiliation of unprecedented disasters, and when groaning under the weight of foreign chains, was silently relaxing the fetters of the feudal system, and laying the foundation, in a cautious and guiltless reformation of experienced grievances, for the future erection of those really free institutions which can never be established on any other basis than those of justice, order, and religion.†

In the prosecution, however, of these glorious, because wise and judicious, plans of public improvement, Stein had great difficulties to encounter. Government was overwhelmed by a multitude of civil servants, to the number of seven thousand, who had been deprived of their situations in the ceded provinces, and whose just prayers for relief could not be attended to by a treasury drained of the last farthing by the charges of the war, and the inordinate requisitions of

the French armies. The rapid absorption of the precious metals by these rigorous taskmasters, the general practice of hoarding which their depredations occasioned, and the necessity, in consequence, of having recourse to a currency of a baser alloy, or paper money, to supply the deficiency, had totally deranged the monetary system, and occasioned a rapid enhancement of prices, under which the labouring classes suffered severely. The closing of the harbours against foreign commerce, in consequence of the Berlin and Milan Decrees, put the finishing stroke to the public distress, and raised such a ferment that the king was obliged to yield to the general clamour, and the representations of the French authorities, who dreaded the effects of such an intrepid system of government, and sent Stein into honourable exile in Russia. So rapidly was this insisted on by the ministers of Napoleon, that the last of these regenerating measures, dated the 24th of November, 1807, were signed by his successors, M. Dohna and Altenstein. But by this ebullition of jealousy the French emperor gained nothing; the merit of Stein was too generally known by the intelligent classes to be forgotten; from his retreat in Courland he really directed the Prussian councils; and by the appointment of SCHARNHORST to the elevated office of minister at war, the door was opened to a variety of important changes in that department, which were of the highest consequence, six years afterward, in the mortal struggle for European freedom.*

Gerard David de Scharnhorst, who was now intrusted with the military direction of Prussia, and whose great scientific abilities subsequently rendered him so distinguished in the fields of European glory, had quitted the Hanoverian service for that of Prussia in 1801. Taken prisoner at Lubeck, but subsequently exchanged, he had powerfully contributed, by his decisive conduct at the critical moment with Lestocq's corps, to the brilliant result of the battle of Eylau. In him a blameless life and amiable manners were combined with the purest patriotism and the soundest judgment; exalted attainments were undisfigured by pride; vigour of thought was adorned by simplicity of character. The perfection of the French military organization, as well as the energy of their army, appeared to him in painful contrast beside the numerous defects and dejected spirit of that over which he now presided; but, instead of sinking in despair under the difficulties of his situation, he was only inspired by the magnitude of the evil with additional ardour in the work of amelioration, and induced, like Stein, to take advantage of the general consternation to effect several salutary reforms, which, in more tranquil times, might have been seriously obstructed by the prejudices of aristocratic birth or the suggestions of interested ambition. Boldly applying to the military department the admirable principles by which Stein had se-

History, character, and great military reforms of Scharnhorst.

Dec. 15, 1807, cured the affections of the burgher and Jan. 7, 1808.

personal service in the army, made its weight fall with additional severity on those who were not relieved. Every department of the service underwent his searching eye: in all he introduced salutary reforms, rectified experienced abuses, and electrified the general spirit by opening to merit the career of promotion; while the general strength of the army was silently augmented to an extent which afterward became in the highest degree important, by the introduction of an equally simple and efficacious regulation. By the subsisting engagements with Napoleon, it was provided that Prussia should not keep on foot more than forty-two thousand men, a stipulation which at once cast her down to the rank of a fourth-rate power, and totally disabled her from assuming the attitude of resistance to the numerous and hourly-increasing demands of the French armies. To elude its operation, and at the same time avoid any direct or obvious infringement of the treaty, he took care never to have more than the agreed on number of men at once in arms; but no sooner were the young soldiers sufficiently drilled than they were sent home to their hearths, and other recruits called to the national standards, who in like manner, after a brief period of service, made way for others in succession. By this simple but admirable system, which is the true secret of the political strength and military renova of Prussia, so much beyond the physical resources of the monarchy, a military spirit was diffused through the whole population; service in the army came to be considered, instead of a degradation, as an agreeable recreation, after the severe labours of pacific life; the manner, carriage, and intelligence of those who returned from their standards were so superior to those of the rustics who had remained at home, that no Prussian damsel would look at a youth who had not served his country; the passion for arms became universal; and while forty thousand only were enrolled in the regular army, two hundred thousand brave men were trained to arms, and ready at a moment's warning to join the standards of their country.*

From these salutary changes, joined to the oppressive exactions of the French armies, and the enormous contributions levied by the government through the whole of the north of Germany, arose another effect, not less important in its ultimate consequences upon the future fate of Europe. Grievously oppressed by foreign depredation, deprived by national disaster of domestic protection, surrounded within and without by rapacious enemies or impotent friends; deprived of their commerce, their manufactures, the vent for their industry, with their farm produce liable to perpetual seizure by bands of rapacious men, armed with imperial authority, the inhabitants both of the towns and the country had no resource but in mutual and voluntary associations. The universality of the suffering produced a corresponding unanimity of opinion: the divisions which existed before the war disappeared under the calamities to which it had given birth; the jealousies of rank or class yielded to the pressure of common distress. Genius and learning, amid the general despondency, stood forth as the leaders, privately and cautiously, indeed, but still the leaders, of public thought. Societies were everywhere formed, in profound secrecy, for the future deliverance

of Germany; the professors at the Universities were at their head; the ardent youth who attended their seminaries joyfully enrolled themselves in their ranks; the nobles and statesmen at the helm of affairs lent them what, with such materials, was much required, the aid of their wisdom and the benefits of their experience. Stein was at their head: from his retreat in Russia he exercised a secret but unlimited sway over the minds of all the energetic and generous portion of the north of Germany. Arndt, who was soon after compelled to seek an asylum from French persecution under the same empire, lent the cause all the aid of his nervous eloquence; Professor Jahn supported it with powerful zeal; Hardenberg was active in its behalf; Scharnhorst, and almost all the councillors of the king, though compelled publicly to discountenance its proceedings, were, in reality, either in secret members of the TUGENDBUND,* or warmly disposed to second its efforts.†

There, too, were to be seen those exalted spirits who subsequently, through evil report and good report, in prosperity and adversity, stood foremost in the bands of European freedom: Schill, whose ardent patriotism, in advance of his countrymen, precipitated, in 1809, to his own ruin, that premature resistance which four years longer of ignominy and bondage were required to render universal; Wittgenstein, the future antagonist of Napoleon, whose clear judgment, notwithstanding the prudent reserve of his character, saw in these associations the only means of future salvation; Blücher, whose generous and inconsiderate ardour threw him early into their arms, as it afterward warned him in the headlong charge against the enemy; Gneisenau, whose scientific abilities, supplying what was wanting in his gallant associate, proved so fatal to the arms of France. The nobles, straitened in their fortunes by the French requisitions, and insulted in their persons by the French officers; the peasants, ground to the dust by merciless exactions, supported by military force; the merchants, ruined by the Continental system, and reduced to despair by the entire stoppage of foreign commerce; the burghers, become the bitterest enemies of Napoleon, from his entire overthrow of those liberal principles on which the early fortunes of the Revolution had been founded, all combined to join the secret societies, from which alone they could one day hope for the deliverance of their country. The machinery put in motion for the attainment of these objects was, indeed, highly dangerous, and capable of being applied to the worst purposes, but the necessities of their situation gave the lovers of the Fatherland no alternative. Alike in town and country, equally among the rich and the poor, the Tugendbund spread its ramifications: a central body of directors at Berlin guided their movements; provincial committees carried their orders into effect; and, as is usual in such cases, a dark, unseen authority, was obeyed with an implicit alacrity unknown to the orders of the successor of Charlemagne. Thus, while France, rioting in the triumph of Tilsit, and deeming her power established on an immovable basis, was fawning on her rulers with Eastern adulation, and bartering her freedom for the enjoyments of gold, Prussia, taking counsel from adversity, was preparing in silence, in the amelioration of her institutions and the energy of her inhabitants,

* Hard., ix., 467, 468.

* Society or Bond of Virtue. † Hard., ix., 467, 469.

that real regeneration which, independent of individuals, unstained by crime, was destined hereafter to raise her from the lowest state of depression to an unexampled height of prosperity and glory.*

Bent to the earth by the disasters of Austerlitz, but still possessing the physical and material resources of power, Austria, during the desperate strife from the Saale to the Niemen, was silently but uninterruptedly repairing her losses, and preparing to resume her place in the rank of independent nations. If she had lost the opportunity, during the preceding winter, of interposing with decisive effect on the banks of the Elbe, she had the magnitude of previous losses, the mortal hazard of an unsuccessful demonstration, to offer in her excuse. Sufficient reliance, it was thought, would not yet be placed on the constancy of Russia; suffering had not adequately tamed the hereditary jealousy of the Prussian government. But the observers of the imperial cabinet augured, not less from the measures which they were in the course of adopting, than the known perseverance and constancy of their policy, that they had by no means relinquished the contest, and that, if a favourable opportunity should occur, they would yet appear foremost in the struggle for European freedom. During the interval of hostilities, the Aulic Council had been indefatigable in their efforts to restore the equipment and revive the spirit of the army. The artillery, abstracted from the arsenal of Vienna, had been regained, in great part, by purchase from the French government; vast exertions had been made to supply the horses wanting in the cavalry regiments; the infantry had been, to a considerable extent, recruited by the prisoners who returned from France, or the new soldiers who had been unostentatiously invited to the imperial standards.†

In open violation of the treaty of Presburg, however, France had hitherto retained the fortress of Braunau, on their western frontier, on the absurd pretext that Russia, an independent power, over whom the imperial cabinet had no control, had not, agreeably to that treaty, evacuated the mouths of the Cattaro. Other measures, equally significant, told them that they were regarded by the great conqueror only in the highest rank of vassals. Andreossi, the French ambassador at Vienna, openly used the most menacing language, both before and after the treaty of Tilsit; new states were, without either notice or negotiation, added by a simple decree of the French emperor to the Confederation of the Rhine;‡ and, by Aug. 24, 1807, a summary decree, the cabinet of Vienna was ordered forthwith to adhere to the Continental system. By yielding on this vital point, however, and, at the same time, making a skilful use of the termination of the dispute with Russia about the mouths of the Cattaro, by the treaty of Tilsit, and the growing anxiety of the French emperor to increase his forces on the Pyrenean frontier, with a view to his ambitious projects in the Spanish Peninsula, Metternich, to the great joy of the inhabitants of Vienna, who regarded its prolonged occupation as a con-

tinued badge of subjection, at length succeeded in obtaining the removal of the French troops from the ramparts of Braunau, and the imperial dominions, still flourishing and powerful, notwithstanding all their losses, ceased to be polluted by the presence of a stranger.*†

In the general wreck of the hopes of Europe on the shores of the Niemen, the Affairs of Sweden, who possessed a spirit worthy of a more powerful monarchy and a greater part on the political theatre, was not discouraged. His semi-insular situation enabled him to bid defiance to the threats of the French emperor: the passage round the Gulf of Bothnia was scarcely practicable; and, with the assistance of England, he did not despair of being able to make head against his enemies, even if Russia should be added to their already formidable league. No sooner, therefore, did the English squadron, with the advanced guard of the land-forces, which had been destined for the support of Russia and Prussia, appear in the Baltic, than he denounced the armistice, six nineteen days after the battle of Friedland. Napoleon, noways displeased at this unexpected resumption of hostilities, immediately made preparations for bringing them to a rapid conclusion. Thirty thousand men were speedily assembled under Marshal Brune, who, as soon as hostilities recommenced on the 13th of July, began to press on all sides the fifteen thousand Swedes who occupied Pomerania. Unable to bear up against so great a preponderance of force, the Swedish generals, after some inconsiderable combats, took shelter under the cannon of Stralsund; and Brune completed the investment of the place in the middle of July.‡

* Hard., ix., 445, 447.

† The resources of Austria in 1807, notwithstanding the loss of Tyrol and other provinces by the peace of Presburg, were still very great; and they are an object of interest, considering the prominent share which that power soon after took in the war. They are thus stated by Baron Lichtenstein:

Population.....	24,900,000
Inhabited towns.....	796
Burghs.....	2,012
Villages.....	65,572
Composed of

‡ The principalities of Anhalt, Reuss, Ladepé, Schwartzbourg, and Waldeck

The King of Sweden was soon made to perceive, from bitter experience, that, after the pacification of Tilsit, the possession of his transmarine dominions was held by the most precarious tenure. At first, the English troops, under Lord Cathcart, above ten thousand strong, and in the finest condition, formed part of the garrison; and the presence of this imposing force appeared to promise to Gustavus, who commanded in person, the means of making a defence which might rival that by which Charles XII. had immortalized its walls. At this period the Swedish monarch appeared to be passionately desirous of military renown, and so ambitious was he of the perils and glories of actual warfare, that he went so far as to send a flag of truce to the French marshal, offering a purse of gold to the gunner in the French lines who had levelled the piece of ordnance whose shot had struck the wall a few feet from the place where he was standing: a proceeding which the English general justly considered as savouring rather of a romantic or highly-excited temperament, than the sober judgment befitting the ruler of a nation.* But stern necessity soon put a period to these chivalrous illusions. The English troops were withdrawn in the end of July, to co-operate in the great armament intended for the reduction of Copenhagen July 30. and seizure of the Danish fleet, of which mention will immediately be made; and the Swedish garrison, without any external aid, was left to make head alone against the hourly-increasing forces of the French marshal, which already were more than double their own. The evident hopelessness of the attempt to preserve the place after the treaty of Tilsit was known, and it had become apparent that the French emperor could increase the besieging force at pleasure to quadruple its present amount, damped the military ardour of the Swedes, and induced them to prolong the defence rather from a sense of duty than any hope that it could ultimately prove successful. Trenches were opened on Aug. 15. the night of the fête of the emperor, by seven thousand workmen, and advanced, under the scientific direction of General Chasseloup, with extraordinary vigour. Contrary to all previous example, the approaches were made on three fronts at the same time, and pushed with such rapidity, that in four days they were within three hundred yards of the external palisades, the batteries already armed, and everything prepared for a bombardment. Seeing their city about to be ruined, for no political or national purpose but a mere point of military honour, the magistrates

threw themselves at the feet of the king, Aug. 20. and besought him to spare the inhabitants the horrors of an unavailing defence. He could not resist the appeal, and withdrew with almost the whole garrison into the adjacent island of Rugen, while Stralsund itself, with four hundred pieces of cannon and immense military magazines, fell into the hands of the enemy.†

Still the enemy kept their ground in the isles of Rugen and Danholm, which not only completely blockaded the harbour, but neutralized all the advantages otherwise consequent on the possession of this extensive fortress. Marshal

Brune showed great activity in the measures adopted to root the Swedes out of this their last stronghold on the German shore. Three days after the capitulation, two hundred boats and small craft were assembled, chiefly by means of land carriage, in the harbour of Stralsund, with which, on the night of the 25th, a descent was effected on the isle of Danholm, which fell into the hands of the French, Aug. 25. with twenty pieces of cannon and its little garrison of a hundred and eighty men. Still the isle of Rugen, with the bulk of the Swedish forces, remained in the possession of the king; but the troops, wearied of a fruitless contest which they deemed foreign to the real interests of the monarchy, and strongly impressed with the idea that the military excitement of their sovereign bordered on insanity, murmured so loudly on the farther continuance of the contest, that he was obliged to yield; and a convention was concluded on the 7th of September, by Sept. 7. which the island was to be given up to the French troops, and the king, with the whole garrison and fleet, were to withdraw to the Swedish shore. This convention relieved Napoleon from all anxiety in the north of Germany, and put the finishing stroke to the Continental war in that part of the world; but it was far from answering the expectations of the French emperor, who had calculated on the capture of the Swedish king, or at least the whole of his garrison;* and it was the occasion of Marshal Brune falling into a disgrace from which he never afterward was able to recover.

While the last flames of the Continental war were thus expiring around the walls of Stralsund, a blow of the highest importance on the future prospects of the maritime contest was struck by the vigour and decision of the British cabinet.

Notwithstanding all the precautions taken by the two emperors, in their negotiations at Tilsit, to bury their designs in profound secrecy, the English government were possessed of a golden key which laid open their most confidential communications. They were made aware of the determination of the imperial despots to seize the fleets of Denmark and Portugal, not only before it was reduced to a regular treaty, but almost as soon as it itself was formed; and the vast forces at the disposal of the French emperor left no room for doubt that they possessed ample means to carry their intentions into effect. Not a moment was to be lost; for in the final treaty, as already noticed,† the first of September was fixed as the period when the courts of Copenhagen and Lisbon were to be summoned to place their fleets at the disposal of the combined powers, and enter into the general confederacy against Great Britain. Hardly was the ink of the treaty dry, when the French forces, under Bernadotte and Davoust, began to defile in such numbers towards Holstein, and assumed so menacing a position, that it was evident that Denmark would speedily lose her whole Continental possessions, if she resisted the demands of the combined emperors. Nor did there appear any reason to believe that the cabinet of Copenhagen would incur any such hazard to maintain their neutrality. On the contrary, there were the strongest grounds for concluding that they would readily embrace so favourable

Capture of the islands of Danholm and Rugen.

* I received this anecdote from my venerable and much-esteemed friend the Earl of Cathcart, whose recollection of all the events of that memorable period, in which he bore so prominent a part, is still as vivid and correct, though at a very advanced age, as when they occurred, thirty years ago. † Dum., xix., 145, 161. Jom., ii., 456, 457.

* Jom., ii., 456, 457. Dum., xix., 161, 165. † Ante, ii., 545.

an opportunity of contending, with the aid of such powerful allies, for those maritime changes which had long constituted the ruling objects of their ambition. In 1780, they had been the first to join the Northern Confederacy against England, and proclaim the principles of the armed neutrality; in 1801, they had exposed themselves for the same object, in the front rank, to the cannon of Nelson and all the terrors of the English navy. More lately, their conduct had savoured still more strongly of aversion to the English and partiality for the French alliance. The Berlin Decree of the 21st of November, which inflicted so unexampled and fatal a wound on neutral commerce, had drawn forth no complaints from the Danish government; but no sooner did the British order in council of the 7th of January issue, which provided only a mild, and, as it proved, ineffectual measure of retaliation, by putting a stop to the coasting-trade of neutrals from one French harbour to another, than the Danish minister made loud complaints, which drew forth the able and unanswerable reply from Lord Howick, which has already been quoted.* No remonstrances had been made by the Danish government against the threatening accumulation of forces on the frontier of Holstein; no advances to secure aid, in the peril which was evidently approaching, from the British or Swedish cabinets. On the contrary, although Napoleon had, previous to the battle of Friedland, made proposals to Gustavus, with a view to detach him from the Russian alliance, and actually offered, as an inducement, to wrest the kingdom of Norway from the Danish crown, and annex it to that of Sweden, yet even the generous refusal of this offer by that upright monarch, accompanied by its instant communication to the cabinet of Copenhagen,† had made no alteration in their line of policy, and they declined all offers of assistance against a power which had manifested so little scruple at the prospect of partitioning their dominions.

In these circumstances the cabinet of Great Britain had a most serious duty to perform. They were menaced with an attack from the combined navies of Europe, amounting to one hundred and eighty sail of the line; and of that immense force they were well aware that the Baltic fleet would form the right wing.‡ No time was to be lost: every

hour was precious: in a few days an overwhelming French force would, to all appearance, be assembled on the shores of the Great Belt; and, if ferried over to Zealand, might enable the Danish government securely to comply with the requisition of the combined emperors, and bid defiance to all the efforts of Great Britain. In these circumstances they took a resolution similar to that adopted by Frederic the Great in regard to Saxony, when he received authentic intelligence of the accession, or probable accession, of Saxony to the league of Russia and Austria against his existence; and resolved, by a vigorous stroke, not only to deprive the enemy of the prize he was so soon to seize, but convert its resources to their own defence.*

Accidental circumstances gave the British government, contrary to the usual case with an insular power, the means, both with respect to land and sea forces, of instantly acting on this vigorous resolution. The first division of the expedition which had been so long in preparation to aid the allies on the shores of the Baltic was already in the isle of Rugen, and the remainder were in such a state of forwardness as to be ready to embark at a few days' notice. A large naval force was also assembled, to act as occasion might require, and this was speedily added to with extraordinary expedition. Such was the activity displayed, that in the end of July twenty-seven ships of the line, having on board twenty thousand land-troops, set sail from the British harbours, besides other smaller vessels, amounting in all to ninety pendants, and stretched across the German Ocean for the shores of Denmark. They arrived off the Danish coast on the 3d of August, and immediately stationed such a force under Commodore Keats, in the Great Belt, as effectually cut off all communication between the island of Zealand and the adjacent isles, or shores of Jutland.† At the same time, the troops from Stralsund, under Lord Cathcart, arrived, who immediately took the command of the whole expedition; and the formidable armament, spreading their sails before a favourable wind, passed the Sound, and cast anchor in appalling strength before the harbour of Copenhagen.‡

It was no part, however, of the design of the British government to precipitate the country into hostilities; on the contrary, they were on many accounts most desirous to avoid, if possible, proceeding to that extremity, and rather to gain the object in view by diplomatic arrangements than actual force. With this view they had sent Mr. Jackson with the armament, who had resided as envoy of Great Britain for many years at the court of Berlin, and was supposed to enjoy, in a very high degree, the confidence of the Northern powers. As soon as he arrived off the Danish coast, Mr. Jackson landed at Kiel, and proceeded to announce the purport of his instructions to Count Bernstorff, and request an audience of the

‡ General Jomini has given the following summary of the design of Napoleon and Alexander, after the treaty of Tilsit, to unite all the navies of Europe against England, and of the probable forces at their disposal. Speaking in the person of the French emperor, he says, "After Russia had joined my alliance, Prussia, as a matter of course, followed her example; Portugal, Sweden, and the pope alone required to be gained over, for we were well aware that Denmark would hasten to throw herself into our arms. If England refused the proffered mediation of Russia, the whole maritime forces of the Continent were to be employed against her, and they could muster 180 sail of the line. In a few years, this force could be raised to 250. With the aid of such a fleet, and my immense flotilla, it was by no means impossible to lead a European army to London. One hundred ships of the line employed against her colonies in the two hemispheres would have sufficed to draw off a large portion of the British navy; while eighty more, assembled in the Channel, would have sufficed to assure the passage of the flotilla and avenge the outrages of nations. Such was at bottom my plan, which only failed of success from the faults committed in the Spanish war."—*JOMINI, Vie de NAPOLEON*, ii., 449.

prince royal. By the former he was received with the indignant vehemence natural to a patriotic minister, who saw, from what he conceived to be foreign injustice, a grievous misfortune impending over his country; by the latter, with the mild but courageous dignity which added lustre to a throne under the storms of adversity. The instructions of the English envoy, however, were peremptory; and, as the prince royal positively refused to accede to the terms proposed, which were that the fleet should be deposited with the British government in pledge, and under an obligation of restitution, till the conclusion of a general peace, he had no alternative but to declare that force would be employed. Upon this, the prince royal, with praiseworthy resolution, declared his determination to share the dangers of his capital, and immediately set out for Copenhagen. He was allowed by the British cruisers to pass the Great Belt with all the officers of his staff, and was soon after followed to the capital by the British envoy; but, having no powers to accede to an accommodation on the basis proposed, the negotiation broke off, and both sides prepared to decide the matter in dispute by the sword. At the same time Aug. 16. a proclamation was issued by the English commanders, declaring in precise terms the object of their hostility, disclaiming all idea of conquest or capture, but demanding the fleet in deposit till the conclusion of a general peace.*†

* Parl. Deb., x., 222, 223. Ann. Reg., 258, 261. Dum., xix., 167, 173.

† "Whereas the present treaties of peace, and the changes of government and of territory acceded to, and by so many powers, have so far increased the influence of France on the Continent of Europe, as to render it impossible for Denmark, even though it desires to be neutral, to preserve its neutrality, and absolutely necessary for those who continue to resist the French aggression, to take measures to prevent the arms of a neutral power from being turned against them: in this view his majesty cannot regard the present position of Denmark with indifference, and he has therefore sent negotiators with ample powers to his Danish majesty, to request, in the most amicable manner, such explanations as the circumstances require, and a concurrence in such measures as can alone give security against the farther mischief which the French meditate through the acquisition of the Danish navy. The king, therefore, has judged it expedient to demand the temporary deposit of the Danish ships of the line, in one of his majesty's ports. The deposit seems to be just, and so indispensably necessary, under the relative situation of the neutral and belligerent powers, that his majesty has farther deemed it a duty to himself and to his people to support his demand by a powerful fleet, and by an army amply supplied with every necessary for the most active and determined enterprise. We come, therefore, to your shores, inhabitants of Zealand, not as enemies, but in self-defence, to prevent those who have so long disturbed the peace of Europe from compelling the force of your navy to be employed against us. We ask deposit—we have not looked to capture: so far from it, the most solemn pledge has been offered to your government, and it is hereby renewed, in the name and by the express commands of the king our master, that, if our demand is acceded to, every ship belonging to the Danish navy shall, at the conclusion of a general peace, be restored to her, in the same condition and state of equipment as when received under the protection of the British flag. It is in the power of your government, by a word, to sheath our swords, most reluctantly drawn against you; you will be treated on the footing of the most friendly powers; property of all sorts will be respected and preserved; the most severe discipline enforced; every article required paid for at a fair price; but if these offers are rejected, and the machinations of France render you deaf to the voice of reason and the call of friendship, the innocent blood that will be shed, and the horrors of a besieged and bombarded capital, must fall on your own heads, and those of your cruel advisers."—See *Parl. Deb.*, x., 222. The prince royal replied, "No example Prince Royal is to be found in history of so odious an aggression as that with which Denmark is menaced; more honour may now be expected from the pirates of Barbary than the English government. You offer us your alliance! Do we not know what is its worth? your allies,

The British troops commenced their disembarkation without resistance on the 16th, and in three days the whole force was landed, and the investment of the town completed. It then appeared that, however much the Danish government might have been inclined to accede to the summons of the combined emperors, and unite their navy to the general maritime confederacy, they at least had no expectation of being so soon involved in hostilities on their own shores, and were totally unprepared for the formidable forces now arrayed by sea and land against them. Such had been the vigilance of the cruisers in the Great Belt, that no troops whatever had been ferried over from the adjacent shores, and no preparations had, on their arrival, been made in Zealand itself. The ramparts were unarmed, the fleet unequipped; and though great fermentation, and the most honourable patriotic zeal prevailed in the capital, few regular troops were assembled within its walls, and little progress could in so short a time be made in the organization of a voluntary force. The sudden calm, however, which ensued, and prevented the ships from approaching the coast to land the heavy ordnance and siege equipage, retarded for several days the approaches, and afforded the Danes a breathing-time, of which they actively availed themselves, both to prepare for their defence and retard the operations of the besiegers. But this respite was of short duration, and, by inspiring the inhabitants with fallacious hopes, in the end only led to additional and lamentable calamities. The heavy artillery was at length landed, and brought up to the trenches: the assistance of the sailors enabled the works to be prosecuted with great rapidity, and on the 1st of September they were so far advanced as to have everything in readiness for the bombardment to commence. The place was then summoned, and the same terms generously offered which had before been rejected.* Meanwhile, ARTHUR WELLESLEY, who then began in high command that career in Europe which has rendered his name and country immortal, moved with ten thousand men against a body of twelve thousand militia, supported by a few regular troops which had assembled in the interior of the island at Kioje, and by a sudden attack, in which the 92d and 52d regiments distinguished themselves, dispersed them, with the loss of several hundred killed and twelve hundred prisoners.†

The offer of accommodation being rejected, the bombardment began, and was continued with uncommon vigour, and with only a short interruption, for three days and nights. The inhabitants sustained with heroic re-

vainly expecting your succours for an entire year, have taught us what is the worth of English friendship."—See *Dumas*, xix., 171.

* The summons set forth: "To convince the Danish government and the whole world of the reluctance with which his majesty has recourse to arms, we, the undersigned, at the moment when our troops are before your gates, and our batteries ready to open, renew to you the offer of the same advantageous terms which we formerly proposed: viz., if you will consent to deliver up the Danish fleet, and to our carrying it away, it shall be held in deposit merely, and restored in as good a state as received, with all its equipments, as soon as the provisions of a general peace shall have removed the necessity which occasioned this demand. But, if this offer is now rejected, it cannot be repeated."—CATHCART, GAMBIER, *Sept. 1, 1807.*

† Sir A. Wellesley's Despatch, *Ann. Reg.*, 1807, 703. *Dum.*, xix., 171, 176.

olution the flaming tempest, and all classes were indefatigable in their endeavours to carry water to the quarters where the city had taken fire; but in spite of all their efforts the conflagration spread with frightful rapidity, and at length a great magazine of wood and the lofty steeple of the Church of Our Lady took fire, and the flames, curling to a prodigious height up its wooden pinnacles, illuminated the whole heavens, and threw a lurid light over all the fleet and army of the besiegers. With speechless anxiety the trembling citizens watched the path of the burning projectiles through the air, while the British soldiers and sailors from afar beheld with admiration the heavens tracked by innumerable stars, which seemed to realize more than the fabled splendours of Oriental fireworks. At length the obvious danger of the total destruction of the city by the progress of the flames overcame the firmness of General Peymann, to whom the prince royal had delegated his command, and on the forenoon of the 5th a flag of truce appeared at the British outposts to treat for a capitulation.* But the period of equal negotiation was past: the Danes had perilled all on the issue of the sword, and no other terms would be agreed to but the unconditional surrender of the whole fleet, with all the artillery and naval stores which the place contained. Hard as these terms appeared, necessity left the Danes no alternative, and a capitulation was signed on such conditions two days afterward, in virtue of which the British troops were immediately put in possession of the citadel, gates, and arsenal; and, by the united efforts of friends and foes, a stop was at length put to the progress of the conflagration, but not before it had consumed an eighth part of the city.†

By the terms of the capitulation, it had been stipulated that the English should evacuate the citadel of Copenhagen within six weeks, or a shorter time, if the fleet could be got ready before the expiry of that period. But such was the expedition with which the operations were conducted, and the activity displayed by both the naval and military departments, that long before the expiry of that period the fleet was equipped, the stores on board, and the evacuation completed. Early in October the British fleet and army returned to England, bringing with them their magnificent prize, consisting of eighteen ships of the line in excellent condition, fifteen frigates, six brigs, and twenty-five gunboats, besides two sail of the line and three frigates which had been destroyed as not worth the removal.‡

The Copenhagen expedition excited a prodigious sensation throughout Europe; and as it

was a mortal stroke levelled at a neutral power, without any previous declaration of war then ascertained, or ground for hostility, it was generally condemned as an uncalculated violation of the law of nations. "Blood and fire," said Napoleon, "have made the English masters of Copenhagen;" and these expressions were not only re-echoed over all the Continent by all that great portion of the public press which was directly subjected to his control, but met with a responsive voice in those nations who, chagrined with reason at the refusal of its government to lend assistance in men or money at the decisive moment on the banks of the Vistula, were not sorry of this opportunity of giving vent, apparently on very sufficient grounds, to their displeasure. The Russians were loud in their condemnation of the English administration: the emperor, with that profound dissimulation which formed so remarkable a feature in his character, affected to be deeply afflicted by the catastrophe, though none knew so well the reality of the secret articles in the treaty of Tilsit which had rendered it necessary; even their long-established national rivalry with the Danes could scarcely induce the Swedes to receive with satisfaction the intelligence of so serious an invasion of neutral rights. Thus, on all sides and in all countries, a general cry of indignation burst forth against this successful enterprise; and the old jealousy at the maritime power of England revived with such vehemence, as for a time to extinguish all sense of the more pressing dangers arising from the military power of France.*

But, whatever might be the general impression of Europe as to the Copenhagen expedition immediately after it occurred, Napoleon was not long of affording it a complete vindication. It has been already mentioned that it was stipulated in the treaty of Tilsit, that, in the event of England declining the proffered mediation of Russia, the courts of Copenhagen and Lisbon should be summoned to join the Continental league, and unite their naval forces to those of France and Russia. On the 12th of August, a note was transmitted to the French minister at Lisbon, peremptorily requiring that the Portuguese fleet should co-operate with the French and Danish in the maritime war, and that the persons and property of all Englishmen in Portugal should be forthwith seized. And it soon after appeared that on the same day similar orders had been transmitted to the cabinet of Copenhagen. In a public assembly of all the ambassadors of Europe at the Tuileries, the Emperor Napoleon demanded of the Portuguese ambassador whether he had trans-
Count Romanzoff's note to Lord G. L. Gower.
Aug. 12.
Aug. 16.
 mitted to the court of Lisbon his orders to join their fleet to the general maritime confederacy against England, and confiscate all English property within their dominions. And, having said this, he immediately turned round to the Danish ambassador, and asked him whether he had done the same. The note addressed to the Portuguese government was immediately communicated by its ministers to the British cabinet; that to the Danish was concealed, and its existence even denied. Thus, at the very time that the English expedition was, unknown to France, approaching the Danish shores, the diplomatic pa-

* "From the top of a tower," says a respectable eyewitness, "I beheld, in October, 1807, the extent of the devastation: whole streets were level with the ground; 1800 houses were destroyed; the principal church was in ruins; almost every house in the town bore some marks of violence; 1500 of the inhabitants had lost their lives, and a vast number were wounded. The Danes certainly defended themselves like men, and left to the English the poignant regret that the insatiable ambition of Bonaparte had converted this gallant people into our enemies."—BRENTON'S *Naval History*, ii., 177.

† *Ann. Reg.*, 1807, 263. Lord Cathcart's Despatch, *ibid.*, 706, 707. *Dum.*, xix., 175, 181. *Jom.*, ii., 454, 455.
 ‡ Lord Gambier's Despatch, *Ann. Reg.*, 1807, 698, 699. *Dum.*, xix., 179, 180.

§ Including the cannon placed on the prams and floating batteries which were brought away, the artillery taken amounted to 3500 pieces. The prize-money due to the troops engaged was estimated by Admiral Lord Gambier at £960,000.—See HARDENBERG, x., 42.

* *Hard.*, x., 42, 45. *Bign.*, vi., 422, 423. *Parl. Deb.*, x., 211.

pers and public words of Napoleon were affording decisive evidence of his preconceived designs against the Danish fleet, while the conduct of their government was equally characteristic of an inclination to slide, without opposition, into the required hostility against this country.*

But these diplomatic communications, little understood or attended to at the time by the bulk of the people, produced no general impression in England, and very painful division of opinion existed for a considerable time, both as to the lawfulness of the expedition and the justice of retaining the prizes which had been made. Whatever violence might have been meditated by the French emperor, it was very generally said it would have been better to have suffered him to perpetrate it, and then made open war on his vassals, than to forestall his iniquity in this manner by its imitation. This feeling was as creditable to the public mind and the severe principles of morality which religious faith and long-established habits of freedom had produced in Great Britain, as the conception of the measure itself was honourable to the government. It was a memorable thing to see the people of England repudiate a triumph won, as it was thought, by injustice; disregard security purchased by the blood of the innocent, and look with shame on the proudest trophy of maritime conquest ever yet brought to a European harbour,† as long as doubt existed as to the justice of the means by which it had been acquired. Contrasting this honourable feeling with the utter confusion of all moral principle which in France resulted from the Revolution, and the universal application to public measures of no other test than success, it is impossible to deny that the religious feelings and the tempered balance of power, which in England both saved the country from a disastrous convulsion, and, by restraining the excesses of freedom, preserved its existence, were equally favourable to the maintenance of that high standard of morality which, in nations as well as individuals, constitutes the only secure basis of durable prosperity.

The Copenhagen expedition, as might have been expected, led to vehement debates in both houses of Parliament, which, though now of comparatively little importance, as the publication of the secret article in the treaty of Tilsit has completely justified the expedition, are of historical value, as indicating the opinions entertained, and the arguments advanced at the time in the country, on a subject of such vital importance to the honour and security of the Empire.‡

* Lord Wellesley's Statement, Parl. Deb., x., 345, and Lord Hawkesbury's, *ibid.*, x., 371.

† There is no example in modern times of such an armament being at once made prize and brought home by any power. At Trafalgar, only four ships of the twenty taken were brought to the British harbours; at La Hogue, none of the prizes were saved, out of eighteen taken; and at Toulon, in 1793, no more than three sail of the line and three frigates were brought away out of the vast fleet there committed to the flames.—See SMOLLETT'S *History*, ii., 151, and *Ante*, i., 333.

‡ On the part of the opposition, it was strongly urged by Argument in Par- Mr. Granville Sharpe, Mr. Ponsonby, and lament against the Lord Erskine: "The ground stated in the Copenhagen ex- king's speech for the Copenhagen expedition, tion was, that the government were in possession of the secret articles of the treaty of Tilsit, in which it was stipulated that the Danish fleet should be employed against this country. If so, why is it not produced? It is said that Denmark has always been hostile to this country, and would gladly have yielded up her fleet for such a purpose on the first summons. If this is really the case, on what grounds is the charge supported? True, the ships at

The great circumstance which long suggested a painful doubt as to the justice of the Copenhagen expedition was the non-production of the alleged clauses in the secret treaty of Tilsit, of which ministers asserted they were in possession, which provided for

The secret article of the treaty of Tilsit regarding the Danish fleet is at length produced.

Copenhagen were in a certain degree of preparation, but not more so than they have been for the last half century. Was it probable that Denmark would have risked her East and West India possessions, the island of Zealand itself, and Norway, from an apprehension that Holstein and Jutland would be overrun by French troops? If history be consulted, it will be found that no considerable armament has crossed the Great Belt on the ice for 150 years, in the face of an allied British and Swedish naval force. Such an attempt would never have been thought of, so that the Danes had no reason to tremble for their capital. When the Copenhagen expedition set sail, there were 350 Danish ships in British harbours, with cargoes worth two millions; and when the British consul applied to the Chamber of Commerce, at the Danish capital, he received for answer that there was not the slightest room for apprehension, as no such circumstances existed as were calculated to disturb the neutrality of Denmark. The plea, therefore, of impending danger, to justify so flagrant a breach of neutral rights, has not even for its basis the essential ground of correctness in point of fact.

"The vindication of this step, supposing that some danger had been shown to have existed, must rest upon its necessity; for the first principles of justice demonstrate, and the concurring testimony of all writers on the law of nations has established, that one belligerent could not be justified in taking its property from a neutral state, unless it is clearly established that its enemy meant and was able to take possession of it, and apply it to the purposes of its hostility. How, then, is it to be justified, when every appearance is against the opinion that the enemy had either the inclination or the power to convert the Danish navy into an instrument of our destruction? But this is not all: supposing it proved, beyond the possibility of doubt, that Bonaparte intended to have seized the Copenhagen fleet, and had a force at his command adequate to that purpose, as he afterward did with the fleet at Lisbon, are we to justify our robbery upon the plea that our enemy was meditating a similar spoliation, and that it was best to be beforehand with him? It is a principle of morality applicable alike to nations and individuals, that one wrong will not authorize another; and that, unless in extreme cases, even self-defence will not justify a deviation from the laws and usages of war; how much more, therefore, is an illegal act indefensible, committed not in retaliation for, but in anticipation of, a similar unjustifiable stretch on the enemy's part! Better, far better that Bonaparte should have carried his alleged designs into full effect, and united the Danish navy to his own, than that we should have stained our national character by an act, indefensible by those who were to profit, execrable in the estimation of those who were to suffer by it.

"A comparison of dates is alone sufficient to demonstrate the untenable grounds on which this expedition was sent out. The treaty of Tilsit was signed on the 8th of July; the orders for the sailing of the expedition were issued on the 19th of the same month, and for several days previously the newspapers had announced its destination. How was it possible that, in so short a time, preparations could have been made for so vast an armament? Admitting that a military armament, to co-operate with Russia or Sweden, and act as occasion might require, in the Baltic, had previously been resolved on, and was in a great state of forwardness, still the peculiar force employed in that expedition, the great quantity of battering cannon and besieging stores, as well as the vast amount of the naval force, proves that, long before the treaty of Tilsit was either signed or thought of, the resolution to spoliolate Denmark had been formed.

"We have got possession, indeed, of the Danish fleet; but is that the real or the principal object which we have to dread, in the great maritime confederacy which an inveterate enemy is forming against us? Do we esteem as nothing the now urgent and avowed resentment of the Danish sailors; the dubious neutrality of Russia, converted by our rapacity into real and formidable hostility; the indignation of all neutral and maritime powers at our unparalleled injustice; the loss of the character which formerly rendered us the last asylum of freedom and independence throughout the world? Better, far better would it have been to have had to combat the Danish fleet manned by disaffected seamen and fitted out by a reluctant government, than to have, as now, the fleets of France and Russia to fight, manned with the indignant and exasperated sailors of the North. With what countenance can we now reproach the French emperor with his attack on Egypt, his subjugation of Switzerland, his overthrow of Portugal? We have ourselves

the seizure of the fleet by France and Russia. Notwithstanding all the taunts with which they

furnished his justification: we have forever closed our lips from the most powerful argument which we could ever have used to effect the future liberation of mankind. Will no recollection of our violence in Denmark lie heavy on our spirits when called upon to resist the violence of the enemy retaliating upon us? Will not the hostile myriads on the opposite shore be animated with fresh ardour and confidence, now that they are no longer following the banners of a desolating conqueror, but revisiting upon us the aggression of our own fleets and armies? When we reflect on the little we have gained, and the much we have lost by this aggression, it clearly appears to have been not less impolitic and inexpedient than iniquitous and unjust."^{*}

Powerful as these arguments were, and warmly as they spoke to the best and noblest feelings of our nature, they were met by others not less cogent, and, perhaps, when the period for impartial decision arrived, still more convincing. It was answered by Lord Wellesley, Lord Castlereagh, and Mr. Secretary Canning: "It is needless to ask for additional documents to justify that great and saving measure, the expedition to Copenhagen. It was evident that, after the battle of Trafalgar had annihilated his present hopes of maritime ascendancy, and the victory of Friedland had laid all the Continental states prostrate at his feet, all the efforts of Bonaparte would be turned against the power and resources of the British Empire. Was any proof requisite of his desire to annihilate our independence, nay, destroy our very existence as a nation; or was any necessary as to the mode in which, being actuated by such motives, he would proceed? How has he uniformly acted in his acquisitions at land? By compelling the powers whom he had conquered, or intimidated into an alliance, to co-operate with him in his future hostility against such as still remained to be subdued. Was it to be supposed that profound statesman and consummate general would not proceed in the same manner in the great object of his life, the destruction of the maritime strength and resources of this country? Actuated by such motives and principles, is it conceivable that, after his great land victory, and when he had for the first time the maritime resources of the whole Continent at his command, he would hesitate to accomplish the inviting object of adding the Danish navy, lying in a manner within his grasp, to his resources?"

"But the matter does not rest on probabilities and inferences. The French emperor announced his intention almost in direct terms, immediately after the battle of Friedland, of uniting all the navies of Europe in one great confederacy against this country, and all his subsequent conduct has been regulated by the same principle. His plan was not confined to Denmark: it extended also to Portugal; these two powers were placed in exactly the same situation, and in both of these countries all British property was to be seized, and their respective courts compelled to unite their naval forces to those of France and Russia. It was well known that, before the 1st of September, the Emperor Napoleon publicly demanded of the Portuguese ambassador, in presence of all the envoys of foreign courts, whether he had transmitted his order to the court of Portugal to join their fleets to the maritime confederacy against England, to shut their ports against the British flag, and confiscate the property of its subjects within the Portuguese territory; and, having said this, he immediately turned round to the Danish minister and asked if he had transmitted the same order to his own court. The cabinet of Lisbon have transmitted official intelligence to the government of Great Britain, that a formal demand had been made on them for the surrender of their fleet and the closing of their ports against English commerce, and the confiscation of all English property within their territories; and upon their failure to comply with the last only as the most unjust of these demands, they received a notification in the *Moniteur*, that the house of Braganza had ceased to reign: a clear demonstration of what fate awaited the Danish court if they hesitated a moment to obey the same haughty summons.

"Difficulties, it has been said, existed in the way of the French troops effecting the passage of the Great Belt, and compelling the Danes to join in the maritime confederacy against this country. These difficulties have been much exaggerated, for it is well known that Copenhagen depends almost entirely for its supply of provisions on Jutland and Holstein, and the occupation of these provinces by the French troops would soon starve the government into submission. It was idle to suppose that the Danish troops, which did not at the utmost exceed 20,000 men, could cope with the united armies of France and Russia. Even supposing that, with the aid of British valour, they could for a time have made a successful stand, was it likely that they would not be paralyzed by the dread of engaging in a conflict with these two colossal empires, whose strife had so recently resounded through the world? And even if the Danish cab-

were assailed on this subject, they for long withheld its production from the public, and it came, in consequence, to be seriously doubted whether such an agreement article really existed, until at length, in 1817, when the reasons for withholding it had ceased by the death of the persons by whom the discovery had been made, the decisive article was publicly revealed in Parliament.* Thus had the British cabinet the merit of having at once early discovered, and instantly acted upon, the hidden designs of the enemy; paralyzed by the vigour of their measures the formidable naval force which was preparing against them in the North; and afterward, for a long course of years, generously borne the whole load of opprobrium with which they were assailed, rather than, by a premature publication of the secret information they had received, endangered the persons by whom it had been transmitted.†

inet, in a cause in which they were heartily engaged, possessed the firmness of the Roman Senate, is it not notorious that their wishes, in this instance, would have led them to join their forces, at the first summons, to those of France? It is in vain to refer to the dangers which their transmarine possessions would run from the hostility of Great Britain. They braved these dangers in 1780, in prosecution of the object of the armed neutrality; they braved them in 1801, when the cannons of Nelson were pointed at their arsenals, though on neither of these occasions were they supported by such a gigantic Continental confederacy as now summoned them to take their place at its side. Their inclinations and secret bias have been clearly evinced by their public acts: and he has studied the history of the last fifty years, indeed, to little purpose, who does not perceive that they would enter the alliance, not as reluctant neutrals, but ardent belligerents, contending for objects which they have long had at heart.

"The power of France, already sufficiently formidable by land, and daily receiving important additions by sea, would have been increased in the most alarming manner by the fleet and the arsenals of Denmark. Twenty ships of the line, ready for sea, backed by a great supply of naval and military stores, constitute a force, in addition to that already possessed by the enemy, on which England, with all her maritime strength, cannot look without alarm. But this is not all. These twenty line-of-battle ships would speedily be joined by those of Russia and Sweden, amounting to at least as many more; the Russian fleet in the Euxine had already proceeded to Lisbon, to join the Portuguese squadron, which together amounted to twenty ships of the line. Spain could furnish the like number, and thus Napoleon would soon have been enabled to direct against this country a centre of fifty ships of the line, drawn from Antwerp, Cherbourg, and Brest, with two wings, each of forty, supplied by his northern and southern confederates. He is a bold man who can look unmoved on such a prospect. Had ministers not acted as they have done, they would have neglected their first and greatest duty, that of preserving the independence of their country, and with it the liberties of the world. Self-preservation is the law of nature, and that law loudly called for the adoption of this vigorous step, which has at least completely paralyzed the designs of their confederates in the north seas. Here was an instrument of war within the grasp of our inveterate enemy: we interposed and seized it, as he was stretching out his hand for the same purpose, and that act of energy and wisdom has the hard epithets of rapine and impiety ascribed to it! The bloodshed and devastation which occurred in the execution of this necessary act are, indeed, deeply to be deplored; but the Danes had themselves to blame for these calamities, by refusing to deliver up their fleet in deposit till the conclusion of the war, as originally and rightly proposed by the English government. The expedition had been originally destined for co-operation with the Russians and Prussians; but upon the pence of Tilsit, with a promptitude and energy worthy of the highest commendation, ministers at once gave it a different destination; and though this bold step may now be unanimously blamed on the Continent by writers who take their opinions on every subject from the beck of one or other of the imperial despots who rule its empires, it will one day be applauded by an impartial posterity as the salvation of the British Empire."[‡]

Upon a division, both houses supported ministers: the Commons by a majority of 253 to 108; the Peers by one of 105 to 48.†

† The writers on the law of nations are clear that, in such circumstances as the Danish fleet was here placed, its sei-

† *Ibid.*, x., 310, 383.

The negotiations contemplated by the treaty of Tilsit were not long of being set on foot. Early in August the cabinet of St. Petersburg tendered their good offices to that of London for the conclusion of a general peace. To which Mr. Canning answered, that Great Britain was perfectly

willing to treat, on equitable terms, for so desirable an object, and required, in return, a frank communication of the secret articles of the treaty of Tilsit, as the best pledge of the friendly and pacific intentions of his imperial majesty. Baron Budberg, on the part of Alexander, eluded this demand, and, instead, entered into a

statement of many grievances of Russia against this country, some of which, especially the want of co-operation when the contest was quivering in the balance on the Vistula, were too well-founded. Matters were in this dubious state when intelligence arrived of the landing of the British forces in Zealand, and the demand made for the delivery, in deposit, of the Danish fleet.

From the outset the cabinet of St. Petersburg manifested the utmost disquietude at this intelligence, and loudly protested against it as an un-called-for violation of the law of nations. In reply, the British ambassador explicitly stated that his cabinet had received information of the secret articles of the treaty of Tilsit, and the destined co-operation of the Danish fleet in a descent on the British shores, and called upon the Russian minister to disprove the assertion, by an unreserved communication of these hidden stipulations, and of the grounds on which France was willing to treat, and which appeared to the cabinet of St. Petersburg so reasonable, that they gave them the additional weight of their interposition. The Russian cabinet, however, both when Baron Budberg had the direction of its foreign affairs, and after he was succeeded,

early in September, by Count Romanzow, constantly eluded this demand; and the intelligence of the capture of the Danish fleet gave them a plausible pretext for breaking off the negotiation, without complying with so inconvenient a requisition.* Upon that event being known

zure was perfectly justifiable. "I may," says Grotius, "without considering whether it is merited or not, take possession of that which belongs to another, if I have reason to fear any evil from his holding it; but I cannot make myself master or proprietor of it, the property having nothing to do with the end which I propose. I can only keep possession of the thing seized till my safety is sufficiently provided for."—GROTIUS, b. iii., c. i., § 2. This was precisely what the English government proposed to Denmark.

Napoleon felt the Copenhagen blow most keenly, the more so that it was achieved by a vigorous and decision in the English councils to which they had long been strangers, and which, in that instance, even surpassed his own promptitude. "The success of the attack on Copenhagen," says Fouché, "was the first derangement of the secret articles of the treaty of Tilsit, in virtue of which the navy of Denmark was to have been put at the disposal of France. Since the catastrophe of Paul, I had never seen Napoleon in such a transport of rage. That which struck him most in this vigorous coup-de-main was the promptitude and resolution of the English minister."—*Mémoires de Fouché*, ii., 137.

* It appears, however, from the following passage in Sir Walter Scott, evidently founded on official information, that the cabinet of St. Petersburg, though obliged to yield to circumstances, were secretly gratified at the vigorous and decisive stroke struck at the Danish fleet.

"An English officer of literary celebrity" (probably Sir R. Wilson) "was employed by Alexander, or those who were supposed to share his most secret councils, to convey to the British ministry the emperor's expressions of the secret satisfaction which his imperial majesty felt at the skill and dexterity which Britain had displayed in anticipating

in the Russian capital, the emperor demanded of the English ambassador whether the fleet would be restored at the conclusion of a general peace? To which Lord Leveson Gower replied, Oct. 29, that "the object for which the expedition had been undertaken, viz., the removing of the Danish fleet, during the continuance of hostilities, beyond the reach of France, having been accomplished, the English government was perfectly willing to renounce any advantage which could be derived from the continuance of the war with Denmark, and earnestly pressed the emperor to recommend neutrality on these conditions to the prince royal." These moderate views so far prevailed with the Russian cabinet, that a note was presented by them to Savary, to signify the wish of the emperor that the neutrality of Denmark should be re-established, and there was every prospect of the peace of the North being undisturbed by any farther hostility, when the arrival of a messenger from Paris, with decisive instructions from Napoleon, at once put an end to the negotiation. He brought a peremptory demand for the immediate execution of the secret articles of the treaty of Tilsit, and the instant closing of the Russian harbours against the ships of Great Britain. The Emperor Alexander was startled with the imperative tone of the mandate, as, since his return to St. Petersburg, he had been endeavouring to withdraw from his promises in that particular; but it was too late: Savary appealed to his personal honour pledged at Tilsit, and the emperor, at whatever hazard to himself or his dominions, felt himself bound to comply.*†

and preventing the purposes of France by her attack upon Copenhagen. Her ministers were invited to communicate freely with the Czar, as with a prince who, though obliged to yield to circumstances, was, nevertheless, as much as ever attached to the cause of European independence."—SCOTT, vi., 24. Certainly of all the remarkable qualities of Alexander's mind, his profound power of dissimulation was the most extraordinary; and this was the opinion formed by Lord Cathcart and all who had an opportunity of seeing him even in the most unreserved and confidential manner.

* See the whole papers in *Parl. Deb.*, x., 195, 218. Sav., iii., 126, 128.

† The statements of the French and English ambassadors on this point are very material, as not only are they perfectly in unison with each other, but distinctly prove that the rupture with Russia had no connexion with the Copenhagen expedition, but was the result of the secret articles of the treaty of Tilsit. Savary says, "In the first days of November I received a courier from the emperor, which brought instructions from the minister of foreign affairs to insist upon the execution of one of the secret articles of the treaty of Tilsit. On the day following I said to the emperor, at a special audience, 'Sire, I am charged with the desire of my master that you should unite your force to his to compel England to listen to his propositions.' 'Very well,' replied the emperor, 'I have given him my word that I would do so, and I will keep my promise'; see Romanzoff, and return to speak with me on the subject." On the day following I returned; and the emperor then said that it had been agreed that France and Russia should unite to summon England, but that the mediation of Russia was first to be proposed, which should still be done. I represented that this had already taken place, and that England had refused his mediation. He hesitated a moment, and then said, 'I understand you; and, since your master desires it, I am quite disposed to fulfil my engagements. I will to-day give orders to Romanzoff.' Two days afterward the hostile note against England was issued, and the British ambassador demanded his passports. Having gained this much, though well aware that the principal object of Napoleon was to strike at the English commerce, I deemed it expedient to shut my eyes to the time given to the British vessels to clear out from the Russian harbours."—SAVARY, iii., 126, 128. Lord L. Gower says, in his despatch to Mr. Canning, November 4, 1807, "Some members of the council, who were consulted on the matter, advised the emperor not to reject so fair an opportunity of re-establishing the tranquillity of the north of Europe; and their opinion was so far

Concurring statement of English and French ambassadors on its causes.

Next day a note was presented to the British ambassador, breaking off all relations between the two countries, requiring his immediate departure from St. Petersburg, and reannouncing the principles of the armed neutrality; and on the day following Lord L. Gower set out for the British shores.*

taken, that a note was written to General Savary with the view of engaging the French government to consent to the restoration of the neutrality of Denmark. The French general has remonstrated violently against this measure; and the Russian cabinet, alarmed at the violence of his language, is undecided what answer to return to the overtures received from England." And on the 8th of November he wrote to the same minister, "The enclosed note, the contents of which are so extremely important" (they contained a declaration of war), "has been produced by a peremptory demand, brought by the last messenger from Paris, of the immediate execution of the secret articles of the treaty of Tilsit; and the French mission boasts that, after some difficulty, they have gained a complete victory, and have carried not only this act of hostility against England, but also every other point essential to the success of Bonaparte's views. I shall ask my passports to-morrow."—Lord L. GOWER to Mr. CANNING, *Petersburg, 4th and 8th Nov., 1807. Parl. Deb., x., 215, 216.*

* The Russian manifesto bore: "The great value which Russian man- the emperor attached to the friendship of his

British majesty enhanced the regret at perceiving that that monarch altogether separated himself from him. Twice has the emperor taken up arms in a cause which was directly that of England, and he solicited in vain from England such a co-operation as her own interest demanded. He did not demand that her troops should be united to his; he desired only they should effect a diversion. He was astonished that in her cause she did not act in union with him, but, coolly contemplating a bloody spectacle in a war which had been kindled at her will, she, instead of co-operating, sent troops to attack Buenos Ayres and Alexandria. And what sensibly touched the heart of the emperor, was to perceive that England, contrary to her good faith and the express terms of treaties, troubled at sea the commerce of his subjects at the very time that the blood of the Russians was shedding in the most glorious of warfare, which drew down and fixed against the armies of his imperial majesty all this military force of the French emperor, with whom the English then were and still are at war. Nevertheless, when the two emperors made peace, the Emperor of Russia, faithful to his old friendship, proffered his mediation to effect a general pacification; but the King of England rejected the mediation. The treaty between Russia and France was intended to procure a general peace; but at that very moment England suddenly quitted that apparent lethargy to which she had abandoned herself; but it was to east upon the north of Europe new firebrands, which were to light anew the flames of war. Her fleets and her armies appeared upon the coasts of Denmark, to execute there an act of violence of which history, so fertile in wickedness, does not afford a single example. A tranquil and moderate power sees itself assaulted as if it had been forging plots and meditating the ruin of England, and all to justify its prompt and total spoliation. The emperor, wounded in his dignity, in the interests of his people, in his engagements with the courts of the north, by this act of violence committed in the Baltic, did not dissemble his resentment against England; new proposals were made by England for the neutrality of Denmark, but to these the emperor would not accede. His imperial majesty, therefore, breaks off all communication with England, proclaims anew the principles of the Armed Neutrality, and annuls all conventions inconsistent with its spirit."—*Parl. Deb., x., 218, 221.*

To this manifesto it was replied, in a long and able declaration by Great Britain, drawn by Mr. Canning. "His majesty was apprized of the secret conditions which had been imposed upon Russia in the conference at Tilsit; but he indulged a hope that a review of the transactions of that unfortunate negotiation, and its effects upon the glory of the Russian name, and the interests of the Russian Empire, would have led him to extricate himself from these trammels, contracted in a moment of despondency and alarm. His majesty deemed it necessary to demand a specific explanation from Russia with respect to these arrangements with France, the concealment of which could not but confirm the impression already received as to their character and tendency. The demand was made in the most amicable manner, and with every degree of delicacy and forbearance; but the declaration of war by the Emperor of Russia proves but too distinctly that this forbearance was misplaced. It proves, unhappily, that the influence acquired over Russia by the inveterate enemy of England, is such as to excite a causeless animosity between the two nations,

This declaration of war against Great Britain was attended by a summons to Sweden to join in the league against the latter place, and it soon appeared, from the vigorous preparations for the prosecution of the war in that quarter, that the cession of Finland

Oct. 6, 1807.

The Russians declare war against Sweden. Feb. 10, 1808.

to Russia had been arranged at Tilsit, and that the Czar was resolved immediately to add that important province, lying so near his capital, to his extensive dominions. As fast as the troops arrived from the Niemen at St. Petersburg, they were passed through to the frontiers of Finland, and such a force was soon accumulated there as rendered hopeless the preservation of that bright jewel to the Swedish crown. A formal declaration of war was, however, delayed till the spring following, when the preparations of the cabinet of St. Petersburg were completed, and the season of the year enabled them to resume military operations. In the interval, the Swedish government had so carefully abstained from giving any cause of complaint to the Northern Autocrat, that, when he came to assign his reasons for a rupture to the world, he could find no ground whatever on which to justify his hostilities, but that the Swedish monarch had not acceded to his proposal to break with England and join his forces to those of Russia, and was desirous of preserving throughout the contest a strict neutrality: a pretext for a

whose long connexion and mutual interests prescribed the most intimate union and co-operation. The King of England does full justice to the motives which induced the Emperor of Russia twice to take up arms in the common cause. But, surely, the Emperor of Russia, on the last occasion, had a more pressing call to join his arms to those of his ally, the King of Prussia, than Great Britain, then actually at war with that power. The reference to the war with the Porte is peculiarly unfortunate, when it was undertaken at the instigation of Russia, and solely for the purpose of maintaining the Russian interests against those of France. If, however, the peace of Tilsit was really a punishment for the inactivity of Great Britain, it was singularly unfortunate that it took place at a time when England was making the most strenuous exertions in the common cause, and had actually got that great armament prepared which she has since been obliged to employ to disconcert a combination directed against her own immediate interests and security. The complaint of vexations to Russian commerce is a mere imaginary grievance, never heard of before, and now put forth only to stigmatize the exaggerated declamations by which France strives to inflame the animosity of the other Continental powers. The vindication of the Copenhagen expedition is already before the world, and Russia has it in her power at once to disprove the basis on which it is erected, by producing the secret articles of the treaty of Tilsit. These secret articles were not communicated to his majesty—they are not yet communicated—not even that which prescribed a time for the acceptance, by Great Britain, of the proffered mediation of Russia. Even after this unworthy concealment, however, so unsuitable to the dignity of an independent sovereign, the mediation was not refused: it was conditionally accepted, and the conditions were a communication of the basis on which the proposed treaty was to be founded, and of the secret articles of the treaty of Tilsit: conditions to which the Emperor of Russia could not object, as the first was the same which the emperor had himself annexed to the mediation of Austria between himself and France, not four months before; and the second was clearly called for by the previous and long-established relations between Russia and Great Britain. Instead of granting either of these demands, Russia declares war."—*English Declaration, December 18, 1807; Parl. Deb., x., 118-122.* It will be observed how studiously, in these diplomatic papers, Russia eludes all allusion to the secret articles of the treaty of Tilsit. "The capture of the Danish fleet," says Hardenberg, "was not the cause, but the pretext, of Russia's rupture with England. The cabinet of St. Petersburg, if the truth was known, was not sorry of so fair an opportunity for getting quit of all restraints upon its meditated hostilities in the North, as it already was in the South of Europe; and, notwithstanding all the loud declamations against the Copenhagen expedition, beheld, with more satisfaction, the success of England in that quarter, than it would have done the junction of the Danish fleet to the naval resources of the French emperor."—*HARD., x., 49.*

Declaration by Great Britain, Dec. 18, 1807.

war which came with a singularly bad grace from a power which affected to feel such indignation at the English government for having, for a similar reason, and when well informed of the secret designs of France against the Danish fleet, commenced hostilities against the court of Copenhagen.

This declaration was immediately followed by Feb. 6, 1808. a proclamation to the Fins by the Russian commander, in which he declared that he entered their territory with no hostile intentions, and solely to preserve them from the horrors of war, and invited them to abstain from hostilities or revolt to Russia: a promise instantly belied by the formal occupation of the whole provinces by the Moscovite forces, and the establishment of Russian authorities in every part of them excepting those fortresses still held by Swedish garrisons. Meanwhile the King of Sweden, faithful to his engagements, relying on the support of Great Britain, and encouraged by the great blow struck at the Danish power by the English armament, bid defiance to the united hostility of France and Russia, and replied to the Russian manifesto in a dignified proclamation, a model for greater powers and more prosperous fortunes, in which he bitterly complained of the invasion of his dominions and the incitement held out to his subjects to revolt by the Russian forces, without any declaration of war, or ground of hostility; contrasted the present subservience of Russia to France, with the repeated declarations she had made, that its ambition was inconsistent with the liberties of Europe, and her solemn engagements to conclude no peace with that power which should be "inconsistent with the glory of the Russian name, the security of the Empire, the sanctity of alliances, and the general security of Europe;"* and justly observed that the present war, based on the avowed design of Russia to dictate all their foreign connexions to the Northern powers, was undertaken for no other object but to add Finland to the Russian dominions, and compel Sweden to sacrifice her fleet and commerce as a security for Cronstadt and Revel.†

It was not to be supposed that Denmark, after the grievous though unavoidable losses she had sustained, should not into the war. Denmark en- ters cordially into the war. resent to the utmost of her power the hostility of Great Britain. She threw herself, therefore, without reserve into the arms of France, and made every preparation for the most active hostility; though the loss of her fleet and dismantling of her arsenal deprived her of the means of carrying on any efficient warfare, and which, on the other hand, exposed her commerce and colonies to total destruction. The prince royal, carried away by an excusable resentment, overlooked all these considerations, and not only constantly refused to ratify the capitulation of Copenhagen, but concluded, soon after, a treaty offensive and defensive with the Emperor Napoleon, which, by a singular coincidence, was signed on Oct. 16. the very day on which Junot, at the head of a powerful army, commenced his march from Bayonne to enforce a similar obedience to the secret resolutions adopted at Tilsit from the court of Lisbon.‡

While a new war was thus kindling from the ashes of the old one in the north of Europe, Rus-

sia was steadily prosecuting those ambitious designs on her southern frontier, the unmolested advancement of which had constituted the principal lure held out by Napoleon to gain her alliance on the shores of the Niemen. In this attempt, however, she did not experience all the facilities which she expected. As the main object of Napoleon, in the negotiations at Tilsit, was to accelerate the rupture of Russia with Great Britain, and procure her accession to the Continental system,* so the ruling principle of Russia was to obtain facilities for the prosecution of her designs against the Ottoman Empire, and in the mean time to postpone the evacuation of the principalities of Wallachia and Moldavia, till she was better prepared to carry her projects of conquest into effect. Napoleon, as already stated, had agreed at Tilsit that the evacuation should be indefinitely postponed;† but hardly had he returned to Paris, when, being engrossed with his ambitious projects in the Spanish Peninsula, and unable to appropriate to himself, in consequence, his anticipated share of the Ottoman spoils, he repented of the ready consent which he had given to the advances of Russia in that direction, and became desirous to throw every obstacle in the way of their farther prosecution. In terms of the stipulation to that effect in the formal treaty, the mediation of France had been offered to the Divan, which having been accepted, Aug. 24. and an armistice concluded, nothing remained to justify the prolonged occupation of the principalities. It appeared the more necessary to bring it to a termination, as the Turks, though they gladly availed themselves of the French mediation at first, did so in the belief that they were to obtain thereby the evacuation of Moldavia and Wallachia; but no sooner did they discover that this was not really intended, and that the Moscovite standards were still to remain on the Danube, than they loudly expressed their resolution to continue, in preference, the conflict. They said, with justice, "In what worse situation could we be, if the French, instead of being victorious, had been beaten in Poland? is this the emperor's care of his allies, whom he has drawn into the conflict, to leave their richest provinces in the hands of their enemies?"‡ Savary, therefore, received orders to insist in the mildest possible manner, but still to insist, for the evacuation of the principalities, and to consent to the prolonged occupation of them by the Russian forces only on condition that Alexander sanctioned the continued possession of Silesia by the French troops. This was at once agreed to: the two autocrats readily consented to wink at their mutual infraction of the rights of other states; and as the Turks found that they had been betrayed by Napoleon, and some account of the secret article of the treaty of Tilsit which provided for their partition had reached them, they declined the farther intervention of the French, and prepared to renew the war.¶

Affairs of Russia and Turkey.

The Turks, finding themselves betrayed by the French, prepare to renew the war.

Meanwhile Napoleon had set out for Italy, where great political changes were in progress. Destined, like all the subordinate thrones which surrounded the great nation, to share in

Changes in the constitution of the Italian States.

ting the ulterior ambitious views of the great empires which they severally represented, and the seeds of that jealousy which, in the midst of unbounded protestations of present regard, was laying the foundation of future and mortal hostility. By despatches from Napoleon dated Fontainebleau, 14th October, 1807, Savary was required to inquire what was the cause which had retarded the evacuation of Moldavia and Wallachia by the Russian troops, and to observe that peace could not be re-established between Russia and the Porte till that evacuation had taken place; as it was the condition which must precede the armistice which was to be the foundation of the definitive treaty; that the delay to evacuate could not fail to annul the armistice, which had been concluded, and rekindle the flames of war between Russia and the Ottoman Porte. In reply, the Emperor Alexander, after alleging various insignificant reasons for not commencing the evacuation, observed, "Circumstances now appear to require a deviation in this particular from the strict letter of the treaty of Tilsit. The latest advices from Vienna and Odessa concur in stating that the influence of France has declined at Constantinople; it is even said that Lord A. Paget, the English ambassador, has embarked on board Lord Collingwood's fleet in the Dardanelles. There is every probability that a treaty will be concluded between England and the Porte hostile to you, and, consequently, to me; and that, if I should evacuate these provinces, I should soon have to re-enter them in order to avert the war from my own frontiers. I must revert to what the Emperor Napoleon said to me, not once, but ten times, at Tilsit, in respect to these provinces; and I have more confidence in these assurances than in all the reasons of expedience or policy which may subsequently appear to thwart them. Why, then, renounce my present advantages, when past experience tells me so clearly what will ensue if I evacuate these provinces? Even supposing that you have the upper hand at Constantinople, you can never prevent bands of insurgents from crossing the Danube, and renewing the pillage of these provinces: the orders of the Porte are null a mile from Constantinople. In our conversations at Tilsit, your emperor often said that he was noways set on that evacuation: that it might be indefinitely postponed; that it was not possible any longer to tolerate the Turks in Europe; that he left me at liberty to drive them into Asia. It was only on a subsequent occasion that he went back on his word so far as to speak of leaving the Turks Constantinople and some of the adjacent provinces."

Savary replied, "Russia can always renew the war if you find it advisable. It is needless to refer to the engagements between the two monarchs: the Emperor Napoleon has too much confidence in the honour of the Emperor Alexander to doubt the validity of the reasons which have hitherto prevented him from executing these secret engagements; but still he is desirous of seeing them carried into effect, as a peace between Russia and the Porte is all that remains to conclude the execution of the stipulations of the public treaty of Tilsit. All that the Emperor Napoleon has said at Tilsit shall be religiously executed; nor is there anything in the secret treaty which is calculated to thwart the desires of Russia. Nay, the surest and most expeditious mode to arrive at it is to carry into execution the public treaty; for we must conclude an armistice with the Turks before a treaty is concluded; or do you propose at once to write their epitaph?"

"I yesterday had a long interview," replied Alexander, "with the Swedish ambassador, and strongly urged him to enter into all the views of France, and the risk he would run in not making common cause with her and Russia. Meanwhile, the march of the troops continues: in seven or eight days the last division will have arrived, and fifty thousand men will be ready to commence the war on the frontiers of Finland. When you demanded from me a declaration of war against England, I was well aware it was no trifling change of policy which was required; no slight change of system which could be altered as soon as adopted. Had I conceived it to be such, I would never have put my name to it; but I viewed it in a more extended light. What am I required to do? said I to myself. To prepare great events which will cause the memory of mournful ones to be forgotten, and put the two states in such political relations as can never be disturbed. Impressed with these ideas, and within twenty-four hours after your requisition, I did what you desired, though that war was not only noways conducive to our interests, but, on the contrary, exposed us to very serious losses. Now you insist that I should make war on Sweden; I am ready to do so; my armies are on her frontier; but what return are we to obtain for so many sacrifices? Wallachia and Moldavia are the recompense which the na-

the rapid mutations which its government underwent, the kingdom of Italy was soon called upon to accept a change in its constitution. Napoleon, in consequence, suppressed the Legislative Body, and substituted in its room a Senate, which was exclusively intrusted with the power of submitting observations to government on the public wants, and of superintending the budget and public expenditure. As this Senate was named and paid by government, this last shadow of representative institutions became a Nov. 20, 1807. perfect mockery. Nevertheless, Napoleon was received with unbounded adulation by all the towns of Italy: their deputies, who waited upon him at Milan, vied with each other in elegant flattery. He was the Redeemer of France, but the Creator of Italy; they had supplicated Heaven for his safety, for his victories; they offered him the tribute of their eternal love and fidelity. Napoleon received their adulation in the most gracious manner; but he was careful not to lose sight of the main object of his policy, the consolidation of his dominions, the dependance of them all on his imperial crown, and the fostering of a military spirit among his subjects. "You will always find," said he, "the source of your prosperity, the best guarantee alike of your institutions and of your independence, in the constant union of the Iron crown with the Imperial crown of France. But, to obtain this felicity, you must show yourselves worthy of it. It is time that the Italian youth should seek some more ennobling employment than idling away their lives at the feet of women, and that they should spurn every lover who cannot lay claim to their favour by the exhibition of honourable scars."*

From Milan the emperor travelled by Verona and Padua to Venice: he there admired the marble palaces, and varied scenery, and gorgeous architecture of the Queen of the Adriatic, which appeared to extraordinary advantage amid illuminations, fireworks, and rejoicings, and, returning to Milan, arranged, with an authoritative hand, all the affairs of the Peninsula. The discontent of Melzi, who still retained a lingering partiality for the Democratic institutions which he had vainly hoped to see established in his country, was stifled by the title of Duke of Lodi; Tuscany was taken from the King of Etruria, on whom Napoleon had settled it, and united to France by the title of the department of the Taro; while magnificent public works were set on foot at Milan to dazzle the ardent imagination of the Italians, and console them for the entire loss of their national independence and civil liberty. The cathedral was daily adorned with fresh works of sculpture; its exterior decorated and restored to its original purity, while thousands

tion expects, and you wish to bereave us of them. What reply can we make to our people, if, after their evacuation, they ask us what benefits are to compensate to them for the manifold losses consequent on the war with England?"—See the whole diplomatic papers and conversations in SAVARY'S *Secret Despatch to Napoleon, Petersburg, 18th November, 1807; Corresp. Conf. de Napoleon*, vii., 564, 585. That confidential despatch reveals more of the real nature of the secret engagements at Tilsit than any other documents in existence; and demonstrates that both the Swedish and English war were the result of those engagements, and noways connected with the Copenhagen expedition, which is never once mentioned as a ground of complaint against Great Britain, by either Savary, Alexander, or his minister, Romanzow.

of pinnacles and statues rose on all sides, glittering in spotless brilliancy in the blue vault of heaven; the forum of Bonaparte was rapidly advancing; the beautiful basso-relievos of the arch of the Simplon already attracted the admiring gaze of thousands; the roads of the Simplon and Mont Cenis were kept in the finest order, and daily attracted fresh crowds of strangers to the Italian plains. But in the midst of all this external splendour, the remains of which still throw a halo round the recollection of the French domination in Italy, the finances of all the states were involved in hopeless embarrassments, and suffering of the most grinding kind pervaded all classes of the people: the public expenditure of the kingdom of Italy had risen to 120,000,000 francs (£5,000,000); the annual tribute of a million sterling to France was severely felt; ten thousand men had recently been raised by conscription to fill up the chasm in the army; and the misery of Piedmont, Tuscany, and the Venitian States, from the enormous contributions levied by the French troops, and the total stoppage of foreign commerce, was such as to draw forth the most piteous lamentations from its native historians.*

The encroachments thus made on the Italian Peninsula, were not the only ones which he effected in consequence of the liberty to dispose of Western Europe acquired by Napoleon at the treaty of Tilsit. The territory of the Great Nation was rounded also on the side of Germany and Holland. On the 11th of November, the important town and territory of Flushing was ceded by the King of Holland to France, who obtained, in return, merely an elusory equivalent in East Friesland.

Jan. 21. On the 21st of January following, a decree of the Senate united to the French Empire, besides these places, the important towns of Kehl, Cassel, and Wesel, on the right bank of the Rhine. Shortly after, the French troops, who had already taken possession of the whole of Tuscany, in virtue of the resignation

Feb. 2. forced upon the Queen of Etruria, invaded the Roman territories, and took possession of the ancient capital of the world. They immediately occupied the castle of St. Angelo and gates of the city, and entirely dispossessed the papal troops. Two months afterward, an imperial decree of Napoleon's severed the

April 2. provinces of Ancona, Urbino, Macerata, and Camerino, which had formed part of the ecclesiastical estates under the gift of Charlemagne for nearly a thousand years, and annexed them to the kingdom of Italy. The reason assigned for this spoliation was, "That the actual sovereign of Rome has constantly declined to declare war against the English, and to coalesce with the kings of Italy and Naples for the defence of the Italian Peninsula. The interests of these two kingdoms, as well as of the armies of Naples and Italy, require that their communication should not be interrupted by a hostile power." The importance of these acquisitions, great as they undoubtedly were, especially in Italy, was not so momentous as the principles on which they were founded, and the ulterior acquisitions to which they evidently pointed. France now, without disguise, assumed the right of annexing neutral and independent states to its already extensive dominion, by no other au-

thority than the decree of its own Legislature. The natural boundaries, so long held forth as the limits of the Great Nation, were overstepped: by extending its territory beyond the Rhine, it was plain that Holland and the north of Germany were soon to be incorporated with its dominions; by stretching across the Alps, it was evident that, ere long, Rome and the whole of Italy would form an integral part of the dominions of Napoleon.*

But all the other consequences of the peace at Tilsit were trifling, in comparison of those which took place in the Spanish Peninsula. As the war to which they led in that quarter, however, was by far the most important and eventful which arose out of the French Revolution, brought, for the first time, the English and French armies as principals into the contest, and was the chief cause of the overthrow of Napoleon, as well as the best index to the leading features of his policy, it requires for its elucidation a separate chapter.

In the consequences, however, which have already been described as flowing from the treaty at Tilsit, is to be discerned the clearest indication of the great peril which instantly threatens the cause of European independence, from the undue preponderance acquired by any of its potentates, and of the absolute necessity which exists for the maintenance of that balance of power in which superficial observers have so often seen only the prolific source of unnecessary warfare. The principle on which that policy is founded is that of *obsta principis*: resist the encroachments which may give any one state an undue preponderance, and regard such contests, at the extremity of the outworks, as the only effectual means of defending the ramparts of the place. Such a system requires a sacrifice of the present to the future: it involves an immediate expenditure to avert a remote, and possibly contingent, evil. It will therefore always be supported only by the wise, and be generally unpopular with the bulk of mankind. It is of great importance, therefore, to attend to the consequences which immediately resulted from the treaty at Tilsit, and the effects which necessarily ensued from the overthrow of this system. The inferior powers of Europe were then overawed or subdued. England had withdrawn almost entirely from the strife, and, secluded in her inaccessible isle, had remained, according to the favourite system of a numerous class of her politicians, a neutral spectator of the wars of the Continent. What was the consequence? Was it that her independence was better secured, her interests more thoroughly established, or her ultimate safety better provided for than under the more active and costly system of former times? On the contrary, while the rights and liberties of the Continental states were utterly destroyed during her secession, England herself was brought to the very edge of perdition. The European strife immediately ran into a contest between its two great powers: the whole moral as well as physical strength of the Continent was arrayed under the banners of France and Russia, and when these rival powers came to an accommodation, it was by the mutual agreement to divide between them the spoils of all subordinate or neutral states. To Russia, already enriched by a portion of Prussia, was

assigned Finland, the greater part of Turkey, and an irresistible preponderance in the Euxine and Baltic Seas; to France, already master of the half of Germany, was allotted Italy, Poland, and the Spanish Peninsula. These great powers at once laid aside all moderation and semblance even of justice in their proceedings; and, strong in each other's forbearance, instantly proceeded to appropriate, without scruple, the possessions of all other states, even unoffending neutrals or faithful allies, which lay on their own side of the line of demarcation. It was easy to see that the present concord which subsisted between them could not last. The world was not wide enough for two such great and ambitious powers, any more than it had been for Alexander and Darius, Rome and Carthage. Universal empire to one or other would, it was plain, be the result of a desperate strife between them, and in that case it would be hard to say whether the independence of Great Britain had most to fear from the Scythian or the Gallic hosts. Already this danger had become apparent: all the fleets of Europe were combined under the command of the French emperor, and in a few years he would have two hundred sail of the line to beat down in the Channel the naval forces of England, and carry slavery and ruin into the British dominions. Such were then the consequences of the subversion of the balance of power; such the dangers which induce the far-seeing sagacity of political wisdom to commence the conflict for national independence as soon as the rights of inferior powers are menaced.

Although, however, both the liberties of England and independence of Europe were at this time placed in such imminent peril, yet a great step had already been made towards diminishing the danger; and the Copenhagen expedition had completely paralyzed the right wing of the naval force by which Napoleon expected to effect our subjugation. The capture of twenty ships of

the line and fifteen frigates, with all Napoleon in their stores complete, equivalent, in Month. Napoleon's estimation, to the destruction of eighty thousand land-troops, was perhaps the greatest maritime blow ever yet struck by any nation, and weakened the naval resources of the French emperor to a degree greater in extent than any single calamity yet experienced during the war. The hostility of Russia, predetermined at Tilsit, was by this stroke kept almost within the bounds of neutrality. Sweden was encouraged to continue in the English alliance: the maritime force of the Baltic was in a manner withdrawn from the contest; a few sail of the line were all that were required to be maintained by England in that quarter. It is remarkable that this great achievement, fraught with such momentous consequences at that eventful crisis, was regarded by the nation, at the time, with divided and uneasy sentiments; and that the opposition never had so largely the support of the public as when they assailed the government for a measure calculated, in its ultimate results, to prove the salvation of the country. But it is not to be supposed that this dissatisfaction was owing to factious motives; on the contrary, it was brought about by the ascendancy in the public mind of the best and noblest principles of our nature. And it is a memorable circumstance, highly characteristic of the salutary influence of public opinion under a really free government, in bringing the actions of public men to the test of general morality, that while in France, where Revolutionary ascendancy had extinguished every feeling in regard to public matters, except the admiration for success, and in Russia, where a despotic sway had hitherto prevented the growth of any public opinion, universal satisfaction ensued at the ill-gotten gains of the respective emperors; the English people mourned at the greatest maritime conquest yet achieved by their arms, and disdained to purchase even national independence at the expense, as it was then ignorantly thought, of the national faith.
